The value of the specified field as num-char array (digits only).
Please pass length. If you don't know, please try StringValue/StringLength.
(Read and Write computed property)
See also:

- 157.4.29 NumberValue(Index as Integer, Size as Integer) as String 23627

### 157.4.31 StringValue(Index as Integer) as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get or set string value by index.
**Notes:** (Read and Write computed property)
See also:

- 157.4.32 StringValue(Name as String) as String 23628

### 157.4.32 StringValue(Name as String) as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get or set string value by name.
**Example:**

```
Dim fd As RFCFunctionDescriptionMBS = connection.FunctionDescription("BAPI_COMPANY_GETDETAIL")
Dim f As RFCFunctionMBS = fd.CreateFunction

f.StringValue("COMPANYID") = "000007"
f.Invoke

Dim s As RFCStructureMBS = f.StructureValue("RETURN")
Dim t As String = s.StringValue("MESSAGE")

MsgBox t
```

**Notes:** (Read and Write computed property)
See also:

- 157.4.31 StringValue(Index as Integer) as String 23628

### 157.4.33 StructureValue(Index as Integer) as RFCStructureMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get or set structure value with RFCStructureMBS object by index.
**Notes:** (Read and Write computed property)
See also:

- 157.4.34 StructureValue(Name as String) as RFCStructureMBS 23629

### 157.4.34 StructureValue(Name as String) as RFCStructureMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get or set structure value with RFCStructureMBS object by name.
**Notes:** (Read and Write computed property)
See also:

- 157.4.33 StructureValue(Index as Integer) as RFCStructureMBS 23628

### 157.4.35 TableValue(Index as Integer) as RFCTableMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get or set table value with RFCTableMBS object by index.
**Notes:** (Read and Write computed property)
See also:

- 157.4.36 TableValue(Name as String) as RFCTableMBS 23629

### 157.4.36 TableValue(Name as String) as RFCTableMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get or set table value with RFCTableMBS object by name.
**Notes:** (Read and Write computed property)
See also:

- 157.4.35 TableValue(Index as Integer) as RFCTableMBS 23629

### 157.4.37 TimeValue(Index as Integer) as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get or set time value by index.
**Notes:**

Format is always 6 character string with format HHMMSS.
(Read and Write computed property)
See also:

- 157.4.38 TimeValue(Name as String) as String 23629

### 157.4.38 TimeValue(Name as String) as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get or set time value by name.
**Notes:**

Format is always 6 character string with format HHMMSS.
(Read and Write computed property)
See also:

- 157.4.37 TimeValue(Index as Integer) as String 23629

### 157.4.39 UInt8Value(Index as Integer) as UInt8

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get or set UInt8 value by index.
**Notes:** (Read and Write computed property)
See also:

- 157.4.40 UInt8Value(Name as String) as UInt8 23630

### 157.4.40 UInt8Value(Name as String) as UInt8

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get or set UInt8 value by name.
**Notes:** (Read and Write computed property)
See also:

- 157.4.39 UInt8Value(Index as Integer) as UInt8 23630

## 157.5 class RFCErrorExceptionMBS

### 157.5.1 class RFCErrorExceptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The exception class to report any error.
**Notes:** Subclass of the RuntimeException class.

## 157.6 class RFCExceptionDescriptionMBS

### 157.6.1 class RFCExceptionDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for an exception description.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 157.6.2 Methods

### 157.6.3 Constructor

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 157.6.4 Properties

### 157.6.5 Key as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Exception key
**Notes:** (Read only property)

### 157.6.6 Message as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Error message (exception text as defined in SE37)
**Notes:** (Read only property)

## 157.7 class RFCFieldDescriptionMBS

### 157.7.1 class RFCFieldDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a field description.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 157.7.2 Methods

### 157.7.3 Constructor

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 157.7.4 Properties

### 157.7.5 Connection as RFCConnectionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The connection for this field.
**Notes:** (Read only property)

### 157.7.6 decimals as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If the field is of type "packed number" (BCD), this member gives the number of decimals.
**Notes:** (Read only property)

### 157.7.7 Name as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Field name.
**Notes:** (Read only property)

### 157.7.8 nucLength as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Field length in bytes in a 1-byte-per-SAP_CHAR system.
**Notes:** (Read only property)

### 157.7.9 nucOffset as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Field offset in bytes in a 1-byte-per-SAP_CHAR system.
**Notes:** (Read only property)

### 157.7.10 Parent as Variant

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The parent object.
**Notes:** (Read only property)

### 157.7.11 Type as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Field data type.
**Notes:** (Read only property)

### 157.7.12 TypeDescription as RFCTypeDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the type description for this field.
**Notes:** (Read only property)

### 157.7.13 TypeString as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The type as string.
**Notes:**

Convenience property so you can see type in debugger.
(Read only property)

### 157.7.14 ucLength as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Field length in bytes in a 2-byte-per-SAP_CHAR system.
**Notes:** (Read only property)

### 157.7.15 ucOffset as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Field offset in bytes in a 2-byte-per-SAP_CHAR system.
**Notes:** (Read only property)

## 157.8 class RFCFunctionDescriptionMBS

### 157.8.1 class RFCFunctionDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a function description.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 157.8.2 Methods

### 157.8.3 Constructor

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 157.8.4 CreateFunction as RFCFunctionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a data container that can be used to execute function calls in the backend via Invoke.
**Notes:** The importing parameters can be set using the Value() properties. After the RfcInvoke call returned successfully, the exporting parameters can be read from this data container via the Value() properties.

### 157.8.5 Destructor

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destructor.

### 157.8.6 ExceptionDescription(Index as Integer) as RFCExceptionDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The exception description by index.
See also:

- 157.8.7 ExceptionDescription(Name as String) as RFCExceptionDescriptionMBS

### 157.8.7 ExceptionDescription(Name as String) as RFCExceptionDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The exception description by name.
See also:

- 157.8.6 ExceptionDescription(Index as Integer) as RFCExceptionDescriptionMBS 23636

### 157.8.8 ExceptionDescriptions as RFCExceptionDescriptionMBS()

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries all exception descriptions.

### 157.8.9 ParameterDescription(Index as Integer) as RFCParameterDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries parameter description by index.
See also:

- 157.8.10 ParameterDescription(Name as String) as RFCParameterDescriptionMBS 23637

### 157.8.10 ParameterDescription(Name as String) as RFCParameterDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries parameter description by name.
See also:

- 157.8.9 ParameterDescription(Index as Integer) as RFCParameterDescriptionMBS 23637

### 157.8.11 ParameterDescriptions as RFCParameterDescriptionMBS()

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries all parameter description as array.

### 157.8.12 Properties

### 157.8.13 Connection as RFCConnectionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The parent connection.
**Notes:** (Read only property)

### 157.8.14 ExceptionCount as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries number of exceptions.
**Notes:** (Read only property)

### 157.8.15 Handle as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read only property)

### 157.8.16 Name as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The name of the function.
**Notes:** (Read only property)

### 157.8.17 ParameterCount as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of parameters for this function.
**Notes:** (Read only property)

### 157.8.18 Parent as Variant

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The parent object.
**Notes:** (Read only property)

## 157.9 class RFCFunctionMBS

### 157.9.1 class RFCFunctionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a function in a RFC connection.
**Notes:**

Please use values to set parameters and then call invoke.
Subclass of the RFCContainerMBS class.

### 157.9.2 Methods

### 157.9.3 Constructor(typeDescription as RFCFunctionDescriptionMBS)

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a data container that can be used to execute function calls in the backend via Invoke.
**Notes:** The importing parameters can be set using the Value() properties. After the RfcInvoke call returned successfully, the exporting parameters can be read from this data container via the Value() properties.

### 157.9.4 DescribeFunction as RFCFunctionDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the function description that is valid for the system to which connection points to.
**Notes:** If the function description is already in the repository cache for that system ID, it will be returned immediately (from the cache), otherwise it will be looked up in the system's DDIC using the connection. The result from the DDIC lookup will then be placed in the cache. The RFC Runtime maintains a cache for every SAP System ID, as the meta data may be different depending on the SAP release. This is the main API that should be used.

### 157.9.5 Destructor

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destructor.

### 157.9.6 Invoke

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Executes a function module in the backend system so far.
**Example:**

```
Dim fd As RFCFunctionDescriptionMBS = connection.FunctionDescription("BAPI_COMPANY_GETDETAIL")
Dim f As RFCFunctionMBS = fd.CreateFunction

f.StringValue("COMPANYID") = "000007"
f.Invoke

Dim s As RFCStructureMBS = f.StructureValue("RETURN")
Dim t As String = s.StringValue("MESSAGE")

MsgBox t
```

### 157.9.7 Properties

### 157.9.8 ParameterActive(Name as String) as Boolean

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether a parameter is active.
**Notes:**

This is particularly useful for BAPIs which have many large tables, in which you are not interested. Deactivate those and leave only those tables active, in which you are interested. This reduces network traffic and memory consumption in your application considerably.

This functionality can be used for input and output parameters. If the parameter is an input, no data for that parameter will be sent to the backend. If it's an output, the backend will be informed not to return data for that parameter.
(Read and Write computed property)

## 157.10 module RFCModuleMBS

### 157.10.1 module RFCModuleMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The module for globals in RFC API.
**Notes:**

You can use this module and related classes to connect Xojo to SAP applications and databases.
We support MacOS, Windows and Linux.

You need to get a SAP login (maybe become SAP developer) and download ,Ä®SAP NetWeaver RFC SDK 7.50.
You need SAP license for user and maybe a developer license yourself.

Please read SAP documentation for various RFC functions to get more details.
MBS Plugin manages memory for you, does reference counting and makes API easier to use for Xojo developers.

### 157.10.2 Blog Entries

- Connect Xojo to SAP via RFC

### 157.10.3 Blog Entries

- Connect Xojo to SAP via RFC

### 157.10.4 Methods

### 157.10.5 LoadLibrary(file as folderitem) as boolean

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Loads the sapnwrfc library.
**Example:**

```
# If TargetWin32
Const path = "sapnwrfc.dll"
# Else
Dim path As FolderItem = GetFolderItem("libsapnwrfc.dylib")
Dim LibPath As String = path.parent.NativePath

Call RFCModuleMBS.SetCurrentWorkingDirectory(libPath)
```

```
# EndIf

If RFCModuleMBS.LoadLibrary(path) Then
MsgBox "Library loaded."
Else
MsgBox "Failed to load library"+EndOfLine+EndOfLine+RFCModuleMBS.LibraryLoadErrorMessage
quit
End If
```

**Notes:**

Pass path to sapnwrfc.dll on Windows or libsapnwrfc.dylib on MacOS or libsapnwrfc.so on Linux.
If file is installed in system path, you may just pass file name.

Returns true on success or false on failure.
The LibraryLoadErrorMessage function returns error message on failure.
See also:

- 157.10.6 LoadLibrary(path as string) as boolean 23643

### 157.10.6 LoadLibrary(path as string) as boolean

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Loads the sapnwrfc library.
**Notes:**

Pass path to sapnwrfc.dll on Windows or libsapnwrfc.dylib on MacOS or libsapnwrfc.so on Linux.
If file is installed in system path, you may just pass file name.

Returns true on success or false on failure.
The LibraryLoadErrorMessage function returns error message on failure.
See also:

- 157.10.5 LoadLibrary(file as folderitem) as boolean 23642

### 157.10.7 LocalTransactionID as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Retrieves a unique 24-digit transaction ID.
**Notes:** The API will attempt to generate a TID locally using the operating system's UUID.

### 157.10.8 ReloadIniFile

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Loads the contents of the sapnwrfc.ini file into memory.
**Notes:** Searches the directory given by IniPath (or the current working directory) for the file sapnwrfc.ini and loads its contents into memory.

### 157.10.9 SetCurrentWorkingDirectory(path as folderitem) as boolean

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the current working directory.
**Example:**

```
Dim path As FolderItem = GetFolderItem("libsapnwrfc.dylib")
Dim LibPath As String = path.parent.NativePath

Call RFCModuleMBS.SetCurrentWorkingDirectory(libPath)
```

**Notes:** This is often useful to make sure the DLLs in that folder are found.
See also:

- 157.10.10 SetCurrentWorkingDirectory(path as String) as boolean 23644

### 157.10.10 SetCurrentWorkingDirectory(path as String) as boolean

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the current working directory.
**Notes:** This is often useful to make sure the DLLs in that folder are found.
See also:

- 157.10.9 SetCurrentWorkingDirectory(path as folderitem) as boolean 23644

### 157.10.11 Properties

### 157.10.12 IniPath as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The directory in which to search for the sapnwrfc.ini file.
**Notes:**

By default the sapnwrfc library searches for the sapnwrfc.ini in the current working directory of the process. If you want to keep it in a different directory, use this function to tell the sapnwrfc library about the new path.

Note
After you have changed the directory, the NW RFC lib automatically loads the contents of the new sapnwrfc.ini file from that directory.

Pass the full (absolute) path of the directory, in which the sapnwrfc library should look for the sapnwrfc.ini file. A path relative to the current working directory of the process also works.
(Read and Write property)

### 157.10.13 LibraryLoadError as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The load error code.
**Notes:** (Read only property)

### 157.10.14 LibraryLoadErrorMessage as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The load error message.
**Notes:** (Read only property)

### 157.10.15 Loaded as Boolean

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether the library is loaded.
**Notes:**

Returns true if the library contains the required functions.
(Read only property)

### 157.10.16 MajorVersion as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get information about currently loaded sapnwrfc library.
**Notes:**

Major version, e.g. 7500.
(Read only property)

### 157.10.17 MinorVersion as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get information about currently loaded sapnwrfc library.
**Notes:**

Minor version.
(Read only property)

### 157.10.18 PatchLevel as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get information about currently loaded sapnwrfc library.
**Notes:**

Patch level of the version.
(Read only property)

### 157.10.19 TraceDir as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Changes the directory where the NW RFC lib should write trace files.
**Notes:**

This function has the same effect as the sapnwrfc.ini parameter RFC_TRACE_DIR. See the documentation of that parameter in the sample ini file contained in the /demo directory of the NW RFC SDK.

Note
This API call affects only new trace files that will be opened after the call. The directory of already existing trace files is not changed in order to prevent confusion and garbage data...

Pass the new directory. Can be an absolute or relative path name. The directory needs to exist prior to calling this API. The NW RFC lib will not attempt to create non-existing directories.
(Read and Write property)

### 157.10.20 TraceEncoding as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Changes the character encoding to be used in trace files.
**Notes:**

This function has the same effect as the sapnwrfc.ini parameter RFC_TRACE_ENCODING. See the documentation of that parameter in the sample ini file contained in the /demo directory of the NW RFC SDK.

Note
This API call affects only new trace files that will be opened after the call. The character encoding of already existing trace files is not changed in order to prevent confusion and garbage data...

Pass the new encoding. Possible values are "UTF-16", "UTF-8" and "DEFAULT". On Windows UTF-16 is recommended for faster performance. "DEFAULT" corresponds to the operating system's default character encoding, which is CP1252 or ISO-8859-1 on most Windows systems and UTF-8 on most Linux systems.
(Read and Write property)

### 157.10.21 TraceType as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Changes the way the NW RFC lib writes trace files.
**Notes:**

This function has the same effect as the sapnwrfc.ini parameter RFC_TRACE_TYPE. See the documentation of that parameter in the sample ini file contained in the /demo directory of the NW RFC SDK.

Note
This API call closes currently open trace files and then changes to "one file per process" or one "file per thread". If the NW RFC lib is already using the given trace type, it does nothing.

Must be either "PROCESS" or "THREAD".
(Read and Write property)

### 157.10.22 Version as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get information about currently loaded sapnwrfc library.
**Notes:**

Version as text to show to user.

(Read only property)

### 157.10.23 Constants

### 157.10.24 kErrorAbapClassException = 27

MBS Tools Plugin, Plugin Version: 20.2.

**Function:** One of the error constants.
**Notes:** The called function module raised a class based exception

### 157.10.25 kErrorAbapException = 5

MBS Tools Plugin, Plugin Version: 20.2.

**Function:** One of the error constants.
**Notes:** The called function module raised an Exception (RAISE or MESSAGE ... RAISING)

### 157.10.26 kErrorAbapMessage = 4

MBS Tools Plugin, Plugin Version: 20.2.

**Function:** One of the error constants.
**Notes:** The called function module raised an E-, A- or X-Message

### 157.10.27 kErrorAbapRuntimeFailure = 3

MBS Tools Plugin, Plugin Version: 20.2.

**Function:** One of the error constants.
**Notes:** SAP system runtime error (SYSTEM_FAILURE): Shortdump on the backend side

### 157.10.28 kErrorAuthorizationFailure = 29

MBS Tools Plugin, Plugin Version: 20.2.

**Function:** One of the error constants.
**Notes:** Authorization check error

### 157.10.29 kErrorBufferTooSmall = 23

MBS Tools Plugin, Plugin Version: 20.2.

**Function:** One of the error constants.
**Notes:** The given buffer was to small to hold the entire parameter. Data has been truncated.

### 157.10.30 kErrorCanceled = 7

MBS Tools Plugin, Plugin Version: 20.2.

**Function:** One of the error constants.
**Notes:** No longer used

### 157.10.31 kErrorClosed = 6

MBS Tools Plugin, Plugin Version: 20.2.

**Function:** One of the error constants.
**Notes:** Connection closed by the other side

### 157.10.32 kErrorCodepageConversionFailure = 21

MBS Tools Plugin, Plugin Version: 20.2.

**Function:** One of the error constants.
**Notes:** Codepage conversion error

### 157.10.33 kErrorCommunicationFailure = 1

MBS Tools Plugin, Plugin Version: 20.2.

**Function:** One of the error constants.
**Notes:** Error in Network & Communication layer

### 157.10.34 kErrorConversionFailure = 22

MBS Tools Plugin, Plugin Version: 20.2.

**Function:** One of the error constants.
**Notes:** Error while converting a parameter to the correct data type

### 157.10.35 kErrorExecuted = 16

MBS Tools Plugin, Plugin Version: 20.2.

**Function:** One of the error constants.
**Notes:** Inbound tRFC Call already executed (needs to be returned from RFC_ON_CHECK_TRANSACTION in case the TID is already known and successfully processed before.)

### 157.10.36 kErrorExternalFailure = 15

MBS Tools Plugin, Plugin Version: 20.2.

**Function:** One of the error constants.
**Notes:** Error in external custom code. (E.g. in the function handlers or tRFC handlers.) Results in SYSTEM_FAILURE

### 157.10.37 kErrorIllegalState = 19

MBS Tools Plugin, Plugin Version: 20.2.

**Function:** One of the error constants.
**Notes:** The operation is not supported on that handle at the current point of time (e.g. trying a callback on a server handle, while not in a call)

### 157.10.38 kErrorInvalidHandle = 13

MBS Tools Plugin, Plugin Version: 20.2.

**Function:** One of the error constants.
**Notes:** An invalid handle was passed to an API call

### 157.10.39 kErrorInvalidParameter = 20

MBS Tools Plugin, Plugin Version: 20.2.

**Function:** One of the error constants.
**Notes:** An invalid parameter was passed to an API call, (e.g. invalid name, type or length)

### 157.10.40 kErrorInvalidProtocol = 11

MBS Tools Plugin, Plugin Version: 20.2.

**Function:** One of the error constants.
**Notes:** The received data has an unsupported format

### 157.10.41 kErrorLogonFailure = 2

MBS Tools Plugin, Plugin Version: 20.2.

**Function:** One of the error constants.
**Notes:** Unable to logon to SAP system. Invalid password, user locked, etc.

### 157.10.42 kErrorMemoryInsufficient = 9

MBS Tools Plugin, Plugin Version: 20.2.

**Function:** One of the error constants.
**Notes:** Memory insufficient

### 157.10.43 kErrorNotFound = 17

MBS Tools Plugin, Plugin Version: 20.2.

**Function:** One of the error constants.
**Notes:** Function or structure definition not found (Metadata API)

### 157.10.44 kErrorNotSupported = 18

MBS Tools Plugin, Plugin Version: 20.2.

**Function:** One of the error constants.
**Notes:** The operation is not supported on that handle

### 157.10.45 kErrorOk = 0

MBS Tools Plugin, Plugin Version: 20.2.

**Function:** One of the error constants.
**Notes:** Everything O.K. Used by every function. (no exception)

### 157.10.46 kErrorRetry = 14

MBS Tools Plugin, Plugin Version: 20.2.

**Function:** One of the error constants.
**Notes:** ListenAndDispatch did not receive an RFC request during the timeout period

### 157.10.47 kErrorSerializationFailure = 12

MBS Tools Plugin, Plugin Version: 20.2.

**Function:** One of the error constants.
**Notes:** A problem while serializing or deserializing RFM parameters

### 157.10.48 kErrorStartSapguiFailure = 26

MBS Tools Plugin, Plugin Version: 20.2.

**Function:** One of the error constants.
**Notes:** Failed to start and attach SAPGUI to the RFC connection.

### 157.10.49 kErrorTableMoveBof = 24

MBS Tools Plugin, Plugin Version: 20.2.

**Function:** One of the error constants.
**Notes:** Trying to move the current position before the first row of the table.

### 157.10.50 kErrorTableMoveEof = 25

MBS Tools Plugin, Plugin Version: 20.2.

**Function:** One of the error constants.
**Notes:** Trying to move the current position after the last row of the table.

### 157.10.51 kErrorTimeout = 8

MBS Tools Plugin, Plugin Version: 20.2.

**Function:** One of the error constants.
**Notes:** Time out

### 157.10.52 kErrorUnknownError = 28

MBS Tools Plugin, Plugin Version: 20.2.

**Function:** One of the error constants.
**Notes:** ”Something” went wrong, but I don’t know what...

### 157.10.53 kErrorVersionMismatch = 10

MBS Tools Plugin, Plugin Version: 20.2.

**Function:** One of the error constants.
**Notes:** Version mismatch

## 157.11 class RFCParameterDescriptionMBS

### 157.11.1 class RFCParameterDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a parameter description.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 157.11.2 Methods

### 157.11.3 Constructor

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor

### 157.11.4 Properties

### 157.11.5 Connection as RFCConnectionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The parent connection.
**Notes:** (Read only property)

### 157.11.6 decimals as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Gives the number of decimals in case of a packed number (BCD)
**Notes:** (Read only property)

### 157.11.7 defaultValue as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Default value as defined in SE37.
**Notes:** (Read only property)

### 157.11.8 Direction as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Specifies whether the parameter is an input, output or bi-directional parameter.
**Notes:** (Read only property)

### 157.11.9 isOptional as Boolean

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Specifies whether this parameter is defined as optional in SE37.
**Notes:**

True is optional, false non-optional.
(Read only property)

### 157.11.10 Name as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parameter name.
**Notes:** (Read only property)

### 157.11.11 nucLength as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parameter length in bytes in a 1-byte-per-SAP_CHAR system.
**Notes:** (Read only property)

### 157.11.12 parameterText as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Description text of the parameter as defined in SE37.
**Notes:** (Read only property)

### 157.11.13 Parent as Variant

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The parent object.
**Notes:** (Read only property)

### 157.11.14 Type as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parameter data type.
**Notes:** (Read only property)

### 157.11.15 TypeDescription as RFCTypeDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The structure definition in case this parameter is a structure or table.
**Notes:**

May be nil for other parameter types.
(Read only property)

### 157.11.16 TypeString as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The type as string.
**Notes:**

Convenience property so you can see type in debugger.
(Read only property)

### 157.11.17 ucLength as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parameter length in bytes in a 2-byte-per-SAP_CHAR system.
**Notes:** (Read only property)

### 157.11.18 Constants

### 157.11.19 kDirectionChanging = 3

MBS Tools Plugin, Plugin Version: 20.2.

**Function:** One of the direction mode constants.
**Notes:** Import and export parameter. This corresponds to ABAP CHANGING parameter.

### 157.11.20 kDirectionExport = 2

MBS Tools Plugin, Plugin Version: 20.2.

**Function:** One of the direction mode constants.
**Notes:** Export parameter. This corresponds to ABAP EXPORTING parameter.

### 157.11.21 kDirectionImport = 1

MBS Tools Plugin, Plugin Version: 20.2.

**Function:** One of the direction mode constants.
**Notes:** Import parameter. This corresponds to ABAP IMPORTING parameter.

### 157.11.22 kDirectionTable = 7

MBS Tools Plugin, Plugin Version: 20.2.

**Function:** One of the direction mode constants.
**Notes:** Table parameter. This corresponds to ABAP TABLES parameter.

## 157.12 class RFCStructureMBS

### 157.12.1 class RFCStructureMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a structure in a RFC connection.
**Notes:** Subclass of the RFCContainerMBS class.

### 157.12.2 Methods

### 157.12.3 Clone as RFCStructureMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a copy of the given structure and returns the handle to the new object.

### 157.12.4 Constructor(typeDescription as RFCTypeDescriptionMBS)

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates an internal structure data object and returns the handle to the structure object.

### 157.12.5 Destructor

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destructor.

## 157.13 class RFCTableMBS

### 157.13.1 class RFCTableMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a table in a RFC connection.
**Notes:** Subclass of the RFCContainerMBS class.

### 157.13.2 Methods

### 157.13.3 AppendNewRow as RFCStructureMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new row and appends it at the end of the table.

### 157.13.4 AppendNewRows(numRows as Integer)

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Appends a set of new empty rows at the end of the table and moves the table cursor to the first new row.

### 157.13.5 AppendRow(row as RFCStructureMBS)

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Appends the given structure at the end of the table.

### 157.13.6 Clone as RFCTableMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a copy of the given table and returns the handle to the new table.

### 157.13.7 Constructor(TypeDescription as RFCTypeDescriptionMBS)

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a internal table object and returns the handle to the table.

### 157.13.8 CurrentRow as RFCStructureMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Gets the structure handle to the current row.

### 157.13.9 DeleteAllRows

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Deletes all rows from the table.

### 157.13.10 DeleteCurrentRow

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Deletes the current row from the table.

### 157.13.11 Destructor

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destructor.

### 157.13.12 InsertNewRow as RFCStructureMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new row and inserts it at the current position of the table cursor.

### 157.13.13 InsertRow(row as RFCStructureMBS)

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Inserts the given structure at the current position of the table cursor.

### 157.13.14 MoveTo(row as Integer)

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Moves the cursor from the current position to the position specified by the index.

### 157.13.15 MoveToFirstRow

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Moves the current position to the first row of the table.

### 157.13.16 MoveToLastRow

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Moves the current position to the last row of the table.

### 157.13.17 MoveToNextRow

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Moves the cursor from the current position to the next row.

### 157.13.18 MoveToPreviousRow

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Moves the cursor from the current position to the previours row.

### 157.13.19 ReserveCapacity(numRows as Integer)

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reserves memory without changing the size of a table so that new rows can be appended without new memory allocation.

### 157.13.20 Properties

### 157.13.21 RowCount as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Gets the number of the rows contained in the table.
**Notes:** (Read only property)

### 157.13.22 RowType as RFCTypeDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Gets the type descriptor of the table rows.
**Notes:** (Read only property)

## 157.14 class RFCTransactionMBS

### 157.14.1 class RFCTransactionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a transaction.

### 157.14.2 Methods

### 157.14.3 ConfirmTransaction

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** After SubmitTransaction has finally succeeded, ConfirmTransaction cleans up the transaction handling table in the backend.
**Notes:**

Caution:
After this call the backend is no longer protected against this TID. So another SubmitTransaction would result in a duplicate.

### 157.14.4 Constructor(connection as RFCConnectionMBS, TransactionID as String, QueueName as String)

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a container for executing a (multi-step) transactional call.
**Notes:**

TransactionID: trasanction ID used to identify the transaction;
queueName: queue name associated with the transaction. If it is "" or empty, the transaction is for tRfc

### 157.14.5 Destructor

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destructor.

### 157.14.6 InvokeInTransaction(funcHandle as RFCFunctionMBS)

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Puts a tRfc or qRfc call into the given transaction.
**Notes:**

Can be used multiple times within one transaction handle.
funcHandle: function handle that identifies the Rfc function;

### 157.14.7 SubmitTransaction

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Executes all function modules in the backend system, that have accumulated in the transaction so far.
**Notes:** This step can be repeated until it finally succeeds (RFC_OK). The transaction handling in the backend system protects against duplicates.

### 157.14.8 Properties

### 157.14.9 Handle as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read only property)

### 157.14.10 TransactionID as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Retrieves a unique 24-digit transaction ID from the SAP backend system.
**Notes:** (Read only property)

# 157.15 class RFCTypeDescriptionMBS

## 157.15.1 class RFCTypeDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a type definition.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 157.15.2 Methods

## 157.15.3 Constructor

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

## 157.15.4 CreateStructure as RFCStructureMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates an internal structure data object and returns the handle to the structure object.

## 157.15.5 CreateTable as RFCTableMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a internal table object and returns the handle to the table.

## 157.15.6 FieldDescription(Index as Integer) as RFCFieldDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads the field description of the structure's indexth field.
See also:

- 157.15.7 FieldDescription(Name as String) as RFCFieldDescriptionMBS 23666

### 157.15.7 FieldDescription(Name as String) as RFCFieldDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads the field description of a field given by name.
See also:

- 157.15.6 FieldDescription(Index as Integer) as RFCFieldDescriptionMBS 23665

### 157.15.8 FieldDescriptions as RFCFieldDescriptionMBS()

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads all the field descriptions.

### 157.15.9 Properties

### 157.15.10 Connection as RFCConnectionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The connection owning this object.
**Notes:** (Read only property)

### 157.15.11 FieldCount as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of fields for this type.
**Notes:** (Read only property)

### 157.15.12 Handle as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read only property)

### 157.15.13 Name as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The name of the type.
**Notes:** (Read only property)

### 157.15.14 Parent as Variant

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The parent object.
**Notes:** (Read only property)

# Chapter 158

# SATSolver

## 158.1 class LGLAbortedExceptionMBS

### 158.1.1 class LGLAbortedExceptionMBS

MBS Tools Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The exception used to report fatal errors in SAT Solver.
**Notes:** Subclass of the RuntimeException class.

### 158.1.2 Blog Entries

- MBS Xojo Plugins, version 21.3pr6

### 158.1.3 Blog Entries

- MBS Xojo Plugins, version 21.3pr6

## 158.2 class LGLMBS

### 158.2.1 class LGLMBS

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for the SAT Solver from lingeling.
**Notes:**

Based on lingeling project here:
https://github.com/arminbiere/lingeling
and
http://fmv.jku.at/lingeling/

### 158.2.8 Methods

### 158.2.9 Add(lit as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds a value.

### 158.2.10 Assume(lit as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Assume single units.

### 158.2.11 CAssume(lit as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Assume clause (at most one)

### 158.2.12 Clone as LGLMBS

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Clones the object.
**Notes:** Both 'Cloning' and 'Forking' can be used to implement 'Push & Pop', but the asymmetric forking is more similar to the classical way of implementing it, needs less resources since for instance eliminated

variables do not occupy any memory in the children, but requires lifting back satisfying assignments explicitly (through the whole parent chain). If these full satisfying assignments are really needed actually cloning could be more space efficient too. Assume you want to split the solver into two instances, one with a literal set to false, the other one to true. Then cloning allows you to produce two independent branches, while for forking you need three, since the root / top solver still has to be kept for lifting back a potential assignment.

### 158.2.13 Constructor

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor.
**Notes:** Creates new empty object.

### 158.2.14 DefaultOption(Name as String) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries default value for an option.

### 158.2.15 Deref(lit as Integer) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries value.
**Notes:**

neg=false, pos=true
Returns -1 if lit is bigger then MaxVar.

### 158.2.16 Failed(lit as Integer) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Checks failed flag for given item.
**Notes:**

neg=false, pos=true
for assumptions.

### 158.2.17 Fixate

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Add assumptions as units

### 158.2.18 Fixed(lit as Integer) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Checks fixed flag.
**Notes:**

neg=false, pos=true
Toplevel

### 158.2.19 FlushCache

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Flush all learned clauses.

### 158.2.20 FlushTimers

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Flush timers.

### 158.2.21 Fork as LGLMBS

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Forks the object.
**Notes:**

'Forking' copies only irredundant clauses and also uses internal variable indices of the parent as external variable indices. Thus 'parent' and the forked off 'child' do neither exactly work the same way, nor do they use from the API point of view the same set of variables. They are satisfiability equivalent. If the child becomes unsatisfiable the parent can be assumed to be unsatisfiable too and thus 'join' would just add the empty clause to the parent. If the child produces a satisfying assignment, this assignment is turned into an assignment of the parent by 'join'. Parents can be forked multiple times. A child has exactly one parent. Parents and children can be released independently. Between 'Fork' and 'Join' no other operations but

further 'Fork' are allowed. The effect ot multiple 'Join' with the same parent is unclear at this point. The same memory manager is use for the child and the parent. Options, prefix, output file and the callbacks for 'getime' and 'Abort' are copied too (if set).

Both 'Cloning' and 'Forking' can be used to implement 'Push & Pop', but the asymmetric forking is more similar to the classical way of implementing it, needs less resources since for instance eliminated variables do not occupy any memory in the children, but requires lifting back satisfying assignments explicitly (through the whole parent chain). If these full satisfying assignments are really needed actually cloning could be more space efficient too. Assume you want to split the solver into two instances, one with a literal set to false, the other one to true. Then cloning allows you to produce two independent branches, while for forking you need three, since the root / top solver still has to be kept for lifting back a potential assignment.

### 158.2.22 Freeze(lit as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Freezes the given item.

### 158.2.23 Frozen(lit as Integer) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries frozen state.

### 158.2.24 GetOptionMinMax(Name as String, byref min as Integer, byref max as Integer) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries current value, minimum and maximum values.

### 158.2.25 HasOption(Name as String) as Boolean

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Checks if the given option is set.

### 158.2.26 IncVar as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Increases variables by one.

### 158.2.27 Join(Child as LGLMBS) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Joins back forked child.

### 158.2.28 LibVersion as String

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries library version.
**Example:**

Print "LGL "+LGLMBS.LibVersion

### 158.2.29 Lookahead as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a good look ahead literal or zero if all potential literals have been eliminated or have been used as blocking literals in blocked clause elimination.
**Notes:** Zero is also returned if the formula is already inconsistent. The lookahead literal is made usable again, for instance if it was not frozen during a previous SAT call and thus implicitly became melted. Therefore it can be added in a unit clause.

### 158.2.30 Melt(lit as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Melts a literal.

### 158.2.31 MeltAll

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Melt all literals.

### 158.2.32 ParseFile(File as FolderItem, force as boolean = false) as String

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parses data file.
**Notes:** Returns empty text on success or error message from parser.
See also:

- 158.2.33 ParseFile(File as FolderItem, force as boolean, byref LineNo as Integer, byref Max as Integer) as String 23676

### 158.2.33 ParseFile(File as FolderItem, force as boolean, byref LineNo as Integer, byref Max as Integer) as String

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parses data file.
**Notes:** Returns empty text on success or error message from parser.
See also:

- 158.2.32 ParseFile(File as FolderItem, force as boolean = false) as String 23676

### 158.2.34 ParseFileMT(File as FolderItem, force as boolean = false) as String

MBS Tools Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parses data file.
**Notes:**

Returns empty text on success or error message from parser.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 158.2.35 ParseFileMT(File as FolderItem, force as boolean, byref LineNo as Integer, byref Max as Integer) as String 23677

### 158.2.35 ParseFileMT(File as FolderItem, force as boolean, byref LineNo as Integer, byref Max as Integer) as String

MBS Tools Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parses data file.
**Notes:**

Returns empty text on success or error message from parser.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 158.2.34 ParseFileMT(File as FolderItem, force as boolean = false) as String 23676

### 158.2.36 ParsePath(Path as String, force as boolean = false) as String

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parses data file given by path.
**Notes:**

Returns empty text on success or error message from parser.

On MacOS and Linux, if file has the following extensions, the file will be decompressed with command line tool and then parsed:

| | |
|---|---|
| .gz | gzip |
| .xz | xz |
| .bz2 | bzip2 |
| .zip | unzip |
| .7z | 7x |

See also:

- 158.2.37 ParsePath(Path as String, force as boolean, byref LineNo as Integer, byref Max as Integer) as String 23678

### 158.2.37 ParsePath(Path as String, force as boolean, byref LineNo as Integer, byref Max as Integer) as String

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parses data file given by path.
**Notes:**

Returns empty text on success or error message from parser.

On MacOS and Linux, if file has the following extensions, the file will be decompressed with command line tool and then parsed:

| | |
|---|---|
| .gz | gzip |
| .xz | xz |
| .bz2 | bzip2 |
| .zip | unzip |
| .7z | 7x |

See also:

- 158.2.36 ParsePath(Path as String, force as boolean = false) as String 23677

### 158.2.38 ParsePathMT(Path as String, force as boolean = false) as String

MBS Tools Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parses data file given by path.
**Notes:**

Returns empty text on success or error message from parser.

On MacOS and Linux, if file has the following extensions, the file will be decompressed with command line tool and then parsed:

| | |
|---|---|
| .gz | gzip |
| .xz | xz |
| .bz2 | bzip2 |
| .zip | unzip |
| .7z | 7x |

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 158.2.39 ParsePathMT(Path as String, force as boolean, byref LineNo as Integer, byref Max as Integer) as String 23679

### 158.2.39 ParsePathMT(Path as String, force as boolean, byref LineNo as Integer, byref Max as Integer) as String

MBS Tools Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parses data file given by path.
**Notes:**

Returns empty text on success or error message from parser.

On MacOS and Linux, if file has the following extensions, the file will be decompressed with command line tool and then parsed:

| | |
|---|---|
| .gz | gzip |
| .xz | xz |
| .bz2 | bzip2 |
| .zip | unzip |
| .7z | 7x |

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 158.2.38 ParsePathMT(Path as String, force as boolean = false) as String 23678

### 158.2.40 ParseString(Data as String, force as boolean = false) as String

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parses data file given it as text.
**Notes:**

Returns empty text on success or error message from parser.
Please pass text with data separated with unix line endings (endofline.unix), so you may need to use Re-

placeLineEndings function.
See also:

- 158.2.41 ParseString(Data as String, force as boolean, byref LineNo as Integer, byref Max as Integer) as String 23680

### 158.2.41 ParseString(Data as String, force as boolean, byref LineNo as Integer, byref Max as Integer) as String

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parses data file given it as text.
**Notes:**

Returns empty text on success or error message from parser.
Please pass text with data separated with unix line endings (endofline.unix), so you may need to use ReplaceLineEndings function.
See also:

- 158.2.40 ParseString(Data as String, force as boolean = false) as String 23679

### 158.2.42 ParseStringMT(Data as String, force as boolean = false) as String

MBS Tools Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parses data file given it as text.
**Notes:**

Returns empty text on success or error message from parser.
Please pass text with data separated with unix line endings (endofline.unix), so you may need to use ReplaceLineEndings function.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 158.2.43 ParseStringMT(Data as String, force as boolean, byref LineNo as Integer, byref Max as Integer) as String 23680

### 158.2.43 ParseStringMT(Data as String, force as boolean, byref LineNo as Integer, byref Max as Integer) as String

MBS Tools Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parses data file given it as text.
**Notes:**

Returns empty text on success or error message from parser.
Please pass text with data separated with unix line endings (endofline.unix), so you may need to use ReplaceLineEndings function.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 158.2.42 ParseStringMT(Data as String, force as boolean = false) as String 23680

### 158.2.44 Print(File as FolderItem = nil)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Print system to file or stdout.
**Notes:**

Pass nil to use stdout.
Remaining in DIMACS format

### 158.2.45 PrintAll(File as FolderItem = nil)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Prints all values.
**Notes:**

Including units & equivs.
Pass nil to use stdout.

### 158.2.46 PrintBanner(Name as String, Prefix as String, File as FolderItem = nil)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Prints banner including version of library.
**Notes:**

Pass nil to use stdout.

see lglbnr function.

### 158.2.47 PrintOptions(prefix as string, IgnoreSome as boolean)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Print all options to stdout.

### 158.2.48 PrintPCS(mixed as boolean)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Prints PCS file.

### 158.2.49 PrintRangeOptions

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Print range options to stdout.

### 158.2.50 PrintSizes

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Prints data structure sizes.

### 158.2.51 PrintStats

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Prints statistics to stdout.

### 158.2.52 PrintUsage

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Print usage "-h".

### 158.2.53 ReadOptionFile(File as FolderItem) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads the option file.

### 158.2.54 Reconstk(byref Start as Ptr, byref Top as Ptr)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Set Start and Top to the 'start' and 'top' of the reconstruction stack, which is used in BCE, BVE and CCE for reconstructing a solution after eliminating variables or clauses.
**Notes:** These pointers are only valid until the next Sat or Simp call.

### 158.2.55 ReduceCache

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reset cache size.

### 158.2.56 Representative(lit as Integer) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Return representative from equivalence class if literal is not top-level assigned nor eliminated.

### 158.2.57 ResetPhase(lit as integer)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Set default phase of a literal.
**Notes:** Stop forcing phase in decisions.

### 158.2.58 Reusable(lit as Integer) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Checks if item can be reused.
**Notes:** If a literal was not frozen at the last call to Sat (or Simp) it becomes 'unusable' after the next call

even though it might not have been used as blocking literal etc.

### 158.2.59 Reuse(lit as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reuses an item.
**Notes:** If a literal was not frozen at the last call to Sat (or Simp) it becomes 'unusable' after the next call even though it might not have been used as blocking literal etc.

### 158.2.60 Sat as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the system.
**Notes:** May output messages to stdout.

### 158.2.61 SatMT as Integer

MBS Tools Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the system.
**Notes:**

May output messages to stdout.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

### 158.2.62 SetAPITraceFile(File as FolderItem)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a text file and let the library output to this file.
**Notes:** Logs API calls to the library.

### 158.2.63 SetID(tid as Integer, tids as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Set individual ids for logging and statistics.

### 158.2.64 SetImportant(lit as integer)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Prefer decisions on 'important' variables.

### 158.2.65 SetOutputFile(File as FolderItem)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates an output file and let the library output to this file.
**Notes:** Sets output file for report.

### 158.2.66 SetPhase(lit as integer)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Set default phase of a literal.
**Notes:** Any decision on this literal will always try this phase. Note, that this function does not have any effect on eliminated variables. Further equivalent variables share the same forced phase and thus if they are set to different default phases, only the last set operation will be kept.

### 158.2.67 SetPhases

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the phases.
**Notes:** Assume the solver is in the SATISFIABLE state (after Sat or Simp), then calling SetPhases will copy the current assignment as default phases.

### 158.2.68 SetTraceFile(File as FolderItem)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a text file and let the library output to this file.
**Notes:**

Set trace output file.
Logs trace calls to the library.

### 158.2.69 Simp(iterations as integer) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the system.
**Notes:** Iterations must be >= 0.

### 158.2.70 TraverseAllClauses

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Loops over all clauses and calls TraverseAllClauses event for each.
**Notes:** Internally calls TraverseUnits, TraverseEquivalences and TraverseRemainingClauses.
See also:

- 158.2.96 TraverseAllClauses(Lit as Integer) 23691

### 158.2.71 TraverseEquivalences

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Loops over equivalences and calls TraverseEquivalences event for each.
See also:

- 158.2.97 TraverseEquivalences(Lit as Integer, Representation as Integer) 23691

### 158.2.72 TraverseRemainingClauses

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Loops over remaining clauses and calls TraverseRemainingClauses event for each.
See also:

- 158.2.98 TraverseRemainingClauses(Lit as Integer) 23691

### 158.2.73 TraverseUnits

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Loops over units and calls TraverseUnits event for each.
See also:

- 158.2.99 TraverseUnits(Unit as Integer) 23691

### 158.2.74 Unclone(Child as LGLMBS) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Unclones the object.

### 158.2.75 Usable(lit as Integer) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Checks whether an item is usable.
**Notes:** If a literal was not frozen at the last call to Sat (or Simp) it becomes 'unusable' after the next call even though it might not have been used as blocking literal etc.

### 158.2.76 Properties

### 158.2.77 Aborted as Boolean

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The aborted status.
**Notes:**

We set this to true when the processing is aborted due to an error.
See AbortMessage property for the message.
(Read and Write property)
See also:

- 158.2.95 Aborted 23690

### 158.2.78 AbortMessage as String

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The abort reason message.
**Notes:** (Read only property)

### 158.2.79 Bytes as Int64

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries current size in bytes.
**Notes:** (Read only property)

### 158.2.80 Changed as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Model changed.
**Notes:** (Read only property)

### 158.2.81 Confs as Int64

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries number of conflicts.
**Notes:** (Read only property)

### 158.2.82 Decs as Int64

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries number of decisions.
**Notes:** (Read only property)

### 158.2.83 Handle as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read only property)

### 158.2.84 Inconsistent as Boolean

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Contains empty clause?
**Notes:** (Read only property)

### 158.2.85 MaxMegaBytes as Double

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Maximum memory usage in megabytes.
**Notes:** (Read only property)

### 158.2.86 MaxVar as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries maximum index of variables.
**Notes:** (Read only property)

### 158.2.87 MegaBytes as Double

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries current size in memory as megabytes.
**Notes:** (Read only property)

### 158.2.88 Options as Dictionary

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries all options with values.
**Notes:** (Read only property)

### 158.2.89 Prefix as String

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The prefix for messages.
**Notes:** (Read and Write property)

### 158.2.90 ProcessTime as Double

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries CPU usage time used.
**Notes:**

Value is -1 on Windows as we don't have the unix functions there.
(Read only property)

### 158.2.91 Props as Int64

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries number of propagations.
**Notes:** (Read only property)

### 158.2.92 Seconds as Double

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns time needed.
**Notes:** (Read only property)

### 158.2.93 Option(Name as String) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries or sets option value.
**Notes:** (Read and Write computed property)

### 158.2.94 Events

### 158.2.95 Aborted

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called when processing is aborted due to an error.
**Notes:**

Errors are printed to stdout.
See AbortMessage property for the message.
See also:

- 158.2.77 Aborted as Boolean 23687

### 158.2.96 TraverseAllClauses(Lit as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called for TraverseAllClauses method.
See also:

- 158.2.70 TraverseAllClauses 23686

### 158.2.97 TraverseEquivalences(Lit as Integer, Representation as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called for TraverseEquivalences method.
See also:

- 158.2.71 TraverseEquivalences 23686

### 158.2.98 TraverseRemainingClauses(Lit as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called for TraverseRemainingClauses method.
See also:

- 158.2.72 TraverseRemainingClauses 23686

### 158.2.99 TraverseUnits(Unit as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called for TraverseUnits method.
See also:

- 158.2.73 TraverseUnits 23687

### 158.2.100 Constants

### 158.2.101 LGL_SATISFIABLE = 10

MBS Tools Plugin, Plugin Version: 20.0.

**Function:** One of the SAT result values.
**Notes:** The system is satisfiable.

### 158.2.102 LGL_UNKNOWN = 0

MBS Tools Plugin, Plugin Version: 20.0.

**Function:** One of the SAT result values.
**Notes:** It is not known whether it is satisfiable.

### 158.2.103 LGL_UNSATISFIABLE = 20

MBS Tools Plugin, Plugin Version: 20.0.

**Function:** One of the SAT result values.
**Notes:** The system is not satisfiable.

# Chapter 159

# SceneKit

## 159.1 control DesktopSCNControlMBS

### 159.1.1 control DesktopSCNControlMBS

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** The Xojo control for a SCNViewMBS.
**Notes:**

This control embeds a special SCNView subclass.
Designed for Xojo 2021r3 and newer.
Please use view property to access the underlaying object and set properties.

To learn about rendering events, please check here:
https://developer.apple.com/documentation/scenekit/scnscenerendererdelegate?language=objc

### 159.1.2 Blog Entries

- News from the MBS Xojo Plugins in version 21.5
- New desktop controls
- Three new controls for iOS in Xojo
- MBS Xojo Plugins, version 20.6pr3
- MonkeyBread Software Releases the MBS Xojo Plugins in version 20.2
- MBS Xojo Plugins, version 20.2pr1
- MBS Xojo Plugins, version 18.4pr8

### 159.1.3 Xojo Developer Magazine

- 19.6, page 45: Rotating Christmas Tree, Using the MBS Plugins to create an animated 3D Christmas tree by Stefanie Juchmes
- 18.4, page 39: On the Scene Again (Part 3), Getting Started with SceneKit by Stefanie Juchmes
- 18.1, page 26: On the Scene, Getting Started with SceneKit by Stefanie Juchmes

### 159.1.4 Blog Entries

- News from the MBS Xojo Plugins in version 21.5
- New desktop controls
- Three new controls for iOS in Xojo
- MBS Xojo Plugins, version 20.6pr3
- MonkeyBread Software Releases the MBS Xojo Plugins in version 20.2
- MBS Xojo Plugins, version 20.2pr1

### 159.1.6 Properties

### 159.1.7 View as SCNViewMBS

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** The view used in the control.
**Notes:**

Use this object to set more options on the control.
(Read only property)

### 159.1.8 Events

### 159.1.9 BoundsChanged

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The event called when the bounds, but not the frame, changed.

### 159.1.10 Closing

Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:**

The control is about to close.
In older Xojo versions, this event is named Close.

### 159.1.11 ConstructContextualMenu(base as DesktopMenuItem, x as Integer, y as Integer) As Boolean

Plugin Version: 22.1, Platform: macOS, Targets: .

**Function:** This event is called when it is appropriate to display a contextual menu for the control.

### 159.1.12 ContextualMenuItemSelected(selectedItem As DesktopMenuItem) As Boolean

Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** Called when a menuitem is choosen.
**Notes:** This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

### 159.1.13 FocusLost

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:**

The control lost focus.
In older Xojo versions, this event is named LostFocus.

**Notes:** This only fires if the control itself lost focus and not a sub control.

### 159.1.14 FocusReceived

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:**

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
**Notes:** This only fires if the control itself got focus and not a sub control.

### 159.1.15 FrameChanged

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The event called when the frame changed.
**Notes:** This event notifies you, that the control changed it's bounding frame, which is position and/or size.

### 159.1.16 MenuBarSelected

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:**

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

### 159.1.17 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
**Notes:**

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown.
If you return False, the system handles the MouseDown so the above event handlers do not get called.

### 159.1.18 MouseDrag(x as Integer, y as Integer)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** This event fires continuously after the mouse button was pressed inside the Control.
**Notes:**

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

### 159.1.19 MouseUp(x As Integer, y As Integer)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The mouse button was released.
**Notes:** Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

### 159.1.20 Opening

Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:**

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

### 159.1.21 rendererDidApplyAnimations(time as double)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** Tells the control to perform any updates that need to occur after actions and animations are evaluated.
**Notes:**

time: The current system time, in seconds. Use this parameter for any time-based elements of your game logic.

SceneKit calls this method exactly once per frame, so long as the SCNViewMBS object (or other SCNSceneRenderer object) displaying the scene is not paused.

Implement this method to add game logic to the rendering loop. Any changes you make to the scene graph

during this method are immediately reflected in the displayed scene. That is, SceneKit immediately updates the hierarchy of presentation nodes it uses to render the scene (instead of using the SCNTransactionMBS class to ,Äúbatch,Äù your changes).

### 159.1.22 rendererDidApplyConstraints(time as double)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** Invoked on the control once the scene renderer did apply the constraints.
**Notes:**

time The time at which the constraints were simulated.

All modifications done within this method don't go through the transaction model, they are directly applied on the presentation tree.

### 159.1.23 rendererDidRenderScene(scene as SCNSceneMBS, time as double)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** Tells the control that the renderer has rendered the scene.
**Notes:**

scene: The scene object that was rendered.
time: The current system time, in seconds. If your custom rendering involves animation, use this parameter to compute your own animation state.

Implement this method to perform custom drawing after SceneKit has rendered a scene,Äîfor example, to draw overlay content on top of SceneKit content. You should only execute Metal or OpenGL drawing commands (and any setup required to perform them) in this method,Äîthe results of modifying SceneKit objects in this method are undefined.

- To render using Metal, use the renderer parameter to retrieve the scene renderer,Äôs currentRenderCommandEncoder object and encode your own drawing commands. If you need to reference other Metal state, see the properties listed in SCNSceneRenderer.
- To render using OpenGL, simply call the relevant OpenGL drawing commands,ÄîSceneKit automatically makes its OpenGL context the current context before calling this method. If you need to reference the OpenGL context being rendered into, examine the context property of the renderer parameter.

You must draw using the appropriate graphics technology for the view currently being rendered. Use the renderingAPI property of the renderer object to determine whether Metal or OpenGL is in use.

### 159.1.24 rendererDidSimulatePhysics(time as double)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** Tells the control to perform any updates that need to occur after physics simulations are performed.
**Notes:**

time: The current system time, in seconds. Use this parameter for any time-based elements of your game logic.

SceneKit calls this event exactly once per frame, so long as the SCNViewMBS object (or other SCNSceneRenderer object) displaying the scene is not paused.

Implement this event to add game logic to the rendering loop. Any changes you make to the scene graph during this method are immediately reflected in the displayed scene. That is, SceneKit immediately updates the hierarchy of presentation nodes it uses to render the scene (instead of using the SCNTransactionMBS class to ,Äúbatch,Äù your changes).

This event is the last opportunity SceneKit provides for you to change the scene graph before rendering.

### 159.1.25 rendererUpdate(time as double)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** Tells the control to perform any updates that need to occur before actions, animations, and physics are evaluated.
**Notes:**

time: The current system time, in seconds. Use this parameter for any time-based elements of your game logic.

SceneKit calls this method exactly once per frame, so long as the SCNViewMBS object (or other SCNSceneRenderer object) displaying the scene is not paused.

Implement this event to add game logic to the rendering loop. Any changes you make to the scene graph during this method are immediately reflected in the displayed scene. That is, SceneKit immediately updates the hierarchy of presentation nodes it uses to render the scene (instead of using the SCNTransactionMBS class to ,Äúbatch,Äù your changes).

### 159.1.26 rendererWillRenderScene(scene as SCNSceneMBS, time as double)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** Tells the control that the renderer has cleared the viewport and is about to render the scene.
**Notes:**

scene: The SCNSceneMBS object to be rendered.
time: The current system time, in seconds. If your custom rendering involves animation, use this parameter to compute your own animation state.

Implement this event to perform custom drawing before SceneKit renders a scene,Äîfor example, to draw backdrop content underneath SceneKit content. You should only execute Metal or OpenGL drawing commands (and any setup required to perform them) in this event,Äîthe results of modifying SceneKit objects during this event are undefined.

To render using Metal, use the renderer parameter to retrieve the scene renderer,Äôs currentRenderCommandEncoder object and encode your own drawing commands. If you need to reference other Metal state, see the properties listed in SCNSceneRenderer.
To render using OpenGL, simply call the relevant OpenGL drawing commands,ÄîSceneKit automatically makes its OpenGL context the current context before calling this event. If you need to reference the OpenGL context being rendered into, examine the context property of the renderer parameter.

You must draw using the appropriate graphics technology for the view currently being rendered. Use the renderingAPI property of the renderer object to determine whether Metal or OpenGL is in use.

### 159.1.27 ScaleFactorChanged(NewFactor as double)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The backing store scale factor has changed.
**Notes:** Please invalidate any cached bitmaps or other relevant state.

## 159.2 class SCNAccelerationConstraintMBS

### 159.2.1 class SCNAccelerationConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** A SCNAccelerationConstraint caps the acceleration and velocity of a node.

### 159.2.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

### 159.2.3 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

### 159.2.4 Methods

### 159.2.5 accelerationConstraint as SCNAccelerationConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a SCNAccelerationConstraint object.

### 159.2.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a SCNAccelerationConstraint object.

### 159.2.7 Properties

### 159.2.8 damping as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Specifies the damping factor of the receiver.
**Notes:**

Optionally reduce the body's linear velocity each frame to simulate fluid/air friction. Value should be zero or greater. Defaults to 0.1. Animatable.

(Read and Write property)

### 159.2.9 decelerationDistance as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Controls the distance at which the node should start decelerating.
**Notes:**

Defaults to 0. Animatable.
(Read and Write property)

### 159.2.10 maximumLinearAcceleration as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Controls the maximum linear acceleration. Defaults to MAXFLOAT. Animatable.
**Notes:**

The maximum linear acceleration is in m.s^-2
(Read and Write property)

### 159.2.11 maximumLinearVelocity as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Controls the maximum linear velocity. Defaults to MAXFLOAT. Animatable.
**Notes:**

The maximum linear velocity is in m.s
(Read and Write property)

## 159.3 class SCNActionMBS

### 159.3.1 class SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** A simple, reusable animation that changes attributes of any node you attach it to.
**Notes:**

You use actions most often to change the structure and content of the SCNNodeMBS object to which they are attached, but you can also use actions make other changes to the scene. In SceneKit, actions provide an easy way to implement animated behaviors that frequently change in response to user input.

see also
https://developer.apple.com/documentation/scenekit/scnaction
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 159.3.6 Methods

### 159.3.7 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The private constructor.

### 159.3.8 copy as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a copy of the action.

### 159.3.9 fadeIn(duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates an action that changes the opacity of the node to 1.0.
**Notes:**

duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node,Äôs opacity property animates from its current value to 1.0.
This action is reversible; the reverse is created as if the following code had been executed:

SCNActionMBS.fadeOut(Duration)

### 159.3.10 fadeOpacityBy(factor as double, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates an action that adjusts the opacity of a node by a relative value.
**Notes:**

factor: The amount to change the node,Äôs opacity by.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node,Äôs opacity property animates to its new value.
This action is reversible; the reverse is created as if the following code had been executed:

SCNActionMBS.fadeOpacityBy(-factor, duration)

### 159.3.11 fadeOpacityTo(opacity as double, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates an action that adjusts the opacity of a node to a new value.
**Notes:**

opacity: The new opacity value of the node.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node,Äôs opacity property animates to its new value.
This action is not reversible; the reverse of this action has the same duration but does not change anything.

### 159.3.12 fadeOut(duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates an action that changes the opacity of the node to 0.0.
**Notes:**

duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node,Äôs opacity property animates from its current value to 0.0.
This action is reversible; the reverse is created as if the following code had been executed:

SCNActionMBS.fadeIn(duration)

### 159.3.13 group(actions() as SCNActionMBS) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates an action that runs a collection of actions in parallel.
**Notes:**

actions: An array of SCNActionMBS objects.

Returns a new group action object.

When the action executes, the actions that make up the group all start immediately and run in parallel. The duration of the group action is the longest duration among the collection of actions. If an action in the group has a duration less than the group,Äôs duration, the action completes and then idles until the group completes the remaining actions. This matters most when creating a repeating action that repeats a group. This action is reversible; it creates a new group action that contains the reverse of each action specified in the group.

### 159.3.14 hide as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates an action that hides a node.
**Notes:**

When the action executes, the node,Äôs hidden property is set to true.
This action is reversible; the reverse is equivalent to the unhide action.

### 159.3.15 javaScriptActionWithScript(script as string, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates an action that executes a JavaScript script periodically over a specified duration.
**Notes:**

script: A string containing JavaScript source code.
seconds: The duration of the action, in seconds.

SceneKit exposes its classes, methods, and functions in the JavaScript context that runs the script,Äîsee the

SCNJavaScript.h header file for details.

When the action executes, SceneKit runs the script repeatedly until the action,Äôs duration expires. Each time SceneKit runs the script, it computes the elapsed time since the action began executing (as a fraction of the action,Äôs duration between 0.0 and 1.0) and makes it available to the script as a variable named elapsedTime. The script can also reference the SCNNode object running the action as a variable named node.
This action is not reversible; the reverse action executes the same script.

### 159.3.16 moveBy(delta as SCNVector3MBS, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates an action that moves a node relative to its current position.
**Notes:**

delta: A vector that describes the change to be applied to the node,Äôs position.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node,Äôs position property animates from its current position to its new position.
This action is reversible; the reverse is created as if the following code had been executed:

dim reverseDelta as SCNVector3MBS = SCNVector3MBS.Vector(-delta.x, -delta.y, -delta.z)
SCNActionMBS.moveBy( reverseDelta, duration)
See also:

- 159.3.17 moveBy(deltaX as double, deltaY as double, deltaZ as double, duration as double) as SCNActionMBS 23707

### 159.3.17 moveBy(deltaX as double, deltaY as double, deltaZ as double, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates an action that moves a node relative to its current position.
**Notes:**

deltaX: The distance to move the node in the X direction of its parent node,Äôs local coordinate space.
deltaY: The distance to move the node in the Y direction of its parent node,Äôs local coordinate space.
deltaZ: The distance to move the node in the Z direction of its parent node,Äôs local coordinate space.

duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node,Äôs position property animates from its current position to its new position.
This action is reversible; the reverse is created as if the following code had been executed:

SCNActionMBS.moveBy( -deltaX, -deltaY, -deltaZ, duration)
See also:

- 159.3.16 moveBy(delta as SCNVector3MBS, duration as double) as SCNActionMBS 23707

### 159.3.18 moveTo(location as SCNVector3MBS, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates an action that moves a node to a new position.
**Notes:**

location: The coordinates for the node,Äôs new position in its parent node,Äôs local coordinate space.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node,Äôs position property animates from its current position to its new position.
This action is not reversible; the reverse of this action has the same duration but does not move the node.

### 159.3.19 removeFromParentNode as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates an action that removes the node from its parent.
**Notes:**

When the action executes, the node is immediately removed from its parent.
This action is not reversible; the reverse of this action is the same action.

### 159.3.20 repeatAction(action as SCNActionMBS, count as integer) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates an action that repeats another action a specified number of times.
**Notes:**

action: The action to be executed.
count: The number of times to execute the action.

Returns a new action object.

When the action executes, the associated action runs to completion and then repeats, until the count is reached.
This action is reversible; it creates a new action that is the reverse of the specified action and then repeats it the same number of times.

### 159.3.21 repeatActionForever(action as SCNActionMBS) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates an action that repeats another action forever.
**Notes:**

action: The action to execute.

Returns a new action object.

When the action executes, the associated action runs to completion and then repeats.
This action is reversible; it creates a new action that is the reverse of the specified action and then repeats it forever.
Note
The action to be repeated must have a non-instantaneous duration.

### 159.3.22 reversedAction as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates an action that reverses the behavior of another action.
**Notes:** This method always returns an action object; however, not all actions are reversible. When reversed, some actions return an object that either does nothing or performs the same action as the original action. For details on how an action is reversed, see the description of the class method used to create that action.

### 159.3.23 rotateBy(xAngle as double, yAngle as double, zAngle as double, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates an action that rotates the node in each of the three principal axes by angles relative to its current orientation.
**Notes:**

xAngle: The amount to rotate the node counterclockwise around the x-axis of its local coordinate space, in radians.
yAngle: The amount to rotate the node counterclockwise around the y-axis of its local coordinate space, in radians.
zAngle: The amount to rotate the node counterclockwise around the z-axis of its local coordinate space, in radians.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node,Äôs rotation property animates to the new angle.
This action is reversible; the reverse is created as if the following code had been executed:

SCNActionMBS.rotateBy( -xAngle, -yAngle, -zAngle, duration)

### 159.3.24 rotateByAngle(angle as double, axis as SCNVector3MBS, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates an action that rotates the node by an angle around a specified axis.
**Notes:**

angle: The amount to rotate the node counterclockwise around the specified axis, in radians.
axis: A vector in the node,Äôs local coordinate space whose direction specifies the axis of rotation.
duration: The duration, in seconds, of the animation.

Return a new action object.

When the action executes, the node,Äôs rotation property animates to the new angle.
This action is reversible; the reverse is created as if the following code had been executed:

SCNActionMBS.rotateByAngle( -angle, axis, duration)

### 159.3.25 rotateTo(xAngle as double, yAngle as double, zAngle as double, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates an action that rotates the node to absolute angles in each of the three principal axes.
**Notes:**

xAngle: The amount to rotate the node counterclockwise around the x-axis of its local coordinate space, in radians.
yAngle: The amount to rotate the node counterclockwise around the y-axis of its local coordinate space, in radians.
zAngle: The amount to rotate the node counterclockwise around the z-axis of its local coordinate space, in radians.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node,Äôs rotation property animates to the new angle. Calling this method is equivalent to calling rotateTo() and passing false for the shortestUnitArc parameter.
This action is not reversible; the reverse of this action has the same duration but does not change anything.
See also:

- 159.3.26 rotateTo(xAngle as double, yAngle as double, zAngle as double, duration as double, shortestUnitArc as boolean) as SCNActionMBS 23711

### 159.3.26 rotateTo(xAngle as double, yAngle as double, zAngle as double, duration as double, shortestUnitArc as boolean) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates an action that rotates the node to absolute angles in each of the three principal axes.
**Notes:**

xAngle: The amount to rotate the node counterclockwise around the x-axis of its local coordinate space, in radians.
yAngle: The amount to rotate the node counterclockwise around the y-axis of its local coordinate space, in radians.
zAngle: The amount to rotate the node counterclockwise around the z-axis of its local coordinate space, in radians.
duration: The duration, in seconds, of the animation.
shortestUnitArc: If false (the default), the animation interpolates each component of the node,Äôs rotation between its current value and the new value. If true, the animation makes the most direct rotation possible

from the node,Äôs current orientation to the new orientation.

Returns a new action object.

When the action executes, the node,Äôs rotation property animates to the new angle.
This action is not reversible; the reverse of this action has the same duration but does not change anything.
See also:

- 159.3.25 rotateTo(xAngle as double, yAngle as double, zAngle as double, duration as double) as SCNActionMBS 23711

### 159.3.27 rotateToAxisAngle(axisAngle as SCNVector4MBS, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates an action that rotates the node to an absolute angle around a specified axis.
**Notes:**

axisAngle: A four-component vector whose first three components are a vector in the node,Äôs local coordinate space specifying an axis and whose fourth component is the amount to rotate the node counterclockwise around that axis, in radians.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node,Äôs rotation property animates to the new angle.
This action is not reversible; the reverse of this action has the same duration but does not change anything.

### 159.3.28 runBlock(del as SCNActionRunBlockMBS, tag as variant = nil) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates an action that executes run the given method.
**Notes:**

When the action executes, SceneKit calls the delegate method. This action takes place instantaneously.
This action is not reversible; the reverse action executes the same delegate method.

### 159.3.29 scaleBy(scale as double, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates an action that uniformly changes the scale factor of a node by a relative value.
**Notes:**

scale: The amount of change to make to all three components of the node,Äôs scale.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node,Äôs scale property animates to the new value.
This action is reversible; the reverse is created as if the following code had been executed:

SCNActionMBS.scaleBy( -scale, duration)

### 159.3.30 scaleTo(scale as double, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates an action that uniformly changes the scale factor of a node to an absolute value.
**Notes:**

scale: The new value for all three components of the node,Äôs scale.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node,Äôs scale property animates to the new value.
This action is not reversible; the reverse of this action has the same duration but does not change anything.

### 159.3.31 sequence(actions() as SCNActionMBS) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates an action that runs a collection of actions sequentially.
**Notes:**

actions: An array of SCNActionMBS objects.
Returns a new sequence action object.

When the action executes, the first action in the sequence starts and runs to completion. Subsequent actions in the sequence run in a similar fashion until all of the actions in the sequence have executed. The duration of the sequence action is the sum of the durations of the actions in the sequence.

This action is reversible; it creates a new sequence action that reverses the order of the actions. Each action in the reversed sequence is itself reversed.

### 159.3.32 unhide as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates an action that ensures a node is not hidden.
**Notes:**

When the action executes, the node,Äôs hidden property is set to false.
This action is reversible; the reverse is equivalent to the hide action.

### 159.3.33 wait(duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates an action that idles for a specified period of time.
**Notes:**

When the action executes, the action waits for the specified amount of time and then ends. This is typically used as part of a sequence of actions to insert a delay between two other actions. You might also use it in conjunction with the runAction method to trigger code that needs to run at a later time.
This action is not reversible; the reverse of this action is the same action.

### 159.3.34 Properties

### 159.3.35 duration as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The duration required to complete an action.
**Notes:**

This is the expected duration of an action,Äôs animation. The actual time an action takes to complete is modified by the action,Äôs timingMode property.
(Read and Write property)

### 159.3.36 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object references.
**Notes:** (Read and Write property)

### 159.3.37 speed as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** A speed factor that modifies how fast an action runs.
**Notes:**

The speed factor adjusts how fast an action,Äôs animation runs. For example, a speed factor of 2.0 means the animation runs twice as fast.
(Read and Write property)

### 159.3.38 timingMode as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The timing mode used to execute an action.
**Notes:**

For possible values, see TimingMode constants. The default value is TimingModeLinear.
(Read and Write property)

### 159.3.39 Constants

### 159.3.40 TimingModeEaseIn = 1

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the constants affecting the animation curve of an action, used by the timingMode property.
**Notes:** Ease-in pacing. The animation begins slowly, and then speeds up as it progresses.

### 159.3.41 TimingModeEaseInEaseOut = 3

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the constants affecting the animation curve of an action, used by the timingMode property.
**Notes:** Ease-in ease-out pacing. The animation begins slowly, accelerates through the middle of its duration, and then slows again before completing.

### 159.3.42 TimingModeEaseOut = 2

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the constants affecting the animation curve of an action, used by the timingMode property.
**Notes:** Ease-out pacing. The animation begins quickly, and then slows as it completes.

### 159.3.43 TimingModeLinear = 0

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the constants affecting the animation curve of an action, used by the timingMode property.
**Notes:** Linear pacing. The animation progresses evenly throughout its duration.

### 159.3.44 Delegates

### 159.3.45 SCNActionRunBlockMBS(node as SCNNodeMBS, tag as variant)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop only.

**Function:** The delegate for the runBlock method.

## 159.4 class SCNAudioPlayerMBS

### 159.4.1 class SCNAudioPlayerMBS

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

**Function:** A controller for playback of a positional audio source in a SceneKit scene.
**Example:**

```
Dim file As FolderItem = SpecialFolder.Desktop.Child("Laser.wav")
audioSource = New SCNAudioSourceMBS(file)
audioPlayer = New MySCNAudioPlayerMBS(audioSource)
audioSource.Volume = 1.0
audioSource.Loops = true
audioSource.load

// now build your nodes
dim someNode as SCNNodeMBS

// show scene
MyView.scene = MyScene
MyView.play

// and add player to plays
someNode.addAudioPlayer(audioPlayer)
```

**Notes:** An SCNAudioPlayerMBS object controls playback of a positional audio source in a SceneKit scene. To use positional audio, first create a reusable SCNAudioSourceMBS or AVAudioNodeMBS object to provide an audio stream. Then, create an audio player to control the playback of that audio source. Finally, attach the audio player to an SCNNodeMBS object for spatialized 3D audio playback based on the position of that node relative to the scene,Äôs audioListener node.

### 159.4.2 Blog Entries

### 159.4.4 Methods

### 159.4.5 audioPlayerWithAVAudioNode(audioNode as Variant) as SCNAudioPlayerMBS

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

**Function:** Returns an audio player (creating one if necessary) to play an audio node.
**Notes:**

Please pass a AVAudioNodeMBS class.

Creating an audio player from an audio node does not attach that node to an AVAudioEngine object for mixing and playback,Äîinstead, this option allows you to build your own audio node graph for custom effects before manually adding it to the audioEngine object of the view (or other SceneKit renderer) displaying the scene. Then, after you attach the audio player to an SCNNodeMBS object, SceneKit continually updates the audio node,Äôs 3D mixing parameters to match the position of the scene node.

When you use this method, SceneKit creates an audio player for the specified AVAudioNodeMBS object or, if an audio player for that node already exists and is not in use, SceneKit reuses the existing player object.

### 159.4.6 audioPlayerWithSource(audioSource as SCNAudioSourceMBS) as SCNAudioPlayerMBS

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

**Function:** Returns an audio player (creating one if necessary) to play a simple audio source.
**Notes:**

An SCNAudioSourceMBS object represents a distinct source of audio (for example, a sound file) that can be reused and shared by many player objects. Use this method to create an audio player from such a source. When you use this method, SceneKit creates an audio player for the specified SCNAudioSourceMBS object or, if an audio player for that source already exists and is not in use, SceneKit reuses the existing player object.

If instead you want to attach a more complex audio setup to a position in your scene,Äîsuch as a mixer that varies several audio inputs in response to user input,Äîbuild that setup using AVAudioNodeMBS objects and create a player for it with the audioPlayerWithAVAudioNode() method.

### 159.4.7 Constructor(audioSource as SCNAudioSourceMBS)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

**Function:** Initializes an audio player for playing the specified simple audio source.

**Notes:** Using this initializer is typically not necessary. Instead, call the audioPlayerWithSource() method, which returns a cached audio player object if one for the specified audio source has already been created and is available for use.

### 159.4.8 Properties

### 159.4.9 audioNode as Variant

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

**Function:** The audio node SceneKit uses for mixing audio from this player.
**Notes:**

Value is an AVAudioNodeMBS class.
(Read only property)

### 159.4.10 audioSource as SCNAudioSourceMBS

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

**Function:** The source of audio played by this player.
**Notes:**

An SCNAudioSourceMBS object represents a distinct source of audio,Äîfor example, a sound file,Äîthat can be reused and shared by many player objects. Use a player,Äôs audio source to configure the default values for playback parameters such as volume and reverb. To vary those parameters in real time during playback, use the audioNode property to work with the underlying AVAudioNodeMBS object.
If the player was created with the audioPlayerWithAVAudioNode() method, this property,Äôs value is nil.
(Read only property)

### 159.4.11 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 159.4.12 Events

### 159.4.13 DidFinishPlayback

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: .

**Function:** An event called by SceneKit when playback of the player,Äôs audio source has completed.
**Notes:** The block takes no parameters and returns no value. Use this block to perform actions when a sound finishes playing. For example, after a line of spoken character dialogue finishes playing, you might start playing another line of dialogue.

### 159.4.14 WillStartPlayback

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: .

**Function:** An event called by SceneKit when playback of the player,Äôs audio source is about to begin.

## 159.5 class SCNAudioSourceMBS

### 159.5.1 class SCNAudioSourceMBS

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

**Function:** A simple, reusable audio source,Äîmusic or sound effects loaded from a file,Äîfor use in positional audio playback.
**Example:**

```
Dim file As FolderItem = SpecialFolder.Desktop.Child("Laser.wav")
audioSource = New SCNAudioSourceMBS(file)
audioSource.Volume = 1.0
audioSource.Loops = true
audioSource.load

// now use for SCNAudioPlayerMBS class
```

**Notes:** To create positional audio effects, create an SCNAudioPlayerMBS object from the audio source to control playback, and add that player object to an SCNNodeMBS object in your scene. SceneKit then automatically spatializes 3D audio effects based on the position of that node relative to the scene,Äôs audioListener node.

### 159.5.2 Blog Entries

### 159.5.4 Methods

### 159.5.5 audioSourceNamed(Name as String) as SCNAudioSourceMBS

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

**Function:** Returns the audio source associated with the specified filename.
**Notes:**

fileName: The name of an audio file. If this filename has not been previously requested, the method looks for an audio file with the specified name in the application,Äôs main bundle.

This method looks in the system caches for an audio source with the specified name and returns that object if it exists. If a matching audio source is not already in the cache, this method locates the audio file with the specified name in the application,Äôs main bundle, then creates a new audio source and caches it for reuse.

### 159.5.6 Constructor(File as FolderItem)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

**Function:** Initializes an audio source from the specified audio file.
See also:

- 159.5.7 Constructor(URL as String) 23722

### 159.5.7 Constructor(URL as String)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

**Function:** Initializes an audio source from the specified audio file.
See also:

- 159.5.6 Constructor(File as FolderItem) 23722

### 159.5.8 copy as SCNAudioSourceMBS

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

**Function:** Creates a copy of the audio source object.

### 159.5.9 Load

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

**Function:** Loads audio data from the source and prepares it for playing.
**Notes:**

This method reads audio data from the source file (specified when initializing the audio source) and performs any decompression necessary to prepare for playing audio. Use this method to control when your app

or game incurs the run-time performance cost of such work,Äîfor example, you can load all audio source before starting a game level, instead of suffering a frame rate drop upon playing a new audio source during gameplay.
This method has no effect if the shouldStream property,Äôs value is true.

### 159.5.10 Properties

### 159.5.11 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 159.5.12 Loops as Boolean

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

**Function:** A Boolean value that determines whether the audio source should play repeatedly.
**Notes:**

If this value is true, audio players using this source automatically begin playing again after playback has finished. If this value is false (the default), the audio source plays exactly once.
(Read and Write property)

### 159.5.13 Positional as Boolean

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

**Function:** A Boolean value that determines whether audio from this source uses 3D positional mixing.
**Notes:**

If this value is YES (the default), SceneKit mixes audio from the source based on its position relative to the scene,Äôs audioListener node,Äîthat is, the audio source,Äôs volume, reverb, and other parameters automatically change depending on the distance to the listener and other objects in the scene. (To position an audio source in a scene, create an SCNAudioPlayerMBS player from the source and attach that player to an SCNNodeMBS object.)
If you set this property to NO, the source,Äôs audio plays with the same volume (and other mixing parameters) regardless of the listener,Äôs position.
(Read and Write property)

### 159.5.14 Rate as Single

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

**Function:** The default playback rate for the audio source.
**Notes:**

This property determines the default rate for when a source begins playing. To vary the rate during playback through an SCNAudioPlayerMBS object, use the player,Äôs audioNode property to access real-time audio controls.
(Read and Write property)

### 159.5.15 ReverbBlend as Single

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

**Function:** The default blend of blend of unmodified and reverb-processed (also called dry and wet) audio for playback of the audio source.
**Notes:**

This property determines the default reverb blend for when a source begins playing. To vary the reverb blend during playback through an SCNAudioPlayerMBS object, use the player,Äôs audioNode property to access real-time audio controls.
(Read and Write property)

### 159.5.16 ShouldStream as Boolean

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

**Function:** A Boolean value that determines whether the audio source should stream content from its source URL when playing.
**Notes:**

If this value is true, audio players using this source do not preload audio buffer data, instead reading directly from the source file while playing audio. If this value is false, SceneKit loads audio buffer data upon playing audio from the source.
(Read and Write property)

### 159.5.17 Volume as Single

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

**Function:** The default playback volume for the audio source.
**Notes:**

This property determines the default volume for when a source begins playing. To vary the volume during playback through an SCNAudioPlayerMBS object, use the player,Äôs audioNode property to access real-time audio controls.
(Read and Write property)

## 159.6 class SCNAvoidOccluderConstraintMBS

### 159.6.1 class SCNAvoidOccluderConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** A SCNAvoidOccluderConstraint constraints place the receiver at a position that prevent nodes with the specified category to occlude the target.
**Notes:** The target node and it's children are ignored as potential occluders.

### 159.6.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

### 159.6.3 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

### 159.6.4 Methods

### 159.6.5 avoidOccluderConstraintWithTarget(target as SCNNodeMBS) as SCNAvoidOccluderConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a SCNAvoidOccluderConstraint object.

### 159.6.6 Constructor(target as SCNNodeMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a SCNAvoidOccluderConstraint object.

### 159.6.7 Properties

### 159.6.8 bias as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Defines the bias the apply after moving the receiver to avoid occluders.
**Notes:**

Defaults to 10e-5.
A positive bias will move the receiver closer to the target.
(Read and Write property)

### 159.6.9 occluderCategoryBitMask as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Defines the category of node to consider as occluder.
**Notes:**

Defaults to 1.
(Read and Write property)

### 159.6.10 target as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Defines the target node.
**Notes:** (Read and Write property)

## 159.7 class SCNBillboardConstraintMBS

### 159.7.1 class SCNBillboardConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** A constraint that orients a node to always point toward the current camera.
**Notes:**

An SCNBillboardConstraint object automatically adjusts a node,Äôs orientation so that its local z-axis always points toward the pointOfView node currently being used to render the scene. For example, you can use a billboard constraint to efficiently render parts of a scene using two-dimensional sprite images instead of three-dimensional geometry,Äîby mapping sprites onto planes affected by a billboard constraint, the sprites maintain their orientation with respect to the viewer. To attach constraints to an SCNNodeMBS object, use its constraints property.
Subclass of the SCNConstraintMBS class.

### 159.7.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

### 159.7.3 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

### 159.7.4 Methods

### 159.7.5 billboardConstraint as SCNBillboardConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a SCNBillboardConstraint constraint.
**Notes:** A billboard constraint forces the receiver to look into the direction of the current point of view.

### 159.7.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a SCNBillboardConstraint constraint.
**Notes:** A billboard constraint forces the receiver to look into the direction of the current point of view.

### 159.7.7 Properties

### 159.7.8 freeAxes as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Specifies the axes on which the billboarding orientation operates. Defaults to SCNBillboardAxisAll.
**Notes:** (Read and Write property)

### 159.7.9 Constants

### 159.7.10 SCNBillboardAxisAll = 7

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the options for locking the orientation of nodes affected by a billboard constraint.
**Notes:**

Align an affected node such that its orientation always matches that of the view.
This is the default option for newly created billboard constraints.

### 159.7.11 SCNBillboardAxisX = 1

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the options for locking the orientation of nodes affected by a billboard constraint.
**Notes:** Align an affected node such that its x-axis is always parallel to that of the view, leaving it free to rotate otherwise.

### 159.7.12 SCNBillboardAxisY = 2

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the options for locking the orientation of nodes affected by a billboard constraint.
**Notes:** Align an affected node such that its y-axis is always parallel to that of the view, leaving it free to rotate otherwise.

### 159.7.13 SCNBillboardAxisZ = 4

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the options for locking the orientation of nodes affected by a billboard constraint.
**Notes:** Align an affected node such that its z-axis is always perpendicular to the viewing plane, leaving it free to rotate otherwise.

## 159.8 class SCNBoxMBS

### 159.8.1 class SCNBoxMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** SCNBox represents a box with rectangular sides and optional chamfers.
**Notes:** Subclass of the SCNGeometryMBS class.

### 159.8.6 Methods

### 159.8.7 box(width as double, height as double, length as double, chamferRadius as double) as SCNBoxMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a box with given width, height, length and chamfer radius.
**Notes:**

width: The width of the box.
height: The height of the box.
length: The length of the box.
chamferRadius: The chamfer radius of the box.

### 159.8.8 Constructor(width as double, height as double, length as double, chamferRadius as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a box with given width, height, length and chamfer radius.
**Notes:**

width: The width of the box.
height: The height of the box.
length: The length of the box.
chamferRadius: The chamfer radius of the box.

### 159.8.9 Properties

### 159.8.10 chamferRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The chamfer radius. Animatable.
**Notes:**

If the value is strictly less than 0, the geometry is empty. The default value is 0.
(Read and Write property)

### 159.8.11 chamferSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The number of chamfer subdivisions. Animatable.
**Notes:**

If the value is less than 1, the behavior is undefined. The default value is 10.
(Read and Write property)

### 159.8.12 height as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The height of the box. Animatable.
**Notes:**

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

### 159.8.13 heightSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The number of subdivisions along the Y axis. Animatable.
**Notes:**

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

### 159.8.14 length as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The length of the box. Animatable.
**Notes:**

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

### 159.8.15 lengthSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The number of subdivisions along the Z axis. Animatable.
**Notes:**

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

### 159.8.16 width as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The width of the box. Animatable.
**Notes:**

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

### 159.8.17 widthSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The number of subdivisions along the X axis. Animatable.
**Notes:**

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

## 159.9 class SCNCameraControllerMBS

### 159.9.1 class SCNCameraControllerMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The class for a camera controller.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 159.9.2 Blog Entries

- MBS Xojo Plugins, version 18.5pr3

### 159.9.3 Blog Entries

- MBS Xojo Plugins, version 18.5pr3

### 159.9.4 Methods

### 159.9.5 clearRoll

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** Clear the camera roll if any.

### 159.9.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The private constructor.

### 159.9.7 dollyToTarget(delta as double)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** Zoom by moving the camera along the axis from the camera position to the target.

### 159.9.8 rollAroundTarget(delta as double)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** Rotate the camera around the axis from the camera position to the target.
**Notes:** Delta is in degrees.

### 159.9.9 rotate(deltaX as double, deltaY as double)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** Rotate delta is in degrees.

### 159.9.10 stopInertia

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** Stop current inertia.

### 159.9.11 translateInCameraSpace(x as double, y as double, z as double)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** Translate the camera along the local X/Y/Z axis.

### 159.9.12 Properties

### 159.9.13 automaticTarget as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** Automatically update the target in beginInteraction.
**Notes:**

Defaults to false.
(Read and Write property)

### 159.9.14 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 159.9.15 inertiaEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** Set to true to enable inertia on endInteraction.
**Notes:**

Defaults to false.
(Read and Write property)

### 159.9.16 inertiaFriction as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The friction coefficient applied to the inertia.
**Notes:**

Defaults to 0.05.
(Read and Write property)

### 159.9.17 inertiaRunning as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns true if inertia is running.
**Notes:** (Read only property)

### 159.9.18 maximumHorizontalAngle as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** Minimum and maximum horizontal view angles in degrees for SCNInteractionModeFly and SCNInteractionModeOrbitTurntable.
**Notes:**

The angle constraints is not enforced if both horizontal angle properties values are set to 0.
The angle constraints will not be enforced if the initial orientation is outside the given range.
The minimum angle must be inferior to the maximum angle.
Angles are in world space and within the range [ -180, 180 ] .

Defaults to 0.0.
(Read and Write property)

### 159.9.19 maximumVerticalAngle as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** Minimum and maximum vertical view angles in degrees for SCNInteractionModeFly and SCNInteractionModeOrbitTurntable.
**Notes:**

The angle constraints is not enforced if both vertical angle properties values are set to 0.
The angle constraints will not be enforced if the initial orientation is outside the given range.
The minimum angle must be inferior to the maximum angle.
Angles are in world space and within the range [ -90, 90 ] .
Defaults to 0.0.
For example: set to minimum to 0 and maximum to 90 to only allow orbit around the top hemisphere.
(Read and Write property)

### 159.9.20 minimumHorizontalAngle as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** Minimum and maximum horizontal view angles in degrees for SCNInteractionModeFly and SCNInteractionModeOrbitTurntable.
**Notes:**

The angle constraints is not enforced if both horizontal angle properties values are set to 0.
The angle constraints will not be enforced if the initial orientation is outside the given range.
The minimum angle must be inferior to the maximum angle.
Angles are in world space and within the range [ -180, 180 ] .
Defaults to 0.0.
(Read and Write property)

### 159.9.21 minimumVerticalAngle as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** Minimum and maximum vertical view angles in degrees for SCNInteractionModeFly and SCNInteractionModeOrbitTurntable.
**Notes:**

The angle constraints is not enforced if both vertical angle properties values are set to 0.
The angle constraints will not be enforced if the initial orientation is outside the given range.

The minimum angle must be inferior to the maximum angle.
Angles are in world space and within the range [ -90, 90 ] .
Defaults to 0.0.
For example: set to minimum to 0 and maximum to 90 to only allow orbit around the top hemisphere.
(Read and Write property)

### 159.9.22 pointOfView as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The node describing the point of view.
**Notes:** (Read and Write property)

### 159.9.23 target as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The camera target in world space for orbit rotation.
**Notes:** (Read and Write property)

### 159.9.24 worldUp as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The up vector in world space used as reference for SCNInteractionModeFly and SCNInteraction-ModeOrbitTurntable camera modes.
**Notes:**

Defaults to (0, 1, 0).
(Read and Write property)

## 159.10 class SCNCameraMBS

### 159.10.1 class SCNCameraMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** A set of camera attributes that can be attached to a node to provide a point of view for displaying the scene.
**Notes:**

To display a scene, you must designate a node whose camera property contains a camera object as the point of view.

The SCNNode object containing a camera defines a point of view,Äîthat is, the position and orientation of the camera. A camera,Äôs direction of view is always along the negative z-axis of the node,Äôs local coordinate system. To point the camera at different parts of your scene, use the position, rotation, or transform property of the node containing it. (Alternatively, to ensure that a camera always points at a particular element of your scene even when that element moves, attach a SCNLookAtConstraint object to the node containing the camera.)

An SCNCamera object itself defines the shape and, in part, the appearance of the rendered scene as seen from its point of view. By default, a camera defines a perspective projection, whose field of view (FOV) and near and far visibility limits you control using the properties listed in Adjusting Camera Perspective and illustrated below.

### 159.10.2 Blog Entries

- MBS Xojo Plugins, version 18.5pr3

### 159.10.3 Blog Entries

- MBS Xojo Plugins, version 18.5pr3

### 159.10.4 Methods

### 159.10.5 camera as SCNCameraMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a new camera object.
**Notes:** To use the camera to display a scene, attach it to the camera property of a node and then select that node using the pointOfView property of the view (or layer or renderer) rendering the scene.

### 159.10.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a new camera object.
**Notes:** To use the camera to display a scene, attach it to the camera property of a node and then select that node using the pointOfView property of the view (or layer or renderer) rendering the scene.

### 159.10.7 copy as SCNCameraMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a copy of the camera.

### 159.10.8 Properties

### 159.10.9 ApertureBladeCount as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The number of physical camera aperture blades simulated by SceneKit for depth-of-field effects.
**Notes:**

When the wantsDepthOfField setting is enabled, SceneKit renders scenes using the camera with a depth-of-field blur (also called bokeh) effect modeled after those created by a real-world physical camera. One feature of real-world camera bokeh effects is the tendency of distant bright points to blur into larger shapes based on the shape of the aperture between the camera's lens and its imaging plane (film or sensor). Physical cameras control aperture using a mechanism that moves several flat blades in or out to create a smaller or larger opening, so the natural bokeh effect in traditional photography produces polygon-shaped blur effects. This property controls the number of blades in the simulated camera aperture, and thus the polygon shape seen in the resulting bokeh effect. For example, a blade count of 6 (the default) causes distant bright points to blur into hexagon shapes. Increasingly large blade counts result in the bokeh effect appearing more circular, as shown below.
(Read and Write property)

### 159.10.10 AutomaticallyAdjustsZRange as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that determines whether the camera automatically adjusts its zNear and zFar depth limits.
**Notes:**

The default value of this property is false, specifying that the camera,Äôs zNear and zFar properties control

its depth limits. If you change this property,Äôs value to true, SceneKit automatically adjusts the depth limits at render time to fit the bounding box of the scene. Changing the values of the zNear and zFar properties automatically resets this property,Äôs value to false.
(Read and Write property)

### 159.10.11 averageGray as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The luminance level to use as the midpoint of a tone mapping curve.
**Notes:**

When using a High Dynamic Range (HDR) camera, SceneKit applies a process called tone mapping to translate the wide range of luminance values in the visible scene to the narrower range of brightness values that can be shown on a display. SceneKit determines a tone mapping curve from the minimumExposure, maximumExposure, exposureOffset, and whitePoint properties, along with this property which serves as a constant estimate of scene luminance.
The default value is 0.18. By setting this property to a higher or lower value, you can compensate for scenes with darker or brighter content. Alternatively, by setting the wantsExposureAdaptation property, you can allow SceneKit to automatically adjust exposure as the visible contents of the scene change.
This property has no effect if the wantsHDR value is false. If the exposureAdaptationDarkeningSpeedFactor value is true, SceneKit ignores this property, and instead computes the average luminance currently visible to the camera during rendering.
(Read and Write property)

### 159.10.12 bloomBlurRadius as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The radius, in pixels, for the blurring portion of the bloom effect applied to highlights in the rendered scene. Animatable.
**Notes:**

A bloom effect adds a soft glow to highlights (areas of bright color) in the rendered scene, simulating the way bright highlights appear to the human eye or a physical camera in a real-world scene. The bloom effect combines selective brightening and blurring effects; this property controls the blur portion of the effect. A value of zero effectively disables the bloom effect, and higher values result in a broader, softer glow. The default value is 4.0 pixels.
You can animate changes to this property,Äôs value. See Animating SceneKit Content.
To enable this behavior, you must first enable the wantsHDR setting.
(Read and Write property)

### 159.10.13 bloomIntensity as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The magnitude of bloom effect to apply to highlights in the rendered scene. Animatable.
**Notes:**

A bloom effect adds a soft glow to highlights (areas of bright color) in the rendered scene, simulating the way bright highlights appear to the human eye or a physical camera in a real-world scene. This property controls the strength of the bloom effect; lower values result in a subtle effect, and higher values create very bright glow. The default value is 0.0, resulting in no bloom effect.
You can animate changes to this property,Äôs value. See Animating SceneKit Content.
To enable this behavior, you must first enable the wantsHDR setting.
(Read and Write property)

### 159.10.14 bloomThreshold as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The brightness threshold at which to apply a bloom effect to highlights in the rendered scene. Animatable.
**Notes:**

A bloom effect adds a soft glow to highlights (areas of bright color) in the rendered scene, simulating the way bright highlights appear to the human eye or a physical camera in a real-world scene. This property controls the brightness level required to trigger the bloom effect; lower values apply the effect to more of the scene, and higher values apply the effect only to the brightest white areas. The default value is 1.0.
You can animate changes to this property,Äôs value. See Animating SceneKit Content.
To enable this behavior, you must first enable the wantsHDR setting.
(Read and Write property)

### 159.10.15 colorFringeIntensity as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The blend factor for fading the color fringing effect applied to the rendered scene.
**Notes:**

Color fringing applies an effect that separately blurs the color components of each rendered pixel, adding subtle rainbow edge effects to the rendered scene that simulate the effects of chromatic aberration in a physical camera. Higher values for this property result in brighter, more vivid color fringing, and lower values create a subtler effect. The default value of 1.0 leaves the color fringing effect at its most vivid.
This property controls a fade between the color fringing effect and the otherwise-normally-rendered image. The colorFringeStrength property controls the breadth of the color fringing effect.
To enable this behavior, you must first enable the wantsHDR setting.
(Read and Write property)

### 159.10.16 colorFringeStrength as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The magnitude of color fringing effect to apply to the rendered scene.
**Notes:**

Color fringing applies an effect that separately blurs the color components of each rendered pixel, adding subtle rainbow edge effects to the rendered scene that simulate the effects of chromatic aberration in a physical camera. Higher values create a more pronounced color shift, creating wider rainbow fringes; lower values spread colors across shorter distances, creating a subtler effect. The default value of 0.0 disables the color fringing effect entirely.
This property controls the breadth of color fringing. The colorFringeIntensity property controls the blend factor between the color-fringed and the otherwise-normally-rendered image.
To enable this behavior, you must first enable the wantsHDR setting.
(Read and Write property)

### 159.10.17 colorGrading as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** A texture for applying color grading effects to the entire rendered scene.
**Notes:**

The contents value for this material property must be a 3D color lookup table, or a 2D texture image that represents such a table arranged in a horizontal strip.

see also
https://developer.apple.com/documentation/scenekit/scncamera/1644114-colorgrading
(Read only property)

### 159.10.18 contrast as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** An adjustment factor to apply to the overall visual contrast of the rendered scene.
**Notes:**

A value of 0.0 (the default) leaves the rendered scene unchanged. Positive values increase contrast between bright and dark areas, and negative values reduce contrast, shifting the rendered scene towards a uniform gray.
To enable this behavior, you must first enable the wantsHDR setting.

(Read and Write property)

### 159.10.19 exposureAdaptationBrighteningSpeedFactor as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The relative duration of automatically animated exposure transitions from dark to bright areas.
**Notes:**

When using a High Dynamic Range (HDR) camera, SceneKit applies a process called tone mapping to translate the wide range of luminance values in the visible scene to the narrower range of brightness values that can be shown on a display. When the wantsExposureAdaptation property is enabled, SceneKit automatically adjusts the tone mapping curve based on the average luminance currently visible to the camera, and creates automatic transitions between exposure levels.
SceneKit automatically determines the overall duration of exposure-level animations based on the values of this property and the exposureAdaptationDarkeningSpeedFactor property. The default value is 0.4, resulting in brightening animations that are slightly faster than darkening animations.
This property has no effect if either of the wantsHDR or wantsExposureAdaptation values is false.
(Read and Write property)

### 159.10.20 exposureAdaptationDarkeningSpeedFactor as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The relative duration of automatically animated exposure transitions from bright to dark areas.
**Notes:**

When using a High Dynamic Range (HDR) camera, SceneKit applies a process called tone mapping to translate the wide range of luminance values in the visible scene to the narrower range of brightness values that can be shown on a display. When the wantsExposureAdaptation property is enabled, SceneKit automatically adjusts the tone mapping curve based on the average luminance currently visible to the camera, and creates automatic transitions between exposure levels.
SceneKit automatically determines the overall duration of exposure-level animations based on the values of this property and the exposureAdaptationDarkeningSpeedFactor property. The default value is 0.6, resulting in darkening animations that are slightly faster than brighting animations.
This property has no effect if either of the wantsHDR or wantsExposureAdaptation values is false.
(Read and Write property)

### 159.10.21 exposureOffset as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** A logarithmic bias that adjusts the results of SceneKit,Äôs tone mapping operation, brightening or darkening the visible scene.

**Notes:**

When using a High Dynamic Range (HDR) camera, SceneKit applies a process called tone mapping to translate the wide range of luminance values in the visible scene to the narrower range of brightness values that can be shown on a display. SceneKit determines a tone mapping curve from the minimumExposure, maximumExposure, exposureOffset, and whitePoint properties, along with a measure of scene luminance.
Use this property to bias the tone mapping curve. The default exposure offset is zero, specifying no bias. Positive values result in a brighter scene, and negative values result in a darker scene.
This property has no effect if the wantsHDR value is false.
(Read and Write property)

### 159.10.22 FieldOfView as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The vertical or horizontal viewing angle of the camera.
**Notes:**

The projectionDirection property determines whether this fieldOfView property measures the camera's vertical or horizontal viewing angle, and SceneKit automatically calculates the viewing angle in the other direction to match the aspect ratio of the view displaying the scene. For example, a fieldOfView of 60 and the default SCNCameraProjectionDirectionVertical projection, presented fullscreen on a 16:9 display in portrait orientation, results in a vertical viewing angle of 60¬∞ and a horizontal viewing angle of 33.75¬∞.
You can choose to specify viewing angle either directly, using this fieldOfView property, or in terms that model a physical camera, using the sensorHeight and focalLength properties. Setting the fieldOfView property causes SceneKit to automatically recalculate the focalLength value, and setting the sensorHeight or focalLength property recalculates fieldOfView.
(Read and Write property)

### 159.10.23 FocalBlurSampleCount as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The number of pixel samples SceneKit uses to create depth-of-field blur effects.
**Notes:**

When the wantsDepthOfField setting is enabled, SceneKit renders depth-of-field blur (also called bokeh) effects using a blur filter that samples multiple points in the image. Sampling a larger number of points produces a higher quality visual effect at a higher performance cost, and vice versa. The default sample count is 25.
(Read and Write property)

### 159.10.24 FocalLength as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The camera's focal length, in millimeters.
**Notes:**

The sensorHeight and focalLength properties determine the camera's horizontal and vertical viewing angles using terms that model physical camera devices. (Alternatively, you can work with viewing angle directly though the fieldOfView property.) For example, with the default sensor height of 24 mm and default focal length of 50 mm, the vertical field of view is 60¬∞.
Setting the fieldOfView property causes SceneKit to automatically recalculate the focalLength value, and setting the sensorHeight or focalLength property recalculates fieldOfView.
(Read and Write property)

### 159.10.25 focusDistance as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The distance from the camera at which objects appear in sharp focus. Animatable.
**Notes:**

Objects at this distance from the camera appear perfectly focused. Objects nearer to or farther from the camera than this distance appear increasingly blurred, with the behavior of the blur effect depending on the fStop, apertureBladeCount and focalBlurSampleCount properties. The default focus distance is 2.5.
You can animate changes to this property,Äôs value. See Animating SceneKit Content.
(Read and Write property)

### 159.10.26 fStop as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The physical camera aperture simulated by SceneKit for depth-of-field effects. Animatable.
**Notes:**

F-stop numbers describe the light-gathering area of a physical camera's imaging system, and are typically expressed as the denominator of a ratio including the camera's focal length í, such as í/2 or í/5.6. A larger denominator indicates a smaller aperture, allowing less light to pass from the camera's lens through to the imaging plane (sensor or film), and a smaller denominator indicates a larger aperture that lets more light through.
SceneKit uses aperture measurements to simulate depth-of-field blur effects (also called bokeh) approximating those produced by a physical camera. A larger fStop number (or aperture denominator) causes most of the scene to appear in focus, with extremely close or far depths showing slight blurring; a smaller number results in only a narrow range of depths appearing in focus, and a more pronounced blur effect for the rest of the scene. The default fStop value is 5.6.
You can animate changes to this property,Äôs value. See Animating SceneKit Content.

(Read and Write property)

### 159.10.27 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 159.10.28 maximumExposure as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The minimum exposure value to use in tone mapping.
**Notes:**

When using a High Dynamic Range (HDR) camera, SceneKit applies a process called tone mapping to translate the wide range of luminance values in the visible scene to the narrower range of brightness values that can be shown on a display. SceneKit determines a tone mapping curve from the minimumExposure, maximumExposure, exposureOffset, and whitePoint properties, along with a measure of scene luminance.
Exposure values are exponential: a value of 1.0 doubles brightness, a value of 2.0 quadruples brightness, a value of -1.0 halves brightness, and so on. The default value is 15.0. Decreasing the value causes brighter portions of the scene to become over-exposed (uniformly white, losing definition). Increasing the value adds more dynamic range for brighter portions of the scene; however, a greater breadth of difference between the minimum and maximum exposures decreases contrast.
This property has no effect if the wantsHDR value is false.
(Read and Write property)

### 159.10.29 minimumExposure as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The minimum exposure value to use in tone mapping.
**Notes:**

When using a High Dynamic Range (HDR) camera, SceneKit applies a process called tone mapping to translate the wide range of luminance values in the visible scene to the narrower range of brightness values that can be shown on a display. SceneKit determines a tone mapping curve from the minimumExposure, maximumExposure, exposureOffset, and whitePoint properties, along with a measure of scene luminance.
Exposure values are exponential: a value of 1.0 doubles brightness, a value of 2.0 quadruples brightness, a value of -1.0 halves brightness, and so on. The default value is -15.0. Increasing the value causes darker portions of the scene to become under-exposed (uniformly black, losing definition). Decreasing the value adds more dynamic range for darker portions of the scene; however, a greater breadth of difference between the minimum and maximum exposures decreases contrast.

This property has no effect if the wantsHDR value is false.
(Read and Write property)

### 159.10.30 motionBlurIntensity as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** A factor that determines the intensity of motion blur effects. Animatable.
**Notes:**

The default intensity of zero results in no motion blur effect. Higher values (toward a maximum of 1.0) create more pronounced motion blur effects.
Motion blur is not supported when wide-gamut color rendering is enabled. Wide-gamut rendering is enabled by default on supported devices; to opt out, set the SCNDisableWideGamut key in your app's Info.plist file.
You can animate changes to this property,Äôs value. See Animating SceneKit Content.
(Read and Write property)

### 159.10.31 Name as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** A name associated with the camera object.
**Notes:**

You can provide a descriptive name for a camera object to make managing your scene graph easier. Cameras loaded from a scene file may have names assigned by an artist using a 3D authoring tool. Use the SCNSceneSourceMBS class to examine cameras in a scene file without loading its scene graph.
(Read and Write property)

### 159.10.32 orthographicScale as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** Specifies the camera,Äôs magnification factor when using an orthographic projection.
**Notes:**

In an orthographic projection, equally sized objects appear equally sized regardless of their distance from the camera. To switch between orthographic and perspective projections, see the usesOrthographicProjection property.
(Read and Write property)

### 159.10.33 ProjectionDirection as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The axis used to determine field of view or orthographic scale.
**Notes:**

The fieldOfView property measures view angle in a single primary direction, determined by this projectionDirection property. For the other direction, SceneKit automatically adjusts field of view depending on the aspect ratio of the view presenting the scene.
For example, with the default projection direction of SCNCameraProjectionDirectionVertical, setting fieldOfView to 60 results in a vertical view angle of 60¬∞. If the scene appears on a display with a 4:3 aspect ratio, the horizontal view angle is 80¬∞. However, if the scene appears on a 16:9 display, the horizontal view angle is 106¬∞.
This property has a similar effect on scaling for orthographic projections. The orthographicScale property measures the scale factor in the direction of the projectionDirection property, and SceneKit automatically calculates scale factor in the other direction according to aspect ratio.
(Read and Write property)

### 159.10.34 projectionTransform as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The camera,Äôs projection transformation.
**Notes:**

This transformation expresses the combination of all the camera,Äôs geometric properties: projection type (perspective or orthographic), field of view, depth limits, and orthographic scale (if applicable). SceneKit uses this transformation to convert points in the camera node,Äôs coordinate space to the renderer,Äôs 2D space when rendering and processing events.
You can use this transformation directly if your app needs to convert between view and renderer coordinates for other purposes. Alternatively, if you compute your own projection transform matrix, you can set this property to override the transformation synthesized from the camera,Äôs geometric properties.
(Read and Write property)

### 159.10.35 saturation as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** An adjustment factor to apply to the overall color saturation of the rendered scene.
**Notes:**

A value of 1.0 (the default) leaves scene colors unchanged. Greater values result in oversaturated colors, and a value of 0.0 makes the rendered scene entirely grayscale.
To enable this behavior, you must first enable the wantsHDR setting.
(Read and Write property)

### 159.10.36 screenSpaceAmbientOcclusionBias as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** An offset for modulating ambient occlusion effects.
**Notes:**

Ambient occlusion is an effect that improves material shading by calculating the amounts of ambient light that reach various parts of a surface, creating shadows on parts of a geometry where incoming light is obscured by other parts of the geometry. (You can provide pre-rendered ambient occlusion effects for a material using its ambientOcclusion property.) Screen-space ambient occlusion (SSAO) provides a real-time approximation of this effect for the entire scene viewed through the camera.
This screenSpaceAmbientOcclusionBias value is used in an intermediate stage of calculating the SSAO effect, and measures a distance in scene units. Increasing or decreasing this value from its default of 0.03 can help to offset unrealistic effects produced by changing other SSAO settings.
(Read and Write property)

### 159.10.37 screenSpaceAmbientOcclusionDepthThreshold as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The maximum depth difference, in units of scene space, at which to apply ambient occlusion effects.
**Notes:**

Ambient occlusion is an effect that improves material shading by calculating the amounts of ambient light that reach various parts of a surface, creating shadows on parts of a geometry where incoming light is obscured by other parts of the geometry. (You can provide pre-rendered ambient occlusion effects for a material using its ambientOcclusion property.) Screen-space ambient occlusion (SSAO) provides a real-time approximation of this effect for the entire scene viewed through the camera.
This screenSpaceAmbientOcclusionDepthThreshold property controls the effect of relative distance from the camera on SSAO effects. Higher values create more shadowing effects between foreground and background elements of the scene, but this can result in unrealistic dark halos around foreground elements that are far from the background. Lower values avoid dark halo effects, but create less visual separation between scene elements at different distances from the camera. The default value is 0.2 units.
(Read and Write property)

### 159.10.38 screenSpaceAmbientOcclusionIntensity as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The intensity of the screen-space ambient occlusion effect applied in camera rendering.
**Notes:**

Ambient occlusion is an effect that improves material shading by calculating the amounts of ambient light that reach various parts of a surface, creating shadows on parts of a geometry where incoming light is obscured by other parts of the geometry. (You can provide pre-rendered ambient occlusion effects for a material using its ambientOcclusion property.) Screen-space ambient occlusion (SSAO) provides a real-time approximation of this effect for the entire scene viewed through the camera.
The default value of this property is zero, disabling SSAO effects. Increasing the intensity value creates deeper, bolder shadows.
(Read and Write property)

### 159.10.39 screenSpaceAmbientOcclusionNormalThreshold as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The magnitude of the blur effect applied to create ambient occlusion shadows.
**Notes:**

Ambient occlusion is an effect that improves material shading by calculating the amounts of ambient light that reach various parts of a surface, creating shadows on parts of a geometry where incoming light is obscured by other parts of the geometry. (You can provide pre-rendered ambient occlusion effects for a material using its ambientOcclusion property.) Screen-space ambient occlusion (SSAO) provides a real-time approximation of this effect for the entire scene viewed through the camera.
SSAO shadowing includes a blur effect to realistically soften differences in shadow between adjacent pixels, which depends on both the smoothness of scene geometry and this factor. Larger blur factors create a softer, more spread-out blur; smaller factors create coarser shadowing effects.
(Read and Write property)

### 159.10.40 screenSpaceAmbientOcclusionRadius as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The distance, in units of scene space, at which ambient occlusion takes effect.
**Notes:**

Ambient occlusion is an effect that improves material shading by calculating the amounts of ambient light that reach various parts of a surface, creating shadows on parts of a geometry where incoming light is obscured by other parts of the geometry. (You can provide pre-rendered ambient occlusion effects for a material using its ambientOcclusion property.) Screen-space ambient occlusion (SSAO) provides a real-time approximation of this effect for the entire scene viewed through the camera.
SSAO effects work by storing relevant scene geometry information for each pixel, and using that information to produce per-pixel shading effects. This screenSpaceAmbientOcclusionRadius property determines the area in scene space to consider around each pixel for determining the amount of incoming ambient light blocked by surrounding geometry (and thus the amount of shadow effect to apply). The default value is 5; smaller values cause SSAO effects to apply only to finer geometry details, while larger values affect coarser details.
(Read and Write property)

### 159.10.41 SensorHeight as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The vertical size of the camera's imaging plane, in millimeters.
**Notes:**

The sensorHeight and focalLength properties determine the camera's horizontal and vertical viewing angles using terms that model physical camera devices. (Alternatively, you can work with viewing angle directly though the fieldOfView property.) For example, with the default sensor height of 24 mm and default focal length of 50 mm, the vertical field of view is 60¬∞.
Setting the fieldOfView property causes SceneKit to automatically recalculate the focalLength value, and setting the sensorHeight or focalLength property recalculates fieldOfView.
(Read and Write property)

### 159.10.42 UsesOrthographicProjection as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that determines whether the camera uses an orthographic projection.
**Notes:**

The default value of this property is false, specifying a perspective projection. In a perspective projection, equally sized objects nearer to the camera appear larger than those farther away.
Set the value of this property to true to specify an orthographic projection. In an orthographic projection, equally sized objects appear equally sized regardless of distance from the camera.
To control the magnification factor of an orthographic camera, use its orthographicScale property.
(Read and Write property)

### 159.10.43 vignettingIntensity as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The magnitude of vignette (darkening around edges) effect to apply to the rendered scene.
**Notes:**

A vignette effect darkens the edges and corners of the rendered scene, simulating the effect of lens and barrel shape on the image produced by a physical camera. Higher values result in more darkening, and lower values result in a subtler effect. The default value of 0.0 results in no vignetting effect.
This property controls the level of darkening applied; the vignettingPower property controls the area of the rendered image to be darkened.
To enable this behavior, you must first enable the wantsHDR setting.

(Read and Write property)

### 159.10.44 vignettingPower as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The amount of the rendered scene to darken with a vignette effect.
**Notes:**

A vignette effect darkens the edges and corners of the rendered scene, simulating the effect of lens and barrel shape on the image produced by a physical camera. Higher values result apply the darkening effect to a broader area around the edges of the rendered image, and lower values apply the effect to a smaller area, leaving more of the rendered image at full brightness. The default value of 0.0 results in no vignetting effect. This property controls the area of the rendered image to be darkened; the vignettingIntensity property controls the level of darkening applied to those areas.
To enable this behavior, you must first enable the wantsHDR setting.
(Read and Write property)

### 159.10.45 WantsDepthOfField as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that determines whether SceneKit renders depth-of-field blur effects for the camera.
**Notes:**

This value is false by default, disabling depth-of-field effects.
Enabling this property causes SceneKit to render blur effects that model those created by a physical camera device (also known as bokeh). That is, objects in the scene appear more or less blurry depending on their distance from the camera and the camera's focusDistance, and the intensity and style of the blur effect depend on the fStop and apertureBladeCount properties.

Note
For best results, also enable the wantsHDR property when using depth-of-field effects. High Dynamic Range rendering provides high contrast for distant bright points in the scene, creating more pronounced bokeh effects.
(Read and Write property)

### 159.10.46 WantsExposureAdaptation as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that determines whether SceneKit automatically adjusts the exposure level.

**Notes:**

When using a High Dynamic Range (HDR) camera, SceneKit applies a process called tone mapping to translate the wide range of luminance values in the visible scene to the narrower range of brightness values that can be shown on a display. One measure of tone mapping is the exposure value, whose effect on the output is similar to that of the shutter speed (or exposure time) of a real-world camera,Äîlower exposure values result in a darker image, and higher exposures result in a brighter image. You cannot adjust exposure value directly,Äîinstead, SceneKit determines a tone mapping curve (including the exposure level) from the minimumExposure, maximumExposure, exposureOffset, and whitePoint properties along with a measure of scene luminance.

If this property,Äôs value is true (the default), SceneKit automatically measures the current luminance visible to the camera during rendering, and adjusts the exposure level accordingly. Additionally, when the scene luminance changes, SceneKit automatically animates a transition to the new exposure level (see the exposureAdaptationBrighteningSpeedFactor and exposureAdaptationDarkeningSpeedFactor properties).

Note
The visual effect of automatic exposure is similar to how human visual perception adjusts to changes in environmental lighting. For example, consider a game scene where the player moves from a darkened area into full daylight. At first, the exposure value is low, allowing for visible detail in the darkened area, but no detail in the white daylight outside. As the player moves into the daylight, the entire view becomes blindingly bright, but over a brief time the player,Äôs vision adapts: detail becomes visible in the bright area, and the darkened area loses detail.

If this property,Äôs value is false, SceneKit,Äôs tone mapping effect is constant. Instead of responding to scene luminance, SceneKit uses the averageGray property to determine the tone mapping curve.
This property has no effect if the wantsHDR value is false.
(Read and Write property)

### 159.10.47 WantsHDR as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that determines whether SceneKit applies High Dynamic Range (HDR) post-processing effects to a scene.
**Notes:**

When this property,Äôs value is false (the default), SceneKit performs lighting calculations in a color space whose brightness range is similar to that of the output display. This approach limits the ability to perform realistic rendering of scenes with fine details in brightness levels.
When you enable HDR rendering for a camera, SceneKit calculates lighting in a much deeper color space, preserving fine details in contrast regardless of brightness, then applies a post-processing effect called tone mapping to translate luminance values from that space to the narrower range of brightness values that can be shown on a display. SceneKit determines a tone mapping curve (including the exposure level) from the minimumExposure, maximumExposure, exposureOffset, and whitePoint properties along with a measure

of scene luminance. The wantsExposureAdaptation property determines whether tone mapping effects are static or dynamically respond when the luminance visible to the camera changes.
The default value is false.
(Read and Write property)

### 159.10.48 whitePoint as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The luminance level to use as the upper end of a tone mapping curve.
**Notes:**

When using a High Dynamic Range (HDR) camera, SceneKit applies a process called tone mapping to translate the wide range of luminance values in the visible scene to the narrower range of brightness values that can be shown on a display. SceneKit determines a tone mapping curve from the minimumExposure, maximumExposure, exposureOffset, and whitePoint properties, along with a measure of scene luminance.
The default value is 1.0. By setting this property to a higher or lower value, you can produce more gradual or more abrupt transitions between shadows and highlights.
This property has no effect if the wantsHDR value is false.
(Read and Write property)

### 159.10.49 zFar as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The camera,Äôs far depth limit. Animatable.
**Notes:**

The far value determines the maximal distance between the camera and a visible surface. If a surface is farther from the camera than this distance, the surface is clipped and does not appear. The default far value is 100.0.
You can animate changes to this property,Äôs value. See Animating SceneKit Content.
(Read and Write property)

### 159.10.50 zNear as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The camera's near depth limit. Animatable.
**Notes:**

The near value determines the minimal distance between the camera and a visible surface. If a surface is closer to the camera than this distance, the surface is clipped and does not appear. The near value must not be zero. The default near value is 1.0.

You can animate changes to this property,Äôs value. See Animating SceneKit Content.
(Read and Write property)

### 159.10.51 Constants

### 159.10.52 kProjectionDirectionHorizontal = 1

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the options for the axis used to determine field of view or orthographic projection.
**Notes:** The camera's field of view or orthographic scale are measured horizontally.

### 159.10.53 kProjectionDirectionVertical = 0

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the options for the axis used to determine field of view or orthographic projection.
**Notes:** The camera's field of view or orthographic scale are measured vertically.

## 159.11 class SCNCapsuleMBS

### 159.11.1 class SCNCapsuleMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** SCNCapsule represents a capsule with controllable height and cap radius.
**Notes:** Subclass of the SCNGeometryMBS class.

### 159.11.6 Methods

### 159.11.7 capsule(capRadius as double, height as double) as SCNCapsuleMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a capsule with given radius and height.
**Notes:**

capRadius: The radius of the capsule.
height: The height of the capsule.

### 159.11.8 Constructor(capRadius as double, height as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a capsule with given radius and height.
**Notes:**

capRadius: The radius of the capsule.
height: The height of the capsule.

### 159.11.9 Properties

### 159.11.10 capRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The cap radius of the capsule. Animatable.
**Notes:**

If the value is less than or equal to 0, the geometry is empty. The default value is 0.5.
(Read and Write property)

### 159.11.11 capSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The number of subdivisions in the cap. Animatable.
**Notes:**

If the value is less than 2, the behavior is undefined. The default value is 24.
(Read and Write property)

### 159.11.12 height as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The height of the capsule. Animatable.
**Notes:**

If the value is less than or equal to 0, the geometry is empty. The default value is 2.
(Read and Write property)

### 159.11.13 heightSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The number of subdivisions along the Y axis. Animatable.
**Notes:**

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

### 159.11.14 radialSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The number of subdivisions along the radial coordinate. Animatable.
**Notes:**

If the value is less than 3, the behavior is undefined. The default value is 48.
(Read and Write property)

# 159.12 class SCNConeMBS

## 159.12.1 class SCNConeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** SCNCone represents a cone with controllable height, top radius and bottom radius.
**Notes:** Subclass of the SCNGeometryMBS class.

### 159.12.6 Methods

### 159.12.7 cone(topRadius as double, bottomRadius as double, height as double) as SCNConeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a cone with given top radius, bottom radius and height.
**Notes:**

topRadius: The radius at the top of the cone.
bottomRadius: The radius at the bottom of the cone.
height: The height of the cone.

### 159.12.8 Constructor(topRadius as double, bottomRadius as double, height as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a cone with given top radius, bottom radius and height.
**Notes:**

topRadius: The radius at the top of the cone.
bottomRadius: The radius at the bottom of the cone.
height: The height of the cone.

### 159.12.9 Properties

### 159.12.10 bottomRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The radius at the bottom of the cone. Animatable.
**Notes:**

If the value is less than 0, the geometry is empty. The default value is 0.5.
(Read and Write property)

### 159.12.11 height as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The height of the cone. Animatable.
**Notes:**

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

### 159.12.12 heightSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The number of subdivisions along the Y axis. Animatable.
**Notes:**

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

### 159.12.13 radialSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The number of subdivisions along the radial coordinate. Animatable.
**Notes:**

If the value is less than 3, the behavior is undefined. The default value is 48.
(Read and Write property)

### 159.12.14 topRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The radius at the top of the cone. Animatable.
**Notes:**

If the value is less than 0, the geometry is empty. The default value is 0.
(Read and Write property)

## 159.13 class SCNConstraintMBS

### 159.13.1 class SCNConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The abstract superclass for objects that automatically adjust the position, rotation, or scale of a node based on specified rules.
**Notes:**

To control the transform (position, rotation, and scale) of one or more SCNNodeMBS objects with constraints, create and configure instances of the SCNConstraint subclass that provides the behavior you want, then add those constraint objects to each node's constraints array.

When SceneKit prepares to render a scene, it examines the list of constraints attached to each node to determine the transform for that node, then applies the new transformation before displaying the scene.

### 159.13.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

### 159.13.3 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

### 159.13.4 Methods

### 159.13.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The constructor.

### 159.13.6 copy as SCNConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a copy of the constraint object.

### 159.13.7 Properties

### 159.13.8 Enabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Determines whether the constraint is enabled or not.
**Notes:**

Defaults to true.
(Read and Write property)

### 159.13.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 159.13.10 Incremental as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Specifies whether or not the contraint should applies incrementally and have it's effect being cumulated over the rendered frames.
**Notes:**

Defaults to true on macOS 10.13, iOS 11, tvOS 11 and watchOS 4. Defaults to false in earlier versions.
(Read and Write property)

### 159.13.11 influenceFactor as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The influence of the constraint on the node,Äôs transformation.
**Notes:**

Use this property to relax the effect of a constraint on the nodes it applies to. For example, consider a node containing a spotlight, constrained by an SCNLookAtConstraintMBS object to point toward another node containing a moving game character. If the constraint,Äôs influence factor is 1.0, SceneKit adjusts the spotlight node to point directly at the game character each time it renders a frame. If you reduce the influence factor to 0.5, each time SceneKit renders a frame it moves the spotlight halfway from its current orientation to the target orientation. As a result, the spotlight continues to follow the moving character, but

with a slight lag.

The default influence factor is 1.0, specifying that SceneKit apply the full effect of the constraint every frame. An influence factor of 0.0 means the constraint has no effect.

This property has no effect on SCNTransformConstraintMBS objects.
(Read and Write property)

# 159.14 control SCNControlMBS

## 159.14.1 control SCNControlMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop only.

**Function:** The Xojo control for a SCNViewMBS.
**Notes:**

This control embeds a special SCNView subclass.
Designed for Xojo 2013r1 and newer. May work on Xojo 2012, but not perfectly.
Please use view property to access the underlaying object and set properties.

To learn about rendering events, please check here:
https://developer.apple.com/documentation/scenekit/scnscenerendererdelegate?language=objc

### 159.14.6 Properties

### 159.14.7 View as SCNViewMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop only.

**Function:** The view used in the control.
**Notes:**

Use this object to set more options on the control.
(Read only property)

### 159.14.8 Events

### 159.14.9 BoundsChanged

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: .

**Function:** The event called when the bounds, but not the frame, changed.

### 159.14.10 Close

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: .

**Function:**

The control is about to close.
In Xojo version 2021r3 and newer this event is named Closing.

### 159.14.11 Closing

Plugin Version: 18.4, Platform: macOS, Targets: .

**Function:**

The control is about to close.
In older Xojo versions, this event is named Close.

### 159.14.12 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS Mac64bit Plugin, Plugin Version: 22.1, Platform: macOS, Targets: .

**Function:** This event is called when it is appropriate to display a contextual menu for the control.

### 159.14.13 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: .

**Function:** Called when a menuitem is choosen.
**Notes:** This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

### 159.14.14 EnableMenuItems

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: .

**Function:**

The event where you can enable menu items.
In Xojo version 2021r3 and newer this event is named MenuBarSelected.

### 159.14.15 FocusLost

Plugin Version: 18.4, Platform: macOS, Targets: .

**Function:**

The control lost focus.
In older Xojo versions, this event is named LostFocus.
**Notes:** This only fires if the control itself lost focus and not a sub control.

### 159.14.16 FocusReceived

Plugin Version: 18.4, Platform: macOS, Targets: .

**Function:**

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
**Notes:** This only fires if the control itself got focus and not a sub control.

### 159.14.17 FrameChanged

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: .

**Function:** The event called when the frame changed.
**Notes:** This event notifies you, that the control changed it's bounding frame, which is position and/or size.

### 159.14.18 GotFocus

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: .

**Function:**

The control itself got focus.
In Xojo version 2021r3 and newer this event is named FocusReceived.
**Notes:** This only fires if the control itself got focus and not a sub control.

### 159.14.19 LostFocus

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: .

**Function:**

The control lost focus.
In Xojo version 2021r3 and newer this event is named FocusLost.
**Notes:** This only fires if the control itself lost focus and not a sub control.

### 159.14.20 MenuBarSelected

Plugin Version: 18.4, Platform: macOS, Targets: .

**Function:**

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

### 159.14.21 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: .

**Function:** The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
**Notes:**

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown.
If you return False, the system handles the MouseDown so the above event handlers do not get called.

### 159.14.22 MouseDrag(x as Integer, y as Integer)

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: .

**Function:** This event fires continuously after the mouse button was pressed inside the Control.
**Notes:**

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

### 159.14.23 MouseUp(x As Integer, y As Integer)

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: .

**Function:** The mouse button was released.
**Notes:** Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

### 159.14.24 Open

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: .

**Function:**

The control is about to was created and you can initialize it.

In Xojo version 2021r3 and newer this event is named Opening.

### 159.14.25 Opening

Plugin Version: 18.4, Platform: macOS, Targets: .

**Function:**

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

### 159.14.26 rendererDidApplyAnimations(time as double)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

**Function:** Tells the control to perform any updates that need to occur after actions and animations are evaluated.
**Notes:**

time: The current system time, in seconds. Use this parameter for any time-based elements of your game logic.

SceneKit calls this method exactly once per frame, so long as the SCNViewMBS object (or other SCNSceneRenderer object) displaying the scene is not paused.

Implement this method to add game logic to the rendering loop. Any changes you make to the scene graph during this method are immediately reflected in the displayed scene. That is, SceneKit immediately updates the hierarchy of presentation nodes it uses to render the scene (instead of using the SCNTransactionMBS class to ,Äúbatch,Äù your changes).

### 159.14.27 rendererDidApplyConstraints(time as double)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

**Function:** Invoked on the control once the scene renderer did apply the constraints.
**Notes:**

time The time at which the constraints were simulated.

All modifications done within this method don't go through the transaction model, they are directly applied on the presentation tree.

### 159.14.28 rendererDidRenderScene(scene as SCNSceneMBS, time as double)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

**Function:** Tells the control that the renderer has rendered the scene.
**Notes:**

scene: The scene object that was rendered.
time: The current system time, in seconds. If your custom rendering involves animation, use this parameter to compute your own animation state.

Implement this method to perform custom drawing after SceneKit has rendered a scene,Äîfor example, to draw overlay content on top of SceneKit content. You should only execute Metal or OpenGL drawing commands (and any setup required to perform them) in this method,Äîthe results of modifying SceneKit objects in this method are undefined.

- To render using Metal, use the renderer parameter to retrieve the scene renderer,Äôs currentRenderCommandEncoder object and encode your own drawing commands. If you need to reference other Metal state, see the properties listed in SCNSceneRenderer.
- To render using OpenGL, simply call the relevant OpenGL drawing commands,ÄîSceneKit automatically makes its OpenGL context the current context before calling this method. If you need to reference the OpenGL context being rendered into, examine the context property of the renderer parameter.

You must draw using the appropriate graphics technology for the view currently being rendered. Use the renderingAPI property of the renderer object to determine whether Metal or OpenGL is in use.

### 159.14.29 rendererDidSimulatePhysics(time as double)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

**Function:** Tells the control to perform any updates that need to occur after physics simulations are performed.
**Notes:**

time: The current system time, in seconds. Use this parameter for any time-based elements of your game logic.

SceneKit calls this event exactly once per frame, so long as the SCNViewMBS object (or other SCNSceneRenderer object) displaying the scene is not paused.

Implement this event to add game logic to the rendering loop. Any changes you make to the scene graph during this method are immediately reflected in the displayed scene. That is, SceneKit immediately updates the hierarchy of presentation nodes it uses to render the scene (instead of using the SCNTransactionMBS

class to ‚Äúbatch‚Äù your changes).

This event is the last opportunity SceneKit provides for you to change the scene graph before rendering.

### 159.14.30 rendererUpdate(time as double)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

**Function:** Tells the control to perform any updates that need to occur before actions, animations, and physics are evaluated.
**Notes:**

time: The current system time, in seconds. Use this parameter for any time-based elements of your game logic.

SceneKit calls this method exactly once per frame, so long as the SCNViewMBS object (or other SCNSceneRenderer object) displaying the scene is not paused.

Implement this event to add game logic to the rendering loop. Any changes you make to the scene graph during this method are immediately reflected in the displayed scene. That is, SceneKit immediately updates the hierarchy of presentation nodes it uses to render the scene (instead of using the SCNTransactionMBS class to ‚Äúbatch‚Äù your changes).

### 159.14.31 rendererWillRenderScene(scene as SCNSceneMBS, time as double)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

**Function:** Tells the control that the renderer has cleared the viewport and is about to render the scene.
**Notes:**

scene: The SCNSceneMBS object to be rendered.
time: The current system time, in seconds. If your custom rendering involves animation, use this parameter to compute your own animation state.

Implement this event to perform custom drawing before SceneKit renders a scene,‚Äîfor example, to draw backdrop content underneath SceneKit content. You should only execute Metal or OpenGL drawing commands (and any setup required to perform them) in this event,‚Äîthe results of modifying SceneKit objects during this event are undefined.

To render using Metal, use the renderer parameter to retrieve the scene renderer,‚Äôs currentRenderCommandEncoder object and encode your own drawing commands. If you need to reference other Metal state, see the properties listed in SCNSceneRenderer.

To render using OpenGL, simply call the relevant OpenGL drawing commands,ÄîSceneKit automatically makes its OpenGL context the current context before calling this event. If you need to reference the OpenGL context being rendered into, examine the context property of the renderer parameter.

You must draw using the appropriate graphics technology for the view currently being rendered. Use the renderingAPI property of the renderer object to determine whether Metal or OpenGL is in use.

### 159.14.32 ScaleFactorChanged(NewFactor as double)

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: .

**Function:** The backing store scale factor has changed.
**Notes:** Please invalidate any cached bitmaps or other relevant state.

## 159.15 class SCNCylinderMBS

### 159.15.1 class SCNCylinderMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** SCNCylinder represents a cylinder with controllable height and radius.
**Notes:** Subclass of the SCNGeometryMBS class.

### 159.15.6 Methods

### 159.15.7 Constructor(radius as double, height as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a cylinder with given radius and height.

### 159.15.8 cylinder(radius as double, height as double) as SCNCylinderMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a cylinder with given radius and height.

### 159.15.9 Properties

### 159.15.10 height as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The height of the cylinder. Animatable.
**Notes:**

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

### 159.15.11 heightSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The number of subdivisions along the Y axis. Animatable.
**Notes:**

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

### 159.15.12 radialSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The number of subdivisions along the radial coordinate. Animatable.
**Notes:**

If the value is less than 3, the behavior is undefined. The default value is 48.
(Read and Write property)

### 159.15.13 radius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The radius of the cylinder. Animatable.
**Notes:**

If the value is less than or equal to 0, the geometry is empty. The default value is 0.5.
(Read and Write property)

# 159.16 class SCNDistanceConstraintMBS

## 159.16.1 class SCNDistanceConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** A SCNDistanceConstraint ensure a minimum/maximum distance with a target node.
**Notes:** Subclass of the SCNConstraintMBS class.

## 159.16.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

## 159.16.3 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

## 159.16.4 Methods

## 159.16.5 Constructor(target as SCNNodeMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a SCNDistanceConstraint constraint.

## 159.16.6 distanceConstraintWithTarget(target as SCNNodeMBS) as SCNDistanceConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a SCNDistanceConstraint constraint.

## 159.16.7 Properties

## 159.16.8 maximumDistance as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The minimum distance.
**Notes:**

Defaults to MAXFLOAT. Animatable.
(Read and Write property)

### 159.16.9 minimumDistance as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The minimum distance.
**Notes:**

Defaults to 0. Animatable.
(Read and Write property)

### 159.16.10 target as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Defines the target node to keep distance with.
**Notes:** (Read and Write property)

# 159.17 class SCNFloorMBS

## 159.17.1 class SCNFloorMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** SCNFloor represents an infinite plane geometry.
**Notes:** Subclass of the SCNGeometryMBS class.

## 159.17.2 Blog Entries

- Basic Forms in MBS Xojo SceneKit Plugin
- MBS Xojo Plugins, version 19.1pr1

## 159.17.3 Blog Entries

## 159.17.4 Methods

## 159.17.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a floor.
**Notes:** A floor is an infinite plane.

## 159.17.6 floor as SCNFloorMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a floor.
**Notes:** A floor is an infinite plane.

### 159.17.7 Properties

### 159.17.8 length as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The floor extent along the Z axis. Animatable.
**Notes:**

If the value is equal to 0, the floor is infinite on the Z axis. The default value is 0.
(Read and Write property)

### 159.17.9 reflectionCategoryBitMask as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Determines the node categories to reflect. Defaults to all bits set.
**Notes:** (Read and Write property)

### 159.17.10 reflectionFalloffEnd as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Specifies the distance from the floor where the falloff finishes. Animatable.
**Notes:**

If the value is 0 then there is no falloff. The default value is 0.
(Read and Write property)

### 159.17.11 reflectionFalloffStart as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Specifies the distance from the floor where the falloff begins. Animatable.
**Notes:**

The default value is 0.
(Read and Write property)

### 159.17.12 reflectionResolutionScaleFactor as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Specifies the resolution scale factor of the buffer used to render the reflection.
**Notes:**

Defaults to 1.0.
(Read and Write property)

### 159.17.13 reflectivity as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Specifies the reflectivity of the floor. Animatable.
**Notes:**

If the value is greater than zero then the surface will reflect other objects in the scene. The default value is 0.25.
(Read and Write property)

### 159.17.14 width as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The floor extent along the X axis. Animatable.
**Notes:**

If the value is equal to 0, the floor is infinite on the X axis. The default value is 0.
(Read and Write property)

# 159.18 class SCNGeometryElementMBS

## 159.18.1 class SCNGeometryElementMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** A container for index data describing how vertices connect to define a three-dimensional object, or geometry.
**Notes:**

You use geometry elements together with SCNGeometrySourceMBS objects to define custom SCNGeometryMBS objects or to inspect the data that composes an existing geometry. You create a custom geometry using a three-step process:

1. Create one or more SCNGeometrySource objects, each of which defines per-vertex information such as position, surface normal, or texture coordinates for all vertices in the geometry.
2. Create at least one SCNGeometryElement object, containing an array of indices identifying vertices in the geometry sources and describing the drawing primitive that SceneKit uses to connect the vertices when rendering the geometry.
3. Create an SCNGeometry instance from the geometry sources and geometry elements.

When SceneKit renders a geometry, each geometry element corresponds to a drawing command sent to the GPU. Because different rendering states require separate drawing commands, you can define a geometry using multiple geometry elements. For example, the teapot geometry shown below has four geometry elements, so you can assign up to four SCNMaterial objects in order to render each element with a different appearance. But because each drawing command incurs a CPU time overhead when rendering, minimizing the number of elements in a custom geometry can improve rendering performance.

## 159.18.2 Blog Entries

## 159.18.3 Blog Entries

- MBS Xojo Plugins, version 19.3pr5

## 159.18.4 Methods

## 159.18.5 Constructor(data as MemoryBlock, PrimitiveType as Integer, primitiveCount as Integer, bytesPerIndex as Integer)

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a geometry element from the specified data and options.
**Notes:**

data: The data describing the element.
primitiveType: The drawing primitive that connects vertices when rendering the geometry element. For possible values, see SCNGeometryPrimitiveType.
primitiveCount: The number of primitives in the element.
bytesPerIndex: The number of bytes that represent a single index value in the data.

Returns a new geometry element object.

An element,Äôs data is an array of index values identifying vertices in a geometry source. SceneKit interprets the data as an array of unsigned integers (whose size is specified by the bytesPerIndex parameter), and then connects the vertices in the order specified by this array, arranged according to the primitiveType parameter. To create a custom SCNGeometryMBS object from the geometry element, use the geometryWithSources() method.

### 159.18.6 geometryElementWithData(data as MemoryBlock, PrimitiveType as Integer, primitiveCount as Integer, bytesPerIndex as Integer) as SCNGeometryElementMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a geometry element from the specified data and options.
**Notes:**

data: The data describing the element.
primitiveType: The drawing primitive that connects vertices when rendering the geometry element. For possible values, see SCNGeometryPrimitiveType.
primitiveCount: The number of primitives in the element.
bytesPerIndex: The number of bytes that represent a single index value in the data.

Returns a new geometry element object.

An element,Äôs data is an array of index values identifying vertices in a geometry source. SceneKit interprets the data as an array of unsigned integers (whose size is specified by the bytesPerIndex parameter), and then connects the vertices in the order specified by this array, arranged according to the primitiveType parameter. To create a custom SCNGeometryMBS object from the geometry element, use the geometryWithSources() method.

### 159.18.7 Properties

### 159.18.8 bytesPerIndex as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The number of bytes that represent each index value in the element,Äôs data.
**Notes:**

An element,Äôs data property holds an array of index values identifying vertices in a geometry source. SceneKit interprets the data as an array of unsigned integers, whose size is specified by the bytesPerIndex property.
(Read only property)

### 159.18.9 Data as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The data describing the geometry element.
**Notes:**

An element,Äôs data is an array of index values identifying vertices in a geometry source. SceneKit interprets the data as an array of unsigned integers, whose size is specified by the bytesPerIndex property.
(Read only property)

### 159.18.10 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 159.18.11 maximumPointScreenSpaceRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The largest radius, measured in screen points, at which to render any point in the geometry element.
**Notes:**

Some visual effects call for rendering a geometry as a collection of individual points,Äîthat is, a point cloud, not a solid surface or wireframe mesh. When you use this option, SceneKit can render each point as a small 2D surface that always faces the camera. By applying a texture or custom shader to that surface, you can efficiently render many small objects at once.

To render a geometry element as a point cloud, you must set three properties: pointSize, minimumPointScreenSpaceRadius, and maximumPointScreenSpaceRadius. Use pointSize to determine how large each point appears in world space, so that points farther away appear as smaller 2D surfaces. Use the minimum and maximum radius properties to ensure that the on-screen rendering of each point fits within a certain range of pixel sizes.
For example, to render a point cloud where each point is always one pixel wide (like a field of stars), set both the minimum and maximum sizes to one pixel. To render a group of objects whose screen sizes vary with perspective (like a set of images representing planets), set the minimum size to one pixel and the maximum size to a much larger value.
(Read and Write property)

### 159.18.12 minimumPointScreenSpaceRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The smallest radius, measured in screen points, at which to render any point in the geometry element.
**Notes:**

Some visual effects call for rendering a geometry as a collection of individual points,Äîthat is, a point cloud, not a solid surface or wireframe mesh. When you use this option, SceneKit can render each point as a small 2D surface that always faces the camera. By applying a texture or custom shader to that surface, you can efficiently render many small objects at once.
To render a geometry element as a point cloud, you must set three properties: pointSize, minimumPointScreenSpaceRadius, and maximumPointScreenSpaceRadius. Use pointSize to determine how large each point appears in world space, so that points farther away appear as smaller 2D surfaces. Use the minimum and maximum radius properties to ensure that the on-screen rendering of each point fits within a certain range of pixel sizes.
For example, to render a point cloud where each point is always one pixel wide (like a field of stars), set both the minimum and maximum sizes to one pixel. To render a group of objects whose screen sizes vary with perspective (like a set of images representing planets), set the minimum size to one pixel and the maximum size to a much larger value.
(Read and Write property)

### 159.18.13 pointSize as Double

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The width of each point in the geometry element, as measured in the geometry's local 3D coordinate space.
**Notes:**

Some visual effects call for rendering a geometry as a collection of individual points,Äîthat is, a point cloud, not a solid surface or wireframe mesh. When you use this option, SceneKit can render each point as a small 2D surface that always faces the camera. By applying a texture or custom shader to that surface, you can

efficiently render many small objects at once.
To render a geometry element as a point cloud, you must set three properties: pointSize, minimumPointScreenSpaceRadius, and maximumPointScreenSpaceRadius. Use pointSize to determine how large each point appears in world space, so that points farther away appear as smaller 2D surfaces. Use the minimum and maximum radius properties to ensure that the on-screen rendering of each point fits within a certain range of pixel sizes.
(Read and Write property)

### 159.18.14 primitiveCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The number of primitives in the element.
**Notes:** (Read only property)

### 159.18.15 primitiveRange as NSRangeMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The range of primitives from the geometry element to render.
**Notes:**

The default value for this property is an NSRangeMBS whose location is NSNotFound (-1) and length is zero, indicating that, by default, SceneKit renders the entire set of primitives specified by a geometry element's data buffer.
You can change a geometry without redefining it by choosing to render only a subset of the primitives specified by a geometry element. To do so, set this property to a subrange of primitive indexes.
(Read and Write property)

### 159.18.16 primitiveType as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The drawing primitive that connects vertices when rendering the geometry element.
**Notes:** (Read only property)

### 159.18.17 Constants

### 159.18.18 PrimitiveTypeLine = 2

MBS Mac64bit Plugin, Plugin Version: 19.3.

**Function:** One of the primitive types.
**Notes:** The geometry element,Äôs data is a sequence of line segments, with each line segment described by two new vertices.

### 159.18.19 PrimitiveTypePoint = 3

MBS Mac64bit Plugin, Plugin Version: 19.3.

**Function:** One of the primitive types.
**Notes:** The geometry element,Äôs data is a sequence of unconnected points.

### 159.18.20 PrimitiveTypePolygon = 4

MBS Mac64bit Plugin, Plugin Version: 19.3.

**Function:** One of the primitive types.
**Notes:**

The geometry element,Äôs data is a sequence of arbitrary polygons.
see
https://developer.apple.com/documentation/scenekit/scngeometryprimitivetype/scngeometryprimitivetype-polygon?language=objc

### 159.18.21 PrimitiveTypeTriangles = 0

MBS Mac64bit Plugin, Plugin Version: 19.3.

**Function:** One of the primitive types.
**Notes:** The geometry element,Äôs data is a sequence of triangles, with each triangle described by three new vertices.

### 159.18.22 PrimitiveTypeTriangleStrip = 1

MBS Mac64bit Plugin, Plugin Version: 19.3.

**Function:** One of the primitive types.
**Notes:** The geometry element,Äôs data is a sequence of triangles, with each triangle described by one new vertex and two vertices from the previous triangle.

## 159.19 class SCNGeometryMBS

### 159.19.1 class SCNGeometryMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** A three-dimensional shape (also called a model or mesh) that can be displayed in a scene, with attached materials that define its appearance.
**Notes:**

In SceneKit, geometries attached to SCNNode objects form the visible elements of a scene, and SCNMaterial objects attached to a geometry determine its appearance.

Working with Geometry Objects

You control a geometry,Äôs appearance in a scene with nodes and materials. A geometry object provides only the form of a visible object rendered by SceneKit. You specify color and texture for a geometry,Äôs surface, control how it responds to light, and add special effects by attaching materials (for details, see the methods in Managing a Geometry,Äôs Materials). You position and orient a geometry in a scene by attaching it to an SCNNode object. Multiple nodes can reference the same geometry object, allowing it to appear at different positions in a scene.

You can easily copy geometries and change their materials. A geometry object manages the association between immutable vertex data and a mutable assignment of materials. To make a geometry appear more than once in the same scene with a different set of materials, use its inherited copy method. The copy shares the underlying vertex data of the original, but can be assigned materials independently. You can thus make many copies of a geometry without incurring a significant cost to rendering performance.

You can animate a geometry object. The vertex data associated with a geometry is immutable, but SceneKit provides several ways to animate geometry. You can use a SCNMorpher or SCNSkinner object to deform a geometry,Äôs surface, or run animations created in an external 3D authoring tool and loaded from a scene file. You can also use methods in the SCNShadable protocol to add custom GLSL shader programs that alter SceneKit,Äôs rendering of a geometry.

Obtaining a Geometry Object

SceneKit provides several ways to introduce geometry objects to your app:

| Action | For further information |
|---|---|
| Load from a scene file created using external 3D authoring tools | SCNScene, SCNSceneSource |
| Use and customize SceneKit,Äôs built-in primitive shapes | SCNPlane, SCNBox, SCNSphere, SCNPyramid, SCNCone, SCNCylinder, SCNCapsule, SCNTube, and SCNTorus |
| Create 3D geometry from 2D text or B√©zier curves | SCNText, SCNShape |
| Create a custom geometry from vertex data | SCNGeometrySource, SCNGeometryElement, geometryWithSources. |

### 159.19.6 Methods

### 159.19.7 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a new geometry object with no content (or default content).
**Notes:**

This method creates a geometry with no visible content. You can use an empty geometry with another geometry,Äôs levelsOfDetail property to make the geometry disappear when it is too far away from the camera to usefully render.
SceneKit,Äôs SCNGeometryMBS subclasses use this method to create geometry instances with default contents. For example, if you call this method on the SCNSphereMBS class, it creates a sphere geometry whose radius property has the default value of 0.5.
You cannot add geometry sources or elements to a geometry object after creating it. To create a custom geometry from your own source and element data, use the geometryWithSources method.

### 159.19.8 copy as SCNGeometryMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a copy of the geometry.

### 159.19.9 geometry as SCNGeometryMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a new geometry object with no content (or default content).
**Notes:**

This method creates a geometry with no visible content. You can use an empty geometry with another geometry,Äôs levelsOfDetail property to make the geometry disappear when it is too far away from the camera to usefully render.
SceneKit,Äôs SCNGeometryMBS subclasses use this method to create geometry instances with default contents. For example, if you call this method on the SCNSphereMBS class, it creates a sphere geometry whose radius property has the default value of 0.5.
You cannot add geometry sources or elements to a geometry object after creating it. To create a custom geometry from your own source and element data, use the geometryWithSources method.

### 159.19.10 geometryElementAtIndex(index as Integer) as SCNGeometryElementMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns the geometry element at a specified index.
**Notes:** Each SCNGeometryElementMBS object describes how vertices from the geometry,Äôs sources are combined into polygons to create the geometry,Äôs shape. Visible geometries contain at least one element.

### 159.19.11 geometryElements as SCNGeometryElementMBS()

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** An array of geometry elements that describe the geometry,Äôs shape.
**Notes:**

Each SCNGeometryElementMBS object describes how vertices from the geometry,Äôs sources are combined into polygons to create the geometry,Äôs shape. Visible geometries contain at least one element.
For geometries with multiple elements, you can use the materials property to attach different materials to each element.

### 159.19.12 geometrySources as SCNGeometrySourceMBS()

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** An array of geometry sources that provide vertex data for the geometry.
**Notes:** Each SCNGeometrySourceMBS object describes an attribute of all vertices in the geometry (such as vertex position, surface normal vector, color, or texture mapping coordinates) identified by the source,Äôs semantic property. A geometry always has at least one source (for the SCNGeometrySourceSemanticVertex

semantic), typically has additional sources for use in lighting and shading, and may have other sources for skeletal animation or surface subdivision information.

### 159.19.13 geometrySourcesForSemantic(semantic as String) as SCNGeometrySourceMBS()

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns the geometry sources for a specified semantic.
**Notes:**

semantic: A constant identifying a semantic for which to return geometry sources. See Geometry Semantic Identifiers for possible values.

Returns an array of SCNGeometrySource objects, or nil if the geometry has no source for the specified semantic.

Each SCNGeometrySourceMBS object describes an attribute of all vertices in the geometry (such as vertex position, surface normal vector, color, or texture mapping coordinates) identified by the source,Äôs semantic property. A geometry always has at least one source, for the SCNGeometrySourceSemanticVertex semantic, typically has additional sources for use in lighting and shading, and may have other sources for skeletal animation or surface subdivision information.
The vertex, normal, and color semantics each refer to at most one source. A geometry may have multiple sources for the SCNGeometrySourceSemanticTexcoord semantic,Äîin this case, indices in the returned array correspond to values for the mappingChannel property used when attaching textures to materials.

### 159.19.14 geometryWithSources(sources() as SCNGeometrySourceMBS, elements() as SCNGeometryElementMBS) as SCNGeometryMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a new geometry built from the specified geometry sources and elements.
**Notes:**

sources: An array of SCNGeometrySourceMBS objects describing vertices in the geometry and their attributes.
elements: An array of SCNGeometryElementMBS objects describing how to connect the geometry,Äôs vertices.

A geometry,Äôs visible content comes from the combination of geometry sources, which contain data describing its vertices, with geometry elements, which contain data describing how the vertices connect to form a surface.
Each SCNGeometrySourceMBS object describes an attribute of all vertices in the geometry (vertex position, surface normal vector, color, or texture mapping coordinates) identified by the source,Äôs semantic property.

To create a custom geometry you must provide at least one source, for the SCNGeometrySourceSemanticVertex semantic. Typically, you also provide sources for normals and texture coordinates for use in lighting and shading.
Sources for the vertex, normal, and color semantics must be unique,Äîif multiple objects in the sources array have the same semantic, SceneKit uses only the first. A geometry may have multiple sources for the SCNGeometrySourceSemanticTexcoord semantic,Äîthe order of texture coordinate sources in the sources array determines the value to use for the mappingChannel property when attaching materials.
Each SCNGeometryElementMBS object describes how vertices from the geometry sources are combined into polygons to create the geometry,Äôs shape. Creating a custom geometry requires at least one element. If the elements array contains multiple objects, their order determines the arrangement of the geometry,Äôs materials,Äîfor details, see the discussion of the materials property.

### 159.19.15 insertMaterial(Material as SCNMaterialMBS, Index as Integer)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Insert a material in the materials array at the specified index.
**Notes:**

material: The material to insert.
index: Index in the materials array to insert the new material.

### 159.19.16 levelsOfDetail as SCNLevelOfDetailMBS()

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** An array of SCNLevelOfDetail objects for managing the geometry,Äôs appearance when viewed from far away.
**Notes:** Because rendering a complex geometry incurs a performance cost, you can use level-of-detail objects to substitute simpler geometries in its place as its distance from the point of view camera increases (or its apparent size decreases). For details, see SCNLevelOfDetailMBS.

### 159.19.17 materials as SCNMaterialMBS()

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Specifies the receiver's materials array.
**Notes:** Each geometry element can be rendered using a different material. The index of the material used for a geometry element is equal to the index of that element modulo the number of materials.

### 159.19.18 materialWithName(name as string) as SCNMaterialMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Return the first material from the materials array of the receiver with the specified name.
**Notes:** name: The name of the material to retrieve.

### 159.19.19 removeMaterial(Index as Integer)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Remove the material at the specified index from the materials array.
**Notes:** index: The index of the material to remove from the 'materials' array.

### 159.19.20 replaceMaterial(Index as Integer, Material as SCNMaterialMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Remove the material at the index 'index' from the materials array of the receiver and insert 'material' in its position.
**Notes:**

index: The index of the material to replace in the materials array.
material: The new material that will replace the previous one.

### 159.19.21 setLevelsOfDetail(LevelsOfDetails() as SCNLevelOfDetailMBS = nil)

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Sets an array of SCNLevelOfDetail objects for managing the geometry,Äôs appearance when viewed from far away.
**Notes:** Value can be nil to clear it.

### 159.19.22 setMaterials(materials() as SCNMaterialMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Sets the materials.

### 159.19.23 Properties

### 159.19.24 edgeCreasesElement as SCNGeometryElementMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The geometry element identifying which edges of the geometry,Äôs surface should remain sharp after subdivision.
**Notes:**

This geometry element,Äôs primitiveType value must be SCNGeometryPrimitiveTypeLine. The geometry element,Äôs data is an array of vertex indices, each pair of which defines a line segment identifying an edge to be treated as a crease during subdivision. Use the edgeCreasesSource property to specify the smoothness or sharpness of each crease.
(Read and Write property)

### 159.19.25 edgeCreasesSource as SCNGeometrySourceMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The geometry source specifying the smoothness or sharpness of edges after surface subdivision.
**Notes:**

This geometry source,Äôs semantic value must be SCNGeometrySourceSemanticEdgeCrease. Its data is an array of scalar values (that is, the source,Äôs componentsPerVector value is 1). The value at an index in the geometry source determines the smoothness or sharpness of the edge identified by the primitive at the corresponding index in the edgeCreasesElement geometry element: a value of 0.0 specifies a completely smoothed edge, and a value of 10.0 or greater specifies an infinitely sharp edge.
(Read and Write property)

### 159.19.26 firstMaterial as SCNMaterialMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Determines the first material of the geometry. Returns nil if the geometry has no material.
**Notes:**

This method is here for convenience. It is equivalent to the first object in the ”materials” array above.
(Read and Write property)

### 159.19.27 geometryElementCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns the number of geometry elements owned by the geometry.
**Notes:** (Read only property)

### 159.19.28 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 159.19.29 Name as String

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** A name associated with the geometry object.
**Notes:**

You can provide a descriptive name for a geometry object to make managing your scene graph easier. Geometries loaded from a scene file may have names assigned by an artist using a 3D authoring tool. Use the SCNSceneSourceMBS class to examine geometries in a scene file without loading its scene graph.

Geometry names are saved when you export a scene to a file using its writeToURL method. They also appear in the Xcode scene editor.
(Read and Write property)

### 159.19.30 subdivisionLevel as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Specifies the subdivision level of the receiver.
**Notes:**

Defaults to 0.
A subdivision level of 0 means no subdivision. When the ‘tessellator‘ property of the receiver is not nil, the refinement is done on the GPU.
(Read and Write property)

### 159.19.31 tessellator as SCNGeometryTessellatorMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Specifies how the geometry should be tessellated at render time on the GPU.
**Notes:**

Defaults to nil.
(Read and Write property)

### 159.19.32 wantsAdaptiveSubdivision as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Specifies if the subdivision is adaptive or uniform.
**Notes:**

Defaults to true.
Adaptive subdivision requires that the ‘tessellator‘ property of the receiver is not nil.
(Read and Write property)

# 159.20 class SCNGeometrySourceMBS

## 159.20.1 class SCNGeometrySourceMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** A container for vertex data forming part of the definition for a three-dimensional object, or geometry.
**Notes:**

You use geometry sources together with SCNGeometryElement objects to define custom SCNGeometry objects or to inspect the data that composes an existing geometry.

see
https://developer.apple.com/documentation/scenekit/scngeometrysource

## 159.20.4 Methods

## 159.20.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The constructor.

### 159.20.6 geometrySourceWithData(data as MemoryBlock, Semantic as String, vectorCount as Integer, floatComponents as boolean, componentsPerVector as Integer, bytesPerComponent as Integer, dataOffset as Integer, dataStride as Integer) as SCNGeometrySourceMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a geometry source from the specified data and options.
**Notes:**

data: The data for the geometry source.
semantic: The semantic value (or attribute) that the geometry source describes for each vertex. See Geometry Semantic Identifiers for available values.
vectorCount: The number of geometry source vectors.
floatComponents: A Boolean value that indicates whether vector components are floating-point values. Specify true for floating-point values, or false for integer values.
componentsPerVector: The number of scalar components in each vector.
bytesPerComponent: The size, in bytes, of each vector component.
offset: The offset, in bytes, from the beginning of the data to the first vector component to be used in the geometry source.
stride: The number of bytes from each vector to the next in the data.

Returns a new geometry source object.

sA geometry source,Äôs data is an array of vectors, each of which represents a particular attribute (or semantic) of a vertex in the geometry. The other parameters determine how SceneKit interprets this data. For example, an array of vertex positions may have three 32-bit floating-point components per vector, but an array of texture coordinates may have two 8-bit integer coponents per vector. You can use the offset and stride parameters together to interleave data for multiple geometry sources in the same array, improving rendering performance. See SCNGeometrySourceMBS for details.
To create a custom SCNGeometryMBS object from the geometry source, use the geometryWithSources method.

### 159.20.7 geometrySourceWithNormals(Normals() as SCNVector3MBS) as SCNGeometrySourceMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a geometry source from an array of normal vectors.
**Notes:**

normals: An array of three-component vectors, each of which represents a surface normal for the geometry source.

A new geometry source whose SCNGeometrySource property is SCNGeometrySourceSemanticNormal.

SceneKit converts this data to its own format to optimize rendering performance. To read the converted data, examine the properties of the created SCNGeometrySourceMBS object.
To create a custom SCNGeometryMBS object from the geometry source, use the geometryWithSources method.
See also:

- 159.20.8 geometrySourceWithNormals(texcoord() as CGPointMBS) as SCNGeometrySourceMBS 23801

### 159.20.8 geometrySourceWithNormals(texcoord() as CGPointMBS) as SCNGeometrySourceMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a geometry source from an array of texture coordinate points.
**Notes:**

texcoord: An array of points, each of which represents a texture coordinate pair for the geometry source.

A new geometry source whose SCNGeometrySource property is SCNGeometrySourceSemanticTexcoord.

SceneKit converts this data to its own format to optimize rendering performance. To read the converted data, examine the properties of the created SCNGeometrySourceMBS object.
To create a custom SCNGeometryMBS object from the geometry source, use the geometryWithSources:elements: method.
See also:

- 159.20.7 geometrySourceWithNormals(Normals() as SCNVector3MBS) as SCNGeometrySourceMBS 23800

### 159.20.9 geometrySourceWithVertices(vertices() as SCNVector3MBS) as SCNGeometrySourceMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a geometry source from an array of vertex positions.
**Notes:**

vertices: An array of three-component vectors, each of which represents a vertex position for the geometry source.

Returns a new geometry source whose SCNGeometrySource property is SCNGeometrySourceSemanticVertex.

SceneKit converts this data to its own format to optimize rendering performance. To read the converted data, examine the properties of the created SCNGeometrySourceMBS object.
To create a custom SCNGeometryMBS object from the geometry source, use the geometryWithSources method.

### 159.20.10 SCNGeometrySourceSemanticBoneIndices as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The semantic for bone index data, used for skeletal animation of skinned surfaces.
**Notes:**

For a geometry source, this semantic identifies data containing skeletal animation data for each vertex in the geometry. SceneKit uses this information to determine which bone nodes in the skeleton affect the behavior of each vertex.
For a custom shader program, you use this semantic to bind SceneKit,Äôs bone index data to an input attribute of the shader.
For details on skeletal animation, see SCNSkinnerMBS.

### 159.20.11 SCNGeometrySourceSemanticBoneWeights as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The semantic for bone weight data, used for skeletal animation of skinned surfaces.
**Notes:**

For a geometry source, this semantic identifies data containing skeletal animation data for each vertex in the geometry. SceneKit uses this information to determine how much a vertex,Äôs position is influenced by the positions of bone nodes in the skeleton.
For a custom shader program, you use this semantic to bind SceneKit,Äôs bone weight data to an input attribute of the shader.
For details on skeletal animation, see SCNSkinnerMBS.

### 159.20.12 SCNGeometrySourceSemanticColor as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The semantic for per-vertex color data.
**Notes:**

For a geometry source, this semantic identifies data containing a color for each vertex in the geometry. SceneKit interpolates per-vertex colors across a surface to produce smooth shading. Per-vertex colors modulate those produced by lighting and a geometry,Äôs materials, if applicable.
For a custom shader program, you use this semantic to bind SceneKit,Äôs vertex color data to an input

attribute of the shader.
Vertex color data is typically an array of three- or four-component vectors.

### 159.20.13 SCNGeometrySourceSemanticEdgeCrease as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The semantic for edge crease data, used for subdividing surfaces.
**Notes:**

For a geometry source, this semantic identifies data containing crease data for each vertex in the geometry. SceneKit uses this information to determine the sharpness of edges and smoothness of surfaces when you change a geometry,Äôs subdivisionLevel property.
For a custom shader program, you use this semantic to bind SceneKit,Äôs edge crease data to an input attribute of the shader.
Edge crease data is an array of scalar floating-point values, where each value determines the smoothness or sharpness of the edge identified by the primitive at the corresponding index in the geometry,Äôs SceneKit Constants geometry element: A value of 0.0 specifies a completely smoothed edge, and a value of 10.0 or greater specifies an infinitely sharp edge.

### 159.20.14 SCNGeometrySourceSemanticNormal as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The semantic for surface normal data.
**Notes:**

For a geometry source, this semantic identifies data containing the surface normal vector at each vertex in the geometry. SceneKit uses this information to compute lighting effects on the surface.
For a custom shader program, you use this semantic to bind SceneKit,Äôs vertex normal data to an input attribute of the shader.
Vertex normal data is typically an array of three- or four-component vectors.

### 159.20.15 SCNGeometrySourceSemanticTangent as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The semantic for surface tangent vector data.
**Notes:**

For a geometry source, this semantic identifies data containing the surface tangent vector at each vertex in the geometry. SceneKit uses this information to compute advanced lighting effects on the surface.
For a custom shader program, you use this semantic to bind SceneKit,Äôs vertex tangent data to an input attribute of the shader.

Vertex tangent data is typically an array of three- or four-component vectors.

### 159.20.16 SCNGeometrySourceSemanticTexcoord as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The semantic for texture coordinate data.
**Notes:**

For a geometry source, this semantic identifies data containing texture mapping coordinates for each vertex in the geometry. Unlike other semantics, a geometry may contain multiple sources for texture coordinates,Äîeach corresponds to a separate mappingChannel number that you can use when associating textured materials.
For a custom shader program, you use this semantic to bind SceneKit,Äôs texture coordinate data to one or more input attributes of the shader.
Texture coordinate data is typically an array of two-component vectors.

### 159.20.17 SCNGeometrySourceSemanticVertex as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The semantic for vertex position data.
**Notes:**

For a geometry source, this semantic identifies data containing the positions of each vertex in the geometry. If you create a custom geometry using the geometryWithSources method, you must provide a geometry source for this semantic.
For a custom shader program, you use this semantic to bind SceneKit,Äôs vertex position data to an input attribute of the shader.
Vertex position data is typically an array of three- or four-component vectors.

### 159.20.18 SCNGeometrySourceSemanticVertexCrease as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The semantic for vertex crease data, used for subdividing surfaces.
**Notes:**

For a geometry source, this semantic identifies data containing crease data for each vertex in the geometry. SceneKit uses this information to determine the sharpness of corners and smoothness of surfaces when you change a geometry,Äôs subdivisionLevel property.
For a custom shader program, you use this semantic to bind SceneKit,Äôs vertex crease data to an input attribute of the shader.
Vertex crease data is an array of scalar floating-point values, where each value determines the smoothness

or sharpness of the corresponding vertex: A value of 0.0 specifies a completely smoothed corner, and a value of 10.0 or greater specifies an infinitely sharp point.

### 159.20.19 Properties

### 159.20.20 bytesPerComponent as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The size, in bytes, of each vector component.
**Notes:** (Read only property)

### 159.20.21 componentsPerVector as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The number of scalar components in each vector.
**Notes:** (Read only property)

### 159.20.22 Data as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The data for the geometry source.
**Notes:**

A geometry source,Äôs data is an array of vectors, each of which represents a particular attribute (or semantic) of a vertex in the geometry. The other properties of the geometry source determine how SceneKit interprets this data. For example, an array of vertex positions may have three 32-bit floating-point components per vector, but an array of texture coordinates may have two 8-bit integer coponents per vector.
(Read only property)

### 159.20.23 dataOffset as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The offset, in bytes, from the beginning of the data to the first vector component to be used in the geometry source.
**Notes:**

You can use the dataOffset and dataStride parameters can be used together to interleave data for multiple geometry sources in the same array, improving rendering performance. See SCNGeometrySourceMBS for

details.
(Read only property)

### 159.20.24 dataStride as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The number of bytes from a vector to the next one in the data.
**Notes:**

You can use the dataOffset and dataStride parameters can be used together to interleave data for multiple geometry sources in the same array, improving rendering performance. See SCNGeometrySourceMBS for details.
(Read only property)

### 159.20.25 floatComponents as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that indicates whether vector components are floating-point values.
**Notes:**

If true, SceneKit interprets the geometry source,Äôs data as an array of vectors whose components are floating-point values. The type of floating-point value is determined by the SCNGeometrySourceMBS property: 4 bytes for float values or 8 bytes for double values.
If false, SceneKit interprets the geometry source,Äôs data as an array of vectors whose components are integer values. The type of integer value is determined by the SCNGeometrySourceMBS property; for example, 2 bytes for unsigned short values or 4 bytes for unsigned int values.
(Read only property)

### 159.20.26 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 159.20.27 semantic as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The semantic value (or attribute) the geometry source describes for each vertex.
**Notes:**

A semantic describes an attribute for each vertex, such as position, color, surface normal vector, or texture coordinates.
See Geometry Semantic Identifiers for available values.
(Read only property)

### 159.20.28 vectorCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The number of vectors in the data.
**Notes:** (Read only property)

## 159.21 class SCNGeometryTessellatorMBS

### 159.21.1 class SCNGeometryTessellatorMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** A geometry tessellator describes how a more detailed surface is calculated from the geometry's initial surface.

### 159.21.2 Blog Entries

- MBS Xojo Plugins, version 19.3pr5

### 159.21.3 Blog Entries

### 159.21.4 Methods

### 159.21.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The constructor.

### 159.21.6 copy as SCNGeometryTessellatorMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a copy of the object.

### 159.21.7 Properties

### 159.21.8 Adaptive as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Specifies if the tessellation should be uniform or adaptive.
**Notes:**

Defaults to false.
(Read and Write property)

### 159.21.9 edgeTessellationFactor as Double

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Specifies the edge tessellation factor.
**Notes:**

Defaults to 1.
This has no effect for adaptive subdivision.
(Read and Write property)

### 159.21.10 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 159.21.11 insideTessellationFactor as Double

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Specifies the inside tessellation factor.
**Notes:**

Defaults to 1.
This has no effect for adaptive subdivision
(Read and Write property)

### 159.21.12 maximumEdgeLength as Double

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Specifies the maximum edge length.
**Notes:**

Defaults to 1.
This has no effect for non-adaptive subdivision
(Read and Write property)

### 159.21.13 ScreenSpace as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Specifies if the level of tessellation should be adapted in screenSpace.
**Notes:**

Defaults to false.
(Read and Write property)

### 159.21.14 smoothingMode as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The smoothing mode.
**Notes:**

Defaults to SmoothingModeNone.
(Read and Write property)

### 159.21.15 tessellationFactorScale as Double

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Specifies the scale factor applied to the per-patch tessellation factors.
**Notes:**

Defaults to 1.
(Read and Write property)

### 159.21.16 tessellationPartitionMode as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Specifies the tessellation partition mode.
**Notes:**

Defaults to TessellationPartitionModeInteger.

see also
https://developer.apple.com/documentation/metal/mtltessellationpartitionmode?language=objc
(Read and Write property)

### 159.21.17 Constants

### 159.21.18 SmoothingModeNone = 0

MBS Mac64bit Plugin, Plugin Version: 19.3.

**Function:** One of the smoothing modes.

### 159.21.19 SmoothingModePhong = 2

MBS Mac64bit Plugin, Plugin Version: 19.3.

**Function:** One of the smoothing modes.

### 159.21.20 SmoothingModePNTriangles = 1

MBS Mac64bit Plugin, Plugin Version: 19.3.

**Function:** One of the smoothing modes.

### 159.21.21 TessellationPartitionModeFractionalEven = 3

MBS Mac64bit Plugin, Plugin Version: 19.3.

**Function:** One of the partitioning modes used by the tessellator to derive the number and spacing of segments used to subdivide a corresponding edge.
**Notes:** A fractional even partitioning mode.

### 159.21.22 TessellationPartitionModeFractionalOdd = 2

MBS Mac64bit Plugin, Plugin Version: 19.3.

**Function:** One of the partitioning modes used by the tessellator to derive the number and spacing of segments used to subdivide a corresponding edge.
**Notes:** A fractional odd partitioning mode.

### 159.21.23 TessellationPartitionModeInteger = 1

MBS Mac64bit Plugin, Plugin Version: 19.3.

**Function:** One of the partitioning modes used by the tessellator to derive the number and spacing of segments used to subdivide a corresponding edge.
**Notes:** An integer partitioning mode.

### 159.21.24 TessellationPartitionModePow2 = 0

MBS Mac64bit Plugin, Plugin Version: 19.3.

**Function:** One of the partitioning modes used by the tessellator to derive the number and spacing of segments used to subdivide a corresponding edge.
**Notes:** A power of two partitioning mode.

# 159.22 class SCNHitTestResultMBS

## 159.22.1 class SCNHitTestResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Information about the result of a scene-space or view-space search for scene elements.
**Notes:**

Hit-testing is the process of finding elements of a scene located at a specified point, or along a specified line segment (or ray). An SCNHitTestResult object provides details about one result from a hit-test search. There are three ways to perform a hit-test search. Use the hitTest method of an SCNViewMBS object (or other scene renderer), the hitTestWithSegment method of a node, or the rayTestWithSegment method of your scene,Äôs physics world.

When you perform a hit-test search, SceneKit looks for SCNGeometryMBS objects along the ray you specify. For each intersection between the ray and and a geometry, SceneKit creates a hit-test result to provide information about both the SCNNodeMBS object containing the geometry and the location of the intersection on the geometry,Äôs surface.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- MBS Xojo Plugins, version 20.2pr1

## 159.22.5 Videos

- XDC 2020 MBS Plugins Presentation

### 159.22.6 Methods

### 159.22.7 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The private constructor.

### 159.22.8 SCNHitTestBackFaceCullingKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** An option to ignore faces not oriented toward the camera.
**Notes:** The value for this key is a Boolean value. The default value is true, specifying that back-facing polygons will not be returned as hit-test results.

### 159.22.9 SCNHitTestBoundingBoxOnlyKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** An option to search for objects by bounding box only.
**Notes:** The value for this key is a Boolean value. The default value is false, specifying that hit-testing searches should test against node geometry. Specifying true for this option increases search performance at the expense of geometric accuracy.

### 159.22.10 SCNHitTestClipToZRangeKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** An option to search for objects only within the depth range of the current point of view.
**Notes:**

The value for this key is a Boolean value. The default value is true, specifying that hit-testing searches only objects between the zNear and zFar distances of the pointOfView camera. Specify false to include objects outside this depth range in the search.
This option is valid only when hit-testing in the screen space of an SCNSceneRenderer object with the hitTest method.

### 159.22.11 SCNHitTestIgnoreChildNodesKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** An option to ignore child nodes when searching.
**Notes:** The value for this key is a Boolean value. The default value is false, specifying that hit-testing may return objects from any portion of the node hierarchy. Specify true to search only the node specified by the SCNHitTestRootNodeKey key.

### 159.22.12 SCNHitTestIgnoreHiddenNodesKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** An option to ignore hidden nodes when searching.
**Notes:** The value for this key is a Boolean value. The default value is true, specifying that hit-testing should not return nodes whose hidden property value is true. Specify false to search nodes regardless of their visibility.

### 159.22.13 SCNHitTestOptionCategoryBitMask as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** An option to search only for objects matching a specified bitmask.
**Notes:** The value for this key is an integer value. If present, the search will return only nodes that both satisfy the hit test and have a categoryBitMask value overlapping this bitmask.

### 159.22.14 SCNHitTestOptionSearchMode as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** An option for the number and order of hit test results to provide.
**Notes:** The value for this key is an raw integer value of an SCNHitTestSearchMode constant.

### 159.22.15 SCNHitTestRootNodeKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The root of the node hierarchy to be searched.
**Notes:** The value for this key is an SCNNodeMBS object. Hit-testing searches only the child node hierarchy under this node. When hit-testing takes place in the screen space of an SCNSceneRenderer object with the hitTest() method, the default value is the presented scene,Äôs root node. When hit-testing is in a node using its hitTestWithSegment(), the default value is the node.

### 159.22.16 Properties

### 159.22.17 boneNode as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The hit bone.
**Notes:**

Only available if the node hit has a SCNSkinnerMBS attached.
(Read only property)

### 159.22.18 faceIndex as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The index of the primitive in the geometry element intersected by the search ray.
**Notes:** (Read only property)

### 159.22.19 geometryIndex as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The index of the geometry element whose surface the search ray intersects.
**Notes:**

Every SCNGeometryMBS object contains one or more SCNGeometryElementMBS objects that define how its vertices connect to form a surface. This property provides the index of the geometry element intersecting the search ray. For more information about that geometry element, use the geometry,Äôs geometryElementAtIndex method.
(Read only property)

### 159.22.20 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 159.22.21 localCoordinates as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The point of intersection between the geometry and the search ray, in the local coordinate system of the node containing the geometry.
**Notes:** (Read only property)

### 159.22.22 localNormal as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The surface normal vector at the point of intersection, in the local coordinate system of the node containing the geometry intersected by the search ray.
**Notes:** (Read only property)

### 159.22.23 modelTransform as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The world transform matrix of the node containing the intersection.
**Notes:**

Use this matrix to transform vectors from the local coordinate space of the node whose geometry is intersected by the search ray to the scene,Äôs world coordinate system.
(Read only property)

### 159.22.24 node as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The node whose geometry intersects the search ray.
**Notes:** (Read only property)

### 159.22.25 worldCoordinates as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The point of intersection between the geometry and the search ray, in the scene,Äôs world coordinate system.
**Notes:** (Read only property)

### 159.22.26 worldNormal as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The surface normal vector at the point of intersection, in the scene,Äôs world coordinate system.
**Notes:** (Read only property)

### 159.22.27 Constants

### 159.22.28 SCNHitTestSearchModeAll = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the possible values for the SCNHitTestOptionSearchMode option used with hit-testing methods.
**Notes:** The hit test should return all possible results, sorted from nearest to farthest.

### 159.22.29 SCNHitTestSearchModeAny = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the possible values for the SCNHitTestOptionSearchMode option used with hit-testing methods.
**Notes:** The hit test should return only the first object found, regardless of distance.

### 159.22.30 SCNHitTestSearchModeClosest = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the possible values for the SCNHitTestOptionSearchMode option used with hit-testing methods.
**Notes:** The hit test should return only the closes object found.

# 159.23 class SCNIKConstraintMBS

## 159.23.1 class SCNIKConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** A constraint that applies inverse kinematics to make a chain of nodes ‚Äúreach‚Äù toward a target point.
**Notes:**

see also
https://developer.apple.com/documentation/scenekit/scnikconstraint
Subclass of the SCNConstraintMBS class.

## 159.23.2 Blog Entries

## 159.23.4 Methods

## 159.23.5 Constructor(chainRootNode as SCNNodeMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a SCNIKConstraint object with the specified parameter.
**Notes:**

chainRootNode The root node of the kinematic chain.
"chainRootNode" must be an ancestor of the node on which the constraint is applied.

## 159.23.6 inverseKinematicsConstraintWithChainRootNode(chainRootNode as SCNNodeMBS) as SCNIKConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a SCNIKConstraint object with the specified parameter.
**Notes:**

chainRootNode The root node of the kinematic chain.
”chainRootNode” must be an ancestor of the node on which the constraint is applied.

### 159.23.7 Properties

### 159.23.8 chainRootNode as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Specifies the root node of the kinematic chain.
**Notes:** (Read only property)

### 159.23.9 targetPosition as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Specifies the target position (in world space coordinates) of the end joint (i.e the node that owns the IK constraint).
**Notes:**

Defaults to (0,0,0). Animatable.
(Read and Write property)

# 159.24 control SCNIOSControlMBS

## 159.24.1 control SCNIOSControlMBS

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

**Function:** The Xojo control for a SCNViewMBS.
**Notes:**

This control embeds a special SCNView subclass.
Designed for Xojo 2020r2 and newer.
Please use view property to access the underlaying object and set properties.

To learn about rendering events, please check here:
https://developer.apple.com/documentation/scenekit/scnscenerendererdelegate?language=objc

- 19.2, page 9: News

### 159.24.6 Properties

### 159.24.7 View as SCNViewMBS

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

**Function:** The view used in the control.
**Notes:**

Use this object to set more options on the control.
(Read only property)

### 159.24.8 Events

### 159.24.9 Close

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

**Function:** The control is about to close.

### 159.24.10 GotFocus

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

**Function:** The control itself got focus.
**Notes:** This only fires if the control itself got focus and not a sub control.

### 159.24.11 LostFocus

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

**Function:** The control lost focus.
**Notes:** This only fires if the control itself lost focus and not a sub control.

### 159.24.12 Open

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

**Function:** The control is about to was created and you can initialize it.

### 159.24.13 rendererDidApplyAnimations(time as double)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

**Function:** Tells the control to perform any updates that need to occur after actions and animations are evaluated.
**Notes:**

time: The current system time, in seconds. Use this parameter for any time-based elements of your game logic.

SceneKit calls this method exactly once per frame, so long as the SCNViewMBS object (or other SCNSceneRenderer object) displaying the scene is not paused.

Implement this method to add game logic to the rendering loop. Any changes you make to the scene graph during this method are immediately reflected in the displayed scene. That is, SceneKit immediately updates the hierarchy of presentation nodes it uses to render the scene (instead of using the SCNTransactionMBS class to ‚Äúbatch‚Äù your changes).

### 159.24.14 rendererDidApplyConstraints(time as double)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

**Function:** Invoked on the control once the scene renderer did apply the constraints.
**Notes:**

time The time at which the constraints were simulated.

All modifications done within this method don't go through the transaction model, they are directly applied on the presentation tree.

### 159.24.15 rendererDidRenderScene(scene as SCNSceneMBS, time as double)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

**Function:** Tells the control that the renderer has cleared the viewport and is about to render the scene.
**Notes:**

scene: The SCNSceneMBS object to be rendered.
time: The current system time, in seconds. If your custom rendering involves animation, use this parameter to compute your own animation state.

Implement this event to perform custom drawing before SceneKit renders a scene,Äîfor example, to draw backdrop content underneath SceneKit content. You should only execute Metal or OpenGL drawing com-

mands (and any setup required to perform them) in this event,Äîthe results of modifying SceneKit objects during this event are undefined.

To render using Metal, use the renderer parameter to retrieve the scene renderer,Äôs currentRenderCommandEncoder object and encode your own drawing commands. If you need to reference other Metal state, see the properties listed in SCNSceneRenderer.
To render using OpenGL, simply call the relevant OpenGL drawing commands,ÄîSceneKit automatically makes its OpenGL context the current context before calling this event. If you need to reference the OpenGL context being rendered into, examine the context property of the renderer parameter.

You must draw using the appropriate graphics technology for the view currently being rendered. Use the renderingAPI property of the renderer object to determine whether Metal or OpenGL is in use.

### 159.24.16 rendererDidSimulatePhysics(time as double)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

**Function:** Tells the control to perform any updates that need to occur after physics simulations are performed.
**Notes:**

time: The current system time, in seconds. Use this parameter for any time-based elements of your game logic.

SceneKit calls this event exactly once per frame, so long as the SCNViewMBS object (or other SCNSceneRenderer object) displaying the scene is not paused.

Implement this event to add game logic to the rendering loop. Any changes you make to the scene graph during this method are immediately reflected in the displayed scene. That is, SceneKit immediately updates the hierarchy of presentation nodes it uses to render the scene (instead of using the SCNTransactionMBS class to ,Äúbatch,Äù your changes).

This event is the last opportunity SceneKit provides for you to change the scene graph before rendering.

### 159.24.17 rendererUpdate(time as double)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

**Function:** Tells the control to perform any updates that need to occur before actions, animations, and physics are evaluated.
**Notes:**

time: The current system time, in seconds. Use this parameter for any time-based elements of your game logic.

SceneKit calls this method exactly once per frame, so long as the SCNViewMBS object (or other SCNSceneRenderer object) displaying the scene is not paused.

Implement this event to add game logic to the rendering loop. Any changes you make to the scene graph during this method are immediately reflected in the displayed scene. That is, SceneKit immediately updates the hierarchy of presentation nodes it uses to render the scene (instead of using the SCNTransactionMBS class to ,Äúbatch,Äù your changes).

### 159.24.18 rendererWillRenderScene(scene as SCNSceneMBS, time as double)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

**Function:** Tells the control that the renderer has rendered the scene.
**Notes:**

scene: The scene object that was rendered.
time: The current system time, in seconds. If your custom rendering involves animation, use this parameter to compute your own animation state.

Implement this method to perform custom drawing after SceneKit has rendered a scene,Äîfor example, to draw overlay content on top of SceneKit content. You should only execute Metal or OpenGL drawing commands (and any setup required to perform them) in this method,Äîthe results of modifying SceneKit objects in this method are undefined.

- To render using Metal, use the renderer parameter to retrieve the scene renderer,Äôs currentRenderCommandEncoder object and encode your own drawing commands. If you need to reference other Metal state, see the properties listed in SCNSceneRenderer.
- To render using OpenGL, simply call the relevant OpenGL drawing commands,ÄîSceneKit automatically makes its OpenGL context the current context before calling this method. If you need to reference the OpenGL context being rendered into, examine the context property of the renderer parameter.

You must draw using the appropriate graphics technology for the view currently being rendered. Use the renderingAPI property of the renderer object to determine whether Metal or OpenGL is in use.

## 159.25 class SCNLevelOfDetailMBS

### 159.25.1 class SCNLevelOfDetailMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** An alternate resolution for a geometry that SceneKit automatically substitutes to improve rendering performance.
**Notes:**

You use level-of-detail objects when you have a detailed geometry that appears at several apparent sizes in a scene. For example, the teapot model on the the left in the figure below has 256 polygons, the model at center has 1024 polygons, and the model on the right has 14,400 polygons. If all three models appear close to the camera, filling most of the rendered view, the difference in detail between them is clearly visible,Äîbut if they appear far away, taking up a small area of the view, the difference is much less obvious. Rendering higher-resolution geometries incurs a higher performance cost.

When you associate one or more level-of-detail objects with a SCNGeometryMBS object using its levelsOfDetail property, SceneKit automatically substitutes alternate geometries when appropriate. For example, the two lower-resolution teapot models seen above can be added as levels of detail for the high-resolution model. For each level of detail, you specify either a world-space distance or a screen-space radius. The measure you specify determines the threshold where SceneKit automatically renders that level of detail,Äôs alternate geometry instead of the original geometry. If you specify a distance, the alternate geometry appears when the node containing the geometry is moved that distance away from the camera. If you specify a radius, the alternate geometry appears when the pixel area covered by the rendered by the geometry is smaller than a circle of that radius.
The geometries associated with lower levels of detail need not share all attributes of the original geometry. For example, you can use different materials for levels of detail that only appear when far away from the camera, disabling expensive features such as per-pixel lighting, reflection mapping, or custom shader programs.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 159.25.2 Blog Entries

- MBS Xojo Plugins, version 19.3pr5

### 159.25.3 Blog Entries

- MBS Xojo Plugins, version 19.3pr5

### 159.25.4 Methods

### 159.25.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The private constructor.

### 159.25.6 copy as SCNLevelOfDetailMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a copy of the object.

### 159.25.7 levelOfDetailWithGeometryAndScreenSpaceRadius(geo as SCNGeometryMBS, screenSpaceRadius as Double) as SCNLevelOfDetailMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a level of detail with the specified geometry and threshold pixel radius.
**Notes:**

geometry: The geometry to render for this level of detail.
radius: The maximum radius (in pixels) of the geometry,Äôs bounding sphere for this level of detail to appear.

Returns a level-of-detail object. You associate levels of detail with a SCNGeometry object using its levelsOfDetail property.

When rendering a geometry with associated levels of detail, SceneKit calculates the radius in pixels of the circle covered by a geometry,Äôs bounding sphere, then renders the geometry for the SCNLevelOfDetail object with the largest radius parameter smaller than that circle.
If you pass nil for the geometry parameter, SceneKit renders no geometry for the level of detail. Creating a level-of-detail object with no geometry allows you to skip rendering costs entirely for an object when it would appear very far away or very small.

### 159.25.8 levelOfDetailWithGeometryAndWorldSpaceDistance(geo as SCNGeometryMBS, worldSpaceDistance as Double) as SCNLevelOfDetailMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a level of detail with the specified geometry and threshold camera distance.
**Notes:**

geometry: The geometry to render for this level of detail, or nil if SceneKit should render no geometry at this level of detail.
distance: The minimum distance from the current point of view for this level of detail to appear.

Returns a level-of-detail object. You associate levels of detail with a SCNGeometry object using its levelsOfDetail property.

When rendering a geometry with associated levels of detail, SceneKit calculates the distance from the current point of view to the geometry,Äôs parent node, then renders the geometry for the SCNLevelOfDetail object with the smallest distance parameter greater than that distance.
If you pass nil for the geometry parameter, SceneKit renders no geometry for the level of detail. Creating a level-of-detail object with no geometry allows you to skip rendering costs entirely for an object when it would appear very far away or very small.

### 159.25.9 Properties

### 159.25.10 geometry as SCNGeometryMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The geometry associated with this level of detail.
**Notes:**

SceneKit renders this geometry instead of the original geometry when the level of detail is appropriate. Generally, levels of detail with larger worldSpaceDistance values or smaller screenSpaceRadius values should contain less complex geometries.
If the value of this property is nil, SceneKit renders no geometry at this level of detail.
(Read only property)

### 159.25.11 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object handle.
**Notes:** (Read and Write property)

### 159.25.12 screenSpaceRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The maximum radius (in pixels) of the geometry,Äôs bounding sphere for this level of detail to appear.

**Notes:**

When rendering a geometry with associated levels of detail, SceneKit calculates the radius in pixels of the circle covered by a geometry,Äôs bounding sphere, then renders the geometry for the SCNLevelOfDetail object with the smallest radius parameter larger than that circle.
(Read only property)

### 159.25.13 worldSpaceDistance as Double

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The minimum distance from the current point of view for this level of detail to appear.
**Notes:**

When rendering a geometry with associated levels of detail, SceneKit calculates the distance from the current point of view to the geometry,Äôs parent node, then renders the geometry for the SCNLevelOfDetailMBS object with the largest distance parameter less than that distance.
(Read only property)

# 159.26 class SCNLightMBS

## 159.26.1 class SCNLightMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** A light source that can be attached to a node to illuminate the scene.
**Notes:**

You illuminate your scene by attaching lights to SCNNode objects using their light property.

You set a light,Äôs type using its type property. Depending on a light,Äôs type, its position and direction may affect its behavior,Äîyou control the light,Äôs position and direction through the node that the light is attached to. The direction of a light, if applicable to its type, is along the negative z-axis of its node,Äôs local coordinate system.

A light,Äôs other properties affect how it illuminates a scene. All lights have a color property, which interacts with SCNMaterial objects to produce the pixel colors in a rendered scene. Other properties, such as attenuation, shadowing, and spot angle, can affect the behavior of certain types of lights.

The number and type of lights in a scene is a key factor in SceneKit,Äôs rendering performance. For efficient rendering, follow these tips:

- Use SceneKit lights only for dynamic light sources or lights that affect moving objects. For statically lit portions of your scene, create a light map texture in an external 3D authoring tool (also known as baked lighting) and apply it to objects in the scene using the multiply material property.
- Minimize the number of lights on each element of the scene. You can achieve most common lighting effects using no more than three lights, and you only need a single ambient light source. SceneKit only uses up to eight light sources per node when rendering, ignoring any additional lights. If you set the attenuationEndDistance property on a spotlight or omnidirectional light to limit its area of effect, SceneKit ignores the light (and its performance cost) when rendering objects outside that area. You can also use the categoryBitMask property to choose which nodes are illuminated by a light.

Requires MacOS 10.8 or newer.

- 19.6, pages 48 to 50: Rotating Christmas Tree, Using the MBS Plugins to create an animated 3D Christmas tree by Stefanie Juchmes

### 159.26.6 Methods

### 159.26.7 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a new light object.

### 159.26.8 copy as SCNLightMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a copy of the light.

### 159.26.9 light as SCNLightMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a new light object.

### 159.26.10 SCNLightTypeAmbient as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** A light that illuminates all objects in the scene from all directions.
**Notes:** Because the intensity of light from an ambient source is the same everywhere in the scene, its position and direction have no effect. Attenuation, spotlight angle, and shadow attributes do not apply to ambient lights.

### 159.26.11 SCNLightTypeDirectional as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** A light source with a uniform direction and constant intensity.
**Notes:** Because a directional light illuminates all objects in the scene from the same direction and with the same intensity, so the position of the node containing the light has no effect. Attenuation and spotlight angle attributes do not apply to directional lights.

### 159.26.12 SCNLightTypeIES as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** A light source whose shape, direction, and intensity of illumination is determined by a photometric profile.
**Notes:**

The intensity of a photometric light varies in different directions from the light source, much like the illumination from a real-world light source. The position of the containing node determines the location of the light source, and the orientation of the node determines the relative directions specified by the photometric profile. Spotlight angle attributes do not apply to photometric lights.
For more information about photometric lights, see the IESProfileURL property.

### 159.26.13 SCNLightTypeOmni as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** An omnidirectional light, also known as a point light.
**Notes:** Because an omnidirectional light casts equal illumination in all directions, the orientation of the node containing the light has no effect. Spotlight angle and shadow attributes do not apply to directional lights.

### 159.26.14 SCNLightTypeProbe as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** A sample of the environment around a point in a scene to be used in environment-based lighting.
**Notes:**

A light probe describes a point in a scene in terms of the variations in color and intensity of the illumination it receives from all directions. This information can then be used in shading of materials based on their location in the scene. For example, a white object placed near blue and red walls will appear bluish on surfaces facing the blue wall and reddish on surfaces facing the red wall.
You can place light probes in a scene and generate their lighting contributions using the Xcode scene editor, or import light probes from scene file formats that support them. Lighting-related properties of the SCNLight class do not apply to light probes; their contribution to scene rendering depends entirely on the light probe content generated in Xcode.

### 159.26.15 SCNLightTypeSpot as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** A light source that illuminates a cone-shaped area.
**Notes:** The position and orientation of the node containing the light determines the area lit by the spotlight, and all lighting attributes affect its appearance.

### 159.26.16 Properties

### 159.26.17 attenuationEndDistance as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The distance from the light at which its intensity is completely diminished. Animatable.
**Notes:**

You can apply attenuation to omnidirectional lights and spotlights, causing their intensity to diminish over a specified range of distances. At distances less than the start distance, the light,Äôs illumination is at full intensity. At distances greater than the end distance, the light provides no illumination. At distances in between the start and end distance, the attenuationFalloffExponent property defines the transition from full illumination to no illumination.
The default value is 0.0, specifying no attenuation (the light,Äôs intensity is the same at all distances).
You can animate changes to this property,Äôs value. See Animating SceneKit Content.
(Read and Write property)

### 159.26.18 attenuationFalloffExponent as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The transition curve for the light,Äôs intensity between its attenuation start and end distances.

Animatable.
**Notes:**

You can apply attenuation to omnidirectional lights and spotlights, causing their intensity to diminish over a specified range of distances. At distances in between the start and end distance, the light,Äôs intensity transitions from full to no illumination according to the value of this property.
A value of 0.0 specifies no attenuation,Äîthe light,Äôs intensity is the same at all distances. A value of 1.0 specifies a linear transition, and a value of 2.0 (the default) specifies a quadratic transition curve. Higher values have little visible effect.
You can animate changes to this property,Äôs value. See Animating SceneKit Content.
(Read and Write property)

### 159.26.19 attenuationStartDistance as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The distance from the light at which its intensity begins to diminish. Animatable.
**Notes:**

You can apply attenuation to omnidirectional lights and spotlights, causing their intensity to diminish over a specified range of distances. At distances less than the start distance, the light,Äôs illumination is at full intensity. At distances greater than the end distance, the light provides no illumination. At distances in between the start and end distance, the attenuationFalloffExponent property defines the transition from full illumination to no illumination.
The default value is 0.0, specifying no attenuation (the light,Äôs intensity is the same at all distances).
You can animate changes to this property,Äôs value. See Animating SceneKit Content.
(Read and Write property)

### 159.26.20 automaticallyAdjustsShadowProjection as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** Specifies if the shadow map projection should be done automatically or manually by the user.
**Notes:**

Defaults to true.
(Read and Write property)

### 159.26.21 CastsShadow as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that determines whether the light casts shadows.
**Notes:**

Geometries illuminated by the light cast shadows only if the value of this property is true and the type property of the light is SCNLightTypeSpot or SCNLightTypeDirectional. The default value is false.
(Read and Write property)

### 159.26.22 Color as NSColorMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The color of the light. Animatable.
**Notes:**

The value of this property is an NSColorMBS object. The default color is white.
You can animate changes to this property,Äôs value.

See Animating SceneKit Content:
https://developer.apple.com/documentation/scenekit/animation/animating_scenekit_content
(Read and Write property)

### 159.26.23 ForcesBackFaceCasters as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 159.26.24 gobo as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** An image or other visual content affecting the shape and color of a light,Äôs illuminated area.
**Notes:**

In photographic and stage lighting terminology, a gobo (also known as a flag or cookie) is a stencil, gel, or other object placed just in front of a light source, shaping or coloring the beam of light.
You alter the appearance of a spotlight by changing the contents property of the object permanently assigned to this property. As with other material properties, you can use a color or image, or a Core Animation layer containing animated content, as a lighting gobo.
This property applies only to lights whose type property is spot.
(Read only property)

### 159.26.25 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 159.26.26 Intensity as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The luminous flux, in lumens, or total brightness of the light. Animatable.
**Notes:**

When working with photometric lights (see the IESProfileURL property) or physically-based rendering (see SCNLightingModelPhysicallyBased), you can leave the color property at its default white color and use the intensity and temperature to control the light using realistic parameters. When working with physically-based materials, this value the luminous flux of the light source. The default value is 1000 lumens.
When not using physically-based rendering, this value (divided by 1000) serves as a multiplier for the the color property. The default value of of 1000 leaves the light color unmodulated; you can use higher values, for example, to brighten a light whose color is already the maximum red value.
You can animate changes to this property,Äôs value. See Animating SceneKit Content.
(Read and Write property)

### 159.26.27 maximumShadowDistance as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** Specifies the maximum distance from the viewpoint from which the shadows for the receiver light won't be computed.
**Notes:**

Defaults to 100.0.
(Read and Write property)

### 159.26.28 Name as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** A name associated with the light.
**Notes:**

You can provide a descriptive name for a light to make managing your scene graph easier. Lights loaded from a scene file may have names assigned by an artist using a 3D authoring tool. To examine lights in a

scene file without loading its scene graph, use the SCNSceneSourceMBS class.
(Read and Write property)

### 159.26.29 OrthographicScale as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The orthographic scale SceneKit uses when rendering the shadow map for a directional light.
**Notes:**

SceneKit draws a shadow map image by rendering the scene from the point of view of the node containing the light. Directional lights ignore the position property of the node containing them because their light has a constant direction. Therefore, rendering a shadow map for a directional light requires an orthographic projection. Like the orthographicScale property of a camera object, this property specifies the extent of the scene ,Äúvisible to,Äù the light when rendering the shadow map.
This property applies only if the light,Äôs type property is SCNLightTypeDirectional.
(Read and Write property)

### 159.26.30 SampleDistributedShadowMaps as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** Use the sample distribution of the main rendering to better fit the shadow frusta.
**Notes:**

Defaults to false.
(Read and Write property)

### 159.26.31 ShadowBias as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The amount of correction to apply to the shadow to prevent rendering artifacts.
**Notes:**

Rendering shadows from a shadow map can result in artifacts where the shadow color does not appear on all pixels in a shadowed surface as intended. (This effect is typically called shadow acne.) This property specifies the error margin SceneKit uses to correct such artifacts.
The default value is 1.0.
(Read and Write property)

### 159.26.32 ShadowCascadeCount as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** Specifies the number of distinct shadow maps that will be computed for the receiver light.
**Notes:**

Defaults to 1. Maximum is 4.
(Read and Write property)

### 159.26.33 ShadowCascadeSplittingFactor as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** Specifies a factor to interpolate between linear splitting (0) and logarithmic splitting (1).
**Notes:**

Defaults to 0.15.
(Read and Write property)

### 159.26.34 shadowColor as NSColorMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The color of shadows cast by the light. Animatable.
**Notes:**

The value of this property is an NSColorMBS object. SceneKit blends the light,Äôs color with other colors in the rendered image to produce a shadow effect. The color,Äôs opacity (alpha value) determines the intensity of the shadows. The default shadow color is black with 50% opacity.
You can animate changes to this property,Äôs value. See Animating SceneKit Content.
(Read and Write property)

### 159.26.35 ShadowMode as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The mode SceneKit uses to render shadows.
**Notes:**

The default mode is SCNShadowModeForward in iOS and in macOS 10.10 or later. In OS X v10.9 or earlier, the default mode is SCNShadowModeDeferred.
(Read and Write property)

### 159.26.36 ShadowRadius as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** A number that specifies the amount of blurring around the edges of shadows cast by the light. Animatable.
**Notes:**

SceneKit produces soft-edged shadows by rendering the silhouettes of geometry into a 2D shadow map and then using several weighted samples from the shadow map to determine the strength of the shadow at each pixel in the rendered scene. This property controls the radius of shadow map sampling. Lower numbers result in shadows with sharply defined, pixelated edges; higher numbers result in blurry shadows.
You can animate changes to this property,Äôs value. See Animating SceneKit Content.
(Read and Write property)

### 159.26.37 ShadowSampleCount as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The number of samples from the shadow map that SceneKit uses to render each pixel.
**Notes:**

SceneKit produces soft-edged shadows by rendering the silhouettes of scene geometry into a 2D shadow map and then using several weighted samples from the shadow map to determine the strength of the shadow at each pixel in the rendered scene. This property controls the number of samples from the shadow map used to render each pixel. Higher numbers result in smoother edges; lower numbers increase rendering performance. The default value is 16 in macOS and 1 on iOS.
(Read and Write property)

### 159.26.38 spotInnerAngle as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The angle, in degrees, of the area fully lit by a spotlight. Animatable.
**Notes:**

You define the cone-shaped illuminated area of a spotlight with a position and direction (from the node containing the light) and an angle specifying the cone,Äôs width. Additionally, the illuminated area can smoothly transition from full illumination to no illumination. This property determines the width of the fully illuminated area.
The default value is 0.0, specifying that only the center of the area illuminated by the spotlight is lit at full intensity.
You can animate changes to this property,Äôs value. See Animating SceneKit Content.
(Read and Write property)

### 159.26.39 spotOuterAngle as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The angle, in degrees, of the area partially lit by a spotlight. Animatable.
**Notes:**

You define the cone-shaped illuminated area of a spotlight with a position and direction (from the node containing the light) and with an angle specifying the cone,Äôs width. Additionally, the illuminated area can smoothly transition from full illumination to no illumination. This property determines the width of the transition area.
The default value is 45.0.
You can animate changes to this property,Äôs value. See Animating SceneKit Content.
(Read and Write property)

### 159.26.40 Temperature as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The color temperature, in degrees Kelvin, of the light source. Animatable.
**Notes:**

SceneKit determines the actual color of the light by multiplying the color value by a color corresponding to the light,Äôs temperature. The default value of 6500 K represents a pure white light (leaving the color unmodulated); lower values (down to a minimum of zero) add a ,Äúwarmer,Äù yellow or orange effect to the light source, and higher values (up to a maximum of 40000) add a ,Äúcooler,Äù blue effect.
This property affects all light types, but is especially useful when working with photometric lights (see the IESProfileURL property) or physically-based rendering (see SCNLightingModelPhysicallyBased). You can leave the color property at its default white color and use the intensity and temperature properties to control the light using realistic parameters.
You can animate changes to this property,Äôs value. See Animating SceneKit Content.
(Read and Write property)

### 159.26.41 Type as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** A constant identifying the general behavior of the light.
**Notes:**

A light,Äôs type determines the shape and directionality of illumination provided by the light, as well as the set of attributes available for modifying the light,Äôs behavior. For example, light types include omnidirectional lights and spotlights. See Light Types for the full set of types and their behaviors.

see also

https://developer.apple.com/documentation/scenekit/scnlighttype
(Read and Write property)

### 159.26.42 zFar as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The maximum distance between the light and a visible surface for casting shadows.
**Notes:**

A spotlight casts shadows if its castsShadow property is true. If a surface is farther from the light than this distance, shadows are not cast against the surface.
The default value is 100.0.
You can animate changes to this property,Äôs value. See Animating SceneKit Content.
(Read and Write property)

### 159.26.43 zNear as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The minimum distance between the light and a visible surface for casting shadows. Animatable.
**Notes:**

A spotlight casts shadows if its castsShadow property is true. If a surface is closer to the light than this distance, shadows are not cast against the surface.
The default value is 1.0.
You can animate changes to this property,Äôs value. See Animating SceneKit Content.
(Read and Write property)

### 159.26.44 Constants

### 159.26.45 kShadowModeDeferred = 1

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the shadow modes.
**Notes:**

SceneKit renders shadows in a postprocessing pass.
In the mode, SceneKit blends shadows into the final image after the main rendering pass, so shadows can be of any color.

### 159.26.46 kShadowModeForward = 0

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the shadow modes.
**Notes:**

SceneKit renders shadows during lighting computations.
In this mode, the color components of the light,Äôs shadowColor property do not apply. The color,Äôs alpha component determines the intensity of shadows.

### 159.26.47 kShadowModeModulated = 2

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the shadow modes.
**Notes:**

SceneKit renders shadows by projecting the light,Äôs gobo image. The light does not illuminate the scene.

Typically, you use this mode to create a low-accuracy, high-performance shadow under a game character or similar scene element: Use an image of a radial gradient (black to white) for the light,Äôs gobo property, and use categoryBitMask properties to prevent the shadow image from appearing on the character.

# 159.27 class SCNLookAtConstraintMBS

## 159.27.1 class SCNLookAtConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** A SCNLookAtConstraint applies on a node's orientation so that it always look at another node.
**Notes:** Subclass of the SCNConstraintMBS class.

## 159.27.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

## 159.27.3 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

## 159.27.4 Methods

## 159.27.5 Constructor(target as SCNNodeMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a SCNLookAtConstraint object with the specified target.
**Notes:** target: The target node to look at.

## 159.27.6 lookAtConstraintWithTarget(target as SCNNodeMBS) as SCNLookAtConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a SCNLookAtConstraint object with the specified target.
**Notes:** target: The target node to look at.

## 159.27.7 Properties

## 159.27.8 gimbalLockEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Specifies whether the receiver enables the gimbal lock. Defaults to false.
**Notes:**

Enabling the gimbal lock prevents the receiver from rotating the constrained node around to roll axis.
(Read and Write property)

### 159.27.9 localFront as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Front direction in the constraint owner local space. Defaults to - [ SCNNode localFront ] . Animatable
**Notes:** (Read and Write property)

### 159.27.10 target as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Defines the target node to look at.
**Notes:** (Read and Write property)

### 159.27.11 targetOffset as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Offset look at position in target space. Defaults to zero. Animatable
**Notes:** (Read and Write property)

### 159.27.12 worldUp as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Up reference direction in world space. Defaults to - [ SCNNode localUp ] . Animatable
**Notes:** (Read and Write property)

# 159.28 class SCNMaterialMBS

## 159.28.1 class SCNMaterialMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** A set of shading attributes that define the appearance of a geometry's surface when rendered.
**Notes:**

When you create a material, you define a collection of visual attributes and their options, which you can then reuse for multiple geometries in a scene.

A material has several visual properties, each of which defines a different part of SceneKit,Äôs lighting and shading process. Each visual property is an instance of the SCNMaterialPropertyMBS class that provides a solid color, texture, or other 2D content for that aspect of SceneKit,Äôs rendering. The material,Äôs lightingModelName property then determines the formula SceneKit uses to combine the visual properties with the lights in the scene to produce the final color for each pixel in the rendered scene. For more details on the rendering process, see SCNLightingModelMBS.

You attach one or more materials to an instance of the SCNGeometryMBS class using its firstMaterial or materials property. Multiple geometries can reference the same material. In this case, changing the attributes of the material changes the appearance of every geometry that uses it.

## 159.28.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

## 159.28.3 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

## 159.28.4 Methods

## 159.28.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a new material.

### 159.28.6 copy as SCNMaterialMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a copy of the material.

### 159.28.7 material as SCNMaterialMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a new material object.
**Notes:** A newly created material contains an SCNMaterialPropertyMBS object for each of its eight visual properties. You change a material,Äôs appearance by setting the contents of each visual property. For information on each visual property,Äôs default contents and how it affects a material,Äôs appearance, see Visual Properties for Special Effects.

### 159.28.8 SCNLightingModelBlinn as string

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Shading that incorporates ambient, diffuse, and specular properties, where specular highlights are calculated using the Blinn-Phong formula.
**Notes:**

see
https://developer.apple.com/documentation/scenekit/scnlightingmodelblinn

### 159.28.9 SCNLightingModelConstant as string

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Uniform shading that incorporates ambient lighting only.
**Notes:**

see also
https://developer.apple.com/documentation/scenekit/scnlightingmodelconstant

### 159.28.10 SCNLightingModelLambert as string

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Shading that incorporates ambient and diffuse properties only.
**Notes:**

see also
https://developer.apple.com/documentation/scenekit/scnlightingmodellambert

### 159.28.11 SCNLightingModelPhong as string

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Shading that incorporates ambient, diffuse, and specular properties, where specular highlights are calculated using the Phong formula.
**Notes:**

see also
https://developer.apple.com/documentation/scenekit/scnlightingmodelphong

### 159.28.12 SCNLightingModelPhysicallyBased as string

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Shading based on a realistic abstraction of physical lights and materials.
**Notes:**

see also
https://developer.apple.com/documentation/scenekit/scnlightingmodelphysicallybased

### 159.28.13 Properties

### 159.28.14 ambient as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** An object that manages the material,Äôs response to ambient lighting.
**Notes:**

The ambient property specifies the amount of ambient light to reflect. This property has no visual impact on scenes that have no ambient light. Setting the ambient has no effect if locksAmbientWithDiffuse is set to true.
(Read only property)

### 159.28.15 ambientOcclusion as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** An object that provides color values to be multiplied with the ambient light affecting the material.
**Notes:**

Use this property to assign an ambient occlusion texture map to a surface. This property has no effect if there is no ambient light in the scene. If this property is not nil, SceneKit ignores the ambient property. When using physically-based shading (see SCNLightingModelPhysicallyBased), ambient occlusion approximates large-scale surface details that obscure global illumination.
(Read only property)

### 159.28.16 blendMode as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The mode that determines how pixel colors rendered using this material blend with other pixel colors in the rendering target.
**Notes:**

With the default blend mode of SCNBlendModeAlpha, materials blend according to their alpha (opacity) values,Äîa pixel rendered with a higher alpha value appears more opaque than one with a lower alpha value. Change this property to create special effects. For example, the SCNBlendModeAdd mode can make objects appear to glow.
(Read and Write property)

### 159.28.17 colorBufferWriteMask as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Determines whether the receiver writes to the color buffer when rendered.
**Notes:**

Defaults to SCNColorMaskAll.
(Read and Write property)

### 159.28.18 cullMode as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The mode determining which faces of a surface SceneKit renders. Animatable.
**Notes:**

The vertex data and normal vectors in a geometry designate which side of each polygon is to be considered

its front face, and the geometry,Äôs orientation with respect to the camera determines which front surfaces are currently visible. Typically, back-facing surfaces are found only on the interior of a closed geometry, obscured by front-facing surfaces, so rendering these surfaces has a performance cost but no visible effect.
This property,Äôs default value is SCNCullBack, specifying that SceneKit should cull, or not render, back-facing surfaces. You can change this property,Äôs value to cause SceneKit to render only the back surfaces of a material instead. See SCNCullMode for available values.
You can animate changes to this property,Äôs value. See Animating SceneKit Content. Animating this property fades between the results of rendering with each state
(Read and Write property)

### 159.28.19 diffuse as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** An object that manages the material,Äôs diffuse response to lighting.
**Notes:**

see also
https://developer.apple.com/documentation/scenekit/scnmaterial/1462589-diffuse
(Read only property)

### 159.28.20 displacement as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The displacement property specifies how vertex are translated in tangent space.
**Notes:**

Pass a grayscale image for a simple 'elevation' or rgb image for a vector displacement.
(Read only property)

### 159.28.21 DoubleSided as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that determines whether SceneKit should render both front and back faces of a surface. Animatable.
**Notes:**

When this property,Äôs value is false (the default), SceneKit renders a surface using the material from one side. The vertex data and normal vectors in a geometry designate which side of each polygon is to be considered its front face, and the geometry,Äôs orientation with respect to the camera determines which front surfaces are currently visible.
If you change this property,Äôs value to true, SceneKit renders both the front and back surfaces of every

polygon. SceneKit assumes the surface normals a back face to be the negative of the front face,Äôs normal vector.
You can animate changes to this property,Äôs value. See Animating SceneKit Content. Animating this property fades between the results of rendering with each state
(Read and Write property)

### 159.28.22 emission as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** An object that defines the color emitted by each point on a surface.
**Notes:**

The emission property specifies the amount of light the material emits. This emission does not light up other surfaces in the scene.
(Read only property)

### 159.28.23 fillMode as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Determines of to how to rasterize the receiver's primitives.
**Notes:**

Defaults to SCNFillModeFill.
(Read and Write property)

### 159.28.24 fresnelExponent as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** A factor affecting the material,Äôs reflectivity. Animatable.
**Notes:**

The Fresnel exponent of a material interacts with its reflective property to determine the intensity of reflections in a surface based on its angle relative to the viewer. A higher Fresnel exponent increases the visibility of reflections when the material is viewed from a shallow angle.
(Read and Write property)

### 159.28.25 lightingModelName as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The lighting formula that SceneKit uses to render the material.
**Notes:**

SceneKit provides several different lighting models, each of which combines information from a material,Äôs visual properties with the lights and other contents of a scene. For details on how each lighting model affects rendering, see Lighting Models. For details on the contribution from each visual property, see Visual Properties for Special Effects.
(Read and Write property)

### 159.28.26 LitPerPixel as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that determines whether SceneKit performs lighting calculations per vertex or per pixel. Animatable.
**Notes:**

When this property,Äôs value is true (the default), SceneKit performs lighting calculations independently for each rendered pixel. This approach provides better rendering quality, but can adversely impact rendering performance.
If you change this property,Äôs value to false, SceneKit performs lighting calculations for each vertex in a geometry, and allows the GPU to interpolate lighting results across the pixels in between vertices. Depending on the shape and vertex count of a geometry,Äôs surface and the material properties being rendered, this approach may improve rendering performance without much noticeable impact on visual quality.
You can animate changes to this property,Äôs value. See Animating SceneKit Content. Animating this property fades between the results of rendering with each state.
(Read and Write property)

### 159.28.27 locksAmbientWithDiffuse as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that determines whether the material responds identically to both ambient and diffuse lighting. Animatable.
**Notes:**

Makes the ambient property automatically match the diffuse property. Defaults to false on 10.9 and before, defaults to true otherwise. Animatable.
(Read and Write property)

### 159.28.28 metalness as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** An object that provides color values to determine how metallic the material,Äôs surface appears.
**Notes:**

This property measures only the total intensity of color values; texture contents are best defined in grayscale. This property generally approximates aspects of a physical surface,Äîsuch as index of refraction, tendency to produce sharp reflections, and tendency to produce Fresnel reflections at grazing angles,Äîthat together produce an overall metallic or nonmetallic (also called dielectric) appearance. Lower values (darker colors) cause the material to appear more like a dielectric surface. Higher values (brighter colors) cause the surface to appear more metallic.
This property applies only when the material,Äôs lightingModelName value is SCNLightingModelPhysicallyBased.
(Read only property)

### 159.28.29 multiply as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** An object that provides color values that are multiplied with pixels in a material after all other shading is complete.
**Notes:**

The multiply property specifies a color or an image used to multiply the output fragments with. The computed fragments are multiplied with the multiply value to produce the final fragments. This property may be used for shadow maps, to fade out or tint 3d objects.
(Read only property)

### 159.28.30 name as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** A name associated with the material.
**Notes:**

You can provide a descriptive name for a material to make managing your scene graph easier. Materials loaded from a scene file may have names assigned by an artist using a 3D authoring tool. Use the SCNSceneSourceMBS class to examine materials in a scene file without loading its scene graph.

Material names are saved when you export a scene to a file using its writeToURL method, and appear in the Xcode scene editor.
(Read and Write property)

### 159.28.31 normal as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** An object that defines the nominal orientation of the surface at each point for use in lighting.
**Notes:**

see also
https://developer.apple.com/documentation/scenekit/scnmaterial/1462542-normal
(Read only property)

### 159.28.32 readsFromDepthBuffer as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Determines whether the receiver reads from the depth buffer when rendered.
**Notes:**

Defaults to true.
(Read and Write property)

### 159.28.33 reflective as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** An object that defines the reflected color for each point on a surface.
**Notes:**

The reflective property specifies the reflectivity of the surface. The surface will not actually reflect other objects in the scene. This property may be used as a sphere mapping to reflect a precomputed environment.
(Read only property)

### 159.28.34 roughness as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** An object that provides color values to determine the apparent smoothness of the surface.
**Notes:**

This property measures only the total intensity of color values; texture contents are best defined in grayscale. This property approximates the level of microscopic detail,Äîfor example tiny bumps and cracks,Äîin a surface. By approximating these ,Äúmicrofacets,Äù as a single term, this property helps produce lighting calculations that resemble the energy-conserving laws of real-world physics, resulting in more realistic variation between matte and shiny surfaces. Lower values (darker colors) cause the material to appear shiny, with well-defined specular highlights. Higher values (brighter colors) cause specular highlights to spread out

and the diffuse color of the material to become more retroreflective.
This property applies only when the material,Äôs lightingModelName value is SCNLightingModelPhysicallyBased.
(Read only property)

### 159.28.35 selfIllumination as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** An object that provides color values representing the global illumination of the surface.
**Notes:**

Self-illumination applies to all materials, but is especially useful for those using physically-based shading (see SCNLightingModelPhysicallyBased). Physically-based materials work best with environment-based lighting (see the SCNSceneMBS property lightingEnvironment), but for some materials it can be useful to let a surface itself define part of its lighting,Äîfor example, an object whose position obscures it from the ,Äúsky,Äù that provides the main lighting environment. When you assign contents to this property, they override the environmental lighting contribution to diffuse shading, but environmental lighting still contributes to specular effects.
(Read only property)

### 159.28.36 shininess as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The sharpness of specular highlights. Animatable.
**Notes:**

The shininess of a material interacts with its specular property and the lighting in a scene to produce bright highlights on a surface. A higher value produces more sharply defined highlights, making a surface appear more smooth and glossy.
(Read and Write property)

### 159.28.37 specular as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** An object that manages the material,Äôs specular response to lighting.
**Notes:**

The specular property specifies the amount of light to reflect in a mirror-like manner. The specular intensity increases when the point of view lines up with the direction of the reflected light.
(Read only property)

### 159.28.38 transparency as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The uniform transparency of the material. Animatable.
**Notes:**

SceneKit determines the total opacity of each rendered pixel in a surface by multiplying the color from the material,Äôs transparent property by the value of this property. Then, the material,Äôs transparencyMode property determines how pixels from the material are blended into the scene.
You can also uniformly adjust the opacity of all content attached to a node using its opacity property.
(Read and Write property)

### 159.28.39 transparencyMode as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The mode SceneKit uses to calculate transparency for the material.
**Notes:**

The default transparency mode is SCNTransparencyModeAOne. See SCNTransparencyMode for available values and their effects.
(Read and Write property)

### 159.28.40 transparent as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** An object that determines the opacity of each point in a material.
**Notes:**

The transparent property specifies the transparent areas of the material.
(Read only property)

### 159.28.41 writesToDepthBuffer as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that determines whether SceneKit produces depth information when rendering the material.
**Notes:**

Determines whether the receiver writes to the depth buffer when rendered. Defaults to true.
(Read and Write property)

### 159.28.42 Constants

### 159.28.43 SCNBlendModeAdd = 1

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the constants for the modes that describe how SceneKit blends source colors rendered using a material with destination colors already in a rendering target, used by the blendMode property.
**Notes:**

Blend by adding the source color to the destination color.
This mode results in a brightening effect that can be useful for making objects appear to glow relative to their surroundings.

### 159.28.44 SCNBlendModeAlpha = 0

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the constants for the modes that describe how SceneKit blends source colors rendered using a material with destination colors already in a rendering target, used by the blendMode property.
**Notes:**

Blend by multiplying source and destination color values by their corresponding alpha values.
This mode is the default value of the blendMode property.

### 159.28.45 SCNBlendModeMax = 6

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the constants for the modes that describe how SceneKit blends source colors rendered using a material with destination colors already in a rendering target, used by the blendMode property.
**Notes:** Max

### 159.28.46 SCNBlendModeMultiply = 3

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the constants for the modes that describe how SceneKit blends source colors rendered using a material with destination colors already in a rendering target, used by the blendMode property.
**Notes:**

Blend by multiplying the source color with the background color.
This mode results in colors that are at least as dark as either of the two contributing colors.

### 159.28.47 SCNBlendModeReplace = 5

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the constants for the modes that describe how SceneKit blends source colors rendered using a material with destination colors already in a rendering target, used by the blendMode property.
**Notes:** Blend by replacing the destination color with the source color, ignoring alpha.

### 159.28.48 SCNBlendModeScreen = 4

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the constants for the modes that describe how SceneKit blends source colors rendered using a material with destination colors already in a rendering target, used by the blendMode property.
**Notes:**

Blend by multiplying the inverse of the source color with the inverse of the destination color.
This mode results in colors that are at least as light as either of the two contributing colors.

### 159.28.49 SCNBlendModeSubtract = 2

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the constants for the modes that describe how SceneKit blends source colors rendered using a material with destination colors already in a rendering target, used by the blendMode property.
**Notes:** Blend by subtracting the source color from the destination color.

### 159.28.50 SCNCullModeBack = 0

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the constants for the modes SceneKit uses to determine which polygons to render in a surface, used by the cullMode property.
**Notes:** The mode for culling back-facing polygons (and rendering only front-facing polygons).

### 159.28.51 SCNCullModeFront = 1

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the constants for the modes SceneKit uses to determine which polygons to render in a surface, used by the cullMode property.

**Notes:** The mode for culling front-facing polygons (and rendering only back-facing polygons).

### 159.28.52 SCNFillModeFill = 0

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the file mode constants.
**Notes:** Fill

### 159.28.53 SCNFillModeLines = 1

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the file mode constants.
**Notes:** Lines

### 159.28.54 SCNTransparencyModeAOne = 0

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the constants for the modes SceneKit uses to calculate the opacity of pixels rendered with a material, used by the transparencyMode property.
**Notes:** SceneKit derives transparency information from the alpha channel of colors. The value 1.0 is opaque.

### 159.28.55 SCNTransparencyModeDefault = 0

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the constants for the modes SceneKit uses to calculate the opacity of pixels rendered with a material, used by the transparencyMode property.
**Notes:** Default

### 159.28.56 SCNTransparencyModeDualLayer = 3

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the constants for the modes SceneKit uses to calculate the opacity of pixels rendered with a material, used by the transparencyMode property.
**Notes:** Dual layer.

### 159.28.57 SCNTransparencyModeRGBZero = 1

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the constants for the modes SceneKit uses to calculate the opacity of pixels rendered with a material, used by the transparencyMode property.
**Notes:**

SceneKit derives transparency information from the luminance of colors. The value 0.0 is opaque.
When using this mode, SceneKit ignores the alpha value of colors in the material,Äôs transparent property. SceneKit calculates the luminance of a color from its red, green, and blue channels and uses the resulting value to determine the material,Äôs opacity.

### 159.28.58 SCNTransparencyModeSingleLayer = 2

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the constants for the modes SceneKit uses to calculate the opacity of pixels rendered with a material, used by the transparencyMode property.
**Notes:** Single layer.

## 159.29 class SCNMaterialPropertyMBS

### 159.29.1 class SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** A container for the color or texture of one of a material,Äôs visual properties.
**Notes:**

A material has several visual properties that together determine its appearance under lighting and shading. SceneKit renders each pixel in the scene by combining the information from material properties with the locations, intensities, and colors of lights.
A material property,Äôs contents can be either a color, which provides a uniform effect across the surface of a material, or a texture, which SceneKit maps across the surface of a material using texture coordinates provided by the geometry object the material is attached to. A texture, in turn, can come from any of several sources, such as an image object, a URL to an image file, a specially formatted image or set of images for use as a cube map, or even animated content provided by Core Animation, SpriteKit, or AVFoundation,Äîfor the full set of options, see the contents property.

see also
https://developer.apple.com/documentation/scenekit/scnmaterialproperty

### 159.29.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

### 159.29.3 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

### 159.29.4 Methods

### 159.29.5 Constructor(content as Variant)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a new material property with given content.

### 159.29.6 materialPropertyWithColor(color as NSColorMBS) as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a new material property object with the specified color.

### 159.29.7 materialPropertyWithContents(content as Variant) as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a new material property object with the specified contents.
**Notes:**

contents: The visual contents of the material property,Äîa color, image, or source of animated content. For details, see the discussion of the contents property.

Returns a new material property object.

Newly created SCNMaterialMBS objects contain SCNMaterialPropertyMBS instances for all of their visual properties. To change a material,Äôs visual properties, you modify those instances rather than creating new material property objects.
You create new SCNMaterialPropertyMBS instances to provide textures for use with custom GLSL shaders,Äî- for details, see SCNShadableMBS.

### 159.29.8 materialPropertyWithImage(image as NSImageMBS) as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a new material property object with the specified image.

### 159.29.9 materialPropertyWithLayer(layer as CALayerMBS) as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a new material property object with the specified layer.

### 159.29.10 materialPropertyWithPicture(picture as Picture) as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a new material property object with the specified picture.

### 159.29.11 Properties

### 159.29.12 borderColor as NSColorMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** A color used to fill in areas of a material,Äôs surface not covered by the material property,Äôs image contents.
**Notes:**

When the material property,Äôs contents are a texture image and its texture wrapping properties are set to SCNWrapModeClampToBorder, the border color appears in areas of a textured geometry not covered by the texture image, as shown in .
(Read and Write property)

### 159.29.13 contents as Variant

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The visual contents of the material property,Äîa color, image, or source of animated content. Animatable.
**Notes:**

see also
https://developer.apple.com/documentation/scenekit/scnmaterialproperty/1395372-contents
(Read and Write property)

### 159.29.14 contentsTransform as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The transformation applied to the material property,Äôs visual contents. Animatable.
**Notes:**

SceneKit applies this transformation to the texture coordinates provided by the geometry object the material is attached to, then uses the resulting coordinates to map the material property,Äôs contents across the surface of the material. (This transformation has no effect if the material property,Äôs contents object is a constant color.)
(Read and Write property)

### 159.29.15 intensity as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** A number between 0.0 and 1.0 that modulates the effect of the material property. Animatable.
**Notes:**

The default intensity is 1.0. Reducing the intensity fades out the contents of the material property, causing different effects depending on which visual property of an SCNMaterialMBS object it represents:

- For the normal property, intensity varies the apparent roughness of the normal-mapped surface. Reducing intensity makes the surface appear more smooth.
- For the multiply property, reducing intensity blends the material property,Äôs colors with white, effectively reducing the strength of the color multiplication effect.
- For all other properties, reducing intensity dims the material property,Äôs contents.

(Read and Write property)

### 159.29.16 magnificationFilter as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Texture filtering for rendering the material property,Äôs image contents at a size larger than that of the original image.
**Notes:**

Texture filtering determines the appearance of a material property,Äôs contents when portions of the material surface appear larger or smaller than the original texture image. For example, the texture coordinates at a point near the camera may correspond to a small fraction of a pixel in the texture image. SceneKit uses the magnification filter to determine the color of the sampled texel at that point.
The default magnification filter is SCNFilterModeLinear.
(Read and Write property)

### 159.29.17 mappingChannel as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The source of texture coordinates for mapping the material property,Äôs image contents.
**Notes:**

A geometry can have multiple independent sources of texture coordinates, each of which defines a unique mapping channel number. You can use these channels to map different visual properties of a material in different ways. For example, a geometry representing a picture frame might use one set of texture coordinates

for mapping the materials of the frame itself, and another set of texture coordinates for placing a picture into the frame.
For information about creating geometries with multiple texture mapping channels, see SCNGeometryMBS.
(Read and Write property)

### 159.29.18 maxAnisotropy as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The amount of anisotropic texture filtering to be used when rendering the material property,Äôs image contents.
**Notes:**

see
https://developer.apple.com/documentation/scenekit/scnmaterialproperty/1395402-maxanisotropy
(Read and Write property)

### 159.29.19 minificationFilter as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Texture filtering for rendering the material property,Äôs image contents at a size smaller than that of the original image.
**Notes:**

Texture filtering determines the appearance of a material property,Äôs contents when portions of the material surface appear larger or smaller than the original texture image. For example, the texture coordinates at a point far from the camera may correspond to an area of several pixels in the texture image. SceneKit uses the minification filter to determine the color of the sampled texel at that point.
The default minification filter is SCNFilterModeLinear. See constants for available modes and their effects.
(Read and Write property)

### 159.29.20 mipFilter as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Texture filtering for using mipmaps to render the material property,Äôs image contents at a size smaller than that of the original image.
**Notes:**

see
https://developer.apple.com/documentation/scenekit/scnmaterialproperty/1395398-mipfilter
(Read and Write property)

### 159.29.21 wrapS as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The wrapping behavior for the S texture coordinate.
**Notes:**

Wrapping modes determine texture mapping behavior for cases where a material,Äôs texture coordinates extend outside the range from 0.0 to 1.0. For example, if you use the contentsTransform property to shrink a texture relative to the surface of a geometry, you use the wrap mode properties to determine whether the texture repeats across the surface.
The S texture coordinate measures the horizontal axis of a texture image, increasing from 0.0 at the left edge of the image to 1.0 at the right edge.
The default wrap mode is SCNWrapModeClamp. See constants for available modes and their effects.
(Read and Write property)

### 159.29.22 wrapT as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The wrapping behavior for the T texture coordinate.
**Notes:**

Wrapping modes determine texture mapping behavior for cases where a material,Äôs texture coordinates extend outside the range from 0.0 to 1.0. For example, if you use the contentsTransform property to shrink a texture relative to the surface of a geometry, you use the wrap mode properties to determine whether the texture repeats across the surface.
The T texture coordinate measures the vertical axis of a texture image, increasing from 0.0 at the bottom of the image to 1.0 at the top.
The default wrap mode is SCNWrapModeClamp.
(Read and Write property)

### 159.29.23 Constants

### 159.29.24 SCNFilterModeLinear = 2

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the Texture filtering modes, used by the minificationFilter, magnificationFilter, and mipFilter properties.
**Notes:** Texture filtering sample texels from the neighborhood of the coordinates being sampled and linearly interpolates their colors.

### 159.29.25 SCNFilterModeNearest = 1

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the Texture filtering modes, used by the minificationFilter, magnificationFilter, and mipFilter properties.
**Notes:** Texture filtering returns the color from only one texel, whose location is nearest to the coordinates being sampled.

### 159.29.26 SCNFilterModeNone = 0

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the Texture filtering modes, used by the minificationFilter, magnificationFilter, and mipFilter properties.
**Notes:**

No texture filtering is applied.
Only valid for the mipFilter property, specifying that SceneKit should not use mip mapping.

### 159.29.27 SCNWrapModeClamp = 1

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the Modes to apply to texture wrapping, used by the wrapT and wrapS properties.
**Notes:**

Texture coordinates are clamped to the range from 0.0 to 1.0, inclusive.
Texture sampling in areas whose texture coordinates would fall outside this range produces texel colors from the nearest edge of the texture image.

### 159.29.28 SCNWrapModeClampToBorder = 3

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the Modes to apply to texture wrapping, used by the wrapT and wrapS properties.
**Notes:**

Texture sampling uses texture colors for coordinates in the range from 0.0 to 1.0 (inclusive) and the material property,Äôs borderColor value otherwise.

Texture sampling in areas whose texture coordinates would fall outside this range uses the borderColor property instead of texel colors from the texture image.

### 159.29.29 SCNWrapModeMirror = 4

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the Modes to apply to texture wrapping, used by the wrapT and wrapS properties.
**Notes:**

Texture sampling of texture coordinates outside range from 0.0 to 1.0 should behave as if the range reverses before repeating.

Texture sampling in areas of the material whose texture coordinates would fall outside from 0.0 to 1.0 results in tiling both texture image and its mirror image across the surface using the material.

### 159.29.30 SCNWrapModeRepeat = 2

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the Modes to apply to texture wrapping, used by the wrapT and wrapS properties.
**Notes:**

Texture sampling uses only the fractional part of texture coordinates, passing through the range from 0.0 to (but not including) 1.0.

Texture sampling in areas of the material whose texture coordinates would fall outside from 0.0 to 1.0 results in tiling the texture image across the surface using the material.

## 159.30 class SCNMatrix4MBS

### 159.30.1 class SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** A representation of a 4 x 4 matrix.
**Notes:** SceneKit uses matrices to represent coordinate space transformations, which in turn can represent the combined position, rotation or orientation, and scale of an object in three-dimensional space.

### 159.30.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

### 159.30.3 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

### 159.30.4 Methods

### 159.30.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The constructor.
**Notes:** Initializes all values with zero.

### 159.30.6 copy as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a copy of the matrix.

### 159.30.7 equals(other as SCNMatrix4MBS) as boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns a Boolean value that indicates whether the corresponding elements of two matrices are equal.
**Notes:**

self: The first matrix to be compared.
other: The first matrix to be compared.

Returns true if each element in self is exactly equal to the corresponding element in other.

This function performs a numeric (not bitwise) comparison of each pair of elements.

### 159.30.8 Identity as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The 4 x 4 identity matrix.
**Notes:** Elements on the diagonal of this matrix are 1.0; all other elements are 0.0. Multiplying another matrix by the identity matrix or multiplying the identity matrix by another matrix yields the other matrix.

### 159.30.9 Invert as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns the inverse of the specified matrix.
**Notes:** The inverse matrix of the specified matrix, or the original matrix if it is not invertible.

### 159.30.10 Multiply(other as SCNMatrix4MBS) as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns the product of two matrices.
**Notes:**

self: The multiplicand, or left operand of matrix multiplication.
other: The multiplier, or right operand of matrix multiplication.

Returns the matrix product of the self and other parameters.

Matrix multiplication is not commutative. As a transformation, the result of multiplying a matrix A by a matrix B is the transformation represented by B followed by the transformation represented by A.

### 159.30.11 Null as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The null matrix.
**Notes:** All values are zero.

### 159.30.12 Rotate(angle as double, sx as double, sy as double, sz as double) as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns a new matrix created by concatenating the specified matrix with a rotation transformation.
**Notes:**

mat: The matrix to be combined with a rotation.
angle: The amount of rotation, in radians, measured counterclockwise around the rotation axis.
sx: The x-component of the rotation axis.
sy: The y-component of the rotation axis.
sz: The z-component of the rotation axis.

Returns a new matrix.

The resulting transformation consists of the specified rotation followed by the transformation represented by the mat parameter.

### 159.30.13 Rotation(angle as double, x as double, y as double, z as double) as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns a matrix describing a rotation transformation.
**Notes:**

angle: The amount of rotation, in radians, measured counterclockwise around the rotation axis.
x: The x-component of the rotation axis.
y: The y-component of the rotation axis.
z: The z-component of the rotation axis.

Returns a new rotation matrix.

### 159.30.14 Scale(sx as double, sy as double, sz as double) as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns a matrix describing a scale transformation.
**Notes:**

sx: The scale factor in the x-axis direction.
sy: The scale factor in the y-axis direction.
sz: The scale factor in the z-axis direction.

Returns a new scale matrix.
See also:

- 159.30.15 Scale(sx as double, sy as double, sz as double) as SCNMatrix4MBS 23871

### 159.30.15 Scale(sx as double, sy as double, sz as double) as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns a new matrix created by concatenating the specified matrix with a scale transformation.
**Notes:**

self: The matrix to be combined with a translation.
sx: The scale factor in the x-axis direction.
sy: The scale factor in the y-axis direction.
sz: The scale factor in the z-axis direction.

Returns a new matrix.

The resulting transformation consists of the specified scale followed by the transformation represented by the mat parameter.
See also:

- 159.30.14 Scale(sx as double, sy as double, sz as double) as SCNMatrix4MBS 23871

### 159.30.16 Translate(tx as double, ty as double, tz as double) as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns a new matrix created by concatenating the specified matrix with a translation transformation.
**Notes:**

self: The matrix to be combined with a translation.
tx: The translation distance in the x-axis direction.

ty: The translation distance in the y-axis direction.
tz: The translation distance in the z-axis direction.

Returns a new matrix.

The resulting transformation consists of the specified translation followed by the transformation represented by the mat parameter.

### 159.30.17 Translation(tx as double, ty as double, tz as double) as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns a matrix describing a translation transformation.
**Notes:**

tx: The translation distance in the x-axis direction.
ty: The translation distance in the y-axis direction.
tz: The translation distance in the z-axis direction.

Returns a new translation matrix.

### 159.30.18 Properties

### 159.30.19 IsIdentity as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns a Boolean value that indicates whether the specified matrix is equal to the identity matrix.
**Notes:**

Returns true if the elements on the matrix,Äôs diagonal are 1.0 and all other elements are 0.0.
(Read only property)

### 159.30.20 m11 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The value at 1/1.
**Notes:** (Read and Write property)

### 159.30.21 m12 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The value at 1/2.
**Notes:** (Read and Write property)

### 159.30.22 m13 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The value at 1/3.
**Notes:** (Read and Write property)

### 159.30.23 m14 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The value at 1/4.
**Notes:** (Read and Write property)

### 159.30.24 m21 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The value at 2/1.
**Notes:** (Read and Write property)

### 159.30.25 m22 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The value at 2/2.
**Notes:** (Read and Write property)

### 159.30.26 m23 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The value at 2/3.
**Notes:** (Read and Write property)

### 159.30.27 m24 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The value at 2/4.
**Notes:** (Read and Write property)

### 159.30.28 m31 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The value at 3/1.
**Notes:** (Read and Write property)

### 159.30.29 m32 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The value at 3/2.
**Notes:** (Read and Write property)

### 159.30.30 m33 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The value at 3/3.
**Notes:** (Read and Write property)

### 159.30.31 m34 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The value at 3/4.
**Notes:** (Read and Write property)

### 159.30.32 m41 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The value at 4/1.
**Notes:** (Read and Write property)

### 159.30.33 m42 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The value at 4/2.
**Notes:** (Read and Write property)

### 159.30.34 m43 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The value at 4/3.
**Notes:** (Read and Write property)

### 159.30.35 m44 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The value at 4/4.
**Notes:** (Read and Write property)

## 159.31 class SCNNodeMBS

### 159.31.1 class SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** A structural element of a scene graph, representing a position and transform in a 3D coordinate space, to which you can attach geometry, lights, cameras, or other displayable content.
**Notes:**

### 159.31.6 Methods

### 159.31.7 addAudioPlayer(player as SCNAudioPlayerMBS)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Adds the specified auto player to the node and begins playback.
**Notes:**

player: An audio player object.

Positional audio effects from a player attached to a node are based on that node,Äôs position relative to the audioListener position in the scene.

After playback has completed, SceneKit automatically removes the audio player from the node.

You may need to have the scene/view in play mode to hear something.

### 159.31.8 addChildNode(node as SCNNodeMBS)

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** Adds a node to the node,Äôs array of children.
**Notes:**

child: The node to be added.

Calling this method appends the node to the end of the childNodes array.

### 159.31.9 audioPlayers as SCNAudioPlayerMBS()

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The audio players currently attached to the node.
**Notes:**

Positional audio effects from a player attached to a node are based on that node,Äôs position relative to the audioListener position in the scene.
After an audio player completes playback, SceneKit automatically removes it from the node. Therefore, this array always contains audio players that are currently playing back audio.

### 159.31.10 childNodes as SCNNodeMBS()

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** An array of the node,Äôs children in the scene graph hierarchy.

### 159.31.11 childNodeWithName(Name as String, recursively as Boolean = false) as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns the first node in the node,Äôs child node subtree with the specified name.
**Notes:**

name: The name of the node to search for.
recursively: True to search the entire child node subtree, or false to search only the node,Äôs immediate children.

If the recursive parameter is true, SceneKit uses a preorder traversal to search the child node subtree,Äîthat is, the block searches a node before it searches each of the node,Äôs children, and it searches all children of a node before searching any of that node,Äôs sibling nodes. Otherwise, SceneKit searches only those nodes in the node,Äôs childNodes array.

### 159.31.12 clearGeometry

MBS Mac64bit Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Clears geometry property.
**Example:**

```
if MyScene <>nil then
// clear geometry for all nodes in this Scene
MyScene.rootNode.clearGeometry
end if
```

**Notes:**

Recursively walks over child nodes to also clear geometry by assigning nil.
Calling this method can help to mitigate problems where textures would not unload properly due to bugs in SceneKit framework.

### 159.31.13 clone as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a copy of the node and its children.
**Notes:**

This method recursively copies the node and its child nodes. For a nonrecursive copy, use the inherited copy method, which creates a copy of the node without any child nodes.
Cloning or copying a node creates a duplicate of the node object, but not the geometries, lights, cameras, and other SceneKit objects attached to it,Äîinstead, each copied node shares references to these objects.

This behavior means that you can use cloning to, for example, place the same geometry at several locations within a scene without maintaining multiple copies of the geometry and its materials. However, it also means that changes to the objects attached to one node will affect other nodes that share the same attachments. For example, to render two copies of a node using different materials, you must copy both the node and its

geometry before assigning a new material.

Multiple copies of an SCNGeometryMBS object efficiently share the same vertex data, so you can copy geometries without a significant performance penalty.

### 159.31.14 constraints as SCNConstraintMBS()

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** A list of constraints affecting the node,Äôs transformation.
**Notes:**

An array of constraint objects. Before rendering, SceneKit evaluates all constraints attached to a node hierarchy and adjusts node transformations appropriately.
Use the SCNLookAtConstraintMBS class to make a node always point toward another node even as both are moved, or the SCNTransformConstraintMBS class to apply arbitrary transformations at constraint evaluation time.

### 159.31.15 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a new node object.
See also:

- 159.31.16 Constructor(geometry as SCNGeometryMBS) 23880

### 159.31.16 Constructor(geometry as SCNGeometryMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a node object with the specified geometry attached.
**Notes:**

geometry: The geometry to be attached.

Returns a new node object with the geometry attached, or nil if initialization is not successful.
See also:

- 159.31.15 Constructor 23880

### 159.31.17 convertPositionFromNode(position as SCNVector3MBS, node as SCNNodeMBS) as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Converts a position to the node,Äôs local coordinate space from that of another node.
**Notes:**

position: A position in the local coordinate space defined by the other node.
node: Another node in the same scene graph as the node, or nil to convert from the scene,Äôs world coordinate space.

Returns a position in the node,Äôs local coordinate space.

### 159.31.18 convertPositionToNode(position as SCNVector3MBS, node as SCNNodeMBS) as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Converts a position from the node,Äôs local coordinate space to that of another node.
**Notes:**

position: A position in the node,Äôs local coordinate space.
node: Another node in the same scene graph as the node, or nil to convert to the scene,Äôs world coordinate space.

Returns a position in the local coordinate space defined by the other node.

### 159.31.19 convertTransformFromNode(position as SCNMatrix4MBS, node as SCNNodeMBS) as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Converts a transform to the node,Äôs local coordinate space from that of another node.
**Notes:**

transform: A transform relative to the local coordinate space defined by the other node.
node: Another node in the same scene graph as the node, or nil to convert from the scene,Äôs world coordinate space.

Returns a transform relative to the node,Äôs coordinate space.

### 159.31.20 convertTransformToNode(position as SCNMatrix4MBS, node as SCNNodeMBS) as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Converts a transform from the node,Äôs local coordinate space to that of another node.
**Notes:**

transform: A transform relative to the node,Äôs coordinate space.
node: Another node in the same scene graph as the node, or nil to convert to the scene,Äôs world coordinate space.

Returns a transform relative to the local coordinate space defined by the other node.

### 159.31.21 convertVectorFromNode(position as SCNVector3MBS, node as SCNNodeMBS) as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Converts a direction vector to the node,Äôs local coordinate space from that of another node.
**Notes:**

vector: A direction vector in the local coordinate space defined by the other node.
node: Another node in the same scene graph as the node, or nil to convert from the scene,Äôs world coordinate space.

Returns a direction vector in the node,Äôs local coordinate space.

Unlike the convertPositionFromNode method, this method ignores the translational aspect of both nodes' transforms. As such, this method is more appropriate for use with vectors that represent only directional information, such as velocity or facing.

### 159.31.22 convertVectorToNode(position as SCNVector3MBS, node as SCNNodeMBS) as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Converts a direction vector from the node,Äôs local coordinate space to that of another node.
**Notes:**

vector: A direction vector in the node,Äôs local coordinate space.
node: Another node in the same scene graph as the node, or nil to convert to the scene,Äôs world coordinate space.

Returns a direction vector in the local coordinate space defined by the other node.

Unlike the convertPositionToNode method, this method ignores the translational aspect of both nodes' transforms. As such, this method is more appropriate for use with vectors that represent only directional information, such as velocity or facing.

### 159.31.23 copy as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a copy of the node.

### 159.31.24 flattenedClone as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates an optimized copy of the node and its children.
**Notes:**

A new single node containing the combined geometries and materials of the node and its child node subtree.

Rendering complex node hierarchies can incur a performance cost. Each geometry and material requires a separate draw command to be sent to the GPU, and each draw command comes with a performance overhead. If you plan for a portion of your scene,Äôs node hierarchy to remain static (with respect to itself, if not the rest of the scene), use this method to create a single node containing all elements of that node hierarchy that SceneKit can render using fewer draw commands.

### 159.31.25 hitTestWithSegment(PointA as SCNVector3MBS, PointB as SCNVector3MBS, Options as Dictionary = nil) as SCNHitTestResultMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Searches the node,Äôs child node subtree for objects intersecting a line segment between two specified points.
**Notes:**

pointA: An endpoint of the line segment to search along, specified in the node,Äôs local coordinate system.
pointB: The other endpoint of the line segment to search along, specified in the node,Äôs local coordinate system.
options: A dictionary of options affecting the search. See Key shared methods in SCNHitTestResultMBS class for acceptable values.

Returns an array of SCNHitTestResultMBS objects representing search results.

Hit-testing is the process of finding elements of a scene located along a specified line segment in the scene,Äôs coordinate space (or that of a particular node in the scene). For example, you can use this method to determine whether a projectile launched by a game character will hit its target.

To search for the scene element corresponding to a two-dimensional point in the rendered image, use the renderer,Äôs hitTest method instead.

### 159.31.26 insertChildNode(newNode as SCNNodeMBS, atIndex as Integer)

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** Adds a node to the node,Äôs array of children at a specified index.

### 159.31.27 localRotateBy(rotation as SCNVector4MBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Changes the node's orientation relative to its current orientation.
**Notes:**

rotation: The axis and angle of rotation to apply, in node-local space, expressed as a quaternion.

This method rotates the node according to its pivot transform.
The effects of this method are animatable; that is, calling this method during an implicit-animation transaction animates the rotation effect.

Available in macOS 10.13 or later.

### 159.31.28 localTranslateBy(translation as SCNVector3MBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Changes the node's position relative to its current position.
**Notes:**

translation: The distance, in node-local space, by which to move the node.

The effects of this method are animatable; that is, calling this method during an implicit-animation transaction animates the move.

Available in macOS 10.13 or later.

### 159.31.29 lookAt(worldTarget as SCNVector3MBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Changes the node's orientation so that its local forward vector points toward the specified location.
**Notes:**

worldTarget: The point, in world space, to face the node toward.

Using this method is equivalent to calling the other lookAt method and passing the node's worldUp and localFront vectors for the corresponding parameters.
The effects of this method are animatable; that is, calling this method during an implicit-animation transaction animates the rotation effect.

Available in macOS 10.13 or later.
See also:

- 159.31.30 lookAt(worldTarget as SCNVector3MBS, worldUp as SCNVector3MBS, localFront as SCNVector3MBS) 23885

### 159.31.30 lookAt(worldTarget as SCNVector3MBS, worldUp as SCNVector3MBS, localFront as SCNVector3MBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Changes the node's orientation so that the specified forward vector points toward the specified location.
**Notes:**

worldTarget: The point, in world space, to face the node toward.
worldUp: The direction vector, in world space, that should appear as "up" from the rotated node's point of view.
localFront: The direction vector, in the node's local space, that should orient toward the target point.

The effects of this method are animatable; that is, calling this method during an implicit-animation transaction animates the rotation effect.

Available in macOS 10.13 or later.
See also:

• 159.31.29 lookAt(worldTarget as SCNVector3MBS) 23885

### 159.31.31 node as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a node object.
**Notes:** Returns a new node object, or nil if initialization is not successful.

### 159.31.32 nodeWithGeometry(geometry as SCNGeometryMBS) as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a node object with the specified geometry attached.
**Notes:** Returns a new node object with the geometry attached, or nil if initialization is not successful.

### 159.31.33 removeAllActions

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Ends and removes all actions from the node.
**Notes:** When SceneKit removes an action from a node, it skips any remaining animation the action would perform. However, any changes the action has already made to the node,Äôs state remain in effect.

### 159.31.34 removeAllAudioPlayers

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Removes all audio players attached to the node, stopping playback.

### 159.31.35 removeAudioPlayer(player as SCNAudioPlayerMBS)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Removes the specified audio player from the node, stopping playback.
**Notes:**

player: An audio player attached to the node.

This method has no effect if the player parameter does not reference an audio player directly attached to the node.

### 159.31.36 removeFromParentNode

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** Removes the node from its parent,Äôs array of child nodes.
**Notes:** Removing nodes from the node hierarchy serves two purposes. Nodes own their contents (child nodes or attached lights, geometries, and other objects), so deallocating unneeded nodes can reduce memory usage. Additionally, SceneKit does more work at rendering time with a large, complex node hierarchy, so removing nodes whose contents you don,Äôt need to display can improve rendering performance.

### 159.31.37 replaceChildNode(oldNode as SCNNodeMBS, newNode as SCNNodeMBS)

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** Removes a child from the node,Äôs array of children and inserts another node in its place.
**Notes:**

oldNode: The existing child node to be replaced.
newNode: The node with which to replace the child node.

If both the oldNode and newNode nodes are children of the node, calling this method swaps their positions in the array. Note that removing a node from the node hierarchy may result in it being deallocated.
Calling this method results in undefined behavior if the child parameter does not refer to a child of this node.

### 159.31.38 rotateBy(worldRotation as SCNVector4MBS, worldTarget as SCNVector3MBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Changes the node's position and orientation, relative to its current transform, through a rotation around the specified point in scene space.
**Notes:**

worldRotation: The axis and angle of rotation to apply, in scene space, expressed as a quaternion.
worldTarget: The center point, in scene space, about which to rotate.

The effects of this method are animatable; that is, calling this method during an implicit-animation transaction animates the rotation effect.

Available in macOS 10.13 or later.

### 159.31.39 runAction(action as SCNActionMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Adds an action to the list of actions executed by the node.
**Notes:**

action: The action to be performed.

SceneKit begins running a newly added action when it prepares to render the next frame.
See also:

- 159.31.40 runAction(action as SCNActionMBS, del as SCNNodeRunActionCompletedMBS, tag as variant = nil) 23888
- 159.31.41 runAction(action as SCNActionMBS, key as string) 23889
- 159.31.42 runAction(action as SCNActionMBS, key as string, del as SCNNodeRunActionCompletedMBS, tag as variant = nil) 23889

### 159.31.40 runAction(action as SCNActionMBS, del as SCNNodeRunActionCompletedMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Adds an action to the list of actions executed by the node. SceneKit calls the specified block when the action completes.
**Notes:**

action: The action to be performed.
del: The method that SceneKit calls when the action completes.
tag: The tag is passed through to delegate method.

The new action is processed the next time SceneKit prepares to render a frame.
SceneKit calls your method after the action,Äôs duration is complete. For example, in a game you could use this method to show a Game Over message after performing a fade-out action on a node that displays a player character.
See also:

- 159.31.39 runAction(action as SCNActionMBS) 23888
- 159.31.41 runAction(action as SCNActionMBS, key as string) 23889

- 159.31.42 runAction(action as SCNActionMBS, key as string, del as SCNNodeRunActionCompletedMBS, tag as variant = nil) 23889

### 159.31.41 runAction(action as SCNActionMBS, key as string)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Adds an identifiable action to the list of actions executed by the node.
**Notes:**

action: The action to be performed.
key: A unique key used to identify the action.

This method is identical to runAction, but the action is stored and identified so that you can retrieve or cancel it later. If an action using the same key is already running, SceneKit removes it before adding the new action.
See also:

- 159.31.39 runAction(action as SCNActionMBS) 23888
- 159.31.40 runAction(action as SCNActionMBS, del as SCNNodeRunActionCompletedMBS, tag as variant = nil) 23888
- 159.31.42 runAction(action as SCNActionMBS, key as string, del as SCNNodeRunActionCompletedMBS, tag as variant = nil) 23889

### 159.31.42 runAction(action as SCNActionMBS, key as string, del as SCNNodeRunActionCompletedMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Adds an identifiable action to the list of actions executed by the node.
**Notes:**

SceneKit calls the specified block when the action completes.

action: The action to be performed.
key: A unique key used to identify the action.
del: A completion block called when the action completes.
tag: The tag is passed through to delegate method.

This method is identical to runAction, but the action is stored and identified so that you can retrieve or cancel it later. If an action using the same key is already running, SceneKit removes it before adding the new action.
SceneKit calls your method after the action,Äôs duration is complete. For example, you can use this method with a wait action to execute some code after a timed delay. If during the delay period you need to prevent

the code from running, use the removeActionForKey method to cancel it.
See also:

- 159.31.39 runAction(action as SCNActionMBS) 23888
- 159.31.40 runAction(action as SCNActionMBS, del as SCNNodeRunActionCompletedMBS, tag as variant = nil) 23888
- 159.31.41 runAction(action as SCNActionMBS, key as string) 23889

### 159.31.43 SCNModelTransform as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** One of the keys are used for the 'semantic' argument of SCNProgramMBS.setSemantic method.
**Notes:**

Transforms are SCNMatrix4 wrapped in NSValue objects.
A 4 x 4 matrix for transforming coordinates from model space to scene (or world) space.

### 159.31.44 SCNModelViewProjectionTransform as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** One of the keys are used for the 'semantic' argument of SCNProgramMBS.setSemantic method.
**Notes:**

Transforms are SCNMatrix4 wrapped in NSValue objects.
A 4 x 4 matrix containing the concatenation of the Model, View, and Projection transformations.

### 159.31.45 SCNModelViewTransform as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** One of the keys are used for the 'semantic' argument of SCNProgramMBS.setSemantic method.
**Notes:**

Transforms are SCNMatrix4 wrapped in NSValue objects.
A 4 x 4 matrix containing the concatenation of the Model and View transformations.

### 159.31.46 SCNNormalTransform as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** One of the keys are used for the 'semantic' argument of SCNProgramMBS.setSemantic method.
**Notes:**

Transforms are SCNMatrix4 wrapped in NSValue objects.
A 4 x 4 matrix for transforming surface normal vectors from model space to view (or eye) space.

### 159.31.47 SCNProjectionTransform as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** One of the keys are used for the 'semantic' argument of SCNProgramMBS.setSemantic method.
**Notes:**

Transforms are SCNMatrix4 wrapped in NSValue objects.
A 4 x 4 matrix for transforming coordinates from view (or eye) space to clip space.

### 159.31.48 SCNViewTransform as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** One of the keys are used for the 'semantic' argument of SCNProgramMBS.setSemantic method.
**Notes:**

Transforms are SCNMatrix4 wrapped in NSValue objects.
A 4 x 4 matrix for transforming coordinates from scene (or world) space to view (or eye) space.

### 159.31.49 setConstraints(constraints() as SCNConstraintMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Sets the list of constraints affecting the node,Äôs transformation.
**Notes:**

An array of constraint objects. Before rendering, SceneKit evaluates all constraints attached to a node hierarchy and adjusts node transformations appropriately.
Use the SCNLookAtConstraintMBS class to make a node always point toward another node even as both are moved, or the SCNTransformConstraintMBS class to apply arbitrary transformations at constraint evaluation time.

### 159.31.50 Properties

### 159.31.51 Camera as SCNCameraMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The camera attached to the node.
**Notes:**

To use a camera for displaying a scene, set the the pointOfView property of the view (or layer or renderer) displaying the scene to the node containing the camera. A camera looks in the direction of the node,Äôs negative z-axis, so you aim the camera by changing the position and orientation of the node containing it. You control geometric and optical parameters of the camera,Äîprojection, field of view, and depth of field,Äîusing the attached SCNCameraMBS object.
(Read and Write property)

### 159.31.52 CastsShadow as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that determines whether SceneKit renders the node,Äôs contents into shadow maps.
**Notes:**

SceneKit renders shadows by rendering a shadow map image containing silhouettes of the scene,Äôs contents, and then projecting that image onto the scene. SceneKit performs this process once for each SCNLight object in the scene whose castsShadow property is true. Because shadow map rendering re-renders portions of the scene, it incurs a performance cost. To minimize this performance cost, exclude nodes from shadow map rendering by setting the node,Äôs castsShadow property to false.

For more details on shadow rendering, see SCNLight.
(Read and Write property)

### 159.31.53 categoryBitMask as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A mask that defines which categories the node belongs to.
**Notes:**

You can assign each node in a scene to one or more categories, where each category corresponds to a bit in the bit mask. You define the mask values used in your app. When SceneKit renders a scene, it compares the each node,Äôs categoryBitMask property with the category bit masks of every other object that participates in the rendering process,Äîlights, cameras, and techniques,Äîusing a bitwise AND operation. If the result is a nonzero value, SceneKit includes the node when rendering. The default category bit mask is 1.

Use a node,Äôs category bit mask together with:

- An SCNLightMBS object,Äôs categoryBitMask property to exclude the node from that light,Äôs illumination
- An SCNCameraMBS object,Äôs categoryBitMask property to make the node invisible to that camera
- The category bit masks in an SCNTechniqueMBS object,Äôs definition dictionary to include or exclude the node from phases of a multipass rendering technique

This property does not affect SceneKit,Äôs physics simulation. To include or exclude a node from physics interactions, use the categoryBitMask property of the node,Äôs physicsBody and physicsField objects.
(Read and Write property)

### 159.31.54 EulerAngles as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The node,Äôs orientation, expressed as pitch, yaw, and roll angles in radians. Animatable.
**Notes:**

The order of components in this vector matches the axes of rotation:

- Pitch (the x component) is the rotation about the node,Äôs x-axis.
- Yaw (the y component) is the rotation about the node,Äôs y-axis.
- Roll (the z component) is the rotation about the node,Äôs z-axis.

SceneKit applies these rotations relative to the node,Äôs pivot property in the reverse order of the components: first roll, then yaw, then pitch. The rotation, eulerAngles, and orientation properties all affect the rotational aspect of the node,Äôs transform property. Any change to one of these properties is reflected in the others.
You can animate changes to this property,Äôs value. See Animating SceneKit Content.
(Read and Write property)

### 159.31.55 focusBehavior as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The focus behavior for a node.
**Notes:** (Read and Write property)

### 159.31.56 Geometry as SCNGeometryMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The geometry attached to the node.
**Notes:**

A node can have only one geometry attached to it. To combine geometries so they can be controlled or animated together, create a node with no geometry and add other nodes to it.
Animating the node,Äôs geometric properties can move, rotate, stretch and scale its geometry. For more advanced animations of a node,Äôs geometry, use its morpher and skinner objects.
(Read and Write property)

### 159.31.57 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 159.31.58 Hidden as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that determines the visibility of the node,Äôs contents. Animatable.
**Notes:**

The default value of this property is false, specifying that SceneKit should render geometries and use lights attached to the node or its children. Change this property,Äôs value to true to exclude attached geometries and lights from rendering. (Cameras attached to the node or its children are not affected by this property.) Hiding a node also hides its child nodes recursively.

You can animate changes to this property,Äôs value. See Animating SceneKit Content. Hiding or showing a node in an animation results in a fade-in or fade-out effect.
(Read and Write property)

### 159.31.59 Light as SCNLightMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The light attached to the node..
**Notes:**

A node can have only one light attached to it. To combine lights so they can be controlled or animated

together, create a node with no light and add other nodes to it.
(Read and Write property)

### 159.31.60 localFront as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The unit vector SceneKit treats as "forward" in local space for all nodes.
**Notes:**

The "forward" direction of a node affects cameras and directional lighting attached to a node, as well as relative orientation and movement effects such as lookAt, SCNLookAtConstraint, and SCNBillboardConstraint. This vector is always (0, 0, -1) for all nodes, but you can use this class property when it's convenient to refer to directions symbolically.

Available in macOS 10.13 or later.
(Read only property)

### 159.31.61 localRight as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The direction SceneKit treats as "right" in local space for all nodes.
**Notes:**

No SceneKit features depend directly on this direction's definition,Äîit's simply a natural consequence of recognizing "forward" and "up" directions for use with cameras, directional lighting, and relative orientation operations.
This vector is always (1, 0, 0) for all nodes, but you can use this class property when it's convenient to refer to directions symbolically.

Available in macOS 10.13 or later.
(Read only property)

### 159.31.62 localUp as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The direction SceneKit treats as "up" in local space for all nodes.
**Notes:**

The "up" direction of a node affects cameras attached to a node, as well as relative orientation and movement effects such as lookAt, SCNLookAtConstraint, and SCNBillboardConstraint.

This vector is always (0, 1, 0) for all nodes, but you can use this class property when it's convenient to refer to directions symbolically.

Available in macOS 10.13 or later.
(Read only property)

### 159.31.63 movabilityHint as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** A value that indicates how SceneKit should handle the node when rendering movement-related effects.
**Notes:**

This property controls how the node contributes to various motion-related effects during rendering. The default value is SCNMovabilityHintFixed. If the movability hint is SCNMovabilityHintMovable:

- The node,Äôs content is not affected by motion blur effects. (See the motionBlurIntensity camera property, which applies motion blur effects for camera movement but not subject movement.)
- The node does not contribute to environmental lighting of other objects. Environmental lighting is an aspect of physically based rendering (see SCNLightingModelPhysicallyBased), in which surfaces tend to pick up the color of other scene content around them. SceneKit performs environmental lighting by rendering light probes,Äîsmall, omnidirectional snapshots of the scene,Äôs contents, as visible from at various points around the scene. Light probes are static, so nodes that are expected to move should not contribute to the lighting environment for other surfaces.

This value is merely a hint that communicates to SceneKit,Äôs rendering system about how you want to move content in your scene; it does not affect your ability to change the node,Äôs position or add animations or physics to the node.
(Read and Write property)

### 159.31.64 Name as String

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** A name associated with the node.
**Notes:**

You can provide a descriptive name for a node to make managing your scene graph easier. Nodes loaded from a scene file may have names assigned by an artist using a 3D authoring tool. Use the childNodeWithName or childNodesPassingTest method to retrieve a node from a scene graph by its name, or the SCNSceneSource class to examine nodes in a scene file without loading its scene graph.

The names of nodes and their attached objects are saved when you export a scene to a file using its writeToURL method, and appear in the Xcode scene editor. The SceneKit statistics view (see showsStatistics) also shows the names of nodes with attached cameras.
(Read and Write property)

### 159.31.65 Opacity as Double

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** The opacity value of the node. Animatable.
**Notes:**

Possible values are between 0.0 (fully transparent) and 1.0 (fully opaque). The default is 1.0.
You can animate changes to this property,Äôs value.
(Read and Write property)

### 159.31.66 orientation as SCNVector4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The node,Äôs orientation, expressed as a quaternion. Animatable.
**Notes:**

The rotation, eulerAngles, and orientation properties all affect the rotational aspect of the node,Äôs transform property. Any change to one of these properties is reflected in the others.
You can animate changes to this property,Äôs value.
(Read and Write property)

### 159.31.67 parentNode as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** The node,Äôs parent in the scene graph hierarchy.
**Notes:**

For a scene,Äôs rootNode object, the value of this property is nil.
(Read only property)

### 159.31.68 Paused as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that determines whether to run actions and animations attached to the node and its child nodes.
**Notes:**

The default value of this property is false, specifying that SceneKit should continuously update the node,Äôs contents. Pausing a node pauses any running animations or actions. This property applies to the actions and animations attached to the node itself and those attached to any of its child or descendant nodes.
(Read and Write property)

### 159.31.69 physicsBody as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The physics body associated with the node.
**Notes:**

The default value is nil, specifying that the node does not participate in the physics simulation at all. If you provide a physics body, SceneKit updates the node,Äôs position and orientation each time it processes a step of its physics simulation. For more information on SceneKit,Äôs physics system, see SCNPhysicsWorldMBS.
(Read and Write property)

### 159.31.70 physicsField as SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The physics field associated with the node.
**Notes:**

Physics fields apply forces to other physics bodies in a specified area around their node. For example, a SCNPhysicsDragField field slows all physics bodies that pass through its area. For a full list of field types and their effects, see SCNPhysicsFieldMBS.

A node can contain both a physics body that defines collision behavior and a physics field that defines forces in its area. For example, two nodes containing physics bodies and radial gravity fields will be attracted to one another, but will bounce off each other when they collide.
(Read and Write property)

### 159.31.71 pivot as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The pivot point for the node,Äôs position, rotation, and scale. Animatable.
**Notes:**

A node,Äôs pivot is the transformation between its coordinate space and that used by its position, rotation, and scale properties. The default pivot is SCNMatrix4MBS.Identity, specifying that the node,Äôs position locates the origin of its coordinate system, its rotation is about an axis through its center, and its scale is also relative to that center point.
Changing the pivot transform alters these behaviors in many useful ways. You can:

- Offset the node,Äôs contents relative to its position. For example, by setting the pivot to a translation transform you can position a node containing a sphere geometry relative to where the sphere would rest on a floor instead of relative to its center.
- Move the node,Äôs axis of rotation. For example, with a translation transform you can cause a node to revolve around a faraway point instead of rotating around its center, and with a rotation transform you can tilt the axis of rotation.
- Adjust the center point and direction for scaling the node. For example, with a translation transform you can cause a node to grow or shrink relative to a corner instead of to its center.

You can animate changes to this property,Äôs value.
(Read and Write property)

### 159.31.72 Position as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The translation applied to the node. Animatable.
**Notes:**

The node,Äôs position locates it within the coordinate system of its parent, as modified by the node,Äôs pivot property. The default position is the zero vector, indicating that the node is placed at the origin of the parent node,Äôs coordinate system.
(Read and Write property)

### 159.31.73 presentationNode as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** A node object representing the state of the node as it currently appears onscreen.
**Notes:**

When you use implicit animation (see SCNTransaction) to change a node,Äôs properties, those node properties are set immediately to their target values, even though the animated node content appears to transition from the old property values to the new. During the animation SceneKit maintains a copy of the node, called the presentation node, whose properties reflect the transitory values determined by any in-flight animations currently affecting the node. The presentation node,Äôs properties provide a close approximation to the

version of the node that is currently displayed. SceneKit also uses the presentation node when computing the results of explicit animations, physics, and constraints.

Do not modify the properties of the presentation node. (Attempting to do so results in undefined behavior.) Instead, you use the presentation node to read current animation values,Äîfor example, to create a new animation starting at those values.

The presentation node has no parent or child nodes. To access animated properties of related nodes, use the node,Äôs own parentNode and childNodes properties and the presentationNode property of each related node.
(Read only property)

### 159.31.74 RenderingOrder as Integer

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** The order the node,Äôs content is drawn in relative to that of other nodes.
**Notes:**

Nodes with greater rendering orders are rendered last. Defaults to zero.
(Read and Write property)

### 159.31.75 Rotation as SCNVector4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The node,Äôs orientation, expressed as a rotation angle about an axis. Animatable.
**Notes:**

The four-component rotation vector specifies the direction of the rotation axis in the first three components and the angle of rotation (in radians) in the fourth. The default rotation is the zero vector, specifying no rotation. Rotation is applied relative to the node,Äôs pivot property.
The rotation, eulerAngles, and orientation properties all affect the rotational aspect of the node,Äôs transform property. Any change to one of these properties is reflected in the others.
(Read and Write property)

### 159.31.76 Scale as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The scale factor applied to the node. Animatable.
**Notes:**

Each component of the scale vector multiplies the corresponding dimension of the node,Äôs geometry. The default scale is 1.0 in all three dimensions. For example, applying a scale of (2.0, 0.5, 2.0) to a node containing a cube geometry reduces its height and increases its width and depth. Scaling is applied relative to the node,Äôs pivot property.
(Read and Write property)

### 159.31.77 transform as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The transform applied to the node relative to its parent. Animatable.
**Notes:**

The transformation is the combination of the node,Äôs rotation, position, and scale properties. The default transformation is SCNMatrix4MBS.Identity.

When you set the value of this property, the node,Äôs rotation, orientation, eulerAngles, position, and scale properties automatically change to match the new transform, and vice versa. SceneKit can perform this conversion only if the transform you provide is a combination of rotation, translation, and scale operations. If you set the value of this property to a skew transformation or to a nonaffine transformation, the values of these properties become undefined. Setting a new value for any of these properties causes SceneKit to compute a new transformation, discarding any skew or nonaffine operations in the original transformation.

You can animate changes to this property,Äôs value.
(Read and Write property)

### 159.31.78 WorldFront as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The ”forward” (-Z) direction vector relative to the node, expressed in world space.
**Notes:**

Reading this property is equivalent to reading the localFront class property and using the convertVectorToNode or convertVectorFromNode method to convert that vector from the node’s local coordinate space to the scene’s world coordinate space.

Available in macOS 10.13 or later.
(Read only property)

### 159.31.79 worldOrientation as SCNVector4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The node's orientation relative to the scene's world coordinate space.
**Notes:**

This quaternion isolates the rotational aspect of the node's worldTransform matrix, which in turn is the conversion of the node's transform from local space to the scene's world coordinate space. That is, it expresses the difference in axis and angle of rotation between the node and the scene's rootNode.
(Read and Write property)

### 159.31.80 WorldPosition as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The node's position relative to the scene's world coordinate space.
**Notes:**

his vector isolates the translational aspect of the node's worldTransform matrix, which in turn is the conversion of the node's transform from local space to the scene's world coordinate space. That is, it expresses the x, y, and z offsets of the node's position from that of the scene's rootNode, and is equivalent to reading the node's position vector and converting it to world space with the convertPositionFromNode or convertPositionToNode method.
(Read and Write property)

### 159.31.81 WorldRight as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The "right" (+X) direction vector relative to the node, expressed in world space.
**Notes:**

Reading this property is equivalent to reading the localRight class property and using the convertVectorToNode or convertVectorFromNode method to convert that vector from the node's local coordinate space to the scene's world coordinate space.

Available in macOS 10.13 or later.
(Read only property)

### 159.31.82 worldTransform as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The world transform applied to the node.
**Notes:**

A world transform is the node,Äôs coordinate space transform relative to the scene,Äôs coordinate space. This transform is the concatenation of the node,Äôs transform property with that of its parent node, the parent,Äôs parent, and so on up to the rootNode object of the scene.
(Read and Write property)

### 159.31.83 WorldUp as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The "up" (+Y) direction vector relative to the node, expressed in world space.
**Notes:**

Reading this property is equivalent to reading the localUp class property and using the convertVectorToNode or convertVectorFromNode method to convert that vector from the node's local coordinate space to the scene's world coordinate space.

Available in macOS 10.13 or later.
(Read only property)

### 159.31.84 Constants

### 159.31.85 SCNMovabilityHintFixed = 0

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the values that inform SceneKit,Äôs rendering for movement-related effects, used by the movabilityHint property.
**Notes:** The node is not expected to move over time.

### 159.31.86 SCNMovabilityHintMovable = 1

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the values that inform SceneKit,Äôs rendering for movement-related effects, used by the movabilityHint property.
**Notes:** The node is expected to move over time.

### 159.31.87 SCNNodeFocusBehaviorFocusable = 2

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the options for the focusable states of a SceneKit node.
**Notes:** Node is focusable and prevents nodes that it visually obscures from becoming focusable.

### 159.31.88 SCNNodeFocusBehaviorNone = 0

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the options for the focusable states of a SceneKit node.
**Notes:** Node is not focusable.

### 159.31.89 SCNNodeFocusBehaviorOccluding = 1

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the options for the focusable states of a SceneKit node.
**Notes:** Node is not focusable and prevents nodes that it visually obscures from becoming focusable.

### 159.31.90 Delegates

### 159.31.91 SCNNodeRunActionCompletedMBS(node as SCNNodeMBS, action as SCNActionMBS, key as string, tag as variant)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop only.

**Function:** The delegate for the runAction method.

# 159.32 class SCNPhysicsBallSocketJointMBS

## 159.32.1 class SCNPhysicsBallSocketJointMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A physics behavior that connects two physics bodies and allows them to pivot around each other in any direction.
**Notes:**

A ball and socket joint has three rotational degrees of freedom and zero translational degrees of freedom. You can also use a ball and socket joint to pin a body to a specific location in the coordinate space of the node containing it while allowing it to rotate freely.

Available in MacOS 10.10.
Subclass of the SCNPhysicsBehaviorMBS class.

## 159.32.2 Methods

## 159.32.3 Constructor(body as SCNPhysicsBodyMBS, anchor as SCNVector3MBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a ball and socket joint that anchors a single physics body in space and allows it to rotate freely around an anchor point.
**Notes:**

body: The physics body to be controlled by the joint.
anchor: The point the body pivots around, relative to the node containing it.

Returns a new ball-and-socket-joint behavior.

For a behavior to take effect, add it to the physics simulation by calling the addBehavior method on your scene,Äôs SCNPhysicsWorldMBS object. The physics bodies constrained by the joint must be attached to nodes in the scene.
See also:

- 159.32.4 Constructor(bodyA as SCNPhysicsBodyMBS, anchorA as SCNVector3MBS, bodyB as SCNPhysicsBodyMBS, anchorB as SCNVector3MBS) 23906

### 159.32.4 Constructor(bodyA as SCNPhysicsBodyMBS, anchorA as SCNVector3MBS, bodyB as SCNPhysicsBodyMBS, anchorB as SCNVector3MBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a ball and socket joint connecting two physics bodies.
**Notes:**

bodyA: The first physics body to be connected by the joint.
anchorA: The point at which the joint connects, relative to the node containing the first body.
bodyB: The second physics body to be connected by the joint.
anchorB: The point at which the joint connects, relative to the node containing the second body.

Returns a new ball-and-socket-joint behavior.

For a behavior to take effect, add it to the physics simulation by calling the addBehavior: method on your scene,Äôs SCNPhysicsWorldMBS object. The physics bodies constrained by the joint must be attached to nodes in the scene.
See also:

- 159.32.3 Constructor(body as SCNPhysicsBodyMBS, anchor as SCNVector3MBS) 23905

### 159.32.5 jointWithBody(body as SCNPhysicsBodyMBS, anchor as SCNVector3MBS) as SCNPhysicsBallSocketJointMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a ball and socket joint that anchors a single physics body in space and allows it to rotate freely around an anchor point.
**Notes:**

body: The physics body to be controlled by the joint.
anchor: The point the body pivots around, relative to the node containing it.

Returns a new ball-and-socket-joint behavior.

For a behavior to take effect, add it to the physics simulation by calling the addBehavior method on your scene,Äôs SCNPhysicsWorldMBS object. The physics bodies constrained by the joint must be attached to nodes in the scene.
See also:

- 159.32.6 jointWithBody(bodyA as SCNPhysicsBodyMBS, anchorA as SCNVector3MBS, bodyB as SCNPhysicsBodyMBS, anchorB as SCNVector3MBS) as SCNPhysicsBallSocketJointMBS 23907

### 159.32.6 jointWithBody(bodyA as SCNPhysicsBodyMBS, anchorA as SCNVector3MBS, bodyB as SCNPhysicsBodyMBS, anchorB as SCNVector3MBS) as SCNPhysicsBallSocketJointMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a ball and socket joint connecting two physics bodies.
**Notes:**

bodyA: The first physics body to be connected by the joint.
anchorA: The point at which the joint connects, relative to the node containing the first body.
bodyB: The second physics body to be connected by the joint.
anchorB: The point at which the joint connects, relative to the node containing the second body.

Returns a new ball-and-socket-joint behavior.

For a behavior to take effect, add it to the physics simulation by calling the addBehavior: method on your scene,Äôs SCNPhysicsWorldMBS object. The physics bodies constrained by the joint must be attached to nodes in the scene.
See also:

- 159.32.5 jointWithBody(body as SCNPhysicsBodyMBS, anchor as SCNVector3MBS) as SCNPhysicsBallSocketJointMBS 23906

### 159.32.7 Properties

### 159.32.8 anchorA as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The point at which the joint connects, relative to the node containing the first body.
**Notes:** (Read and Write property)

### 159.32.9 anchorB as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The point at which the joint connects, relative to the node containing the second body.
**Notes:** (Read and Write property)

### 159.32.10 bodyA as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The first physics body connected by the joint.
**Notes:** (Read only property)

### 159.32.11 bodyB as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The second physics body connected by the joint.
**Notes:**

This property,Äôs value is nil if the joint was created using the Constructor without bodyB parameter.
(Read only property)

# 159.33 class SCNPhysicsBehaviorMBS

## 159.33.1 class SCNPhysicsBehaviorMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The abstract superclass for joints, vehicle simulations, and other high-level behaviors that incorporate multiple physics bodies.
**Notes:**

An SCNPhysicsBehavior object defines a high-level behavior for one or more physics bodies, modifying the results of the physics simulation. Behaviors include joints that connect multiple bodies so they move together and vehicle definitions that cause a body to roll like a car. You never use this class directly; instead, you instantiate one of the subclasses that defines the kind of behavior you want to add to your physics world.Table 1 describes the kinds of behaviors you can create in SceneKit.

Behavior classes implemented by SceneKit

| Class Name | Description |
|---|---|
| SCNPhysicsHingeJointMBS | Connects two bodies and allows them to pivot around each other on a single axis. |
| SCNPhysicsBallSocketJointMBS | Connects two bodies and allows them to pivot around each other in any direction. |
| SCNPhysicsSliderJointMBS | Connects two bodies and allows them to slide or rotate relative to one another. Slider joints can also work as motors, applying a force or torque between the two bodies. |
| SCNPhysicsVehicleMBS | Simulates a physics body as the chassis of a car or other wheeled vehicle. You control a vehicle in terms of steering, braking, and acceleration, and use SCNPhysicsVehicleWheelMBS objects to define the appearance and physical properties of each of its wheels. |

To use a physics behavior, you follow these steps:
1. Create SCNPhysicsBodyMBS objects and attach them to each node that participates in the behavior.
2. Create and configure a behavior object using one of the subclasses listed in above.
3. Add the behavior to the physics simulation by calling the addBehavior method on your scene,Äôs SCNPhysicsWorldMBS object.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 159.33.2 Methods

## 159.33.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The private constructor.

### 159.33.4 Properties

### 159.33.5 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

# 159.34 class SCNPhysicsBodyMBS

## 159.34.1 class SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The physics simulation attributes attached to a scene graph node.
**Notes:**

Overview
When SceneKit prepares to render a new frame, it performs physics calculations on physics bodies attached to nodes in the scene. These calculations include gravity, friction, and collisions with other bodies. You can also apply your own forces and impulses to a body. After SceneKit completes these calculations, it updates the positions and orientations of the node objects before rendering the frame.

To add physics to a node, create and configure an SCNPhysicsBody object and then assign it to the physicsBody property of the SCNNode object. A physics body must be associated with a node object before you apply forces or impulses to it.

A Body,Äôs Physical Characteristics
The SCNPhysicsBody class defines the physical characteristics for the body when it is simulated by the scene. Three properties are most important for physics simulation:

- The type property, which determines how the body interacts with forces and other bodies in the simulation. Static bodies are unaffected by forces and collisions and cannot move. Dynamic bodies are affected by forces and collisions with other body types. Kinematic bodies are not affected by forces or collisions, but by moving them directly you can cause collisions that affect dynamic bodies.
- The physicsShape property, which defines the three-dimensional form of the body for collision detection purposes. Physics simulations run faster when using simple shapes instead of the fine detail of a node,Äôs visible geometry. Typically, you set a body,Äôs physics shape to a bounding box, sphere, or primitive shape that roughly matches its node,Äôs visible content. For details on creating physics shapes, see SCNPhysicsShape.
- The kinematicBody property. Applying a force or torque to a dynamic body results in an acceleration (or angular acceleration) proportional to its mass.

All values in SceneKit,Äôs physics simulation use the International System of Units (SI): The unit of mass is the kilogram; the units of force, impulse, and torque are the newton, newton-second, and newton-meter; and the unit of distance for node positions and sizes is the meter. Note that you need not attempt to provide realistic values for physical quantities,Äîuse whatever values produce the behavior or gameplay you,Äôre looking for.
For a dynamic body, you can control how the body is affected by forces or collisions. See Defining How Forces Affect a Physics Body.

Defining a Body,Äôs Category and Collisions

When you design a game that uses physics, you define the different categories of physics objects that appear in the scene. You define different categories of physics bodies for the behaviors your want for your app. A body can be assigned to as many of these categories as you want. In addition to declaring its own categories, a physics body also declares which categories of bodies it interacts with.
Use the categoryBitMask and collisionBitMask properties to define an object,Äôs collision behavior. The constants listed in SCNPhysicsCollisionCategory provide default values for these properties. In addition, with the contactTestBitMask property you can define interactions where a pair of bodies generates contact messages (see the SCNPhysicsContactDelegate protocol) without the bodies being affected by the collision.

Related Physics Classes
Physics fields create forces that affect all bodies in an area, such as vortices and gravitational attraction. For details and a list of available field types, see SCNPhysicsField.
You can add higher-level behaviors that control interactions between multiple bodies, such as joints and wheeled vehicles. For details and a list of available behaviors, see SCNPhysicsBehavior.
A scene,Äôs physicsWorld property holds an SCNPhysicsWorld object that manages physics characteristics that affect the entire scene.

Physics and the Rendering Loop
SceneKit evaluates its physics simulation as part of the rendering loop described in SCNSceneRendererDelegate. On each pass through this loop, SceneKit determines the state of all nodes with attached physics bodies, and simulates the effects of physics on those bodies for one time step,Äîfor example, by updating the position or rotation of a body based on its velocity and angular velocity. After simulating physics, SceneKit applies the results of the physics simulation to the scene for display.

Because you can animate SceneKit content not only through physics, but also through actions and implicitly and explicitly defined animations, SceneKit applies the results of physics simulation not to the SCNNode objects in your scene, but to each node,Äôs presentationNode object that represents its currently displayed state. As such, changing properties of a node that are affected by physics requires special consideration.

If you change the transform value,Äîor any of the other properties that are components of the transform, such as position and rotation,Äîof a node affected by physics, SceneKit resets the physics simulation for that node. If you want to change only one component of the transform, while leaving the others at their physics-simulated values, copy the presentation node,Äôs transform before making changes.

### 159.34.2 Blog Entries

- Physics example for SceneKit in Xojo

### 159.34.3 Blog Entries

- Physics example for SceneKit in Xojo

### 159.34.4 Methods

### 159.34.5 applyForce(direction as SCNVector3MBS, atPosition as SCNVector3MBS, impulse as Boolean)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Applies a force or impulse to the body at a specific point.
**Notes:**

direction: The direction and magnitude of the force (in newtons) or of the impulse (in newton-seconds).
position: The point on the body where the force or impulse should be applied, in the local coordinate system of the SCNNodeMBS object containing the physics body.
impulse: True to apply an instantaneous change in momentum; false to apply a force that affects the body at the end of the simulation step.

Applying a force or impulse to a body at a position other than its center of mass may impart both linear and angular acceleration, depending on how the body is situated in the physics world and the other forces acting upon it.
The impulse parameter determines how this method contributes to the physics simulation:

- If you specify true, SceneKit treats the direction parameter as an impulse, measured in newton-seconds, and accelerates the physics body immediately. Use this option to simulate instantaneous effects such as launching a projectile.
- If you specify false, SceneKit treats the direction parameter as a force, measured in newtons. At the end of each simulation step (by default, a step occurs once for each frame in the rendering loop), SceneKit sums all forces applied to the physics body during that step and accelerates the body according to the net effect of those forces. Use this option when you want to simulate continuous forces on the body by calling applyForce on each simulation step.

Note
The impulse parameter effectively changes the unit of magnitude. A value that results in a certain acceleration when applied continuously on each frame of the simulation results in much less acceleration if applied only during a single frame.

As with all physical quantities in SceneKit, you need not use realistic force measurements in your app,Äîthe effects of the physics simulation depend on the relative differences between forces, not on their absolute values. You may use whatever values produce the behavior or gameplay you,Äôre looking for as long as you use them consistently.
See also:

- 159.34.6 applyForce(direction as SCNVector3MBS, impulse as Boolean) 23914

### 159.34.6 applyForce(direction as SCNVector3MBS, impulse as Boolean)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Applies a force or impulse to the body at its center of mass.
**Notes:**

direction: The direction and magnitude of the force (in newtons) or of the impulse (in newton-seconds).
impulse: True to apply an instantaneous change in momentum; false to apply a force that affects the body at the end of the simulation step.

Applying a force or impulse to a body imparts a linear acceleration proportional to its mass.
The impulse parameter determines how this method contributes to the physics simulation:

- If you specify true, SceneKit treats the direction parameter as an impulse, measured in newton-seconds, and accelerates the physics body immediately. Use this option to simulate instantaneous effects such as launching a projectile.
- If you specify false, SceneKit treats the direction parameter as a force, measured in newtons. At the end of each simulation step (by default, a step occurs once for each frame in the rendering loop), SceneKit sums all forces applied to the physics body during that step and accelerates the body according to the net effect of those forces. Use this option when you want to simulate continuous forces on the body by calling applyForce:impulse: on each simulation step.

Note
The impulse parameter effectively changes the unit of magnitude. A value that results in a certain acceleration when applied continuously on each frame of the simulation results in much less acceleration if applied only during a single frame.

As with all physical quantities in SceneKit, you need not use realistic force measurements in your app,Äîthe effects of the physics simulation depend on the relative differences between forces, not on their absolute values. You may use whatever values produce the behavior or gameplay you,Äôre looking for as long as you use them consistently.
See also:

- 159.34.5 applyForce(direction as SCNVector3MBS, atPosition as SCNVector3MBS, impulse as Boolean) 23913

### 159.34.7 applyTorque(torque as SCNVector4MBS, impulse as Boolean)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Applies a net torque or a change in angular momentum to the body.
**Notes:**

torque: The direction and magnitude of the torque (in newton-meters) or of the change of angular momentum (in newton-meter-seconds), relative to the world coordinate space of the scene.
impulse: True to apply an instantaneous change in angular momentum; false to apply a torque that affects the body at the end of the simulation step.

Applying a torque to a body changes its angular velocity by an amount related to its mass and shape, rotating it without affecting its linear acceleration. Each component of the torque vector relates to rotation about the corresponding axis in the local coordinate system of the SCNNode object containing the physics body. For example, applying a torque of { 0.0, 0.0, 1.0 } causes a node to spin counterclockwise around the world-space z-axis.
The impulse parameter determines how this method contributes to the physics simulation:

- If you specify true, SceneKit treats the direction parameter as an instantaneous change in angular momentum, measured in newton-meter-seconds.
- If you specify false, SceneKit treats the direction parameter as a torque, measured in newton-meters. At the end of each simulation step (by default, a step occurs once for each frame in the rendering loop), SceneKit sums all forces and torques applied to the physics body during that step and accelerates the body according to the net effect of those forces and torques. Use this option when you want to simulate gradual acceleration by calling applyTorque:impulse: on each simulation step.

Note
The impulse parameter effectively changes the unit of magnitude. A value that results in a certain acceleration when applied continuously on each frame of the simulation results in much less acceleration if applied only during a single frame.

As with all physical quantities in SceneKit, you need not use realistic force and torque measurements in your app,Äîthe effects of the physics simulation depend on the relative differences between forces, not on their absolute values. You may use whatever values produce the behavior or gameplay you,Äôre looking for as long as you use them consistently.

### 159.34.8 body(type as Integer, shape as SCNPhysicsShapeMBS) as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a physics body with the specified type and shape.
**Notes:**

type: A constant that determines how a body responds to forces and collisions. See SCNPhysicsBodyType.
shape: A physics shape defining the volume of the body for collision detection purposes.

Returns a new physics body object.

For the body to participate in collision detection or respond to forces, you must attach it to the physicsBody property of an SCNNode object in a scene.
If you pass nil for the shape parameter, SceneKit automatically creates a physics shape for the body when you attach it to a node, based on that node,Äôs geometry property. To create a physics shape that,Äôs based on the geometries of a node and its hierarchy of children, or to control the level of detail in a physics shape, create the physics shape manually using an SCNPhysicsShape class method.

Note
For nodes containing custom geometry, the physics shape SceneKit automatically creates is a rough approximation of the geometry. This approximation, or convex hull, provides a compromise between accuracy and performance in collision detection. For the best collision detection performance, create an SCNPhysicsShape instance based on a basic geometry class (SCNBox, SCNSphere, SCNPyramid, SCNCone, SCNCylinder, or SCNCapsule).

### 159.34.9 clearAllForces

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Cancels all continuous forces and torques acting on the physics body during the current simulation step.
**Notes:**

When you pass false for the impulse parameter in the applyForce, applyForce:atPosition, or applyTorque method, SceneKit waits until the end of the current simulation step before applying its effect. At that time, SceneKit sums all forces and torques applied during that simulation step and changes the velocity or angular velocity of the body according to the net effect of those forces and torques.
Call clearAllForces to cancel any forces and torques previously applied during the current simulation step.

### 159.34.10 Constructor(type as Integer, shape as SCNPhysicsShapeMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a physics body with the specified type and shape.
**Notes:**

type: A constant that determines how a body responds to forces and collisions. See SCNPhysicsBodyType.
shape: A physics shape defining the volume of the body for collision detection purposes.

Returns a new physics body object.

For the body to participate in collision detection or respond to forces, you must attach it to the physicsBody

property of an SCNNode object in a scene.
If you pass nil for the shape parameter, SceneKit automatically creates a physics shape for the body when you attach it to a node, based on that node,Äôs geometry property. To create a physics shape that,Äôs based on the geometries of a node and its hierarchy of children, or to control the level of detail in a physics shape, create the physics shape manually using an SCNPhysicsShape class method.

Note
For nodes containing custom geometry, the physics shape SceneKit automatically creates is a rough approximation of the geometry. This approximation, or convex hull, provides a compromise between accuracy and performance in collision detection. For the best collision detection performance, create an SCNPhysicsShape instance based on a basic geometry class (SCNBox, SCNSphere, SCNPyramid, SCNCone, SCNCylinder, or SCNCapsule).

### 159.34.11 copy as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a copy of the body.

### 159.34.12 dynamicBody as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a physics body that can be affected by forces and collisions.
**Notes:**

Use dynamic bodies for the elements of your scene that are moved by the physics simulation.
For the body to participate in collision detection or respond to forces, you must attach it to the physicsBody property of an SCNNode object in a scene.
SceneKit automatically creates a physics shape for the body when you attach it to a node, based on that node,Äôs geometry property. To create a physics shape that,Äôs based on the geometries of a node and its hierarchy of children, or to control the level of detail in a physics shape, create the physics shape manually using an SCNPhysicsShape class method.

Note
For nodes containing custom geometry, the physics shape SceneKit automatically creates is a rough approximation of the geometry. This approximation, or convex hull, provides a compromise between accuracy and performance in collision detection. For the best collision detection performance, create an SCNPhysicsShape instance based on a basic geometry class (SCNBox, SCNSphere, SCNPyramid, SCNCone, SCNCylinder, or SCNCapsule).

### 159.34.13 kinematicBody as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a physics body that is unaffected by forces or collisions but that can cause collisions affecting other bodies when moved.
**Notes:**

Return a new physics body object.

Use kinematic bodies for scene elements that you want to control directly but whose movement manipulates other elements. For example, to allow the user to push objects around with a finger, you might create a kinematic body and attach it to an invisible node that you move follow touch events. (In macOS, use the same technique to allow the user to move objects with the mouse pointer.)

For the body to participate in collision detection or respond to forces, you must attach it to the physicsBody property of an SCNNode object in a scene.
SceneKit automatically creates a physics shape for the body when you attach it to a node, based on that node,Äôs geometry property. To create a physics shape that,Äôs based on the geometries of a node and its hierarchy of children, or to control the level of detail in a physics shape, create the physics shape manually using an SCNPhysicsShape class method.
Note
For nodes containing custom geometry, the physics shape SceneKit automatically creates is a rough approximation of the geometry. This approximation, or convex hull, provides a compromise between accuracy and performance in collision detection. For the best collision detection performance, create an SCNPhysicsShape instance based on a basic geometry class (SCNBox, SCNSphere, SCNPyramid, SCNCone, SCNCylinder, or SCNCapsule).

### 159.34.14 resetTransform

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Updates the position and orientation of a body in the physics simulation to match that of the node to which the body is attached.
**Notes:**

If you change the position or orientation of a node with an attached static or dynamic physics body, call this method afterward to ensure that the physics simulation incorporates the change. You need not call this method for kinematic bodies.
Note that dynamic and physics bodies are designed to be moved only by the physics simulation or not at all. You may use this method to move them regardless of this restriction, but at a cost to performance.

### 159.34.15 staticBody as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a physics body that is unaffected by forces or collisions and that cannot move.
**Notes:**

Use static bodies to construct fixtures in your scene that other bodies need to collide with but that do not themselves move, such as floors, walls, and terrain.
For the body to participate in collision detection or respond to forces, you must attach it to the physicsBody property of an SCNNode object in a scene.
SceneKit automatically creates a physics shape for the body when you attach it to a node, based on that node,Äôs geometry property. To create a physics shape that,Äôs based on the geometries of a node and its hierarchy of children, or to control the level of detail in a physics shape, create the physics shape manually using an SCNPhysicsShape class method.

Note
For nodes containing custom geometry, the physics shape SceneKit automatically creates is a rough approximation of the geometry. This approximation, or convex hull, provides a compromise between accuracy and performance in collision detection. For the best collision detection performance, create an SCNPhysicsShape instance based on a basic geometry class (SCNBox, SCNSphere, SCNPyramid, SCNCone, SCNCylinder, or SCNCapsule).

### 159.34.16 Properties

### 159.34.17 AffectedByGravity as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that determines whether the constant gravity of a scene accelerates the body.
**Notes:**

If this property is true (the default), and the type of the body is SCNPhysicsBodyTypeDynamic, the gravity property of the scene,Äôs physicsWorld object causes the body to accelerate.
If this property is false, the body is not affected by scene gravity. This option can be useful when making physics bodies whose behavior should be governed by SCNPhysicsFieldMBS objects instead of a constant global acceleration.
(Read and Write property)

### 159.34.18 allowsResting as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that specifies whether SceneKit can automatically mark the physics body at rest.

**Notes:**

If true (the default), SceneKit keeps track of whether the body is moving or affected by forces, automatically setting its Resting property to true when it is ,Äúat rest.,Äù The physics simulation runs faster when simulating fewer bodies, so treating a body as resting temporarily removes it from the simulation to improve performance.

SceneKit automatically returns a resting body to the simulation if another body collides with it, if you change its position or velocity, or if you apply a force to it. However, SceneKit uses a faster, less accurate simulation when deciding whether to change a body,Äôs isResting property back to false. If testing your app reveals unexpected physics behaviors involving resting bodies, changing those bodies,Äô allowsResting property to false may improve simulation accuracy.
(Read and Write property)

### 159.34.19 angularDamping as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A factor that reduces the body,Äôs angular velocity.
**Notes:**

This property simulates the effect of rotational friction on a body. A damping factor of 0.0 specifies no loss in angular velocity, and a damping factor of 1.0 prevents the body from rotating. The default damping factor is 0.1.
(Read and Write property)

### 159.34.20 angularVelocity as SCNVector4MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A vector describing both the current rotation axis and rotational speed (in radians per second) of the physics body.
**Notes:**

A positive rotational speed indicates counterclockwise rotation (when viewed from the direction the rotation axis points in).
SceneKit,Äôs physics simulation determines the angular velocity (and corresponding change in rotation) of each dynamic physics body in the scene. You can also set a body,Äôs velocity directly to set the physics simulation in motion or influence its behavior.

The effect of reading or setting this property,Äôs value changes based on the current context:

- When invoked within a rendering loop method (any of the events), or from any other code invoked

from within such a method, reading the property returns the current result of the physics simulation, and setting the property immediately applies the change.

- When invoked at any other time, reading the property returns the last value set for the property, and setting the property does not take effect until the next pass through the rendering loop.

(Read and Write property)

### 159.34.21 angularVelocityFactor as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A multiplier affecting how SceneKit applies rotations computed by the physics simulation to the node containing the physics body.
**Notes:**

Use this property to constrain or restrict the effect of physics simulation on the node containing the physics body. For example, you can force a body to rotate in only one axis by setting its angular velocity factor to { 0.0, 1.0, 0.0 } .
(Read and Write property)

### 159.34.22 categoryBitMask as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A mask that defines which categories this physics body belongs to.
**Notes:**

Every physics body in a scene can be assigned to one or more categories, each corresponding to a bit in the bit mask. You define the mask values used in your game. Use this property together with the physicsShape and contactTestBitMask properties to define which physics bodies interact with each other and when your game is notified of interactions.
The default value is SCNPhysicsCollisionCategoryStatic for static bodies and SCNPhysicsCollisionCategoryDefault for dynamic and kinematic bodies.
(Read and Write property)

### 159.34.23 charge as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The electric charge of the body, in coulombs.
**Notes:**

A body,Äôs charge determines its behavior when affected by an electric or magnetic field. Use the SCNPhysicsFieldMBS class to add these fields to your scene. Bodies with positive or negative charges behave

differently when affected by electric or magnetic fields. The default electric charge on a physics body is 0.0, causing it to be unaffected by electric and magnetic fields.

Note that you need not use realistic measurements for the bodies in your app,Äîthe effects of the physics simulation depend on the relative masses of different bodies, not the absolute values. You may use whatever values produce the behavior or gameplay you,Äôre looking for as long as you use them consistently.
(Read and Write property)

### 159.34.24 collisionBitMask as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A mask that defines which categories of physics bodies can collide with this physics body.
**Notes:**

When two physics bodies contact each other, a collision may occur. SceneKit compares the body,Äôs collision mask to the other body,Äôs category mask by performing a bitwise AND operation. If the result is a nonzero value, then the body is affected by the collision. Each body independently chooses whether it wants to be affected by the other body. For example, you might choose to avoid collision calculations that would make negligible changes to a body,Äôs velocity.

The default value is SCNPhysicsCollisionCategoryAll (a bit mask whose every bit is enabled), specifying that the body will collide with bodies of all other categories.
(Read and Write property)

### 159.34.25 contactTestBitMask as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A mask that defines which categories of bodies cause intersection notifications with this physics body.
**Notes:**

When two physics bodies overlap, a contact may occur. SceneKit compares the body,Äôs contact mask to the other body,Äôs category mask by performing a bitwise AND operation. If the result is a nonzero value, SceneKit creates an SCNPhysicsContactMBS object describing the contact and sends messages to the contactDelegate object of the scene,Äôs physics world. For best performance, only set bits in the contact mask for interactions you are interested in.

For applications running in OS X v10.10 or iOS 8, this property,Äôs value matches that of the collisionBitMask property,Äîthat is, SceneKit sends contact messages if and only if a collision occurs. For applications running in OS X v10.11 or iOS 9 or later, this property,Äôs value defaults to zero and need not match the collision mask,Äîthat is, a pair of bodies generates contact messages whenever the bodies intersect, regardless of whether they collide or pass through one another.

(Read and Write property)

### 159.34.26 damping as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A factor that reduces the body,Äôs linear velocity.
**Notes:**

This property simulates the effect of fluid friction or air resistance on a body. A damping factor of 0.0 specifies no loss in velocity, and a damping factor of 1.0 prevents the body from moving. The default damping factor is 0.1.
(Read and Write property)

### 159.34.27 friction as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The body,Äôs resistance to sliding motion.
**Notes:**

This property simulates the roughness of the body,Äôs surface. When two bodies are in contact and a force is applied that would cause them to slide against one another, the friction values for both bodies determine their resistance to motion. If both bodies,Äô friction value is 0.0, they slide freely against each other. If both bodies,Äô friction value is 1.0, they do not slide at all. The default friction is 0.5.
(Read and Write property)

### 159.34.28 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

### 159.34.29 isResting as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that indicates whether the physics body is at rest.
**Notes:**

This property,Äôs default value is false, but SceneKit,Äôs physics simulation may automatically set it to true if the body is not moving and not affected by any forces. A resting body does not participate in the

simulation until another body collides with it or you change its position or velocity or apply a force to it.
(Read only property)

### 159.34.30 mass as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The mass of the body, in kilograms.
**Notes:**

The mass of a body affects its momentum and how it responds to forces. The default mass for dynamic bodies is 1.0. The default mass for static and kinematic bodies is 0.0, but these bodies are unaffected by mass.

Note that you need not use realistic measurements for the bodies in your app,Äîthe effects of the physics simulation depend on the relative masses of different bodies, not the absolute values. You may use whatever values produce the behavior or gameplay you,Äôre looking for as long as you use them consistently.
(Read and Write property)

### 159.34.31 momentOfInertia as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The body,Äôs moment of inertia, expressed in the local coordinate system of the node that contains the body.
**Notes:**

A body,Äôs moment of inertia determines how it responds to torques (that is, forces with a rotational component). Each component of this vector is the moment of inertia for the corresponding principal axis (in the coordinate system containing the physics body). For example, if the x-component value of the moment vector is less than the y-component value, the body rotates more freely about its x-axis than its y-axis.

By default, SceneKit automatically determines the body,Äôs moment of inertia based on its shape and mass. Use this property to define a custom moment of inertia (for example, to model an object of non-uniform density). Using a custom moment of inertia requires setting the usesDefaultMomentOfInertia property to false.
(Read and Write property)

### 159.34.32 physicsShape as SCNPhysicsShapeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** An object that defines the solid volume of the physics body for use in collision detection.
**Notes:**

The physics simulation does not use a node,Äôs visible geometry for collision detection,Äîthe simulation can run faster when using simple shapes, and it can also be useful to design your app or game using invisible collision shapes for some elements. Typically, you set a body,Äôs physics shape to a bounding box or primitive shape that roughly matches its node,Äôs visible content, but you can use a more detailed shape for more precise collision detection at a cost to performance.
For details on creating physics shapes, see SCNPhysicsShapeMBS.
(Read and Write property)

### 159.34.33 restitution as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A factor that determines how much kinetic energy the body loses or gains in collisions.
**Notes:**

This property simulates the ,Äúbounciness,Äù of a body. A restitution of 1.0 means that the body loses no energy in a collision,Äîfor example, a ball dropped onto a flat surface will bounce back to the height it fell from. A restitution of 0.0 means the body does not bounce after a collision. A restitution of greater than 1.0 causes the body to gain energy in collisions. The default restitution is 0.5.
(Read and Write property)

### 159.34.34 rollingFriction as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The body,Äôs resistance to rolling motion.
**Notes:**

This property simulates the traction between a rounded body and bodies it might roll against. A rolling friction of 0.0 (the default) means that a body induced to roll (for example, by being placed on an inclined surface) will continue to roll without slowing down unless otherwise acted upon, and a rolling friction of 1.0 prevents the body from rolling.
(Read and Write property)

### 159.34.35 type as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A constant that determines how the physics body responds to forces and collisions.
**Notes:** (Read and Write property)

### 159.34.36 usesDefaultMomentOfInertia as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that determines whether SceneKit automatically calculates the body,Äôs moment of inertia or allows setting a custom value.
**Notes:**

A body,Äôs moment of inertia determines how it responds to torques (that is, forces with a rotational component).
If this property is true (the default), SceneKit automatically determines the body,Äôs moment of inertia based on its shape and mass. Set this property to false and use the momentOfInertia property to define a custom moment of inertia (for example, to model an object of non-uniform density).
(Read and Write property)

### 159.34.37 velocity as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A vector describing both the current speed (in meters per second) and direction of motion of the physics body.
**Notes:**

SceneKit,Äôs physics simulation determines the velocity (and corresponding change in position) of each dynamic physics body in the scene. You can also set a body,Äôs velocity directly to set the physics simulation in motion or influence its behavior.
The effect of reading or setting this property,Äôs value changes based on the current context:

- When invoked within a rendering loop method (any of the events), or from any other code invoked from within such a method, reading the property returns the current result of the physics simulation, and setting the property immediately applies the change.
- When invoked at any other time, reading the property returns the last value set for the property, and setting the property does not take effect until the next pass through the rendering loop.

(Read and Write property)

### 159.34.38 velocityFactor as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A multiplier affecting how SceneKit applies translations computed by the physics simulation to the node containing the physics body.
**Notes:**

Use this property to constrain or restrict the effect of physics simulation on the node containing the physics body. For example, you can force a body to move in only two dimensions by setting its velocity factor to { 1.0, 1.0, 0.0 } .
(Read and Write property)

### 159.34.39 Constants

### 159.34.40 kPhysicsCollisionCategoryAll = -1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the collision category constants.
**Notes:**

This is the default value for a physics body,Äôs collisionBitMask property.
With this collision mask, a physics body can collide with all other physics bodies.

### 159.34.41 kPhysicsCollisionCategoryDefault = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the collision category constants.
**Notes:** The default categoryBitMask value for dynamic and kinematic bodies.

### 159.34.42 kPhysicsCollisionCategoryStatic = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the collision category constants.
**Notes:** The default categoryBitMask value for static bodies.

### 159.34.43 kTypeDynamic = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the body type constants.
**Notes:**

A physics body that can be affected by forces and collisions.
Use dynamic bodies for the elements of your scene that are moved by the physics simulation.

### 159.34.44 kTypeKinematic = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the body type constants.
**Notes:**

A physics body that is unaffected by forces or collisions but that can cause collisions affecting other bodies when moved.
Use kinematic bodies for scene elements that you want to control directly directly but whose movement manipulates other elements. For example, to allow the user to push objects around with a finger, you might create a kinematic body and attach it to an invisible node that you move to follow touch events. (In macOS, use the same technique to allow the user to move objects with the mouse pointer.)

### 159.34.45 kTypeStatic = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the body type constants.
**Notes:**

A physics body that is unaffected by forces or collisions and cannot move.
Use static bodies to construct fixtures in your scene that other bodies need to collide with but that do not themselves move, such as floors, walls, and terrain.

# 159.35 class SCNPhysicsConeTwistJointMBS

## 159.35.1 class SCNPhysicsConeTwistJointMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The class for a cone twist join.
**Notes:** Subclass of the SCNPhysicsBehaviorMBS class.

## 159.35.2 Methods

## 159.35.3 Constructor(body as SCNPhysicsBodyMBS, frame as SCNMatrix4MBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Initializes and returns a physics cone-twist joint.
**Notes:** The joint attaches "body" to the 3d location specified by "frame" and relative to the node that owns the body.
See also:

- 159.35.4 Constructor(bodyA as SCNPhysicsBodyMBS, frameA as SCNMatrix4MBS, bodyB as SCNPhysicsBodyMBS, frameB as SCNMatrix4MBS) 23929

## 159.35.4 Constructor(bodyA as SCNPhysicsBodyMBS, frameA as SCNMatrix4MBS, bodyB as SCNPhysicsBodyMBS, frameB as SCNMatrix4MBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Initializes and returns a physics cone-twist joint.
**Notes:** The joint attaches bodyA and bodyB on frameA and frameB respectively.
See also:

- 159.35.3 Constructor(body as SCNPhysicsBodyMBS, frame as SCNMatrix4MBS) 23929

## 159.35.5 jointWithBody(body as SCNPhysicsBodyMBS, frame as SCNMatrix4MBS) as SCNPhysicsConeTwistJointMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Initializes and returns a physics cone-twist joint.
**Notes:** The joint attaches "body" to the 3d location specified by "frame" and relative to the node that owns the body.
See also:

- 159.35.6 jointWithBody(bodyA as SCNPhysicsBodyMBS, frameA as SCNMatrix4MBS, bodyB as SCNPhysicsBodyMBS, frameB as SCNMatrix4MBS) as SCNPhysicsConeTwistJointMBS 23930

### 159.35.6 jointWithBody(bodyA as SCNPhysicsBodyMBS, frameA as SCNMatrix4MBS, bodyB as SCNPhysicsBodyMBS, frameB as SCNMatrix4MBS) as SCNPhysicsConeTwistJointMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Initializes and returns a physics cone-twist joint.
**Notes:** The joint attaches bodyA and bodyB on frameA and frameB respectively.
See also:

- 159.35.5 jointWithBody(body as SCNPhysicsBodyMBS, frame as SCNMatrix4MBS) as SCNPhysicsConeTwistJointMBS 23929

### 159.35.7 Properties

### 159.35.8 bodyA as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The first body attached to the slider joint.
**Notes:** (Read only property)

### 159.35.9 bodyB as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The second body attached to the slider joint.
**Notes:** (Read only property)

### 159.35.10 frameA as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Frame for bodyA.
**Notes:** (Read and Write property)

### 159.35.11 frameB as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Frame for bodyB.
**Notes:** (Read and Write property)

### 159.35.12 maximumAngularLimit1 as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The maximum angular limits in radians in each cone tangent directions
**Notes:** (Read and Write property)

### 159.35.13 maximumAngularLimit2 as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The maximum angular limits in radians in each cone tangent directions
**Notes:** (Read and Write property)

### 159.35.14 maximumTwistAngle as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Maximum twist angle alon the cone axis.
**Notes:** (Read and Write property)

## 159.36 class SCNPhysicsContactMBS

### 159.36.1 class SCNPhysicsContactMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Detailed information about a contact between two physics bodies in a scene,Äôs physics simulation.
**Notes:**

You don't create SCNPhysicsContact instances directly; SceneKit automatically creates these objects whenever contacts occur.
To receive contact messages, implement events in your of your scene,Äôs SCNPhysicsWorld object. Next, for each physics body in your scene, set the categoryBitMask and collisionBitMask properties to define which interactions should generate contact messages.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 159.36.2 Methods

### 159.36.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The private constructor.

### 159.36.4 Properties

### 159.36.5 collisionImpulse as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The force over time of the collision, in newton-seconds.
**Notes:**

This property,Äôs value tells you how hard the bodies struck each other in a collision. For example, in a game you might allow a character to proceed unhindered after a minor collision, but take damage when struck with sufficient force.
(Read only property)

### 159.36.6 contactNormal as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The normal vector at the contact point between the two physics bodies, in scene coordinates.
**Notes:**

This vector tells you which direction the bodies were moving relative to one another at the time of the collision. For example, in a game you can examine this vector to have enemy characters take damage when struck from above by the player character but damage the player character instead when they collide side-to-side.
(Read only property)

### 159.36.7 contactPoint as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The contact point between the two physics bodies, in scene coordinates.
**Notes:** (Read only property)

### 159.36.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

### 159.36.9 nodeA as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The node containing the first body in the contact.
**Notes:**

Use the node,Äôs physicsBody property to examine physics characteristics of the node.
(Read only property)

### 159.36.10 nodeB as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The node containing the second body in the contact.
**Notes:**

Use the node,Äôs physicsBody property to examine physics characteristics of the node.
(Read only property)

### 159.36.11 penetrationDistance as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The distance of overlap, in units of scene coordinate space, between the two physics bodies.
**Notes:** (Read only property)

### 159.36.12 sweepTestFraction as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Value between 0 and 1 giving the relative position of the physic shape when performing a convex sweep test.
**Notes:** (Read only property)

# 159.37 class SCNPhysicsFieldMBS

## 159.37.1 class SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** An object that applies forces, such as gravitation, electromagnetism, and turbulence, to physics bodies within a certain area of effect.
**Notes:**

You can create many types of field effects, such as gravitation, electromagnetism, and turbulence. To add a field effect to a scene, you create a physics field of the type you want to use and then attach it to the physicsField property of a node in the scene.
Physics fields can affect both SCNPhysicsBodyMBS objects and the particles spawned by SCNParticleSystemMBS objects.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 159.37.2 Methods

## 159.37.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The private constructor.

## 159.37.4 copy as SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a copy of the field.

## 159.37.5 customField(FieldForceEvaluator as SCNFieldForceEvaluatorMBS, tag as variant = nil) as SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a field that runs the specified block to determine the force a field applies to each object in its area of effect.
**Notes:**

delegate: A method that SceneKit runs for each object in the field,Äôs area of effect.

Returns a physics field object. To use the field in a scene, attach it to the physicsField property of an SCNNodeMBS object.

For custom physics fields, SceneKit ignores the direction, strength, falloffExponent, and minimumDistance properties. Instead, SceneKit calls your block to determine the direction and magnitude of force to apply to each physics body or particle in the field,Äôs area of effect.

Due to the dispatching of the delegate to main thread, this is not very efficient.

### 159.37.6 dragField as SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a field that slows any object in its area of effect with a force proportional to the object,Äôs velocity.
**Notes:**

Returns a physics field object. To use the field in a scene, attach it to the physicsField property of an SCNNode object.

Like the damping and angularDamping properties of a physics body, drag fields can simulate effects such as fluid friction or air resistance. Unlike those properties, drag fields can simulate different intensities of fluid friction in different areas of your scene. For example, you can use a drag field to represent underwater areas. The default falloffExponent value for a drag field is 0.0, indicating that the field,Äôs effect is constant throughout its area of effect.

### 159.37.7 electricField as SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a field that attracts or repels objects based on their electrical charge and on their distance from the field,Äôs center.
**Notes:**

Returns a physics field object. To use the field in a scene, attach it to the physicsField property of an SCNNode object.

Use this field type to make objects behave differently from one another when they enter a region, or to make an object's behavior different from its mass-based behavior. An electric field behaves according to the first part of the Lorentz force equation modeling real-world electromagnetic forces,Äîthe field applies a force whose magnitude is proportional to electric charge and distance.
By default, physics bodies and particle systems have no electric charge, so they are unaffected by electric and magnetic fields. Use the charge property of a physics body or the particleCharge property of a particle

system to add charge-based behavior.
When the field,Äôs strength value is positive (the default), it attracts bodies whose charge is negative and repels bodies whose charge is positive. To reverse this behavior, set the field,Äôs strength property to a negative value.
The default falloffExponent value for an electric field is 2.0, indicating that the field,Äôs effect diminishes with the square of its distance from its center.

### 159.37.8 linearGravityField as SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a field that accelerates objects in a specific direction.
**Notes:**

Returns a physics field object. To use the field in a scene, attach it to the physicsField property of an SCNNode object.

Because the force of gravity on an object is proportional to the object,Äôs mass, this force accelerates all objects in the field,Äôs area of affect by the same amount. The field,Äôs strength property measures this acceleration in meters per second per second.
By default, a linear gravity field accelerates objects in along its direction vector. To make it accelerate objects in the opposite direction, set the field,Äôs strength property to a negative value.
The default falloffExponent value for a linear gravity field is 0.0, indicating that the field,Äôs effect is constant throughout its area of effect.

### 159.37.9 magneticField as SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a field that attracts or repels objects based on their electrical charge, velocity, and distance from the field,Äôs axis.
**Notes:**

A physics field object. To use the field in a scene, attach it to the physicsField property of an SCNNode object.

Use this field type to make objects behave differently from one another when they enter a region, or to make an object's behavior different from its mass based behavior. A magnetic field behaves according to the second part of the Lorentz force equation modeling real-world electromagnetic forces,Äîthe field applies a force determined by the cross product of an object,Äôs velocity vector and the magnetic field vector at the object,Äôs location, with magnitude proportional to the object,Äôs electric charge.
By default, physics bodies and particle systems have no electric charge, so they are unaffected by electric and magnetic fields. Use the charge property of a physics body or the particleCharge property of a particle system to add charge-based behavior.
When the field,Äôs strength value is positive (the default), the magnetic field vectors circulate counterclock-

wise relative to the field,Äôs direction vector. (That is, the magnetic field models a real-world magnetic field created by current in a wire oriented in the field,Äôs direction.) To make field vectors circulate clockwise, set the field,Äôs strength property to a negative value.

This SCNPhysicsField option models the real-world physics effect of magnetic fields on moving, electrically charged bodies, not the behavior of permanent magnets or electromagnets. To make objects in your scene simply attract or repel one another, use a different field type. For example, a field created by the radialGravityField method attracts or repels all dynamic bodies near it according to its strength property, and a field created by the electricField method selectively attracts or repels bodies according to their electric charge.
The default falloffExponent value for a magnetic field is 2.0, indicating that the field,Äôs effect diminishes with the square of distance from its center.

### 159.37.10 noiseField(smoothness as double, animationSpeed as double) as SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a field that applies random forces to objects in its area of effect.
**Notes:**

smoothness: The amount of randomness in the field. A value of 0.0 specifies maximum noise, and a value of 1.0 specifies no noise at all.
speed: The field,Äôs variation over time. Specify 0.0 for a static field.

Returns a physics field object. To use the field in a scene, attach it to the physicsField property of an SCNNode object.

Use this field type to simulate effects involving random motion, such as fireflies or gently falling snow.
In calculating the direction and strength of the field,Äôs effect on an object, SceneKit uses a Perlin simplex noise function. This function produces a velocity field that varies over time.
The default falloffExponent value for a noise field is 0.0, indicating that the field,Äôs effect is constant throughout its area of effect. This field type ignores the field,Äôs direction property.

### 159.37.11 radialGravityField as SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a field that accelerates objects toward its center.
**Notes:**

Returns a physics field object. To use the field in a scene, attach it to the physicsField property of an SCNNode object.

Because the force of gravity on an object is proportional to the object,Äôs mass, this force accelerates all objects at the same distance from the field,Äôs center by the same amount. The field,Äôs strength property measures this acceleration in meters per second per second.
By default, a radial gravity field attracts objects toward its center. To make it repel objects instead, set the field,Äôs strength property to a negative value.
The default falloffExponent value for a radial gravity field is 2.0, indicating that the field,Äôs effect diminishes with the square of distance from its center.

### 159.37.12 springField as SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a field that pulls objects toward its center with a spring-like force.
**Notes:**

Returns a physics field object. To use the field in a scene, attach it to the physicsField property of an SCNNode object.

The force a spring field applies to objects in its area of effect is linearly proportional to the distance from the object to the center of the field. (That is, the field behaves according to Hooke,Äôs Law of real-world spring forces.) An object placed at the center of the field and moved away will oscillate around the center, with a period of oscillation that is proportional to the object,Äôs mass. The field,Äôs strength property scales the magnitude of the spring effect,Äîa larger strength simulates a stiffer spring.

The default falloffExponent value for a spring field is 1.0, indicating that the field,Äôs effect diminishes linearly with distance from its center.

### 159.37.13 turbulenceField(smoothness as double, animationSpeed as double) as SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a field that applies random forces to objects in its area of effect, with magnitudes proportional to those objects,Äô velocities.
**Notes:**

smoothness: The amount of randomness in the field. A value of 0.0 specifies maximum noise, and a value of 1.0 specifies no noise at all.
speed: The field,Äôs variation over time. Specify 0.0 for a static field.

Return a physics field object. To use the field in a scene, attach it to the physicsField property of an SCNNode object.

Like a noise field, a turbulence field applies forces in random directions to the objects that it affects. Unlike a noise field, a turbulence field applies a force whose magnitude is proportional to the speed of each affected object. For example, an object passing through a noise field shakes as it travels through the field, but an object passing through a turbulence field shakes more violently the faster it travels. The field,Äôs strength property scales the magnitude of the turbulence effect.

The default falloffExponent value for a turbulence field is 0.0, indicating that the field,Äôs effect is constant throughout its area of effect.

### 159.37.14 vortexField as SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a field whose forces circulate around an axis.
**Notes:**

Returns a physics field object. To use the field in a scene, attach it to the physicsField property of an SCNNode object.

The force on an object in a vortex field is tangential to the line from the object,Äôs position to the field,Äôs axis and proportional to the object,Äôs mass. (The field,Äôs axis is a line that is parallel to its direction vector and that passes through its center. For details, see the offset property.) For example, when a vortex field,Äôs area of effect contains many objects, the resulting scene resembles a tornado: The objects simultaneously revolve around and fly away from the field,Äôs center.
By default, a vortex circulates counterclockwise relative to its direction vector. To make it circulate clockwise, set the field,Äôs strength property to a negative value.
The default falloffExponent value for a vortex field is 0.0, indicating that the field,Äôs effect is constant throughout its area of effect.

### 159.37.15 Properties

### 159.37.16 Active as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that determines whether the field,Äôs effect is enabled.
**Notes:**

If this value is fasle, the field does not apply forces to physics bodies in its area of effect. The default value is true.
Use this property, for example, to switch fields on and off as a gameplay mechanic.
(Read and Write property)

### 159.37.17 CategoryBitMask as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A mask that defines which categories this physics field belongs to.
**Notes:**

To determine whether a field affects a physics body, SceneKit performs a bitwise AND operation on the field,Äôs category bit mask and the body,Äôs categoryBitMask property. If the result is a nonzero value, SceneKit computes and applies the force of the field on the body. To determine whether a field affects the particles spawned by an SCNParticleSystemMBS object, SceneKit performs the same check using the categoryBitMask property of the node containing the particle system.
Use this property to create fields which affect only certain bodies in your scene. Reducing the number of bodies affected by fields can also improve simulation performance.
(Read and Write property)

### 159.37.18 direction as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The field,Äôs directional axis.
**Notes:**

Some types of fields apply forces whose direction or magnitude is relative to an axis. (For details on each type of field, see the methods listed in Creating Physics Fields.) Changing the direction changes the effects of these field types.

The default direction is the vector { 0, -1, 0 } . With this direction, for example, linear gravity fields whose strength is positive cause objects to fall in the ,Äúdown,Äù direction of scene space.
(Read and Write property)

### 159.37.19 Exclusive as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that determines whether the field overrides other fields whose areas of effect it overlaps.
**Notes:**

If this value is true and a physics body is within this field,Äôs region, SceneKit ignores the effects of all other fields that might otherwise affect the body. The default value is false.
If you set this property to true on multiple fields in a scene, their regions should not overlap. If they do, the results are undefined.
(Read and Write property)

### 159.37.20 falloffExponent as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** An exponent that determines how the field,Äôs strength diminishes with distance.
**Notes:**

When SceneKit calculates the force to be applied by a field, it attenuates the field,Äôs effect by multiplying with the expression pow(distance - minRadius, -falloff). If the falloff exponent is greater than zero, the field,Äôs effect is stronger on nearby bodies than on bodies farther away from its location.
The default falloff exponent varies by field type. For details, see the methods listed in Creating Physics Fields.
(Read and Write property)

### 159.37.21 halfExtent as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A location marking the end of the field,Äôs area of effect.
**Notes:**

To define a field,Äôs area of effect, use the position property of the node that contains the field and the field,Äôs halfExtent property. The center of the area of effect is the node,Äôs position. The half-extent, a position vector in the local coordinate space of the node containing the field, marks one corner of a box, and the negative of the half-extent vector marks the opposite corner of the box. For example, if a node,Äôs position is the vector { 2.0, 2.0, 2.0 } and it contains a physics field whose half-extent is the vector { 0.5, 0.5, 0.5 } , the field,Äôs area of effect is the box extending from 1.5 to 2.5 along each axis of the scene,Äôs coordinate system.
By default, a field,Äôs area of effect is the interior of this box shape. Use the usesEllipsoidalExtent property to instead make the area of effect an ellipsoid bounded by this box. Use the scope property to choose whether the area of effect is the interior or exterior of the box (or ellipsoid).
The default half-extent is the vector { INFINITY, INFINITY, INFINITY } , specifying that the field affects bodies located anywhere in the scene.
(Read and Write property)

### 159.37.22 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

### 159.37.23 minimumDistance as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The minimum value for distance-based effects.
**Notes:**

This property determines the beginning of the field,Äôs falloff area. At distances less than the minimum, the field,Äôs effect is at full strength. At greater distances, the field,Äôs effect diminishes based on the value of the falloffExponent property. The default minimum distance is a very small (but nonzero) value.
(Read and Write property)

### 159.37.24 offset as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The offset of the field,Äôs center within its area of effect.
**Notes:**

Some types of fields apply forces whose magnitude is relative to the distance between an object and the field,Äôs center. (For details on each type of field, see the methods listed in Creating Physics Fields.) Changing the offset changes the effects of these field types.

With the default offset vector { 0, 0, 0 } , the center of a field is the center of its area of effect.
(Read and Write property)

### 159.37.25 Scope as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The area affected by the field, either inside or outside its region.
**Notes:**

First, define a field,Äôs region using its halfExtent property and the position property of the node containing the field. Then, use the scope property to choose whether the field,Äôs area of effect is the interior of the region (the default) or all space outside the region.
(Read and Write property)

### 159.37.26 strength as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A multiplier for the force that the field applies to objects in its area of effect.
**Notes:**

Each type of physics field defines its own behavior for strength values. For details, see the methods listed in Creating Physics Fields.
(Read and Write property)

### 159.37.27 usesEllipsoidalExtent as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that determines whether the field,Äôs area of effect is shaped like a box or ellipsoid.
**Notes:**

If this value is false (the default), the field,Äôs area of effect is the box-shaped region of space defined by its halfExtent property and the position property of the node containing the field.

If this value is true, the field,Äôs area of effect is the ellipsoid bounded by this box-shaped region. That is, if all components of the half-extent vector are equal, the field has a spherical area of effect.
(Read and Write property)

### 159.37.28 Constants

### 159.37.29 kScopeInsideExtent = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the options for defining the region of space affected by a physics field, used by the scope property.
**Notes:** The field,Äôs effect applies only to objects within the region of space defined by its position and extent.

### 159.37.30 kScopeOutsideExtent = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the options for defining the region of space affected by a physics field, used by the scope property.
**Notes:** The field,Äôs effect applies only to objects outside the region of space defined by its position and extent.

### 159.37.31 Delegates

### 159.37.32 SCNFieldForceEvaluatorMBS(position as SCNVector3MBS, velocity as SCNVector3MBS, mass as single, charge as single, time as double, Tag as Variant) as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** The signature for a delegate that SceneKit calls to determine the effect of a custom field on an object.
**Notes:**

You use this type of delegate to create a custom physics field with the customFieldWithEvaluationBlock: method. SceneKit calls your delegate once for each object in the field,Äôs area of effect, on each step of the physics simulation.

Note
By default, one simulation step occurs for each frame rendered. For example, if your view renders at 60 frames per second and three bodies are in the field,Äôs area of effect, SceneKit runs your delegate 180 times per second. To avoid reduced rendering performance, take care not to perform extensive computation in this delegate.
The delegate takes the following parameters:

position: The position of the object affected by the field, in the local coordinate space of the node containing the field.
velocity: The velocity of the object affected by the field, relative to the local coordinate space of the node containing the field.
mass: The mass of the object affected by the field. (See the mass property for physics bodies and the particleMass property for particle systems.)
charge: The electrical charge of the object affected by the field. (See the charge property for physics bodies and the particleCharge property for particle systems.)
time: The elapsed time, in seconds, since the last simulation step.

Your delegate uses these parameters to compute and return an SCNVector3 force vector, which SceneKit then applies to the object affected by the field.

## 159.38 class SCNPhysicsHingeJointMBS

### 159.38.1 class SCNPhysicsHingeJointMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A physics behavior that connects two bodies and allows them to pivot around each other on a single axis.
**Notes:**

A hinge has a single degree of freedom (rotation). You can also use a hinge joint to pin a body so that it can only move by rotating around a specific axis in the coordinate space of the node containing it.

Available in MacOS 10.10 or newer.
Subclass of the SCNPhysicsBehaviorMBS class.

### 159.38.2 Methods

### 159.38.3 Constructor(body as SCNPhysicsBodyMBS, axis as SCNVector3MBS, anchor as SCNVector3MBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a hinge joint that anchors a single physics body in space and lets it rotate around a specific axis.
**Notes:**

body: The physics body to be controlled by the hinge joint.
axis: The direction of the axis that the body pivots around, relative to the node containing the body.
anchor: The location of the axis in the node containing the body.

Returns a new hinge joint behavior.

For a behavior to take effect, add it to the physics simulation by calling the addBehavior method on your scene,Äôs SCNPhysicsWorldMBS object. The physics bodies constrained by the joint must be attached to nodes in the scene.
See also:

- 159.38.4 Constructor(bodyA as SCNPhysicsBodyMBS, axisA as SCNVector3MBS, anchorA as SCNVector3MBS, bodyB as SCNPhysicsBodyMBS, axisB as SCNVector3MBS, anchorB as SCNVector3MBS)

### 159.38.4 Constructor(bodyA as SCNPhysicsBodyMBS, axisA as SCNVector3MBS, anchorA as SCNVector3MBS, bodyB as SCNPhysicsBodyMBS, axisB as SCNVector3MBS, anchorB as SCNVector3MBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a hinge joint connecting two physics bodies.
**Notes:**

bodyA: The first physics body to be connected by the joint.
axisA: The axis that the hinge pivots around, relative to the node containing the first body.
anchorA: The point at which the hinge connects, relative to the node containing the first body.
bodyB: The second physics body to be connected by the joint.
axisB: The axis that the hinge pivots around, relative to the node containing the second body.
anchorB: The point at which the hinge connects, relative to the node containing the second body.

Returns a new hinge joint behavior.

For a behavior to take effect, add it to the physics simulation by calling the addBehavior method on your scene,Äôs SCNPhysicsWorldMBS object. The physics bodies constrained by the joint must be attached to nodes in the scene.
See also:

- 159.38.3 Constructor(body as SCNPhysicsBodyMBS, axis as SCNVector3MBS, anchor as SCNVector3MBS) 23946

### 159.38.5 jointWithBody(body as SCNPhysicsBodyMBS, axis as SCNVector3MBS, anchor as SCNVector3MBS) as SCNPhysicsHingeJointMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a hinge joint that anchors a single physics body in space and lets it rotate around a specific axis.
**Notes:**

body: The physics body to be controlled by the hinge joint.
axis: The direction of the axis that the body pivots around, relative to the node containing the body.
anchor: The location of the axis in the node containing the body.

Returns a new hinge joint behavior.

For a behavior to take effect, add it to the physics simulation by calling the addBehavior method on your scene,Äôs SCNPhysicsWorldMBS object. The physics bodies constrained by the joint must be attached to nodes in the scene.
See also:

- 159.38.6 jointWithBody(bodyA as SCNPhysicsBodyMBS, axisA as SCNVector3MBS, anchorA as SCNVector3MBS, bodyB as SCNPhysicsBodyMBS, axisB as SCNVector3MBS, anchorB as SCNVector3MBS) as SCNPhysicsHingeJointMBS 23948

### 159.38.6 jointWithBody(bodyA as SCNPhysicsBodyMBS, axisA as SCNVector3MBS, anchorA as SCNVector3MBS, bodyB as SCNPhysicsBodyMBS, axisB as SCNVector3MBS, anchorB as SCNVector3MBS) as SCNPhysicsHingeJointMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a hinge joint connecting two physics bodies.
**Notes:**

bodyA: The first physics body to be connected by the joint.
axisA: The axis that the hinge pivots around, relative to the node containing the first body.
anchorA: The point at which the hinge connects, relative to the node containing the first body.
bodyB: The second physics body to be connected by the joint.
axisB: The axis that the hinge pivots around, relative to the node containing the second body.
anchorB: The point at which the hinge connects, relative to the node containing the second body.

Returns a new hinge joint behavior.

For a behavior to take effect, add it to the physics simulation by calling the addBehavior method on your scene,Äôs SCNPhysicsWorldMBS object. The physics bodies constrained by the joint must be attached to nodes in the scene.
See also:

- 159.38.5 jointWithBody(body as SCNPhysicsBodyMBS, axis as SCNVector3MBS, anchor as SCNVector3MBS) as SCNPhysicsHingeJointMBS 23947

### 159.38.7 Properties

### 159.38.8 anchorA as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The point at which the hinge connects, relative to the node containing the first body.
**Notes:** (Read and Write property)

### 159.38.9 anchorB as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The point at which the hinge connects, relative to the node containing the second body.
**Notes:** (Read and Write property)

### 159.38.10 axisA as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The axis that the hinge pivots around, relative to the node containing the first body.
**Notes:** (Read and Write property)

### 159.38.11 axisB as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The axis that the hinge pivots around, relative to the node containing the second body.
**Notes:** (Read and Write property)

### 159.38.12 bodyA as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The first physics body connected by the joint.
**Notes:** (Read only property)

### 159.38.13 bodyB as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The second physics body connected by the joint.
**Notes:**

This property,Äôs value is nil if the joint was created using the Constructor without bodyB parameter.
(Read only property)

# 159.39 class SCNPhysicsShapeMBS

## 159.39.1 class SCNPhysicsShapeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** An abstraction of a physics body,Äôs solid volume for tuning collision detection.
**Notes:**

When SceneKit performs contact detection and other simulations for the SCNPhysicsBodyMBS objects in your scene, it uses physics shapes instead of the rendered geometry of visible objects. This approach both improves simulation performance and allows you to more easily design your gameplay around scene elements the player can interact with.

Simple Versus Complex Shapes
When you allow SceneKit to automatically create a physics shape, it uses the simplest possible shape roughly matching the geometry of the node the physics body is attached to. This approach maximizes simulation performance but can lead to unrealistic physics behavior for some objects.

You can make the simulation behave more realistically by defining physics shapes that more closely follow the visible geometry in your scene. This approach comes at a cost to performance, so you want to limit the amount of detail in your physics shapes. Use the highest levels of detail only on bodies for which precise collision detection is important for your app.
If you create a physics shape using one of the basic geometry classes (SCNBoxMBS, SCNSphereMBS, SCNPyramidMBS, SCNConeMBS, SCNCylinderMBS, or SCNCapsuleMBS), SceneKit uses an idealized form of that geometry for the physics shape instead of using the geometry,Äôs vertex data to simulate collisions. For example, if you create a physics shape from an SCNSphere object, SceneKit simulates collisions for any object that passes within the sphere,Äôs radius.

Because the idealized forms of simple geometries are computationally much simpler than the vertex data needed for displaying them, using basic geometries for physics shapes (or compound shapes created from basic geometries with the shapeWithShapes method) often provides the best balance between simulation accuracy and performance.

Changing a Physics Body,Äôs Shape
Physics shapes are immutable, but you can change the shape associated with a physics body by creating a new SCNPhysicsShape instance and assigning it to the body,Äôs physicsShape property.

## 159.39.2 Blog Entries

- Physics example for SceneKit in Xojo

### 159.39.3 Blog Entries

- Physics example for SceneKit in Xojo

### 159.39.4 Methods

### 159.39.5 Constructor(geometry as SCNGeometryMBS, Options as Dictionary = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a physics shape based on a geometry object.
**Notes:**

geometry: A geometry object.
options: A dictionary of options affecting the level of detail of the physics shape, or nil to use default options. For applicable keys and their possible values, see Shape Creation Options Keys.

Returns a new physics shape object.

If you create a physics shape using one of the basic geometry classes (SCNBoxMBS, SCNSphereMBS, SCNPyramidMBS, SCNConeMBS, SCNCylinderMBS, or SCNCapsuleMBS), SceneKit uses an idealized form of that geometry for the physics shape instead of using the geometry,Äôs vertex data to simulate collisions. For example, if you create a physics shape from an SCNSphere object, SceneKit simulates collisions for any object that passes within the sphere,Äôs radius.

Because the idealized forms of simple geometries are computationally much simpler than the vertex data needed for displaying them, using basic geometries for physics shapes (or compound shapes created from basic geometries with the shapeWithShapes method) often provides the best balance between simulation accuracy and performance.

To use the newly created physics shape, create a physics body with the the bodyWithType method, or assign the shape to the physicsShape property of an existing body.
See also:

- 159.39.6 Constructor(node as SCNNodeMBS, Options as Dictionary = nil) 23951

### 159.39.6 Constructor(node as SCNNodeMBS, Options as Dictionary = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a physics shape from a node or hierarchy of nodes.
**Notes:**

node: A node object. The node must contain an SCNGeometryMBS object in its geometry property or have one or more child (or descendant) nodes that contain geometry.
options: A dictionary of options affecting the level of detail of the physics shape, or nil to use default options. For applicable keys and their possible values, see Shape Creation Options Keys.

Returns a new physics shape object.

To use the newly created physics shape, create a physics body with the the bodyWithType method, or assign the shape to the physicsShape property of an existing body.

The node used to create the physics shape need not be the same as the node whose physics body you attach the shape to,Äîor even be in the scene whose physics world you use the shape in. For example, you can create a physics body for a complex object by building a hierarchy of nodes containing simple geometries (using the SCNBoxMBS and SCNSphereMBS classes), and then creating a physics shape from those nodes. The resulting physics shape, a compound of bounding boxes or convex hulls, provides a rough approximation of the complex object without a high cost to simulation performance.
See also:

- 159.39.5 Constructor(geometry as SCNGeometryMBS, Options as Dictionary = nil) 23951

### 159.39.7 copy as SCNPhysicsShapeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a copy of the shape.

### 159.39.8 SCNPhysicsShapeKeepAsCompoundKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** An option for selecting whether to create a group of independent shapes or combine them into a single shape.
**Notes:** The value for this key is a boolean value. The default value is true, specifying that SceneKit convert separate geometries into separate shapes and join the resulting shapes. If false, SceneKit creates a single shape approximating the combined form of the geometries.

### 159.39.9 SCNPhysicsShapeOptionCollisionMargin as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Collision margin of the physics shape (as a number)

### 159.39.10 SCNPhysicsShapeScaleKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** An option for selecting the scale factor of the shape relative to the local coordinate space of the node containing it.
**Notes:**

The value for this key is a SCNVector3MBS object , whose components describe the scale factor in each of the x-, y- and z-axis directions. The default value is the vector { 1.0, 1.0, 1.0 } , specifying no change of scale.
SceneKit,Äôs physics simulation ignores the scale property of nodes containing physics bodies when simulating collisions. Instead, use this option to provide a scale factor when creating custom physics shapes. (If you create a physics body for a node without specifying a custom shape, SceneKit uses the node,Äôs scale property to infer this scale factor at creation time.)

### 159.39.11 SCNPhysicsShapeTypeBoundingBox as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The physics shape is the smallest box containing the geometry.
**Notes:** This option provides the lowest level of detail and the fastest simulation performance. Use it for generally box-shaped physics bodies or when constructing a compound physics shape.

### 159.39.12 SCNPhysicsShapeTypeConcavePolyhedron as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The physics shape is a concave polyhedron closely following the surface of the geometry.
**Notes:**

This option provides the highest level of detail, at a high cost to simulation performance. Use it only for irregularly shaped bodies where precise collision behavior is crucial to your app,Äôs design.
This shape type may only be used for static physics bodies (that is, those whose type property is SCNPhysicsBodyTypeStatic).

### 159.39.13 SCNPhysicsShapeTypeConvexHull as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The physics shape is a convex polyhedron roughly enclosing the geometry.
**Notes:** This option provides a moderate level of detail and simulation performance. Use it for rounded or irregularly shaped physics bodies.

### 159.39.14 SCNPhysicsShapeTypeKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** An option for selecting the level of detail at which to create shapes from geometry.
**Notes:** The value for this key is one of the constants listed in Shape Types. The default type is SCNPhysicsShapeTypeConvexHull.

### 159.39.15 shapeWithGeometry(geometry as SCNGeometryMBS, Options as Dictionary = nil) as SCNPhysicsShapeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a physics shape based on a geometry object.
**Notes:**

geometry: A geometry object.
options: A dictionary of options affecting the level of detail of the physics shape, or nil to use default options. For applicable keys and their possible values, see Shape Creation Options Keys.

Returns a new physics shape object.

If you create a physics shape using one of the basic geometry classes (SCNBoxMBS, SCNSphereMBS, SCNPyramidMBS, SCNConeMBS, SCNCylinderMBS, or SCNCapsuleMBS), SceneKit uses an idealized form of that geometry for the physics shape instead of using the geometry,Äôs vertex data to simulate collisions. For example, if you create a physics shape from an SCNSphere object, SceneKit simulates collisions for any object that passes within the sphere,Äôs radius.

Because the idealized forms of simple geometries are computationally much simpler than the vertex data needed for displaying them, using basic geometries for physics shapes (or compound shapes created from basic geometries with the shapeWithShapes method) often provides the best balance between simulation accuracy and performance.

To use the newly created physics shape, create a physics body with the the bodyWithType method, or assign the shape to the physicsShape property of an existing body.

### 159.39.16 shapeWithNode(node as SCNNodeMBS, Options as Dictionary = nil) as SCNPhysicsShapeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a physics shape from a node or hierarchy of nodes.
**Notes:**

node: A node object. The node must contain an SCNGeometryMBS object in its geometry property or have one or more child (or descendant) nodes that contain geometry.
options: A dictionary of options affecting the level of detail of the physics shape, or nil to use default options. For applicable keys and their possible values, see Shape Creation Options Keys.

Returns a new physics shape object.

To use the newly created physics shape, create a physics body with the the bodyWithType method, or assign the shape to the physicsShape property of an existing body.

The node used to create the physics shape need not be the same as the node whose physics body you attach the shape to,Äîor even be in the scene whose physics world you use the shape in. For example, you can create a physics body for a complex object by building a hierarchy of nodes containing simple geometries (using the SCNBoxMBS and SCNSphereMBS classes), and then creating a physics shape from those nodes. The resulting physics shape, a compound of bounding boxes or convex hulls, provides a rough approximation of the complex object without a high cost to simulation performance.

### 159.39.17 shapeWithShapes(shapes() as SCNPhysicsShapeMBS, transforms() as SCNMatrix4MBS = nil) as SCNPhysicsShapeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a new physics shape by combining others.
**Notes:**

shapes: An array of SCNPhysicsShapeMBS objects.
transforms: An array SCNMatrix4MBS values, each of which is a transform for the physics shape at the corresponding index in the shapes parameter.

Returns a new physics shape object.

An individual physics shape is defined in its own local coordinate space. Therefore, to describe the positions and orientations of multiple shapes relative to one another, you must use coordinate transformations.

### 159.39.18 sourceObject as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The object that was used to create the shape.
**Notes:**

This property, along with the transforms and options properties, provides the information that was used

to create the shape. You can use this information, for example, to draw editing or debugging UI in your scene.

- If the shape was created with the shapeWithGeometry method, the source object is an SCNGeometryMBS object, and the options property contains the options affecting the shape,Äôs construction from that geometry.
- If the shape was created with the shapeWithNode method, the source object is an SCNNodeMBS object, and the options property contains the options affecting the shape,Äôs construction from that node.
- If the shape was created with the shapeWithShapes method, the source object is an array of SCNPhysicsShapeMBS objects and the transforms property describes how those shapes combine to form a compound shape.

### 159.39.19 transforms as SCNMatrix4MBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The array of transforms that was used to create a compound shape.
**Notes:**

You provide this array of SCNMatrix4MBS values, in the shapeWithShapes method to create a compound shape. Use this array along with the sourceObject property to recover the information that was used to create the shape.

If the shape was created with the shapeWithGeometry or shapeWithNode method, this property,Äôs value is nil.

### 159.39.20 Properties

### 159.39.21 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

### 159.39.22 options as Dictionary

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The options dictionary that was used to create the shape.
**Notes:**

You provide this dictionary in the shapeWithGeometry or shapeWithNode method. Use this dictionary along with the sourceObject property to recover the information that was used to create the shape.
If the shape was created with the shapeWithShapes method, this property,Äôs value is nil.
(Read only property)

# 159.40 class SCNPhysicsSliderJointMBS

## 159.40.1 class SCNPhysicsSliderJointMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A physics behavior that connects two bodies and allows them to slide against each other and rotate around their connecting points.
**Notes:**

A slider joint can have zero, one, or two degrees of freedom depending on whether you allow it to slide or rotate. You can also use a slider joint to pin a body so that it can move only by sliding a specific axis in the coordinate space of the node containing it. You can also use a slider joint as a motor, applying a force or torque to the bodies it connects.
Subclass of the SCNPhysicsBehaviorMBS class.

## 159.40.2 Methods

## 159.40.3 Constructor(body as SCNPhysicsBodyMBS, axis as SCNVector3MBS, anchor as SCNVector3MBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a slider joint that anchors a single physics body in space and allows it to slide along a specific axis.
**Notes:**

body: The physics body to be controlled by the joint.
axis: The axis along which the first body can slide, relative to the node containing it.
anchor: The point at which the body is pinned, in the local coordinate system of the node containing it.

Returns a new slider joint behavior.

This method defines the location where the body is anchored in the coordinate system of the node containing it. To define its sliding or rotation motion relative to that point, use the properties listed in Limiting the Motion of a Slider Joint.
For a behavior to take effect, add it to the physics simulation by calling the addBehavior method on your scene,Äôs SCNPhysicsWorldMBS object. The physics bodies constrained by the joint must be attached to nodes in the scene.
See also:

- 159.40.4 Constructor(bodyA as SCNPhysicsBodyMBS, axisA as SCNVector3MBS, anchorA as SCNVector3MBS, bodyB as SCNPhysicsBodyMBS, axisB as SCNVector3MBS, anchorB as SCNVector3MBS)

### 159.40.4 Constructor(bodyA as SCNPhysicsBodyMBS, axisA as SCNVector3MBS, anchorA as SCNVector3MBS, bodyB as SCNPhysicsBodyMBS, axisB as SCNVector3MBS, anchorB as SCNVector3MBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a slider joint connecting two physics bodies.
**Notes:**

bodyA: The first physics body to be connected by the joint.
axisA: The axis along which the first body can slide, relative to the node containing it.
anchorA: The point at which the joint connects, relative to the node containing the first body.
bodyB: The second physics body to be connected by the joint.
axisB: The axis along which the second body can slide, relative to the node containing it.
anchorB: The point at which the joint connects, relative to the node containing the second body.

Returns a new slider joint behavior.

This method defines the location where the bodies are pinned together. To define their sliding or rotation motion relative to that point, use the properties listed in Limiting the Motion of a Slider Joint.

For a behavior to take effect, add it to the physics simulation by calling the addBehavior method on your scene,Äôs SCNPhysicsWorldMBS object. The physics bodies constrained by the joint must be attached to nodes in the scene.
See also:

- 159.40.3 Constructor(body as SCNPhysicsBodyMBS, axis as SCNVector3MBS, anchor as SCNVector3MBS) 23958

### 159.40.5 jointWithBody(body as SCNPhysicsBodyMBS, axis as SCNVector3MBS, anchor as SCNVector3MBS) as SCNPhysicsSliderJointMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a slider joint that anchors a single physics body in space and allows it to slide along a specific axis.
**Notes:**

body: The physics body to be controlled by the joint.
axis: The axis along which the first body can slide, relative to the node containing it.
anchor: The point at which the body is pinned, in the local coordinate system of the node containing it.

Returns a new slider joint behavior.

This method defines the location where the body is anchored in the coordinate system of the node containing

it. To define its sliding or rotation motion relative to that point, use the properties listed in Limiting the Motion of a Slider Joint.
For a behavior to take effect, add it to the physics simulation by calling the addBehavior method on your scene,Äôs SCNPhysicsWorldMBS object. The physics bodies constrained by the joint must be attached to nodes in the scene.
See also:

- 159.40.6 jointWithBody(bodyA as SCNPhysicsBodyMBS, axisA as SCNVector3MBS, anchorA as SCNVector3MBS, bodyB as SCNPhysicsBodyMBS, axisB as SCNVector3MBS, anchorB as SCNVector3MBS) as SCNPhysicsSliderJointMBS 23960

### 159.40.6 jointWithBody(bodyA as SCNPhysicsBodyMBS, axisA as SCNVector3MBS, anchorA as SCNVector3MBS, bodyB as SCNPhysicsBodyMBS, axisB as SCNVector3MBS, anchorB as SCNVector3MBS) as SCNPhysicsSliderJointMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a slider joint connecting two physics bodies.
**Notes:**

bodyA: The first physics body to be connected by the joint.
axisA: The axis along which the first body can slide, relative to the node containing it.
anchorA: The point at which the joint connects, relative to the node containing the first body.
bodyB: The second physics body to be connected by the joint.
axisB: The axis along which the second body can slide, relative to the node containing it.
anchorB: The point at which the joint connects, relative to the node containing the second body.

Returns a new slider joint behavior.

This method defines the location where the bodies are pinned together. To define their sliding or rotation motion relative to that point, use the properties listed in Limiting the Motion of a Slider Joint.

For a behavior to take effect, add it to the physics simulation by calling the addBehavior method on your scene,Äôs SCNPhysicsWorldMBS object. The physics bodies constrained by the joint must be attached to nodes in the scene.
See also:

- 159.40.5 jointWithBody(body as SCNPhysicsBodyMBS, axis as SCNVector3MBS, anchor as SCNVector3MBS) as SCNPhysicsSliderJointMBS 23959

### 159.40.7 Properties

### 159.40.8 anchorA as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The point at which the joint connects, relative to the node containing the first body.
**Notes:** (Read and Write property)

### 159.40.9 anchorB as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The point at which the joint connects, relative to the node containing the second body.
**Notes:** (Read and Write property)

### 159.40.10 axisA as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The axis along which the first body can slide, relative to the node containing it.
**Notes:** (Read and Write property)

### 159.40.11 axisB as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The axis along which the second body can slide, relative to the node containing it.
**Notes:** (Read and Write property)

### 159.40.12 bodyA as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The first physics body connected by the joint.
**Notes:** (Read only property)

### 159.40.13 bodyB as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The second physics body connected by the joint.
**Notes:**

This property,Äôs value is nil if the joint was created using the jointWithBody method.
(Read only property)

### 159.40.14 maximumAngularLimit as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The maximum rotation angle between the two bodies, measured in radians relative to their initial orientations.
**Notes:**

The default (and maximum) value of this property is M_PI. With this value, the joint can spin counter-clockwise (relative to the first body) with no limit.
Set both this property and the maximumAngularLimit property to the same value to prevent the bodies from rotating around their anchor points. (Set both properties to 0.0 to fix the bodies in their initial orientations.) Bodies whose orientation is fixed by a sliding joint may still slide, depending on the values of the minimumLinearLimit and maximumLinearLimit properties.
(Read and Write property)

### 159.40.15 maximumLinearLimit as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The maximum distance between the anchor points of the two bodies, relative to their initial positions.
**Notes:**

The default value of this property is INFINITY. With this value, the joint can slide forever in the direction of the slider axis.
Set both this property and the minimumLinearLimit property to the same value to pin the bodies together at their anchor points. (Set both properties to 0.0 to pin the bodies together at their initial positions.) Bodies pinned together by a sliding joint may still rotate, depending on the values of the minimumAngularLimit and maximumAngularLimit properties.
(Read and Write property)

### 159.40.16 minimumAngularLimit as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The minimum rotation angle between the two bodies, measured in radians relative to their initial orientations.
**Notes:**

The default (and minimum) value of this property is -M_PI. With this value, the joint can spin clockwise (relative to the first body) with no limit.
Set both this property and the maximumAngularLimit property to the same value to prevent the bodies from rotating around their anchor points. (Set both properties to 0.0 to fix the bodies in their initial orientations.) Bodies whose orientation is fixed by a sliding joint may still slide, depending on the values of the minimumLinearLimit and maximumLinearLimit properties.
(Read and Write property)

### 159.40.17 minimumLinearLimit as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The minimum distance between the anchor points of the two bodies, relative to their initial positions.
**Notes:**

The default value of this property is -INFINITY. With this value, the joint can slide forever in the direction opposite the slider axis.
Set both this property and the maximumLinearLimit property to the same value to pin the bodies together at their anchor points. (Set both properties to 0.0 to pin the bodies together at their initial positions.) Bodies pinned together by a sliding joint may still rotate, depending on the values of the minimumAngularLimit and maximumAngularLimit properties.
(Read and Write property)

### 159.40.18 motorMaximumForce as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The maximum linear force that the joint can apply to its connected bodies, in newtons.
**Notes:**

When you change the value of the motorTargetLinearVelocity property, the joint continuously applies a force of no greater than this magnitude until the bodies are moving at the target velocity. The default value is 1.0.
(Read and Write property)

### 159.40.19 motorMaximumTorque as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The maximum torque that the joint can apply to its connected bodies, in newton-meters.
**Notes:**

When you change the value of the motorTargetAngularVelocity property, the joint continuously applies a force of no greater than this magnitude until the bodies are rotating around the joint at the target angular velocity. The default value is 1.0.
(Read and Write property)

### 159.40.20 motorTargetAngularVelocity as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The angular velocity at which the joint,Äôs connected bodies should rotate around it.
**Notes:**

At the default value of 0.0, the joint moves only when an external force acts on one of its connected bodies. Changing this value causes the joint to act as a rotary motor, continuously applying a torque (specified by the motorMaximumTorque property) until its connected bodies are rotating around the joint at the new angular velocity.
(Read and Write property)

### 159.40.21 motorTargetLinearVelocity as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The velocity at which the joint,Äôs connected bodies should slide.
**Notes:**

At the default value of 0.0, the joint moves only when an external force acts on one of its connected bodies. Changing this value causes the joint to act as a linear motor, continuously applying a force (specified by the motorMaximumForce property) until its connected bodies are moving along the sliding axis of the joint at the new velocity.
(Read and Write property)

# 159.41 class SCNPhysicsVehicleMBS

## 159.41.1 class SCNPhysicsVehicleMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A physics behavior that modifies a physics body to behave like a car, motorcycle, or other wheeled vehicle.
**Notes:**

To build a vehicle, designate an SCNPhysicsBodyMBS object as its chassis and an array of SCNPhysicsVehicleWheelMBS objects as its wheels. For each wheel, you define physical characteristics such as suspension and traction, and associate a node in your scene to provide the wheel,Äôs size and visual representation. After you construct a vehicle, you can control it in terms of acceleration, braking, and steering.

Although it,Äôs also possible to use a set of physics bodies and joints to collectively simulate a wheeled vehicle, the SCNPhysicsVehicleMBS class implements a higher-level simulation that provides realistic vehicle behavior with more efficient simulation performance.
Subclass of the SCNPhysicsBehaviorMBS class.

## 159.41.2 Methods

## 159.41.3 applyBrakingForce(value as double, index as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Applies a force between the specified wheel and the ground under the vehicle.
**Notes:**

value: The magnitude of the torque, in newton-meters.
index: The index of the wheel applying the force.

Applying a braking force causes the wheel to slow down regardless of the direction it,Äôs currently spinning in.

As with all physical quantities in SceneKit, you need not use realistic force measurements in your app,Äîthe effects of the physics simulation depend on the relative differences between forces, not on their absolute values. You may use whatever values produce the behavior or gameplay you,Äôre looking for as long as you use them consistently.

Calling this method applies a braking force for one step (or frame) of the physics simulation. To continuously decelerate a vehicle, call this method again on subequent simulation steps (for example, from your scene renderer delegate,Äôs renderer method) until the vehicle stops or reaches your desired speed.

### 159.41.4 applyEngineForce(value as double, index as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Applies a force between the specified wheel and the ground under the vehicle.
**Notes:**

value: The magnitude of the force, in newtons.
index: The index of the wheel applying the force.

Applying a positive force turns the wheel in a direction that would move the vehicle forward; applying a negative force moves the vehicle in reverse.

As with all physical quantities in SceneKit, you need not use realistic force measurements in your app,Äîthe effects of the physics simulation depend on the relative differences between forces, not on their absolute values. You may use whatever values produce the behavior or gameplay you,Äôre looking for as long as you use them consistently.

Calling this method applies a force for one step (or frame) of the physics simulation. To continuously accelerate a vehicle, call this method again on subequent simulation steps (for example, from your scene renderer delegate,Äôs renderer method) until the vehicle reaches your desired speed.

### 159.41.5 Constructor(chassisBody as SCNPhysicsBodyMBS, wheels() as SCNPhysicsVehicleWheelMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a vehicle behavior.
**Notes:**

chassisBody: A physics body to serve as the vehicle,Äôs chassis.
wheels: An array of SCNPhysicsVehicleWheel objects representing the vehicle,Äôs wheels. A vehicle must have at least one wheel.

Returns a new vehicle behavior.

Each object in the wheels array associates a node with the wheel to serve as its visual representation and defines properties for the wheel,Äôs physical characteristics. Each wheel object must reference a unique node, which should be a child of the node containing the physics body used for the vehicle,Äôs chassis. Typically, you load a node hierarchy representing the vehicle and all of its wheels from a scene file and then designate which nodes serve as the body and wheels.

For a behavior to take effect, you must add it to the physics simulation by calling the addBehavior: method on your scene,Äôs SCNPhysicsWorldMBS object.

### 159.41.6 setSteeringAngle(value as double, index as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Pivots the specified wheel around its steering axis.
**Notes:**

value: The angle to set the wheel at relative to its steering axis, in radians.
index: The index, in the vehicle,Äôs wheels array, of the wheel to be pivoted.

Steering angles are relative to the wheel,Äôs steeringAxis vector. With the default steering axis of { 0.0, -1.0, 0.0 } , a steering angle of 0.0 represents neutral steering, positive values steer the vehicle to the right, and negative values steer to the left.

### 159.41.7 vehicleWithChassisBody(chassisBody as SCNPhysicsBodyMBS, wheels() as SCNPhysicsVehicleWheelMBS) as SCNPhysicsVehicleMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a vehicle behavior.
**Notes:**

chassisBody: A physics body to serve as the vehicle,Äôs chassis.
wheels: An array of SCNPhysicsVehicleWheel objects representing the vehicle,Äôs wheels. A vehicle must have at least one wheel.

Returns a new vehicle behavior.

Each object in the wheels array associates a node with the wheel to serve as its visual representation and defines properties for the wheel,Äôs physical characteristics. Each wheel object must reference a unique node, which should be a child of the node containing the physics body used for the vehicle,Äôs chassis. Typically, you load a node hierarchy representing the vehicle and all of its wheels from a scene file and then designate which nodes serve as the body and wheels.

For a behavior to take effect, you must add it to the physics simulation by calling the addBehavior: method on your scene,Äôs SCNPhysicsWorldMBS object.

### 159.41.8 wheels as SCNPhysicsVehicleWheelMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** An array of SCNPhysicsVehicleWheelMBS objects representing the vehicle,Äôs wheels.
**Notes:** You can dynamically change the suspension and traction properties of a wheel connected to the vehicle by using the corresponding SCNPhysicsVehicleWheelMBS object.

### 159.41.9 Properties

### 159.41.10 chassisBody as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The physics body representing the vehicle,Äôs chassis.
**Notes:**

The vehicle,Äôs chassis must be a dynamic body.
(Read only property)

### 159.41.11 speedInKilometersPerHour as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The vehicle,Äôs ground speed, in kilometers per hour.
**Notes:** (Read only property)

# 159.42 class SCNPhysicsVehicleWheelMBS

## 159.42.1 class SCNPhysicsVehicleWheelMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The appearance and physical characteristics of an individual wheel associated with an physics vehicle behavior.
**Notes:**

To use wheels in a vehicle simulation, include them when creating an SCNPhysicsVehicle object with the vehicleWithChassisBody / Constructro initializer, then add the vehicle object to your scene,Äôs physics world using the physics world,Äôs addBehavior method.

Creating a Wheel
You create a wheel with an SCNNodeMBS object whose contents provide the wheel,Äôs visual representation,Äîa geometry that rotates when the simulated vehicle rolls along a surface. The node representing a wheel must be a child of the node containing the physics body that serves as the vehicle,Äôs chassis, and each wheel in a vehicle must reference a unique node. Typically, you load a scene file that contains a node hierarchy representing the vehicle and all of its wheels. Next, you designate which nodes serve as the body and wheels.
Because the SCNPhysicsVehicleMBS behavior that a wheel is attached to manages its participation in the physics simulation, you don,Äôt need to attach a physics body to the SCNNodeMBS object representing a wheel.

Changing a Wheel,Äôs Physical Properties
The properties of a wheel define the geometry of its connection to the vehicle and simulate its size, traction, and suspension. You can change these properties after the wheel and the vehicle containing it have been added to the physics world. In this way, you can simulate effects such as variable suspension and flat tires.

Note
Vehicles and their wheels have several properties measured in real-world units (meters, centimeters, and newtons) with default values that produce realistic behavior for vehicles of size similar to an average automobile. If you design your scene on a different scale, proportionally change the values of these properties to fit the desired behavior of your app or game.

## 159.42.2 Methods

## 159.42.3 Constructor(node as SCNNodeMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a wheel object.
**Notes:**

node: The node whose contents provide the wheel,Äôs visual representation.

Returns a new wheel object.

The node representing a wheel must be a child of the node whose physics body serves as the chassis of the SCNPhysicsVehicleMBS behavior the wheel is attached to. Each wheel object must reference a unique node. To use the wheel, add it to the vehicle behavior using the addWheel method.
SceneKit uses the node,Äôs bounding box to determine the wheel,Äôs initial size, and it uses the node,Äôs position to determine the where the wheel connects to the vehicle,Äôs chassis. You can change attributes using the radius and connectionPosition properties.

### 159.42.4 copy as SCNPhysicsVehicleWheelMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a copy of the wheel.

### 159.42.5 wheelWithNode(node as SCNNodeMBS) as SCNPhysicsVehicleWheelMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a wheel object.
**Notes:**

node: The node whose contents provide the wheel,Äôs visual representation.

Returns a new wheel object.

The node representing a wheel must be a child of the node whose physics body serves as the chassis of the SCNPhysicsVehicleMBS behavior the wheel is attached to. Each wheel object must reference a unique node. To use the wheel, add it to the vehicle behavior using the addWheel method.
SceneKit uses the node,Äôs bounding box to determine the wheel,Äôs initial size, and it uses the node,Äôs position to determine the where the wheel connects to the vehicle,Äôs chassis. You can change attributes using the radius and connectionPosition properties.

### 159.42.6 Properties

### 159.42.7 Axle as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The direction of the axis that the wheel spins around to move the vehicle.
**Notes:**

This vector is expressed in the coordinate space of the node containing the vehicle,Äôs chassis. The default axle direction is { -1.0, 0.0, 0.0 } .
(Read and Write property)

### 159.42.8 ConnectionPosition as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The position of the wheel,Äôs connection to the vehicle,Äôs chassis.
**Notes:**

This vector is expressed in the coordinate space of the node containing the vehicle,Äôs chassis. When you create a wheel from a node, SceneKit uses the node,Äôs position property as the wheel,Äôs connection point.
(Read and Write property)

### 159.42.9 FrictionSlip as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The traction between the wheel and any surface in contact with it.
**Notes:**

The default value of this property is 1.0. Lower values result in better traction, and higher values make the wheel more likely to slip (causing it to spin freely instead of moving the vehicle).
(Read and Write property)

### 159.42.10 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

### 159.42.11 MaximumSuspensionForce as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The maximum force of the suspension between the vehicle and the wheel, in newtons.
**Notes:**

The physics simulation applies a force of no greater than this magnitude when contact with the ground causes the wheel to move relative to the vehicle. The default maximum suspension force is 6000.0.
(Read and Write property)

### 159.42.12 MaximumSuspensionTravel as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The maximum distance that the wheel is allowed to move up or down relative to its connection point, in centimeters.
**Notes:**

Travel is the total distance a wheel is allowed to move (in both directions), in the coordinate system of the node containing the vehicle,Äôs chassis. The default suspension travel is 500.0.
(Read and Write property)

### 159.42.13 Node as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The node providing the wheel,Äôs visual representation.
**Notes:**

SceneKit automatically rotates and repositions this node in response to the physics simulation.
(Read only property)

### 159.42.14 Radius as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The radius of the wheel.
**Notes:**

When you create a wheel from a node, its default radius is half of the largest dimension of the node,Äôs bounding box. (A wheel is always circular, even if the content of the node representing it is not.)
(Read and Write property)

### 159.42.15 SteeringAxis as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The direction of the axis that the wheel pivots around to steer the vehicle.
**Notes:**

This vector is expressed in the coordinate space of the node containing the vehicle,Äôs chassis. The default steering axis is { 0.0, -1.0, 0.0 } .
When you steer a wheel using the vehicle,Äôs setSteeringAngle() method, the wheel pivots relative to this axis. For example, you can implement a vehicle whose rear wheels steer opposite its front wheels by reversing this vector,Äôs direction for the rear wheels and then applying the same steering angle to all wheels.
(Read and Write property)

### 159.42.16 SuspensionCompression as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The coefficient that limits the speed of the suspension returning to its rest length when compressed.
**Notes:**

The default suspension coefficient is 4.4. Lower values cause the wheel to return to its natural position more quickly.
(Read and Write property)

### 159.42.17 SuspensionDamping as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The damping ratio that limits oscillation in the vehicle,Äôs suspension.
**Notes:**

Damping ratio measures the tendency of the suspension to oscillate after a shock,Äîin other words, for the vehicle to bounce up and down after running over a bump. The default damping ratio of 2.3 causes the wheel to return to its neutral position quickly after a shock. Values lower than 1.0 result in more oscillation.
(Read and Write property)

### 159.42.18 SuspensionRestLength as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The resting length of the suspension, in meters.
**Notes:**

This property measures the length of the simulated spring between the vehicle and its wheel when the spring is not stressed by the weight of either body. When the wheel receives a shock (for example, when the vehicle runs over a bump), SceneKit adds the difference between the wheel,Äôs current position and its connection position to this rest length and then applies a force between the wheel and vehicle proportional to the total.
(Read and Write property)

### 159.42.19 SuspensionStiffness as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The spring coefficient of the suspension between the vehicle and the wheel.
**Notes:**

The spring coefficient determines both how quickly the wheel returns to its natural position after a shock (for example, when the vehicle runs over a bump) and how much force from the shock it transmits to the vehicle. The default spring coefficient is 2.0.
(Read and Write property)

# 159.43 class SCNPhysicsWorldMBS

## 159.43.1 class SCNPhysicsWorldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The global simulation of collisions, gravity, joints, and other physics effects in a scene.
**Notes:**

You do not create SCNPhysicsWorldMBS objects directly; instead, read the physicsWorld property of an SCNSceneMBS object. Use physics world object to perform the following tasks:

- Manage global properties of the simulation, such as its speed and constant gravity. (For more precise control of gravity and similar effects, see the SCNPhysicsFieldMBS class.)
- Register behaviors that modify interactions between the scene,Äôs physics bodies, such as joints and vehicles. For more details, see SCNPhysicsBehaviorMBS.
- Specify a delegate object to receive messages when two physics bodies contact each other
- Perform specific contact tests, and search for physics bodies in the scene using ray and sweep tests.

### 159.43.6 Methods

### 159.43.7 addBehavior(behavior as SCNPhysicsBehaviorMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Adds a behavior to the physics world.
**Notes:**

behavior: The behavior to be added.

Physics behaviors constrain or modify the effects of the physics simulation on sets of physics bodies. For example, the SCNPhysicsHingeJointMBS behavior causes two bodies to move as if connected by a hinge that pivots around a specific axis, and the SCNPhysicsVehicleMBS behavior causes a body to roll like a car or other wheeled vehicle.

To use a behavior in your scene, follow these steps:
1. Create SCNPhysicsBody objects and attach them to each node that participates in the behavior.
2. Create and configure a behavior object joining the physics bodies. See SCNPhysicsBehaviorMBS for a list of behavior classes.
3. Call addBehavior on your scene,Äôs physics world object to add the behavior to the physics simulation.

### 159.43.8 allBehaviors as SCNPhysicsBehaviorMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The list of behaviors affecting bodies in the physics world.

### 159.43.9 Constructor(fireContactEvents as Boolean = false)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The constructor.
**Notes:**

If fireContactEvents is true or you call EnableContactsEvents, we enable the contact events.

A contact is created when two physics bodies overlap and one of the physics bodies has a collisionBitMask property that overlaps with the other body,Äôs categoryBitMask property.

### 159.43.10 contactTest(body as SCNPhysicsBodyMBS, options as Dictionary = nil) as SCNPhysicsContactMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Checks for contacts between one physics body and any other bodies in the physics world.
**Notes:**

body: The body to test for contact.
options: A dictionary of options affecting the test, or nil to use default options. For applicable keys and the possible values, see Physics Test Options Keys.

Returns an array of SCNPhysicsContactMBS objects describing contacts between the specified body and any others, or nil if the body is not in contact with any other bodies.

SceneKit sends messages to the physics world,Äôs contactdelegate object only when collisions occur between bodies whose collisionBitMask and categoryBitMask properties overlap, and only for collisions between certain types of bodies. (For details, see SCNPhysicsBodyType.) Use this method to directly test for all contacts between one body and any other bodies at a time of your choosing. For example, to implement a game with a ,Äúwall jump,Äù effect, you could call this method when the player presses the jump button to see if the player character is in contact with any walls.
See also:

- 159.43.11 contactTest(bodyA as SCNPhysicsBodyMBS, bodyB as SCNPhysicsBodyMBS, options as Dictionary = nil) as SCNPhysicsContactMBS() 23977

### 159.43.11 contactTest(bodyA as SCNPhysicsBodyMBS, bodyB as SCNPhysicsBodyMBS, options as Dictionary = nil) as SCNPhysicsContactMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Checks for contacts between two physics bodies.
**Notes:**

bodyA: The first body (to test for contact with the second).
bodyB: The second body (to test for contact with the first).
options: A dictionary of options affecting the test, or nil to use default options. For applicable keys and the possible values, see Physics Test Options Keys.

Returns an array of SCNPhysicsContactMBS objects describing contacts between the two bodies, or nil if the bodies are not in contact.

SceneKit sends messages to the physics world,Äôs contactDelegate object only when collisions occur between bodies whose collisionBitMask and categoryBitMask properties overlap, and only for collisions between certain types of bodies. (For details, see SCNPhysicsBodyType.) Use this method to directly test for contacts between any two bodies at a time of your choosing. For example, to implement a game where the

player character can pick up an item, you might call this method when the player presses the ,Äúpick up,Äù button to see if the player character is in contact with the item to be picked up.
See also:

- 159.43.10 contactTest(body as SCNPhysicsBodyMBS, options as Dictionary = nil) as SCNPhysicsContactMBS() 23977

### 159.43.12 convexSweepTest(shape as SCNPhysicsShapeMBS, fromTransform as SCNMatrix4MBS, toTransform as SCNMatrix4MBS, options as Dictionary = nil) as SCNPhysicsContactMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Searches for physics bodies in the space formed by moving a convex shape through the physics world.
**Notes:**

shape: A physics shape. This shape must enclose a convex volume. For details on creating shapes that satisfy this requirement, see SCNPhysicsShapeMBS.
from: A transform matrix representing the initial position and orientation of the shape.
to: A transform matrix representing the final position and orientation of the shape.
options: A dictionary of options affecting the test, or nil to use default options. For applicable keys and the possible values, see Physics Test Options Keys.

Returns an array of SCNPhysicsContactMBS objects describing any contacts that would occur when moving the physics shape through the physics world.

Use this method when it,Äôs important to plan for (or avoid) collisions ahead of the physics simulation. For example, in a game you might plan maneuvers for a flying character to fit through the gaps between static bodies in the physics world

### 159.43.13 EnableContactsEvents

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Enables contact events.
**Notes:** If you connect the contact events via AddHandler, please call this method once to connect the events internally.

### 159.43.14 rayTestWithSegment(origin as SCNVector3MBS, dest as SCNVector3MBS, options as Dictionary = nil) as SCNPhysicsBehaviorMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Searches for physics bodies along a line segment between two points in the physics world.
**Notes:**

origin: An endpoint of the line segment to search, specified in the scene,Äôs world coordinate system.
dest: The other endpoint of the line segment to search, specified in the scene,Äôs world coordinate system.
options: A dictionary of options affecting the test, or nil to use default options. For applicable keys and the possible values, see Physics Test Options Keys.

Returns an array of SCNHitTestResultMBS objects describing search results.

Use this method to implement concepts such as line of sight in your app. For example, in a game you might implement behavior for an enemy character by searching for physics bodies along a line between the enemy character,Äôs position and the player character,Äôs position

### 159.43.15 removeAllBehaviors

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Removes all behaviors affecting bodies in the physics world.

### 159.43.16 removeBehavior(behavior as SCNPhysicsBehaviorMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Removes a behavior from the physics world.

### 159.43.17 SCNPhysicsTestBackfaceCullingKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The key for choosing whether to ignore back-facing polygons in physics shapes when searching for contacts.
**Notes:**

The value for this key is a Boolean value. The default value is true, specifying that the search should only return contacts with the exterior surfaces of any physics shapes. Change the value to false to consider contacts with both interior and exterior surfaces.

This key applies only to ray and convex sweep tests, and only to physics shapes created using the SCNPhysicsShapeTypeConcavePolyhedron option.

### 159.43.18 SCNPhysicsTestCollisionBitMaskKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The key for selecting which categories of physics bodies that SceneKit should test for contacts.
**Notes:** The value for this key is an unsigned Integer value. SceneKit tests for contacts only with physics bodies whose categoryBitMask property overlaps with this bit mask. The default value is SCNPhysicsCollisionCategoryAll, specifying that searches should test all physics bodies regardless of their category.

### 159.43.19 SCNPhysicsTestSearchModeAll as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** One of the option values for SCNPhysicsTestSearchModeKey key.
**Notes:** Searches should return all contacts matching the search parameters.

### 159.43.20 SCNPhysicsTestSearchModeAny as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** One of the option values for SCNPhysicsTestSearchModeKey key.
**Notes:** Searches should return only the first contact found regardless of its position relative to the search parameters.

### 159.43.21 SCNPhysicsTestSearchModeClosest as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** One of the option values for SCNPhysicsTestSearchModeKey key.
**Notes:** Searches should return only the closest contact to the beginning of the search.

### 159.43.22 SCNPhysicsTestSearchModeKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The key for selecting the number and order of contacts to be tested.
**Notes:**

See Physics Test Search Modes for possible values. The default value is SCNPhysicsTestSearchModeAny. This key applies only to ray and convex sweep tests.

### 159.43.23 updateCollisionPairs

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Forces the physics engine to reevaluate possible collisions between physics bodies.
**Notes:** By default, SceneKit checks for collisions between physics bodies only once per simulation step. If you directly change the positions of any physics bodies outside of a event, call the updateCollisionPairs method before using any of the methods listed in Searching for Physics Bodies Detecting Contacts Between Physics Bodies.

### 159.43.24 Properties

### 159.43.25 gravity as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A vector that specifies the gravitational acceleration applied to physics bodies in the physics world.
**Notes:**

The components of this vector are measured in meters per second per second. The default value is (0.0,-9.8,0.0).
This property applies a constant acceleration to all physics bodies in the world, simulating the effect of gravity near the surface of the Earth. For more sophisticated gravity effects, including limited areas of effect and strength proportional to distance, use the SCNPhysicsFieldMBS class. When using fields, you may want to set this property to the zero vector so that fields provide all gravity effects in the physics world.
(Read and Write property)

### 159.43.26 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

### 159.43.27 speed as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The rate at which the simulation executes.
**Notes:**

The default value is 1.0, which means that the simulation runs at normal speed. A value other than the default changes the rate at which time passes in the physics simulation. For example, a speed value of 2.0 indicates that time in the physics simulation passes twice as fast as the scene,Äôs simulation time. A value of 0.0 pauses the physics simulation.

Note:
Increasing the speed of the physics simulation reduces its accuracy.
(Read and Write property)

### 159.43.28 timeStep as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The time interval between updates to the physics simulation.
**Notes:**

SceneKit processes the physics simulation and updates the state of all physics bodies once per the time interval specified by this property. The default value is 1/60 second (a rate of 60 Hz).
A faster simulation rate provides more accuracy in simulation results,Äîsuch as collisions between fast-moving objects,Äîbut at a higher cost in CPU time (which may in turn slow down your app,Äôs rendering frame rate). Typically, you should set this property to match your target rendering frame rate (as defined by the preferredFramesPerSecond property of the SCNViewMBS object rendering your scene).
(Read and Write property)

### 159.43.29 Events

### 159.43.30 didBeginContact(contact as SCNPhysicsContactMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

**Function:** Tells the class that two bodies have come into contact.
**Notes:** contact: An object that describes the contact.

### 159.43.31 didEndContact(contact as SCNPhysicsContactMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

**Function:** Tells the class that a contact has ended.
**Notes:** contact: An object that describes the contact.

### 159.43.32 didUpdateContact(contact as SCNPhysicsContactMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

**Function:** Tells the class that new information is available about an ongoing contact.
**Notes:**

contact: An object that describes the contact.

SceneKit calls this method on each step of the physics simulation (see the timeStep property) if information about the contact changes,Äîfor example, if two bodies are sliding against one another.

## 159.44 class SCNPlaneMBS

### 159.44.1 class SCNPlaneMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** SCNPlaneMBS represents a rectangle with controllable width and height. The plane has one visible side.
**Notes:** Subclass of the SCNGeometryMBS class.

### 159.44.6 Methods

### 159.44.7 Constructor(Width as Double, Height as Double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a plane with given width and height.

### 159.44.8 plane(Width as Double, Height as Double) as SCNPlaneMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a plane with given width and height.

### 159.44.9 Properties

### 159.44.10 cornerRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The corner radius. Animatable.
**Notes:**

If the value is strictly less than 0, the geometry is empty. The default value is 0.
(Read and Write property)

### 159.44.11 cornerSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The number of subdivisions for the rounded corners. Animatable.
**Notes:**

If the value is less than 1, the behavior is undefined. The default value is 10.
(Read and Write property)

### 159.44.12 height as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The plane extent along the Y axis. Animatable.
**Notes:**

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

### 159.44.13 heightSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The number of subdivisions along the Y axis. The default value is 1. Animatable.
**Notes:**

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

### 159.44.14 width as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The plane extent along the X axis. Animatable.
**Notes:**

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

### 159.44.15 widthSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The number of subdivisions along the X axis. Animatable.
**Notes:**

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

# 159.45 class SCNPyramidMBS

## 159.45.1 class SCNPyramidMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** SCNPyramid represents a right pyramid with a rectangular base.
**Notes:** Subclass of the SCNGeometryMBS class.

### 159.45.6 Methods

### 159.45.7 Constructor(width as double, height as double, length as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a pyramid with given width, height, and length.
**Notes:**

width: The width of the pyramid.
height: The height of the pyramid.
length: The length of the pyramid.

### 159.45.8 pyramid(width as double, height as double, length as double) as SCNPyramidMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a pyramid with given width, height, and length.
**Notes:**

width: The width of the pyramid.
height: The height of the pyramid.
length: The length of the pyramid.

### 159.45.9 Properties

### 159.45.10 height as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The height of the pyramid. Animatable.
**Notes:**

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

### 159.45.11 heightSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The number of subdivisions along the Y axis. Animatable.
**Notes:**

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

### 159.45.12 length as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The length of the pyramid base. Animatable.
**Notes:**

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

### 159.45.13 lengthSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The number of subdivisions along the Z axis. Animatable.
**Notes:**

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

### 159.45.14 width as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The width of the pyramid base. Animatable.
**Notes:**

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

### 159.45.15 widthSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The number of subdivisions along the X axis. Animatable.
**Notes:**

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

## 159.46 class SCNReplicatorConstraintMBS

### 159.46.1 class SCNReplicatorConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** A SCNReplicatorConstraint replicates the position/orientation/scale of a target node
**Notes:** Subclass of the SCNConstraintMBS class.

### 159.46.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

### 159.46.3 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

### 159.46.4 Methods

### 159.46.5 Constructor(target as SCNNodeMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a SCNReplicatorConstraint constraint.

### 159.46.6 replicatorConstraintWithTarget(target as SCNNodeMBS) as SCNReplicatorConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a SCNReplicatorConstraint constraint.

### 159.46.7 Properties

### 159.46.8 orientationOffset as SCNVector4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Defines an addition orientation offset.
**Notes:**

Defaults to no offset. Animatable.
(Read and Write property)

### 159.46.9 positionOffset as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Defines an addition orientation offset.
**Notes:**

Defaults to no offset. Animatable.
(Read and Write property)

### 159.46.10 replicatesOrientation as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Defines whether or not the constraint should replicate the target orientation.
**Notes:**

Defaults to true.
(Read and Write property)

### 159.46.11 replicatesPosition as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Defines whether or not the constraint should replicate the target position.
**Notes:**

Defaults to true.
(Read and Write property)

### 159.46.12 replicatesScale as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Defines whether or not the constraint should replicate the target scale.
**Notes:**

Defaults to true.
(Read and Write property)

### 159.46.13 scaleOffset as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Defines an addition scale offset.
**Notes:**

Defaults to no offset. Animatable.
(Read and Write property)

### 159.46.14 target as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Defines the target node to replicate.
**Notes:** (Read and Write property)

# 159.47 class SCNSceneMBS

## 159.47.1 class SCNSceneMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** A container for the node hierarchy and global properties that together form a displayable 3D scene.
**Notes:**

To display 3D content with SceneKit, you create a scene containing a hierarchy of the nodes and attributes that together represent your visual elements. Typically, you build your assets in a 3D visual editor, then assemble them into a scene using Xcode,Äôs SceneKit Scene Editor, ready for SceneKit to render.

The simplest way to create a scene is through Xcode,Äôs SceneKit Scene Editor. Start by importing one or more assets from a 3D editor, such as Blender. Then you adjust the positions and attributes of the assets, and set global scene properties, such as lighting environment, to compose your scene. The scene editor creates a .scn file, which you save to a .scnassets folder in the app bundle. When you build your project, Xcode optimizes the scene file for your target platform.

### 159.47.6 Methods

### 159.47.7 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns an empty scene.

### 159.47.8 scene as SCNSceneMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns an empty scene.
**Notes:** An empty scene contains only a root SCNNode object with no contents. To populate the scene, add children to the root node.

### 159.47.9 sceneNamed(name as string) as SCNSceneMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** Loads a scene from a file with the specified name in the app,Äôs main bundle.
**Notes:**

name: The name of a scene file in the app bundle,Äôs resources directory.

Returns a new scene object, or nil if no scene could be loaded.

This method provides a convenient way to load a complete scene from a file in the app,Äôs main bundle. Calling this method is equivalent to using the NSBundle class to locate the scene file and passing the resulting URL to the sceneWithURL method, specifying no options and no error handling.

For more detailed options or to load only part of a file,Äôs scene graph, use the SCNSceneSource class.

When creating a scene using Xcode's Scene Editor or an external tool, you should copy your scene file into a directory with the .scnassets extension inside your app bundle. You should also place any image files referenced as textures from that scene in an Asset Catalog. Xcode will optimize the scene and texture resources for best performance on each target device, and prepare your texture resources for delivery features

such as App Thinning and On-Demand Resources.
See also:

- 159.47.10 sceneNamed(name as string, folder as folderItem, options as Dictionary = nil) as SCNSceneMBS 23995

### 159.47.10 sceneNamed(name as string, folder as folderItem, options as Dictionary = nil) as SCNSceneMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** Loads a scene from a file with the specified name in a specific subdirectory of the app,Äôs main bundle.
**Notes:**

name: The name of a scene file in the app bundle.
directory: The path to the subdirectory of the bundle,Äôs resources directory containing the scene file.
options: A dictionary of options affecting scene loading, or nil for default options. For available keys, see Scene Loading Options.

Returns a new scene object, or nil if no scene could be loaded.

This method provides a convenient way to load a complete scene from a file in the app,Äôs main bundle. Calling this method is equivalent to using the NSBundle class to locate the scene file and passing the resulting URL to the sceneWithURL method.

For more detailed options or to load only part of a file,Äôs scene graph, use the SCNSceneSource class.

When creating a scene using Xcode's Scene Editor or an external tool, you should copy your scene file into a directory with the .scnassets extension inside your app bundle. You should also place any image files referenced as textures from that scene in an Asset Catalog. Xcode will optimize the scene and texture resources for best performance on each target device, and prepare your texture resources for delivery features such as App Thinning and On-Demand Resources.
See also:

- 159.47.9 sceneNamed(name as string) as SCNSceneMBS 23994

### 159.47.11 sceneWithFile(file as folderItem, options as Dictionary = nil, byref Error as NSErrorMBS) as SCNSceneMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** Loads a scene from the specified file.
**Notes:**

file: The scene file to load.
options: A dictionary of options affecting scene loading, or nil for default options. For available keys, see Scene Loading Options.
error: If an error occurs, this pointer is set to an NSError object describing the error. If you do not want error information, pass in nil.

Returns a new scene object, or nil if no scene could be loaded.

This method provides a convenient way to load a complete scene from a file at an arbitrary URL. For more detailed options or to load only part of a file,Äôs scene graph, use the SCNSceneSource class.

When creating a scene using Xcode's Scene Editor or an external tool, you should copy your scene file into a directory with the .scnassets extension inside your app bundle. You should also place any image files referenced as textures from that scene in an Asset Catalog. Xcode will optimize the scene and texture resources for best performance on each target device, and prepare your texture resources for delivery features such as App Thinning and On-Demand Resources.

### 159.47.12 sceneWithURL(FileURL as string, options as Dictionary = nil, byref Error as NSErrorMBS) as SCNSceneMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** Loads a scene from the specified URL.
**Notes:**

url: The URL to the scene file to load.
options: A dictionary of options affecting scene loading, or nil for default options. For available keys, see Scene Loading Options.
error: If an error occurs, this pointer is set to an NSError object describing the error. If you do not want error information, pass in nil.

Returns a new scene object, or nil if no scene could be loaded.

This method provides a convenient way to load a complete scene from a file at an arbitrary URL. For more detailed options or to load only part of a file,Äôs scene graph, use the SCNSceneSource class.

When creating a scene using Xcode's Scene Editor or an external tool, you should copy your scene file into a directory with the .scnassets extension inside your app bundle. You should also place any image files referenced as textures from that scene in an Asset Catalog. Xcode will optimize the scene and texture resources for best performance on each target device, and prepare your texture resources for delivery features such as App Thinning and On-Demand Resources.

### 159.47.13 SCNSceneEndTimeAttributeKey as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** One of the constant name for the attributes.
**Notes:** A floating-point value for the end time of the scene.

### 159.47.14 SCNSceneExportDestinationURL as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The final destination URL (an NSURLMBS object) for the exported scene file.
**Notes:** Use this option if you export a scene to a temporary directory and then move it to a final location. You must specify a final destination URL if your scene references external resources, such as image files for textures. SceneKit uses this URL to construct appropriate paths for external resources when writing the scene file.

### 159.47.15 SCNSceneFrameRateAttributeKey as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** One of the constant name for the attributes.
**Notes:**

A floating-point value (in an NSNumber object) for the frame rate of the scene.
This value may be present in scenes loaded from scene files produced using external tools, but has no effect on SceneKit,Äôs rendering of the scene.

### 159.47.16 SCNSceneStartTimeAttributeKey as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** One of the constant name for the attributes.
**Notes:** A floating-point value for the start time of the scene.

### 159.47.17 SCNSceneUpAxisAttributeKey as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** One of the constant name for the attributes.
**Notes:**

An SCNVector3MBS object (in an NSValueMBS object) specifying the orientation of the scene.

This value may be present in scenes loaded from scene files produced using external tools, but has no effect on SceneKit,Äôs processing of the scene. Use this vector when combining elements from different scenes so that they appear in their expected orientation.

### 159.47.18 Properties

### 159.47.19 background as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** A background to be rendered before the rest of the scene.
**Notes:**

If the material property,Äôs contents object is nil, SceneKit does not draw any background before drawing the rest of the scene. (If the scene is presented in an SCNView instance, the view,Äôs background color is visible behind the contents of the scene.)
If you specify a cube map texture for the material property (see the discussion of the contents property), SceneKit renders the background as a skybox.
(Read only property)

### 159.47.20 fogColor as NSColorMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** The color of the fog effect to be rendered with the scene. Animatable.
**Notes:**

The default fog color is white.
You can animate changes to this property,Äôs value.
(Read and Write property)

### 159.47.21 fogDensityExponent as Double

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** The transition curve for the fog,Äôs intensity between its start and end distances. Animatable.
**Notes:**

A fog effect fades out the contents of the scene with increasing distance from the pointOfView location, replacing them with increasing intensities of the fogColor color. The fogDensityExponent property determines the smoothness or abruptness of this transition.

A value of 0.0 (the default) specifies no attenuation,Äîthe fog,Äôs intensity is the same at all distances . A value of 1.0 specifies a linear transition, and a value of 2.0 specifies a quadratic transition curve. Higher values have little visible effect.

You can animate changes to this property,Äôs value.
(Read and Write property)

### 159.47.22 fogEndDistance as Double

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** The distance from a point of view at which the scene,Äôs contents are completely obscured by fog. Animatable.
**Notes:**

A fog effect causes scene contents to become less visible the farther they are from the pointOfView node currently used for rendering. At distances less than the value of the fogStartDistance property, scene contents are fully visible. At greater distances, SceneKit blends the rendered scene contents with a constant color (specified by the fogColor property). At distances greater than the fogEndDistance property, the scene contents fade away completely and only the fog color is visible. Use fog to add atmospheric effects to your app or game, or to improve rendering performance by hiding parts of the scene that are far away from the current point of view.

The default end distance of 0.0 disables the fog effect. Change this property,Äôs value to enable fog.

You can animate changes to this property,Äôs value.
(Read and Write property)

### 159.47.23 fogStartDistance as Double

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** The distance from a point of view at which the scene,Äôs contents begin to be obscured by fog. Animatable.
**Notes:**

A fog effect causes scene contents to become less visible the farther they are from the pointOfView node currently used for rendering. At distances less than the value of the fogStartDistance property, scene contents are fully visible. At greater distances, SceneKit blends the rendered scene contents with a constant color (specified by the fogColor property). At distances greater than the fogEndDistance property, the scene contents fade away completely and only the fog color is visible. Use fog to add atmospheric effects to your app or game, or to improve rendering performance by hiding parts of the scene that are far away from the

current point of view.

The default start distance is 0.0.

You can animate changes to this property,Äôs value.
(Read and Write property)

### 159.47.24 lightingEnvironment as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** A cube map texture that depicts the environment surrounding the scene,Äôs contents, used for advanced lighting effects.
**Notes:**

When rendering materials with the physicallyBased lighting model, SceneKit illuminates surfaces differently according to the environment that surrounds them. For example, with physically based shading, even a diffuse surface takes on some color from the sky above it and the ground below it.

Tip: For realistic results, reuse the same contents for both the lighting environment and the background property.

For information about defining cube maps, see the discussion of the contents property.
(Read only property)

### 159.47.25 paused as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that determines whether to run actions, animations, particle systems, and physics simulations in the scene graph.
**Notes:**

If false (the default), SceneKit continuously updates and renders the contents of the scene. Pausing a scene pauses any running animations or actions attached to the scene graph, and suspends updates of the scene,Äôs physics simulation and any particle systems in the scene.
(Read and Write property)

### 159.47.26 physicsWorld as SCNPhysicsWorldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The physics simulation associated with the scene.
**Notes:**

Every scene automatically creates a physics world object to simulate physics on nodes in the scene. You use this property to access the scene,Äôs global physics properties, such as gravity, and to manage physics interactions between nodes. To make a node in the scene participate in the physics simulation, use either or both of its physicsBodyMBS and physicsFieldMBS properties.
(Read only property)

### 159.47.27 rootNode as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** The root node of the scene graph.
**Notes:**

All scene content,Äînodes, geometries and their materials, lights, cameras, and related objects,Äîis organized in a node hierarchy with a single common root node.

Some scene files created using external tools may describe node hierarchies containing multiple root nodes. When SceneKit imports such files, their separate root nodes will be made children of a new, unique root node.

Each child node,Äôs coordinate system is defined relative to the transformation of its parent node. You should not modify the transform property of the root node.
(Read only property)

### 159.47.28 attributeForKey(key as String) as Variant

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns or sets the scene attribute for the specified key.
**Notes:**

key: One of the constants described in Scene Attributes that identifies the attribute to be written.
(Read and Write computed property)

## 159.48 class SCNShapeMBS

### 159.48.1 class SCNShapeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** SCNShape represents a 2D shape (cubic Bezier spline) than can be extruded.
**Notes:** Subclass of the SCNGeometryMBS class.

### 159.48.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

### 159.48.3 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

### 159.48.4 Methods

### 159.48.5 Constructor(path as NSBezierPathMBS, extrusionDepth as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a 3D representation of the given shape with the given extrusion depth.
**Notes:**

path: The cubic Bezier spline to extrude.
extrusionDepth: The extrusion depth.

### 159.48.6 shape(path as NSBezierPathMBS, extrusionDepth as double) as SCNShapeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a 3D representation of the given shape with the given extrusion depth.
**Notes:**

path: The cubic Bezier spline to extrude.
extrusionDepth: The extrusion depth.

### 159.48.7 Properties

### 159.48.8 chamferMode as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The sides of the text that are chamfered.
**Notes:**

The default value is ChamferModeBoth.
(Read and Write property)

### 159.48.9 chamferProfile as NSBezierPathMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Describes the profile used to when "chamferRadius" is not nil.
**Notes:**

When "chamferProfile" is nil we fallback on a path representing a quadrant.
The profile should be a 2D curve beginning at (0,1) and ending at (1,0). The "flatness" property is also used to flatten this path. The default value is nil.
(Read and Write property)

### 159.48.10 chamferRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The chamfer radius. Animatable.
**Notes:**

Values are clamped to the range [ 0, extrusionDepth / 2 ] . The default value is 0.
(Read and Write property)

### 159.48.11 extrusionDepth as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The extrusion depth. Animatable.
**Notes:**

If the value is 0, we get a mono-sided, 2D version of the shape.
(Read and Write property)

### 159.48.12 path as NSBezierPathMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The path defining the shape to be rendered.
**Notes:**

The path defines the outline of the shape. The path is filled using the even-odd rule. If the path is self-intersecting, the behavior is undefined.
(Read and Write property)

### 159.48.13 Constants

### 159.48.14 ChamferModeBack = 2

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the chamfer mode constants.
**Notes:** Apply a chamfer to only the back edge of the extruded shape.

### 159.48.15 ChamferModeBoth = 0

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the chamfer mode constants.
**Notes:** Apply a chamfer to both front and back edges of the extruded shape.

### 159.48.16 ChamferModeFront = 1

MBS Mac64bit Plugin, Plugin Version: 19.1.

**Function:** One of the chamfer mode constants.
**Notes:** Apply a chamfer to only the front edge of the extruded shape.

# 159.49 class SCNSliderConstraintMBS

## 159.49.1 class SCNSliderConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** A SCNSliderConstraint constraint makes a node to collide and slide against a category of nodes
**Notes:** Subclass of the SCNConstraintMBS class.

## 159.49.2 Blog Entries

## 159.49.4 Methods

## 159.49.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a SCNSliderConstraint object.

## 159.49.6 sliderConstraint as SCNSliderConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a SCNSliderConstraint object.

## 159.49.7 Properties

## 159.49.8 collisionCategoryBitMask as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Defines the category of node to collide against. Defaults to 0.
**Notes:** (Read and Write property)

### 159.49.9 offset as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Defines the offset of the slider.
**Notes:**

Defaults to (0,0,0).
(Read and Write property)

### 159.49.10 Radius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Defines the radius of the slider. Defaults to 1.
**Notes:** (Read and Write property)

# 159.50 class SCNSphereMBS

## 159.50.1 class SCNSphereMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** SCNSphere represents a sphere with controllable radius.
**Notes:** Subclass of the SCNGeometryMBS class.

### 159.50.6 Methods

### 159.50.7 Constructor(radius as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a sphere with given radius.
**Notes:** radius: The radius of the sphere.

### 159.50.8 sphere(radius as double) as SCNSphereMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a sphere with given radius.
**Notes:** radius: The radius of the sphere.

### 159.50.9 Properties

### 159.50.10 geodesic as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Indicate if the geometry is a geosphere.
**Notes:**

The default value is false.
(Read and Write property)

### 159.50.11 radius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The sphere radius. Animatable.
**Notes:**

If the value is less than or equal to 0, the geometry is empty. The default value is 0.5.
(Read and Write property)

### 159.50.12 segmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The number of segments along both spherical coordinates. Animatable.
**Notes:**

If the value is less than 3, the behavior is undefined. The default value is 48.
(Read and Write property)

# 159.51 class SCNTextMBS

## 159.51.1 class SCNTextMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** SCNText represents a block of text that has been extruded
**Notes:** Subclass of the SCNGeometryMBS class.

## 159.51.2 Blog Entries

- Basic Forms in MBS Xojo SceneKit Plugin
- MBS Xojo Plugins, version 19.1pr1

## 159.51.3 Blog Entries

- Basic Forms in MBS Xojo SceneKit Plugin

## 159.51.4 Methods

## 159.51.5 Constructor(text as string, extrusionDepth as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a 3D representation of given text with given extrusion depth.
**Notes:**

string: The text to be represented.
extrusionDepth: The extrusion depth.

## 159.51.6 text(text as string, extrusionDepth as double) as SCNTextMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a 3D representation of given text with given extrusion depth.
**Notes:**

string: The text to be represented.
extrusionDepth: The extrusion depth.
See also:

- 159.51.17 text as String

### 159.51.7 Properties

### 159.51.8 alignmentMode as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Determines how individual lines of text are horizontally aligned within the bounds.
**Notes:**

For the text to be aligned you first need to set its bounds, otherwise the text is not aligned. The default value is kCAAlignmentNatural.
(Read and Write property)

### 159.51.9 attributedString as NSAttributedStringMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The text to be represented.
**Notes:**

The text can be string or NSAttributedStringMBS.
(Read and Write property)

### 159.51.10 chamferProfile as NSBezierPathMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Describes the profile used to when "chamferRadius" is not nil.
**Notes:**

When "chamferProfile" is nil we fallback on a path representing a quadrant.
The profile should be a 2D curve beginning at (0,1) and ending at (1,0). The "flatness" property is also used to flatten this path. The default value is nil.
(Read and Write property)

### 159.51.11 chamferRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The chamfer radius. Animatable.
**Notes:**

Values are clamped to the range [ 0, extrusionDepth / 2 ] . The actual chamfer radius might be different to the one here specified: large values are clipped to a per-glyph max value. The default value is 0.

(Read and Write property)

### 159.51.12 chamferSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop only.

**Function:** The number of chamfer subdivisions. Animatable.
**Notes:**

If the value is less than 1, the behavior is undefined. The default value is 10.
(Read and Write property)

### 159.51.13 containerFrame as CGRectMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** A container within which the text may be wrapped or truncated.
**Notes:**

The text will start at the top-left corner of the rect. You need to set this property for text truncation or alignment to work. Getting this property when it has never been set returns CGRectMBS with all values zero.
(Read and Write property)

### 159.51.14 extrusionDepth as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The extrusion depth. Animatable.
**Notes:**

If the value is 0, we get a mono-sided, 2D version of the text.
(Read and Write property)

### 159.51.15 flatness as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Specifies the accuracy (or smoothness) with which fonts are rendered.
**Notes:**

Smaller numbers give smoother curves at the expense of more computation and heavier geometries in terms of vertices. The default value is 0.6, which yields smooth curves.

(Read and Write property)

### 159.51.16 font as NSFontMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The font used to represent the text.
**Notes:**

The font property is only used when the string property is not an NSAttributedString. Defaults to the system font (12 point).
(Read and Write property)

### 159.51.17 text as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The text to be represented.
**Notes:**

The text can be string or NSAttributedStringMBS.
(Read and Write property)
See also:

- 159.51.6 text(text as string, extrusionDepth as double) as SCNTextMBS 24010

### 159.51.18 textSize as CGSizeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns the bounding box size the receiver occupies.
**Notes:** (Read only property)

### 159.51.19 truncationMode as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Describes how the text is truncated to fit within the bounds.
**Notes:**

For the text to be truncated you first need to set its bounds, otherwise the text is not truncated. The default value is kCATruncationNone.
(Read and Write property)

### 159.51.20 Wrapped as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Determines whether the text is wrapped to fit within the bounds.
**Notes:**

For the text to be wrapped you first need to set its bounds, otherwise the text is not wrapped. The default value is false.
(Read and Write property)

# 159.52 class SCNTorusMBS

## 159.52.1 class SCNTorusMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** SCNTorus represents a torus with controllable ring radius and pipe radius.
**Notes:** Subclass of the SCNGeometryMBS class.

### 159.52.6 Methods

### 159.52.7 Constructor(ringRadius as double, pipeRadius as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a torus with given ring radius and pipe radius.
**Notes:**

ringRadius: The radius of the ring.
pipeRadius: The radius of the pipe.

### 159.52.8 torus(ringRadius as double, pipeRadius as double) as SCNTorusMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a torus with given ring radius and pipe radius.
**Notes:**

ringRadius: The radius of the ring.
pipeRadius: The radius of the pipe.

### 159.52.9 Properties

### 159.52.10 pipeRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The radius of the torus pipe. Animatable.
**Notes:**

If the value is less than or equal to 0, the geometry is empty. The default value is 0.25.
(Read and Write property)

### 159.52.11 pipeSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The number of subdivisions of the pipe. Animatable.
**Notes:**

If the value is less than 3, the behavior is undefined. The default value is 24.
(Read and Write property)

### 159.52.12 ringRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The radius of the torus ring. Animatable.
**Notes:**

If the value is less than or equal to 0, the geometry is empty. The default value is 0.5.
(Read and Write property)

### 159.52.13 ringSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The number of subdivisions of the ring. Animatable.
**Notes:**

If the value is less than 3, the behavior is undefined. The default value is 48.
(Read and Write property)

## 159.53 class SCNTransformConstraintMBS

### 159.53.1 class SCNTransformConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** A SCNTransformConstraint applies on the transform of a node via a custom block.
**Notes:**

Subclass of the SCNConstraintMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 159.54.6 Methods

## 159.54.7 Constructor(InnerRadius as double, outerRadius as double, height as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a tube with given inner radius, outer radius and height.
**Notes:**

innerRadius: The inner radius of the tube.
outerRadius: The outer radius of the tube.
height: The height of the tube.

### 159.54.8 tube(InnerRadius as double, outerRadius as double, height as double) as SCNTubeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates and returns a tube with given inner radius, outer radius and height.
**Notes:**

innerRadius: The inner radius of the tube.
outerRadius: The outer radius of the tube.
height: The height of the tube.

### 159.54.9 Properties

### 159.54.10 height as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The height of the tube. Animatable.
**Notes:**

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

### 159.54.11 heightSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The number of subdivisions along the Y axis. Animatable.
**Notes:**

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

### 159.54.12 innerRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The inner radius of the tube. Animatable.
**Notes:**

If the value is less than or equal to 0, or if it is greater than or equal to the outer radius, then the geometry is empty. The default value is 0.25.
(Read and Write property)

### 159.54.13 outerRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The outer radius of the tube. Animatable.
**Notes:**

If the value is less than or equal to 0, or if it is less than or equal to the inner radius, then the geometry is empty. The default value is 0.5.
(Read and Write property)

### 159.54.14 radialSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The number of subdivisions along the radial coordinate. Animatable.
**Notes:**

If the value is less than 3, the behavior is undefined. The default value is 48.
(Read and Write property)

## 159.55 class SCNVector3MBS

### 159.55.1 class SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** A representation of a three-component vector.
**Notes:** SceneKit uses three-component vectors for a variety of purposes, such as describing node or vertex positions, surface normals, and scale or translation transforms. The different vector components should be interpreted based on the context in which the vector is being used.

### 159.55.6 Methods

### 159.55.7 Constructor(x as double = 0.0, y as double = 0.0, z as double = 0.0)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The constructor.

### 159.55.8 copy as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a copy of the vector.

### 159.55.9 equals(other as SCNVector3MBS) as boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Compares two vectors.
**Notes:** Returns true if both are equal.

### 159.55.10 Null as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns vector with all values zero.

### 159.55.11 Vector(x as double, y as double, z as double) as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a new vector.

### 159.55.12 Properties

### 159.55.13 x as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The first component in the vector.
**Notes:** (Read and Write property)

### 159.55.14 y as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The second component in the vector.
**Notes:** (Read and Write property)

### 159.55.15 z as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The third component in the vector.
**Notes:** (Read and Write property)

# 159.56 class SCNVector4MBS

## 159.56.1 class SCNVector4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** A representation of a four-component vector.
**Notes:**

SceneKit uses four-component vectors to represent multiple kinds of data:

- Axis-angle rotation or torque. The x, y, and z fields contain the normalized x-, y-, and z-components of the rotation axis, and the w field contains the rotation angle, in radians, or torque magnitude, in newton-meters.
- Color value (or range). The x, y, z, and w fields contain the red, green, blue, and alpha components of the color, or the width of the color variation range in each component.

## 159.56.4 Methods

## 159.56.5 Constructor(x as double = 0.0, y as double = 0.0, z as double = 0.0, w as double = 0.0)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The constructor.

## 159.56.6 copy as SCNVector4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a copy of the vector.

### 159.56.7 equals(other as SCNVector4MBS) as boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Compares two vectors.
**Notes:** Returns true if equal.

### 159.56.8 Null as SCNVector4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns vector with all values zero.

### 159.56.9 Vector(x as double, y as double, z as double, w as double) as SCNVector4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns the vector with given values.

### 159.56.10 Properties

### 159.56.11 w as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The fourth component in the vector.
**Notes:** (Read and Write property)

### 159.56.12 x as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The first component in the vector.
**Notes:** (Read and Write property)

### 159.56.13 y as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The second component in the vector.
**Notes:** (Read and Write property)

### 159.56.14 z as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The third component in the vector.
**Notes:** (Read and Write property)

# 159.57 class SCNViewMBS

## 159.57.1 class SCNViewMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** A view for displaying 3D SceneKit content.
**Notes:**

In macOS, SCNView is a subclass of NSView. As part of the operating system,Äôs view hierarchy, an SCNView object provides a place for SceneKit content in your app,Äôs user interface. You can create a SceneKit view by using its Constructor method. To provide content for a SceneKit view, assign an SCNSceneMBS object to its scene property.

For additional important methods and properties for working with SceneKit views, see the SCNSceneRenderer protocol. (You can also render SceneKit content into an arbitrary Metal command queue or OpenGL context using the SCNRenderer class, or into a Core Animation layer on macOS using the SCNLayer class. The SCNSceneRenderer protocol defines functionality common to all three SceneKit rendering classes.)

see
https://developer.apple.com/documentation/scenekit/scnview

Requires 64bit app on macOS 10.8 or newer
Subclass of the NSViewMBS class.

- 19.6, page 46: Rotating Christmas Tree, Using the MBS Plugins to create an animated 3D Christmas tree by Stefanie Juchmes
- 18.4, page 39: On the Scene Again (Part 3), Getting Started with SceneKit by Stefanie Juchmes
- 18.1, page 26: On the Scene, Getting Started with SceneKit by Stefanie Juchmes

### 159.57.6 Methods

### 159.57.7 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a new box view with size 100/100 and position 0/0
**Example:**

```
dim x as new SCNViewMBS
```

**Notes:** On success the handle property is not zero.
See also:

- 159.57.8 Constructor(Handle as Integer) 24029
- 159.57.9 Constructor(left as double, top as double, width as double, height as double) 24030

### 159.57.8 Constructor(Handle as Integer)

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates an object based on the given NSView handle.
**Example:**

```
dim t as new SCNViewMBS(0, 0, 100, 100)
dim v as new SCNViewMBS(t.handle)

MsgBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

**Notes:** The handle is casted to a SCNView and the plugin retains this handle.
See also:

- 159.57.7 Constructor 24029
- 159.57.9 Constructor(left as double, top as double, width as double, height as double) 24030

### 159.57.9 Constructor(left as double, top as double, width as double, height as double)

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a new control with the given size and position.
**Example:**

```
dim left,top,width,height as Integer
// define rectangle
dim x as new SCNViewMBS(left, top, width, height)
```

**Notes:** On success the handle property is not zero.
See also:

- 159.57.7 Constructor 24029
- 159.57.8 Constructor(Handle as Integer) 24029

### 159.57.10 hitTest(Point as CGPointMBS, Options as Dictionary = nil) as SCNHitTestResultMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Searches the renderer,Äôs scene for objects corresponding to a point in the rendered image.
**Notes:**

Point: A point in the screen-space (view, layer, or GPU viewport) coordinate system of the scene renderer.
options: A dictionary of options affecting the search. See Hit Testing Options Keys for acceptable values.

Returns an array of SCNHitTestResultMBS objects representing search results.

A 2D point in the rendered screen coordinate space can refer to any point along a line segment in the 3D scene coordinate space. Hit-testing is the process of finding elements of a scene located along this line segment. For example, you can use this method to find the geometry corresponding to a click event in a SceneKit view.

### 159.57.11 isNodeInsideFrustum(node as SCNNodeMBS, pointOfView as SCNNodeMBS) as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns a Boolean value indicating whether a node might be visible from a specified point of view.
**Notes:**

node: The node whose visibility is to be tested.
pointOfView: A node defining a point of view, as used by the pointOfView property.

Returns true if the bounding box of the tested node intersects the view frustum defined by the pointOfView node; otherwise, false.

Any node containing a camera or spotlight may serve as a point of view (see the pointOfView property for details). Such a node defines a viewing frustum,Äîa portion of the scene,Äôs coordinate space, shaped like a truncated pyramid, that encloses all points visible from that point of view.

Use this method to test whether a node lies within the viewing frustum defined by another node (which may or may not be the scene renderer,Äôs current pointOfView node). For example, in a game scene containing multiple camera nodes, you could use this method to determine which camera is currently best for viewing a moving player character.

Note that this method does not perform occlusion testing. That is, it returns true if the tested node lies within the specified viewing frustum regardless of whether that node,Äôs contents are obscured by other geometry.

### 159.57.12 nodesInsideFrustumWithPointOfView(pointOfView as SCNNodeMBS) as SCNNodeMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns all nodes that might be visible from a specified point of view.
**Notes:**

pointOfView: A node defining a point of view, as used by the pointOfView property.

Returns an array of nodes whose bounding boxes intersect the view frustum defined by the pointOfView node. If the array is empty, no nodes lie within the specified frustum.

Any node containing a camera or spotlight may serve as a point of view (see the pointOfView property for details). Such a node defines a viewing frustum,Äîa portion of the scene,Äôs coordinate space, shaped like a truncated pyramid, that encloses all points visible from that point of view.
Use this method find all nodes whose content lies within the viewing frustum defined by another node (which may or may not be the scene renderer,Äôs current pointOfView node).
Note that this method does not perform occlusion testing. That is, the returned array includes any node that lies within the specified viewing frustum regardless of whether that node,Äôs contents are obscured by other geometry.

### 159.57.13 pause

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** Pauses playback of the view,Äôs scene.
**Notes:** This method has no effect if the scene is already paused.

### 159.57.14 play

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** Resumes playback of the view,Äôs scene.
**Notes:** This method has no effect if the scene is not paused.

### 159.57.15 projectPoint(Point as SCNVector3MBS) as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Projects a point from the 3D world coordinate system of the scene to the 2D pixel coordinate system of the renderer.
**Notes:**

point: A point in the world coordinate system of the renderer,Äôs scene.

Returns the corresponding point in the screen-space (view, layer, or GPU viewport) coordinate system of the scene renderer.

The z-coordinate of the returned point describes the depth of the projected point relative to the near and far clipping planes of the renderer,Äôs viewing frustum (defined by its pointOfView node). Projecting a point on the near clipping plane returns a point whose z-coordinate is 0.0; projecting a point on the far clipping plane returns a point whose z-coordinate is 1.0.

### 159.57.16 snapshot as NSImageMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** Renders the view,Äôs scene into a new image object.

### 159.57.17 stop

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** Stops playback of the view,Äôs scene and resets the scene time to its start time.

### 159.57.18 unprojectPoint(Point as SCNVector3MBS) as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Unprojects a point from the 2D pixel coordinate system of the renderer to the 3D world coordinate system of the scene.
**Notes:**

point: A point in the screen-space (view, layer, or GPU viewport) coordinate system of the scene renderer.

Returns the corresponding point in the world coordinate system of the renderer,Äôs scene.

The z-coordinate of the point parameter describes the depth at which to unproject the point relative to the near and far clipping planes of the renderer,Äôs viewing frustum (defined by its pointOfView node). Unprojecting a point whose z-coordinate is 0.0 returns a point on the near clipping plane; unprojecting a point whose z-coordinate is 1.0 returns a point on the far clipping plane.

A 2D point in the rendered screen coordinate space can refer to any point along a line segment in the 3D scene coordinate space. To test for scene contents along this line,Äîfor example, to find the geometry corresponding to the location of a click event in a view,Äîuse the hitTest method.

### 159.57.19 Properties

### 159.57.20 allowsCameraControl as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that determines whether the user can manipulate the current point of view that is used to render the scene.
**Notes:**

If you set this property to true, SceneKit creates a camera node and handles mouse or touch events to allow the user to pan, zoom, and rotate their view of the scene. (Enabling user camera control does not modify camera objects already existing in the scene graph or the nodes containing them.)

When you enable user camera control, the defaultCameraController object handles input events and drives camera behavior. You can use that object's methods and properties to change the style of user camera

interaction, and use the cameraControlConfiguration property to adjust control sensitivity.

In the default configuration, SceneKit provides the following controls:

- Pan with one finger to rotate the camera around the scene
- Pan with two fingers to translate the camera on its local xy-plane
- Pan with three fingers vertically to move the the camera forward backward
- Double-tap to switch to the next camera in the scene
- Rotate with two fingers to roll the camera (rotate on the camera node's z-axis)

Pinch to zoom in or zoom out (change the camera's fieldOfView)
The default value of this property is false. Use this option if you intend to control the camera programmatically.
(Read and Write property)

### 159.57.21 audioListener as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The node representing the listener,Äôs position in the scene for use with positional audio effects.
**Notes:**

When you use the SCNAudioPlayerMBS class to play sound, the resulting effect depends on the position of each audio source in the scene relative to the listener. For example, changes in relative position can cause a sound to be localized to the left or right channel for stereo headphone output.

This property determines the listener,Äôs position. If the value is nil (the default), the listener position is always the same as that of the pointOfView node. By providing a different node for this property, you can separate the listener position from the point of view,Äîthis produces an effect similar to that of a boom microphone in video production. For example, in a third-person game where the camera floats high in the sky above the player character, you might use the player character as the listener node so that sounds from positions nearest the player are loudest.
To place an audio source in the scene, use the addAudioPlayer method on an SCNNode object.
(Read and Write property)

### 159.57.22 autoenablesDefaultLighting as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that determines whether SceneKit automatically adds lights to a scene.
**Notes:**

If this property,Äôs value is false (the default), the only light sources SceneKit uses for rendering a scene are those contained in the scene graph. If you change the value to true, SceneKit automatically adds and places an omnidirectional light source when rendering scenes that contain no lights or only contain ambient lights.
(Read and Write property)

### 159.57.23 backgroundColor as NSColorMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** The background color of the view.
**Notes:**

SceneKit displays this color behind the contents of the rendered scene. If the scene contents fill the view or if the scene provides its own background using the background property, the view,Äôs background color may not be visible.
This property,Äôs value must be a color that can be represented using RGBA components.
(Read and Write property)

### 159.57.24 debugOptions as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Options for drawing overlay content in a scene that can aid debugging.
**Notes:**

Use these options to display overlays that show otherwise-invisible scene content,Äîsuch as node bounding boxes and the extents of physics fields,Äîfor use in debugging and profiling your app. For example:

- To visualize how well each object,Äôs physics representation corresponds to its visible geometry, show the shape of each SCNPhysicsBodyMBS object in the scene with the SCNDebugOptionShowPhysicsShapes option.
- To improve rendering performance in a scene with multiple SCNLightMBS objects, show each light,Äôs area of effect with the SCNDebugOptionShowLightExtents option and ensure that each object in the scene is affected by no more than three lights.

Debug options are bit mask patterns. To display multiple debugging overlays, combine options using the bitwise OR operator.
(Read and Write property)

### 159.57.25 defaultCameraController as SCNCameraControllerMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The default camera controller for this view.
**Notes:** (Read only property)

### 159.57.26 jitteringEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that determines whether SceneKit applies jittering to reduce aliasing artifacts.
**Notes:**

Jittering is a process that SceneKit uses to improve the visual quality of a rendered scene. While the scene,Äôs content is still, SceneKit moves the pointOfView location very slightly (by less than a pixel in projected screen space). It then composites images rendered after several such moves to create the final rendered scene, creating an antialiasing effect that smooths the edges of rendered geometry.

By default, the value of this property is false, specifying that SceneKit should not perform jittering. Change the value to true to enable jittering.

Because the SCNViewMBS and SCNLayerMBS classes perform jittering automatically and asynchronously, enabling jittering for these classes has minimal impact on rendering performance. The SCNRenderer class performs jittering synchronously, incurring a high performance cost. With this class, jittering is suitable for rendering single frames on demand, but not for real-time rendering.
(Read and Write property)

### 159.57.27 loops as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that determines whether SceneKit restarts the scene time after all animations in the scene have played.
**Notes:**

If the value of this property is true (the default), SceneKit returns the scene time to zero after all animations associated with the scene have played, causing those animations to repeat. Otherwise, SceneKit stops playing the scene when all animations have completed.
(Read and Write property)

### 159.57.28 Playing as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that determines whether the scene is playing.
**Notes:**

If the value of this property is false (the default), SceneKit does not increment the scene time, so animations associated with the scene do not play. Change this property,Äôs value to true to start animating the scene.
(Read and Write property)

### 159.57.29 pointOfView as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The node from which the scene,Äôs contents are viewed for rendering.
**Notes:**

Use a node with an SCNCameraMBS instance assigned to its camera property to view a scene. The node provides the position and direction of a virtual camera, and the camera object provides rendering parameters such as field of view and focus.
For debugging lights and shadows, you can also designate a spotlight (an SCNLightMBS object whose type property is spot) as a point of view. In this case, the light,Äôs spotInnerAngle property determines the field of view, and its zNear and zFar properties determine the near and far extents of the region that is visible onscreen (also known as the viewing frustum).
In either case, the direction of view is along the negative z-axis of the node,Äôs local coordinate space.
(Read and Write property)

### 159.57.30 preferredFramesPerSecond as Integer

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** The animation frame rate that the view uses to render its scene.
**Notes:**

SceneKit chooses an actual frame rate that is as close as possible to your preferred frame rate based on the capabilities of the screen the view is displayed on. The actual frame rate is usually a factor of the maximum refresh rate of the screen to provide a consistent frame rate. For example, if the maximum refresh rate of the screen is 60 frames per second, that is also the highest frame rate the view sets as the actual frame rate. However, if you ask for a lower frame rate, SceneKit might choose 30, 20, 15 or some other factor to be the actual frame rate. For this reason, you want to choose a frame rate that your app can consistently maintain. The default value is 60 frames per second.
(Read and Write property)

### 159.57.31 renderingAPI as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The graphics technology SceneKit uses to render the scene.
**Notes:**

You choose a graphics technology when initializing a scene renderer:

- When initializing a SCNViewMBS object, use the Constructor initializer and the SCNPreferredRenderingAPIKey key. Alternatively, create a view in Interface Builder and use the Rendering API control in the inspector. During initialization, the view will attempt to use the preferred API, but will fall back to a different API if the preferred one is not supported on the current hardware.
- To create a SCNRendererMBS object that renders into your own OpenGL contect, use the rendererWithContext initializer. To create a renderer for use in your own Metal workflow, use the rendererWithDevice initializer.
- The rendering technology used by a SCNLayer object is determined by Core Animation.

After initializing a renderer, this property reflects the rendering technology in use.
(Read only property)

### 159.57.32 rendersContinuously as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that determines whether the view always renders at its preferred frame rate or only when its visible content changes.
**Notes:**

When this value is false (the default), the view redraws its contents only when something in its scene graph change or animates. Use this option to maximize energy efficiency.

If you change this value to true, the view redraws itself continually, at the rate specified by the preferredFramesPerSecond property, regardless of whether content is changing or animating.
(Read and Write property)

### 159.57.33 scene as SCNSceneMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** The scene to be displayed in the view.
**Notes:** (Read and Write property)

### 159.57.34 sceneTime as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The current scene time.
**Notes:**

This timestamp determines how running animations behave, which is similar to how the playhead time in a video player application determines which frame of a movie to display. Scene time applies only to animations whose usesSceneTimeBase property is true, including those loaded from a scene source using the SCNSceneSourceAnimationImportPolicyPlayUsingSceneTimeBase option.

Use this property, together with the above animation options, when you want to directly control (or allow the user to directly control) the playback of animations. For example, if you,Äôre building an authoring tool for 3D assets, you might bind this property,Äôs value to a slider control for scrubbing through playback of animations in a scene file.
(Read and Write property)

### 159.57.35 showsStatistics as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that determines whether SceneKit displays rendering performance statistics in an accessory view.
**Notes:**

The SceneKit statistics view displays various information about scene rendering performance and GPU resource usage, including a frames-per-second (fps) counter. In macOS, click the gear button in the statistics view to show a panel with additional controls for adjusting SceneKit,Äôs rendering of the scene.
(Read and Write property)

### 159.57.36 Constants

### 159.57.37 kAntialiasingModeMultisampling16X = 4

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the antialiasing modes for scene renderers.
**Notes:** Multisampling 16x

### 159.57.38 kAntialiasingModeMultisampling2X = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the antialiasing modes for scene renderers.
**Notes:** Multisampling 2x

### 159.57.39 kAntialiasingModeMultisampling4X = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the antialiasing modes for scene renderers.
**Notes:** Multisampling 4x

### 159.57.40 kAntialiasingModeMultisampling8X = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the antialiasing modes for scene renderers.
**Notes:** Multisampling 8x

### 159.57.41 kAntialiasingModeNone = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the antialiasing modes for scene renderers.
**Notes:** No antialiasing.

### 159.57.42 kDebugOptionNone = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the debug flag constants.
**Notes:** Disable all debugging overlays.

### 159.57.43 kDebugOptionRenderAsWireframe = 64

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the debug flag constants.
**Notes:**

Display only wireframe placeholders for geometries in the scene.
Unlike the SCNDebugOptionShowWireframe option, this option disables normal surface rendering, display-

ing only the wireframe for each geometry.

### 159.57.44 kDebugOptionShowBoundingBoxes = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the debug flag constants.
**Notes:** Display the bounding boxes for any nodes with content.

### 159.57.45 kDebugOptionShowCameras = 1024

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the debug flag constants.
**Notes:** Display visualizations for nodes in the scene with attached cameras and their fields of view.

### 159.57.46 kDebugOptionShowConstraints = 512

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the debug flag constants.
**Notes:** Display visualizations of the constraint objects acting on nodes in the scene.

### 159.57.47 kDebugOptionShowCreases = 256

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the debug flag constants.
**Notes:** Display nonsmoothed crease regions for geometries affected by surface subdivision.

### 159.57.48 kDebugOptionShowLightExtents = 8

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the debug flag constants.
**Notes:**

Display the regions affected by each SCNLightMBS object in the scene.

Only lights whose type is SCNLightTypeOmni or SCNLightTypeSpot have an area of effect; directional and ambient lights affect the entire scene.

### 159.57.49 kDebugOptionShowLightInfluences = 4

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the debug flag constants.
**Notes:** Display the locations of each SCNLightMBS object in the scene.

### 159.57.50 kDebugOptionShowPhysicsFields = 16

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the debug flag constants.
**Notes:** Display the regions affected by each SCNPhysicsFieldMBS object in the scene.

### 159.57.51 kDebugOptionShowPhysicsShapes = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the debug flag constants.
**Notes:** Display the physics shapes for any nodes with attached SCNPhysicsBodyMBS objects.

### 159.57.52 kDebugOptionShowSkeletons = 128

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the debug flag constants.
**Notes:** Display visualizations of the skeletal animation parameters for relevant geometries.

### 159.57.53 kDebugOptionShowWireframe = 32

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the debug flag constants.
**Notes:**

Display geometries in the scene with wireframe rendering.
When this option is enabled, SceneKit still renders scene geometry with all associated materials, then over-

lays a wireframe rendering of the same geometry. You can use this option, for example, to debug material rendering issues.

### 159.57.54 kRenderingAPIMetal = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the options for choosing the graphics technology for an SCNViewMBS object (or other SceneKit renderer) to use for drawing its contents.
**Notes:**

Use the Metal framework for SceneKit rendering.
Metal provides improved graphics performance on supported devices, allows you to integrate GPU-compute tasks into a rendering workflow, and provides the same API in both iOS and macOS.
Used by the renderingAPI property and the SCNPreferredRenderingAPIKey option when initializing an SCNViewMBS object.

### 159.57.55 kRenderingAPIOpenGLCore32 = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the options for choosing the graphics technology for an SCNViewMBS object (or other SceneKit renderer) to use for drawing its contents.
**Notes:**

Use the OpenGL 3.2 Core Profile API for SceneKit rendering in macOS.
Used by the renderingAPI property and the SCNPreferredRenderingAPIKey option when initializing an SCNViewMBS object.

### 159.57.56 kRenderingAPIOpenGLCore41 = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the options for choosing the graphics technology for an SCNViewMBS object (or other SceneKit renderer) to use for drawing its contents.
**Notes:**

Use the OpenGL 4.1 Core Profile API for SceneKit rendering in macOS.
Used by the renderingAPI property and the SCNPreferredRenderingAPIKey option when initializing an SCNViewMBS object.

### 159.57.57 kRenderingAPIOpenGLLegacy = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the options for choosing the graphics technology for an SCNViewMBS object (or other SceneKit renderer) to use for drawing its contents.
**Notes:**

Use the Legacy OpenGL API for SceneKit rendering in macOS.
This option is available on all macOS systems supporting SceneKit. If you request the Metal rendering API for an SCNViewMBS object on a system that does not support Metal, SceneKit falls back to the Legacy OpenGL API.
Used by the renderingAPI property and the SCNPreferredRenderingAPIKey option when initializing an SCNViewMBS object.

# Chapter 160

# Scintilla

## 160.1 control DesktopScintillaControlMBS

### 160.1.1 control DesktopScintillaControlMBS

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The Xojo control to host Scintilla editor.

### 160.1.2 Blog Entries

- The Top 10 from the MBS Xojo Plugins in 2022

### 160.1.8 Methods

### 160.1.9 AddSelection(caret as Integer, anchor as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Add a new selection from anchor to caret as the main selection retaining all other selections as additional selections.
**Notes:** Since there is always at least one selection, to set a list of selections, the first selection should be added with SetSelection() and later selections added with AddSelection().

### 160.1.10 AddStyledText(StyledText as MemoryBlock)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This behaves just like AddText, but inserts styled text.
**Notes:** See GetStyledText function.

### 160.1.11 AddTabStop(line as Integer, x as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Adds an explicit tabstop at the specified distance from the left (in pixels).
**Notes:** Changing tab stops produces a ChangeTabStops event.

### 160.1.12 AddText(Text as String)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This inserts the first length characters from the string text at the current position.
**Notes:** This will include any 0's in the string that you might have expected to stop the insert operation. The current position is set at the end of the inserted text, but it is not scrolled into view.

### 160.1.13 AddUndoAction(token as Integer, UndoFlags as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Adds an undo action.
**Notes:**

The container can add its own actions into the undo stack by calling AddUndoAction and an Modify event will be sent to the container with the KModificationFlagsContainer flag when it is time to undo (Performe-

dUndo) or redo (PerformedRedo) the action. The token argument supplied is returned in the token field of the notification.
For example, if the container wanted to allow undo and redo of a 'toggle bookmark' command then it could call AddUndoAction(line, 0) each time the command is performed. Then when it receives a notification to undo or redo it toggles a bookmark on the line given by the token field. If there are different types of commands or parameters that need to be stored into the undo stack then the container should maintain a stack of its own for the document and use the current position in that stack as the argument to AddUndoAction(line). AddUndoAction commands are not combined together into a single undo transaction unless grouped with BeginUndoAction and EndUndoAction.

The flags argument can be KUndoFlagsMayCoalesce (1) if the container action may be coalesced along with any insertion and deletion actions into a single compound action, otherwise kUndoFlagsNone (0). Coalescing treats coalescible container actions as transparent so will still only group together insertions that look like typing or deletions that look like multiple uses of the Backspace or Delete keys.

### 160.1.14 AllocateBytes(bytes as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Allocate a document buffer large enough to store a given number of bytes.
**Notes:** The document will not be made smaller than its current contents.

### 160.1.15 AllocateLineCharacterIndex(lineCharacterIndex as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Allocate one or more indexes.
**Notes:**

Most Scintilla APIs use byte positions but some applications want to use positions based on counting (UTF-32) characters or (UTF-16) code units or need to communicate with other code written in terms of characters or code units. With only byte positions, this may require examining many bytes to count characters or code units in the document but this may be sped up in some cases by indexing the line starts by character or code unit.

Different aspects of an application may need indexes for different periods and should allocate for those periods. Indexes use additional memory so releasing them can help minimize memory but they also take time to recalculate. Scintilla may also allocate indexes to support features like accessibility or input method editors. Only one index of each type is created for a document at a time.

### 160.1.16 AllocateLines(line as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Allocate line indices to match the lines argument.
**Notes:** This is an optimization that can prevent multiple reallocations of the indices as text is inserted if the application can estimate the number of lines in the document. The number of lines will not be reduced by this call.

### 160.1.17 AnnotationClearAll

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Clears all annotations.
**Notes:** All the lines can be cleared of annotations with AnnotationClearAll which is equivalent to clearing each line (setting to "") and then deleting other memory used for this feature.

### 160.1.18 AnnotationLines(line as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The number of lines annotating a line can be retrieved with AnnotationLines.

### 160.1.19 AppendText(Text as String)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This adds the text to the end of the document.
**Notes:** This will include any 0's in the string that you might have expected to stop the operation. The current selection is not changed and the new text is not scrolled into view.

### 160.1.20 AssignCmdKey(keyDefinition as Integer, sciCommand as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This assigns the given key definition to a Scintilla command identified by sciCommand.
**Notes:**

sciCommand can be any SCI_* command that has no arguments.

There is a default binding of keys to commands that is defined in the Scintilla library. You can change the

mapping to suit your own requirements.

keyDefinition,Ä®: a key definition contains the key code in the low 16-bits and the key modifiers in the high 16-bits. To combine keyCode and keyMod set:,Ä®,Ä®

keyDefinition = keyCode + Bitwise.ShiftLeft(keyMod, 16)

The key code is a visible or control character or a key from the kKeys* enumeration, which contains: ,Ä®kKeysAdd, kKeysBack, kKeysDelete, kKeysDivide, kKeysDown, kKeysEnd, kKeysEscape, kKeysHome, kKeysInsert, kKeysLeft, kKeysMenu, kKeysNext (Page Down), kKeysPrior (Page Up), kKeysReturn, kKeysRight, kKeysRWin, kKeysSubtract, kKeysTab, kKeysUp, and kKeysWin.

The modifiers are a combination of zero or more of kKeyModAlt, kKeyModCtrl, kKeyModShift, kKeyModMeta, and kKeyModSuper. On OS X, the Command key is mapped to kKeyModCtrl and the Control key to kKeyModMeta. kKeyModSuper is only available on GTK which is commonly the Windows key. If you are building a table, you might want to use kKeyModNorm, which has the value 0, to mean no modifiers.

On Win32, the numeric keypad with Alt pressed can be used to enter characters by number. This can produce unexpected results in non-numlock mode when function keys are assigned so potentially problematic keys are ignored. For example, setting kKeyModAlt, kKeysUP will only be active for the Up key on the main cursor keys, not the numeric keypad.

### 160.1.21 AutoComplete

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This method triggers autocompletion.
**Notes:** This has the same effect as the tab key.

### 160.1.22 AutoCompleteCancel

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Cancels any displayed auto completion list.
**Notes:** When in auto completion mode, the list should disappear when the user types a character that can not be part of the auto completion, such as '.', '(' or ' [ ' when typing an identifier. A set of characters that will cancel autocompletion can be specified with AutoCompleteStops.

### 160.1.23 AutoCompletePosStart as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This returns the value of the current position when AutoCompleteShow started display of the list.

### 160.1.24 AutoCompleteSelect(Value as String)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This method selects an item in the autocompletion list.
**Notes:**

It searches the list of words for the first that matches select. By default, comparisons are case sensitive, but you can change this with AutoCIgnoreCase. The match is character by character for the length of the select string. That is, if select is "Fred" it will match "Frederick" if this is the first item in the list that begins with "Fred". If an item is found, it is selected. If the item is not found, the autocompletion list closes if auto-hide is true (see AutoCAutoHide).
The current selection index can be retrieved with AutoCompleteCurrent.

### 160.1.25 AutoCompleteSetFillUps(characterSet as String)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** If a fillup character is typed with an auto completion list active, the currently selected item in the list is added into the document, then the fillup character is added.
**Notes:** Common fillup characters are '(', ' [ ' and '.' but others are possible depending on the language. By default, no fillup characters are set.

### 160.1.26 AutoCompleteShow(lengthEntered as Integer, itemList as String)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This method causes a list to be displayed.
**Notes:**

lengthEntered is the number of characters of the word already entered and itemList is the list of words separated by separator characters. The initial separator character is a space but this can be set or got with AutoCompleteSeparator property.

With default settings, the list of words should be in sorted order. If set to ignore case mode with AutoCompleteIgnoreCase, then strings are matched after being converted to upper case. One result of this is that the list should be sorted with the punctuation characters ' [ ', '\', ' ] ', '^', '_', and '`' sorted after letters.

Alternative handling of list order may be specified with AutoCompleteOrder property.

### 160.1.27 AutoCompleteStops(characterSet as String)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The characterSet argument is a string containing a list of characters that will automatically cancel the auto completion list.
**Notes:** When you start the editor, this list is empty.

### 160.1.28 BackTab

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.29 BeginUndoAction

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Starts a composed undo action.
**Notes:** Call BeginUndoAction to mark the beginning and EndUndoAction to end of a set of operations that you want to undo all as one operation but that you have to generate as several operations. Alternatively, you can use these to mark a set of operations that you do not want to have combined with the preceding or following operations if they are undone.

### 160.1.30 BraceBadLight(pos as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Shows bad brace highlight.
**Notes:** If there is no matching brace then the brace badlighting style, style kStylesCommonBraceBad (35), can be used to show the brace that is unmatched. Using a position of kInvalidPosition (-1) removes the highlight.

### 160.1.31 BraceBadLightIndicator(useSetting as Boolean, indicator as ScintillaIndicatorMBS)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Use specified indicator to highlight non matching brace instead of changing its style

### 160.1.32 BraceHighlight(posA as Integer, posB as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Up to two characters can be highlighted in a 'brace highlighting style', which is defined as style number BraceHighlight (34).
**Notes:** If you have enabled indent guides, you may also wish to highlight the indent that corresponds with the brace. You can locate the column with Column() and highlight the indent with HighlightGuide.

### 160.1.33 BraceHighlightIndicator(useSetting as Boolean, indicator as ScintillaIndicatorMBS)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Use specified indicator to highlight matching braces instead of changing their style.

### 160.1.34 BraceMatch(pos as Integer, maxReStyle as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The BraceMatch method finds a corresponding matching brace given pos, the position of one brace.
**Notes:**

The brace characters handled are '(', ')', ' [ ', ' ] ', ' { ', ' } ', '<', and '>'. The search is forwards from an opening brace and backwards from a closing brace. If the character at position is not a brace character, or a matching brace cannot be found, the return value is -1. Otherwise, the return value is the position of the matching brace.
A match only occurs if the style of the matching brace is the same as the starting brace or the matching brace is beyond the end of styling. Nested braces are handled correctly. The maxReStyle parameter must currently be 0 - it may be used in the future to limit the length of brace searches.

### 160.1.35 BraceMatchNext(pos as Integer, startPos as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Similar to BraceMatch, but matching starts at the explicit start position startPos instead of the implicitly next position pos ¬± 1.

### 160.1.36 CallTipCancel

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This method cancels any displayed call tip.
**Notes:** Scintilla will also cancel call tips for you if you use any keyboard commands that are not compatible with editing the argument list of a function. Call tips are cancelled if you delete back past the position where the caret was when the tip was triggered.

### 160.1.37 CallTipSetBackColor(backColor as Color)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The background colour of call tips can be set with this property;
**Notes:** The default colour is white. It is not a good idea to set a dark colour as the background as the default colour for normal calltip text is mid grey and the default colour for highlighted text is dark blue. This also sets the background colour of kStylesCommonCallTip.

### 160.1.38 CallTipSetForeColor(foreColor as Color)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The colour of call tip text can be set with this method.
**Notes:**

The default colour is mid grey.
This also sets the foreground colour of kStylesCommonCallTip.

### 160.1.39 CallTipSetForeColorHighlight(foreColor as Color)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The colour of highlighted call tip text can be set with this method.
**Notes:** The default colour is dark blue.

### 160.1.40 CallTipSetHighlight(highlightStart as Integer, highlightEnd as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This sets the region of the call tips text to display in a highlighted style.
**Notes:**

highlightStart is the zero-based index into the string of the first character to highlight and highlightEnd is the index of the first character after the highlight. highlightEnd must be greater than highlightStart; highlightEnd-highlightStart is the number of characters to highlight. Highlights can extend over line ends if this is required.
Unhighlighted text is drawn in a mid grey. Selected text is drawn in a dark blue. The background is white. These can be changed with CallTipSetBackColor, CallTipSetForeColor, and CallTipSetForeColorHighlight.

### 160.1.41 CallTipSetPosition(above as Boolean)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** By default the calltip is displayed below the text, setting above to true will display it above the text.

### 160.1.42 CallTipShow(pos as Integer, definition as String)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This method starts the process by displaying the call tip window.
**Notes:**

If a call tip is already active, this has no effect.

pos is the position in the document at which to align the call tip. The call tip text is aligned to start 1 line below this character unless you have included up and/or down arrows in the call tip text in which case the tip is aligned to the right-hand edge of the rightmost arrow. The assumption is that you will start the text with something like "\001 1 of 3 \002".

definition is the call tip text. This can contain multiple lines separated by '\n' (Line Feed, ASCII code 10) characters. Do not include Carriage Return (ASCII code 13), as this will most likely print as an empty box. Tab (ASCII code 9) is supported if you set a tabsize with CallTipUseStyle.

The position of the caret is remembered here so that the call tip can be cancelled automatically if subsequent deletion moves the caret before this position.

Call tips are small windows displaying the arguments to a function and are displayed after the user has typed the name of the function. They normally display characters using the font facename, size and character set defined by kStylesCommonDefault. You can choose to use kStylesCommonCallTip to define the facename, size, foreground and background colours and character set with CallTipUseStyle. This also enables support for Tab characters. There is some interaction between call tips and autocompletion lists in that showing a call tip cancels any active autocompletion list, and vice versa.

Call tips can highlight part of the text within them. You could use this to highlight the current argument to a function by counting the number of commas (or whatever separator your language uses).

The mouse may be clicked on call tips and this causes a CallTipClick event to be sent to the container. Small up and down arrows may be displayed within a call tip by, respectively, including the characters '\001', or '\002'. This is useful for showing that there are overloaded variants of one function name and that the user can click on the arrows to cycle through the overloads.
Alternatively, call tips can be displayed when you leave the mouse pointer for a while over a word in response to the DWellStart event and cancelled in response to DWellEnd. This method could be used in a debugger to give the value of a variable, or during editing to give information about the word under the pointer.

### 160.1.43 CallTipUseStyle(tabSize as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This method changes the style used for call tips from KStylesCommonDefault to KStylesCommoCallTip and sets a tab size in screen pixels.
**Notes:** If tabsize is less than 1, Tab characters are not treated specially. Once this call has been used, the call tip foreground and background colours are also taken from the style.

### 160.1.44 Cancel

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Cancels autocompletion and calltip display and drops any additional selections.

### 160.1.45 ChangeInsertion(text as String)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Changes insert.
**Notes:** This may only be called from a kModificationFlagsInsertCheck in Modify event handler and will change the text being inserted to that provided.

### 160.1.46 ChangeLexerState(start as Integer, ende as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Indicate that the internal state of a lexer has changed over a range and therefore there may be a need to redraw.

### 160.1.47 Character(position as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This returns the character at pos in the document or 0 if pos is negative or past the end of the document.

### 160.1.48 CharacterString(position as Integer, byref Length as Integer) as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This queries character at given position.
**Notes:**

If the position has a multi byte UTF-8 character, we take multiple characters and return length in bytes via Length parameter.
Otherwise character is returned for 1 byte and then length is set to 1.

See also Character() to get individual bytes.

### 160.1.49 CharLeft

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.50 CharLeftExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.51 CharLeftRectExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.52 CharPositionFromPoint(x as Integer, y as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Finds the closest character to a point.

### 160.1.53 CharPositionFromPointClose(x as Integer, y as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Finds the closest character to a point.
**Notes:** Returns -1 if the point is outside the window or not close to any characters. This is similar to the previous CharPositionFromPoint method but finds characters rather than inter-character positions.

### 160.1.54 CharRight

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.55 CharRightExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.56 CharRightRectExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.57 ChooseCaretX

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Scintilla remembers the x value of the last position horizontally moved to explicitly by the user and this value is then used when moving vertically such as by using the up and down keys.
**Notes:** This message sets the current x position of the caret as the remembered value.

### 160.1.58 Clear

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Clears text from current selection.

### 160.1.59 ClearAll

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Unless the document is read-only, this deletes all the text.

### 160.1.60 ClearAllCmdKeys

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This command removes all keyboard command mapping by setting an empty mapping table.

### 160.1.61 ClearAllRepresentations

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Reset representations to defaults.

### 160.1.62 ClearCmdKey(keyDefinition as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This makes the given key definition do nothing by assigning the action Null to it.
**Example:**

```
dim c as DesktopScintillaControlMBS
// disable tab key for editor
c.ClearCmdKey c.kKeysTab
```

### 160.1.63 ClearDocumentStyle

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** When wanting to completely restyle the document, for example after choosing a lexer, the ClearDocumentStyle method can be used to clear all styling information and reset the folding state.

### 160.1.64 ClearRegisteredImages

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Clears all registered images.

### 160.1.65 ClearRepresentation(encodedCharacter as String)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Reset this representation to default.

### 160.1.66 ClearSelections

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set a single empty selection at 0 as the only selection.

### 160.1.67 ClearTabStops(line as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Clears explicit tabstops on a line.
**Notes:** Changing tab stops produces a ChangeTabStops event.

### 160.1.68 Colourise(start as Integer, ende as Integer = -1)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This requests the current lexer or the container (if the lexer is set to nil) to style the document between start and end.
**Notes:** If end is -1, the document is styled from start to the end. If the "fold" property is set to "1" and your lexer or container supports folding, fold levels are also set. This method causes a redraw.

### 160.1.69 ColouriseAll

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This requests the current lexer or the container (if the lexer is set to nil) to style the document.
**Notes:** If the "fold" property is set to "1" and your lexer or container supports folding, fold levels are also set. This method causes a redraw.

### 160.1.70 Column(pos as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This method returns the column number of a position pos within the document taking the width of tabs into account.
**Notes:** This returns the column number of the last tab on the line before pos, plus the number of characters between the last tab and pos. If there are no tab characters on the line, the return value is the number of characters up to the position on the line. In both cases, double byte characters count as a single character. This is probably only useful with monospaced fonts.

### 160.1.71 ContractedFoldNext(lineStart as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Search efficiently for lines that are contracted fold headers.
**Notes:** This is useful when saving the user's folding when switching documents or saving folding with a file. The search starts at line number lineStart and continues forwards to the end of the file. lineStart is returned if it is a contracted fold header otherwise the next contracted fold header is returned. If there are no more contracted fold headers then -1 is returned.

### 160.1.72 ConvertEOLs(EndOfLineMode as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Converts end of line characters for the document.
**Notes:**

Scintilla can handle the major line end conventions and, depending on settings and the current lexer also support additional Unicode line ends.
Scintilla can interpret any of the Macintosh (CR), Unix (LF) and Windows (CR+LF) line ends. When the user presses the Enter key, one of these line end strings is inserted into the buffer. The default is CRL+LF in Windows and LF in Unix, but this can be changed with the EOLMode proeprty. You can also convert the entire document to one of these line endings with ConvertEOLs. Finally, you can choose to display the line endings with ViewEOL.

For the UTF-8 encoding, three additional Unicode line ends, Next Line (NEL=U+0085), Line Separator (LS=U+2028), and Paragraph Separator (PS=U+2029) may optionally be interpreted when Unicode line ends is turned on and the current lexer also supports Unicode line ends.

### 160.1.73 Copy

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Copy current text selection and puts text on the clipboard.

### 160.1.74 CopyAllowLine

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Works the same as Copy() except that if the selection is empty then the current line is copied.
**Notes:** On Windows, an extra "MSDEVLineSelect" marker is added to the clipboard which is then used in SCI_PASTE to paste the whole line before the current line.

### 160.1.75 CopyRange(RangeStart as Integer, RangeEnd as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Copies a range of text from the document to the system clipboard.

### 160.1.76 CopyText(Text as String)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Copies a supplied piece of text to the system clipboard.

### 160.1.77 CountCharacters(start as Integer, ende as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Returns the number of whole characters between two positions.

### 160.1.78 CountCodeUnits(start as Integer, ende as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Returns the number of whole characters between two positions.
**Notes:** This counts in UTF-16 code units.

### 160.1.79 CreateLoader(bytes as Integer = 1000000, documentOptions as Integer = 0) as ScintillaLoaderMBS

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Creates a loader object.
**Notes:**

An application can load all of a file into a buffer it allocates on a background thread and then add the data in that buffer into a Scintilla document on the user interface thread. That technique uses extra memory to store a complete copy of the file and also means that the time that Scintilla takes to perform initial line end discovery blocks the user interface.

To avoid these issues, a loader object may be created and used to load the file.
Returns an object that supports the ScintillaLoaderMBS interface which can be used to load data and then be turned into a Scintilla document object for attachment to a view object. The bytes argument determines the initial memory allocation for the document as it is more efficient to allocate once rather than rely on the buffer growing as data is added. If CreateLoader fails then nil is returned.

See kDocumentOption* constants.

### 160.1.80 Cut

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Cuts current text selection and puts text on the clipboard.

### 160.1.81 DeleteBack

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.82 DeleteBackNotLine

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.83 DeleteRange(start as Integer, lengthDelete as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Deletes a range of text in the document.

### 160.1.84 DelLineLeft

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.85 DelLineRight

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.86 DelWordLeft

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.87 DelWordRight

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.88 DelWordRightEnd

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:**

The *End methods move between word ends instead of word starts.
You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.89 DescribeProperty(Key as String) as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Information may be retrieved about the properties that can be set for the current lexer.

### 160.1.90 DocLineFromVisible(line as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** When some lines are hidden and/or annotations are displayed, then a particular line in the document may be displayed at a different position to its document position.
**Notes:** This method returns the document line number that corresponds to a display line (counting the display line of the first line in the document as 0). If displayLine is less than or equal to 0, the result is 0. If displayLine is greater than or equal to the number of displayed lines, the result is the number of lines in the document.

### 160.1.91 DocumentEnd

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.92 DocumentEndExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.93 DocumentStart

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.94 DocumentStartExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.95 DropSelectionN(selection as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** If there are multiple selections, remove the indicated selection.
**Notes:** If this was the main selection then make the previous selection the main and if it was the first then the last selection becomes main. If there is only one selection, or there is no selection selection, then there is no effect.

### 160.1.96 EditToggleOvertype

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.97 ElementAllowsTranslucent(element as Integer) as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Returns true when the element currently allows translucent drawing when an alpha component is included.
**Notes:** This may change based on circumstances - different platforms or graphics technologies may implement translucency and newer versions of Scintilla may implement translucency for elements that did not previously support it.

### 160.1.98 ElementBaseColour(element as Integer) as Color

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Returns the default colour of an element.
**Notes:**

This may be a value defined by Scintilla or it may be derived from the operating system or platform. Which values are set from the operating system may differ between operating systems and operating system versions. When undefined the return value is 0 which is equivalent to completely transparent black. These colours may be useful when defining styles with similarities such as synthesizing dark mode styles that use the same colours as the system.

On Win32, autocompletion list colours like kElementList are currently provided by the platform layer and on Cocoa, selection background colours like kElementSelectionBack are provided.

### 160.1.99 ElementIsSet(element as Integer) as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Returns true when an element colour has been set.
**Notes:** When false indicates that a default colour or set of colours is displayed.

### 160.1.100 EmptyUndoBuffer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This command tells Scintilla to forget any saved undo or redo history.
**Notes:** It also sets the save point to the start of the undo buffer, so the document will appear to be unmodified. This does not cause the SavePointReached event to be sent to the container.

### 160.1.101 EndStyled as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** End styling.
**Notes:** Scintilla keeps a record of the last character that is likely to be styled correctly. This is moved forwards when characters after it are styled and moved backwards if changes are made to the text of the document before it. Before drawing text, this position is checked to see if any styling is needed and, if so, a StyleNeeded event is sent to the container. The container can send EndStyled to work out where it needs to start styling. Scintilla will always ask to style whole lines.

### 160.1.102 EndUndoAction

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Ends a composed undo action.
**Notes:** Call BeginUndoAction to mark the beginning and EndUndoAction to end of a set of operations that you want to undo all as one operation but that you have to generate as several operations. Alternatively, you can use these to mark a set of operations that you do not want to have combined with the preceding or following operations if they are undone.

### 160.1.103 EnsureVisible(line as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** A line may be hidden because more than one of its parent lines is contracted.
**Notes:** Both these message travels up the fold hierarchy, expanding any contracted folds until they reach the top level. The line will then be visible. If you use EnsureVisibleEnforcePolicy(), the vertical caret policy set by VisiblePolicy() is then applied.

### 160.1.104 EnsureVisibleEnforcePolicy(line as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** A line may be hidden because more than one of its parent lines is contracted.
**Notes:** Both these message travels up the fold hierarchy, expanding any contracted folds until they reach the top level. The line will then be visible. If you use EnsureVisibleEnforcePolicy(), the vertical caret policy set by VisiblePolicy() is then applied.

### 160.1.105 EOLAnnotationClearAll

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Clears all EOL annotations.
**Notes:** All the lines can be cleared of end of line annotations with EOLAnnotationClearAll which is equivalent to clearing each line (setting to 0) and then deleting other memory used for this feature.

### 160.1.106 ExpandChildren(Line as Integer, FoldLevel as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This is used to respond to a change to a line causing its fold level or whether it is a header to change, perhaps when adding or removing a ' { '.
**Notes:** By the time the container has received the notification that the line has changed, the fold level has already been set, so the container has to use the previous level in this call so that any range hidden underneath this line can be shown.

### 160.1.107 FindColumn(line as Integer, column as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Returns the position of a column on a line taking the width of tabs into account.
**Notes:** It treats a multi-byte character as a single column. Column numbers, like lines start at 0.

### 160.1.108 FindIndicatorFlash(start as Integer, ende as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Show and animate the find indicator.
**Notes:** The indicator remains visible with FindIndicatorShow and fades out after showing for half a second with FindIndicatorFlash. FindIndicatorShow behaves similarly to the OS X TextEdit and Safari applications and is best suited to editing documentation where the search target is often a word. FindIndicatorFlash is similar to Xcode and is suited to editing source code where the match will often be located next to operators which would otherwise be hidden under the indicator's padding.

### 160.1.109 FindIndicatorHide

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Hides the find indicator.

### 160.1.110 FindIndicatorShow(start as Integer, ende as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Show and animate the find indicator.
**Notes:** The indicator remains visible with FindIndicatorShow and fades out after showing for half a second with FindIndicatorFlash. FindIndicatorShow behaves similarly to the OS X TextEdit and Safari applications and is best suited to editing documentation where the search target is often a word. FindIndicatorFlash is similar to Xcode and is suited to editing source code where the match will often be located next to operators which would otherwise be hidden under the indicator's padding.

### 160.1.111 FindText(searchFlags as Integer, Text as String, byref RangeStart as Integer, byref RangeEnd as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Searches for text in the document.
**Notes:**

It does not use or move the current selection. The searchFlags argument controls the search type, which includes regular expression searches.
See kFindOption* constants.

You can search backwards to find the previous occurrence of a search string by setting the end of the search range before the start.

RangeStart and RangeEnd provide the range of positions in the document to search. You can search backwards by setting RangeEnd less than RangeStart. The text parameter holds the search pattern. If your language makes the use of _TextToFind difficult, you should consider using SearchInTarget instead.

The return value is -1 if the search fails or the position of the start of the found text if it succeeds. The RangeStart and RangeEnd parameters of TextToFind are filled in with the start and end positions of the found text.

### 160.1.112 FoldAll(FoldAction as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Contracts, expands or toggles all lines.
**Notes:**

Provides a higher-level approach to folding instead of setting expanded flags and showing or hiding individual lines.

An individual fold can be contracted/expanded/toggled with FoldLine(). To affect all child folds as well call FoldChildren().

To affect the entire document call FoldAll(). With kFoldActionToggle the first fold header in the document is examined to decide whether to expand or contract.

### 160.1.113 FoldChildren(Line as Integer, FoldAction as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Contracts, expands or toggles children.
**Notes:**

Provides a higher-level approach to folding instead of setting expanded flags and showing or hiding individual lines.

An individual fold can be contracted/expanded/toggled with FoldLine(). To affect all child folds as well call FoldChildren().

To affect the entire document call FoldAll(). With kFoldActionToggle the first fold header in the document is examined to decide whether to expand or contract.

### 160.1.114 FoldLine(Line as Integer, FoldAction as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Contracts, expands or toggles one line.
**Notes:**

Provides a higher-level approach to folding instead of setting expanded flags and showing or hiding individual lines.

An individual fold can be contracted/expanded/toggled with FoldLine(). To affect all child folds as well call

FoldChildren().

To affect the entire document call FoldAll(). With kFoldActionToggle the first fold header in the document is examined to decide whether to expand or contract.

### 160.1.115 FoldParent(line as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This method returns the line number of the first line before line that is marked as a fold point with kFoldLevelHeaderFlag and has a fold level less than the line.
**Notes:** If no line is found, or if the header flags and fold levels are inconsistent, the return value is -1.

### 160.1.116 FormFeed

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.117 GetLineSelEndPosition(line as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Retrieve the position of the end of the selection at the given line with -1 returned if no selection on this line.

### 160.1.118 GetLineSelStartPosition(line as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Retrieve the position of the start of the selection at the given line with -1 returned if no selection on this line.

### 160.1.119 GetNextTabStop(line as Integer, x as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Gets the next explicit tabstop position set after the given x position, or zero if there aren't any.

### 160.1.120 GetStyledText(RangeStart as Integer, RangeEnd as Integer, byref Styledtext as MemoryBlock) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This collects styled text into a buffer using two bytes for each cell, with the character at the lower address of each pair and the style byte at the upper address.
**Notes:**

Characters between the positions RangeStart and RangeEnd are copied to new MemoryBlock and put into Styledtext.
Positions outside the document return character codes and style bytes of 0.

### 160.1.121 GetTextRange(RangeStart as Integer, RangeEnd as Integer, byref Text as String) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This collects the text between the positions RangeStart and RangeEnd and returns it in Text parameter.
**Notes:**

If RangeEnd is -1, text is returned to the end of the document.
The return value is the length of the returned text.

### 160.1.122 GotoLine(line as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This removes any selection and sets the caret at the start of line number line and scrolls the view (if needed) to make it visible.
**Notes:** The anchor position is set the same as the current position. If line is outside the lines in the document (first line is 0), the line set is the first or last.

### 160.1.123 GotoPos(pos as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This removes any selection, sets the caret at caret and scrolls the view to make the caret visible, if necessary.

**Notes:** It is equivalent to SetSel(caret, caret). The anchor position is set the same as the current position.

### 160.1.124 GrabFocus

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Scintilla can be told to grab the focus with GrabFocus.
**Notes:** This is needed more on GTK where focus handling is more complicated than on Windows.

### 160.1.125 HideLines(lineStart as Integer, lineEnd as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Marks a range of lines as invisible and then redraw the display.
**Notes:**

If kElementHiddenLine is set then a horizontal line is drawn in that colour to indicate that there are hidden lines.
A fold line drawn in that position overrides the hidden line indicator.

### 160.1.126 HideSelection(hide as Boolean)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The normal state is to make the selection visible by drawing it as set by SetSelForeColor and SetSelBackColor.
**Notes:** However, if you hide the selection, it is drawn as normal text.

### 160.1.127 Home

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.128 HomeDisplay

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.129 HomeDisplayExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.130 HomeExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.131 HomeRectExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.132 HomeWrap

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.133 HomeWrapExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.134 IndexPositionFromLine(line as Integer, lineCharacterIndex as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries position from line via index.
**Notes:** The document line of a particular character or code unit may be found by calling LineFromIndexPosition with one of kLineCharacterIndexTypeUtf32 (1) or kLineCharacterIndexTypeUtf16 (2). The inverse action, finds the starting position of a document line either in characters or code units from the document start by calling IndexPositionFromLine with the same lineCharacterIndex argument.

### 160.1.135 Indicator(index as Integer) as ScintillaIndicatorMBS

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries indicator with given index.
**Notes:** Index is from 0 to 35.

### 160.1.136 IndicatorAllOnFor(pos as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Retrieve a bitmap value representing which indicators are non-zero at a position.
**Notes:** Only the first 32 indicators are represented in the result so no IME indicators are included.

### 160.1.137 IndicatorClearRange(start as Integer, lengthClear as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Clears a range for the current indicator.

### 160.1.138 IndicatorFillRange(start as Integer, lengthFill as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Fills a range with the current indicator.
**Notes:** See IndicatorValue property.

### 160.1.139 InitializeLexer(Lexer as String)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Initializes the lexer.
**Notes:**

To style files in different languages, different 'lexers' are used. These are objects that are called by Scintilla with a range of text and some context information and which then set styles and folding information for that range. Lexers for Scintilla are now provided by the Lexilla project.

Current list of buit-in lexers is:

a68k, abaqus, ada, apdl, as, asm, asn1, asy, au3, ave, avs, baan, bash, batch, bib, blitzbasic, bullant, caml, cil, clarion, clarionnocase, cmake, COBOL, coffeescript, conf, cpp, cppnocase, csound, css, d, dataflex, diff, DMAP, DMIS, ecl, edifact, eiffel, eiffelkw, erlang, errorlist, escript, f77, flagship, forth, fortran, freebasic, fsharp, gap, gui4cli, haskell, hollywood, hypertext, ihex, indent, inno, json, julia, kix, kvirc, latex, lisp, literatehaskell, lot, lout, lua, magiksf, makefile, markdown, matlab, maxima, metapost, mmixal, modula, mssql, mysql, nim, nimrod, nncrontab, nsis, null, octave, opal, oscript, pascal, powerbasic, perl, phpscript, PL/M, po, pov, powerpro, powershell, abl, props, ps, purebasic, python, r, raku, rebol, registry, ruby, rust, sas, scriptol, smalltalk, SML, sorcins, specman, spice, sql, srec, stata, fcST, TACL, tads3, TAL, tcl, tcmd, tehex, tex, txt2tags, vb, vbscript, verilog, vhdl, visualprolog, x12, xml, yaml, xojo

### 160.1.140 InsertText(Text as String, atPosition as Integer = -1)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This inserts the text string at position pos or at the current position if pos is -1.
**Notes:** If the current position is after the insertion point then it is moved along with its surrounding text but no scrolling is performed.

### 160.1.141 IsRangeWord(start as Integer, ende as Integer) as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Is the range start..end a word or set of words?
**Notes:** This message checks that start is at a word start transition and that end is at a word end transition. It does not check whether there are any spaces inside the range.

### 160.1.142 LastChild(line as Integer, level as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Searches last child.
**Notes:** Searches for the next line after line, that has a folding level that is less than or equal to level and then returns the previous line number. If you set level to -1, level is set to the folding level of line line. If from is a fold point, LastChild(from, -1) returns the last line that would be in made visible or hidden by toggling the fold state.

### 160.1.143 LexerNameFromID(ID as Integer) as String

MBS Scintilla Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries name of lexer with given ID.
**Example:**

```
// constants in LexerConstants.txt in our examples folder
Const SCLEX_HTML = 4

Dim s As String = DesktopScintillaControlMBS.LexerNameFromID(SCLEX_HTML)
MessageBox s
```

### 160.1.144 LexerNames as String()

MBS Scintilla Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries list of built-in lexers.
**Notes:**

Current list is:

a68k, abaqus, ada, apdl, as, asm, asn1, asy, au3, ave, avs, baan, bash, batch, bib, blitzbasic, bullant, caml, cil, clarion, clarionnocase, cmake, COBOL, coffeescript, conf, cpp, cppnocase, csound, css, d, dataflex, diff, DMAP, DMIS, ecl, edifact, eiffel, eiffelkw, erlang, errorlist, escript, f77, flagship, forth, fortran, freebasic, fsharp, gap, gui4cli, haskell, hollywood, hypertext, ihex, indent, inno, json, julia, kix, kvirc, latex, lisp, literatehaskell, lot, lout, lua, magiksf, makefile, markdown, matlab, maxima, metapost, mmixal, modula, mssql, mysql, nim, nimrod, nncrontab, nsis, null, octave, opal, oscript, pascal, powerbasic, perl, phpscript, PL/M, po, pov, powerpro, powershell, abl, props, ps, purebasic, python, r, raku, rebol, registry, ruby, rust, sas, scriptol, smalltalk, SML, sorcins, specman, spice, sql, srec, stata, fcST, TACL, tads3, TAL, tcl, tcmd, tehex, tex, txt2tags, vb, vbscript, verilog, vhdl, visualprolog, x12, xml, yaml, xojo.

### 160.1.145 lexillaLibraryLoaded as boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether the lexilla library got loaded.
**Notes:** Returns true if you loaded lexilla dylib/dll/so file.

### 160.1.146 Line(line as Integer) as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries text of a line.
**Notes:** Index is zero based.

### 160.1.147 LineCopy

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.148 LineCut

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.149 LineDelete

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.150 LineDown

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.151 LineDownExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.152 LineDownRectExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.153 LineDuplicate

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.154 LineEnd

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.
See also:

- 160.1.155 LineEnd(line as Integer) as Integer 24080

### 160.1.155 LineEnd(line as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries line end position for the given line.
See also:

- 160.1.154 LineEnd 24080

### 160.1.156 LineEndDisplay

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.157 LineEndDisplayExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.158 LineEndExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.159 LineEndPosition(line as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This returns the position at the end of the line, before any line end characters.
**Notes:** If line is the last line in the document (which does not have any end of line characters) or greater, the result is the size of the document. If line is negative the result is undefined.

### 160.1.160 LineEndRectExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.161 LineEndWrap

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.162 LineEndWrapExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.163 LineFromIndexPosition(pos as Integer, lineCharacterIndex as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries line from position via index.
**Notes:** The document line of a particular character or code unit may be found by calling LineFromIndexPosition with one of kLineCharacterIndexTypeUtf32 (1) or kLineCharacterIndexTypeUtf16 (2). The inverse action, finds the starting position of a document line either in characters or code units from the document start by calling IndexPositionFromLine with the same lineCharacterIndex argument.

### 160.1.164 LineFromPosition(pos as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This method returns the line that contains the position pos in the document.
**Notes:**

The return value is 0 if pos <= 0.
The return value is the last line if pos is beyond the end of the document.

### 160.1.165 LineIndentPosition(line as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The position at the end of indentation of a line.

### 160.1.166 LineLength(line as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This returns the length of the line, including any line end characters.
**Notes:** If line is negative or beyond the last line in the document, the result is 0. If you want the length of the line not including any end of line characters, use LineEndPosition(line) - PositionFromLine(line).

### 160.1.167 LineReverse

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.168 LineScroll(columns as Integer, lines as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This will attempt to scroll the display by the number of columns and lines that you specify.
**Notes:**

Positive line values increase the line number at the top of the screen (i.e. they move the text upwards as far as the user is concerned), Negative line values do the reverse.
The column measure is the width of a space in the default style. Positive values increase the column at the left edge of the view (i.e. they move the text leftwards as far as the user is concerned). Negative values do the reverse.

### 160.1.169 LineScrollDown

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.170 LineScrollUp

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.171 LinesJoin

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Join a range of lines indicated by the target into one line by removing line end characters.
**Notes:** Where this would lead to no space between words, an extra space is inserted.

### 160.1.172 LinesSplit(pixelWidth as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Split a range of lines indicated by the target into lines that are at most pixelWidth wide.
**Notes:** Splitting occurs on word boundaries wherever possible in a similar manner to line wrapping. When pixelWidth is 0 then the width of the window is used.

### 160.1.173 LineStart(line as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries line start position for the given line.

### 160.1.174 LineTranspose

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.175 LineUp

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.176 LineUpExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.177 LineUpRectExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.178 LineVisible(line as Integer) as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Reports on the visible state of a line and returns true if it is visible and false if it is not visible.
**Notes:** This method has no effect on fold levels or fold flags.

### 160.1.179 LoadFramework(path as folderitem) as boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Loads the framework.
**Notes:**

You can load Scintilla framework on macOS.
Returns true on success.

### 160.1.180 LoadLibrary(path as folderitem) as boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Loads the library.
**Notes:**

You can load lexer and scintilla libraries here.
Returns true on success.

### 160.1.181 LowerCase

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.182 Margin(index as Integer) as ScintillaMarginMBS

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries margin with given index.
**Notes:** Index ranges from 0 to 5.

### 160.1.183 MarginTextClearAll

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Clears all texts for margin.

### 160.1.184 Marker(index as Integer) as ScintillaMarkerMBS

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries marker with given index.
**Notes:** Index ranges from 0 to 35.

### 160.1.185 MarkerAdd(Line as Integer, markerNumber as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This function searches the document for the marker with this handle and deletes the marker if it is found.
**Notes:** The markerHandle argument is an identifier for a marker returned by MarkerAdd.

### 160.1.186 MarkerAddSet(line as Integer, markerSet as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Add one or more markers to a line with a single call.
**Notes:** Add one or more markers to a line with a single call, specified in the same "one-bit-per-marker" 32-bit integer format returned by Marker() (and used by the mask-based marker search functions MarkerNext() and MarkerPrevious()). As with MarkerAdd, no check is made to see if any of the markers are

already present on the targeted line.

### 160.1.187 MarkerDelete(Line as Integer, markerNumber as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This searches the given line number for the given marker number and deletes it if it is present.
**Notes:** If you added the same marker more than once to the line, this will delete one copy each time it is used. If you pass in a marker number of -1, all markers are deleted from the line.

### 160.1.188 MarkerDeleteAll(markerNumber as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This removes markers of the given number from all lines.
**Notes:** If markerNumber is -1, it deletes all markers from all lines.

### 160.1.189 MarkerDeleteHandle(markerHandle as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Deletes a marker.
**Notes:**

The markerHandle argument is an identifier for a marker returned by MarkerAdd.
This function searches the document for the marker with this handle and deletes the marker if it is found.

### 160.1.190 MarkerEnableHighlight(enabled as Boolean)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This method allows to enable/disable the highlight folding block when it is selected.
**Notes:** (i.e. block that contains the caret)

### 160.1.191 MarkerGet(Line as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This returns a 32-bit integer that indicates which markers were present on the line.
**Notes:** Bit 0 is set if marker 0 is present, bit 1 for marker 1 and so on.

### 160.1.192 MarkerHandleFromLine(line as Integer, which as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Returns the Nth marker handle in a given line.
**Notes:** Handles are returned by MarkerAdd. If which is greater or equal to the number of markers on a line, this returns -1;

### 160.1.193 MarkerLineFromHandle(markerHandle as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This function searches the document for the marker with this handle and returns the line number that contains it or -1 if it is not found.
**Notes:** The markerHandle argument is an identifier for a marker returned by MarkerAdd.

### 160.1.194 MarkerNext(lineStart as Integer, markerMask as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Search efficiently for lines that include a given set of markers.
**Notes:**

The search starts at line number lineStart and continues forwards to the end of the file (MarkerNext) or backwards to the start of the file (MarkerPrevious).
The markerMask argument should have one bit set for each marker you wish to find. Set bit 0 to find marker 0, bit 1 for marker 1 and so on. The message returns the line number of the first line that contains one of the markers in markerMask or -1 if no marker is found.

### 160.1.195 MarkerNumberFromLine(line as Integer, which as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Returns the Nth marker number in a given line.
**Notes:** Handles are returned by MarkerAdd. If which is greater or equal to the number of markers on a line, this returns -1;

### 160.1.196 MarkerPrevious(lineStart as Integer, markerMask as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Search efficiently for lines that include a given set of markers.
**Notes:**

The search starts at line number lineStart and continues forwards to the end of the file (MarkerNext) or backwards to the start of the file (MarkerPrevious).
The markerMask argument should have one bit set for each marker you wish to find. Set bit 0 to find marker 0, bit 1 for marker 1 and so on. The message returns the line number of the first line that contains one of the markers in markerMask or -1 if no marker is found.

### 160.1.197 MoveCaretInsideView

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** If the caret is off the top or bottom of the view, it is moved to the nearest line that is visible to its current position.
**Notes:** Any selection is lost.

### 160.1.198 MoveSelectedLinesDown

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Move the selected lines down one line, shifting the line below before the selection.
**Notes:** The selection will be automatically extended to the beginning of the selection's first line and the end of the selection's last line. If nothing was selected, the line the cursor is currently at will be selected.

### 160.1.199 MoveSelectedLinesUp

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Move the selected lines up one line, shifting the line above after the selection.
**Notes:** The selection will be automatically extended to the beginning of the selection's first line and the end of the selection's last line. If nothing was selected, the line the cursor is currently at will be selected.

### 160.1.200 MultiEdgeAddLine(column as Integer, edgeColour as Color)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Adds a new vertical edge to the view.
**Notes:** The edge will be displayed at the given column number. The resulting edge position depends on the metric of a space character in STYLE_DEFAULT. All the edges can be cleared with MultiEdgeClearAll. MultiEdgeColumn returns the column of the Nth vertical edge (indexed from 0). If which is greater or equal to the number of vertical edges, this returns -1.

### 160.1.201 MultiEdgeClearAll

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** All the edges can be cleared with MultiEdgeClearAll.

### 160.1.202 MultiEdgeColumn(which as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** MultiEdgeColumn returns the column of the Nth vertical edge (indexed from 0).
**Notes:** If which is greater or equal to the number of vertical edges, this returns -1.

### 160.1.203 MultipleSelectAddEach

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** MultipleSelectAddEach is similar to MultipleSelectAddNext but adds multiple occurrences instead of just one.

### 160.1.204 MultipleSelectAddNext

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Adds the next occurrence of the main selection within the target to the set of selections as main.
**Notes:** If the current selection is empty then select word around caret. The current searchFlags are used so the application may choose case sensitivity and word search options.

### 160.1.205 NewLine

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.206 PageDown

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.207 PageDownExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.208 PageDownRectExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.209 PageUp

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.210 PageUpExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.211 PageUpRectExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.212 ParaDown

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.213 ParaDownExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.214 ParaUp

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.215 ParaUpExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.216 Paste

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Performs the paste operation from clipboard.

### 160.1.217 PointXFromPosition(pos as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Return the x display pixel location of text at position pos in the document.

### 160.1.218 PointYFromPosition(pos as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Return the y display pixel location of text at position pos in the document.

### 160.1.219 PositionAfter(pos as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Returns the position after another position in the document taking into account the current code page.
**Notes:** The minimum position returned is 0 and the maximum is the last position in the document. If called with a position within a multi byte character will return the position of the start/end of that character.

### 160.1.220 PositionBefore(pos as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Returns the position before another position in the document taking into account the current code page.
**Notes:** The minimum position returned is 0 and the maximum is the last position in the document. If called with a position within a multi byte character will return the position of the start/end of that character.

### 160.1.221 PositionFromLine(line as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This returns the document position that corresponds with the start of the line.
**Notes:** If line is negative, the position of the line holding the start of the selection is returned. If line is greater than the lines in the document, the return value is -1. If line is equal to the number of lines in the

document (i.e. 1 line past the last line), the return value is the end of the document.

### 160.1.222 PositionFromPoint(x as Integer, y as integer) as integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Finds the closest character position to a point.

### 160.1.223 PositionFromPointClose(x as Integer, y as integer) as integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Finds the closest character position to a point.
**Notes:** Returns -1 if the point is outside the window or not close to any characters.

### 160.1.224 PositionRelative(pos as Integer, relative as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Count a number of whole characters before or after the argument position and return that position.
**Notes:** The minimum position returned is 0 and the maximum is the last position in the document. If the position goes past the document end then 0 is returned.

### 160.1.225 PositionRelativeCodeUnits(pos as Integer, relative as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Count a number of whole characters before or after the argument position and return that position.
**Notes:**

The minimum position returned is 0 and the maximum is the last position in the document. If the position goes past the document end then 0 is returned.

These is the UTF-16 versions of PositionRelative() working in terms of UTF-16 code units

### 160.1.226 PropertyInt(name as String, defaultValue as Integer = 0) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Lookup a keyword:value pair using the specified key; if found, interpret the value as an integer and return it.
**Notes:** If not found (or the value is an empty string) then return the supplied default. If the keyword:value pair is found but is not a number, then return 0.

### 160.1.227 PropertyType(name as String) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries property type.
**Notes:** See kTypeProperty* constants.

### 160.1.228 Redo

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Undoes the effect of the last Undo operation.

### 160.1.229 ReleaseAllExtendedStyles

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Releases any extended styles allocated by the container.

### 160.1.230 ReleaseLineCharacterIndex(lineCharacterIndex as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Release one or more indexes.
**Notes:** Different aspects of an application may need indexes for different periods and should allocate for those periods. Indexes use additional memory so releasing them can help minimize memory but they also take time to recalculate. Scintilla may also allocate indexes to support features like accessibility or input method editors. Only one index of each type is created for a document at a time.

### 160.1.231 ReplaceRectangular(length as Integer, text as String)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Replaces the selected text or empty selection with the given text.
**Notes:** The insertion is performed similarly to rectangular pastes: new lines in the given text are interpreted as moving to the next line without inserting new lines unless at the end of the document.

### 160.1.232 ReplaceSelection(text as string)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The currently selected text between the anchor and the current position is replaced by the text string.
**Notes:** If the anchor and current position are the same, the text is inserted at the caret position. The caret is positioned after the inserted text and the caret is scrolled into view.

### 160.1.233 ReplaceTarget(text as string) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Replace target area with new text.
**Notes:**

After replacement, the target range refers to the replacement text. The return value is the length of the replacement string.
Note that the recommended way to delete text in the document is to set the target to the text to be removed, and to perform a replace target with an empty string.

### 160.1.234 ReplaceTargetRE(text as string) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This replaces the target using regular expressions.
**Notes:** If length is -1, text is a zero terminated string, otherwise length is the number of characters to use. The replacement string is formed from the text string with any sequences of \1 through \9 replaced by tagged matches from the most recent regular expression search. \0 is replaced with all the matched text from the most recent search. After replacement, the target range refers to the replacement text. The return value is the length of the replacement string.

### 160.1.235 ResetElementColour(element as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This removes the element colour returning to the default colour or set of colours.

### 160.1.236 RotateSelection

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Makes the next selection be the main selection.

### 160.1.237 scintillaLibraryLoaded as boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether the scintilla library got loaded.
**Notes:**

Returns true on MacOS when you loaded the Scintilla.framework before.
Returns true if you loaded Scintilla.dll on Windows or Scintilla.so on Linux.

### 160.1.238 ScrollCaret

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** If the current position (this is the caret if there is no selection) is not visible, the view is scrolled to make it visible according to the current caret policy.

### 160.1.239 ScrollRange(secondary as Integer, primary as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Scroll the argument positions and the range between them into view giving priority to the primary position then the secondary position.
**Notes:** The behaviour is similar to ScrollCaret with the primary position used instead of the caret. An effort is then made to ensure that the secondary position and range between are also visible. This may be used to make a search match visible.

### 160.1.240 ScrollToEnd

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:**

The ScrollToEnd commands scroll the document to the end without changing the selection. These commands match OS X platform conventions for the behaviour of the home and end keys. Scintilla can be made to match OS X applications by binding the home and end keys to these commands.

You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.241 ScrollToStart

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:**

The ScrollToStart commands scroll the document to the start without changing the selection. These commands match OS X platform conventions for the behaviour of the home and end keys. Scintilla can be made to match OS X applications by binding the home and end keys to these commands.

You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.242 SearchAnchor

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets the search start point used by SearchNext and SearchPrev to the start of the current selection, that is, the end of the selection that is nearer to the start of the document.
**Notes:** You should always call this before calling either of SearchNext or SearchPrev.

### 160.1.243 SearchInTarget(text as string) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This searches for the first occurrence of a text string in the target defined by TargetStart and TargetEnd.
**Notes:**

The search is modified by the search flags set by SearchFlags property. If the search succeeds, the target is

set to the found text and the return value is the position of the start of the matching text. If the search fails, the result is -1.

See Tag() for regular expression results.

| Character | Description |
|---|---|
| . | Matches any character |
| \( | This marks the start of a region for tagging a match. |
| \) | This marks the end of a tagged region. |
| \n | Where n is 1 through 9 refers to the first through ninth tagged region when replacing. For example, if the search string was Fred\( [ 1-9 ] \)XXX and the replace string was Sam\1YYY, when applied to Fred2XXX this would generate Sam2YYY. \0 refers to all of the matching text. |
| \< | This matches the start of a word using Scintilla's definitions of words. |
| \> | This matches the end of a word using Scintilla's definition of words. |
| \x | This allows you to use a character x that would otherwise have a special meaning. For example, \[ would be interpreted as [ and not as the start of a character set. |
| [ ... ] | This indicates a set of characters, for example, [ abc ] means any of the characters a, b or c. You can also use ranges, for example [ a-z ] for any lower case character. |
| [ ^... ] | The complement of the characters in the set. For example, [ ^A-Za-z ] means any character except an alphabetic character. |
| ^ | This matches the start of a line (unless used inside a set, see above). |
| $ | This matches the end of a line. |
| * | This matches 0 or more times. For example, Sa*m matches Sm, Sam, Saam, Saaam and so on. |
| + | This matches 1 or more times. For example, Sa+m matches Sam, Saam, Saaam and so on. |

### 160.1.244 SearchNext(searchFlags as Integer, text as String) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** SearchNext and SearchPrev search for the next and previous occurrence of the search string pointed at by text.
**Notes:**

The search is modified by the searchFlags.
See kFindOption* constants.

The return value is -1 if nothing is found, otherwise the return value is the start position of the matching text. The selection is updated to show the matched text, but is not scrolled into view.

### 160.1.245 SearchPrev(searchFlags as Integer, text as String) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** SearchNext and SearchPrev search for the next and previous occurrence of the search string pointed at by text.
**Notes:**

The search is modified by the searchFlags.
See kFindOption* constants.

The return value is -1 if nothing is found, otherwise the return value is the start position of the matching text. The selection is updated to show the matched text, but is not scrolled into view.

### 160.1.246 SelectAll

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This selects all the text in the document.
**Notes:** The current position is not scrolled into view.

### 160.1.247 SelectionDuplicate

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.248 SelectionNEndVirtualSpace(selection as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Query the virtual space at start and end of each selection.
**Notes:** Selection parameter is zero based.

### 160.1.249 SelectionNStartVirtualSpace(selection as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Query the virtual space at start and end of each selection.
**Notes:** Selection parameter is zero based.

### 160.1.250 SetAdditionalSelBackColor(value as Color)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets background color for additional selection.
**Notes:** Modify the appearance of additional selections so that they can be differentiated from the main selection.

### 160.1.251 SetAdditionalSelForeColor(value as Color)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets foreground color for additional selection.
**Notes:** Modify the appearance of additional selections so that they can be differentiated from the main selection.

### 160.1.252 SetCharsDefault

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Use the default sets of word and whitespace characters.
**Notes:** This sets whitespace to space, tab and other characters with codes less than & h20, with word characters set to alphanumeric and '_'.

### 160.1.253 SetDocument(otherControl as Variant)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets document for this control to be same as the other control.
**Notes:**

Using this method you can allow multiple controls to share same document, e.g. for split views.

Pass nil to create new empty document.

This method does the following:
1. It removes the current window from the list held by the current document.
2. It reduces the reference count of the current document by 1.
3. If the reference count reaches 0, the document is deleted.
4. doc is set as the new document for the window.
5. If doc was 0, a new, empty document is created and attached to the window.
6. If doc was not 0, its reference count is increased by 1.

Please pass either DesktopScintillaControlMBS or DesktopDesktopScintillaControlMBS here to point to new control.

After you assigned new document, please configure styles as needed.

### 160.1.254 SetEmptySelection(caret as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This removes any selection and sets the caret at caret.
**Notes:** The caret is not scrolled into view.

### 160.1.255 SetFoldFlags(FoldFlags as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets folder flags.
**Notes:** In addition to showing markers in the folding margin, you can indicate folds to the user by drawing lines in the text area. The lines are drawn in the kElementFoldLine colour if set. If it is not set then the foreground colour set for kStylesCommonDefault is used.

### 160.1.256 SetFoldMarginColor(useSetting as boolean, value as Color)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The colour of the fold margin.
**Example:**

```
// turn folder margin to red
c.SetFoldMarginColor(True, Color.red)
```

**Notes:**

Defaults to system color for this.

The FoldMarginColor and the FoldMarginHighlightColor colors are used together to draw the chequerboard pattern in the folder margin.

### 160.1.257 SetFoldMarginHighlightColor(useSetting as boolean, value as Color)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The colour of the fold margin highlight.
**Notes:**

Defaults to system color for this.

The FoldMarginColor and the FoldMarginHighlightColor colors are used together to draw the chequerboard pattern in the folder margin.

### 160.1.258 SetHotspotActiveBackColor(useSetting as boolean, value as Color)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets background color for hotspot.
**Notes:** While the cursor hovers over text in a style with the hotspot attribute set, the default colouring can be modified and an underline drawn with these settings.

### 160.1.259 SetHotspotActiveForeColor(useSetting as boolean, value as Color)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets foreground color for hotspot.
**Notes:** While the cursor hovers over text in a style with the hotspot attribute set, the default colouring can be modified and an underline drawn with these settings.

### 160.1.260 SetSavePoint

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This method tells Scintilla that the current state of the document is unmodified.
**Notes:**

This is usually done when the file is saved or loaded, hence the name "save point". As Scintilla performs undo and redo operations, it notifies the container that it has entered or left the save point with SavePointReached and SavePointLeft events, allowing the container to know if the file should be considered dirty or not.
See also: EmptyUndoBuffer or Modify property.

### 160.1.261 SetSel(anchor as Integer, caret as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets both the anchor and the current position.
**Notes:** If caret is negative, it means the end of the document. If anchor is negative, it means remove any selection (i.e. set the anchor to the same position as caret). The caret is scrolled into view after this operation.

### 160.1.262 SetSelBackColor(useSetting as boolean, value as Color)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** You can choose to override the default selection colouring.
**Example:**

```
// use highlight color for selection and white text

dim c as DesktopScintillaControlMBS // your control
c.SetSelBackColor(True, Color.HighlightColor)
c.SetSelForeColor(True, Color.White)
```

**Notes:** With the method, the colour you provide is used if you set useSetting to true. If it is set to false, the default styled colouring is used and the fore or back argument has no effect.

### 160.1.263 SetSelection(caret as Integer, anchor as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set a single selection from anchor to caret as the only selection.

### 160.1.264 SetSelForeColor(useSetting as boolean, value as Color)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** You can choose to override the default selection colouring.
**Example:**

```
// use highlight color for selection and white text

dim c as DesktopScintillaControlMBS // your control
c.SetSelBackColor(True, Color.HighlightColor)
c.SetSelForeColor(True, Color.White)
```

**Notes:** With the method, the colour you provide is used if you set useSetting to true. If it is set to false, the default styled colouring is used and the fore or back argument has no effect.

### 160.1.265 setStatusText(Text as String)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Targets: Desktop only.

**Function:** Sets message of status field.

### 160.1.266 SetStyling(length as Integer, style as ScintillaStyleMBS)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets the style of length characters starting at the styling position and then increases the styling position by length, ready for the next call.
**Notes:** StartStyling should be called before the first call to this.
See also:

- 160.1.267 SetStyling(start as Integer, length as Integer, style as ScintillaStyleMBS) 24105

### 160.1.267 SetStyling(start as Integer, length as Integer, style as ScintillaStyleMBS)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets the style of length characters starting at the styling position and then increases the styling position by length, ready for the next call.
**Notes:** StartStyling should be called before the first call to this.
See also:

- 160.1.266 SetStyling(length as Integer, style as ScintillaStyleMBS) 24105

### 160.1.268 SetStylingEx(Styles as MemoryBlock)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets styling for a range of text.
**Notes:** As an alternative to SetStyling, which applies the same style to each byte, you can use this method

which specifies the styles for each of length bytes from the styling position and then increases the styling position by length, ready for the next call. StartStyling should be called before the first call to this.

### 160.1.269 SetTargetRange(start as Integer, ende as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set the start and end of the target.

### 160.1.270 SetVisiblePolicy(visiblePolicy as Integer, visibleSlop as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This determines how the vertical positioning is determined when EnsureVisibleEnforcePolicy is called.
**Notes:** It takes kVisiblePolicySlop and kVisiblePolicyStrict flags for the visiblePolicy parameter. It is similar in operation to SetYCaretPolicy.

### 160.1.271 SetWhitespaceBackColor(useSetting as boolean, value as Color)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets background color for white space.
**Notes:** By default, the colour of visible white space is determined by the lexer in use. The foreground and/or background colour of all visible white space can be set globally, overriding the lexer's colours.

### 160.1.272 SetWhitespaceForeColor(useSetting as boolean, value as Color)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets foreground color for white space.
**Notes:** By default, the colour of visible white space is determined by the lexer in use. The foreground and/or background colour of all visible white space can be set globally, overriding the lexer's colours.

### 160.1.273 SetXCaretPolicy(caretPolicy as Integer, caretSlop as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets the caret policy.
**Notes:**

See kCaretPolicy* constants.

| slop | strict | jumps | even | Caret can go to the margin | "On reaching limit (going out of visibility |
|---|---|---|---|---|---|
| 0 | 0 | 0 | 0 | Yes | moved to put caret on top/on right |
| 0 | 0 | 0 | 1 | Yes | moved by one position |
| 0 | 0 | 1 | 0 | Yes | moved to put caret on top/on right |
| 0 | 0 | 1 | 1 | Yes | centred on the caret |
| 0 | 1 | - | 0 | Caret is always on top/on right of display | - |
| 0 | 1 | - | 1 | No, caret is always centred | - |
| 1 | 0 | 0 | 0 | Yes | moved to put caret out of the asymmetrical UZ |
| 1 | 0 | 0 | 1 | Yes | moved to put caret out of the UZ |
| 1 | 0 | 1 | 0 | Yes | moved to put caret at 3UZ of the top or right margin |
| 1 | 0 | 1 | 1 | Yes | moved to put caret at 3UZ of the margin |
| 1 | 1 | - | 0 | Caret is always at UZ of top/right margin | - |
| 1 | 1 | 0 | 1 | No, kept out of UZ | moved by one position |
| 1 | 1 | 1 | 0 | No, kept out of UZ | moved to put caret at 3UZ of the margin |

### 160.1.274 SetYCaretPolicy(caretPolicy as Integer, caretSlop as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets the caret policy.
**Notes:**

See kCaretPolicy* constants.

| slop | strict | jumps | even | Caret can go to the margin | "On reaching limit (going out of visibility |
|---|---|---|---|---|---|

or going into the UZ) display is..."

### 160.1.275 ShowLines(lineStart as Integer, lineEnd as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Marks a range of lines as visible and then redraw the display.

### 160.1.276 StartRecord

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

| | | | | | |
|---|---|---|---|---|---|
| 0 | 0 | 0 | 0 | Yes | moved to put caret on top/on right |
| 0 | 0 | 0 | 1 | Yes | moved by one position |
| 0 | 0 | 1 | 0 | Yes | moved to put caret on top/on right |
| 0 | 0 | 1 | 1 | Yes | centred on the caret |
| 0 | 1 | - | 0 | Caret is always on top/on right of display | - |
| 0 | 1 | - | 1 | No, caret is always centred | - |
| 1 | 0 | 0 | 0 | Yes | moved to put caret out of the asymmetrical UZ |
| 1 | 0 | 0 | 1 | Yes | moved to put caret out of the UZ |
| 1 | 0 | 1 | 0 | Yes | moved to put caret at 3UZ of the top or right margin |
| 1 | 0 | 1 | 1 | Yes | moved to put caret at 3UZ of the margin |
| 1 | 1 | - | 0 | Caret is always at UZ of top/right margin | - |
| 1 | 1 | 0 | 1 | No, kept out of UZ | moved by one position |
| 1 | 1 | 1 | 0 | No, kept out of UZ | moved to put caret at 3UZ of the margin |

**Function:** Turn macro recording on.

### 160.1.277 StartStyling(start as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This prepares for styling by setting the styling position start to start at.
**Notes:** After StartStyling, send multiple SetStyling messages for each lexical entity to style or send SetStylingEX to style in blocks.

### 160.1.278 StopRecord

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Turn macro recording off.

### 160.1.279 StringOfSpan(Span as ScintillaSpanMBS) as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries text for given span.

### 160.1.280 StutteredPageDown

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.281 StutteredPageDownExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:**

This action extends the selection.
You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.282 StutteredPageUp

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.283 StutteredPageUpExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:**

This action extends the selection.
You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.284 Style(index as Integer) as ScintillaStyleMBS

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries style with given index.
**Notes:** Index ranges from 0 to 255.

### 160.1.285 StyleAt(position as Integer) as ScintillaStyleMBS

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This returns the style at pos in the document, or 0 if pos is negative or past the end of the document.

### 160.1.286 StyleClearAll

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This message sets all styles to have the same attributes as the default style.
**Notes:**

If you are setting up Scintilla for syntax colouring, it is likely that the lexical styles you set will be very similar. One way to set the styles is to:
1. Set kStylesCommonDefault to the common features of all styles.
2. Use StyleClearAll to copy this to all styles.
3. Set the style attributes that make your lexical styles different.

### 160.1.287 StyleResetDefault

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This message resets default style (kStylesCommonDefault) to its state when Scintilla was initialised.

### 160.1.288 SupportsFeature(feature as Integer) as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Different platforms support different features and SupportsFeature can be used to check which are currently available.
**Notes:**

For example, on Win32, Direct2D supports drawing translucent lines but GDI does not so SupportsFeature(kSupportsTranslucentStroke) will return 1 for Direct2D and 0 for GDI. Its possible that translucent line drawing will be implemented in a future revision to the GDI platform layer or will be implemented on particular Windows versions. This call allows applications to tailor their settings: perhaps displaying a box with translucent coloured fill on Direct2D but a hollow box on GDI.

See kSupport* constants.

### 160.1.289 SwapMainAnchorCaret

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Moves the caret to the opposite end of the main selection.

### 160.1.290 Tab

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.291 Tag(tagNumber as Integer) as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Discover what text was matched by tagged expressions in a regular expression search.
**Notes:** This is useful if the application wants to interpret the replacement string itself.

### 160.1.292 TargetFromSelection

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set the target start and end to the start and end positions of the selection.

### 160.1.293 TargetWholeDocument

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set the target start to the start of the document and target end to the end of the document.

### 160.1.294 TextHeight(line as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This returns the height in pixels of a particular line.
**Notes:** Currently all lines are the same height.

### 160.1.295 ToggleCaretSticky

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** These method set, get or toggle the caretSticky setting which controls when the last position of the caret on the line is saved.
**Notes:**

When set to kCaretStickyOff (0), the sticky flag is off; all text changes (and all caret position changes) will remember the caret's new horizontal position when moving to different lines. This is the default.
When set to kCaretStickyOn (1), the sticky flag is on, and the only thing which will cause the editor to remember the horizontal caret position is moving the caret with mouse or keyboard (left/right arrow keys, home/end keys, etc).
When set to kCaretStickyWhiteSpace (2), the caret acts like mode 0 (sticky off) except under one special case; when space or tab characters are inserted. (Including pasting only space/tabs – undo, redo, etc. do not exhibit this behaviour..).
ToggleCaretSticky switches from kCaretStickyOn and kCaretStickyWhiteSpace to kCaretStickyOff and from kCaretStickyOff to kCaretStickyOn.

### 160.1.296 ToggleFold(line as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Toggle a folder at the given line.
**Notes:** Each fold point may be either expanded, displaying all its child lines, or contracted, hiding all the child lines. This method toggle the folding state of the given line as long as it has the kFoldLevelHeaderFlag set. This method take care of folding or expanding all the lines that depend on the line. The display updates after this method.

### 160.1.297 ToggleFoldShowText(Line as Integer, text as String)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Toggle a folder at the given line with hsowing text.
**Notes:**

Each fold point may be either expanded, displaying all its child lines, or contracted, hiding all the child lines. This method toggle the folding state of the given line as long as it has the kFoldLevelHeaderFlag set. This method take care of folding or expanding all the lines that depend on the line. The display updates after this method.

An optional text tag may be shown to the right of the folded text with the text argument to ToggleFoldShowText. The default text for all header lines can be set with DefaultFoldDisplayText. The text is drawn with the kStylesCommonFoldDisplayText style.

### 160.1.298 Undo

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Undoes one action.
**Notes:**

Or if the undo buffer has reached a EndUndoAction point, all the actions back to the corresponding BeginUndoAction.

Scintilla has multiple level undo and redo. It will continue to collect undoable actions until memory runs out. Scintilla saves actions that change the document. Scintilla does not save caret and selection movements, view scrolling and the like. Sequences of typing or deleting are compressed into single transactions to make it easier to undo and redo at a sensible level of detail. Sequences of actions can be combined into transactions that are undone as a unit. These sequences occur between BeginUndoAction and EndUndoAction messages. These transactions can be nested and only the top-level sequences are undone as units.

### 160.1.299 UpperCase

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.300 UsePopUp(popUpMode as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Clicking the wrong button on the mouse pops up a short default editing menu.
**Notes:** This may be turned off with UsePopup(kPopUpNever). If you turn it off, context menu commands (in Windows, WM_CONTEXTMENU) will not be handled by Scintilla, so the parent of the Scintilla window will have the opportunity to handle the message.

### 160.1.301 UserListShow(listType as Integer, itemList as string)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Shows an user list.
**Notes:**

User lists use the same internal mechanisms as autocompletion lists, and all the calls listed for autocompletion work on them; you cannot display a user list at the same time as an autocompletion list is active. They differ in the following respects:

- The AutoCChooseSingle method has no effect.,Ä®
- When the user makes a selection you are sent a UserListSelection event rather than AutoCompleteSelection.

BEWARE: if you have set fillup characters or stop characters, these will still be active with the user list, and may result in items being selected or the user list cancelled due to the user typing into the editor.

,Ä®The listType parameter is carried to the events. It must be greater than 0 as this is how Scintilla tells the difference between an autocompletion list and a user list. If you have different types of list, for example a list of buffers and a list of macros, you can use listType to tell which one has returned a selection.

### 160.1.302 VCHome

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.303 VCHomeDisplay

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.304 VCHomeDisplayExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:**

This action extends the selection.
You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.305 VCHomeExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:**

This action extends the selection.
You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.306 VCHomeRectExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:**

This action extends the selection.
You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.307 VCHomeWrap

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.308 VCHomeWrapExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:**

This action extends the selection.
You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.309 VerticalCentreCaret

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.310 VisibleFromDocLine(line as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** When some lines are hidden and/or annotations are displayed, then a particular line in the document may be displayed at a different position to its document position.
**Notes:** If no lines are hidden and there are no annotations, this method returns docLine. Otherwise, this returns the display line (counting the very first visible line as 0). The display line of an invisible line is the

same as the previous visible line. The display line number of the first line in the document is 0. If lines are hidden and docLine is outside the range of lines in the document, the return value is -1. Lines can occupy more than one display line if they wrap.

### 160.1.311 WordEndPosition(pos as Integer, onlyWordCharacters as boolean) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Returns the end of words using the same definition of words as used internally within Scintilla.
**Notes:** You can set your own list of characters that count as words with WordChars. The position sets the start or the search, which is forwards when searching for the end and backwards when searching for the start.

### 160.1.312 WordLeft

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.313 WordLeftEnd

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:**

The *End methods move between word ends instead of word starts.
You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.314 WordLeftEndExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:**

The *End methods move between word ends instead of word starts.
This action extends the selection.
You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.315 WordLeftExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:**

This action extends the selection.
You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.316 WordPartLeft

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:**

The WordPart** commands are used to move between word segments marked by capitalisation (aCamelCaseIdentifier) or underscores (an_under_bar_ident).
You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.317 WordPartLeftExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:**

The WordPart** commands are used to move between word segments marked by capitalisation (aCamelCaseIdentifier) or underscores (an_under_bar_ident).
This action extends the selection.
You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.318 WordPartRight

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:**

The WordPart** commands are used to move between word segments marked by capitalisation (aCamelCaseIdentifier) or underscores (an_under_bar_ident).
You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.319 WordPartRightExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:**

The WordPart** commands are used to move between word segments marked by capitalisation (aCamelCaseIdentifier) or underscores (an_under_bar_ident).
This action extends the selection.
You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.320 WordRight

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.321 WordRightEnd

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:**

The *End methods move between word ends instead of word starts.
You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.322 WordRightEndExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:**

The *End methods move between word ends instead of word starts.
This action extends the selection.
You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.323 WordRightExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:**

This action extends the selection.
You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.1.324 WordStartPosition(pos as Integer, onlyWordCharacters as boolean) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Returns the start of words using the same definition of words as used internally within Scintilla.
**Notes:** You can set your own list of characters that count as words with WordChars. The position sets the start or the search, which is forwards when searching for the end and backwards when searching for the start.

### 160.1.325 WrapCount(line as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Document lines can occupy more than one display line if they wrap and this returns the number of display lines needed to wrap a document line.

### 160.1.326 ZoomIn

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Increases the zoom factor by one point if the current zoom factor is less than 20 points.

### 160.1.327 ZoomOut

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Ddecreases the zoom factor by one point if the current zoom factor is greater than -10 points.

### 160.1.328 Properties

### 160.1.329 Accessibility as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Enable or disable accessibility status.
**Notes:**

Can be set to kAccessibilityEnabled to enable.
(Read and Write property)

### 160.1.330 AdditionalCaretForeColor as Color

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Modify the appearance of additional carets so that they can be differentiated from the main caret which has its appearance.
**Notes:** (Read and Write property)

### 160.1.331 AdditionalCaretsBlink as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Modify the appearance of additional carets so that they can be differentiated from the main caret which has its appearance.
**Notes:** (Read and Write property)

### 160.1.332 AdditionalCaretsVisible as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Determine whether to show additional carets (defaults to true).
**Notes:** (Read and Write property)

### 160.1.333 AdditionalSelAlpha as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets alpha for additional selection.
**Notes:**

Modify the appearance of additional selections so that they can be differentiated from the main selection.
(Read and Write property)

### 160.1.334 AdditionalSelectionTyping as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether typing, new line, cursor left/right/up/down, backspace, delete, home, and end work with multiple selections simultaneously.
**Notes:**

Also allows selection and word and line deletion commands.
(Read and Write property)

### 160.1.335 AllLinesVisible as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Returns true if all lines are visible and false if some lines are hidden.
**Notes:** (Read only property)

### 160.1.336 Anchor as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The current anchor position.
**Notes:**

This sets the anchor position and creates a selection between the anchor position and the current position. The caret is not scrolled into view.
(Read and Write property)

### 160.1.337 AnnotationVisible as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Annotations can be made visible in a view and there is a choice of display style when visible.
**Notes:**

See kAnnotationVisible* constants.
(Read and Write property)

### 160.1.338 AutoCompleteActive as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Returns true if there is an active auto completion list and false if there is not.
**Notes:** (Read only property)

### 160.1.339 AutoCompleteAutoHide as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** By default, the list is cancelled if there are no viable matches (the user has typed characters that no longer match a list entry).
**Notes:**

If you want to keep displaying the original list, set autoHide to false. This also effects AutoCompleteSelect.
(Read and Write property)

### 160.1.340 AutoCompleteCancelAtStart as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The default behaviour is for the list to be cancelled if the caret moves to the location it was at when the list was displayed.
**Notes:**

By calling this message with a false argument, the list is not cancelled until the caret moves at least one character before the word being completed.
(Read and Write property)

### 160.1.341 AutoCompleteCaseInsensitiveBehaviour as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether to ignore case on auto completion.
**Notes:**

When auto completion is set to ignore case (kCaseInsensitiveBehaviourIgnoreCase), by default it will nonetheless select the first list member that matches in a case sensitive way to entered characters. This corresponds to a behaviour property of kCaseInsensitiveBehaviourRespectCase (0). If you want auto completion to ignore case at all, choose kCaseInsensitiveBehaviourIgnoreCase (1).
(Read and Write property)

### 160.1.342 AutoCompleteChooseSingle as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether to choose single item directly.
**Notes:**

If you use AutoCompleteChooseSingle(1) and a list has only one item, it is automatically added and no list is displayed. The default is to display the list even if there is only a single item.
(Read and Write property)

### 160.1.343 AutoCompleteCurrent as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set to select an item in the autocompletion list.
**Notes:**

It searches the list of words for the first that matches select. By default, comparisons are case sensitive, but you can change this with AutoCIgnoreCase. The match is character by character for the length of the select string. That is, if select is "Fred" it will match "Frederick" if this is the first item in the list that begins with "Fred". If an item is found, it is selected. If the item is not found, the autocompletion list closes if auto-hide is true (see AutoCAutoHide).
The current selection index can be retrieved with AutoCompleteCurrent.
(Read only property)

### 160.1.344 AutoCompleteCurrentText as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Retrieves the current selected text in the autocompletion list.
**Notes:**

Normally the AutoCompletion event is used instead.
The value is copied to the text buffer or if not found, an empty string is returned.
(Read only property)

### 160.1.345 AutoCompleteDropRestOfWord as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** When an item is selected, any word characters following the caret are first erased if dropRestOf-Word is set true.
**Notes:**

The default is false.
(Read and Write property)

### 160.1.346 AutoCompleteIgnoreCase as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** By default, matching of characters to list members is case sensitive.
**Notes:**

These method let you set and get case sensitivity.
(Read and Write property)

### 160.1.347 AutoCompleteMaxHeight as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Get or set the maximum number of rows that will be visible in an auto completion list.
**Notes:**

If there are more rows in the list, then a vertical scrollbar is shown. The default is 5.
(Read and Write property)

### 160.1.348 AutoCompleteMaxWidth as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Get or set the maximum width of an auto completion list expressed as the number of characters in the longest item that will be totally visible.
**Notes:**

If zero (the default) then the list's width is calculated to fit the item with the most characters. Any items that cannot be fully displayed within the available width are indicated by the presence of ellipsis.
(Read and Write property)

### 160.1.349 AutoCompleteMulti as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether to auto complete multiple selections.
**Notes:**

When auto completing with multiple selections present, the auto completed text can go into just the main selection with kMultiAutoCompleteOnce (0) or into each selection with kMultiAutoCompleteEach (1). The default is kMultiAutoCompleteOnce.
(Read and Write property)

### 160.1.350 AutoCompleteOptions as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set options for auto completion.
**Notes:**

See kAutoCompleteOption* constants.
(Read and Write property)

### 160.1.351 AutoCompleteOrder as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The default setting kOrderingPreSorted (0) requires that the list be provided in alphabetical sorted order.
**Notes:**

Sorting the list can be done by Scintilla instead of the application with kOrderingPerformSort (1). This will take additional time.
Applications that wish to prioritize some values and show the list in order of priority instead of alphabetical order can use kOrderingCustom (2). This requires extra processing in AutoCompleteShow to create a sorted index.
Setting the order should be done before calling AutoCompleteShow.
(Read and Write property)

### 160.1.352 AutoCompleteSeparator as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set and get the separator character used to separate words in the AutoCompleteShow list.
**Notes:**

The default is the space character.
(Read and Write property)

### 160.1.353 AutoCompleteTypeSeparator as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set or get the type separator for auto complete.
**Notes:** (Read and Write property)

### 160.1.354 AutomaticFold as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The automatic folding behavior.
**Notes:**

The fundamental operation in folding is making lines invisible or visible. Line visibility is a property of the view rather than the document so each view may be displaying a different set of lines. From the point of view of the user, lines are hidden and displayed using fold points. Generally, the fold points of a document are based on the hierarchical structure of the document contents. In Python, the hierarchy is determined by indentation and in C++ by brace characters. This hierarchy can be represented within a Scintilla document object by attaching a numeric "fold level" to each line. The fold level is most easily set by a lexer, but you can also set it with method.

It is up to your code to set the connection between user actions and folding and unfolding. The best way to see how this is done is to search the SciTE source code for the methods used in this section of the documentation and see how they are used. You will also need to use markers and a folding margin to complete your folding implementation. The "fold" property should be set to "1" with SetProperty("fold", "1") to enable folding.

Instead of implementing all the logic for handling folding in the container, Scintilla can provide behaviour that is adequate for many applications. The automaticFold argument is a bit set defining which of the 3 pieces of folding implementation should be enabled. Most applications should be able to use the kAutomaticFoldShow and kAutomaticFoldChange flags unless they wish to implement quite different behaviour such as defining their own fold structure. kAutomaticFoldClick is more likely to be set off when an application would like to add or change click behaviour such as showing method headers only when Shift+Alt is used in conjunction with a click.
(Read and Write property)

### 160.1.355 BackSpaceUnIndents as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether backspace unindents.
**Notes:**

Inside indentation white space, the tab and backspace keys can be made to indent and unindent rather than

insert a tab character or delete a character with the TabIndents and BackSpaceUnIndents functions.
(Read and Write property)

### 160.1.356 Bidirectional as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets or queries bidirectional support.
**Notes:**

The bidirectional features in Scintilla are experimental and incomplete.

Some languages, like Arabic and Hebrew, are written from right to left instead of from left to right as English is. Documents that use multiple languages may contain both directions and this is termed "bidirectional". The default text direction may be right to left or left to right. Scintilla only correctly displays bidirectional text on some platforms. Currently, there is experimental support for bidirectional text on Win32 using DirectWrite and on macOS using Cocoa. Only UTF-8 documents will show bidirectional behaviour and only in kBidirectionalL2R mode. Some features, such as virtual space may not work with bidirectional text or may work only in some circumstances. kBidirectionalR2L may be implemented in the future.

There are additional processing and storage costs to bidirectional text. As some applications may not want to pay the costs, bidirectional support must be explicitly enabled by calling Bidirectional = kBidirectionalL2R (1) which chooses left to right as the default direction or Bidirectional = kBidirectionalR2L (2) for default right to left.

On Win32, this should be done after setting the technology to kTechnologyDirectWrite, kTechnologyDirectWriteRetain, or kTechnologyDirectWriteDC.

If the call succeeded Bidirectional query will return the same value otherwise kBidirectionalDisabled (0) is returned.
(Read and Write property)

### 160.1.357 CallTipActive as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This returns true if a call tip is active and false if it is not active.
**Notes:** (Read only property)

### 160.1.358 CallTipPosStart as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This property returns or sets the value of the current position when CallTipShow started to display the tip.
**Notes:** (Read and Write property)

### 160.1.359 CanPaste as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether clipboard has text and paste can be performed.
**Notes:**

Returns false if document is read only or selection contains protected text.
(Read only property)

### 160.1.360 CanRedo as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether Undo was performed and a Redo step is possible.
**Notes:**

You could typically use the result of this property to enable/disable the Edit menu Redo command.
(Read only property)

### 160.1.361 CanUndo as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether undo stack contains data and can be used to undo.
**Notes:**

You would typically use the result of this property to enable/disable the Edit menu Undo command.
(Read only property)

### 160.1.362 CaretForeColor as Color

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The colour of the caret.
**Example:**

```
dim ScintillaEditor as DesktopScintillaControlMBS // your control

// set cursor width and color

ScintillaEditor.CaretForeColor = Color.HighlightColor
ScintillaEditor.CaretWidth = 8
```

**Notes:** (Read and Write property)

### 160.1.363 CaretLineBackAlpha as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The caret line be drawn translucently which allows other background colours to show through.
**Notes:**

hTis is done by setting the alpha (translucency) value by calling CaretLineBackAlpha. When the alpha is not kAlphaNoAlpha, the caret line is drawn after all other features so will affect the colour of all other features.
(Read and Write property)

### 160.1.364 CaretLineBackColor as Color

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The background colour of the line containing the caret different
**Notes:**

Set the desired background colour with CaretLineBackColor, then use CaretLineVisible = true to enable the effect. You can cancel the effect with CaretLineVisible = false.
(Read and Write property)

### 160.1.365 CaretLineFrame as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** can be used to display the caret line framed instead of filling the whole background.
**Notes:**

Set width <>0 to enable this option and width = 0 to disable it.
(Read and Write property)

### 160.1.366 CaretLineHighlightSubLine as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Choose to highlight only the subline containing the caret instead of the whole line.
**Notes:**

Default behaviour CaretLineHighlightSubLine = false the whole caret line is highlighted.
(Read and Write property)

### 160.1.367 CaretLineLayer as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** You can choose to make the background colour of the line containing the caret.
**Notes:**

This effect may be drawn translucently over the text or opaquely on the base layer with CaretLineLayer. Background colouring has highest priority when a line has markers that would otherwise change the background colour. When drawn translucently other background colours can show through.

See kLayer* constants.
(Read and Write property)

### 160.1.368 CaretLineVisible as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether caret line is visible.
**Notes:**

Set the desired background colour with CaretLineBackColor, then use CaretLineVisible = true to enable the effect. You can cancel the effect with CaretLineVisible = false.
(Read and Write property)

### 160.1.369 CaretLineVisibleAlways as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Choose to make the caret line always visible even when the window is not in focus.
**Notes:**

Default behaviour false the caret line is only visible when the window is in focus.
(Read and Write property)

### 160.1.370 CaretPeriod as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The rate at which the caret blinks.
**Notes:**

The rate at which the caret blinks can be set with CaretPeriod which determines the time in milliseconds that the caret is visible or invisible before changing state. Setting the period to 0 stops the caret blinking. The default value is 500 milliseconds.
(Read and Write property)

### 160.1.371 CaretSticky as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set, get or toggle the caretSticky setting which controls when the last position of the caret on the line is saved.
**Notes:**

These messages set, get or toggle the caretSticky setting which controls when the last position of the caret on the line is saved.

When set to kCaretStickyOff (0), the sticky flag is off; all text changes (and all caret position changes) will remember the caret's new horizontal position when moving to different lines. This is the default.

When set to kCaretStickyOn (1), the sticky flag is on, and the only thing which will cause the editor to remember the horizontal caret position is moving the caret with mouse or keyboard (left/right arrow keys, home/end keys, etc).

When set to kCaretStickyWhiteSpace (2), the caret acts like mode 0 (sticky off) except under one special case; when space or tab characters are inserted. (Including pasting only space/tabs – undo, redo, etc. do not exhibit this behaviour..).

SCI_TOGGLECARETSTICKY switches from kCaretStickyOn and kCaretStickyWhiteSpace to kCaretStickyOff and from kCaretStickyOff to kCaretStickyOn.
(Read and Write property)

### 160.1.372 CaretStyle as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The style of the caret.
**Notes:**

There are separate styles for insert mode (lower 4-bits, kCaretStyleInsMask) and overtype mode (bit 4).

See kCaretStyle* constants.

The block caret draws most combining and multibyte character sequences successfully, though some fonts like Thai Fonts (and possibly others) can sometimes appear strange when the cursor is positioned at these characters, which may result in only drawing a part of the cursor character sequence. This is most notable on Windows platforms.
(Read and Write property)

### 160.1.373 CaretWidth as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The width of the line caret.
**Example:**

```
dim ScintillaEditor as DesktopScintillaControlMBS // your control

// set cursor width and color

ScintillaEditor.CaretForeColor = Color.HighlightColor
ScintillaEditor.CaretWidth = 8
```

**Notes:**

can be set to a value of between 0 and 20 pixels. The default width is 1 pixel.

A width of 0 makes the caret invisible, similar to setting the caret style to kCaretStyleInvisible (though not interchangeable). This setting only affects the width of the cursor when the cursor style is set to line caret mode, it does not affect the width for a block caret.
(Read and Write property)

### 160.1.374 CharacterCategoryOptimization as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Optimize speed of character category features like determining whether a character is a space or number at the expense of memory.
**Notes:**

Mostly used for Unicode documents. The countCharacters parameter determines how many character starting from 0 are added to a look-up table with one byte used for each character. It is reasonable to cover the set of characters likely to be used in a document so & h100 for simple Roman text, & h1000 to cover most simple alphabets, & h10000 to cover most of East Asian languages, and & h110000 to cover all possible characters.
(Read and Write property)

### 160.1.375 ControlCharSymbol as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The mnemonics may be replaced by a nominated symbol with an ASCII code in the range 32 to 255.
**Notes:**

If you set a symbol value less than 32, all control characters are displayed as mnemonics. The symbol you set is rendered in the font of the style set for the character.

The default symbol value is 0.
(Read and Write property)

### 160.1.376 CurrentLine as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This retrieves the text of the line containing the caret and returns the position within the line of the caret.
**Notes:** (Read only property)

### 160.1.377 Cursor as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The current mouse cursor.
**Notes:**

The cursor is normally chosen in a context sensitive way, so it will be different over the margin than when over the text. When performing a slow action, you may wish to change to a wait cursor. You set the cursor type with assignment to this property.

See kCursorShape* constants.

Cursor values 1 through 7 have defined cursors, but only kCursorShapeWait is usefully controllable. Other values of cursorType cause a pointer to be displayed. Reading the cursor property returns the last cursor type you set, or kCursorShapeNormal (-1) if you have not set a cursor type.
(Read and Write property)

### 160.1.378 DefaultFoldDisplayText as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set and get the default text displayed at the right of the folded text.
**Notes:** (Read and Write property)

### 160.1.379 DescribeKeyWordSets as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** A description of all of the keyword sets separated by LF.
**Notes:** (Read only property)

### 160.1.380 DocumentOptions as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The documentation options used to create the document.
**Notes:** (Read only property)

### 160.1.381 EdgeColor as Color

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set and get the colour of the marker used to show that a line has exceeded the length set by EdgeColumn property.
**Notes:** (Read and Write property)

### 160.1.382 EdgeColumn as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set and get the column number at which to display the long line marker.
**Notes:**

When drawing lines, the column sets a position in units of the width of a space character in kStylesCommonDefault. When setting the background colour, the column is a character count (allowing for tabs) into the line.
(Read and Write property)

### 160.1.383 EdgeMode as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set and get the mode used to display long lines.
**Notes:**

You can choose to mark lines that exceed a given length by drawing a vertical line or by colouring the background of characters that exceed the set length.

See kEdgeVisualStyle* constants.
(Read and Write property)

### 160.1.384 EndAtLastLine as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** EndAtLastLine sets the scroll range so that maximum scroll position has the last line at the bottom of the view (default).
**Notes:**

Setting this to false allows scrolling one page below the last line.
(Read and Write property)

### 160.1.385 EOLAnnotationVisible as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set and get the annotation display mode.
**Notes:**

End of Line Annotations can be made visible in a view and there is a choice of display style when visible.

See kEOLAnnotationVisible* constants.
(Read and Write property)

### 160.1.386 EOLMode as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets the characters that are added into the document when the user presses the Enter key.
**Notes:**

You can set eolMode to one of kEndOfLineCRLF (0), kEndOfLineCR (1), or kEndOfLineLF (2).

Scintilla can handle the major line end conventions and, depending on settings and the current lexer also support additional Unicode line ends.
Scintilla can interpret any of the Macintosh (CR), Unix (LF) and Windows (CR+LF) line ends. When the user presses the Enter key, one of these line end strings is inserted into the buffer. The default is CRL+LF in Windows and LF in Unix, but this can be changed with the EOLMode proeprty. You can also convert the entire document to one of these line endings with ConvertEOLs. Finally, you can choose to display the line endings with ViewEOL.

For the UTF-8 encoding, three additional Unicode line ends, Next Line (NEL=U+0085), Line Separator (LS=U+2028), and Paragraph Separator (PS=U+2029) may optionally be interpreted when Unicode line ends is turned on and the current lexer also supports Unicode line ends.
(Read and Write property)

### 160.1.387 ExtraAscent as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The extra ascent.
**Notes:**

Text is drawn with the base of each character on a 'baseline'. The height of a line is found from the maximum that any style extends above the baseline (its 'ascent'), added to the maximum that any style extends below the baseline (its 'descent'). Space may be added to the maximum ascent (ExtraAscent) and the maximum descent (ExtraDescent) to allow for more space between lines. This may done to make the text easier to read or to accommodate underlines or highlights.

The extra ascent and descent values can be negative but that should be done with care as it may lead to unexpected interference when lines share space.
(Read and Write property)

### 160.1.388 ExtraDescent as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The extra descent.
**Notes:**

Text is drawn with the base of each character on a 'baseline'. The height of a line is found from the maximum that any style extends above the baseline (its 'ascent'), added to the maximum that any style extends below the baseline (its 'descent'). Space may be added to the maximum ascent (ExtraAscent) and the maximum descent (ExtraDescent) to allow for more space between lines. This may done to make the text easier to read or to accommodate underlines or highlights.

The extra ascent and descent values can be negative but that should be done with care as it may lead to unexpected interference when lines share space.
(Read and Write property)

### 160.1.389 FirstVisibleLine as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Retrieve or set the line number of the first visible line in the Scintilla view.
**Notes:**

The first line in the document is numbered 0. The value is a visible line rather than a document line.
(Read and Write property)

### 160.1.390 Focus as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether we have focus.
**Notes:**

Scintilla can be told to grab the focus with GrabFocus. This is needed more on GTK where focus handling is more complicated than on Windows.
The internal focus flag can be set with Focus. This is used by clients that have complex focus requirements such as having their own window that gets the real focus but with the need to indicate that Scintilla has the logical focus.
(Read and Write property)

### 160.1.391 FoldDisplayTextStyle as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Changes the appearance of fold text tags.
**Notes:** (Read and Write property)

### 160.1.392 FontLocale as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set the locale used for font selection with language-dependent glyphs.
**Notes:**

It may, depending on platform and other circumstances influence the display of text, so setting "zh-Hant" may result in traditional Chinese display and "zh-Hans" may result in simplified Chinese display. It is currently only implemented for Win32 using DirectWrite where the value is passed as the localeName argument to CreateTextFormat. The default value is US English "en-us".
(Read and Write property)

### 160.1.393 FontQuality as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Manage font quality (antialiasing method).
**Notes:**

See kFontQualityQuality* constants.
(Read and Write property)

### 160.1.394 HasBorder as Boolean

MBS Scintilla Plugin, Plugin Version: 22.4, Platform: Windows, Targets: Desktop only.

**Function:** Enable/disable border for Windows.
**Notes:**

If this flag is set before the control is constructed, you get the control instated on Windows with a border line.
(Read and Write property)

### 160.1.395 HighlightGuide as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** When brace highlighting occurs, the indentation guide corresponding to the braces may be highlighted with the brace highlighting style, kStylesCommonBraceLight (34).
**Notes:**

Set column to 0 to cancel this highlight.
(Read and Write property)

### 160.1.396 HotspotActiveBack as Color

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries background color for hotspot.
**Notes:** (Read only property)

### 160.1.397 HotspotActiveFore as Color

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries foreground color for hotspot.
**Notes:** (Read only property)

### 160.1.398 HotspotActiveUnderline as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** While the cursor hovers over text in a style with the hotspot attribute set, this option shows underline.
**Notes:** (Read and Write property)

### 160.1.399 HotspotSingleLine as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Single line mode stops a hotspot from wrapping onto next line.
**Notes:** (Read and Write property)

### 160.1.400 HScrollBar as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The horizontal scroll bar is only displayed if it is needed for the assumed width.
**Notes:**

If you never wish to see it, call HScrollBar = false. Use HScrollBar = true to enable it again. Querying HScrollBar returns the current state. The default state is to display it when needed.
(Read and Write property)

### 160.1.401 IdleStyling as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The idel styling setting.
**Notes:**

By default, kIdleStylingNone (0), syntax styling is performed for all the currently visible text before displaying it. On very large files, this may make scrolling down slow. With kIdleStylingToVisible (1), a small amount of styling is performed before display and then further styling is performed incrementally in the background as an idle-time task. This may result in the text initially appearing uncoloured and then, some time later, it is coloured. Text after the currently visible portion may be styled in the background with kIdleStylingAfterVisible (2). To style both before and after the visible text in the background use kIdleStylingAll (3).
Since wrapping also needs to perform styling and also uses idle time, this setting has no effect when the document is displayed wrapped.
(Read and Write property)

### 160.1.402 IMEInteraction as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Configures IME interaction.
**Notes:**

When entering text in Chinese, Japanese, or Korean an Input Method Editor (IME) may be displayed. The IME may be an extra window appearing above Scintilla or may be displayed by Scintilla itself as text. On some platforms there is a choice between the two techniques. A windowed IME kIMEInteractionWindowed (0) may be more similar in appearance and behaviour to the IME in other applications. An inline IME kIMEInteractionInline (1) may work better with some Scintilla features such as rectangular and multiple selection.
The windowed behaviour can be chosen with IMEInteraction = kIMEInteractionWindowed and the inline behaviour with IMEInteraction = kIMEInteractionInline. Scintilla may ignore this call in some cases. For example, the inline behaviour might only be supported for some languages.
When the inline IME mode is active, characters are added tentatively before being finalised and an Charac-

terAdded event (with characterSource set to kCharacterSourceTentativeInput) is sent for each character.
(Read and Write property)

### 160.1.403 Indent as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets the size of indentation in terms of the width of a space in KStylesCommonDefault.
**Notes:**

If you set a width of 0, the indent size is the same as the tab size. There are no limits on indent sizes, but values less than 0 or large values may have undesirable effects.

Indentation (the white space at the start of a line) is often used by programmers to clarify program structure and in some languages, for example Python, it may be part of the language syntax. Tabs are normally used in editors to insert a tab character or to pad text with spaces up to the next tab.
When Scintilla is laying out a section of text, text after a tab character will usually be displayed at the next multiple of TabWidth columns from the left. However, it is also possible to explicitly set tabstops in pixels for each line.
Scintilla can be set to treat tab and backspace in the white space at the start of a line in a special way: inserting a tab indents the line to the next indent position rather than just inserting a tab at the current character position and backspace unindents the line rather than deleting a character. Scintilla can also display indentation guides (vertical lines) to help you to generate code.
(Read and Write property)

### 160.1.404 IndentationGuides as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Indentation guides are dotted vertical lines that appear within indentation white space every indent size columns.
**Notes:**

They make it easy to see which constructs line up especially when they extend over multiple pages. Style kStylesCommonIndentGuide (37) is used to specify the foreground and background colour of the indentation guides.
There are 4 indentation guide views. kIndentViewNone turns the feature off but the other 3 states determine how far the guides appear on empty lines.
(Read and Write property)

### 160.1.405 IndicatorCurrent as ScintillaIndicatorMBS

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The current indicator.
**Notes:** (Read and Write property)

### 160.1.406 IndicatorValue as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set and get the value that will be set by calls to IndicatorFillRange.
**Notes:** (Read and Write property)

### 160.1.407 LayoutCache as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Enable layout cache.
**Notes:** (Read and Write property)

### 160.1.408 Length as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The length of the document in bytes.
**Notes:** (Read only property)

### 160.1.409 LexerLanguage as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Returns the name of the current lexer.
**Notes:** (Read only property)

### 160.1.410 LibraryError as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The error message from loading the library.
**Notes:** (Read only property)

### 160.1.411 LineCharacterIndex as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Returns which if any indexes are active.
**Notes:** (Read only property)

### 160.1.412 LineCount as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This returns the number of lines in the document.
**Notes:**

An empty document contains 1 line. A document holding only an end of line sequence has 2 lines.
(Read only property)

### 160.1.413 LineEndTypesActive as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Reports the set of line ends currently interpreted by Scintilla.
**Notes:**

It is LineEndTypesSupported and LineEndTypesAllowed.

See kLineEndType* constants.
(Read only property)

### 160.1.414 LineEndTypesAllowed as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** By default, only the ASCII line ends are interpreted.
**Notes:**

Unicode line ends may be requested with LineEndTypesAllowed = kLineEndTypeUnicode but this will be ineffective unless the lexer also allows you Unicode line ends.

See kLineEndType* constants.
(Read and Write property)

### 160.1.415 LineEndTypesSupported as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Reports the different types of line ends supported by the current lexer.
**Notes:**

This is a bit set although there is currently only a single choice with either kLineEndTypeDefault (0) or kLineEndTypeUnicode (1). These values are also used by the other messages concerned with Unicode line ends.

See kLineEndType* constants.
(Read only property)

### 160.1.416 LinesOnScreen as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This returns the number of complete lines visible on the screen.
**Notes:**

With a constant line height, this is the vertical space available divided by the line separation. Unless you arrange to size your window to an integral number of lines, there may be a partial line visible at the bottom of the view.
(Read only property)

### 160.1.417 MainSelection as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries index of main selection.
**Notes:**

One of the selections is the main selection which is used to determine what range of text is automatically visible. The main selection may be displayed in different colours or with a differently styled caret. Only an already existing selection can be made main.
(Read and Write property)

### 160.1.418 MarginLeft as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set and get the width of the blank margin on left side of the text in pixels.
**Notes:**

The default is to one pixel on each side.
(Read and Write property)

### 160.1.419 MarginOptions as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Define margin options by enabling appropriate bit flags.
**Notes:**

At the moment, only one flag is available kMarginOptionSubLineSelect = 1, which controls how wrapped lines are selected when clicking on margin in front of them. If kMarginOptionSubLineSelect is set only sub line of wrapped line is selected, otherwise whole wrapped line is selected. Margin options are set to kMarginOptionNone=0 by default.
(Read and Write property)

### 160.1.420 MarginRight as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set and get the width of the blank margin on right side of the text in pixels.
**Notes:**

The default is to one pixel on each side.
(Read and Write property)

### 160.1.421 Margins as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Allocate the number of margins or find the number of margins currently allocated.
**Notes:** (Read and Write property)

### 160.1.422 MaxLineState as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This returns the last line that has any line state.
**Notes:** (Read only property)

### 160.1.423 ModEventMask as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The modification event masks.
**Notes:**

Set and get an event mask that determines which document change events are notified to the container with Modify event. For example, a container may decide to see only notifications about changes to text and not styling changes by setting ModEventMask = kModificationFlagsInsertText + kModificationFlagsDeleteText.
(Read and Write property)

### 160.1.424 Modify as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This returns true if the document is modified and false if it is unmodified.
**Notes:**

The modified status of a document is determined by the undo position relative to the save point. The save point is set by SetSavePoint, usually when you have saved data to a file.
If you need to be notified when the document becomes modified, Scintilla notifies the container that it has entered or left the save point with the SavePointReached and SavePointLeft notification messages.
(Read only property)

### 160.1.425 MouseDownCaptures as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** When the mouse is pressed inside Scintilla, it is captured so future mouse movement events are sent to Scintilla.
**Notes:**

This behaviour may be turned off with MouseDownCaptures = false.
(Read and Write property)

### 160.1.426 MouseDwellTime as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The time the mouse must sit still, in milliseconds, to generate a DWellStart event.
**Notes:**

If set to kTimeForever, the default, no dwell events are generated.
(Read and Write property)

### 160.1.427 MouseSelectionRectangularSwitch as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Enable or disable the ability to switch to rectangular selection mode while making a selection with the mouse.
**Notes:**

When this option is turned on, mouse selections in stream mode can be switched to rectangular mode by pressing the corresponding modifier key. They then stick to rectangular mode even when the modifier key is released again. When this option is turned off, mouse selections will always stick to the mode the selection was started in. It is off by default.
(Read and Write property)

### 160.1.428 MouseWheelCaptures as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether to capture mouse wheel events.
**Notes:**

On Windows, Scintilla captures all WM_MOUSEWHEEL messages if it has the focus, even if the mouse pointer is nowhere near the Scintilla editor window. This behaviour can be changed with MouseWheelCaptures = false so that Scintilla passes the WM_MOUSEWHEEL messages to its parent window. Scintilla will still react to the mouse wheel if the mouse pointer is over the editor window.
(Read and Write property)

### 160.1.429 MoveExtendsSelection as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This returns true if regular caret moves will extend or reduce the selection, false if not.
**Notes:**

SetSelectionMode toggles this setting between on and off.
(Read only property)

### 160.1.430 MultiPaste as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** How to do paste with multiple selection.
**Notes:**

When pasting into multiple selections, the pasted text can go into just the main selection with kMultiPasteOnce=0 or into each selection with kMultiPasteEach=1. kMultiPasteOnce is the default.
(Read and Write property)

### 160.1.431 MultipleSelection as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Enable or disable multiple selection.
**Notes:**

When multiple selection is disabled, it is not possible to select multiple ranges by holding down the Ctrl key while dragging with the mouse.

There may be multiple selections active at one time. More selections are made by holding down the Ctrl key while dragging with the mouse. The most recent selection is the main selection and determines which part of the document is shown automatically. Any selection apart from the main selection is called an additional selection. The calls in the previous section operate on the main selection. There is always at least one selection. The selection can be simplified down to just the main selection by Cancel which is normally mapped to the Esc key.

Rectangular selections are handled as multiple selections although the original rectangular range is remembered so that subsequent operations may be handled differently for rectangular selections. For example, pasting a rectangular selection places each piece in a vertical column.

Virtual space is space beyond the end of each line. The caret may be moved into virtual space but no real space will be added to the document until there is some text typed or some other text insertion command is used.

When discontiguous selections are copied to the clipboard, each selection is added to the clipboard text in order with no delimiting characters. For rectangular selections the document's line end is added after each line's text. Rectangular selections are always copied from top line to bottom, not in the in order of selection.Virtual space is not copied.
(Read and Write property)

### 160.1.432 NamedStyles as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Retrieve the number of named styles for the lexer.

**Notes:** (Read only property)

### 160.1.433 NSView as Variant

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The Cocoa view for macOS.
**Notes:**

Object is from NSViewMBS class.
(Read only property)

### 160.1.434 Overtype as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** When overtype is enabled, each typed character replaces the character to the right of the text caret.
**Notes:**

When overtype is disabled, characters are inserted at the caret. Returns true if overtyping is active, otherwise false will be returned.
(Read and Write property)

### 160.1.435 PasteConvertEndings as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether to match end of line on pasting.
**Notes:**

If this property is set then when text is pasted any line ends are converted to match the document's end of line mode as set with EOLMode. Defaults to true.
(Read and Write property)

### 160.1.436 Position as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The current position.
**Notes:**

This sets the current position and creates a selection between the anchor and the current position. The caret is not scrolled into view.
(Read and Write property)

### 160.1.437 PositionCache as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The size in entries of the position cache.
**Notes:**

The position cache stores position information for short runs of text so that their layout can be determined more quickly if the run recurs.
(Read and Write property)

### 160.1.438 PrintColourMode as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set and get the method used to render coloured text on a printer that is probably using white paper.
**Notes:**

It is especially important to consider the treatment of colour if you use a dark or black screen background. Printing white on black uses up toner and ink very many times faster than the other way around.
See kPrintOption* constants.
(Read and Write property)

### 160.1.439 PrintMagnification as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Lets you to print at a different size than the screen font.
**Notes:**

magnification is the number of points to add to the size of each screen font. A value of -3 or -4 gives reasonably small print.
(Read and Write property)

### 160.1.440 PrintWrapMode as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Get and set the printer wrap mode.
**Notes:**

wrapMode can be set to kWrapNone (0) or kWrapWord (1). The default is kWrapWord, which wraps printed output so that all characters fit into the print rectangle. If you set kWrapNone, each line of text generates one line of output and the line is truncated if it is too long to fit into the print area.
kWrapWord tries to wrap only between words as indicated by white space or style changes although if a word is longer than a line, it will be wrapped before the line end.
kWrapChar is not supported for printing.
(Read and Write property)

### 160.1.441 PropertyNames as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Returns a string with all of the valid properties separated by LF.
**Notes:**

If the lexer does not support this call then an empty string is returned.
(Read only property)

### 160.1.442 PunctuationChars as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Similar to WordChars and WhiteSpaceChars, this message allows the user to define which chars Scintilla considers as punctuation.
**Notes:** (Read and Write property)

### 160.1.443 ReadOnly as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set and get the read-only flag for the document.
**Notes:**

If you mark a document as read only, attempts to modify the text cause the ModifyAttemptReadOnly event.
(Read and Write property)

### 160.1.444 RectangularSelectionAnchor as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set or query the position for the anchor of the rectangular selection.
**Notes:**

After setting the rectangular selection, this is broken down into multiple selections, one for each line.
(Read and Write property)

### 160.1.445 RectangularSelectionAnchorVirtualSpace as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set or query the position and amount of virtual space for the of the rectangular selection.
**Notes:**

After setting the rectangular selection, this is broken down into multiple selections, one for each line.
(Read and Write property)

### 160.1.446 RectangularSelectionCaret as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set or query the position for the caret of the rectangular selection.
**Notes:**

After setting the rectangular selection, this is broken down into multiple selections, one for each line.

There may be multiple selections active at one time. More selections are made by holding down the Ctrl key while dragging with the mouse. The most recent selection is the main selection and determines which part of the document is shown automatically. Any selection apart from the main selection is called an additional selection. The calls in the previous section operate on the main selection. There is always at least one selection. The selection can be simplified down to just the main selection by Cancel which is normally mapped to the Esc key.

Rectangular selections are handled as multiple selections although the original rectangular range is remembered so that subsequent operations may be handled differently for rectangular selections. For example, pasting a rectangular selection places each piece in a vertical column.

Virtual space is space beyond the end of each line. The caret may be moved into virtual space but no real space will be added to the document until there is some text typed or some other text insertion command is used.

When discontiguous selections are copied to the clipboard, each selection is added to the clipboard text in order with no delimiting characters. For rectangular selections the document's line end is added after each line's text. Rectangular selections are always copied from top line to bottom, not in the in order of

selection.Virtual space is not copied.
(Read and Write property)

### 160.1.447 RectangularSelectionCaretVirtualSpace as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set or query the position and amount of virtual space for the caret of the rectangular selection.
**Notes:**

After setting the rectangular selection, this is broken down into multiple selections, one for each line.
(Read and Write property)

### 160.1.448 RectangularSelectionModifier as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** On GTK and Qt, the key used to indicate that a rectangular selection should be created when combined with a mouse drag can be set.
**Notes:**

The three possible values are kKeyModCtrl=2, kKeyModAlt=4 (default) or kKeyModSuper=8. Since kKeyModAlt may already be used by a window manager, the window manager may need configuring to allow this choice. kKeyModSuper is often a system dependent modifier key such as the Left Windows key on a Windows keyboard or the Command key on a Mac.
(Read and Write property)

### 160.1.449 ScrollWidth as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** For performance, Scintilla does not measure the display width of the document to determine the properties of the horizontal scroll bar.
**Notes:**

Instead, an assumed width is used. These messages set and get the document width in pixels assumed by Scintilla. The default value is 2000. To ensure the width of the currently visible lines can be scrolled use ScrollWidthTracking.
(Read and Write property)

### 160.1.450 ScrollWidthTracking as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** If scroll width tracking is enabled then the scroll width is adjusted to ensure that all of the lines currently displayed can be completely scrolled.
**Notes:**

This mode never adjusts the scroll width to be narrower.
(Read and Write property)

### 160.1.451 SearchFlags as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** These get and set the searchFlags used by SearchInTarget.
**Notes:**

There are several option flags including a simple regular expression search.
See kFindOption* constants.
(Read and Write property)

### 160.1.452 SelAlpha as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets or gets selection alpha value.
**Notes:** (Read and Write property)

### 160.1.453 SelectedText as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This copies the currently selected text.
**Notes:**

This allows for rectangular and discontiguous selections as well as simple selections. See Multiple Selection for information on how multiple and rectangular selections and virtual space are copied.
(Read only property)

### 160.1.454 SelectionEmpty as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Return true if every selected range is empty else false.
**Notes:**

This can be used as CanCopy or CanCut for building menu.
(Read only property)

### 160.1.455 SelectionEnd as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The end position of the selection.
**Notes:**

SelectionStart and SelectionEnd return the start and end of the selection without regard to which end is the current position and which is the anchor. SelectionStart returns the smaller of the current position or the anchor position. SelectionEnd returns the larger of the two values.

Assign new value to set the selection based on the assumption that the anchor position is less than the current position.
(Read and Write property)

### 160.1.456 SelectionIsRectangle as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This returns true if the current selection is in rectangle mode, false if not.
**Notes:** (Read only property)

### 160.1.457 SelectionLayer as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The selection background can be drawn translucently over the text or opaquely on the base layer.
**Notes:**

See kLayer* constants.
(Read and Write property)

### 160.1.458 SelectionMode as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The selection mode.
**Notes:**

Can be stream (kSelectionModeStream=0) or rectangular (kSelectionModeRectangle=1) or by lines (kSelectionModeLines=2) or thin rectangular (kSelectionModeThin=3). When set in these modes, regular caret moves will extend or reduce the selection, until the mode is cancelled by a call with same value or with Cancel. The get function returns the current mode even if the selection was made by mouse or with regular extended moves. SC_SEL_THIN is the mode after a rectangular selection has been typed into and ensures that no characters are selected.
(Read and Write property)

### 160.1.459 Selections as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Return the number of selections currently active.
**Notes:**

There is always at least one selection.
(Read only property)

### 160.1.460 SelectionSpan as ScintillaSpanMBS

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries selection start and end as a span object.
**Notes:** (Read only property)

### 160.1.461 SelectionStart as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The start position of the selection.
**Notes:**

SelectionStart and SelectionEnd return the start and end of the selection without regard to which end is the current position and which is the anchor. SelectionStart returns the smaller of the current position or the anchor position. SelectionEnd returns the larger of the two values.

Assign new value to set the selection based on the assumption that the anchor position is less than the

current position.
(Read and Write property)

### 160.1.462 SelEOLFilled as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The selection can be drawn up to the right hand border by setting this property.
**Notes:** (Read and Write property)

### 160.1.463 ShowInfoBar as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether to show info bar on macOS.
**Notes:**

Defaults to true.
The info bar allows you to show a status message and to do zoom levels.
(Read and Write property)

### 160.1.464 Status as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** If an error occurs, Scintilla may set an internal error number that can be retrieved with this property.
**Notes:**

To clear the error status call SCI_SETSTATUS(0). Status values from 1 to 999 are errors and status kStatusWarnStart (1000) and above are warnings.
See kStatus* constants.
(Read and Write property)

### 160.1.465 TabDrawMode as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Get and set how tab characters are drawn when white space is visible.
**Notes:**

See kTabDrawMode* constants.

(Read and Write property)

### 160.1.466 TabIndents as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether tab indents.
**Notes:**

Inside indentation white space, the tab and backspace keys can be made to indent and unindent rather than insert a tab character or delete a character with the TabIndents and BackSpaceUnIndents functions.
(Read and Write property)

### 160.1.467 TabMinimumWidth as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The minimum size of a tab in pixels to ensure that the tab can be seen.
**Notes:**

The default value is 2. This is particularly useful with proportional fonts with fractional widths where the character before the tab may end a fraction of a pixel before a tab stop, causing the tab to only be a fraction of a pixel wide without this setting. Where displaying a miniaturized version of the document, setting this to 0 may make the miniaturized version lay out more like the normal size version.
(Read and Write property)

### 160.1.468 TabWidth as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The size of a tab as a multiple of the size of a space character in kStylesCommonDefault.
**Notes:**

The default tab width is 8 characters. There are no limits on tab sizes, but values less than 1 or large values may have undesirable effects.
(Read and Write property)

### 160.1.469 TargetEnd as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** End of target selection in text.

**Notes:** (Read and Write property)

### 160.1.470 TargetEndVirtualSpace as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** End of the virtual space of target selection in text.
**Notes:**

This allows text to be inserted in virtual space more easily.
(Read and Write property)

### 160.1.471 TargetSpan as ScintillaSpanMBS

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries targert start and end as a span object.
**Notes:** (Read and Write property)

### 160.1.472 TargetStart as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Start of the virtual space of target selection in text.
**Notes:**

This allows text to be inserted in virtual space more easily.
When searching you can set start greater than end to find the last matching text in the target rather than the first matching text.
The target is also set by a successful by SearchInTarget.
(Read and Write property)

### 160.1.473 TargetStartVirtualSpace as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Start of target selection in text.
**Notes:**

When searching you can set start greater than end to find the last matching text in the target rather than the first matching text.
(Read and Write property)

### 160.1.474 TargetText as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Retrieve the value in the target.
**Notes:** (Read only property)

### 160.1.475 Technology as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The technology property allows choosing between different drawing APIs and options.
**Notes:**

On most platforms, the only choice is kTechnologyDefault (0). On Windows Vista or later, kTechnologyDirectWrite (1), kTechnologyDirectWriteRetain (2), or kTechnologyDirectWriteDC (3) can be chosen to use the Direct2D and DirectWrite APIs for higher quality antialiased drawing. kTechnologyDirectWriteRetain differs from kTechnologyDirectWrite by requesting that the frame is retained after being presented which may prevent drawing failures on some cards and drivers. kTechnologyDirectWriteDC differs from kTechnologyDirectWrite by using DirectWrite to draw into a GDI DC.
On Win32, buffered drawing is set to a reasonable value for the technology: on for GDI and off for Direct2D as Direct2D performs its own buffering. This can be changed after setting technology with BufferDraw property.
When using DirectWrite, you can use FontLocale to set an appropriate font locale to draw text with expected language-dependent glyphs.
(Read and Write property)

### 160.1.476 Text as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Get or set the text of the document.
**Notes:** (Read and Write property)

### 160.1.477 TextLength as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The length of the document in bytes.
**Notes:** (Read only property)

### 160.1.478 UndoCollection as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** You can control whether Scintilla collects undo information.
**Notes:**

Set to true to collect information and false to stop collecting. If you stop collection, you should also use EmptyUndoBuffer to avoid the undo buffer being unsynchronized with the data in the buffer.

You might wish to turn off saving undo information if you use the Scintilla to store text generated by a program (a Log view) or in a display window where text is often deleted and regenerated.
(Read and Write property)

### 160.1.479 UseTabs as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Determines whether indentation should be created out of a mixture of tabs and spaces or be based purely on spaces.
**Notes:**

Set useTabs to false (0) to create all tabs and indents out of spaces. The default is true. You can use Column() to get the column of a position taking the width of a tab into account.
(Read and Write property)

### 160.1.480 ViewEOL as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Normally, the end of line characters are hidden, but ViewEOL allows you to display (or hide) them by setting visible true (or false).
**Notes:**

The visible rendering of the end of line characters is similar to (CR), (LF), or (CR+LF).

Scintilla can handle the major line end conventions and, depending on settings and the current lexer also support additional Unicode line ends.
Scintilla can interpret any of the Macintosh (CR), Unix (LF) and Windows (CR+LF) line ends. When the user presses the Enter key, one of these line end strings is inserted into the buffer. The default is CRL+LF in Windows and LF in Unix, but this can be changed with the EOLMode proeprty. You can also convert the entire document to one of these line endings with ConvertEOLs. Finally, you can choose to display the line endings with ViewEOL.

For the UTF-8 encoding, three additional Unicode line ends, Next Line (NEL=U+0085), Line Separator (LS=U+2028), and Paragraph Separator (PS=U+2029) may optionally be interpreted when Unicode line ends is turned on and the current lexer also supports Unicode line ends.
(Read and Write property)

### 160.1.481 ViewWS as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** White space can be made visible which may be useful for languages in which white space is significant, such as Python.
**Notes:**

Space characters appear as small centred dots and tab characters as light arrows pointing to the right. There are also ways to control the display of end of line characters. The two messages set and get the white space display mode.
See kWhiteSpaceVisible* constants.
(Read and Write property)

### 160.1.482 VirtualSpaceOptions as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Virtual space can be enabled or disabled for rectangular selections or in other circumstances or in both.
**Notes:**

There are three bit flags kVirtualSpaceRectangularSelection=1, kVirtualSpaceUserAccessible=2, and kVirtualSpaceNoWrapLineStart=4 which can be set independently.
kVirtualSpaceNone=0, the default, disables all use of virtual space.
kVirtualSpaceNoWrapLineStart prevents left arrow movement and selection from wrapping to the previous line. This is most commonly desired in conjunction with virtual space but is an independent setting so works without virtual space.
(Read and Write property)

### 160.1.483 VScrollBar as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** By default, the vertical scroll bar is always displayed when required.
**Notes:**

You can choose to hide or show it with VScrollBar property and get the current state with VScrollBar.
(Read and Write property)

### 160.1.484 WhitespaceChars as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The white space characters.
**Notes:**

Similar to WordChars, this property allows the user to define which chars Scintilla considers as whitespace. Setting the whitespace chars allows the user to fine-tune Scintilla's behaviour doing such things as moving the cursor to the start or end of a word; for example, by defining punctuation chars as whitespace, they will be skipped over when the user presses ctrl+left or ctrl+right. This function should be called after WordChars as it will reset the whitespace characters to the default set. WhiteSpaceChars behaves similarly to WordChars.
(Read and Write property)

### 160.1.485 WhitespaceSize as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets the size of the dots used for mark space characters.
**Notes:**

The value 0 is valid and makes the dots invisible.
(Read and Write property)

### 160.1.486 WordChars as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Defines which characters are members of the word category.
**Notes:**

The character categories are set to default values before processing this function. For example, if you don't allow '_' in your set of characters use:
WordChars = "abcdefghijklmnopqrstuvwxyzABCDEFGHIJKLMNOPQRSTUVWXYZ0123456789"

This fills the characters parameter with all the characters included in words.
The characters parameter must be large enough to hold all of the characters. If the characters parameter is 0 then the length that should be allocated to store the entire set is returned.
For multi-byte encodings, this API will not return meaningful values for & h80 and above.
(Read and Write property)

### 160.1.487 WrapIndentMode as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Wrapped sublines can be indented to the position of their first subline or one more indent level.
**Notes:**

The default is kWrapIndentModeFixed.
(Read and Write property)

### 160.1.488 WrapMode as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The wrap mode.
**Notes:**

Set wrapMode to kWrapWord (1) to enable wrapping on word or style boundaries, kWrapChar (2) to enable wrapping between any characters, kWrapWhiteSpace (3) to enable wrapping on whitespace, and kWrapNone (0) to disable line wrapping. kWrapChar is preferred for Asian languages where there is no white space between words.

By default, Scintilla does not wrap lines of text. If you enable line wrapping, lines wider than the window width are continued on the following lines. Lines are broken after space or tab characters or between runs of different styles. If this is not possible because a word in one style is wider than the window then the break occurs after the last character that completely fits on the line. The horizontal scroll bar does not appear when wrap mode is on.

For wrapped lines Scintilla can draw visual flags (little arrows) at end of a a subline of a wrapped line and at begin of the next subline. These can be enabled individually, but if Scintilla draws the visual flag at the beginning of the next subline this subline will be indented by one char. Independent from drawing a visual flag at the begin the subline can have an indention.

Much of the time used by Scintilla is spent on laying out and drawing text. The same text layout calculations may be performed many times even when the data used in these calculations does not change. To avoid these unnecessary calculations in some circumstances, the line layout cache can store the results of the calculations. The cache is invalidated whenever the underlying data, such as the contents or styling of the document changes. Caching the layout of the whole document has the most effect, making dynamic line wrap as much as 20 times faster but this requires 7 times the memory required by the document contents plus around 80 bytes per line.

Wrapping is not performed immediately there is a change but is delayed until the display is redrawn. This delay improves performance by allowing a set of changes to be performed and then wrapped and displayed once. Because of this, some operations may not occur as expected. If a file is read and the scroll position moved to a particular line in the text, such as occurs when a container tries to restore a previous editing

session, then the scroll position will have been determined before wrapping so an unexpected range of text will be displayed. To scroll to the position correctly, delay the scroll until the wrapping has been performed by waiting for an initial Painted event.
(Read and Write property)

### 160.1.489 WrapStartIndent as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The size of indentation of sublines for wrapped lines.
**Notes:**

WrapStartIndent sets the size of indentation of sublines for wrapped lines in terms of the average character width in kStylesCommonDefault. There are no limits on indent sizes, but values less than 0 or large values may have undesirable effects.
The indention of sublines is independent of visual flags, but if kWrapVisualFlagStart is set an indent of at least 1 is used.
(Read and Write property)

### 160.1.490 WrapVisualFlags as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** You can enable the drawing of visual flags to indicate a line is wrapped.
**Notes:**

Bits set in wrapVisualFlags determine which visual flags are drawn.
See kWrapVisualFlag* constants.
(Read and Write property)

### 160.1.491 WrapVisualFlagsLocation as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** You can set whether the visual flags to indicate a line is wrapped are drawn near the border or near the text.
**Notes:**

Bits set in wrapVisualFlagsLocation set the location to near the text for the corresponding visual flag.
See kWrapVisualLocation* constants.
(Read and Write property)

### 160.1.492 XOffset as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The xOffset is the horizontal scroll position in pixels of the start of the text view.
**Notes:**

A value of 0 is the normal position with the first text column visible at the left of the view.

See FirstVisibleLine property for vertical position.
(Read and Write property)

### 160.1.493 Zoom as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The zoom factor directly.
**Notes:**

There is no limit set on the factors you can set, so limiting yourself to -10 to +20 to match the incremental zoom functions is a good idea.

Scintilla incorporates a "zoom factor" that lets you make all the text in the document larger or smaller in steps of one point. The displayed point size never goes below 2, whatever zoom factor you set. You can set zoom factors in the range -10 to +20 points.
(Read and Write property)
See also:

- 160.1.562 Zoom 24187

### 160.1.494 AnnotationStyle(line as Integer) as ScintillaStyleMBS

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets styles for a line.
**Notes:**

The whole of the text annotation on a line may be displayed in a particular style with AnnotationStyle or each character may be individually styled with AnnotationStyles which uses an array of bytes with each byte setting the style of the corresponding text byte similar to SetStylingEx. The text must be set first as it specifies how long the annotation is so how many bytes of styling to read. Setting an annotation will cause a ChangeAnnotation event to be sent.

Only some style attributes are active in annotations: font, size/sizeFractional, bold/weight, italics, fore, back, and characterSet.

(Read and Write computed property)

### 160.1.495 AnnotationStyles(line as Integer) as MemoryBlock

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets styles for a line.
**Notes:**

The whole of the text annotation on a line may be displayed in a particular style with AnnotationStyle or each character may be individually styled with AnnotationStyles which uses an array of bytes with each byte setting the style of the corresponding text byte similar to SetStylingEX. The text must be set first as it specifies how long the annotation is so how many bytes of styling to read. Setting an annotation will cause a ChangeAnnotation event to be sent.

Only some style attributes are active in annotations: font, size/sizeFractional, bold/weight, italics, fore, back, and characterSet.
(Read and Write computed property)

### 160.1.496 AnnotationText(line as Integer) as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** A different string may be set for each line with AnnotationText.
**Notes:**

Set to empty string to clear it.
(Read and Write computed property)

### 160.1.497 ElementColour(element as Integer) as Color

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This changes the colour of the indicated visual element overriding any current colour.
**Notes:**

If the element supports translucency, then the alpha portion of the value is used. An opaque alpha value (& hff) should always be included when an opaque colour is desired as the value 0 is completely transparent and thus invisible.
(Read and Write computed property)

### 160.1.498 EOLAnnotationStyle(line as Integer) as ScintillaStyleMBS

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Gets or sets the style to use for the EOL annotation.
**Notes:** (Read and Write computed property)

### 160.1.499 EOLAnnotationText(line as Integer) as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** A different string may be set for each line with EOLAnnotationText.
**Notes:**

To clear end of line annotations assign EOLAnnotationText with a empty string. The whole of the text EOLANNOTATION on a line may be displayed in a particular style with
EOLAnnotationStyle(). Setting an end of line annotation will cause a kModificationFlagsChangeEOLAnnotation notification to be sent.
Only some style attributes are active in end of line annotations: font, size/sizeFractional, bold/weight, italics, fore, back, and characterSet.

End of Line Annotations are read-only lines of text at the end of each line of editable text. End of Line Annotations can be used to display an assembler version of code for debugging or to show diagnostic messages inline or to line up different versions of text in a merge tool.
(Read and Write computed property)

### 160.1.500 FoldExpanded(line as Integer) as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set and get the expanded state of a single line.
**Notes:**

The set message has no effect on the visible state of the line or any lines that depend on it. It does change the markers in the folding margin. If you ask for the expansion state of a line that is outside the document, the result is false (0).

If you just want to toggle the fold state of one line and handle all the lines that are dependent on it, it is much easier to use ToggleFold. You would use the FolderExpanded() method to process many folds without updating the display until you had finished. See FoldAll() and Expand() for examples of the use of these methods.
(Read and Write computed property)

### 160.1.501 FoldLevel(line as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set and get a 32-bit value that contains the fold level of a line and some flags associated with folding.
**Notes:**

The fold level is a number in the range 0 to kFoldLevelNumberMask (& h0FFF). However, the initial fold level is set to kFoldLevelBase (& h400) to allow unsigned arithmetic on folding levels. There are two addition flag bits. kFoldLevelWhiteFlag indicates that the line is blank and allows it to be treated slightly different then its level may indicate. For example, blank lines should generally not be fold points and will be considered part of the preceding section even though they may have a lesser fold level. kFoldLevelHeaderFlag indicates that the line is a header (fold point). kFoldLevelNone is a default level that may occur before folding.

Use FoldLevel(line) AND kFoldLevelNumberMask to get the fold level of a line. Likewise, use FoldLevel(line) AND kFoldLevelNumber*Flag to get the state of the flags. To set the fold level you must or in the associated flags. For instance, to set the level to thisLevel and mark a line as being a fold point use: FoldLevel(line) = thisLevel OR kFoldLevelHeaderFlag.

This method causes the display to redraw.
(Read and Write computed property)

### 160.1.502 KeyWords(keyWordSet as Integer) as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The keyword list.
**Notes:**

You can set up to 9 lists of keywords for use by the current lexer. keyWordSet can be 0 to 8 (actually 0 to KEYWORDSET_MAX) and selects which keyword list to replace. keyWords is a list of keywords separated by spaces, tabs, "\n" or "\r" or any combination of these. It is expected that the keywords will be composed of standard ASCII printing characters, but there is nothing to stop you using any non-separator character codes from 1 to 255 (except common sense).
How these keywords are used is entirely up to the lexer. Some languages, such as HTML may contain embedded languages, VBScript and JavaScript are common for HTML. For HTML, key word set 0 is for HTML, 1 is for JavaScript and 2 is for VBScript, 3 is for Python, 4 is for PHP and 5 is for SGML and DTD keywords. Review the lexer code to see examples of keyword list. A fully conforming lexer sets the fourth argument of the LexerModule constructor to be a list of strings that describe the uses of the keyword lists. Alternatively, you might use set 0 for general keywords, set 1 for keywords that cause indentation and set 2 for keywords that cause unindentation. Yet again, you might have a simple lexer that colours keywords and you could change languages by changing the keywords in set 0. There is nothing to stop you building your own keyword lists into the lexer, but this means that the lexer must be rebuilt if more keywords are added.
(Read and Write computed property)

### 160.1.503 LineIndentation(line as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The amount of indentation on a line.
**Notes:**

The indentation is measured in character columns, which correspond to the width of space characters.
(Read and Write computed property)

### 160.1.504 LineState(Line as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The state for each line.
**Notes:**

As well as the 8 bits of lexical state stored for each character there is also an integer stored for each line. This can be used for longer lived parse states such as what the current scripting language is in an ASP page. Assign to LineState to set the integer value and query LineState() to get the value. Changing the value produces a ChangeLineState event.
(Read and Write computed property)

### 160.1.505 MarginStyle(Line as Integer) as ScintillaStyleMBS

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The tyle for the margin on this line.
**Notes:**

The style to use for the margin.
(Read and Write computed property)

### 160.1.506 MarginStyles(line as Integer) as MemoryBlock

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The styles for the margin on this line.
**Notes:**

The MemoryBlock contains an array of bytes with each byte setting the style of the corresponding text byte similar to style index.
(Read and Write computed property)

### 160.1.507 MarginText(line as Integer) as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The text for the margin on this line.
**Notes:**

Text margins are created with the type kMarginTypeText or kMarginTypeRText. A different string may be set for each line with MarginText(). The whole of the text margin on a line may be displayed in a particular style with MarginStyle() or each character may be individually styled with MarginStyles() which uses an array of bytes with each byte setting the style of the corresponding text byte similar to style index. Setting a text margin will cause a kModificationFlagsChangeMargin notification to be sent.
Only some style attributes are active in text margins: font, size/sizeFractional, bold/weight, italics, fore, back, and characterSet.
(Read and Write computed property)

### 160.1.508 PropertyValue(Key as String) as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set or get properties.
**Notes:**

Lookup a keyword:value pair using the specified key; if found, copy the value to the user-supplied buffer and return the length (not including the terminating 0). If not found, copy an empty string to the buffer and return 0.

If the value argument is 0 then the length that should be allocated to store the value is returned; again, the terminating 0 is not included.

You can communicate settings to lexers with keyword:value string pairs. There is no limit to the number of keyword pairs you can set, other than available memory. key is a case sensitive keyword, value is a string that is associated with the keyword. If there is already a value string associated with the keyword, it is replaced. If you pass a zero length string, the method does nothing. Both key and value are used without modification; extra spaces at the beginning or end of key are significant.
The value string can no longer refer to other keywords as was possible in older releases of Scintilla.

Lexers may only store values for keywords they support.
Currently the "fold" property is defined for most of the lexers to set the fold structure if set to "1". SCLEX_PYTHON understands "tab.timmy.whinge.level" as a setting that determines how to indicate bad indentation. Most keywords have values that are interpreted as integers. Search the lexer sources for GetPropertyInt to see how properties are used.
There is a convention for naming properties used by lexers so that the set of properties can be found by scripts. Property names should start with "lexer.<lexer>." or "fold.<lexer>." when they apply to one lexer or start with "lexer." or "fold." if they apply to multiple lexers.

Applications may discover the set of properties used by searching the source code of lexers for lines that contain GetProperty or DefineProperty and a double quoted string and extract the value of the double quoted string as the property name. The lexilla/scripts/LexillaData.py script does this and can be used as an example. Documentation for the property may be located above the call as a multi-line comment starting with ,Ä®// property <property-name>
(Read and Write computed property)

### 160.1.509 Representation(encodedCharacter as String) as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets or gets a representation.
**Notes:**

Some characters, such as control characters and invalid bytes, do not have a visual glyph or use a glyph that is hard to distinguish.

Control characters (characters with codes less than 32, or between 128 and 159 in some encodings) are displayed by Scintilla using their mnemonics inverted in a rounded rectangle. These mnemonics come from the early days of signalling, though some are still used (LF = Line Feed, BS = Back Space, CR = Carriage Return, for example).
For the low 'C0' values: "NUL", "SOH", "STX", "ETX", "EOT", "ENQ", "ACK", "BEL", "BS", "HT", "LF", "VT", "FF", "CR", "SO", "SI", "DLE", "DC1", "DC2", "DC3", "DC4", "NAK", "SYN", "ETB", "CAN", "EM", "SUB", "ESC", "FS", "GS", "RS", "US".
For the high 'C1' values: "PAD", "HOP", "BPH", "NBH", "IND", "NEL", "SSA", "ESA", "HTS", "HTJ", "VTS", "PLD", "PLU", "RI", "SS2", "SS3", "DCS", "PU1", "PU2", "STS", "CCH", "MW", "SPA", "EPA", "SOS", "SGCI", "SCI", "CSI", "ST", "OSC", "PM", "APC".
Invalid bytes are shown in a similar way with an 'x' followed by their value in hexadecimal, like "xFE".

Any character, including those normally displayed as mnemonics may be represented by a Unicode string inverted in a rounded rectangle.

For example, the Ohm sign ,Ñ¶ U+2126 looks very similar to the Greek Omega character Œ© U+03C9 so, for the UTF-8 encoding, to distinguish the Ohm sign as "U+2126 ,Ñ¶" this call could be made: Representation(",Ñ¶", "U+2126 ,Ñ¶")

The encodedCharacter parameter is a string of the bytes for one character in the current encoding. This can not be used to set a representation for multiple-character strings.
The representation parameter is an UTF-8 string with a maximum length of 200 bytes.

One exception to the single character restriction is that the two character sequence "CRLF" (Carriage Return + Line Feed) can have a representation that is visible in line end viewing (ViewEOL property) mode.

If there is no representation for "CRLF" then the individual 'CR' and 'LF' representations will be seen.

The NULL (0) character is a special case and specified as an empty string.
(Read and Write computed property)

### 160.1.510 RepresentationAppearance(encodedCharacter as String) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The appearance may be changed using these flags.
**Notes:**

If a colour is set and the appearance is set without RepresentationColour() then the representation will show in the colour of the underlying text.
(Read and Write computed property)

### 160.1.511 RepresentationColour(encodedCharacter as String) as Color

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The colour and translucency of a representation may be set.
**Notes:** (Read and Write computed property)

### 160.1.512 SelectionNAnchor(selection as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set or query the position and amount of virtual space for the anchor of each already existing selection.
**Notes:**

Selection parameter is zero based.
(Read and Write computed property)

### 160.1.513 SelectionNAnchorVirtualSpace(selection as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set or query the position and amount of virtual space for the caret of each already existing selection.
**Notes:**

Selection parameter is zero based.
(Read and Write computed property)

### 160.1.514 SelectionNCaret(selection as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set or query the position and amount of virtual space for the caret of each already existing selection.
**Notes:**

Selection parameter is zero based.
(Read and Write computed property)

### 160.1.515 SelectionNCaretVirtualSpace(selection as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set or query the position and amount of virtual space for the caret of each already existing selection.
**Notes:**

Selection parameter is zero based.
(Read and Write computed property)

### 160.1.516 SelectionNEnd(selection as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** et or query the end position of each already existing selection.
**Notes:**

Mostly of use to query each range for its text. The selection parameter is zero-based.
(Read and Write computed property)

### 160.1.517 SelectionNStart(selection as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set or query the start position of each already existing selection.
**Notes:**

Mostly of use to query each range for its text. The selection parameter is zero-based.
(Read and Write computed property)

### 160.1.518 Events

### 160.1.519 AutoCompleteCancelled

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Auto complete was cancelled.

### 160.1.520 AutoCompleteCharacterDeleted

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The user deleted a character while autocompletion list was active.

### 160.1.521 AutoCompleteCompleted(Position as Integer, Character as Integer, Text as String, listCompletionMethod as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is generated after an autocompletion has inserted its text.
**Notes:**

| Parameter | Description |
|---|---|
| position | The start position of the word being completed. |
| text | The text of the selection. |
| Character | If a fillup character was the method of selection, the used character, otherwise 0. |
| listCompletionMethod | A value indicating the way in which the completion occurred. See the table below. |

| Symbol | Value | Meaning |
|---|---|---|
| kCompletionMethodsFillUp | 1 | A fillup character triggered the completion. The character used is in Character. |
| kCompletionMethodsDoubleClick | 2 | A double-click triggered the completion. Character is 0. |
| kCompletionMethodsTab | 3 | The tab key or Tab method triggered the completion. Character is 0. |
| kCompletionMethodsNewline | 4 | A new line or Newline method triggered the completion. Character is 0. |
| kCompletionMethodsCommand | 5 | The AutoCSelect method triggered the completion. Character is 0. |

### 160.1.522 AutoCompleteSelection(Position as Integer, Character as Integer, Text as String, listCompletionMethod as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The user has selected an item in an autocompletion list.
**Notes:**

The event is sent before the selection is inserted. Automatic insertion can be cancelled by calling AutoC-Cancel method before returning from the event.

| Parameter | Description |
|---|---|
| position | The start position of the word being completed. |
| text | The text of the selection. |
| Character | If a fillup character was the method of selection, the used character, otherwise 0. |
| listCompletionMethod | A value indicating the way in which the completion occurred. See the table below. |

| Symbol | Value | Meaning |
|---|---|---|
| kCompletionMethodsFillUp | 1 | A fillup character triggered the completion. The character used is in Character. |
| kCompletionMethodsDoubleClick | 2 | A double-click triggered the completion. Character is 0. |
| kCompletionMethodsTab | 3 | The tab key or Tab method triggered the completion. Character is 0. |
| kCompletionMethodsNewline | 4 | A new line or Newline method triggered the completion. Character is 0. |
| kCompletionMethodsCommand | 5 | The AutoCSelect method triggered the completion. Character is 0. |

### 160.1.523 AutoCompleteSelectionChange(Position as Integer, Text as String, listType as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is sent when items are highlighted in an autocompletion or user list.
**Notes:**

| Field | Usage |
|---|---|
| listType | This is set to the listType parameter from the SCI_USERLISTSHOW message or 0 for an autocompletion. |
| text | The text of the selection. |
| position | The position the list was displayed at. |

### 160.1.524 CallTipClick(Position as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is generated when the user clicks on a calltip.
**Notes:** This event can be used to display the next function prototype when a function name is overloaded with different arguments. The position field is set to 1 if the click is in an up arrow, 2 if in a down arrow, and 0 if elsewhere.

### 160.1.525 CharacterAdded(Character as Integer, CharacterSource as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This is sent when the user types an ordinary text character (as opposed to a command character) that is entered into the text.
**Notes:**

The container can use this to decide to display a call tip or an auto completion list.
For single byte character sets, this is the byte value of the character; for UTF-8, it is the Unicode code point; for DBCS, it is (first byte * 256 + second byte) for 2 byte characters and the byte value for 1 byte characters.
This notification is sent before the character has been styled so processing that depends on styling should instead be performed in the UpdateUI event.

| Symbol | Value | Meaning |
|---|---|---|
| kCharacterSourceDirectInput | 0 | Direct input characters, including characters generated by calling keyboard commands like NewLine method. |
| kCharacterSourceTentativeInput | 1 | Tentative input characters. They are used by IME (inline mode, see IMEInteraction) to composite final string, normally different from final composited string (which is the string that has been truly added into current document), and may be withdrawn when the user cancels typing (e.g. by pressing Esc key). Some system (at least Cocoa) also use tentative input for non-IME features like using dead key to composite diacritical marks (grave accent, etc.). These characters are not added to macro recording. Most applications can simply ignore the notification when this value is set. |
| kCharacterSourceImeResult | 2 | IME (either inline or windowed mode) full composited string. Modern IME is able to composite English word or sentence, when this value is set, current character may not a Chinese, Japanese or Korean character. Currently, this is only set on Windows. |

### 160.1.526 Closing

Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:**

The control is about to close.
In older Xojo versions, this event is named Close.

### 160.1.527 ConstructContextualMenu(base as DesktopMenuItem, x as Integer, y as Integer) As Boolean

Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is called when it is appropriate to display a contextual menu for the control.

### 160.1.528 ContextualMenuItemSelected(selectedItem As DesktopMenuItem) As Boolean

Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Called when a menuitem is choosen.
**Notes:**

This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

You can use UsePopUp(kPopUpNever) to disable the contextual menu from Scintilla and use Xojo menus.

### 160.1.529 DoubleClick(Position as Integer, line as integer, modifiers as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The mouse button was double clicked in editor.
**Notes:** The position parameter is set to the text position of the double click, the line parameter is set to the line of the double click, and the modifiers parameter is set to the key modifiers held down in a similar manner to Key event.

### 160.1.530 DWellEnd(Position as Integer, X as Integer, Y as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** DWellEnd is generated after a DWellStart and the mouse is moved or other activity such as key press indicates the dwell is over.

### 160.1.531 DWellStart(Position as Integer, X as Integer, Y as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** DWellStart is generated when the user keeps the mouse in one position for the dwell period (see MouseDwellTime).

### 160.1.532 FocusIn

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is raised when Scintilla receives focus.
**Notes:**

While the control can have a focus from the Xojo point of view, this event informs you that the actual text control part got focus.

So the Xojo wrapper control can have a focus and within it the text control can than have a focus and there are two different states.

### 160.1.533 FocusLost

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:**

The control lost focus.
In older Xojo versions, this event is named LostFocus.

### 160.1.534 FocusOut

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is raised when it loses focus.

### 160.1.535 FocusReceived

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:**

The control got focus.

In older Xojo versions, this event is named GotFocus.

### 160.1.536 FolderToggled(Line as Integer, Position as Integer, Margin as ScintillaMarginMBS)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** A folder was toggled due to a mouse click.
**Notes:**

THis is called when a folder is hit.
MarginClicked event will also be raised.

### 160.1.537 HotSpotClick(Position as Integer, modifiers as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** These event are generated when the user clicks on text that is in a style with the hotspot attribute set.
**Notes:** This event can be used to link to variable definitions or web pages. In the notification handler, you should avoid calling any function that modifies the current selection or caret position. The position parameter is set the text position of the click or double click and the modifiers field set to the key modifiers held down in a similar manner to Key event. Only the state of the Ctrl key is reported for HotspotReleaseClick.

### 160.1.538 HotSpotDoubleCLick(Position as Integer, modifiers as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** These event are generated when the user double clicks on text that is in a style with the hotspot attribute set.
**Notes:** This event can be used to link to variable definitions or web pages. In the notification handler, you should avoid calling any function that modifies the current selection or caret position. The position parameter is set the text position of the double click and the modifiers field set to the key modifiers held down in a similar manner to Key event. Only the state of the Ctrl key is reported for HotspotReleaseClick.

### 160.1.539 HotspotReleaseClick(Position as Integer, modifiers as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** These event are generated when the user clicks on text that is in a style with the hotspot attribute set.

### 160.1.540 IndicatorClick(Position as Integer, modifiers as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** These event is generated when the user clicks the mouse on text that has an indicator.
**Notes:** The position parameter is set the text position of the click or double click and the modifiers field set to the key modifiers held down in a similar manner to Key.

### 160.1.541 IndicatorRelease(Position as Integer, modifiers as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** These event is generated when the user releases the mouse on text that has an indicator.
**Notes:** The position parameter is set the text position of the click or double click and the modifiers field set to the key modifiers held down in a similar manner to Key.

### 160.1.542 Key(Character as Integer, modifiers as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Reports all keys pressed but not consumed by Scintilla.
**Notes:** Used on GTK because of some problems with keyboard focus and is not sent by the Windows version. Character holds the key code and modifiers holds the modifier flags. This notification is sent if the modifiers include kKeyModAlt or kKeyModCtrl and the key code is less than 256.

### 160.1.543 MacroRecord(Message as Integer, wParam as Integer, lParam as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event for a new macro step to record.
**Notes:**

The StartRecord and StopRecord method enable and disable macro recording. When enabled, each time a recordable change occurs, the MacroRecord event is sent to the container. It is up to the container to record the action. To see the complete list of SCI_* messages that are recordable, search the Scintilla source Editor.cxx for Editor::NotifyMacroRecord.

| Field | Usage |
|---|---|
| message | The SCI_* message that caused the notification. |
| wParam | The value of wParam in the SCI_* message. |
| lParam | The value of lParam in the SCI_* message. |

### 160.1.544 MarginClick(Position as Integer, modifiers as Integer, margin as ScintillaMarginMBS)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event tell the container that the mouse was left clicked inside a margin that was marked as sensitive.
**Notes:**

This can be used to perform folding or to place breakpoints.

| Field | Usage |
|---|---|
| modifiers | The appropriate combination of kKeyModShift, kKeyModCtrl and kKeyModAlt to indicate the keys that were held down at the time of the margin click. |
| position | The position of the start of the line in the document that corresponds to the margin click. |
| margin | The margin number that was clicked. |

### 160.1.545 MarginRightClick(Position as Integer, modifiers as Integer, margin as ScintillaMarginMBS)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event tell the container that the mouse was right clicked inside a margin that was marked as sensitive.
**Notes:**

This can be used to perform folding or to place breakpoints.

### 160.1.546 MenuBarSelected

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:**

| Field | Usage |
|---|---|
| modifiers | The appropriate combination of kKeyModShift, kKeyModCtrl and kKeyModAlt to indicate the keys that were held down at the time of the margin click. |
| position | The position of the start of the line in the document that corresponds to the margin click. |
| margin | The margin number that was clicked. |

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

### 160.1.547 Modified(Position as Integer, modificationType as Integer, Text as String, length as Integer, linesAdded as Integer, line as Integer, foldLevelNow as Integer, foldLevelPrev as Integer, token as Integer, annotationLinesAdded as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This notification is sent when the text or styling of the document changes or is about to change.
**Notes:**

You can set a mask for the notifications that are sent to the container with ModEventMask. The parameters contains information about what changed, how the change occurred and whether this changed the number of lines in the document. No modifications may be performed while in a Modified event.

| Parameter | Usage |
|---|---|
| modificationType | A set of flags that identify the change(s) made. See the next table. |
| position | Start position of a text or styling change. Set to 0 if not used. |
| length | Length of the change in bytes when the text or styling changes. Set to 0 if not used. |
| linesAdded | Number of added lines. If negative, the number of deleted lines. Set to 0 if not used or no lines added or deleted. |
| text | Valid for text changes, not for style changes. If we are collecting undo information this holds a pointer to the text that is handed to the Undo system, otherwise it is zero. For user performed SC_MOD_BEFOREDELETE the text field is 0. |
| line | The line number at which a fold level or marker change occurred. This is 0 if unused and may be -1 if more than one line changed. |
| foldLevelNow | The new fold level applied to the line or 0 if this parameter is unused. |
| foldLevelPrev | The previous folding level of the line or 0 if this parameter is unused. |

The modificationType field has bits set to tell you what has been done. The kModificationFlags* constants bits correspond to actions. They tell you if the action was done by the user, or the result of Undo or Redo of a previous action.

| Symbol | Value | Meaning | Parameters |
|---|---|---|---|
| kModificationFlagsNone | 0 | Base value with no fields valid. Will not occur but is useful in tests. | |
| kModificationFlagsInsertText | 1 | Text has been inserted into the document. | position, length, text, linesAdded |
| kModificationFlagsDeleteText | 2 | Text has been removed from the document. | position, length, text, linesAdded |
| kModificationFlagsChangeStyle | 4 | A style has been changed. | position, length |
| kModificationFlagsChangeFold | 8 | A folding change has occurred. | line, foldLevelNow, foldLevelPrev |
| kModificationFlagsUser | & h10 | Information: the operation was done by the user. | None |
| kModificationFlagsUndo | & h20 | Information: this was the result of an Undo. | None |
| kModificationFlagsRedo | & h40 | Information: this was the result of a Redo. | None |
| kModificationFlagsMultiStepUndoRedo | & h80 | This is part of a multi-step Undo or Redo transaction. | None |
| kModificationFlagsLastStepInUndoRedo | & h100 | This is the final step in an Undo or Redo transaction. | None |
| kModificationFlagsChangeMarker | & h200 | One or more markers has changed in a line. | line |
| kModificationFlagsBeforeInsert | & h400 | Text is about to be inserted into the document. | position, if performed by user then text in bytes, length in bytes |
| kModificationFlagsBeforeDelete | & h800 | Text is about to be deleted from the document. | position, length |
| kModificationFlagsChangeIndicator | & h4000 | An indicator has been added or removed from a range of text. | position, length |
| kModificationFlagsChangeLineOverflow | & h8000 | The wrapping of text has changed because LineState was used. | line |
| kModificationFlagsChangeTabStops | & h200000 | The explicit tab stops of a line have changed because ClearTabstops or AddTabStop was called. | line |
| kModificationFlagsLastValueState | & h800000 | The internal state of a lexer has changed over a range. | position, length |
| kModificationFlagsChangeMargin | & h1000000 | A text margin has changed. | line |
| kModificationFlagsChangeAnnotation | & h2000000 | An annotation has changed. | line |
| kModificationFlagsInsertCheck | & h4000000 | Text is about to be inserted. The handler may change the text being inserted by calling SCI_CHANGEINSERTION. No other modifications may be made in this handler. | position, length, text |
| kModificationFlagsMultilineUndoRedo | & h1000 | This is part of an Undo or Redo with multi-line changes. | None |
| kModificationFlagsStartAction | & h2000 | This is set on a SC_PERFORMED_USER action when it is the first or only step in an undo transaction. This can be used to integrate the Scintilla undo stack with an undo stack in the container application by adding a Scintilla action to the container's stack for the currently opened container transaction or to open a new container transaction if there is no open container transaction. | None |
| kModificationFlagsContainer | & h40000 | This is set on for actions that the container stored into the undo stack with AddUndoAction. | token |
| kModificationFlagsEventMaskAll | & h1FFFFF | This is a mask for all valid flags. This is the default mask state set by ModEventMask. | None |

### 160.1.548 ModifyAttemptReadOnly

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** When in read-only mode, this notification is sent to the container if the user tries to change the text.
**Notes:** This can be used to check the document out of a version control system. You can set the read-only state of a document with ReadOnly property.

### 160.1.549 NeedsShown(Position as Integer, length as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Scintilla has determined that a range of lines that is currently invisible should be made visible.
**Example:**

```
sub NeedsShown(Position as Integer)
dim firstLine as Integer = LineFromPosition(me.position)
dim lastLine as Integer = LineFromPosition(me.position+me.length-1)
for line as integer = firstLine to lastLine
me.EnsureVisible(line)
next
end sub
```

**Notes:**

An example of where this may be needed is if the end of line of a contracted fold point is deleted. This message is sent to the container in case it wants to make the line visible in some unusual way such as making the whole document visible. Most containers will just ensure each line in the range is visible by calling EnsureVisible. The position and length fields of SCNotification indicate the range of the document that should be made visible.

The container code will be similar to the following code skeleton in the example above.

If the event is not implemented, we do similar automatically.

### 160.1.550 Opening

Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:**

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

### 160.1.551 Painted

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Painting has just been done.
**Notes:** Useful when you want to update some other widgets based on a change in Scintilla, but want to have the paint occur first to appear more responsive.

### 160.1.552 Prepare

MBS Scintilla Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The prepare event.
**Notes:** Called before we create the control, so you can change properties like HasBorder.

### 160.1.553 SavePointLeft

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Sent to the container when the save point is entered or left, allowing the container to display a ”document dirty” indicator and change its menus.

### 160.1.554 SavePointReached

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Sent to the container when the save point is entered or left, allowing the container to display a ”document dirty” indicator and change its menus.

### 160.1.555 ScaleFactorChanged(NewFactor as double)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The backing store scale factor has changed.
**Notes:** Please invalidate any cached bitmaps or other relevant state.

### 160.1.556 SelectionChanged(updated as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Selection changed.
**Notes:**

If content is changed or selection, this event is fired.

The UpdateUI event will also be called.

### 160.1.557 StyleNeeded(Position as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Queries you to provide style information.
**Notes:**

If you used no explicit lexer to make the container act as the lexer, you will receive this notification when Scintilla is about to display or print text that requires styling.

You are required to style the text from the line that contains the position returned by EndStyled up to the position passed in position. Symbolically, you need code of the form:

```
startPos = me.EndStyled
lineNumber = LineFromPosition(startPos)
startPos = PositionFromLine(lineNumber)
ApplyStyles(startPos, position)
```

### 160.1.558 TextChanged(Position as Integer, modificationType as Integer, Text as String, length as Integer, linesAdded as Integer, line as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Text changed.

**Notes:**

Our plugin calls this to inform you about a text change.
No modifications may be performed while in a Modified event.
Modified event will also be raised.

### 160.1.559 UpdateUI(updated as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Either the text or styling of the document has changed or the selection range or scroll position may have changed.
**Notes:**

Now would be a good time to update any container UI elements that depend on document or view state. As it is sometimes difficult to determine whether a change has occurred, these events may also fire when there has been no actual change. The updated field is set to the bit set of things changed since the previous notification.

See kUpdate* constants.

### 160.1.560 URIDropped(text as String)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Indicates that the user has dragged a URI such as a file name or Web address onto Scintilla.
**Notes:** The container could interpret this as a request to open the file.

### 160.1.561 UserListSelection(Position as Integer, Character as Integer, Text as String, listType as Integer, listCompletionMethod as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The user has selected an item in a user list.
**Notes:**

### 160.1.562 Zoom

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is generated when the user zooms the display using the keyboard or the Zoom method is called.
**Notes:** This event can be used to recalculate positions, such as the width of the line number margin to

| Field | Usage |
|---|---|
| listType | This is set to the listType parameter from the UserListShow message that initiated the list. |
| text | The text of the selection. |
| position | The position the list was displayed at. |
| Character | If a fillup character was the method of selection, the used character, otherwise 0. |
| listCompletionMethod | A value indicating the way in which the completion occurred. |

maintain sizes in terms of characters rather than pixels.
See also:

- 160.1.493 Zoom as Integer 24166

### 160.1.563 Constants

### 160.1.564 kAccessibilityDisabled = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the accessibility status constants.
**Notes:** Accessibility is disabled.

### 160.1.565 kAccessibilityEnabled = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the accessibility status constants.
**Notes:** Accessibility is enabled.

### 160.1.566 kAlphaNoAlpha = 256

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the alpha channel constants.
**Notes:** Special value to indicate no alpha.

### 160.1.567 kAlphaOpaque = 255

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the alpha channel constants.
**Notes:** Opaque color.

### 160.1.568 kAlphaTransparent = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the alpha channel constants.
**Notes:** Full transparency.

### 160.1.569 kAnnotationVisibleBoxed = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the annotation visibility constants.
**Notes:** Annotations are indented to match the text and are surrounded by a box.

### 160.1.570 kAnnotationVisibleHidden = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the annotation visibility constants.
**Notes:** Annotations are not displayed.

### 160.1.571 kAnnotationVisibleIndented = 3

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the annotation visibility constants.
**Notes:** Annotations are indented to match the text.

### 160.1.572 kAnnotationVisibleStandard = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the annotation visibility constants.
**Notes:** Annotations are drawn left justified with no adornment.

### 160.1.573 kAutoCompleteOptionFixedSize = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of auto completion constants.
**Notes:** On Win32 only, use a fixed size list instead of one that can be resized by the user. This also avoids a header rectangle above the list.

### 160.1.574 kAutoCompleteOptionNormal = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of auto completion constants.
**Notes:** Display autocompletion using default settings.

### 160.1.575 kAutomaticFoldChange = & h0004

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of automatic folding constants.
**Notes:**

Show lines as needed when fold structure is changed.
The Modified notification is still sent unless it is disabled by the container.

### 160.1.576 kAutomaticFoldClick = & h0002

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of automatic folding constants.
**Notes:**

Handle clicks in fold margin automatically.
This avoids sending the MarginClick event for folding margins.

### 160.1.577 kAutomaticFoldNone = & h0000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of automatic folding constants.
**Notes:** Value with no automatic behaviour.

### 160.1.578 kAutomaticFoldShow = & h0001

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of automatic folding constants.
**Notes:** Automatically show lines as needed. This avoids sending the NeedsShown notification.

### 160.1.579 kBidirectionalDisabled = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of bidirectional mode constants.
**Notes:** Disabled

### 160.1.580 kBidirectionalL2R = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of bidirectional mode constants.
**Notes:** Left to Right

### 160.1.581 kBidirectionalR2L = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of bidirectional mode constants.
**Notes:** Right to Left

### 160.1.582 kCaretPolicyEven = & h08

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the caret policy constants.
**Notes:** If not set, instead of having symmetrical UZs, the left and bottom UZs are extended up to right and top UZs respectively. This way, we favour the displaying of useful information: the beginning of lines, where most code reside, and the lines after the caret, for example, the body of a function.

### 160.1.583 kCaretPolicyJumps = & h10

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the caret policy constants.
**Notes:** If set, the display is moved more energetically so the caret can move in the same direction longer before the policy is applied again. '3UZ' notation is used to indicate three time the size of the UZ as a distance to the margin.

### 160.1.584 kCaretPolicySlop = & h01

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the caret policy constants.
**Notes:** If set, we can define a slop value: caretSlop. This value defines an unwanted zone (UZ) where the caret is... unwanted. This zone is defined as a number of pixels near the vertical margins, and as a number of lines near the horizontal margins. By keeping the caret away from the edges, it is seen within its context. This makes it likely that the identifier that the caret is on can be completely seen, and that the current line is seen with some of the lines following it, which are often dependent on that line.

### 160.1.585 kCaretPolicyStrict = & h04

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the caret policy constants.
**Notes:** If set, the policy set by kCaretPolicySlop is enforced... strictly. The caret is centred on the display if caretSlop is not set, and cannot go in the UZ if caretSlop is set.

### 160.1.586 kCaretStickyOff = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of caret sticky constants.
**Notes:** When set to kCaretStickyOff (0), the sticky flag is off; all text changes (and all caret position changes) will remember the caret's new horizontal position when moving to different lines. This is the default.

### 160.1.587 kCaretStickyOn = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of caret sticky constants.
**Notes:** When set to kCaretStickyOn (1), the sticky flag is on, and the only thing which will cause the editor to remember the horizontal caret position is moving the caret with mouse or keyboard (left/right arrow keys,

home/end keys, etc).

### 160.1.588 kCaretStickyWhiteSpace = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of caret sticky constants.
**Notes:** When set to kCaretStickyWhiteSpace (2), the caret acts like mode 0 (sticky off) except under one special case; when space or tab characters are inserted. (Including pasting only space/tabs – undo, redo, etc. do not exhibit this behaviour..).

### 160.1.589 kCaretStyleBlock = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the caret style constants.
**Notes:** Draws insertion carets as blocks.

### 160.1.590 kCaretStyleBlockAfter = & h100

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the caret style constants.
**Notes:** When the caret end of a range is at the end and a block caret style is chosen, draws the block outside the selection instead of inside. This can be ored with kCaretStyleBlock or kCaretStyleBlockCurses.

### 160.1.591 kCaretStyleInsMask = & hF

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the caret style constants.
**Notes:** The mask to only get the bits for insert mode.

### 160.1.592 kCaretStyleInvisible = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the caret style constants.
**Notes:** Carets are not drawn at all.

### 160.1.593 kCaretStyleLine = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the caret style constants.
**Notes:** Draws insertion carets as lines. This is the default.

### 160.1.594 kCaretStyleOverstrikeBar = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the caret style constants.
**Notes:** Draws an overstrike caret as a bar. This is the default.

### 160.1.595 kCaretStyleOverstrikeBlock = & h10

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the caret style constants.
**Notes:** Draws an overstrike caret as a block. This should be ored with one of the first three styles.

### 160.1.596 kCaseInsensitiveBehaviourIgnoreCase = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of case insenstive behavior constants.
**Notes:** Ignore Case

### 160.1.597 kCaseInsensitiveBehaviourRespectCase = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of case insenstive behavior constants.
**Notes:** Respect Case

### 160.1.598 kCharacterSetAnsi = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** ANSI

### 160.1.599 kCharacterSetArabic = 178

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** Arabic

### 160.1.600 kCharacterSetBaltic = 186

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** Baltic

### 160.1.601 kCharacterSetChineseBig5 = 136

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** Chinese Big 5

### 160.1.602 kCharacterSetCyrillic = 1251

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** Cyrillic

### 160.1.603 kCharacterSetDefault = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** Default one

### 160.1.604 kCharacterSetEastEurope = 238

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** East Europe

### 160.1.605 kCharacterSetGB2312 = 134

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** GB 2312

### 160.1.606 kCharacterSetGreek = 161

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** Greek

### 160.1.607 kCharacterSetHangul = 129

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** Hangul

### 160.1.608 kCharacterSetHebrew = 177

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** Hebrew

### 160.1.609 kCharacterSetIso8859_15 = 1000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** ISO 8859-15

### 160.1.610 kCharacterSetJohab = 130

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** Johab

### 160.1.611 kCharacterSetMac = 77

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** Mac

### 160.1.612 kCharacterSetOem = 255

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** OEM

### 160.1.613 kCharacterSetOem866 = 866

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** OEM 866

### 160.1.614 kCharacterSetRussian = 204

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** Russian

### 160.1.615 kCharacterSetShiftJis = 128

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** ShiftJis

### 160.1.616 kCharacterSetSymbol = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** Symbol

### 160.1.617 kCharacterSetThai = 222

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** Thai

### 160.1.618 kCharacterSetTurkish = 162

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** Turkish

### 160.1.619 kCharacterSetVietnamese = 163

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** Vietnamese

### 160.1.620 kCharacterSourceDirectInput = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character source constants.
**Notes:** Direct input characters, including characters generated by calling keyboard commands like NewLine method.

### 160.1.621 kCharacterSourceImeResult = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character source constants.
**Notes:** IME (either inline or windowed mode) full composited string. Modern IME is able to composite English word or sentence, when this value is set, current character may not a Chinese, Japanese or Korean character. Currently, this is only set on Windows.

### 160.1.622 kCharacterSourceTentativeInput = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character source constants.
**Notes:** Tentative input characters. They are used by IME (inline mode, see IMEInteraction) to composite final string, normally different from final composited string (which is the string that has been truly added into current document), and may be withdrawn when the user cancels typing (e.g. by pressing Esc key). Some system (at least Cocoa) also use tentative input for non-IME features like using dead key to composite diacritical marks (grave accent, etc.). These characters are not added to macro recording. Most applications can simply ignore the notification when this value is set.

### 160.1.623 kCompletionMethodsCommand = 5

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for completion method in auto complete.
**Notes:** The AutoCSelect method triggered the completion. Character is 0.

### 160.1.624 kCompletionMethodsDoubleClick = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for completion method in auto complete.
**Notes:** A double-click triggered the completion. Character is 0.

### 160.1.625 kCompletionMethodsFillUp = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for completion method in auto complete.
**Notes:** A fillup character triggered the completion. The character used is in Character.

### 160.1.626 kCompletionMethodsNewline = 4

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for completion method in auto complete.
**Notes:** A new line or Newline method triggered the completion. Character is 0.

### 160.1.627 kCompletionMethodsTab = 3

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for completion method in auto complete.
**Notes:** The tab key or Tab method triggered the completion. Character is 0.

### 160.1.628 kCursorShapeArrow = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the cursor shape constants.
**Notes:** Normal arrow.

### 160.1.629 kCursorShapeNormal = -1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the cursor shape constants.
**Notes:** The normal cursor is displayed.

### 160.1.630 kCursorShapeReverseArrow = 7

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the cursor shape constants.
**Notes:** Reverse arrow.

### 160.1.631 kCursorShapeWait = 4

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the cursor shape constants.
**Notes:** The wait cursor is displayed when the mouse is over or owned by the Scintilla window.

### 160.1.632 kDocumentOptionDefault = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of line document option constants.
**Notes:** Standard options.

### 160.1.633 kDocumentOptionStylesNone = & h1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of line document option constants.
**Notes:** Stops allocation of memory to style characters which saves significant memory, often 40% with the whole document treated as being style 0.

### 160.1.634 kDocumentOptionTextLarge = & h100

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of line document option constants.
**Notes:** Accommodates documents larger than 2 GigaBytes in 64-bit executables.

### 160.1.635 kEdgeVisualStyleBackground = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for long line display mode.
**Notes:** The background colour of characters after the column limit is changed to the colour set by EdgeColor property. This is recommended for proportional fonts.

### 160.1.636 kEdgeVisualStyleLine = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for long line display mode.
**Notes:** A vertical line is drawn at the column number set by EdgeColumn(). This works well for monospaced fonts. The line is drawn at a position based on the width of a space character in kStylesCommonDefault, so it may not work very well if your styles use proportional fonts or if your style have varied font sizes or you use a mixture of bold, italic and normal text.

### 160.1.637 kEdgeVisualStyleMultiLine = 3

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for long line display mode.
**Notes:** This is similar to kEdgeVisualStyleLine but in contrary to showing only one single line a configurable set of vertical lines can be shown simultaneously. This edgeMode uses a completely independent dataset that can only be configured by using the MultiEdge* methods.

### 160.1.638 kEdgeVisualStyleNone = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for long line display mode.
**Notes:** Long lines are not marked. This is the default state.

### 160.1.639 kElementCaret = 40

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Colour of caret for main selection

### 160.1.640 kElementCaretAdditional = 41

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Colour of caret for additional selections

### 160.1.641 kElementCaretLineBack = 50

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Colour of caret line background

### 160.1.642 kElementFoldLine = 80

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Colour of fold lines

### 160.1.643 kElementHiddenLine = 81

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Colour of line drawn to show there are lines hidden at that point

### 160.1.644 kElementHotSpotActive = 70

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Text colour of active hot spot

### 160.1.645 kElementHotSpotActiveBack = 71

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Background colour of active hot spot

### 160.1.646 kElementList = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Text colour in autocompletion lists

### 160.1.647 kElementListBack = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Background colour of autocompletion lists

### 160.1.648 kElementListSelected = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Text colour of selected item in autocompletion lists

### 160.1.649 kElementListSelectedBack = 3

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Background colour of selected item in autocompletion lists

### 160.1.650 kElementSelectionAdditionalBack = 13

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Background colour of additional selections

### 160.1.651 kElementSelectionAdditionalText = 12

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Text colour of additional selections

### 160.1.652 kElementSelectionBack = 11

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Background colour of main selection

### 160.1.653 kElementSelectionInactiveBack = 17

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Background colour of selections when another window has focus

### 160.1.654 kElementSelectionInactiveText = 16

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Text colour of selections when another window has focus

### 160.1.655 kElementSelectionSecondaryBack = 15

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Background colour of selections when another window contains the primary selection

### 160.1.656 kElementSelectionSecondaryText = 14

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Text colour of selections when another window contains the primary selection

### 160.1.657 kElementSelectionText = 10

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Text colour of main selection

### 160.1.658 kElementWhiteSpace = 60

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Colour of visible white space

### 160.1.659 kElementWhiteSpaceBack = 61

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Colour of visible white space background

### 160.1.660 kEndOfLineCR = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the end of line constants.
**Notes:** CR, the old Mac line ending.

### 160.1.661 kEndOfLineCRLF = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the end of line constants.
**Notes:** CRLF, the Windows line ending.

### 160.1.662 kEndOfLineLF = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the end of line constants.
**Notes:** LF, the unix line ending.

### 160.1.663 kEOLAnnotationVisibleAngleCircle = & h102

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the EOL annotation constants.
**Notes:** Surround with a ,óÑshape,óó with angled left end and curved right end.

### 160.1.664 kEOLAnnotationVisibleAngleFlat = & h112

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the EOL annotation constants.
**Notes:** Surround with a ,óÑshape | with angled left end and flat right end.

### 160.1.665 kEOLAnnotationVisibleAngles = & h122

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the EOL annotation constants.
**Notes:** Surround with a ,óÑshape,ñ with angles on each end.

### 160.1.666 kEOLAnnotationVisibleBoxed = & h2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the EOL annotation constants.
**Notes:** End of Line Annotations are indented to match the text and are surrounded by a box.

### 160.1.667 kEOLAnnotationVisibleCircleAngle = & h120

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the EOL annotation constants.
**Notes:** Surround with a ,óñshape,ñ with curved left end and angled right end.

### 160.1.668 kEOLAnnotationVisibleCircleFlat = & h110

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the EOL annotation constants.
**Notes:** Surround with a ,óñshape | with curved left end and flat right end.

### 160.1.669 kEOLAnnotationVisibleFlatAngle = & h121

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the EOL annotation constants.
**Notes:** Surround with a | shape,ñ with flat left end and angled right end.

### 160.1.670 kEOLAnnotationVisibleFlatCircle = & h101

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the EOL annotation constants.
**Notes:** Surround with a | shape,óó with flat left end and curved right end.

### 160.1.671 kEOLAnnotationVisibleFlats = & h111

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the EOL annotation constants.
**Notes:** Surround with a | shape | with flat ends.

### 160.1.672 kEOLAnnotationVisibleHidden = & h0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the EOL annotation constants.
**Notes:** End of Line Annotations are not displayed.

### 160.1.673 kEOLAnnotationVisibleStadium = & h100

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the EOL annotation constants.
**Notes:** Surround with a ,óñstadium,óó - a rectangle with rounded ends.

### 160.1.674 kEOLAnnotationVisibleStandard = & h1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the EOL annotation constants.
**Notes:** End of Line Annotations are drawn left justified with no adornment.

### 160.1.675 kFindOptionCxx11RegEx = & h00800000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the search flag constants.
**Notes:** This flag may be set to use C++11 <regex>instead of Scintilla's basic regular expressions. If the regular expression is invalid then -1 is returned and status is set to SC_STATUS_WARN_REGEX. The ECMAScript flag is set on the regex object and UTF-8 documents will exhibit Unicode-compliant behaviour. For MSVC, where wchar_t is 16-bits, the regular expression ".." will match a single astral-plane character. There may be other differences between compilers. Must also have kFindOptionRegExP set.

### 160.1.676 kFindOptionMatchCase = & h4

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the search flag constants.
**Notes:** A match only occurs with text that matches the case of the search string.

### 160.1.677 kFindOptionNone = & h0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the search flag constants.
**Notes:** Default setting is case-insensitive literal match.

### 160.1.678 kFindOptionPosix = & h00400000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the search flag constants.
**Notes:** Treat regular expression in a more POSIX compatible manner by interpreting bare ( and ) for tagged sections rather than \( and \). Has no effect when kFindOptionCxx11RegEx is set.

### 160.1.679 kFindOptionRegExp = & h00200000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the search flag constants.
**Notes:**

The search string should be interpreted as a regular expression.
Uses Scintilla's base implementation unless combined with kFindOptionCxx11RegEx.

### 160.1.680 kFindOptionWholeWord = & h2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the search flag constants.
**Notes:** A match only occurs if the characters before and after are not word characters as defined by WordChars property.

### 160.1.681 kFindOptionWordStart = & h00100000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the search flag constants.
**Notes:** A match only occurs if the character before is not a word character as defined by WordChars.

### 160.1.682 kFoldActionContract = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the folder action constants.
**Notes:** Contract.

### 160.1.683 kFoldActionExpand = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the folder action constants.
**Notes:** Expand.

### 160.1.684 kFoldActionToggle = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the folder action constants.
**Notes:** Toggle between contracted and expanded.

### 160.1.685 kFoldDisplayTextStyleBoxed = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the folder display text style constants.
**Notes:** Display the text tags with a box drawn around them.

### 160.1.686 kFoldDisplayTextStyleHidden = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the folder display text style constants.
**Notes:** Do not display the text tags. This is the default.

### 160.1.687 kFoldDisplayTextStyleStandard = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the folder display text style constants.
**Notes:** Display the text tags.

### 160.1.688 kFoldFlagLevelNumbers = & h0040

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the flags for folders.
**Notes:** Display hexadecimal fold levels in line margin to aid debugging of folding. The appearance of this feature may change in the future.

### 160.1.689 kFoldFlagLineAfterContracted = & h0010

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the flags for folders.
**Notes:** Draw below if not expanded

### 160.1.690 kFoldFlagLineAfterExpanded = & h0008

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the flags for folders.
**Notes:** Draw below if expanded

### 160.1.691 kFoldFlagLineBeforeContracted = & h0004

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the flags for folders.
**Notes:** Draw above if not expanded

### 160.1.692 kFoldFlagLineBeforeExpanded = & h0002

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the flags for folders.
**Notes:** Draw above if expanded

### 160.1.693 kFoldFlagLineState = & h0080

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the flags for folders.
**Notes:** Display hexadecimal line state in line margin to aid debugging of lexing and folding. May not be used at the same time as kFoldFlagLevelNumbers.

### 160.1.694 kFoldFlagNone = & h0000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the flags for folders.
**Notes:** Default value.

### 160.1.695 kFoldLevelBase = & h400

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the folder levels.
**Notes:** The initial fold level.

### 160.1.696 kFoldLevelHeaderFlag = & h2000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the folder levels.
**Notes:** Indicates that the line is a header (fold point).

### 160.1.697 kFoldLevelNone = & h0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the folder levels.
**Notes:** Default level that may occur before folding.

### 160.1.698 kFoldLevelNumberMask = & h0FFF

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the folder levels.
**Notes:** The mask for numbers.

### 160.1.699 kFoldLevelWhiteFlag = & h1000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the folder levels.
**Notes:** Indicates that the line is blank and allows it to be treated slightly different then its level may indicate.

### 160.1.700 kFontQualityQualityAntialiased = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for font quality.
**Notes:** Antialiased

### 160.1.701 kFontQualityQualityDefault = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for font quality.
**Notes:** Default.

### 160.1.702 kFontQualityQualityLcdOptimized = 3

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for font quality.
**Notes:** LCD Optimized

### 160.1.703 kFontQualityQualityMask = & hF

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for font quality.
**Notes:** In case it is necessary to squeeze more options into this property, only a limited number of bits defined by kFontQualityQualityMask will be used for quality.

### 160.1.704 kFontQualityQualityNonAntialiased = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for font quality.
**Notes:** Non Antialiased

### 160.1.705 kIdleStylingAfterVisible = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the idle styling constants.
**Notes:** Text after the currently visible portion may be styled in the background.

### 160.1.706 kIdleStylingAll = 3

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the idle styling constants.
**Notes:** Style both before and after the visible text.

### 160.1.707 kIdleStylingNone = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the idle styling constants.
**Notes:** Syntax styling is performed for all the currently visible text before displaying it.

### 160.1.708 kIdleStylingToVisible = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the idle styling constants.
**Notes:** A small amount of styling is performed before display and then further styling is performed incrementally in the background as an idle-time task.

### 160.1.709 kIMEInteractionInline = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for IME Interaction Mode.
**Notes:** Show inline.

### 160.1.710 kIMEInteractionWindowed = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for IME Interaction Mode.
**Notes:** Show on window.

### 160.1.711 kIndentViewLookBoth = 3

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the indentation guide constants.
**Notes:** Indentation guides are shown beyond the actual indentation up to the level of the next non-empty line or previous non-empty line whichever is the greater. This setting is good for most languages.

### 160.1.712 kIndentViewLookForward = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the indentation guide constants.
**Notes:** Indentation guides are shown beyond the actual indentation up to the level of the next non-empty line. If the previous non-empty line was a fold header then indentation guides are shown for one more level of indent than that line. This setting is good for Python.

### 160.1.713 kIndentViewNone = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the indentation guide constants.
**Notes:** No indentation guides are shown.

### 160.1.714 kIndentViewReal = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the indentation guide constants.
**Notes:** Indentation guides are shown inside real indentation white space.

### 160.1.715 kInvalidPosition = -1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** Invalid position constant.

### 160.1.716 kKeyModAlt = 4

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for an modifier keys.
**Notes:** Alt key. (named Option on MacOS usually)

### 160.1.717 kKeyModCtrl = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for an modifier keys.
**Notes:** Control key (the Command key on Mac, the Ctrl key on other platforms).

### 160.1.718 kKeyModMeta = 16

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for an modifier keys.
**Notes:** Meta key (the Ctrl key on Mac, the Windows key on other platforms).

### 160.1.719 kKeyModNorm = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for an modifier keys.
**Notes:** No modifier key.

### 160.1.720 kKeyModShift = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for an modifier keys.
**Notes:** Shift Key

### 160.1.721 kKeyModSuper = 8

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for an modifier keys.
**Notes:** This is the same as kKeyModMeta on all platforms.

### 160.1.722 kKeysAdd = 310

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.1.723 kKeysBack = 8

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.1.724 kKeysDelete = 308

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.1.725 kKeysDivide = 312

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.1.726 kKeysDown = 300

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.1.727 kKeysEnd = 305

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.1.728 kKeysEscape = 7

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.1.729 kKeysHome = 304

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.1.730 kKeysInsert = 309

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.1.731 kKeysLeft = 302

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.1.732 kKeysMenu = 315

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.1.733 kKeysNext = 307

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.1.734 kKeysPrior = 306

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.1.735 kKeysReturn = 13

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.1.736 kKeysRight = 303

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.1.737 kKeysRWin = 314

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.1.738 kKeysSubtract = 311

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.1.739 kKeysTab = 9

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.1.740 kKeysUp = 301

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.1.741 kKeysWin = 313

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.1.742 kLayerBase = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the layer constants.
**Notes:** Draw the selection background opaquely on the base layer

### 160.1.743 kLayerOverText = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the layer constants.
**Notes:** Draw the selection background translucently over the text.

### 160.1.744 kLayerUnderText = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the layer constants.
**Notes:**

Draw the selection background translucently under the text.
This will not work in single phase drawing mode as there is no under-text phase.

### 160.1.745 kLineCacheCaret = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for line cache.
**Notes:** One line is cached. This is the default.

### 160.1.746 kLineCacheDocument = 3

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for line cache.
**Notes:** All lines in the document.

### 160.1.747 kLineCacheNone = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for line cache.
**Notes:** No lines are cached.

### 160.1.748 kLineCachePage = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for line cache.
**Notes:** Visible lines plus the line containing the caret.

### 160.1.749 kLineCharacterIndexTypeNone = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of line character index type constants.
**Notes:** Bytewise.

### 160.1.750 kLineCharacterIndexTypeUtf16 = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of line character index type constants.
**Notes:** UTF-16 code units are indexed.

### 160.1.751 kLineCharacterIndexTypeUtf32 = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of line character index type constants.
**Notes:** Whole characters are indexed.

### 160.1.752 kLineEndTypeDefault = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the line end types constants.

### 160.1.753 kLineEndTypeUnicode = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the line end types constants.

### 160.1.754 kMarginOptionNone = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the margin option constants.
**Notes:** Whole wrapped line is selected.

### 160.1.755 kMarginOptionSubLineSelect = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the margin option constants.
**Notes:** Only sub line of wrapped line is selected.

### 160.1.756 kMaskFolders = & hFE000000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** The mask for folder flags.

### 160.1.757 kModificationFlagsBeforeDelete = & h800

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** Text is about to be deleted from the document.

### 160.1.758 kModificationFlagsBeforeInsert = & h400

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** Text is about to be inserted into the document.

### 160.1.759 kModificationFlagsChangeAnnotation = & h20000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** An annotation has changed.

### 160.1.760 kModificationFlagsChangeEOLAnnotation = & h400000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** An annotation has changed.

### 160.1.761 kModificationFlagsChangeFold = & h8

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** A folding change has occurred.

### 160.1.762 kModificationFlagsChangeIndicator = & h4000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** An indicator has been added or removed from a range of text.

### 160.1.763 kModificationFlagsChangeLineState = & h8000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** A line state has changed because SCI_SETLINESTATE was called.

### 160.1.764 kModificationFlagsChangeMargin = & h10000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** A text margin has changed.

### 160.1.765 kModificationFlagsChangeMarker = & h200

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** One or more markers has changed in a line.

### 160.1.766 kModificationFlagsChangeStyle = & h4

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** A style change has occurred.

### 160.1.767 kModificationFlagsChangeTabStops = & h200000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** The explicit tab stops on a line have changed because ClearTabStops or AddTabStop was called.

### 160.1.768 kModificationFlagsContainer = & h40000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** This is set on for actions that the container stored into the undo stack with AddUndoAction.

### 160.1.769 kModificationFlagsDeleteText = & h2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** Text has been removed from the document.

### 160.1.770 kModificationFlagsEventMaskAll = & h7FFFFF

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** This is a mask for all valid flags. This is the default mask state set by ModEventMask.

### 160.1.771 kModificationFlagsInsertCheck = & h100000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** Text is about to be inserted. The handler may change the text being inserted by calling ChangeInsertion method. No other modifications may be made in this handler.

### 160.1.772 kModificationFlagsInsertText = & h1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** Text has been inserted into the document.

### 160.1.773 kModificationFlagsLastStepInUndoRedo = & h100

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** This is the final step in an Undo or Redo transaction.

### 160.1.774 kModificationFlagsLexerState = & h80000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** The internal state of a lexer has changed over a range.

### 160.1.775 kModificationFlagsMultilineUndoRedo = & h1000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** This is part of an Undo or Redo with multi-line changes.

### 160.1.776 kModificationFlagsMultiStepUndoRedo = & h80

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** This is part of a multi-step Undo or Redo transaction.

### 160.1.777 kModificationFlagsNone = & h0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:**

Base value with no fields valid. Will not occur but is useful in tests.

### 160.1.778 kModificationFlagsRedo = & h40

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** Information: this was the result of a Redo.

### 160.1.779 kModificationFlagsStartAction = & h2000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** This is set on a kModificationFlagsUser action when it is the first or only step in an undo transaction. This can be used to integrate the Scintilla undo stack with an undo stack in the container application

by adding a Scintilla action to the container's stack for the currently opened container transaction or to open a new container transaction if there is no open container transaction.

### 160.1.780 kModificationFlagsUndo = & h20

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** Information: this was the result of an Undo.

### 160.1.781 kModificationFlagsUser = & h10

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** Information: the operation was done by the user.

### 160.1.782 kMultiAutoCompleteEach = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants to specify how auto complete should handle multiple selections.
**Notes:** Each selection.

### 160.1.783 kMultiAutoCompleteOnce = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants to specify how auto complete should handle multiple selections.
**Notes:** Only first selection.

### 160.1.784 kMultiPasteEach = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the multi paste option constants.
**Notes:** The paste text can go into each selection.

### 160.1.785 kMultiPasteOnce = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the multi paste option constants.
**Notes:** The pasted text can go into just the main selection.

### 160.1.786 kOrderingCustom = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the ordering option constants.
**Notes:** Custom sorting.

### 160.1.787 kOrderingPerformSort = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the ordering option constants.
**Notes:** The control will sort for you.

### 160.1.788 kOrderingPreSorted = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the ordering option constants.
**Notes:** You pass list pre-sorted.

### 160.1.789 kPopUpAll = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special popup modus constants.
**Notes:** Show default editing menu if clicking on scintilla.

### 160.1.790 kPopUpNever = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special popup modus constants.
**Notes:** Never show default editing menu.

### 160.1.791 kPopUpText = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special popup modus constants.
**Notes:** Show default editing menu only if clicking on text area.

### 160.1.792 kPrintOptionBlackOnWhite = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of print option constants.
**Notes:** Print all text as black on a white background.

### 160.1.793 kPrintOptionColourOnWhite = 3

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of print option constants.
**Notes:** Everything prints in its own colour on a white background.

### 160.1.794 kPrintOptionColourOnWhiteDefaultBG = 4

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of print option constants.
**Notes:** Everything prints in its own foreground colour but all styles up to and including kStylesCommonLineNumber will print on a white background.

### 160.1.795 kPrintOptionInvertLight = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of print option constants.
**Notes:** If you use a dark screen background this saves ink by inverting the light value of all colours and printing on a white background.

### 160.1.796 kPrintOptionNormal = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of print option constants.
**Notes:** Print using the current screen colours with the exception of line number margins which print on a white background. This is the default.

### 160.1.797 kPrintOptionScreenColours = 5

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of print option constants.
**Notes:** Print using the current screen colours for both foreground and background. This is the only mode that does not set the background colour of the line number margin to white.

### 160.1.798 kRepresentationAppearanceBlob = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the representation appearance constants.
**Notes:** Draw the representation text inverted in a rounded rectangle. This is the default appearance.

### 160.1.799 kRepresentationAppearanceColour = & h10

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the representation appearance constants.
**Notes:** Draw the representation in the colour set with RepresentationColour() instead of in the colour of the style of the text being represented.

### 160.1.800 kRepresentationAppearancePlain = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the representation appearance constants.
**Notes:** Draw the representation text with no decorations.

### 160.1.801 kSelectionModeLines = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the selection mode constants.
**Notes:** Line selection.

### 160.1.802 kSelectionModeRectangle = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the selection mode constants.
**Notes:** Rectangular

### 160.1.803 kSelectionModeStream = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the selection mode constants.
**Notes:** Stream

### 160.1.804 kSelectionModeThin = 3

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the selection mode constants.
**Notes:** Thin rectangular selection

### 160.1.805 kStatusBadAlloc = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the status constants.
**Notes:** Memory is exhausted.

### 160.1.806 kStatusFailure = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the status constants.
**Notes:** Generic failure.

### 160.1.807 kStatusOk = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the status constants.
**Notes:** No failures.

### 160.1.808 kStatusRegEx = 1001

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the status constants.
**Notes:** Regular expression is invalid.

### 160.1.809 kStatusWarnStart = 1000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the status constants.
**Notes:** Warnings start with this value.

### 160.1.810 kSupportsFractionalStrokeWidth = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the support constants.
**Notes:** Can lines be drawn with fractional widths like 1.5 or 0.5 pixels?

### 160.1.811 kSupportsLineDrawsFinal = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the support constants.
**Notes:** Whether drawing a line draws its final position. Only false on Win32 GDI.

### 160.1.812 kSupportsPixelDivisions = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the support constants.
**Notes:**

Are logical pixels larger than physical pixels?
Currently only true for macOS Cocoa with 'retina' displays. When true, creating pixmaps at twice the resolution can produce clearer output with less blur.

### 160.1.813 kSupportsPixelModification = 4

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the support constants.
**Notes:** Can individual pixels be modified? This is false for character cell platforms like curses.

### 160.1.814 kSupportsTranslucentStroke = 3

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the support constants.
**Notes:** Can translucent lines, polygons, ellipses, and text be drawn?

### 160.1.815 kTabDrawModeLongArrow = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the tab draw mode constants.

### 160.1.816 kTabDrawModeStrikeOut = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the tab draw mode constants.

### 160.1.817 kTechnologyDefault = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the drawing technology constants.
**Notes:** Default

### 160.1.818 kTechnologyDirectWrite = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the drawing technology constants.
**Notes:** Use DirectWrite API.

### 160.1.819 kTechnologyDirectWriteDC = 3

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the drawing technology constants.
**Notes:** DirectWrite to draw into a GDI DC.

### 160.1.820 kTechnologyDirectWriteRetain = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the drawing technology constants.
**Notes:** Use DirectWrite API with retaining frame.

### 160.1.821 kTimeForever = 10000000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** The constant for MouseDwellTime to mean forever in duration.

### 160.1.822 kTypePropertyBoolean = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the property type constants.
**Notes:** Property is a boolean.

### 160.1.823 kTypePropertyInteger = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the property type constants.
**Notes:** Property is an integer.

### 160.1.824 kTypePropertyString = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the property type constants.
**Notes:** Property is a string.

### 160.1.825 kUndoFlagsMayCoalesce = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of line undo flag constants.
**Notes:** If the container action may be coalesced along with any insertion and deletion actions into a single compound action.

### 160.1.826 kUndoFlagsNone = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of line undo flag constants.
**Notes:** Coalescing treats coalescible container actions as transparent so will still only group together insertions that look like typing or deletions that look like multiple uses of the Backspace or Delete keys.

### 160.1.827 kUpdateContent = & h1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the flags to report what was updated.
**Notes:** Contents, styling or markers may have been changed.

### 160.1.828 kUpdateHScroll = & h8

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the flags to report what was updated.
**Notes:** May have scrolled horizontally.

### 160.1.829 kUpdateNone = & h0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the flags to report what was updated.
**Notes:** Value without any changes.

### 160.1.830 kUpdateSelection = & h2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the flags to report what was updated.
**Notes:** Selection may have been changed.

### 160.1.831 kUpdateVScroll = & h4

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the flags to report what was updated.
**Notes:** May have scrolled vertically.

### 160.1.832 kVirtualSpaceNone = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants to define virtual space behavior.
**Notes:** Disables all use of virtual space.

### 160.1.833 kVirtualSpaceNoWrapLineStart = 4

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants to define virtual space behavior.
**Notes:** Prevents left arrow movement and selection from wrapping to the previous line. This is most commonly desired in conjunction with virtual space but is an independent setting so works without virtual space.

### 160.1.834 kVirtualSpaceRectangularSelection = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants to define virtual space behavior.
**Notes:** Rectangular selection.

### 160.1.835 kVirtualSpaceUserAccessible = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants to define virtual space behavior.
**Notes:** User accessible.

### 160.1.836 kVisiblePolicySlop = & h01

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for the visibility policy.
**Notes:** If set, we can define a slop value: caretSlop. This value defines an unwanted zone (UZ) where the caret is... unwanted. This zone is defined as a number of pixels near the vertical margins, and as a number of lines near the horizontal margins. By keeping the caret away from the edges, it is seen within its context. This makes it likely that the identifier that the caret is on can be completely seen, and that the current line is seen with some of the lines following it, which are often dependent on that line.

### 160.1.837 kVisiblePolicyStrict = & h04

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for the visibility policy.
**Notes:** If set, the policy set by slop is kVisiblePolicySlop... strictly. The caret is centred on the display if caretSlop is not set, and cannot go in the UZ if caretSlop is set.

### 160.1.838 kWhiteSpaceInvisible = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the white space visibility constants.
**Notes:** The normal display mode with white space displayed as an empty background colour.

### 160.1.839 kWhiteSpaceVisibleAfterIndent = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the white space visibility constants.
**Notes:** White space used for indentation is displayed normally but after the first visible character, it is shown as dots and arrows.

### 160.1.840 kWhiteSpaceVisibleAlways = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the white space visibility constants.
**Notes:** White space characters are drawn as dots and arrows,

### 160.1.841 kWhiteSpaceVisibleOnlyInIndent = 3

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the white space visibility constants.
**Notes:** White space used for indentation is displayed as dots and arrows.

### 160.1.842 kWrapChar = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the wrap constants.
**Notes:** Enable wrapping between any characters.

### 160.1.843 kWrapIndentModeDeepIndent = 3

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the wrap indent mode constants.
**Notes:** Wrapped sublines are aligned to first subline indent plus two more levels of indentation

### 160.1.844 kWrapIndentModeFixed = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the wrap indent mode constants.
**Notes:** Wrapped sublines aligned to left of window plus amount set by WrapStartIndent.

### 160.1.845 kWrapIndentModeIndent = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the wrap indent mode constants.
**Notes:** Wrapped sublines are aligned to first subline indent plus one more level of indentation

### 160.1.846 kWrapIndentModeSame = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the wrap indent mode constants.
**Notes:** Wrapped sublines are aligned to first subline indent

### 160.1.847 kWrapNone = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the wrap constants.
**Notes:** Disable line wrapping.

### 160.1.848 kWrapVisualFlagEnd = & h0001

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the wrap visual flag constants.
**Notes:** Visual flag at end of subline of a wrapped line.

### 160.1.849 kWrapVisualFlagMargin = & h0004

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the wrap visual flag constants.
**Notes:** Visual flag in line number margin.

### 160.1.850 kWrapVisualFlagNone = & h0000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the wrap visual flag constants.
**Notes:** No visual flags

### 160.1.851 kWrapVisualFlagStart = & h0002

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the wrap visual flag constants.
**Notes:** Visual flag at begin of subline of a wrapped line. Subline is indented by at least 1 to make room for the flag.

### 160.1.852 kWrapVisualLocationDefault = & h0000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the wrap visual location constants.
**Notes:** Visual flags drawn near border

### 160.1.853 kWrapVisualLocationEndByText = & h0001

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the wrap visual location constants.
**Notes:** Visual flag at end of subline drawn near text

### 160.1.854 kWrapVisualLocationStartByText = & h0002

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the wrap visual location constants.
**Notes:** Visual flag at beginning of subline drawn near text

### 160.1.855 kWrapWhiteSpace = 3

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the wrap constants.
**Notes:** Enable wrapping on whitespace.

### 160.1.856 kWrapWord = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the wrap constants.
**Notes:** Enable wrapping on word or style boundaries.

## 160.2 control ScintillaControlMBS

### 160.2.1 control ScintillaControlMBS

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The Xojo control to host Scintilla editor.

### 160.2.8 Methods

### 160.2.9 AddSelection(caret as Integer, anchor as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Add a new selection from anchor to caret as the main selection retaining all other selections as additional selections.
**Notes:** Since there is always at least one selection, to set a list of selections, the first selection should be added with SetSelection() and later selections added with AddSelection().

### 160.2.10 AddStyledText(StyledText as MemoryBlock)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This behaves just like AddText, but inserts styled text.
**Notes:** See GetStyledText function.

### 160.2.11 AddTabStop(line as Integer, x as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Adds an explicit tabstop at the specified distance from the left (in pixels).
**Notes:** Changing tab stops produces a ChangeTabStops event.

### 160.2.12 AddText(Text as String)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This inserts the first length characters from the string text at the current position.
**Notes:** This will include any 0's in the string that you might have expected to stop the insert operation. The current position is set at the end of the inserted text, but it is not scrolled into view.

### 160.2.13 AddUndoAction(token as Integer, UndoFlags as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Adds an undo action.
**Notes:**

The container can add its own actions into the undo stack by calling AddUndoAction and an Modify event will be sent to the container with the KModificationFlagsContainer flag when it is time to undo (PerformedUndo) or redo (PerformedRedo) the action. The token argument supplied is returned in the token field of the notification.
For example, if the container wanted to allow undo and redo of a 'toggle bookmark' command then it could call AddUndoAction(line, 0) each time the command is performed. Then when it receives a notification to undo or redo it toggles a bookmark on the line given by the token field. If there are different types of commands or parameters that need to be stored into the undo stack then the container should maintain a stack of its own for the document and use the current position in that stack as the argument to AddUndoAction(line). AddUndoAction commands are not combined together into a single undo transaction unless grouped with BeginUndoAction and EndUndoAction.

The flags argument can be KUndoFlagsMayCoalesce (1) if the container action may be coalesced along with any insertion and deletion actions into a single compound action, otherwise kUndoFlagsNone (0). Coalescing treats coalescible container actions as transparent so will still only group together insertions that look like typing or deletions that look like multiple uses of the Backspace or Delete keys.

### 160.2.14 AllocateBytes(bytes as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Allocate a document buffer large enough to store a given number of bytes.
**Notes:** The document will not be made smaller than its current contents.

### 160.2.15 AllocateLineCharacterIndex(lineCharacterIndex as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Allocate one or more indexes.
**Notes:**

Most Scintilla APIs use byte positions but some applications want to use positions based on counting (UTF-32) characters or (UTF-16) code units or need to communicate with other code written in terms of characters or code units. With only byte positions, this may require examining many bytes to count characters or code units in the document but this may be sped up in some cases by indexing the line starts by character or code unit.

Different aspects of an application may need indexes for different periods and should allocate for those periods. Indexes use additional memory so releasing them can help minimize memory but they also take time to recalculate. Scintilla may also allocate indexes to support features like accessibility or input method editors. Only one index of each type is created for a document at a time.

### 160.2.16 AllocateLines(line as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Allocate line indices to match the lines argument.
**Notes:** This is an optimization that can prevent multiple reallocations of the indices as text is inserted if the application can estimate the number of lines in the document. The number of lines will not be reduced by this call.

### 160.2.17 AnnotationClearAll

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Clears all annotations.
**Notes:** All the lines can be cleared of annotations with AnnotationClearAll which is equivalent to clearing each line (setting to "") and then deleting other memory used for this feature.

### 160.2.18 AnnotationLines(line as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The number of lines annotating a line can be retrieved with AnnotationLines.

### 160.2.19 AppendText(Text as String)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This adds the text to the end of the document.
**Notes:** This will include any 0's in the string that you might have expected to stop the operation. The current selection is not changed and the new text is not scrolled into view.

### 160.2.20 AssignCmdKey(keyDefinition as Integer, sciCommand as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This assigns the given key definition to a Scintilla command identified by sciCommand.
**Notes:**

sciCommand can be any SCI_* command that has no arguments.

There is a default binding of keys to commands that is defined in the Scintilla library. You can change the mapping to suit your own requirements.

keyDefinition,Ä®: a key definition contains the key code in the low 16-bits and the key modifiers in the high 16-bits. To combine keyCode and keyMod set:,Ä®,Ä®

keyDefinition = keyCode + Bitwise.ShiftLeft(keyMod, 16)

The key code is a visible or control character or a key from the kKeys* enumeration, which contains: ,Ä®kKeysAdd, kKeysBack, kKeysDelete, kKeysDivide, kKeysDown, kKeysEnd, kKeysEscape, kKeysHome, kKeysInsert, kKeysLeft, kKeysMenu, kKeysNext (Page Down), kKeysPrior (Page Up), kKeysReturn, kKeysRight, kKeysRWin, kKeysSubtract, kKeysTab, kKeysUp, and kKeysWin.

The modifiers are a combination of zero or more of kKeyModAlt, kKeyModCtrl, kKeyModShift, kKeyModMeta, and kKeyModSuper. On OS X, the Command key is mapped to kKeyModCtrl and the Control key to kKeyModMeta. kKeyModSuper is only available on GTK which is commonly the Windows key. If you are building a table, you might want to use kKeyModNorm, which has the value 0, to mean no modifiers.

On Win32, the numeric keypad with Alt pressed can be used to enter characters by number. This can produce unexpected results in non-numlock mode when function keys are assigned so potentially problematic keys are ignored. For example, setting kKeyModAlt, kKeysUP will only be active for the Up key on the main cursor keys, not the numeric keypad.

### 160.2.21 AutoComplete

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This method triggers autocompletion.
**Notes:** This has the same effect as the tab key.

### 160.2.22 AutoCompleteCancel

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Cancels any displayed auto completion list.
**Notes:** When in auto completion mode, the list should disappear when the user types a character that can not be part of the auto completion, such as '.', '(' or ' [ ' when typing an identifier. A set of characters that will cancel autocompletion can be specified with AutoCompleteStops.

### 160.2.23 AutoCompletePosStart as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This returns the value of the current position when AutoCompleteShow started display of the list.

### 160.2.24 AutoCompleteSelect(Value as String)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This method selects an item in the autocompletion list.
**Notes:**

It searches the list of words for the first that matches select. By default, comparisons are case sensitive, but you can change this with AutoCIgnoreCase. The match is character by character for the length of the select string. That is, if select is "Fred" it will match "Frederick" if this is the first item in the list that begins with "Fred". If an item is found, it is selected. If the item is not found, the autocompletion list closes if auto-hide is true (see AutoCAutoHide).
The current selection index can be retrieved with AutoCompleteCurrent.

### 160.2.25 AutoCompleteSetFillUps(characterSet as String)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** If a fillup character is typed with an auto completion list active, the currently selected item in the list is added into the document, then the fillup character is added.
**Notes:** Common fillup characters are '(', ' [ ' and '.' but others are possible depending on the language. By default, no fillup characters are set.

### 160.2.26 AutoCompleteShow(lengthEntered as Integer, itemList as String)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This method causes a list to be displayed.
**Notes:**

lengthEntered is the number of characters of the word already entered and itemList is the list of words separated by separator characters. The initial separator character is a space but this can be set or got with AutoCompleteSeparator property.

With default settings, the list of words should be in sorted order. If set to ignore case mode with AutoCompleteIgnoreCase, then strings are matched after being converted to upper case. One result of this is that the list should be sorted with the punctuation characters ' [ ', '\', ' ] ', '^', '_', and '`' sorted after letters. Alternative handling of list order may be specified with AutoCompleteOrder property.

### 160.2.27 AutoCompleteStops(characterSet as String)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The characterSet argument is a string containing a list of characters that will automatically cancel the auto completion list.
**Notes:** When you start the editor, this list is empty.

### 160.2.28 BackTab

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.29 BeginUndoAction

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Starts a composed undo action.

**Notes:** Call BeginUndoAction to mark the beginning and EndUndoAction to end of a set of operations that you want to undo all as one operation but that you have to generate as several operations. Alternatively, you can use these to mark a set of operations that you do not want to have combined with the preceding or following operations if they are undone.

### 160.2.30 BraceBadLight(pos as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Shows bad brace highlight.
**Notes:** If there is no matching brace then the brace badlighting style, style kStylesCommonBraceBad (35), can be used to show the brace that is unmatched. Using a position of kInvalidPosition (-1) removes the highlight.

### 160.2.31 BraceBadLightIndicator(useSetting as Boolean, indicator as ScintillaIndicatorMBS)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Use specified indicator to highlight non matching brace instead of changing its style

### 160.2.32 BraceHighlight(posA as Integer, posB as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Up to two characters can be highlighted in a 'brace highlighting style', which is defined as style number BraceHighlight (34).
**Notes:** If you have enabled indent guides, you may also wish to highlight the indent that corresponds with the brace. You can locate the column with Column() and highlight the indent with HighlightGuide.

### 160.2.33 BraceHighlightIndicator(useSetting as Boolean, indicator as ScintillaIndicatorMBS)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Use specified indicator to highlight matching braces instead of changing their style.

### 160.2.34 BraceMatch(pos as Integer, maxReStyle as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The BraceMatch method finds a corresponding matching brace given pos, the position of one brace.
**Notes:**

The brace characters handled are '(', ')', ' [ ', ' ] ', ' { ', ' } ', '<', and '>'. The search is forwards from an opening brace and backwards from a closing brace. If the character at position is not a brace character, or a matching brace cannot be found, the return value is -1. Otherwise, the return value is the position of the matching brace.
A match only occurs if the style of the matching brace is the same as the starting brace or the matching brace is beyond the end of styling. Nested braces are handled correctly. The maxReStyle parameter must currently be 0 - it may be used in the future to limit the length of brace searches.

### 160.2.35 BraceMatchNext(pos as Integer, startPos as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Similar to BraceMatch, but matching starts at the explicit start position startPos instead of the implicitly next position pos ¬± 1.

### 160.2.36 CallTipCancel

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This method cancels any displayed call tip.
**Notes:** Scintilla will also cancel call tips for you if you use any keyboard commands that are not compatible with editing the argument list of a function. Call tips are cancelled if you delete back past the position where the caret was when the tip was triggered.

### 160.2.37 CallTipSetBackColor(backColor as Color)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The background colour of call tips can be set with this property;
**Notes:** The default colour is white. It is not a good idea to set a dark colour as the background as the default colour for normal calltip text is mid grey and the default colour for highlighted text is dark blue. This also sets the background colour of kStylesCommonCallTip.

### 160.2.38 CallTipSetForeColor(foreColor as Color)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The colour of call tip text can be set with this method.
**Notes:**

The default colour is mid grey.
This also sets the foreground colour of kStylesCommonCallTip.

### 160.2.39 CallTipSetForeColorHighlight(foreColor as Color)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The colour of highlighted call tip text can be set with this method.
**Notes:** The default colour is dark blue.

### 160.2.40 CallTipSetHighlight(highlightStart as Integer, highlightEnd as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This sets the region of the call tips text to display in a highlighted style.
**Notes:**

highlightStart is the zero-based index into the string of the first character to highlight and highlightEnd is the index of the first character after the highlight. highlightEnd must be greater than highlightStart; highlightEnd-highlightStart is the number of characters to highlight. Highlights can extend over line ends if this is required.
Unhighlighted text is drawn in a mid grey. Selected text is drawn in a dark blue. The background is white. These can be changed with CallTipSetBackColor, CallTipSetForeColor, and CallTipSetForeColorHighlight.

### 160.2.41 CallTipSetPosition(above as Boolean)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** By default the calltip is displayed below the text, setting above to true will display it above the text.

### 160.2.42 CallTipShow(pos as Integer, definition as String)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This method starts the process by displaying the call tip window.
**Notes:**

If a call tip is already active, this has no effect.

pos is the position in the document at which to align the call tip. The call tip text is aligned to start 1 line below this character unless you have included up and/or down arrows in the call tip text in which case the tip is aligned to the right-hand edge of the rightmost arrow. The assumption is that you will start the text with something like "\001 1 of 3 \002".

definition is the call tip text. This can contain multiple lines separated by '\n' (Line Feed, ASCII code 10) characters. Do not include Carriage Return (ASCII code 13), as this will most likely print as an empty box. Tab (ASCII code 9) is supported if you set a tabsize with CallTipUseStyle.

The position of the caret is remembered here so that the call tip can be cancelled automatically if subsequent deletion moves the caret before this position.

Call tips are small windows displaying the arguments to a function and are displayed after the user has typed the name of the function. They normally display characters using the font facename, size and character set defined by kStylesCommonDefault. You can choose to use kStylesCommonCallTip to define the facename, size, foreground and background colours and character set with CallTipUseStyle. This also enables support for Tab characters. There is some interaction between call tips and autocompletion lists in that showing a call tip cancels any active autocompletion list, and vice versa.

Call tips can highlight part of the text within them. You could use this to highlight the current argument to a function by counting the number of commas (or whatever separator your language uses).

The mouse may be clicked on call tips and this causes a CallTipClick event to be sent to the container. Small up and down arrows may be displayed within a call tip by, respectively, including the characters '\001', or '\002'. This is useful for showing that there are overloaded variants of one function name and that the user can click on the arrows to cycle through the overloads.
Alternatively, call tips can be displayed when you leave the mouse pointer for a while over a word in response to the DWellStart event and cancelled in response to DWellEnd. This method could be used in a debugger to give the value of a variable, or during editing to give information about the word under the pointer.

### 160.2.43 CallTipUseStyle(tabSize as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This method changes the style used for call tips from KStylesCommonDefault to KStylesCommoCallTip and sets a tab size in screen pixels.
**Notes:** If tabsize is less than 1, Tab characters are not treated specially. Once this call has been used, the call tip foreground and background colours are also taken from the style.

### 160.2.44 Cancel

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Cancels autocompletion and calltip display and drops any additional selections.

### 160.2.45 ChangeInsertion(text as String)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Changes insert.
**Notes:** This may only be called from a kModificationFlagsInsertCheck in Modify event handler and will change the text being inserted to that provided.

### 160.2.46 ChangeLexerState(start as Integer, ende as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Indicate that the internal state of a lexer has changed over a range and therefore there may be a need to redraw.

### 160.2.47 Character(position as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This returns the character at pos in the document or 0 if pos is negative or past the end of the document.

### 160.2.48 CharacterString(position as Integer, byref Length as Integer) as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This queries character at given position.
**Notes:**

If the position has a multi byte UTF-8 character, we take multiple characters and return length in bytes via Length parameter.
Otherwise character is returned for 1 byte and then length is set to 1.

See also Character() to get individual bytes.

### 160.2.49 CharLeft

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.50 CharLeftExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.51 CharLeftRectExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.52 CharPositionFromPoint(x as Integer, y as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Finds the closest character to a point.

### 160.2.53 CharPositionFromPointClose(x as Integer, y as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Finds the closest character to a point.
**Notes:** Returns -1 if the point is outside the window or not close to any characters. This is similar to the previous CharPositionFromPoint method but finds characters rather than inter-character positions.

### 160.2.54 CharRight

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.55 CharRightExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.56 CharRightRectExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.57 ChooseCaretX

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Scintilla remembers the x value of the last position horizontally moved to explicitly by the user and this value is then used when moving vertically such as by using the up and down keys.
**Notes:** This message sets the current x position of the caret as the remembered value.

### 160.2.58 Clear

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Clears text from current selection.

### 160.2.59 ClearAll

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Unless the document is read-only, this deletes all the text.

### 160.2.60 ClearAllCmdKeys

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This command removes all keyboard command mapping by setting an empty mapping table.

### 160.2.61 ClearAllRepresentations

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Reset representations to defaults.

### 160.2.62 ClearCmdKey(keyDefinition as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This makes the given key definition do nothing by assigning the action Null to it.
**Example:**

```
dim c as ScintillaControlMBS
// disable tab key for editor
c.ClearCmdKey c.kKeysTab
```

### 160.2.63 ClearDocumentStyle

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** When wanting to completely restyle the document, for example after choosing a lexer, the ClearDocumentStyle method can be used to clear all styling information and reset the folding state.

### 160.2.64 ClearRegisteredImages

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Clears all registered images.

### 160.2.65 ClearRepresentation(encodedCharacter as String)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Reset this representation to default.

### 160.2.66 ClearSelections

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set a single empty selection at 0 as the only selection.

### 160.2.67 ClearTabStops(line as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Clears explicit tabstops on a line.
**Notes:** Changing tab stops produces a ChangeTabStops event.

### 160.2.68 Colourise(start as Integer, ende as Integer = -1)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This requests the current lexer or the container (if the lexer is set to nil) to style the document between start and end.
**Notes:** If end is -1, the document is styled from start to the end. If the "fold" property is set to "1" and your lexer or container supports folding, fold levels are also set. This method causes a redraw.

### 160.2.69 ColouriseAll

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This requests the current lexer or the container (if the lexer is set to nil) to style the document.
**Notes:** If the "fold" property is set to "1" and your lexer or container supports folding, fold levels are also set. This method causes a redraw.

### 160.2.70 Column(pos as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This method returns the column number of a position pos within the document taking the width of tabs into account.
**Notes:** This returns the column number of the last tab on the line before pos, plus the number of characters between the last tab and pos. If there are no tab characters on the line, the return value is the number of characters up to the position on the line. In both cases, double byte characters count as a single character. This is probably only useful with monospaced fonts.

### 160.2.71 ContractedFoldNext(lineStart as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Search efficiently for lines that are contracted fold headers.
**Notes:** This is useful when saving the user's folding when switching documents or saving folding with a file. The search starts at line number lineStart and continues forwards to the end of the file. lineStart is returned if it is a contracted fold header otherwise the next contracted fold header is returned. If there are no more contracted fold headers then -1 is returned.

### 160.2.72 ConvertEOLs(EndOfLineMode as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Converts end of line characters for the document.
**Notes:**

Scintilla can handle the major line end conventions and, depending on settings and the current lexer also support additional Unicode line ends.
Scintilla can interpret any of the Macintosh (CR), Unix (LF) and Windows (CR+LF) line ends. When the user presses the Enter key, one of these line end strings is inserted into the buffer. The default is CRL+LF in Windows and LF in Unix, but this can be changed with the EOLMode proeprty. You can also convert the entire document to one of these line endings with ConvertEOLs. Finally, you can choose to display the line endings with ViewEOL.

For the UTF-8 encoding, three additional Unicode line ends, Next Line (NEL=U+0085), Line Separator (LS=U+2028), and Paragraph Separator (PS=U+2029) may optionally be interpreted when Unicode line ends is turned on and the current lexer also supports Unicode line ends.

### 160.2.73 Copy

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Copy current text selection and puts text on the clipboard.

### 160.2.74 CopyAllowLine

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Works the same as Copy() except that if the selection is empty then the current line is copied.
**Notes:** On Windows, an extra "MSDEVLineSelect" marker is added to the clipboard which is then used in SCI_PASTE to paste the whole line before the current line.

### 160.2.75 CopyRange(RangeStart as Integer, RangeEnd as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Copies a range of text from the document to the system clipboard.

### 160.2.76 CopyText(Text as String)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Copies a supplied piece of text to the system clipboard.

### 160.2.77 CountCharacters(start as Integer, ende as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Returns the number of whole characters between two positions.

### 160.2.78 CountCodeUnits(start as Integer, ende as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Returns the number of whole characters between two positions.
**Notes:** This counts in UTF-16 code units.

### 160.2.79 CreateLoader(bytes as Integer = 1000000, documentOptions as Integer = 0) as ScintillaLoaderMBS

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Creates a loader object.
**Notes:**

An application can load all of a file into a buffer it allocates on a background thread and then add the data in that buffer into a Scintilla document on the user interface thread. That technique uses extra memory to store a complete copy of the file and also means that the time that Scintilla takes to perform initial line end discovery blocks the user interface.

To avoid these issues, a loader object may be created and used to load the file.
Returns an object that supports the ScintillaLoaderMBS interface which can be used to load data and then be turned into a Scintilla document object for attachment to a view object. The bytes argument determines the initial memory allocation for the document as it is more efficient to allocate once rather than rely on the buffer growing as data is added. If CreateLoader fails then nil is returned.

See kDocumentOption* constants.

### 160.2.80 Cut

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Cuts current text selection and puts text on the clipboard.

### 160.2.81 DeleteBack

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.82 DeleteBackNotLine

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.83 DeleteRange(start as Integer, lengthDelete as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Deletes a range of text in the document.

### 160.2.84 DelLineLeft

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.85 DelLineRight

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.86 DelWordLeft

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.87 DelWordRight

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.88 DelWordRightEnd

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:**

The *End methods move between word ends instead of word starts.
You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.89 DescribeProperty(Key as String) as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Information may be retrieved about the properties that can be set for the current lexer.

### 160.2.90 DocLineFromVisible(line as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** When some lines are hidden and/or annotations are displayed, then a particular line in the document may be displayed at a different position to its document position.
**Notes:** This method returns the document line number that corresponds to a display line (counting the display line of the first line in the document as 0). If displayLine is less than or equal to 0, the result is 0. If displayLine is greater than or equal to the number of displayed lines, the result is the number of lines in the document.

### 160.2.91 DocumentEnd

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.92 DocumentEndExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.93 DocumentStart

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.94 DocumentStartExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.95 DropSelectionN(selection as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** If there are multiple selections, remove the indicated selection.
**Notes:** If this was the main selection then make the previous selection the main and if it was the first then the last selection becomes main. If there is only one selection, or there is no selection selection, then there is no effect.

### 160.2.96 EditToggleOvertype

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.97 ElementAllowsTranslucent(element as Integer) as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Returns true when the element currently allows translucent drawing when an alpha component is included.
**Notes:** This may change based on circumstances - different platforms or graphics technologies may implement translucency and newer versions of Scintilla may implement translucency for elements that did not previously support it.

### 160.2.98 ElementBaseColour(element as Integer) as Color

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Returns the default colour of an element.
**Notes:**

This may be a value defined by Scintilla or it may be derived from the operating system or platform. Which values are set from the operating system may differ between operating systems and operating system ver-

sions. When undefined the return value is 0 which is equivalent to completely transparent black. These colours may be useful when defining styles with similarities such as synthesizing dark mode styles that use the same colours as the system.

On Win32, autocompletion list colours like kElementList are currently provided by the platform layer and on Cocoa, selection background colours like kElementSelectionBack are provided.

### 160.2.99 ElementIsSet(element as Integer) as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Returns true when an element colour has been set.
**Notes:** When false indicates that a default colour or set of colours is displayed.

### 160.2.100 EmptyUndoBuffer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This command tells Scintilla to forget any saved undo or redo history.
**Notes:** It also sets the save point to the start of the undo buffer, so the document will appear to be unmodified. This does not cause the SavePointReached event to be sent to the container.

### 160.2.101 EndStyled as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** End styling.
**Notes:** Scintilla keeps a record of the last character that is likely to be styled correctly. This is moved forwards when characters after it are styled and moved backwards if changes are made to the text of the document before it. Before drawing text, this position is checked to see if any styling is needed and, if so, a StyleNeeded event is sent to the container. The container can send EndStyled to work out where it needs to start styling. Scintilla will always ask to style whole lines.

### 160.2.102 EndUndoAction

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Ends a composed undo action.
**Notes:** Call BeginUndoAction to mark the beginning and EndUndoAction to end of a set of operations that you want to undo all as one operation but that you have to generate as several operations. Alternatively, you can use these to mark a set of operations that you do not want to have combined with the preceding or

following operations if they are undone.

### 160.2.103 EnsureVisible(line as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** A line may be hidden because more than one of its parent lines is contracted.
**Notes:** Both these message travels up the fold hierarchy, expanding any contracted folds until they reach the top level. The line will then be visible. If you use EnsureVisibleEnforcePolicy(), the vertical caret policy set by VisiblePolicy() is then applied.

### 160.2.104 EnsureVisibleEnforcePolicy(line as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** A line may be hidden because more than one of its parent lines is contracted.
**Notes:** Both these message travels up the fold hierarchy, expanding any contracted folds until they reach the top level. The line will then be visible. If you use EnsureVisibleEnforcePolicy(), the vertical caret policy set by VisiblePolicy() is then applied.

### 160.2.105 EOLAnnotationClearAll

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Clears all EOL annotations.
**Notes:** All the lines can be cleared of end of line annotations with EOLAnnotationClearAll which is equivalent to clearing each line (setting to 0) and then deleting other memory used for this feature.

### 160.2.106 ExpandChildren(Line as Integer, FoldLevel as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This is used to respond to a change to a line causing its fold level or whether it is a header to change, perhaps when adding or removing a ' { '.
**Notes:** By the time the container has received the notification that the line has changed, the fold level has already been set, so the container has to use the previous level in this call so that any range hidden underneath this line can be shown.

### 160.2.107 FindColumn(line as Integer, column as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Returns the position of a column on a line taking the width of tabs into account.
**Notes:** It treats a multi-byte character as a single column. Column numbers, like lines start at 0.

### 160.2.108 FindIndicatorFlash(start as Integer, ende as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Show and animate the find indicator.
**Notes:** The indicator remains visible with FindIndicatorShow and fades out after showing for half a second with FindIndicatorFlash. FindIndicatorShow behaves similarly to the OS X TextEdit and Safari applications and is best suited to editing documentation where the search target is often a word. FindIndicatorFlash is similar to Xcode and is suited to editing source code where the match will often be located next to operators which would otherwise be hidden under the indicator's padding.

### 160.2.109 FindIndicatorHide

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Hides the find indicator.

### 160.2.110 FindIndicatorShow(start as Integer, ende as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Show and animate the find indicator.
**Notes:** The indicator remains visible with FindIndicatorShow and fades out after showing for half a second with FindIndicatorFlash. FindIndicatorShow behaves similarly to the OS X TextEdit and Safari applications and is best suited to editing documentation where the search target is often a word. FindIndicatorFlash is similar to Xcode and is suited to editing source code where the match will often be located next to operators which would otherwise be hidden under the indicator's padding.

### 160.2.111 FindText(searchFlags as Integer, Text as String, byref RangeStart as Integer, byref RangeEnd as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Searches for text in the document.
**Notes:**

It does not use or move the current selection. The searchFlags argument controls the search type, which includes regular expression searches.
See kFindOption* constants.

You can search backwards to find the previous occurrence of a search string by setting the end of the search range before the start.

RangeStart and RangeEnd provide the range of positions in the document to search. You can search backwards by setting RangeEnd less than RangeStart. The text parameter holds the search pattern. If your language makes the use of _TextToFind difficult, you should consider using SearchInTarget instead.

The return value is -1 if the search fails or the position of the start of the found text if it succeeds. The RangeStart and RangeEnd parameters of TextToFind are filled in with the start and end positions of the found text.

### 160.2.112 FoldAll(FoldAction as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Contracts, expands or toggles all lines.
**Notes:**

Provides a higher-level approach to folding instead of setting expanded flags and showing or hiding individual lines.

An individual fold can be contracted/expanded/toggled with FoldLine(). To affect all child folds as well call FoldChildren().

To affect the entire document call FoldAll(). With kFoldActionToggle the first fold header in the document is examined to decide whether to expand or contract.

### 160.2.113 FoldChildren(Line as Integer, FoldAction as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Contracts, expands or toggles children.
**Notes:**

Provides a higher-level approach to folding instead of setting expanded flags and showing or hiding individual lines.

An individual fold can be contracted/expanded/toggled with FoldLine(). To affect all child folds as well call FoldChildren().

To affect the entire document call FoldAll(). With kFoldActionToggle the first fold header in the document is examined to decide whether to expand or contract.

### 160.2.114 FoldLine(Line as Integer, FoldAction as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Contracts, expands or toggles one line.
**Notes:**

Provides a higher-level approach to folding instead of setting expanded flags and showing or hiding individual lines.

An individual fold can be contracted/expanded/toggled with FoldLine(). To affect all child folds as well call

FoldChildren().

To affect the entire document call FoldAll(). With kFoldActionToggle the first fold header in the document is examined to decide whether to expand or contract.

### 160.2.115 FoldParent(line as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This method returns the line number of the first line before line that is marked as a fold point with kFoldLevelHeaderFlag and has a fold level less than the line.
**Notes:** If no line is found, or if the header flags and fold levels are inconsistent, the return value is -1.

### 160.2.116 FormFeed

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.117 GetLineSelEndPosition(line as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Retrieve the position of the end of the selection at the given line with -1 returned if no selection on this line.

### 160.2.118 GetLineSelStartPosition(line as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Retrieve the position of the start of the selection at the given line with -1 returned if no selection on this line.

### 160.2.119 GetNextTabStop(line as Integer, x as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Gets the next explicit tabstop position set after the given x position, or zero if there aren't any.

### 160.2.120 GetStyledText(RangeStart as Integer, RangeEnd as Integer, byref Styledtext as MemoryBlock) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This collects styled text into a buffer using two bytes for each cell, with the character at the lower address of each pair and the style byte at the upper address.
**Notes:**

Characters between the positions RangeStart and RangeEnd are copied to new MemoryBlock and put into Styledtext.
Positions outside the document return character codes and style bytes of 0.

### 160.2.121 GetTextRange(RangeStart as Integer, RangeEnd as Integer, byref Text as String) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This collects the text between the positions RangeStart and RangeEnd and returns it in Text parameter.
**Notes:**

If RangeEnd is -1, text is returned to the end of the document.
The return value is the length of the returned text.

### 160.2.122 GotoLine(line as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This removes any selection and sets the caret at the start of line number line and scrolls the view (if needed) to make it visible.
**Notes:** The anchor position is set the same as the current position. If line is outside the lines in the document (first line is 0), the line set is the first or last.

### 160.2.123 GotoPos(pos as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This removes any selection, sets the caret at caret and scrolls the view to make the caret visible, if necessary.

**Notes:** It is equivalent to SetSel(caret, caret). The anchor position is set the same as the current position.

### 160.2.124 GrabFocus

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Scintilla can be told to grab the focus with GrabFocus.
**Notes:** This is needed more on GTK where focus handling is more complicated than on Windows.

### 160.2.125 HideLines(lineStart as Integer, lineEnd as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Marks a range of lines as invisible and then redraw the display.
**Notes:**

If kElementHiddenLine is set then a horizontal line is drawn in that colour to indicate that there are hidden lines.
A fold line drawn in that position overrides the hidden line indicator.

### 160.2.126 HideSelection(hide as Boolean)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The normal state is to make the selection visible by drawing it as set by SetSelForeColor and SetSelBackColor.
**Notes:** However, if you hide the selection, it is drawn as normal text.

### 160.2.127 Home

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.128 HomeDisplay

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.129 HomeDisplayExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.130 HomeExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.131 HomeRectExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.132 HomeWrap

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.133 HomeWrapExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.134 IndexPositionFromLine(line as Integer, lineCharacterIndex as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries position from line via index.
**Notes:** The document line of a particular character or code unit may be found by calling LineFromIndexPosition with one of kLineCharacterIndexTypeUtf32 (1) or kLineCharacterIndexTypeUtf16 (2). The inverse action, finds the starting position of a document line either in characters or code units from the document start by calling IndexPositionFromLine with the same lineCharacterIndex argument.

### 160.2.135 Indicator(index as Integer) as ScintillaIndicatorMBS

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries indicator with given index.
**Notes:** Index is from 0 to 35.

### 160.2.136 IndicatorAllOnFor(pos as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Retrieve a bitmap value representing which indicators are non-zero at a position.
**Notes:** Only the first 32 indicators are represented in the result so no IME indicators are included.

### 160.2.137 IndicatorClearRange(start as Integer, lengthClear as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Clears a range for the current indicator.

### 160.2.138 IndicatorFillRange(start as Integer, lengthFill as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Fills a range with the current indicator.
**Notes:** See IndicatorValue property.

### 160.2.139 InitializeLexer(Lexer as String)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Initializes the lexer.
**Notes:**

To style files in different languages, different 'lexers' are used. These are objects that are called by Scintilla with a range of text and some context information and which then set styles and folding information for that range. Lexers for Scintilla are now provided by the Lexilla project.

Current list of buit-in lexers is:

a68k, abaqus, ada, apdl, as, asm, asn1, asy, au3, ave, avs, baan, bash, batch, bib, blitzbasic, bullant, caml, cil, clarion, clarionnocase, cmake, COBOL, coffeescript, conf, cpp, cppnocase, csound, css, d, dataflex, diff, DMAP, DMIS, ecl, edifact, eiffel, eiffelkw, erlang, errorlist, escript, f77, flagship, forth, fortran, freebasic, fsharp, gap, gui4cli, haskell, hollywood, hypertext, ihex, indent, inno, json, julia, kix, kvirc, latex, lisp, literatehaskell, lot, lout, lua, magiksf, makefile, markdown, matlab, maxima, metapost, mmixal, modula, mssql, mysql, nim, nimrod, nncrontab, nsis, null, octave, opal, oscript, pascal, powerbasic, perl, phpscript, PL/M, po, pov, powerpro, powershell, abl, props, ps, purebasic, python, r, raku, rebol, registry, ruby, rust, sas, scriptol, smalltalk, SML, sorcins, specman, spice, sql, srec, stata, fcST, TACL, tads3, TAL, tcl, tcmd, tehex, tex, txt2tags, vb, vbscript, verilog, vhdl, visualprolog, x12, xml, yaml, xojo

### 160.2.140 InsertText(Text as String, atPosition as Integer = -1)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This inserts the text string at position pos or at the current position if pos is -1.
**Notes:** If the current position is after the insertion point then it is moved along with its surrounding text but no scrolling is performed.

### 160.2.141 IsRangeWord(start as Integer, ende as Integer) as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Is the range start..end a word or set of words?
**Notes:** This message checks that start is at a word start transition and that end is at a word end transition. It does not check whether there are any spaces inside the range.

### 160.2.142 LastChild(line as Integer, level as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Searches last child.
**Notes:** Searches for the next line after line, that has a folding level that is less than or equal to level and then returns the previous line number. If you set level to -1, level is set to the folding level of line line. If from is a fold point, LastChild(from, -1) returns the last line that would be in made visible or hidden by toggling the fold state.

### 160.2.143 LexerNameFromID(ID as Integer) as String

MBS Scintilla Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries name of lexer with given ID.
**Example:**

```
// constants in LexerConstants.txt in our examples folder
Const SCLEX_HTML = 4

Dim s As String = ScintillaControlMBS.LexerNameFromID(SCLEX_HTML)
MessageBox s
```

### 160.2.144 LexerNames as String()

MBS Scintilla Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries list of built-in lexers.
**Notes:**

Current list is:

a68k, abaqus, ada, apdl, as, asm, asn1, asy, au3, ave, avs, baan, bash, batch, bib, blitzbasic, bullant, caml, cil, clarion, clarionnocase, cmake, COBOL, coffeescript, conf, cpp, cppnocase, csound, css, d, dataflex, diff, DMAP, DMIS, ecl, edifact, eiffel, eiffelkw, erlang, errorlist, escript, f77, flagship, forth, fortran, freebasic, fsharp, gap, gui4cli, haskell, hollywood, hypertext, ihex, indent, inno, json, julia, kix, kvirc, latex, lisp, literatehaskell, lot, lout, lua, magiksf, makefile, markdown, matlab, maxima, metapost, mmixal, modula, mssql, mysql, nim, nimrod, nncrontab, nsis, null, octave, opal, oscript, pascal, powerbasic, perl, phpscript, PL/M, po, pov, powerpro, powershell, abl, props, ps, purebasic, python, r, raku, rebol, registry, ruby, rust, sas, scriptol, smalltalk, SML, sorcins, specman, spice, sql, srec, stata, fcST, TACL, tads3, TAL, tcl, tcmd, tehex, tex, txt2tags, vb, vbscript, verilog, vhdl, visualprolog, x12, xml, yaml, xojo.

### 160.2.145 lexillaLibraryLoaded as boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether the lexilla library got loaded.
**Notes:** Returns true if you loaded lexilla dylib/dll/so file.

### 160.2.146 Line(line as Integer) as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries text of a line.
**Notes:** Index is zero based.

### 160.2.147 LineCopy

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.148 LineCut

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.149 LineDelete

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.150 LineDown

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.151 LineDownExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.152 LineDownRectExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.153 LineDuplicate

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.154 LineEnd

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.
See also:

- 160.2.155 LineEnd(line as Integer) as Integer 24278

### 160.2.155 LineEnd(line as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries line end position for the given line.
See also:

- 160.2.154 LineEnd 24278

### 160.2.156 LineEndDisplay

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.157 LineEndDisplayExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.158 LineEndExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.159 LineEndPosition(line as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This returns the position at the end of the line, before any line end characters.
**Notes:** If line is the last line in the document (which does not have any end of line characters) or greater, the result is the size of the document. If line is negative the result is undefined.

### 160.2.160 LineEndRectExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.161 LineEndWrap

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.162 LineEndWrapExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.163 LineFromIndexPosition(pos as Integer, lineCharacterIndex as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries line from position via index.
**Notes:** The document line of a particular character or code unit may be found by calling LineFromIndexPosition with one of kLineCharacterIndexTypeUtf32 (1) or kLineCharacterIndexTypeUtf16 (2). The inverse action, finds the starting position of a document line either in characters or code units from the document start by calling IndexPositionFromLine with the same lineCharacterIndex argument.

### 160.2.164 LineFromPosition(pos as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This method returns the line that contains the position pos in the document.
**Notes:**

The return value is 0 if pos <= 0.
The return value is the last line if pos is beyond the end of the document.

### 160.2.165 LineIndentPosition(line as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The position at the end of indentation of a line.

### 160.2.166 LineLength(line as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This returns the length of the line, including any line end characters.
**Notes:** If line is negative or beyond the last line in the document, the result is 0. If you want the length of the line not including any end of line characters, use LineEndPosition(line) - PositionFromLine(line).

### 160.2.167 LineReverse

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.168 LineScroll(columns as Integer, lines as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This will attempt to scroll the display by the number of columns and lines that you specify.
**Notes:**

Positive line values increase the line number at the top of the screen (i.e. they move the text upwards as far as the user is concerned), Negative line values do the reverse.
The column measure is the width of a space in the default style. Positive values increase the column at the left edge of the view (i.e. they move the text leftwards as far as the user is concerned). Negative values do the reverse.

### 160.2.169 LineScrollDown

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.170 LineScrollUp

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.171 LinesJoin

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Join a range of lines indicated by the target into one line by removing line end characters.
**Notes:** Where this would lead to no space between words, an extra space is inserted.

### 160.2.172 LinesSplit(pixelWidth as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Split a range of lines indicated by the target into lines that are at most pixelWidth wide.
**Notes:** Splitting occurs on word boundaries wherever possible in a similar manner to line wrapping. When pixelWidth is 0 then the width of the window is used.

### 160.2.173 LineStart(line as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries line start position for the given line.

### 160.2.174 LineTranspose

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.175 LineUp

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.176 LineUpExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.177 LineUpRectExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.178 LineVisible(line as Integer) as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Reports on the visible state of a line and returns true if it is visible and false if it is not visible.
**Notes:** This method has no effect on fold levels or fold flags.

### 160.2.179 LoadFramework(path as folderitem) as boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Loads the framework.
**Notes:**

You can load Scintilla framework on macOS.
Returns true on success.

### 160.2.180 LoadLibrary(path as folderitem) as boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Loads the library.
**Notes:**

You can load lexer and scintilla libraries here.
Returns true on success.

### 160.2.181 LowerCase

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.182 Margin(index as Integer) as ScintillaMarginMBS

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries margin with given index.
**Notes:** Index ranges from 0 to 5.

### 160.2.183 MarginTextClearAll

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Clears all texts for margin.

### 160.2.184 Marker(index as Integer) as ScintillaMarkerMBS

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries marker with given index.
**Notes:** Index ranges from 0 to 35.

### 160.2.185 MarkerAdd(Line as Integer, markerNumber as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This function searches the document for the marker with this handle and deletes the marker if it is found.
**Notes:** The markerHandle argument is an identifier for a marker returned by MarkerAdd.

### 160.2.186 MarkerAddSet(line as Integer, markerSet as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Add one or more markers to a line with a single call.
**Notes:** Add one or more markers to a line with a single call, specified in the same "one-bit-per-marker" 32-bit integer format returned by Marker() (and used by the mask-based marker search functions MarkerNext() and MarkerPrevious()). As with MarkerAdd, no check is made to see if any of the markers are

already present on the targeted line.

### 160.2.187 MarkerDelete(Line as Integer, markerNumber as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This searches the given line number for the given marker number and deletes it if it is present.
**Notes:** If you added the same marker more than once to the line, this will delete one copy each time it is used. If you pass in a marker number of -1, all markers are deleted from the line.

### 160.2.188 MarkerDeleteAll(markerNumber as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This removes markers of the given number from all lines.
**Notes:** If markerNumber is -1, it deletes all markers from all lines.

### 160.2.189 MarkerDeleteHandle(markerHandle as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Deletes a marker.
**Notes:**

The markerHandle argument is an identifier for a marker returned by MarkerAdd.
This function searches the document for the marker with this handle and deletes the marker if it is found.

### 160.2.190 MarkerEnableHighlight(enabled as Boolean)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This method allows to enable/disable the highlight folding block when it is selected.
**Notes:** (i.e. block that contains the caret)

### 160.2.191 MarkerGet(Line as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This returns a 32-bit integer that indicates which markers were present on the line.
**Notes:** Bit 0 is set if marker 0 is present, bit 1 for marker 1 and so on.

### 160.2.192 MarkerHandleFromLine(line as Integer, which as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Returns the Nth marker handle in a given line.
**Notes:** Handles are returned by MarkerAdd. If which is greater or equal to the number of markers on a line, this returns -1;

### 160.2.193 MarkerLineFromHandle(markerHandle as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This function searches the document for the marker with this handle and returns the line number that contains it or -1 if it is not found.
**Notes:** The markerHandle argument is an identifier for a marker returned by MarkerAdd.

### 160.2.194 MarkerNext(lineStart as Integer, markerMask as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Search efficiently for lines that include a given set of markers.
**Notes:**

The search starts at line number lineStart and continues forwards to the end of the file (MarkerNext) or backwards to the start of the file (MarkerPrevious).
The markerMask argument should have one bit set for each marker you wish to find. Set bit 0 to find marker 0, bit 1 for marker 1 and so on. The message returns the line number of the first line that contains one of the markers in markerMask or -1 if no marker is found.

### 160.2.195 MarkerNumberFromLine(line as Integer, which as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Returns the Nth marker number in a given line.
**Notes:** Handles are returned by MarkerAdd. If which is greater or equal to the number of markers on a line, this returns -1;

### 160.2.196 MarkerPrevious(lineStart as Integer, markerMask as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Search efficiently for lines that include a given set of markers.
**Notes:**

The search starts at line number lineStart and continues forwards to the end of the file (MarkerNext) or backwards to the start of the file (MarkerPrevious).
The markerMask argument should have one bit set for each marker you wish to find. Set bit 0 to find marker 0, bit 1 for marker 1 and so on. The message returns the line number of the first line that contains one of the markers in markerMask or -1 if no marker is found.

### 160.2.197 MoveCaretInsideView

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** If the caret is off the top or bottom of the view, it is moved to the nearest line that is visible to its current position.
**Notes:** Any selection is lost.

### 160.2.198 MoveSelectedLinesDown

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Move the selected lines down one line, shifting the line below before the selection.
**Notes:** The selection will be automatically extended to the beginning of the selection's first line and the end of the selection's last line. If nothing was selected, the line the cursor is currently at will be selected.

### 160.2.199 MoveSelectedLinesUp

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Move the selected lines up one line, shifting the line above after the selection.
**Notes:** The selection will be automatically extended to the beginning of the selection's first line and the end of the selection's last line. If nothing was selected, the line the cursor is currently at will be selected.

### 160.2.200 MultiEdgeAddLine(column as Integer, edgeColour as Color)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Adds a new vertical edge to the view.
**Notes:** The edge will be displayed at the given column number. The resulting edge position depends on the metric of a space character in STYLE_DEFAULT. All the edges can be cleared with MultiEdgeClearAll. MultiEdgeColumn returns the column of the Nth vertical edge (indexed from 0). If which is greater or equal to the number of vertical edges, this returns -1.

### 160.2.201 MultiEdgeClearAll

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** All the edges can be cleared with MultiEdgeClearAll.

### 160.2.202 MultiEdgeColumn(which as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** MultiEdgeColumn returns the column of the Nth vertical edge (indexed from 0).
**Notes:** If which is greater or equal to the number of vertical edges, this returns -1.

### 160.2.203 MultipleSelectAddEach

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** MultipleSelectAddEach is similar to MultipleSelectAddNext but adds multiple occurrences instead of just one.

### 160.2.204 MultipleSelectAddNext

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Adds the next occurrence of the main selection within the target to the set of selections as main.
**Notes:** If the current selection is empty then select word around caret. The current searchFlags are used so the application may choose case sensitivity and word search options.

### 160.2.205 NewLine

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.206 PageDown

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.207 PageDownExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.208 PageDownRectExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.209 PageUp

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.210 PageUpExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.211 PageUpRectExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.212 ParaDown

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.213 ParaDownExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.214 ParaUp

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.215 ParaUpExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.216 Paste

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Performs the paste operation from clipboard.

### 160.2.217 PointXFromPosition(pos as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Return the x display pixel location of text at position pos in the document.

### 160.2.218 PointYFromPosition(pos as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Return the y display pixel location of text at position pos in the document.

### 160.2.219 PositionAfter(pos as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Returns the position after another position in the document taking into account the current code page.
**Notes:** The minimum position returned is 0 and the maximum is the last position in the document. If called with a position within a multi byte character will return the position of the start/end of that character.

### 160.2.220 PositionBefore(pos as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Returns the position before another position in the document taking into account the current code page.
**Notes:** The minimum position returned is 0 and the maximum is the last position in the document. If called with a position within a multi byte character will return the position of the start/end of that character.

### 160.2.221 PositionFromLine(line as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This returns the document position that corresponds with the start of the line.
**Notes:** If line is negative, the position of the line holding the start of the selection is returned. If line is greater than the lines in the document, the return value is -1. If line is equal to the number of lines in the

document (i.e. 1 line past the last line), the return value is the end of the document.

### 160.2.222 PositionFromPoint(x as Integer, y as integer) as integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Finds the closest character position to a point.

### 160.2.223 PositionFromPointClose(x as Integer, y as integer) as integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Finds the closest character position to a point.
**Notes:** Returns -1 if the point is outside the window or not close to any characters.

### 160.2.224 PositionRelative(pos as Integer, relative as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Count a number of whole characters before or after the argument position and return that position.
**Notes:** The minimum position returned is 0 and the maximum is the last position in the document. If the position goes past the document end then 0 is returned.

### 160.2.225 PositionRelativeCodeUnits(pos as Integer, relative as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Count a number of whole characters before or after the argument position and return that position.
**Notes:**

The minimum position returned is 0 and the maximum is the last position in the document. If the position goes past the document end then 0 is returned.

These is the UTF-16 versions of PositionRelative() working in terms of UTF-16 code units

### 160.2.226 PropertyInt(name as String, defaultValue as Integer = 0) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Lookup a keyword:value pair using the specified key; if found, interpret the value as an integer and return it.
**Notes:** If not found (or the value is an empty string) then return the supplied default. If the keyword:value pair is found but is not a number, then return 0.

### 160.2.227 PropertyType(name as String) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries property type.
**Notes:** See kTypeProperty* constants.

### 160.2.228 Redo

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Undoes the effect of the last Undo operation.

### 160.2.229 ReleaseAllExtendedStyles

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Releases any extended styles allocated by the container.

### 160.2.230 ReleaseLineCharacterIndex(lineCharacterIndex as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Release one or more indexes.
**Notes:** Different aspects of an application may need indexes for different periods and should allocate for those periods. Indexes use additional memory so releasing them can help minimize memory but they also take time to recalculate. Scintilla may also allocate indexes to support features like accessibility or input method editors. Only one index of each type is created for a document at a time.

### 160.2.231 ReplaceRectangular(length as Integer, text as String)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Replaces the selected text or empty selection with the given text.
**Notes:** The insertion is performed similarly to rectangular pastes: new lines in the given text are interpreted as moving to the next line without inserting new lines unless at the end of the document.

### 160.2.232 ReplaceSelection(text as string)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The currently selected text between the anchor and the current position is replaced by the text string.
**Notes:** If the anchor and current position are the same, the text is inserted at the caret position. The caret is positioned after the inserted text and the caret is scrolled into view.

### 160.2.233 ReplaceTarget(text as string) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Replace target area with new text.
**Notes:**

After replacement, the target range refers to the replacement text. The return value is the length of the replacement string.
Note that the recommended way to delete text in the document is to set the target to the text to be removed, and to perform a replace target with an empty string.

### 160.2.234 ReplaceTargetRE(text as string) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This replaces the target using regular expressions.
**Notes:** If length is -1, text is a zero terminated string, otherwise length is the number of characters to use. The replacement string is formed from the text string with any sequences of \1 through \9 replaced by tagged matches from the most recent regular expression search. \0 is replaced with all the matched text from the most recent search. After replacement, the target range refers to the replacement text. The return value is the length of the replacement string.

### 160.2.235 ResetElementColour(element as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This removes the element colour returning to the default colour or set of colours.

### 160.2.236 RotateSelection

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Makes the next selection be the main selection.

### 160.2.237 scintillaLibraryLoaded as boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether the scintilla library got loaded.
**Notes:**

Returns true on MacOS when you loaded the Scintilla.framework before.
Returns true if you loaded Scintilla.dll on Windows or Scintilla.so on Linux.

### 160.2.238 ScrollCaret

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** If the current position (this is the caret if there is no selection) is not visible, the view is scrolled to make it visible according to the current caret policy.

### 160.2.239 ScrollRange(secondary as Integer, primary as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Scroll the argument positions and the range between them into view giving priority to the primary position then the secondary position.
**Notes:** The behaviour is similar to ScrollCaret with the primary position used instead of the caret. An effort is then made to ensure that the secondary position and range between are also visible. This may be used to make a search match visible.

### 160.2.240 ScrollToEnd

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:**

The ScrollToEnd commands scroll the document to the end without changing the selection. These commands match OS X platform conventions for the behaviour of the home and end keys. Scintilla can be made to match OS X applications by binding the home and end keys to these commands.

You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.241 ScrollToStart

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:**

The ScrollToStart commands scroll the document to the start without changing the selection. These commands match OS X platform conventions for the behaviour of the home and end keys. Scintilla can be made to match OS X applications by binding the home and end keys to these commands.

You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.242 SearchAnchor

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets the search start point used by SearchNext and SearchPrev to the start of the current selection, that is, the end of the selection that is nearer to the start of the document.
**Notes:** You should always call this before calling either of SearchNext or SearchPrev.

### 160.2.243 SearchInTarget(text as string) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This searches for the first occurrence of a text string in the target defined by TargetStart and TargetEnd.
**Notes:**

The search is modified by the search flags set by SearchFlags property. If the search succeeds, the target is

set to the found text and the return value is the position of the start of the matching text. If the search fails, the result is -1.

See Tag() for regular expression results.

| Character | Description |
|---|---|
| . | Matches any character |
| \( | This marks the start of a region for tagging a match. |
| \) | This marks the end of a tagged region. |
| \n | Where n is 1 through 9 refers to the first through ninth tagged region when replacing. For example, if the search string was Fred\( [ 1-9 ] \)XXX and the replace string was Sam\1YYY, when applied to Fred2XXX this would generate Sam2YYY. \0 refers to all of the matching text. |
| \< | This matches the start of a word using Scintilla's definitions of words. |
| \> | This matches the end of a word using Scintilla's definition of words. |
| \x | This allows you to use a character x that would otherwise have a special meaning. For example, \[ would be interpreted as [ and not as the start of a character set. |
| [ ... ] | This indicates a set of characters, for example, [ abc ] means any of the characters a, b or c. You can also use ranges, for example [ a-z ] for any lower case character. |
| [ ^... ] | The complement of the characters in the set. For example, [ ^A-Za-z ] means any character except an alphabetic character. |
| ^ | This matches the start of a line (unless used inside a set, see above). |
| $ | This matches the end of a line. |
| * | This matches 0 or more times. For example, Sa*m matches Sm, Sam, Saam, Saaam and so on. |
| + | This matches 1 or more times. For example, Sa+m matches Sam, Saam, Saaam and so on. |

### 160.2.244 SearchNext(searchFlags as Integer, text as String) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** SearchNext and SearchPrev search for the next and previous occurrence of the search string pointed at by text.
**Notes:**

The search is modified by the searchFlags.
See kFindOption* constants.

The return value is -1 if nothing is found, otherwise the return value is the start position of the matching text. The selection is updated to show the matched text, but is not scrolled into view.

### 160.2.245 SearchPrev(searchFlags as Integer, text as String) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** SearchNext and SearchPrev search for the next and previous occurrence of the search string pointed at by text.
**Notes:**

The search is modified by the searchFlags.
See kFindOption* constants.

The return value is -1 if nothing is found, otherwise the return value is the start position of the matching text. The selection is updated to show the matched text, but is not scrolled into view.

### 160.2.246 SelectAll

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This selects all the text in the document.
**Notes:** The current position is not scrolled into view.

### 160.2.247 SelectionDuplicate

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.248 SelectionNEndVirtualSpace(selection as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Query the virtual space at start and end of each selection.
**Notes:** Selection parameter is zero based.

### 160.2.249 SelectionNStartVirtualSpace(selection as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Query the virtual space at start and end of each selection.
**Notes:** Selection parameter is zero based.

### 160.2.250 SetAdditionalSelBackColor(value as Color)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets background color for additional selection.
**Notes:** Modify the appearance of additional selections so that they can be differentiated from the main selection.

### 160.2.251 SetAdditionalSelForeColor(value as Color)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets foreground color for additional selection.
**Notes:** Modify the appearance of additional selections so that they can be differentiated from the main selection.

### 160.2.252 SetCharsDefault

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Use the default sets of word and whitespace characters.
**Notes:** This sets whitespace to space, tab and other characters with codes less than & h20, with word characters set to alphanumeric and '_'.

### 160.2.253 SetDocument(otherControl as Variant)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets document for this control to be same as the other control.
**Notes:**

Using this method you can allow multiple controls to share same document, e.g. for split views.

Pass nil to create new empty document.

This method does the following:
1. It removes the current window from the list held by the current document.
2. It reduces the reference count of the current document by 1.
3. If the reference count reaches 0, the document is deleted.
4. doc is set as the new document for the window.
5. If doc was 0, a new, empty document is created and attached to the window.
6. If doc was not 0, its reference count is increased by 1.

Please pass either ScintillaControlMBS or DesktopScintillaControlMBS here to point to new control.

After you assigned new document, please configure styles as needed.

### 160.2.254 SetEmptySelection(caret as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This removes any selection and sets the caret at caret.
**Notes:** The caret is not scrolled into view.

### 160.2.255 SetFoldFlags(FoldFlags as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets folder flags.
**Notes:** In addition to showing markers in the folding margin, you can indicate folds to the user by drawing lines in the text area. The lines are drawn in the kElementFoldLine colour if set. If it is not set then the foreground colour set for kStylesCommonDefault is used.

### 160.2.256 SetFoldMarginColor(useSetting as boolean, value as Color)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The colour of the fold margin.
**Example:**

```
// turn folder margin to red
c.SetFoldMarginColor(True, Color.red)
```

**Notes:**

Defaults to system color for this.

The FoldMarginColor and the FoldMarginHighlightColor colors are used together to draw the chequerboard pattern in the folder margin.

### 160.2.257 SetFoldMarginHighlightColor(useSetting as boolean, value as Color)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The colour of the fold margin highlight.
**Notes:**

Defaults to system color for this.

The FoldMarginColor and the FoldMarginHighlightColor colors are used together to draw the chequerboard pattern in the folder margin.

### 160.2.258 SetHotspotActiveBackColor(useSetting as boolean, value as Color)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets background color for hotspot.
**Notes:** While the cursor hovers over text in a style with the hotspot attribute set, the default colouring can be modified and an underline drawn with these settings.

### 160.2.259 SetHotspotActiveForeColor(useSetting as boolean, value as Color)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets foreground color for hotspot.
**Notes:** While the cursor hovers over text in a style with the hotspot attribute set, the default colouring can be modified and an underline drawn with these settings.

### 160.2.260 SetSavePoint

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This method tells Scintilla that the current state of the document is unmodified.
**Notes:**

This is usually done when the file is saved or loaded, hence the name "save point". As Scintilla performs undo and redo operations, it notifies the container that it has entered or left the save point with SavePointReached and SavePointLeft events, allowing the container to know if the file should be considered dirty or not.
See also: EmptyUndoBuffer or Modify property.

### 160.2.261 SetSel(anchor as Integer, caret as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets both the anchor and the current position.
**Notes:** If caret is negative, it means the end of the document. If anchor is negative, it means remove any selection (i.e. set the anchor to the same position as caret). The caret is scrolled into view after this operation.

### 160.2.262 SetSelBackColor(useSetting as boolean, value as Color)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** You can choose to override the default selection colouring.
**Example:**

```
// use highlight color for selection and white text

dim c as ScintillaControlMBS // your control
c.SetSelBackColor(True, Color.HighlightColor)
c.SetSelForeColor(True, Color.White)
```

**Notes:** With the method, the colour you provide is used if you set useSetting to true. If it is set to false, the default styled colouring is used and the fore or back argument has no effect.

### 160.2.263 SetSelection(caret as Integer, anchor as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set a single selection from anchor to caret as the only selection.

### 160.2.264 SetSelForeColor(useSetting as boolean, value as Color)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** You can choose to override the default selection colouring.
**Example:**

```
// use highlight color for selection and white text

dim c as ScintillaControlMBS // your control
c.SetSelBackColor(True, Color.HighlightColor)
c.SetSelForeColor(True, Color.White)
```

**Notes:** With the method, the colour you provide is used if you set useSetting to true. If it is set to false, the default styled colouring is used and the fore or back argument has no effect.

### 160.2.265 setStatusText(Text as String)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Targets: Desktop only.

**Function:** Sets message of status field.

### 160.2.266 SetStyling(length as Integer, style as ScintillaStyleMBS)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets the style of length characters starting at the styling position and then increases the styling position by length, ready for the next call.
**Notes:** StartStyling should be called before the first call to this.
See also:

- 160.2.267 SetStyling(start as Integer, length as Integer, style as ScintillaStyleMBS) 24303

### 160.2.267 SetStyling(start as Integer, length as Integer, style as ScintillaStyleMBS)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets the style of length characters starting at the styling position and then increases the styling position by length, ready for the next call.
**Notes:** StartStyling should be called before the first call to this.
See also:

- 160.2.266 SetStyling(length as Integer, style as ScintillaStyleMBS) 24303

### 160.2.268 SetStylingEx(Styles as MemoryBlock)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets styling for a range of text.
**Notes:** As an alternative to SetStyling, which applies the same style to each byte, you can use this method

which specifies the styles for each of length bytes from the styling position and then increases the styling position by length, ready for the next call. StartStyling should be called before the first call to this.

### 160.2.269 SetTargetRange(start as Integer, ende as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set the start and end of the target.

### 160.2.270 SetVisiblePolicy(visiblePolicy as Integer, visibleSlop as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This determines how the vertical positioning is determined when EnsureVisibleEnforcePolicy is called.
**Notes:** It takes kVisiblePolicySlop and kVisiblePolicyStrict flags for the visiblePolicy parameter. It is similar in operation to SetYCaretPolicy.

### 160.2.271 SetWhitespaceBackColor(useSetting as boolean, value as Color)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets background color for white space.
**Notes:** By default, the colour of visible white space is determined by the lexer in use. The foreground and/or background colour of all visible white space can be set globally, overriding the lexer's colours.

### 160.2.272 SetWhitespaceForeColor(useSetting as boolean, value as Color)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets foreground color for white space.
**Notes:** By default, the colour of visible white space is determined by the lexer in use. The foreground and/or background colour of all visible white space can be set globally, overriding the lexer's colours.

### 160.2.273 SetXCaretPolicy(caretPolicy as Integer, caretSlop as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets the caret policy.
**Notes:**

See kCaretPolicy* constants.

| slop | strict | jumps | even | Caret can go to the margin | "On reaching limit (going out of visibility or going into the UZ) display is..." |
|---|---|---|---|---|---|
| 0 | 0 | 0 | 0 | Yes | moved to put caret on top/on right |
| 0 | 0 | 0 | 1 | Yes | moved by one position |
| 0 | 0 | 1 | 0 | Yes | moved to put caret on top/on right |
| 0 | 0 | 1 | 1 | Yes | centred on the caret |
| 0 | 1 | - | 0 | Caret is always on top/on right of display | - |
| 0 | 1 | - | 1 | No, caret is always centred | - |
| 1 | 0 | 0 | 0 | Yes | moved to put caret out of the asymmetrical UZ |
| 1 | 0 | 0 | 1 | Yes | moved to put caret out of the UZ |
| 1 | 0 | 1 | 0 | Yes | moved to put caret at 3UZ of the top or right margin |
| 1 | 0 | 1 | 1 | Yes | moved to put caret at 3UZ of the margin |
| 1 | 1 | - | 0 | Caret is always at UZ of top/right margin | - |
| 1 | 1 | 0 | 1 | No, kept out of UZ | moved by one position |
| 1 | 1 | 1 | 0 | No, kept out of UZ | moved to put caret at 3UZ of the margin |

### 160.2.274 SetYCaretPolicy(caretPolicy as Integer, caretSlop as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets the caret policy.
**Notes:**

See kCaretPolicy* constants.

| slop | strict | jumps | even | Caret can go to the margin | "On reaching limit (going out of visibility or going into the UZ) display is..." |
|---|---|---|---|---|---|

### 160.2.275 ShowLines(lineStart as Integer, lineEnd as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Marks a range of lines as visible and then redraw the display.

### 160.2.276 StartRecord

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

| | | | | | |
|---|---|---|---|---|---|
| 0 | 0 | 0 | 0 | Yes | moved to put caret on top/on right |
| 0 | 0 | 0 | 1 | Yes | moved by one position |
| 0 | 0 | 1 | 0 | Yes | moved to put caret on top/on right |
| 0 | 0 | 1 | 1 | Yes | centred on the caret |
| 0 | 1 | - | 0 | Caret is always on top/on right of display | - |
| 0 | 1 | - | 1 | No, caret is always centred | - |
| 1 | 0 | 0 | 0 | Yes | moved to put caret out of the asymmetrical UZ |
| 1 | 0 | 0 | 1 | Yes | moved to put caret out of the UZ |
| 1 | 0 | 1 | 0 | Yes | moved to put caret at 3UZ of the top or right margin |
| 1 | 0 | 1 | 1 | Yes | moved to put caret at 3UZ of the margin |
| 1 | 1 | - | 0 | Caret is always at UZ of top/right margin | - |
| 1 | 1 | 0 | 1 | No, kept out of UZ | moved by one position |
| 1 | 1 | 1 | 0 | No, kept out of UZ | moved to put caret at 3UZ of the margin |

**Function:** Turn macro recording on.

### 160.2.277 StartStyling(start as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This prepares for styling by setting the styling position start to start at.
**Notes:** After StartStyling, send multiple SetStyling messages for each lexical entity to style or send SetStylingEX to style in blocks.

### 160.2.278 StopRecord

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Turn macro recording off.

### 160.2.279 StringOfSpan(Span as ScintillaSpanMBS) as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries text for given span.

### 160.2.280 StutteredPageDown

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.281 StutteredPageDownExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:**

This action extends the selection.
You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.282 StutteredPageUp

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.283 StutteredPageUpExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:**

This action extends the selection.
You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.284 Style(index as Integer) as ScintillaStyleMBS

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries style with given index.
**Notes:** Index ranges from 0 to 255.

### 160.2.285 StyleAt(position as Integer) as ScintillaStyleMBS

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This returns the style at pos in the document, or 0 if pos is negative or past the end of the document.

### 160.2.286 StyleClearAll

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This message sets all styles to have the same attributes as the default style.
**Notes:**

If you are setting up Scintilla for syntax colouring, it is likely that the lexical styles you set will be very similar. One way to set the styles is to:
1. Set kStylesCommonDefault to the common features of all styles.
2. Use StyleClearAll to copy this to all styles.
3. Set the style attributes that make your lexical styles different.

### 160.2.287 StyleResetDefault

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This message resets default style (kStylesCommonDefault) to its state when Scintilla was initialised.

### 160.2.288 SupportsFeature(feature as Integer) as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Different platforms support different features and SupportsFeature can be used to check which are currently available.
**Notes:**

For example, on Win32, Direct2D supports drawing translucent lines but GDI does not so SupportsFeature(kSupportsTranslucentStroke) will return 1 for Direct2D and 0 for GDI. Its possible that translucent line drawing will be implemented in a future revision to the GDI platform layer or will be implemented on particular Windows versions. This call allows applications to tailor their settings: perhaps displaying a box with translucent coloured fill on Direct2D but a hollow box on GDI.

See kSupport* constants.

### 160.2.289 SwapMainAnchorCaret

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Moves the caret to the opposite end of the main selection.

### 160.2.290 Tab

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.291 Tag(tagNumber as Integer) as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Discover what text was matched by tagged expressions in a regular expression search.
**Notes:** This is useful if the application wants to interpret the replacement string itself.

### 160.2.292 TargetFromSelection

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set the target start and end to the start and end positions of the selection.

### 160.2.293 TargetWholeDocument

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set the target start to the start of the document and target end to the end of the document.

### 160.2.294 TextHeight(line as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This returns the height in pixels of a particular line.
**Notes:** Currently all lines are the same height.

### 160.2.295 ToggleCaretSticky

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** These method set, get or toggle the caretSticky setting which controls when the last position of the caret on the line is saved.
**Notes:**

When set to kCaretStickyOff (0), the sticky flag is off; all text changes (and all caret position changes) will remember the caret's new horizontal position when moving to different lines. This is the default.
When set to kCaretStickyOn (1), the sticky flag is on, and the only thing which will cause the editor to remember the horizontal caret position is moving the caret with mouse or keyboard (left/right arrow keys, home/end keys, etc).
When set to kCaretStickyWhiteSpace (2), the caret acts like mode 0 (sticky off) except under one special case; when space or tab characters are inserted. (Including pasting only space/tabs – undo, redo, etc. do not exhibit this behaviour..).
ToggleCaretSticky switches from kCaretStickyOn and kCaretStickyWhiteSpace to kCaretStickyOff and from kCaretStickyOff to kCaretStickyOn.

### 160.2.296 ToggleFold(line as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Toggle a folder at the given line.
**Notes:** Each fold point may be either expanded, displaying all its child lines, or contracted, hiding all the child lines. This method toggle the folding state of the given line as long as it has the kFoldLevelHeaderFlag set. This method take care of folding or expanding all the lines that depend on the line. The display updates after this method.

### 160.2.297 ToggleFoldShowText(Line as Integer, text as String)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Toggle a folder at the given line with hsowing text.
**Notes:**

Each fold point may be either expanded, displaying all its child lines, or contracted, hiding all the child lines. This method toggle the folding state of the given line as long as it has the kFoldLevelHeaderFlag set. This method take care of folding or expanding all the lines that depend on the line. The display updates after this method.

An optional text tag may be shown to the right of the folded text with the text argument to ToggleFoldShowText. The default text for all header lines can be set with DefaultFoldDisplayText. The text is drawn with the kStylesCommonFoldDisplayText style.

### 160.2.298 Undo

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Undoes one action.
**Notes:**

Or if the undo buffer has reached a EndUndoAction point, all the actions back to the corresponding BeginUndoAction.

Scintilla has multiple level undo and redo. It will continue to collect undoable actions until memory runs out. Scintilla saves actions that change the document. Scintilla does not save caret and selection movements, view scrolling and the like. Sequences of typing or deleting are compressed into single transactions to make it easier to undo and redo at a sensible level of detail. Sequences of actions can be combined into transactions that are undone as a unit. These sequences occur between BeginUndoAction and EndUndoAction messages. These transactions can be nested and only the top-level sequences are undone as units.

### 160.2.299 UpperCase

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.300 UsePopUp(popUpMode as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Clicking the wrong button on the mouse pops up a short default editing menu.
**Notes:** This may be turned off with UsePopup(kPopUpNever). If you turn it off, context menu commands (in Windows, WM_CONTEXTMENU) will not be handled by Scintilla, so the parent of the Scintilla window will have the opportunity to handle the message.

### 160.2.301 UserListShow(listType as Integer, itemList as string)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Shows an user list.
**Notes:**

User lists use the same internal mechanisms as autocompletion lists, and all the calls listed for autocompletion work on them; you cannot display a user list at the same time as an autocompletion list is active. They differ in the following respects:

- The AutoCChooseSingle method has no effect.,Ä®
- When the user makes a selection you are sent a UserListSelection event rather than AutoCompleteSelection.

BEWARE: if you have set fillup characters or stop characters, these will still be active with the user list, and may result in items being selected or the user list cancelled due to the user typing into the editor.

,Ä®The listType parameter is carried to the events. It must be greater than 0 as this is how Scintilla tells the difference between an autocompletion list and a user list. If you have different types of list, for example a list of buffers and a list of macros, you can use listType to tell which one has returned a selection.

### 160.2.302 VCHome

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.303 VCHomeDisplay

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.304 VCHomeDisplayExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:**

This action extends the selection.
You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.305 VCHomeExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:**

This action extends the selection.
You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.306 VCHomeRectExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:**

This action extends the selection.
You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.307 VCHomeWrap

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.308 VCHomeWrapExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:**

This action extends the selection.
You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.309 VerticalCentreCaret

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.310 VisibleFromDocLine(line as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** When some lines are hidden and/or annotations are displayed, then a particular line in the document may be displayed at a different position to its document position.
**Notes:** If no lines are hidden and there are no annotations, this method returns docLine. Otherwise, this returns the display line (counting the very first visible line as 0). The display line of an invisible line is the

same as the previous visible line. The display line number of the first line in the document is 0. If lines are hidden and docLine is outside the range of lines in the document, the return value is -1. Lines can occupy more than one display line if they wrap.

### 160.2.311 WordEndPosition(pos as Integer, onlyWordCharacters as boolean) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Returns the end of words using the same definition of words as used internally within Scintilla.
**Notes:** You can set your own list of characters that count as words with WordChars. The position sets the start or the search, which is forwards when searching for the end and backwards when searching for the start.

### 160.2.312 WordLeft

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.313 WordLeftEnd

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:**

The *End methods move between word ends instead of word starts.
You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.314 WordLeftEndExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:**

The *End methods move between word ends instead of word starts.
This action extends the selection.
You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.315 WordLeftExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:**

This action extends the selection.
You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.316 WordPartLeft

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:**

The WordPart** commands are used to move between word segments marked by capitalisation (aCamelCaseIdentifier) or underscores (an_under_bar_ident).
You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.317 WordPartLeftExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:**

The WordPart** commands are used to move between word segments marked by capitalisation (aCamelCaseIdentifier) or underscores (an_under_bar_ident).
This action extends the selection.
You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.318 WordPartRight

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:**

The WordPart** commands are used to move between word segments marked by capitalisation (aCamelCaseIdentifier) or underscores (an_under_bar_ident).
You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.319 WordPartRightExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:**

The WordPart** commands are used to move between word segments marked by capitalisation (aCamelCaseIdentifier) or underscores (an_under_bar_ident).
This action extends the selection.
You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.320 WordRight

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:** You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.321 WordRightEnd

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:**

The *End methods move between word ends instead of word starts.
You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.322 WordRightEndExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:**

The *End methods move between word ends instead of word starts.
This action extends the selection.
You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.323 WordRightExtend

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The method to perform the action when this key is pressed.
**Notes:**

This action extends the selection.
You can call it directly to perform this action if needed, e.g. from toolbar or menu command.

### 160.2.324 WordStartPosition(pos as Integer, onlyWordCharacters as boolean) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Returns the start of words using the same definition of words as used internally within Scintilla.
**Notes:** You can set your own list of characters that count as words with WordChars. The position sets the start or the search, which is forwards when searching for the end and backwards when searching for the start.

### 160.2.325 WrapCount(line as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Document lines can occupy more than one display line if they wrap and this returns the number of display lines needed to wrap a document line.

### 160.2.326 ZoomIn

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Increases the zoom factor by one point if the current zoom factor is less than 20 points.

### 160.2.327 ZoomOut

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Ddecreases the zoom factor by one point if the current zoom factor is greater than -10 points.

### 160.2.328 Properties

### 160.2.329 Accessibility as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Enable or disable accessibility status.
**Notes:**

Can be set to kAccessibilityEnabled to enable.
(Read and Write property)

### 160.2.330 AdditionalCaretForeColor as Color

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Modify the appearance of additional carets so that they can be differentiated from the main caret which has its appearance.
**Notes:** (Read and Write property)

### 160.2.331 AdditionalCaretsBlink as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Modify the appearance of additional carets so that they can be differentiated from the main caret which has its appearance.
**Notes:** (Read and Write property)

### 160.2.332 AdditionalCaretsVisible as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Determine whether to show additional carets (defaults to true).
**Notes:** (Read and Write property)

### 160.2.333 AdditionalSelAlpha as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets alpha for additional selection.
**Notes:**

Modify the appearance of additional selections so that they can be differentiated from the main selection.
(Read and Write property)

### 160.2.334 AdditionalSelectionTyping as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether typing, new line, cursor left/right/up/down, backspace, delete, home, and end work with multiple selections simultaneously.
**Notes:**

Also allows selection and word and line deletion commands.
(Read and Write property)

### 160.2.335 AllLinesVisible as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Returns true if all lines are visible and false if some lines are hidden.
**Notes:** (Read only property)

### 160.2.336 Anchor as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The current anchor position.
**Notes:**

This sets the anchor position and creates a selection between the anchor position and the current position. The caret is not scrolled into view.
(Read and Write property)

### 160.2.337 AnnotationVisible as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Annotations can be made visible in a view and there is a choice of display style when visible.
**Notes:**

See kAnnotationVisible* constants.
(Read and Write property)

### 160.2.338 AutoCompleteActive as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Returns true if there is an active auto completion list and false if there is not.
**Notes:** (Read only property)

### 160.2.339 AutoCompleteAutoHide as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** By default, the list is cancelled if there are no viable matches (the user has typed characters that no longer match a list entry).
**Notes:**

If you want to keep displaying the original list, set autoHide to false. This also effects AutoCompleteSelect.
(Read and Write property)

### 160.2.340 AutoCompleteCancelAtStart as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The default behaviour is for the list to be cancelled if the caret moves to the location it was at when the list was displayed.
**Notes:**

By calling this message with a false argument, the list is not cancelled until the caret moves at least one character before the word being completed.
(Read and Write property)

### 160.2.341 AutoCompleteCaseInsensitiveBehaviour as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether to ignore case on auto completion.
**Notes:**

When auto completion is set to ignore case (kCaseInsensitiveBehaviourIgnoreCase), by default it will nonetheless select the first list member that matches in a case sensitive way to entered characters. This corresponds to a behaviour property of kCaseInsensitiveBehaviourRespectCase (0). If you want auto completion to ignore case at all, choose kCaseInsensitiveBehaviourIgnoreCase (1).
(Read and Write property)

### 160.2.342 AutoCompleteChooseSingle as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether to choose single item directly.
**Notes:**

If you use AutoCompleteChooseSingle(1) and a list has only one item, it is automatically added and no list is displayed. The default is to display the list even if there is only a single item.
(Read and Write property)

### 160.2.343 AutoCompleteCurrent as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set to select an item in the autocompletion list.
**Notes:**

It searches the list of words for the first that matches select. By default, comparisons are case sensitive, but you can change this with AutoCIgnoreCase. The match is character by character for the length of the select string. That is, if select is "Fred" it will match "Frederick" if this is the first item in the list that begins with "Fred". If an item is found, it is selected. If the item is not found, the autocompletion list closes if auto-hide is true (see AutoCAutoHide).
The current selection index can be retrieved with AutoCompleteCurrent.
(Read only property)

### 160.2.344 AutoCompleteCurrentText as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Retrieves the current selected text in the autocompletion list.
**Notes:**

Normally the AutoCompletion event is used instead.
The value is copied to the text buffer or if not found, an empty string is returned.
(Read only property)

### 160.2.345 AutoCompleteDropRestOfWord as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** When an item is selected, any word characters following the caret are first erased if dropRestOf-Word is set true.
**Notes:**

The default is false.
(Read and Write property)

### 160.2.346 AutoCompleteIgnoreCase as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** By default, matching of characters to list members is case sensitive.
**Notes:**

These method let you set and get case sensitivity.
(Read and Write property)

### 160.2.347 AutoCompleteMaxHeight as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Get or set the maximum number of rows that will be visible in an auto completion list.
**Notes:**

If there are more rows in the list, then a vertical scrollbar is shown. The default is 5.
(Read and Write property)

### 160.2.348 AutoCompleteMaxWidth as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Get or set the maximum width of an auto completion list expressed as the number of characters in the longest item that will be totally visible.
**Notes:**

If zero (the default) then the list's width is calculated to fit the item with the most characters. Any items that cannot be fully displayed within the available width are indicated by the presence of ellipsis.
(Read and Write property)

### 160.2.349 AutoCompleteMulti as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether to auto complete multiple selections.
**Notes:**

When auto completing with multiple selections present, the auto completed text can go into just the main selection with kMultiAutoCompleteOnce (0) or into each selection with kMultiAutoCompleteEach (1). The default is kMultiAutoCompleteOnce.
(Read and Write property)

### 160.2.350 AutoCompleteOptions as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set options for auto completion.
**Notes:**

See kAutoCompleteOption* constants.
(Read and Write property)

### 160.2.351 AutoCompleteOrder as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The default setting kOrderingPreSorted (0) requires that the list be provided in alphabetical sorted order.
**Notes:**

Sorting the list can be done by Scintilla instead of the application with kOrderingPerformSort (1). This will take additional time.
Applications that wish to prioritize some values and show the list in order of priority instead of alphabetical order can use kOrderingCustom (2). This requires extra processing in AutoCompleteShow to create a sorted index.
Setting the order should be done before calling AutoCompleteShow.
(Read and Write property)

### 160.2.352 AutoCompleteSeparator as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set and get the separator character used to separate words in the AutoCompleteShow list.
**Notes:**

The default is the space character.
(Read and Write property)

### 160.2.353 AutoCompleteTypeSeparator as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set or get the type separator for auto complete.
**Notes:** (Read and Write property)

### 160.2.354 AutomaticFold as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The automatic folding behavior.
**Notes:**

The fundamental operation in folding is making lines invisible or visible. Line visibility is a property of the view rather than the document so each view may be displaying a different set of lines. From the point of view of the user, lines are hidden and displayed using fold points. Generally, the fold points of a document are based on the hierarchical structure of the document contents. In Python, the hierarchy is determined by indentation and in C++ by brace characters. This hierarchy can be represented within a Scintilla document object by attaching a numeric "fold level" to each line. The fold level is most easily set by a lexer, but you can also set it with method.

It is up to your code to set the connection between user actions and folding and unfolding. The best way to see how this is done is to search the SciTE source code for the methods used in this section of the documentation and see how they are used. You will also need to use markers and a folding margin to complete your folding implementation. The "fold" property should be set to "1" with SetProperty("fold", "1") to enable folding.

Instead of implementing all the logic for handling folding in the container, Scintilla can provide behaviour that is adequate for many applications. The automaticFold argument is a bit set defining which of the 3 pieces of folding implementation should be enabled. Most applications should be able to use the kAutomaticFoldShow and kAutomaticFoldChange flags unless they wish to implement quite different behaviour such as defining their own fold structure. kAutomaticFoldClick is more likely to be set off when an application would like to add or change click behaviour such as showing method headers only when Shift+Alt is used in conjunction with a click.
(Read and Write property)

### 160.2.355 BackSpaceUnIndents as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether backspace unindents.
**Notes:**

Inside indentation white space, the tab and backspace keys can be made to indent and unindent rather than

insert a tab character or delete a character with the TabIndents and BackSpaceUnIndents functions.
(Read and Write property)

### 160.2.356 Bidirectional as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets or queries bidirectional support.
**Notes:**

The bidirectional features in Scintilla are experimental and incomplete.

Some languages, like Arabic and Hebrew, are written from right to left instead of from left to right as English is. Documents that use multiple languages may contain both directions and this is termed "bidirectional". The default text direction may be right to left or left to right. Scintilla only correctly displays bidirectional text on some platforms. Currently, there is experimental support for bidirectional text on Win32 using DirectWrite and on macOS using Cocoa. Only UTF-8 documents will show bidirectional behaviour and only in kBidirectionalL2R mode. Some features, such as virtual space may not work with bidirectional text or may work only in some circumstances. kBidirectionalR2L may be implemented in the future.

There are additional processing and storage costs to bidirectional text. As some applications may not want to pay the costs, bidirectional support must be explicitly enabled by calling Bidirectional = kBidirectionalL2R (1) which chooses left to right as the default direction or Bidirectional = kBidirectionalR2L (2) for default right to left.

On Win32, this should be done after setting the technology to kTechnologyDirectWrite, kTechnologyDirectWriteRetain, or kTechnologyDirectWriteDC.

If the call succeeded Bidirectional query will return the same value otherwise kBidirectionalDisabled (0) is returned.
(Read and Write property)

### 160.2.357 CallTipActive as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This returns true if a call tip is active and false if it is not active.
**Notes:** (Read only property)

### 160.2.358 CallTipPosStart as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This property returns or sets the value of the current position when CallTipShow started to display the tip.
**Notes:** (Read and Write property)

### 160.2.359 CanPaste as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether clipboard has text and paste can be performed.
**Notes:**

Returns false if document is read only or selection contains protected text.
(Read only property)

### 160.2.360 CanRedo as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether Undo was performed and a Redo step is possible.
**Notes:**

You could typically use the result of this property to enable/disable the Edit menu Redo command.
(Read only property)

### 160.2.361 CanUndo as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether undo stack contains data and can be used to undo.
**Notes:**

You would typically use the result of this property to enable/disable the Edit menu Undo command.
(Read only property)

### 160.2.362 CaretForeColor as Color

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The colour of the caret.
**Example:**

```
dim ScintillaEditor as ScintillaControlMBS // your control

// set cursor width and color

ScintillaEditor.CaretForeColor = Color.HighlightColor
ScintillaEditor.CaretWidth = 8
```

**Notes:** (Read and Write property)

### 160.2.363 CaretLineBackAlpha as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The caret line be drawn translucently which allows other background colours to show through.
**Notes:**

hTis is done by setting the alpha (translucency) value by calling CaretLineBackAlpha. When the alpha is not kAlphaNoAlpha, the caret line is drawn after all other features so will affect the colour of all other features.
(Read and Write property)

### 160.2.364 CaretLineBackColor as Color

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The background colour of the line containing the caret different
**Notes:**

Set the desired background colour with CaretLineBackColor, then use CaretLineVisible = true to enable the effect. You can cancel the effect with CaretLineVisible = false.
(Read and Write property)

### 160.2.365 CaretLineFrame as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** can be used to display the caret line framed instead of filling the whole background.
**Notes:**

Set width <>0 to enable this option and width = 0 to disable it.
(Read and Write property)

### 160.2.366 CaretLineHighlightSubLine as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Choose to highlight only the subline containing the caret instead of the whole line.
**Notes:**

Default behaviour CaretLineHighlightSubLine = false the whole caret line is highlighted.
(Read and Write property)

### 160.2.367 CaretLineLayer as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** You can choose to make the background colour of the line containing the caret.
**Notes:**

This effect may be drawn translucently over the text or opaquely on the base layer with CaretLineLayer. Background colouring has highest priority when a line has markers that would otherwise change the background colour. When drawn translucently other background colours can show through.

See kLayer* constants.
(Read and Write property)

### 160.2.368 CaretLineVisible as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether caret line is visible.
**Notes:**

Set the desired background colour with CaretLineBackColor, then use CaretLineVisible = true to enable the effect. You can cancel the effect with CaretLineVisible = false.
(Read and Write property)

### 160.2.369 CaretLineVisibleAlways as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Choose to make the caret line always visible even when the window is not in focus.
**Notes:**

Default behaviour false the caret line is only visible when the window is in focus.
(Read and Write property)

### 160.2.370 CaretPeriod as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The rate at which the caret blinks.
**Notes:**

The rate at which the caret blinks can be set with CaretPeriod which determines the time in milliseconds that the caret is visible or invisible before changing state. Setting the period to 0 stops the caret blinking. The default value is 500 milliseconds.
(Read and Write property)

### 160.2.371 CaretSticky as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set, get or toggle the caretSticky setting which controls when the last position of the caret on the line is saved.
**Notes:**

These messages set, get or toggle the caretSticky setting which controls when the last position of the caret on the line is saved.

When set to kCaretStickyOff (0), the sticky flag is off; all text changes (and all caret position changes) will remember the caret's new horizontal position when moving to different lines. This is the default.

When set to kCaretStickyOn (1), the sticky flag is on, and the only thing which will cause the editor to remember the horizontal caret position is moving the caret with mouse or keyboard (left/right arrow keys, home/end keys, etc).

When set to kCaretStickyWhiteSpace (2), the caret acts like mode 0 (sticky off) except under one special case; when space or tab characters are inserted. (Including pasting only space/tabs – undo, redo, etc. do not exhibit this behaviour..).

SCI_TOGGLECARETSTICKY switches from kCaretStickyOn and kCaretStickyWhiteSpace to kCaretStickyOff and from kCaretStickyOff to kCaretStickyOn.
(Read and Write property)

### 160.2.372 CaretStyle as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The style of the caret.
**Notes:**

There are separate styles for insert mode (lower 4-bits, kCaretStyleInsMask) and overtype mode (bit 4).

See kCaretStyle* constants.

The block caret draws most combining and multibyte character sequences successfully, though some fonts like Thai Fonts (and possibly others) can sometimes appear strange when the cursor is positioned at these characters, which may result in only drawing a part of the cursor character sequence. This is most notable on Windows platforms.
(Read and Write property)

### 160.2.373 CaretWidth as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The width of the line caret.
**Example:**

```
dim ScintillaEditor as ScintillaControlMBS // your control

// set cursor width and color

ScintillaEditor.CaretForeColor = Color.HighlightColor
ScintillaEditor.CaretWidth = 8
```

**Notes:**

can be set to a value of between 0 and 20 pixels. The default width is 1 pixel.

A width of 0 makes the caret invisible, similar to setting the caret style to kCaretStyleInvisible (though not interchangeable). This setting only affects the width of the cursor when the cursor style is set to line caret mode, it does not affect the width for a block caret.
(Read and Write property)

### 160.2.374 CharacterCategoryOptimization as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Optimize speed of character category features like determining whether a character is a space or number at the expense of memory.
**Notes:**

Mostly used for Unicode documents. The countCharacters parameter determines how many character starting from 0 are added to a look-up table with one byte used for each character. It is reasonable to cover the set of characters likely to be used in a document so & h100 for simple Roman text, & h1000 to cover most simple alphabets, & h10000 to cover most of East Asian languages, and & h110000 to cover all possible characters.
(Read and Write property)

### 160.2.375 ControlCharSymbol as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The mnemonics may be replaced by a nominated symbol with an ASCII code in the range 32 to 255.
**Notes:**

If you set a symbol value less than 32, all control characters are displayed as mnemonics. The symbol you set is rendered in the font of the style set for the character.

The default symbol value is 0.
(Read and Write property)

### 160.2.376 CurrentLine as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This retrieves the text of the line containing the caret and returns the position within the line of the caret.
**Notes:** (Read only property)

### 160.2.377 Cursor as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The current mouse cursor.
**Notes:**

The cursor is normally chosen in a context sensitive way, so it will be different over the margin than when over the text. When performing a slow action, you may wish to change to a wait cursor. You set the cursor type with assignment to this property.

See kCursorShape* constants.

Cursor values 1 through 7 have defined cursors, but only kCursorShapeWait is usefully controllable. Other values of cursorType cause a pointer to be displayed. Reading the cursor property returns the last cursor type you set, or kCursorShapeNormal (-1) if you have not set a cursor type.
(Read and Write property)

### 160.2.378 DefaultFoldDisplayText as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set and get the default text displayed at the right of the folded text.
**Notes:** (Read and Write property)

### 160.2.379 DescribeKeyWordSets as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** A description of all of the keyword sets separated by LF.
**Notes:** (Read only property)

### 160.2.380 DocumentOptions as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The documentation options used to create the document.
**Notes:** (Read only property)

### 160.2.381 EdgeColor as Color

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set and get the colour of the marker used to show that a line has exceeded the length set by EdgeColumn property.
**Notes:** (Read and Write property)

### 160.2.382 EdgeColumn as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set and get the column number at which to display the long line marker.
**Notes:**

When drawing lines, the column sets a position in units of the width of a space character in kStylesCommonDefault. When setting the background colour, the column is a character count (allowing for tabs) into the line.
(Read and Write property)

### 160.2.383 EdgeMode as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set and get the mode used to display long lines.
**Notes:**

You can choose to mark lines that exceed a given length by drawing a vertical line or by colouring the background of characters that exceed the set length.

See kEdgeVisualStyle* constants.
(Read and Write property)

### 160.2.384 EndAtLastLine as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** EndAtLastLine sets the scroll range so that maximum scroll position has the last line at the bottom of the view (default).
**Notes:**

Setting this to false allows scrolling one page below the last line.
(Read and Write property)

### 160.2.385 EOLAnnotationVisible as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set and get the annotation display mode.
**Notes:**

End of Line Annotations can be made visible in a view and there is a choice of display style when visible.

See kEOLAnnotationVisible* constants.
(Read and Write property)

### 160.2.386 EOLMode as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets the characters that are added into the document when the user presses the Enter key.
**Notes:**

You can set eolMode to one of kEndOfLineCRLF (0), kEndOfLineCR (1), or kEndOfLineLF (2).

Scintilla can handle the major line end conventions and, depending on settings and the current lexer also support additional Unicode line ends.
Scintilla can interpret any of the Macintosh (CR), Unix (LF) and Windows (CR+LF) line ends. When the user presses the Enter key, one of these line end strings is inserted into the buffer. The default is CRL+LF in Windows and LF in Unix, but this can be changed with the EOLMode proeprty. You can also convert the entire document to one of these line endings with ConvertEOLs. Finally, you can choose to display the line endings with ViewEOL.

For the UTF-8 encoding, three additional Unicode line ends, Next Line (NEL=U+0085), Line Separator (LS=U+2028), and Paragraph Separator (PS=U+2029) may optionally be interpreted when Unicode line ends is turned on and the current lexer also supports Unicode line ends.
(Read and Write property)

### 160.2.387 ExtraAscent as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The extra ascent.
**Notes:**

Text is drawn with the base of each character on a 'baseline'. The height of a line is found from the maximum that any style extends above the baseline (its 'ascent'), added to the maximum that any style extends below the baseline (its 'descent'). Space may be added to the maximum ascent (ExtraAscent) and the maximum descent (ExtraDescent) to allow for more space between lines. This may done to make the text easier to read or to accommodate underlines or highlights.

The extra ascent and descent values can be negative but that should be done with care as it may lead to unexpected interference when lines share space.
(Read and Write property)

### 160.2.388 ExtraDescent as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The extra descent.
**Notes:**

Text is drawn with the base of each character on a 'baseline'. The height of a line is found from the maximum that any style extends above the baseline (its 'ascent'), added to the maximum that any style extends below the baseline (its 'descent'). Space may be added to the maximum ascent (ExtraAscent) and the maximum descent (ExtraDescent) to allow for more space between lines. This may done to make the text easier to read or to accommodate underlines or highlights.

The extra ascent and descent values can be negative but that should be done with care as it may lead to unexpected interference when lines share space.
(Read and Write property)

### 160.2.389 FirstVisibleLine as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Retrieve or set the line number of the first visible line in the Scintilla view.
**Notes:**

The first line in the document is numbered 0. The value is a visible line rather than a document line.
(Read and Write property)

### 160.2.390 Focus as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether we have focus.
**Notes:**

Scintilla can be told to grab the focus with GrabFocus. This is needed more on GTK where focus handling is more complicated than on Windows.
The internal focus flag can be set with Focus. This is used by clients that have complex focus requirements such as having their own window that gets the real focus but with the need to indicate that Scintilla has the logical focus.
(Read and Write property)

### 160.2.391 FoldDisplayTextStyle as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Changes the appearance of fold text tags.
**Notes:** (Read and Write property)

### 160.2.392 FontLocale as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set the locale used for font selection with language-dependent glyphs.
**Notes:**

It may, depending on platform and other circumstances influence the display of text, so setting "zh-Hant" may result in traditional Chinese display and "zh-Hans" may result in simplified Chinese display. It is currently only implemented for Win32 using DirectWrite where the value is passed as the localeName argument to CreateTextFormat. The default value is US English "en-us".
(Read and Write property)

### 160.2.393 FontQuality as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Manage font quality (antialiasing method).
**Notes:**

See kFontQualityQuality* constants.
(Read and Write property)

### 160.2.394 HasBorder as Boolean

MBS Scintilla Plugin, Plugin Version: 22.4, Platform: Windows, Targets: Desktop only.

**Function:** Enable/disable border for Windows.
**Notes:**

If this flag is set before the control is constructed, you get the control instated on Windows with a border line.
(Read and Write property)

### 160.2.395 HighlightGuide as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** When brace highlighting occurs, the indentation guide corresponding to the braces may be highlighted with the brace highlighting style, kStylesCommonBraceLight (34).
**Notes:**

Set column to 0 to cancel this highlight.
(Read and Write property)

### 160.2.396 HotspotActiveBack as Color

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries background color for hotspot.
**Notes:** (Read only property)

### 160.2.397 HotspotActiveFore as Color

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries foreground color for hotspot.
**Notes:** (Read only property)

### 160.2.398 HotspotActiveUnderline as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** While the cursor hovers over text in a style with the hotspot attribute set, this option shows underline.
**Notes:** (Read and Write property)

### 160.2.399 HotspotSingleLine as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Single line mode stops a hotspot from wrapping onto next line.
**Notes:** (Read and Write property)

### 160.2.400 HScrollBar as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The horizontal scroll bar is only displayed if it is needed for the assumed width.
**Notes:**

If you never wish to see it, call HScrollBar = false. Use HScrollBar = true to enable it again. Querying HScrollBar returns the current state. The default state is to display it when needed.
(Read and Write property)

### 160.2.401 IdleStyling as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The idel styling setting.
**Notes:**

By default, kIdleStylingNone (0), syntax styling is performed for all the currently visible text before displaying it. On very large files, this may make scrolling down slow. With kIdleStylingToVisible (1), a small amount of styling is performed before display and then further styling is performed incrementally in the background as an idle-time task. This may result in the text initially appearing uncoloured and then, some time later, it is coloured. Text after the currently visible portion may be styled in the background with kIdleStylingAfterVisible (2). To style both before and after the visible text in the background use kIdleStylingAll (3).
Since wrapping also needs to perform styling and also uses idle time, this setting has no effect when the document is displayed wrapped.
(Read and Write property)

### 160.2.402 IMEInteraction as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Configures IME interaction.
**Notes:**

When entering text in Chinese, Japanese, or Korean an Input Method Editor (IME) may be displayed. The IME may be an extra window appearing above Scintilla or may be displayed by Scintilla itself as text. On some platforms there is a choice between the two techniques. A windowed IME kIMEInteractionWindowed (0) may be more similar in appearance and behaviour to the IME in other applications. An inline IME kIMEInteractionInline (1) may work better with some Scintilla features such as rectangular and multiple selection.
The windowed behaviour can be chosen with IMEInteraction = kIMEInteractionWindowed and the inline behaviour with IMEInteraction = kIMEInteractionInline. Scintilla may ignore this call in some cases. For example, the inline behaviour might only be supported for some languages.
When the inline IME mode is active, characters are added tentatively before being finalised and an Charac-

terAdded event (with characterSource set to kCharacterSourceTentativeInput) is sent for each character.
(Read and Write property)

### 160.2.403 Indent as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets the size of indentation in terms of the width of a space in KStylesCommonDefault.
**Notes:**

If you set a width of 0, the indent size is the same as the tab size. There are no limits on indent sizes, but values less than 0 or large values may have undesirable effects.

Indentation (the white space at the start of a line) is often used by programmers to clarify program structure and in some languages, for example Python, it may be part of the language syntax. Tabs are normally used in editors to insert a tab character or to pad text with spaces up to the next tab.
When Scintilla is laying out a section of text, text after a tab character will usually be displayed at the next multiple of TabWidth columns from the left. However, it is also possible to explicitly set tabstops in pixels for each line.
Scintilla can be set to treat tab and backspace in the white space at the start of a line in a special way: inserting a tab indents the line to the next indent position rather than just inserting a tab at the current character position and backspace unindents the line rather than deleting a character. Scintilla can also display indentation guides (vertical lines) to help you to generate code.
(Read and Write property)

### 160.2.404 IndentationGuides as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Indentation guides are dotted vertical lines that appear within indentation white space every indent size columns.
**Notes:**

They make it easy to see which constructs line up especially when they extend over multiple pages. Style kStylesCommonIndentGuide (37) is used to specify the foreground and background colour of the indentation guides.
There are 4 indentation guide views. kIndentViewNone turns the feature off but the other 3 states determine how far the guides appear on empty lines.
(Read and Write property)

### 160.2.405 IndicatorCurrent as ScintillaIndicatorMBS

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The current indicator.
**Notes:** (Read and Write property)

### 160.2.406 IndicatorValue as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set and get the value that will be set by calls to IndicatorFillRange.
**Notes:** (Read and Write property)

### 160.2.407 LayoutCache as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Enable layout cache.
**Notes:** (Read and Write property)

### 160.2.408 Length as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The length of the document in bytes.
**Notes:** (Read only property)

### 160.2.409 LexerLanguage as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Returns the name of the current lexer.
**Notes:** (Read only property)

### 160.2.410 LibraryError as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The error message from loading the library.
**Notes:** (Read only property)

### 160.2.411 LineCharacterIndex as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Returns which if any indexes are active.
**Notes:** (Read only property)

### 160.2.412 LineCount as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This returns the number of lines in the document.
**Notes:**

An empty document contains 1 line. A document holding only an end of line sequence has 2 lines.
(Read only property)

### 160.2.413 LineEndTypesActive as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Reports the set of line ends currently interpreted by Scintilla.
**Notes:**

It is LineEndTypesSupported and LineEndTypesAllowed.

See kLineEndType* constants.
(Read only property)

### 160.2.414 LineEndTypesAllowed as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** By default, only the ASCII line ends are interpreted.
**Notes:**

Unicode line ends may be requested with LineEndTypesAllowed = kLineEndTypeUnicode but this will be ineffective unless the lexer also allows you Unicode line ends.

See kLineEndType* constants.
(Read and Write property)

### 160.2.415 LineEndTypesSupported as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Reports the different types of line ends supported by the current lexer.
**Notes:**

This is a bit set although there is currently only a single choice with either kLineEndTypeDefault (0) or kLineEndTypeUnicode (1). These values are also used by the other messages concerned with Unicode line ends.

See kLineEndType* constants.
(Read only property)

### 160.2.416 LinesOnScreen as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This returns the number of complete lines visible on the screen.
**Notes:**

With a constant line height, this is the vertical space available divided by the line separation. Unless you arrange to size your window to an integral number of lines, there may be a partial line visible at the bottom of the view.
(Read only property)

### 160.2.417 MainSelection as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries index of main selection.
**Notes:**

One of the selections is the main selection which is used to determine what range of text is automatically visible. The main selection may be displayed in different colours or with a differently styled caret. Only an already existing selection can be made main.
(Read and Write property)

### 160.2.418 MarginLeft as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set and get the width of the blank margin on left side of the text in pixels.
**Notes:**

The default is to one pixel on each side.
(Read and Write property)

### 160.2.419 MarginOptions as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Define margin options by enabling appropriate bit flags.
**Notes:**

At the moment, only one flag is available kMarginOptionSubLineSelect = 1, which controls how wrapped lines are selected when clicking on margin in front of them. If kMarginOptionSubLineSelect is set only sub line of wrapped line is selected, otherwise whole wrapped line is selected. Margin options are set to kMarginOptionNone=0 by default.
(Read and Write property)

### 160.2.420 MarginRight as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set and get the width of the blank margin on right side of the text in pixels.
**Notes:**

The default is to one pixel on each side.
(Read and Write property)

### 160.2.421 Margins as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Allocate the number of margins or find the number of margins currently allocated.
**Notes:** (Read and Write property)

### 160.2.422 MaxLineState as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This returns the last line that has any line state.
**Notes:** (Read only property)

### 160.2.423 ModEventMask as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The modification event masks.
**Notes:**

Set and get an event mask that determines which document change events are notified to the container with Modify event. For example, a container may decide to see only notifications about changes to text and not styling changes by setting ModEventMask = kModificationFlagsInsertText + kModificationFlagsDeleteText.
(Read and Write property)

### 160.2.424 Modify as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This returns true if the document is modified and false if it is unmodified.
**Notes:**

The modified status of a document is determined by the undo position relative to the save point. The save point is set by SetSavePoint, usually when you have saved data to a file.
If you need to be notified when the document becomes modified, Scintilla notifies the container that it has entered or left the save point with the SavePointReached and SavePointLeft notification messages.
(Read only property)

### 160.2.425 MouseDownCaptures as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** When the mouse is pressed inside Scintilla, it is captured so future mouse movement events are sent to Scintilla.
**Notes:**

This behaviour may be turned off with MouseDownCaptures = false.
(Read and Write property)

### 160.2.426 MouseDwellTime as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The time the mouse must sit still, in milliseconds, to generate a DWellStart event.
**Notes:**

If set to kTimeForever, the default, no dwell events are generated.
(Read and Write property)

### 160.2.427 MouseSelectionRectangularSwitch as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Enable or disable the ability to switch to rectangular selection mode while making a selection with the mouse.
**Notes:**

When this option is turned on, mouse selections in stream mode can be switched to rectangular mode by pressing the corresponding modifier key. They then stick to rectangular mode even when the modifier key is released again. When this option is turned off, mouse selections will always stick to the mode the selection was started in. It is off by default.
(Read and Write property)

### 160.2.428 MouseWheelCaptures as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether to capture mouse wheel events.
**Notes:**

On Windows, Scintilla captures all WM_MOUSEWHEEL messages if it has the focus, even if the mouse pointer is nowhere near the Scintilla editor window. This behaviour can be changed with MouseWheelCaptures = false so that Scintilla passes the WM_MOUSEWHEEL messages to its parent window. Scintilla will still react to the mouse wheel if the mouse pointer is over the editor window.
(Read and Write property)

### 160.2.429 MoveExtendsSelection as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This returns true if regular caret moves will extend or reduce the selection, false if not.
**Notes:**

SetSelectionMode toggles this setting between on and off.
(Read only property)

### 160.2.430 MultiPaste as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** How to do paste with multiple selection.
**Notes:**

When pasting into multiple selections, the pasted text can go into just the main selection with kMultiPasteOnce=0 or into each selection with kMultiPasteEach=1. kMultiPasteOnce is the default.
(Read and Write property)

### 160.2.431 MultipleSelection as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Enable or disable multiple selection.
**Notes:**

When multiple selection is disabled, it is not possible to select multiple ranges by holding down the Ctrl key while dragging with the mouse.

There may be multiple selections active at one time. More selections are made by holding down the Ctrl key while dragging with the mouse. The most recent selection is the main selection and determines which part of the document is shown automatically. Any selection apart from the main selection is called an additional selection. The calls in the previous section operate on the main selection. There is always at least one selection. The selection can be simplified down to just the main selection by Cancel which is normally mapped to the Esc key.

Rectangular selections are handled as multiple selections although the original rectangular range is remembered so that subsequent operations may be handled differently for rectangular selections. For example, pasting a rectangular selection places each piece in a vertical column.

Virtual space is space beyond the end of each line. The caret may be moved into virtual space but no real space will be added to the document until there is some text typed or some other text insertion command is used.

When discontiguous selections are copied to the clipboard, each selection is added to the clipboard text in order with no delimiting characters. For rectangular selections the document's line end is added after each line's text. Rectangular selections are always copied from top line to bottom, not in the in order of selection.Virtual space is not copied.
(Read and Write property)

### 160.2.432 NamedStyles as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Retrieve the number of named styles for the lexer.

**Notes:** (Read only property)

### 160.2.433 NSView as Variant

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The Cocoa view for macOS.
**Notes:**

Object is from NSViewMBS class.
(Read only property)

### 160.2.434 Overtype as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** When overtype is enabled, each typed character replaces the character to the right of the text caret.
**Notes:**

When overtype is disabled, characters are inserted at the caret. Returns true if overtyping is active, otherwise false will be returned.
(Read and Write property)

### 160.2.435 PasteConvertEndings as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether to match end of line on pasting.
**Notes:**

If this property is set then when text is pasted any line ends are converted to match the document's end of line mode as set with EOLMode. Defaults to true.
(Read and Write property)

### 160.2.436 Position as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The current position.
**Notes:**

This sets the current position and creates a selection between the anchor and the current position. The caret is not scrolled into view.
(Read and Write property)

### 160.2.437 PositionCache as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The size in entries of the position cache.
**Notes:**

The position cache stores position information for short runs of text so that their layout can be determined more quickly if the run recurs.
(Read and Write property)

### 160.2.438 PrintColourMode as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set and get the method used to render coloured text on a printer that is probably using white paper.
**Notes:**

It is especially important to consider the treatment of colour if you use a dark or black screen background. Printing white on black uses up toner and ink very many times faster than the other way around.
See kPrintOption* constants.
(Read and Write property)

### 160.2.439 PrintMagnification as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Lets you to print at a different size than the screen font.
**Notes:**

magnification is the number of points to add to the size of each screen font. A value of -3 or -4 gives reasonably small print.
(Read and Write property)

### 160.2.440 PrintWrapMode as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Get and set the printer wrap mode.
**Notes:**

wrapMode can be set to kWrapNone (0) or kWrapWord (1). The default is kWrapWord, which wraps printed output so that all characters fit into the print rectangle. If you set kWrapNone, each line of text generates one line of output and the line is truncated if it is too long to fit into the print area.
kWrapWord tries to wrap only between words as indicated by white space or style changes although if a word is longer than a line, it will be wrapped before the line end.
kWrapChar is not supported for printing.
(Read and Write property)

### 160.2.441 PropertyNames as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Returns a string with all of the valid properties separated by LF.
**Notes:**

If the lexer does not support this call then an empty string is returned.
(Read only property)

### 160.2.442 PunctuationChars as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Similar to WordChars and WhiteSpaceChars, this message allows the user to define which chars Scintilla considers as punctuation.
**Notes:** (Read and Write property)

### 160.2.443 ReadOnly as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set and get the read-only flag for the document.
**Notes:**

If you mark a document as read only, attempts to modify the text cause the ModifyAttemptReadOnly event.
(Read and Write property)

### 160.2.444 RectangularSelectionAnchor as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set or query the position for the anchor of the rectangular selection.
**Notes:**

After setting the rectangular selection, this is broken down into multiple selections, one for each line.
(Read and Write property)

### 160.2.445 RectangularSelectionAnchorVirtualSpace as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set or query the position and amount of virtual space for the of the rectangular selection.
**Notes:**

After setting the rectangular selection, this is broken down into multiple selections, one for each line.
(Read and Write property)

### 160.2.446 RectangularSelectionCaret as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set or query the position for the caret of the rectangular selection.
**Notes:**

After setting the rectangular selection, this is broken down into multiple selections, one for each line.

There may be multiple selections active at one time. More selections are made by holding down the Ctrl key while dragging with the mouse. The most recent selection is the main selection and determines which part of the document is shown automatically. Any selection apart from the main selection is called an additional selection. The calls in the previous section operate on the main selection. There is always at least one selection. The selection can be simplified down to just the main selection by Cancel which is normally mapped to the Esc key.

Rectangular selections are handled as multiple selections although the original rectangular range is remembered so that subsequent operations may be handled differently for rectangular selections. For example, pasting a rectangular selection places each piece in a vertical column.

Virtual space is space beyond the end of each line. The caret may be moved into virtual space but no real space will be added to the document until there is some text typed or some other text insertion command is used.

When discontiguous selections are copied to the clipboard, each selection is added to the clipboard text in order with no delimiting characters. For rectangular selections the document's line end is added after each line's text. Rectangular selections are always copied from top line to bottom, not in the in order of

selection.Virtual space is not copied.
(Read and Write property)

### 160.2.447 RectangularSelectionCaretVirtualSpace as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set or query the position and amount of virtual space for the caret of the rectangular selection.
**Notes:**

After setting the rectangular selection, this is broken down into multiple selections, one for each line.
(Read and Write property)

### 160.2.448 RectangularSelectionModifier as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** On GTK and Qt, the key used to indicate that a rectangular selection should be created when combined with a mouse drag can be set.
**Notes:**

The three possible values are kKeyModCtrl=2, kKeyModAlt=4 (default) or kKeyModSuper=8. Since kKeyModAlt may already be used by a window manager, the window manager may need configuring to allow this choice. kKeyModSuper is often a system dependent modifier key such as the Left Windows key on a Windows keyboard or the Command key on a Mac.
(Read and Write property)

### 160.2.449 ScrollWidth as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** For performance, Scintilla does not measure the display width of the document to determine the properties of the horizontal scroll bar.
**Notes:**

Instead, an assumed width is used. These messages set and get the document width in pixels assumed by Scintilla. The default value is 2000. To ensure the width of the currently visible lines can be scrolled use ScrollWidthTracking.
(Read and Write property)

### 160.2.450 ScrollWidthTracking as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** If scroll width tracking is enabled then the scroll width is adjusted to ensure that all of the lines currently displayed can be completely scrolled.
**Notes:**

This mode never adjusts the scroll width to be narrower.
(Read and Write property)

### 160.2.451 SearchFlags as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** These get and set the searchFlags used by SearchInTarget.
**Notes:**

There are several option flags including a simple regular expression search.
See kFindOption* constants.
(Read and Write property)

### 160.2.452 SelAlpha as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets or gets selection alpha value.
**Notes:** (Read and Write property)

### 160.2.453 SelectedText as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This copies the currently selected text.
**Notes:**

This allows for rectangular and discontiguous selections as well as simple selections. See Multiple Selection for information on how multiple and rectangular selections and virtual space are copied.
(Read only property)

### 160.2.454 SelectionEmpty as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Return true if every selected range is empty else false.
**Notes:**

This can be used as CanCopy or CanCut for building menu.
(Read only property)

### 160.2.455 SelectionEnd as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The end position of the selection.
**Notes:**

SelectionStart and SelectionEnd return the start and end of the selection without regard to which end is the current position and which is the anchor. SelectionStart returns the smaller of the current position or the anchor position. SelectionEnd returns the larger of the two values.

Assign new value to set the selection based on the assumption that the anchor position is less than the current position.
(Read and Write property)

### 160.2.456 SelectionIsRectangle as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This returns true if the current selection is in rectangle mode, false if not.
**Notes:** (Read only property)

### 160.2.457 SelectionLayer as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The selection background can be drawn translucently over the text or opaquely on the base layer.
**Notes:**

See kLayer* constants.
(Read and Write property)

### 160.2.458 SelectionMode as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The selection mode.
**Notes:**

Can be stream (kSelectionModeStream=0) or rectangular (kSelectionModeRectangle=1) or by lines (kSelectionModeLines=2) or thin rectangular (kSelectionModeThin=3). When set in these modes, regular caret moves will extend or reduce the selection, until the mode is cancelled by a call with same value or with Cancel. The get function returns the current mode even if the selection was made by mouse or with regular extended moves. SC_SEL_THIN is the mode after a rectangular selection has been typed into and ensures that no characters are selected.
(Read and Write property)

### 160.2.459 Selections as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Return the number of selections currently active.
**Notes:**

There is always at least one selection.
(Read only property)

### 160.2.460 SelectionSpan as ScintillaSpanMBS

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries selection start and end as a span object.
**Notes:** (Read only property)

### 160.2.461 SelectionStart as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The start position of the selection.
**Notes:**

SelectionStart and SelectionEnd return the start and end of the selection without regard to which end is the current position and which is the anchor. SelectionStart returns the smaller of the current position or the anchor position. SelectionEnd returns the larger of the two values.

Assign new value to set the selection based on the assumption that the anchor position is less than the

current position.
(Read and Write property)

### 160.2.462 SelEOLFilled as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The selection can be drawn up to the right hand border by setting this property.
**Notes:** (Read and Write property)

### 160.2.463 ShowInfoBar as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether to show info bar on macOS.
**Notes:**

Defaults to true.
The info bar allows you to show a status message and to do zoom levels.
(Read and Write property)

### 160.2.464 Status as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** If an error occurs, Scintilla may set an internal error number that can be retrieved with this property.
**Notes:**

To clear the error status call SCI_SETSTATUS(0). Status values from 1 to 999 are errors and status kStatusWarnStart (1000) and above are warnings.
See kStatus* constants.
(Read and Write property)

### 160.2.465 TabDrawMode as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Get and set how tab characters are drawn when white space is visible.
**Notes:**

See kTabDrawMode* constants.

(Read and Write property)

### 160.2.466 TabIndents as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether tab indents.
**Notes:**

Inside indentation white space, the tab and backspace keys can be made to indent and unindent rather than insert a tab character or delete a character with the TabIndents and BackSpaceUnIndents functions.
(Read and Write property)

### 160.2.467 TabMinimumWidth as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The minimum size of a tab in pixels to ensure that the tab can be seen.
**Notes:**

The default value is 2. This is particularly useful with proportional fonts with fractional widths where the character before the tab may end a fraction of a pixel before a tab stop, causing the tab to only be a fraction of a pixel wide without this setting. Where displaying a miniaturized version of the document, setting this to 0 may make the miniaturized version lay out more like the normal size version.
(Read and Write property)

### 160.2.468 TabWidth as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The size of a tab as a multiple of the size of a space character in kStylesCommonDefault.
**Notes:**

The default tab width is 8 characters. There are no limits on tab sizes, but values less than 1 or large values may have undesirable effects.
(Read and Write property)

### 160.2.469 TargetEnd as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** End of target selection in text.

**Notes:** (Read and Write property)

### 160.2.470 TargetEndVirtualSpace as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** End of the virtual space of target selection in text.
**Notes:**

This allows text to be inserted in virtual space more easily.
(Read and Write property)

### 160.2.471 TargetSpan as ScintillaSpanMBS

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries targert start and end as a span object.
**Notes:** (Read and Write property)

### 160.2.472 TargetStart as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Start of the virtual space of target selection in text.
**Notes:**

This allows text to be inserted in virtual space more easily.
When searching you can set start greater than end to find the last matching text in the target rather than the first matching text.
The target is also set by a successful by SearchInTarget.
(Read and Write property)

### 160.2.473 TargetStartVirtualSpace as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Start of target selection in text.
**Notes:**

When searching you can set start greater than end to find the last matching text in the target rather than the first matching text.
(Read and Write property)

### 160.2.474 TargetText as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Retrieve the value in the target.
**Notes:** (Read only property)

### 160.2.475 Technology as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The technology property allows choosing between different drawing APIs and options.
**Notes:**

On most platforms, the only choice is kTechnologyDefault (0). On Windows Vista or later, kTechnologyDirectWrite (1), kTechnologyDirectWriteRetain (2), or kTechnologyDirectWriteDC (3) can be chosen to use the Direct2D and DirectWrite APIs for higher quality antialiased drawing. kTechnologyDirectWriteRetain differs from kTechnologyDirectWrite by requesting that the frame is retained after being presented which may prevent drawing failures on some cards and drivers. kTechnologyDirectWriteDC differs from kTechnologyDirectWrite by using DirectWrite to draw into a GDI DC.
On Win32, buffered drawing is set to a reasonable value for the technology: on for GDI and off for Direct2D as Direct2D performs its own buffering. This can be changed after setting technology with BufferDraw property.
When using DirectWrite, you can use FontLocale to set an appropriate font locale to draw text with expected language-dependent glyphs.
(Read and Write property)

### 160.2.476 Text as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Get or set the text of the document.
**Notes:** (Read and Write property)

### 160.2.477 TextLength as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The length of the document in bytes.
**Notes:** (Read only property)

### 160.2.478 UndoCollection as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** You can control whether Scintilla collects undo information.
**Notes:**

Set to true to collect information and false to stop collecting. If you stop collection, you should also use EmptyUndoBuffer to avoid the undo buffer being unsynchronized with the data in the buffer.

You might wish to turn off saving undo information if you use the Scintilla to store text generated by a program (a Log view) or in a display window where text is often deleted and regenerated.
(Read and Write property)

### 160.2.479 UseTabs as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Determines whether indentation should be created out of a mixture of tabs and spaces or be based purely on spaces.
**Notes:**

Set useTabs to false (0) to create all tabs and indents out of spaces. The default is true. You can use Column() to get the column of a position taking the width of a tab into account.
(Read and Write property)

### 160.2.480 ViewEOL as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Normally, the end of line characters are hidden, but ViewEOL allows you to display (or hide) them by setting visible true (or false).
**Notes:**

The visible rendering of the end of line characters is similar to (CR), (LF), or (CR+LF).

Scintilla can handle the major line end conventions and, depending on settings and the current lexer also support additional Unicode line ends.
Scintilla can interpret any of the Macintosh (CR), Unix (LF) and Windows (CR+LF) line ends. When the user presses the Enter key, one of these line end strings is inserted into the buffer. The default is CRL+LF in Windows and LF in Unix, but this can be changed with the EOLMode proeprty. You can also convert the entire document to one of these line endings with ConvertEOLs. Finally, you can choose to display the line endings with ViewEOL.

For the UTF-8 encoding, three additional Unicode line ends, Next Line (NEL=U+0085), Line Separator (LS=U+2028), and Paragraph Separator (PS=U+2029) may optionally be interpreted when Unicode line ends is turned on and the current lexer also supports Unicode line ends.
(Read and Write property)

### 160.2.481 ViewWS as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** White space can be made visible which may be useful for languages in which white space is significant, such as Python.
**Notes:**

Space characters appear as small centred dots and tab characters as light arrows pointing to the right. There are also ways to control the display of end of line characters. The two messages set and get the white space display mode.
See kWhiteSpaceVisible* constants.
(Read and Write property)

### 160.2.482 VirtualSpaceOptions as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Virtual space can be enabled or disabled for rectangular selections or in other circumstances or in both.
**Notes:**

There are three bit flags kVirtualSpaceRectangularSelection=1, kVirtualSpaceUserAccessible=2, and kVirtualSpaceNoWrapLineStart=4 which can be set independently.
kVirtualSpaceNone=0, the default, disables all use of virtual space.
kVirtualSpaceNoWrapLineStart prevents left arrow movement and selection from wrapping to the previous line. This is most commonly desired in conjunction with virtual space but is an independent setting so works without virtual space.
(Read and Write property)

### 160.2.483 VScrollBar as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** By default, the vertical scroll bar is always displayed when required.
**Notes:**

You can choose to hide or show it with VScrollBar property and get the current state with VScrollBar.
(Read and Write property)

### 160.2.484 WhitespaceChars as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The white space characters.
**Notes:**

Similar to WordChars, this property allows the user to define which chars Scintilla considers as whitespace. Setting the whitespace chars allows the user to fine-tune Scintilla's behaviour doing such things as moving the cursor to the start or end of a word; for example, by defining punctuation chars as whitespace, they will be skipped over when the user presses ctrl+left or ctrl+right. This function should be called after WordChars as it will reset the whitespace characters to the default set. WhiteSpaceChars behaves similarly to WordChars.
(Read and Write property)

### 160.2.485 WhitespaceSize as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets the size of the dots used for mark space characters.
**Notes:**

The value 0 is valid and makes the dots invisible.
(Read and Write property)

### 160.2.486 WordChars as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Defines which characters are members of the word category.
**Notes:**

The character categories are set to default values before processing this function. For example, if you don't allow '_' in your set of characters use:
WordChars = "abcdefghijklmnopqrstuvwxyzABCDEFGHIJKLMNOPQRSTUVWXYZ0123456789"

This fills the characters parameter with all the characters included in words.
The characters parameter must be large enough to hold all of the characters. If the characters parameter is 0 then the length that should be allocated to store the entire set is returned.
For multi-byte encodings, this API will not return meaningful values for & h80 and above.
(Read and Write property)

### 160.2.487 WrapIndentMode as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Wrapped sublines can be indented to the position of their first subline or one more indent level.
**Notes:**

The default is kWrapIndentModeFixed.
(Read and Write property)

### 160.2.488 WrapMode as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The wrap mode.
**Notes:**

Set wrapMode to kWrapWord (1) to enable wrapping on word or style boundaries, kWrapChar (2) to enable wrapping between any characters, kWrapWhiteSpace (3) to enable wrapping on whitespace, and kWrapNone (0) to disable line wrapping. kWrapChar is preferred for Asian languages where there is no white space between words.

By default, Scintilla does not wrap lines of text. If you enable line wrapping, lines wider than the window width are continued on the following lines. Lines are broken after space or tab characters or between runs of different styles. If this is not possible because a word in one style is wider than the window then the break occurs after the last character that completely fits on the line. The horizontal scroll bar does not appear when wrap mode is on.

For wrapped lines Scintilla can draw visual flags (little arrows) at end of a a subline of a wrapped line and at begin of the next subline. These can be enabled individually, but if Scintilla draws the visual flag at the beginning of the next subline this subline will be indented by one char. Independent from drawing a visual flag at the begin the subline can have an indention.

Much of the time used by Scintilla is spent on laying out and drawing text. The same text layout calculations may be performed many times even when the data used in these calculations does not change. To avoid these unnecessary calculations in some circumstances, the line layout cache can store the results of the calculations. The cache is invalidated whenever the underlying data, such as the contents or styling of the document changes. Caching the layout of the whole document has the most effect, making dynamic line wrap as much as 20 times faster but this requires 7 times the memory required by the document contents plus around 80 bytes per line.

Wrapping is not performed immediately there is a change but is delayed until the display is redrawn. This delay improves performance by allowing a set of changes to be performed and then wrapped and displayed once. Because of this, some operations may not occur as expected. If a file is read and the scroll position moved to a particular line in the text, such as occurs when a container tries to restore a previous editing

session, then the scroll position will have been determined before wrapping so an unexpected range of text will be displayed. To scroll to the position correctly, delay the scroll until the wrapping has been performed by waiting for an initial Painted event.
(Read and Write property)

### 160.2.489 WrapStartIndent as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The size of indentation of sublines for wrapped lines.
**Notes:**

WrapStartIndent sets the size of indentation of sublines for wrapped lines in terms of the average character width in kStylesCommonDefault. There are no limits on indent sizes, but values less than 0 or large values may have undesirable effects.
The indention of sublines is independent of visual flags, but if kWrapVisualFlagStart is set an indent of at least 1 is used.
(Read and Write property)

### 160.2.490 WrapVisualFlags as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** You can enable the drawing of visual flags to indicate a line is wrapped.
**Notes:**

Bits set in wrapVisualFlags determine which visual flags are drawn.
See kWrapVisualFlag* constants.
(Read and Write property)

### 160.2.491 WrapVisualFlagsLocation as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** You can set whether the visual flags to indicate a line is wrapped are drawn near the border or near the text.
**Notes:**

Bits set in wrapVisualFlagsLocation set the location to near the text for the corresponding visual flag.
See kWrapVisualLocation* constants.
(Read and Write property)

### 160.2.492 XOffset as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The xOffset is the horizontal scroll position in pixels of the start of the text view.
**Notes:**

A value of 0 is the normal position with the first text column visible at the left of the view.

See FirstVisibleLine property for vertical position.
(Read and Write property)

### 160.2.493 Zoom as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The zoom factor directly.
**Notes:**

There is no limit set on the factors you can set, so limiting yourself to -10 to +20 to match the incremental zoom functions is a good idea.

Scintilla incorporates a "zoom factor" that lets you make all the text in the document larger or smaller in steps of one point. The displayed point size never goes below 2, whatever zoom factor you set. You can set zoom factors in the range -10 to +20 points.
(Read and Write property)
See also:

- 160.2.567 Zoom 24387

### 160.2.494 AnnotationStyle(line as Integer) as ScintillaStyleMBS

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets styles for a line.
**Notes:**

The whole of the text annotation on a line may be displayed in a particular style with AnnotationStyle or each character may be individually styled with AnnotationStyles which uses an array of bytes with each byte setting the style of the corresponding text byte similar to SetStylingEx. The text must be set first as it specifies how long the annotation is so how many bytes of styling to read. Setting an annotation will cause a ChangeAnnotation event to be sent.

Only some style attributes are active in annotations: font, size/sizeFractional, bold/weight, italics, fore, back, and characterSet.

(Read and Write computed property)

### 160.2.495 AnnotationStyles(line as Integer) as MemoryBlock

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets styles for a line.
**Notes:**

The whole of the text annotation on a line may be displayed in a particular style with AnnotationStyle or each character may be individually styled with AnnotationStyles which uses an array of bytes with each byte setting the style of the corresponding text byte similar to SetStylingEX. The text must be set first as it specifies how long the annotation is so how many bytes of styling to read. Setting an annotation will cause a ChangeAnnotation event to be sent.

Only some style attributes are active in annotations: font, size/sizeFractional, bold/weight, italics, fore, back, and characterSet.
(Read and Write computed property)

### 160.2.496 AnnotationText(line as Integer) as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** A different string may be set for each line with AnnotationText.
**Notes:**

Set to empty string to clear it.
(Read and Write computed property)

### 160.2.497 ElementColour(element as Integer) as Color

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This changes the colour of the indicated visual element overriding any current colour.
**Notes:**

If the element supports translucency, then the alpha portion of the value is used. An opaque alpha value (& hff) should always be included when an opaque colour is desired as the value 0 is completely transparent and thus invisible.
(Read and Write computed property)

### 160.2.498 EOLAnnotationStyle(line as Integer) as ScintillaStyleMBS

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Gets or sets the style to use for the EOL annotation.
**Notes:** (Read and Write computed property)

### 160.2.499 EOLAnnotationText(line as Integer) as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** A different string may be set for each line with EOLAnnotationText.
**Notes:**

To clear end of line annotations assign EOLAnnotationText with a empty string. The whole of the text EOLANNOTATION on a line may be displayed in a particular style with EOLAnnotationStyle(). Setting an end of line annotation will cause a kModificationFlagsChangeEOLAnnotation notification to be sent.
Only some style attributes are active in end of line annotations: font, size/sizeFractional, bold/weight, italics, fore, back, and characterSet.

End of Line Annotations are read-only lines of text at the end of each line of editable text. End of Line Annotations can be used to display an assembler version of code for debugging or to show diagnostic messages inline or to line up different versions of text in a merge tool.
(Read and Write computed property)

### 160.2.500 FoldExpanded(line as Integer) as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set and get the expanded state of a single line.
**Notes:**

The set message has no effect on the visible state of the line or any lines that depend on it. It does change the markers in the folding margin. If you ask for the expansion state of a line that is outside the document, the result is false (0).

If you just want to toggle the fold state of one line and handle all the lines that are dependent on it, it is much easier to use ToggleFold. You would use the FolderExpanded() method to process many folds without updating the display until you had finished. See FoldAll() and Expand() for examples of the use of these methods.
(Read and Write computed property)

### 160.2.501 FoldLevel(line as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set and get a 32-bit value that contains the fold level of a line and some flags associated with folding.
**Notes:**

The fold level is a number in the range 0 to kFoldLevelNumberMask (& h0FFF). However, the initial fold level is set to kFoldLevelBase (& h400) to allow unsigned arithmetic on folding levels. There are two addition flag bits. kFoldLevelWhiteFlag indicates that the line is blank and allows it to be treated slightly different then its level may indicate. For example, blank lines should generally not be fold points and will be considered part of the preceding section even though they may have a lesser fold level. kFoldLevelHeaderFlag indicates that the line is a header (fold point). kFoldLevelNone is a default level that may occur before folding.

Use FoldLevel(line) AND kFoldLevelNumberMask to get the fold level of a line. Likewise, use FoldLevel(line) AND kFoldLevelNumber*Flag to get the state of the flags. To set the fold level you must or in the associated flags. For instance, to set the level to thisLevel and mark a line as being a fold point use: FoldLevel(line) = thisLevel OR kFoldLevelHeaderFlag.

This method causes the display to redraw.
(Read and Write computed property)

### 160.2.502 KeyWords(keyWordSet as Integer) as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The keyword list.
**Notes:**

You can set up to 9 lists of keywords for use by the current lexer. keyWordSet can be 0 to 8 (actually 0 to KEYWORDSET_MAX) and selects which keyword list to replace. keyWords is a list of keywords separated by spaces, tabs, "\n" or "\r" or any combination of these. It is expected that the keywords will be composed of standard ASCII printing characters, but there is nothing to stop you using any non-separator character codes from 1 to 255 (except common sense).
How these keywords are used is entirely up to the lexer. Some languages, such as HTML may contain embedded languages, VBScript and JavaScript are common for HTML. For HTML, key word set 0 is for HTML, 1 is for JavaScript and 2 is for VBScript, 3 is for Python, 4 is for PHP and 5 is for SGML and DTD keywords. Review the lexer code to see examples of keyword list. A fully conforming lexer sets the fourth argument of the LexerModule constructor to be a list of strings that describe the uses of the keyword lists. Alternatively, you might use set 0 for general keywords, set 1 for keywords that cause indentation and set 2 for keywords that cause unindentation. Yet again, you might have a simple lexer that colours keywords and you could change languages by changing the keywords in set 0. There is nothing to stop you building your own keyword lists into the lexer, but this means that the lexer must be rebuilt if more keywords are added.
(Read and Write computed property)

### 160.2.503 LineIndentation(line as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The amount of indentation on a line.
**Notes:**

The indentation is measured in character columns, which correspond to the width of space characters.
(Read and Write computed property)

### 160.2.504 LineState(Line as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The state for each line.
**Notes:**

As well as the 8 bits of lexical state stored for each character there is also an integer stored for each line. This can be used for longer lived parse states such as what the current scripting language is in an ASP page. Assign to LineState to set the integer value and query LineState() to get the value. Changing the value produces a ChangeLineState event.
(Read and Write computed property)

### 160.2.505 MarginStyle(Line as Integer) as ScintillaStyleMBS

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The tyle for the margin on this line.
**Notes:**

The style to use for the margin.
(Read and Write computed property)

### 160.2.506 MarginStyles(line as Integer) as MemoryBlock

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The styles for the margin on this line.
**Notes:**

The MemoryBlock contains an array of bytes with each byte setting the style of the corresponding text byte similar to style index.
(Read and Write computed property)

### 160.2.507 MarginText(line as Integer) as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The text for the margin on this line.
**Notes:**

Text margins are created with the type kMarginTypeText or kMarginTypeRText. A different string may be set for each line with MarginText(). The whole of the text margin on a line may be displayed in a particular style with MarginStyle() or each character may be individually styled with MarginStyles() which uses an array of bytes with each byte setting the style of the corresponding text byte similar to style index. Setting a text margin will cause a kModificationFlagsChangeMargin notification to be sent.
Only some style attributes are active in text margins: font, size/sizeFractional, bold/weight, italics, fore, back, and characterSet.
(Read and Write computed property)

### 160.2.508 PropertyValue(Key as String) as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set or get properties.
**Notes:**

Lookup a keyword:value pair using the specified key; if found, copy the value to the user-supplied buffer and return the length (not including the terminating 0). If not found, copy an empty string to the buffer and return 0.

If the value argument is 0 then the length that should be allocated to store the value is returned; again, the terminating 0 is not included.

You can communicate settings to lexers with keyword:value string pairs. There is no limit to the number of keyword pairs you can set, other than available memory. key is a case sensitive keyword, value is a string that is associated with the keyword. If there is already a value string associated with the keyword, it is replaced. If you pass a zero length string, the method does nothing. Both key and value are used without modification; extra spaces at the beginning or end of key are significant.
The value string can no longer refer to other keywords as was possible in older releases of Scintilla.

Lexers may only store values for keywords they support.
Currently the "fold" property is defined for most of the lexers to set the fold structure if set to "1". SCLEX_PYTHON understands "tab.timmy.whinge.level" as a setting that determines how to indicate bad indentation. Most keywords have values that are interpreted as integers. Search the lexer sources for GetPropertyInt to see how properties are used.
There is a convention for naming properties used by lexers so that the set of properties can be found by scripts. Property names should start with "lexer.<lexer>." or "fold.<lexer>." when they apply to one lexer or start with "lexer." or "fold." if they apply to multiple lexers.

Applications may discover the set of properties used by searching the source code of lexers for lines that contain GetProperty or DefineProperty and a double quoted string and extract the value of the double quoted string as the property name. The lexilla/scripts/LexillaData.py script does this and can be used as an example. Documentation for the property may be located above the call as a multi-line comment starting with ,Ä®// property <property-name>
(Read and Write computed property)

### 160.2.509 Representation(encodedCharacter as String) as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets or gets a representation.
**Notes:**

Some characters, such as control characters and invalid bytes, do not have a visual glyph or use a glyph that is hard to distinguish.

Control characters (characters with codes less than 32, or between 128 and 159 in some encodings) are displayed by Scintilla using their mnemonics inverted in a rounded rectangle. These mnemonics come from the early days of signalling, though some are still used (LF = Line Feed, BS = Back Space, CR = Carriage Return, for example).
For the low 'C0' values: "NUL", "SOH", "STX", "ETX", "EOT", "ENQ", "ACK", "BEL", "BS", "HT", "LF", "VT", "FF", "CR", "SO", "SI", "DLE", "DC1", "DC2", "DC3", "DC4", "NAK", "SYN", "ETB", "CAN", "EM", "SUB", "ESC", "FS", "GS", "RS", "US".
For the high 'C1' values: "PAD", "HOP", "BPH", "NBH", "IND", "NEL", "SSA", "ESA", "HTS", "HTJ", "VTS", "PLD", "PLU", "RI", "SS2", "SS3", "DCS", "PU1", "PU2", "STS", "CCH", "MW", "SPA", "EPA", "SOS", "SGCI", "SCI", "CSI", "ST", "OSC", "PM", "APC".
Invalid bytes are shown in a similar way with an 'x' followed by their value in hexadecimal, like "xFE".

Any character, including those normally displayed as mnemonics may be represented by a Unicode string inverted in a rounded rectangle.

For example, the Ohm sign ,Ñ¶ U+2126 looks very similar to the Greek Omega character Œ© U+03C9 so, for the UTF-8 encoding, to distinguish the Ohm sign as "U+2126 ,Ñ¶" this call could be made: Representation(",Ñ¶", "U+2126 ,Ñ¶")

The encodedCharacter parameter is a string of the bytes for one character in the current encoding. This can not be used to set a representation for multiple-character strings.
The representation parameter is an UTF-8 string with a maximum length of 200 bytes.

One exception to the single character restriction is that the two character sequence "CRLF" (Carriage Return + Line Feed) can have a representation that is visible in line end viewing (ViewEOL property) mode.

If there is no representation for "CRLF" then the individual 'CR' and 'LF' representations will be seen.

The NULL (0) character is a special case and specified as an empty string.
(Read and Write computed property)

### 160.2.510 RepresentationAppearance(encodedCharacter as String) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The appearance may be changed using these flags.
**Notes:**

If a colour is set and the appearance is set without RepresentationColour() then the representation will show in the colour of the underlying text.
(Read and Write computed property)

### 160.2.511 RepresentationColour(encodedCharacter as String) as Color

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The colour and translucency of a representation may be set.
**Notes:** (Read and Write computed property)

### 160.2.512 SelectionNAnchor(selection as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set or query the position and amount of virtual space for the anchor of each already existing selection.
**Notes:**

Selection parameter is zero based.
(Read and Write computed property)

### 160.2.513 SelectionNAnchorVirtualSpace(selection as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set or query the position and amount of virtual space for the caret of each already existing selection.
**Notes:**

Selection parameter is zero based.
(Read and Write computed property)

### 160.2.514 SelectionNCaret(selection as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set or query the position and amount of virtual space for the caret of each already existing selection.
**Notes:**

Selection parameter is zero based.
(Read and Write computed property)

### 160.2.515 SelectionNCaretVirtualSpace(selection as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set or query the position and amount of virtual space for the caret of each already existing selection.
**Notes:**

Selection parameter is zero based.
(Read and Write computed property)

### 160.2.516 SelectionNEnd(selection as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** et or query the end position of each already existing selection.
**Notes:**

Mostly of use to query each range for its text. The selection parameter is zero-based.
(Read and Write computed property)

### 160.2.517 SelectionNStart(selection as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set or query the start position of each already existing selection.
**Notes:**

Mostly of use to query each range for its text. The selection parameter is zero-based.
(Read and Write computed property)

### 160.2.518 Events

### 160.2.519 AutoCompleteCancelled

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Auto complete was cancelled.

### 160.2.520 AutoCompleteCharacterDeleted

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The user deleted a character while autocompletion list was active.

### 160.2.521 AutoCompleteCompleted(Position as Integer, Character as Integer, Text as String, listCompletionMethod as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is generated after an autocompletion has inserted its text.
**Notes:**

| Parameter | Description |
|---|---|
| position | The start position of the word being completed. |
| text | The text of the selection. |
| Character | If a fillup character was the method of selection, the used character, otherwise 0. |
| listCompletionMethod | A value indicating the way in which the completion occurred. See the table below. |

| Symbol | Value | Meaning |
|---|---|---|
| kCompletionMethodsFillUp | 1 | A fillup character triggered the completion. The character used is in Character. |
| kCompletionMethodsDoubleClick | 2 | A double-click triggered the completion. Character is 0. |
| kCompletionMethodsTab | 3 | The tab key or Tab method triggered the completion. Character is 0. |
| kCompletionMethodsNewline | 4 | A new line or Newline method triggered the completion. Character is 0. |
| kCompletionMethodsCommand | 5 | The AutoCSelect method triggered the completion. Character is 0. |

### 160.2.522 AutoCompleteSelection(Position as Integer, Character as Integer, Text as String, listCompletionMethod as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The user has selected an item in an autocompletion list.
**Notes:**

The event is sent before the selection is inserted. Automatic insertion can be cancelled by calling AutoC-Cancel method before returning from the event.

| Parameter | Description |
|---|---|
| position | The start position of the word being completed. |
| text | The text of the selection. |
| Character | If a fillup character was the method of selection, the used character, otherwise 0. |
| listCompletionMethod | A value indicating the way in which the completion occurred. See the table below. |

| Symbol | Value | Meaning |
|---|---|---|
| kCompletionMethodsFillUp | 1 | A fillup character triggered the completion. The character used is in Character. |
| kCompletionMethodsDoubleClick | 2 | A double-click triggered the completion. Character is 0. |
| kCompletionMethodsTab | 3 | The tab key or Tab method triggered the completion. Character is 0. |
| kCompletionMethodsNewline | 4 | A new line or Newline method triggered the completion. Character is 0. |
| kCompletionMethodsCommand | 5 | The AutoCSelect method triggered the completion. Character is 0. |

### 160.2.523 AutoCompleteSelectionChange(Position as Integer, Text as String, listType as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is sent when items are highlighted in an autocompletion or user list.
**Notes:**

| Field | Usage |
|---|---|
| listType | This is set to the listType parameter from the SCI_USERLISTSHOW message or 0 for an autocompletion. |
| text | The text of the selection. |
| position | The position the list was displayed at. |

### 160.2.524 CallTipClick(Position as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is generated when the user clicks on a calltip.
**Notes:** This event can be used to display the next function prototype when a function name is overloaded with different arguments. The position field is set to 1 if the click is in an up arrow, 2 if in a down arrow, and 0 if elsewhere.

### 160.2.525 CharacterAdded(Character as Integer, CharacterSource as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This is sent when the user types an ordinary text character (as opposed to a command character) that is entered into the text.
**Notes:**

The container can use this to decide to display a call tip or an auto completion list.
For single byte character sets, this is the byte value of the character; for UTF-8, it is the Unicode code point; for DBCS, it is (first byte * 256 + second byte) for 2 byte characters and the byte value for 1 byte characters.
This notification is sent before the character has been styled so processing that depends on styling should instead be performed in the UpdateUI event.

| Symbol | Value | Meaning |
|---|---|---|
| kCharacterSourceDirectInput | 0 | Direct input characters, including characters generated by calling keyboard commands like NewLine method. |
| kCharacterSourceTentativeInput | 1 | Tentative input characters. They are used by IME (inline mode, see IMEInteraction) to composite final string, normally different from final composited string (which is the string that has been truly added into current document), and may be withdrawn when the user cancels typing (e.g. by pressing Esc key). Some system (at least Cocoa) also use tentative input for non-IME features like using dead key to composite diacritical marks (grave accent, etc.). These characters are not added to macro recording. Most applications can simply ignore the notification when this value is set. |
| kCharacterSourceImeResult | 2 | IME (either inline or windowed mode) full composited string. Modern IME is able to composite English word or sentence, when this value is set, current character may not a Chinese, Japanese or Korean character. Currently, this is only set on Windows. |

### 160.2.526 Close

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:**

The control is about to close.
In Xojo version 2021r3 and newer this event is named Closing.

### 160.2.527 Closing

Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:**

The control is about to close.
In older Xojo versions, this event is named Close.

### 160.2.528 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS Scintilla Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is called when it is appropriate to display a contextual menu for the control.

### 160.2.529 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Called when a menuitem is choosen.
**Notes:**

This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

You can use UsePopUp(kPopUpNever) to disable the contextual menu from Scintilla and use Xojo menus.

### 160.2.530 DoubleClick(Position as Integer, line as integer, modifiers as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The mouse button was double clicked in editor.
**Notes:** The position parameter is set to the text position of the double click, the line parameter is set to the line of the double click, and the modifiers parameter is set to the key modifiers held down in a similar manner to Key event.

### 160.2.531 DWellEnd(Position as Integer, X as Integer, Y as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** DWellEnd is generated after a DWellStart and the mouse is moved or other activity such as key press indicates the dwell is over.

### 160.2.532 DWellStart(Position as Integer, X as Integer, Y as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** DWellStart is generated when the user keeps the mouse in one position for the dwell period (see MouseDwellTime).

### 160.2.533 EnableMenuItems

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:**

The event where you can enable menu items.
In Xojo version 2021r3 and newer this event is named MenuBarSelected.

### 160.2.534 FocusIn

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is raised when Scintilla receives focus.
**Notes:**

While the control can have a focus from the Xojo point of view, this event informs you that the actual text control part got focus.

So the Xojo wrapper control can have a focus and within it the text control can than have a focus and there are two different states.

### 160.2.535 FocusLost

Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:**

The control lost focus.
In older Xojo versions, this event is named LostFocus.

### 160.2.536 FocusOut

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is raised when it loses focus.

### 160.2.537 FocusReceived

Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:**

The control got focus.
In older Xojo versions, this event is named GotFocus.

### 160.2.538 FolderToggled(Line as Integer, Position as Integer, Margin as ScintillaMarginMBS)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** A folder was toggled due to a mouse click.
**Notes:**

THis is called when a folder is hit.
MarginClicked event will also be raised.

### 160.2.539 GotFocus

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:**

The control got focus.
In Xojo version 2021r3 and newer this event is named FocusReceived.

### 160.2.540 HotSpotClick(Position as Integer, modifiers as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** These event are generated when the user clicks on text that is in a style with the hotspot attribute set.
**Notes:** This event can be used to link to variable definitions or web pages. In the notification handler, you should avoid calling any function that modifies the current selection or caret position. The position parameter is set the text position of the click or double click and the modifiers field set to the key modifiers held down in a similar manner to Key event. Only the state of the Ctrl key is reported for HotspotReleaseClick.

### 160.2.541 HotSpotDoubleCLick(Position as Integer, modifiers as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** These event are generated when the user double clicks on text that is in a style with the hotspot attribute set.
**Notes:** This event can be used to link to variable definitions or web pages. In the notification handler, you should avoid calling any function that modifies the current selection or caret position. The position parameter is set the text position of the double click and the modifiers field set to the key modifiers held down in a similar manner to Key event. Only the state of the Ctrl key is reported for HotspotReleaseClick.

### 160.2.542 HotspotReleaseClick(Position as Integer, modifiers as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** These event are generated when the user clicks on text that is in a style with the hotspot attribute set.

### 160.2.543 IndicatorClick(Position as Integer, modifiers as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** These event is generated when the user clicks the mouse on text that has an indicator.
**Notes:** The position parameter is set the text position of the click or double click and the modifiers field set to the key modifiers held down in a similar manner to Key.

### 160.2.544 IndicatorRelease(Position as Integer, modifiers as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** These event is generated when the user releases the mouse on text that has an indicator.
**Notes:** The position parameter is set the text position of the click or double click and the modifiers field set to the key modifiers held down in a similar manner to Key.

### 160.2.545 Key(Character as Integer, modifiers as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Reports all keys pressed but not consumed by Scintilla.
**Notes:** Used on GTK because of some problems with keyboard focus and is not sent by the Windows version. Character holds the key code and modifiers holds the modifier flags. This notification is sent if the modifiers include kKeyModAlt or kKeyModCtrl and the key code is less than 256.

### 160.2.546 LostFocus

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:**

The control lost focus.
In Xojo version 2021r3 and newer this event is named FocusLost.

### 160.2.547 MacroRecord(Message as Integer, wParam as Integer, lParam as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event for a new macro step to record.
**Notes:**

The StartRecord and StopRecord method enable and disable macro recording. When enabled, each time a recordable change occurs, the MacroRecord event is sent to the container. It is up to the container to record the action. To see the complete list of SCI_* messages that are recordable, search the Scintilla source Editor.cxx for Editor::NotifyMacroRecord.

| Field | Usage |
|---|---|
| message | The SCI_* message that caused the notification. |
| wParam | The value of wParam in the SCI_* message. |
| lParam | The value of lParam in the SCI_* message. |

### 160.2.548 MarginClick(Position as Integer, modifiers as Integer, margin as ScintillaMarginMBS)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event tell the container that the mouse was left clicked inside a margin that was marked as sensitive.
**Notes:**

This can be used to perform folding or to place breakpoints.

| Field | Usage |
|---|---|
| modifiers | The appropriate combination of kKeyModShift, kKeyModCtrl and kKeyModAlt to indicate the keys that were held down at the time of the margin click. |
| position | The position of the start of the line in the document that corresponds to the margin click. |
| margin | The margin number that was clicked. |

### 160.2.549 MarginRightClick(Position as Integer, modifiers as Integer, margin as ScintillaMarginMBS)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event tell the container that the mouse was right clicked inside a margin that was marked as sensitive.
**Notes:**

This can be used to perform folding or to place breakpoints.

| Field | Usage |
|---|---|
| modifiers | The appropriate combination of kKeyModShift, kKeyModCtrl and kKeyModAlt to indicate the keys that were held down at the time of the margin click. |
| position | The position of the start of the line in the document that corresponds to the margin click. |
| margin | The margin number that was clicked. |

### 160.2.550 MenuBarSelected

Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:**

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

### 160.2.551 Modified(Position as Integer, modificationType as Integer, Text as String, length as Integer, linesAdded as Integer, line as Integer, foldLevelNow as Integer, foldLevelPrev as Integer, token as Integer, annotationLinesAdded as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This notification is sent when the text or styling of the document changes or is about to change.
**Notes:**

You can set a mask for the notifications that are sent to the container with ModEventMask. The parameters contains information about what changed, how the change occurred and whether this changed the number of lines in the document. No modifications may be performed while in a Modified event.

| Parameter | Usage |
|---|---|
| modificationType | A set of flags that identify the change(s) made. See the next table. |
| position | Start position of a text or styling change. Set to 0 if not used. |
| length | Length of the change in bytes when the text or styling changes. Set to 0 if not used. |
| linesAdded | Number of added lines. If negative, the number of deleted lines. Set to 0 if not used or no lines added or deleted. |
| text | Valid for text changes, not for style changes. If we are collecting undo information this holds a pointer to the text that is handed to the Undo system, otherwise it is zero. For user performed SC_MOD_BEFOREDELETE the text field is 0. |
| line | The line number at which a fold level or marker change occurred. This is 0 if unused and may be -1 if more than one line changed. |
| foldLevelNow | The new fold level applied to the line or 0 if this parameter is unused. |
| foldLevelPrev | The previous folding level of the line or 0 if this parameter is unused. |

The modificationType field has bits set to tell you what has been done. The kModificationFlags* constants bits correspond to actions. They tell you if the action was done by the user, or the result of Undo or Redo of a previous action.

| Symbol | Value | Meaning | Parameters |
|---|---|---|---|
| kModificationFlagsNone | 0 | Base value with no fields valid. Will not occur but is useful in tests. | |
| kModificationFlagsInsertText | 1 | Text has been inserted into the document. | position, length, text, linesAdded |
| kModificationFlagsDeleteText | 2 | Text has been removed from the document. | position, length, text, linesAdded |
| kModificationFlagsChangeStyle | 4 | A styling change has occurred. | position, length |
| kModificationFlagsChangeFold | 8 | A folding change has occurred. | line, foldLevelNow, foldLevelPrev |
| kModificationFlagsUser | & h10 | Information: the operation was done by the user. | None |
| kModificationFlagsUndo | & h20 | Information: this was the result of an Undo. | None |
| kModificationFlagsRedo | & h40 | Information: this was the result of a Redo. | None |
| kModificationFlagsMultiStepUndoRedo | & h80 | This is part of a multi-step Undo or Redo transaction. | None |
| kModificationFlagsLastStepInUndoRedo | & h100 | This is the final step in an Undo or Redo transaction. | None |
| kModificationFlagsChangeMarker | & h200 | One or more markers has changed in a line. | line |
| kModificationFlagsBeforeInsert | & h400 | Text is about to be inserted into the document. | position, if performed by user then text in bytes, length in bytes |
| kModificationFlagsBeforeDelete | & h800 | Text is about to be deleted from the document. | position, length |
| kModificationFlagsChangeIndicator | & h4000 | An indicator has been added or removed from a range of text. | position, length |
| kModificationFlagsChangeLineState | & h8000 | A line state has changed because LineState was set. | line |
| kModificationFlagsChangeTabStops | & h200000 | The explicit tab stops on a line have changed because ClearTabstops or AddTabStop was called. | line |
| kModificationFlagsMultiLineUndoRedo | & h1000 | This is part of an Undo or Redo transaction that changed over a range. | position, length |
| kModificationFlagsChangeMargin | & h10000 | A text margin has changed. | line |
| kModificationFlagsChangeAnnotation | & h20000 | An annotation has changed. | line |
| kModificationFlagsInsertCheck | & h100000 | Text is about to be inserted. The handler may change the text being inserted by calling SCI_CHANGEINSERTION. No other modifications may be made in this handler. | position, length, text |
| kModificationFlagsMultiMultiUndoRedo | & h1000 | This is part of an Undo or Redo with multi-line changes. | None |
| kModificationFlagsStartAction | & h2000 | This is set on a SC_PERFORMED_USER action when it is the first or only step in an undo transaction. This can be used to integrate the Scintilla undo stack with an undo stack in the container application by adding a Scintilla action to the container's stack for the currently opened container transaction or to open a new container transaction if there is no open container transaction. | None |
| kModificationFlagsContainer | & h40000 | This is set on for actions that the container stored into the undo stack with AddUndoAction. | token |
| kModificationFlagsEventMaskAll | & h1FFFFF | This is a mask for all valid flags. This is the default mask state set by ModEventMask. | None |

## 160.2.552 ModifyAttemptReadOnly

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** When in read-only mode, this notification is sent to the container if the user tries to change the text.
**Notes:** This can be used to check the document out of a version control system. You can set the read-only state of a document with ReadOnly property.

## 160.2.553 NeedsShown(Position as Integer, length as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Scintilla has determined that a range of lines that is currently invisible should be made visible.
**Example:**

```
sub NeedsShown(Position as Integer)
dim firstLine as Integer = LineFromPosition(me.position)
dim lastLine as Integer = LineFromPosition(me.position+me.length-1)
for line as integer = firstLine to lastLine
me.EnsureVisible(line)
next
end sub
```

**Notes:**

An example of where this may be needed is if the end of line of a contracted fold point is deleted. This message is sent to the container in case it wants to make the line visible in some unusual way such as making the whole document visible. Most containers will just ensure each line in the range is visible by calling EnsureVisible. The position and length fields of SCNotification indicate the range of the document that should be made visible.

The container code will be similar to the following code skeleton in the example above.
If the event is not implemented, we do similar automatically.

### 160.2.554 Open

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:**

The control is about to was created and you can initialize it.
In Xojo version 2021r3 and newer this event is named Opening.

### 160.2.555 Opening

Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:**

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

### 160.2.556 Painted

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Painting has just been done.
**Notes:** Useful when you want to update some other widgets based on a change in Scintilla, but want to have the paint occur first to appear more responsive.

### 160.2.557 Prepare

MBS Scintilla Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The prepare event.
**Notes:** Called before we create the control, so you can change properties like HasBorder.

### 160.2.558 SavePointLeft

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Sent to the container when the save point is entered or left, allowing the container to display a ”document dirty” indicator and change its menus.

### 160.2.559 SavePointReached

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Sent to the container when the save point is entered or left, allowing the container to display a "document dirty" indicator and change its menus.

### 160.2.560 ScaleFactorChanged(NewFactor as double)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The backing store scale factor has changed.
**Notes:** Please invalidate any cached bitmaps or other relevant state.

### 160.2.561 SelectionChanged(updated as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Selection changed.
**Notes:**

If content is changed or selection, this event is fired.

The UpdateUI event will also be called.

### 160.2.562 StyleNeeded(Position as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Queries you to provide style information.
**Notes:**

If you used no explicit lexer to make the container act as the lexer, you will receive this notification when Scintilla is about to display or print text that requires styling.

You are required to style the text from the line that contains the position returned by EndStyled up to the position passed in position. Symbolically, you need code of the form:

```
startPos = me.EndStyled
lineNumber = LineFromPosition(startPos)
startPos = PositionFromLine(lineNumber)
```

ApplyStyles(startPos, position)

### 160.2.563 TextChanged(Position as Integer, modificationType as Integer, Text as String, length as Integer, linesAdded as Integer, line as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Text changed.
**Notes:**

Our plugin calls this to inform you about a text change.
No modifications may be performed while in a Modified event.
Modified event will also be raised.

### 160.2.564 UpdateUI(updated as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Either the text or styling of the document has changed or the selection range or scroll position may have changed.
**Notes:**

Now would be a good time to update any container UI elements that depend on document or view state. As it is sometimes difficult to determine whether a change has occurred, these events may also fire when there has been no actual change. The updated field is set to the bit set of things changed since the previous notification.

See kUpdate* constants.

### 160.2.565 URIDropped(text as String)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Indicates that the user has dragged a URI such as a file name or Web address onto Scintilla.
**Notes:** The container could interpret this as a request to open the file.

### 160.2.566 UserListSelection(Position as Integer, Character as Integer, Text as String, listType as Integer, listCompletionMethod as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The user has selected an item in a user list.
**Notes:**

| Field | Usage |
|---|---|
| listType | This is set to the listType parameter from the UserListShow message that initiated the list. |
| text | The text of the selection. |
| position | The position the list was displayed at. |
| Character | If a fillup character was the method of selection, the used character, otherwise 0. |
| listCompletionMethod | A value indicating the way in which the completion occurred. |

### 160.2.567 Zoom

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is generated when the user zooms the display using the keyboard or the Zoom method is called.
**Notes:** This event can be used to recalculate positions, such as the width of the line number margin to maintain sizes in terms of characters rather than pixels.
See also:

- 160.2.493 Zoom as Integer 24364

### 160.2.568 Constants

### 160.2.569 kAccessibilityDisabled = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the accessibility status constants.
**Notes:** Accessibility is disabled.

### 160.2.570 kAccessibilityEnabled = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the accessibility status constants.
**Notes:** Accessibility is enabled.

### 160.2.571 kAlphaNoAlpha = 256

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the alpha channel constants.
**Notes:** Special value to indicate no alpha.

### 160.2.572 kAlphaOpaque = 255

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the alpha channel constants.
**Notes:** Opaque color.

### 160.2.573 kAlphaTransparent = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the alpha channel constants.
**Notes:** Full transparency.

### 160.2.574 kAnnotationVisibleBoxed = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the annotation visibility constants.
**Notes:** Annotations are indented to match the text and are surrounded by a box.

### 160.2.575 kAnnotationVisibleHidden = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the annotation visibility constants.
**Notes:** Annotations are not displayed.

### 160.2.576 kAnnotationVisibleIndented = 3

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the annotation visibility constants.
**Notes:** Annotations are indented to match the text.

### 160.2.577 kAnnotationVisibleStandard = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the annotation visibility constants.
**Notes:** Annotations are drawn left justified with no adornment.

### 160.2.578 kAutoCompleteOptionFixedSize = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of auto completion constants.
**Notes:** On Win32 only, use a fixed size list instead of one that can be resized by the user. This also avoids a header rectangle above the list.

### 160.2.579 kAutoCompleteOptionNormal = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of auto completion constants.
**Notes:** Display autocompletion using default settings.

### 160.2.580 kAutomaticFoldChange = & h0004

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of automatic folding constants.
**Notes:**

Show lines as needed when fold structure is changed.
The Modified notification is still sent unless it is disabled by the container.

### 160.2.581 kAutomaticFoldClick = & h0002

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of automatic folding constants.
**Notes:**

Handle clicks in fold margin automatically.
This avoids sending the MarginClick event for folding margins.

### 160.2.582 kAutomaticFoldNone = & h0000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of automatic folding constants.
**Notes:** Value with no automatic behaviour.

### 160.2.583 kAutomaticFoldShow = & h0001

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of automatic folding constants.
**Notes:** Automatically show lines as needed. This avoids sending the NeedsShown notification.

### 160.2.584 kBidirectionalDisabled = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of bidirectional mode constants.
**Notes:** Disabled

### 160.2.585 kBidirectionalL2R = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of bidirectional mode constants.
**Notes:** Left to Right

### 160.2.586 kBidirectionalR2L = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of bidirectional mode constants.
**Notes:** Right to Left

### 160.2.587 kCaretPolicyEven = & h08

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the caret policy constants.
**Notes:** If not set, instead of having symmetrical UZs, the left and bottom UZs are extended up to right and top UZs respectively. This way, we favour the displaying of useful information: the beginning of lines, where most code reside, and the lines after the caret, for example, the body of a function.

### 160.2.588 kCaretPolicyJumps = & h10

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the caret policy constants.
**Notes:** If set, the display is moved more energetically so the caret can move in the same direction longer before the policy is applied again. '3UZ' notation is used to indicate three time the size of the UZ as a distance to the margin.

### 160.2.589 kCaretPolicySlop = & h01

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the caret policy constants.
**Notes:** If set, we can define a slop value: caretSlop. This value defines an unwanted zone (UZ) where the caret is... unwanted. This zone is defined as a number of pixels near the vertical margins, and as a number of lines near the horizontal margins. By keeping the caret away from the edges, it is seen within its context. This makes it likely that the identifier that the caret is on can be completely seen, and that the current line is seen with some of the lines following it, which are often dependent on that line.

### 160.2.590 kCaretPolicyStrict = & h04

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the caret policy constants.
**Notes:** If set, the policy set by kCaretPolicySlop is enforced... strictly. The caret is centred on the display if caretSlop is not set, and cannot go in the UZ if caretSlop is set.

### 160.2.591 kCaretStickyOff = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of caret sticky constants.
**Notes:** When set to kCaretStickyOff (0), the sticky flag is off; all text changes (and all caret position changes) will remember the caret's new horizontal position when moving to different lines. This is the default.

### 160.2.592 kCaretStickyOn = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of caret sticky constants.
**Notes:** When set to kCaretStickyOn (1), the sticky flag is on, and the only thing which will cause the editor to remember the horizontal caret position is moving the caret with mouse or keyboard (left/right arrow keys, home/end keys, etc).

### 160.2.593 kCaretStickyWhiteSpace = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of caret sticky constants.
**Notes:** When set to kCaretStickyWhiteSpace (2), the caret acts like mode 0 (sticky off) except under one special case; when space or tab characters are inserted. (Including pasting only space/tabs – undo, redo, etc. do not exhibit this behaviour..).

### 160.2.594 kCaretStyleBlock = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the caret style constants.
**Notes:** Draws insertion carets as blocks.

### 160.2.595 kCaretStyleBlockAfter = & h100

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the caret style constants.
**Notes:** When the caret end of a range is at the end and a block caret style is chosen, draws the block outside the selection instead of inside. This can be ored with kCaretStyleBlock or kCaretStyleBlockCurses.

### 160.2.596 kCaretStyleInsMask = & hF

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the caret style constants.
**Notes:** The mask to only get the bits for insert mode.

### 160.2.597 kCaretStyleInvisible = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the caret style constants.
**Notes:** Carets are not drawn at all.

### 160.2.598 kCaretStyleLine = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the caret style constants.
**Notes:** Draws insertion carets as lines. This is the default.

### 160.2.599 kCaretStyleOverstrikeBar = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the caret style constants.
**Notes:** Draws an overstrike caret as a bar. This is the default.

### 160.2.600 kCaretStyleOverstrikeBlock = & h10

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the caret style constants.
**Notes:** Draws an overstrike caret as a block. This should be ored with one of the first three styles.

### 160.2.601 kCaseInsensitiveBehaviourIgnoreCase = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of case insenstive behavior constants.
**Notes:** Ignore Case

### 160.2.602 kCaseInsensitiveBehaviourRespectCase = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of case insenstive behavior constants.
**Notes:** Respect Case

### 160.2.603 kCharacterSetAnsi = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** ANSI

### 160.2.604 kCharacterSetArabic = 178

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** Arabic

### 160.2.605 kCharacterSetBaltic = 186

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** Baltic

### 160.2.606 kCharacterSetChineseBig5 = 136

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** Chinese Big 5

### 160.2.607 kCharacterSetCyrillic = 1251

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** Cyrillic

### 160.2.608 kCharacterSetDefault = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** Default one

### 160.2.609 kCharacterSetEastEurope = 238

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** East Europe

### 160.2.610 kCharacterSetGB2312 = 134

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** GB 2312

### 160.2.611 kCharacterSetGreek = 161

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** Greek

### 160.2.612 kCharacterSetHangul = 129

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** Hangul

### 160.2.613 kCharacterSetHebrew = 177

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** Hebrew

### 160.2.614 kCharacterSetIso8859_15 = 1000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** ISO 8859-15

### 160.2.615 kCharacterSetJohab = 130

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** Johab

### 160.2.616 kCharacterSetMac = 77

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** Mac

### 160.2.617 kCharacterSetOem = 255

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** OEM

### 160.2.618 kCharacterSetOem866 = 866

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** OEM 866

### 160.2.619 kCharacterSetRussian = 204

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** Russian

### 160.2.620 kCharacterSetShiftJis = 128

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** ShiftJis

### 160.2.621 kCharacterSetSymbol = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** Symbol

### 160.2.622 kCharacterSetThai = 222

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** Thai

### 160.2.623 kCharacterSetTurkish = 162

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** Turkish

### 160.2.624 kCharacterSetVietnamese = 163

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character set constants.
**Notes:** Vietnamese

### 160.2.625 kCharacterSourceDirectInput = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character source constants.
**Notes:** Direct input characters, including characters generated by calling keyboard commands like NewLine method.

### 160.2.626 kCharacterSourceImeResult = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character source constants.
**Notes:** IME (either inline or windowed mode) full composited string. Modern IME is able to composite English word or sentence, when this value is set, current character may not a Chinese, Japanese or Korean character. Currently, this is only set on Windows.

### 160.2.627 kCharacterSourceTentativeInput = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the character source constants.
**Notes:** Tentative input characters. They are used by IME (inline mode, see IMEInteraction) to composite final string, normally different from final composited string (which is the string that has been truly added into current document), and may be withdrawn when the user cancels typing (e.g. by pressing Esc key). Some system (at least Cocoa) also use tentative input for non-IME features like using dead key to composite diacritical marks (grave accent, etc.). These characters are not added to macro recording. Most applications can simply ignore the notification when this value is set.

### 160.2.628 kCompletionMethodsCommand = 5

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for completion method in auto complete.
**Notes:** The AutoCSelect method triggered the completion. Character is 0.

### 160.2.629 kCompletionMethodsDoubleClick = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for completion method in auto complete.
**Notes:** A double-click triggered the completion. Character is 0.

### 160.2.630 kCompletionMethodsFillUp = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for completion method in auto complete.
**Notes:** A fillup character triggered the completion. The character used is in Character.

### 160.2.631 kCompletionMethodsNewline = 4

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for completion method in auto complete.
**Notes:** A new line or Newline method triggered the completion. Character is 0.

### 160.2.632 kCompletionMethodsTab = 3

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for completion method in auto complete.
**Notes:** The tab key or Tab method triggered the completion. Character is 0.

### 160.2.633 kCursorShapeArrow = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the cursor shape constants.
**Notes:** Normal arrow.

### 160.2.634 kCursorShapeNormal = -1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the cursor shape constants.
**Notes:** The normal cursor is displayed.

### 160.2.635 kCursorShapeReverseArrow = 7

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the cursor shape constants.
**Notes:** Reverse arrow.

### 160.2.636 kCursorShapeWait = 4

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the cursor shape constants.
**Notes:** The wait cursor is displayed when the mouse is over or owned by the Scintilla window.

### 160.2.637 kDocumentOptionDefault = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of line document option constants.
**Notes:** Standard options.

### 160.2.638 kDocumentOptionStylesNone = & h1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of line document option constants.
**Notes:** Stops allocation of memory to style characters which saves significant memory, often 40% with the whole document treated as being style 0.

### 160.2.639 kDocumentOptionTextLarge = & h100

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of line document option constants.
**Notes:** Accommodates documents larger than 2 GigaBytes in 64-bit executables.

### 160.2.640 kEdgeVisualStyleBackground = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for long line display mode.
**Notes:** The background colour of characters after the column limit is changed to the colour set by EdgeColor property. This is recommended for proportional fonts.

### 160.2.641 kEdgeVisualStyleLine = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for long line display mode.
**Notes:** A vertical line is drawn at the column number set by EdgeColumn(). This works well for monospaced fonts. The line is drawn at a position based on the width of a space character in kStylesCommonDefault, so it may not work very well if your styles use proportional fonts or if your style have varied font sizes or you use a mixture of bold, italic and normal text.

### 160.2.642 kEdgeVisualStyleMultiLine = 3

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for long line display mode.
**Notes:** This is similar to kEdgeVisualStyleLine but in contrary to showing only one single line a configurable set of vertical lines can be shown simultaneously. This edgeMode uses a completely independent dataset that can only be configured by using the MultiEdge* methods.

### 160.2.643 kEdgeVisualStyleNone = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for long line display mode.
**Notes:** Long lines are not marked. This is the default state.

### 160.2.644 kElementCaret = 40

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Colour of caret for main selection

### 160.2.645 kElementCaretAdditional = 41

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Colour of caret for additional selections

### 160.2.646 kElementCaretLineBack = 50

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Colour of caret line background

### 160.2.647 kElementFoldLine = 80

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Colour of fold lines

### 160.2.648 kElementHiddenLine = 81

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Colour of line drawn to show there are lines hidden at that point

### 160.2.649 kElementHotSpotActive = 70

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Text colour of active hot spot

### 160.2.650 kElementHotSpotActiveBack = 71

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Background colour of active hot spot

### 160.2.651 kElementList = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Text colour in autocompletion lists

### 160.2.652 kElementListBack = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Background colour of autocompletion lists

### 160.2.653 kElementListSelected = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Text colour of selected item in autocompletion lists

### 160.2.654 kElementListSelectedBack = 3

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Background colour of selected item in autocompletion lists

### 160.2.655 kElementSelectionAdditionalBack = 13

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Background colour of additional selections

### 160.2.656 kElementSelectionAdditionalText = 12

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Text colour of additional selections

### 160.2.657 kElementSelectionBack = 11

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Background colour of main selection

### 160.2.658 kElementSelectionInactiveBack = 17

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Background colour of selections when another window has focus

### 160.2.659 kElementSelectionInactiveText = 16

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Text colour of selections when another window has focus

### 160.2.660 kElementSelectionSecondaryBack = 15

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Background colour of selections when another window contains the primary selection

### 160.2.661 kElementSelectionSecondaryText = 14

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Text colour of selections when another window contains the primary selection

### 160.2.662 kElementSelectionText = 10

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Text colour of main selection

### 160.2.663 kElementWhiteSpace = 60

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Colour of visible white space

### 160.2.664 kElementWhiteSpaceBack = 61

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the element constants.
**Notes:** Colour of visible white space background

### 160.2.665 kEndOfLineCR = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the end of line constants.
**Notes:** CR, the old Mac line ending.

### 160.2.666 kEndOfLineCRLF = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the end of line constants.
**Notes:** CRLF, the Windows line ending.

### 160.2.667 kEndOfLineLF = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the end of line constants.
**Notes:** LF, the unix line ending.

### 160.2.668 kEOLAnnotationVisibleAngleCircle = & h102

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the EOL annotation constants.
**Notes:** Surround with a ,óÑshape,óó with angled left end and curved right end.

### 160.2.669 kEOLAnnotationVisibleAngleFlat = & h112

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the EOL annotation constants.
**Notes:** Surround with a ,óÑshape | with angled left end and flat right end.

### 160.2.670 kEOLAnnotationVisibleAngles = & h122

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the EOL annotation constants.
**Notes:** Surround with a ,óÑshape,ñ with angles on each end.

### 160.2.671 kEOLAnnotationVisibleBoxed = & h2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the EOL annotation constants.
**Notes:** End of Line Annotations are indented to match the text and are surrounded by a box.

### 160.2.672 kEOLAnnotationVisibleCircleAngle = & h120

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the EOL annotation constants.
**Notes:** Surround with a ,óñshape,ñ with curved left end and angled right end.

### 160.2.673 kEOLAnnotationVisibleCircleFlat = & h110

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the EOL annotation constants.
**Notes:** Surround with a ,óñshape | with curved left end and flat right end.

### 160.2.674 kEOLAnnotationVisibleFlatAngle = & h121

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the EOL annotation constants.
**Notes:** Surround with a | shape,ñ with flat left end and angled right end.

### 160.2.675 kEOLAnnotationVisibleFlatCircle = & h101

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the EOL annotation constants.
**Notes:** Surround with a | shape,óó with flat left end and curved right end.

### 160.2.676 kEOLAnnotationVisibleFlats = & h111

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the EOL annotation constants.
**Notes:** Surround with a | shape | with flat ends.

### 160.2.677 kEOLAnnotationVisibleHidden = & h0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the EOL annotation constants.
**Notes:** End of Line Annotations are not displayed.

### 160.2.678 kEOLAnnotationVisibleStadium = & h100

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the EOL annotation constants.
**Notes:** Surround with a ,óñstadium,óó - a rectangle with rounded ends.

### 160.2.679 kEOLAnnotationVisibleStandard = & h1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the EOL annotation constants.
**Notes:** End of Line Annotations are drawn left justified with no adornment.

### 160.2.680 kFindOptionCxx11RegEx = & h00800000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the search flag constants.
**Notes:** This flag may be set to use C++11 <regex>instead of Scintilla's basic regular expressions. If the regular expression is invalid then -1 is returned and status is set to SC_STATUS_WARN_REGEX. The ECMAScript flag is set on the regex object and UTF-8 documents will exhibit Unicode-compliant behaviour. For MSVC, where wchar_t is 16-bits, the regular expression ".." will match a single astral-plane character. There may be other differences between compilers. Must also have kFindOptionRegExP set.

### 160.2.681 kFindOptionMatchCase = & h4

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the search flag constants.
**Notes:** A match only occurs with text that matches the case of the search string.

### 160.2.682 kFindOptionNone = & h0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the search flag constants.
**Notes:** Default setting is case-insensitive literal match.

### 160.2.683 kFindOptionPosix = & h00400000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the search flag constants.
**Notes:** Treat regular expression in a more POSIX compatible manner by interpreting bare ( and ) for tagged sections rather than \( and \). Has no effect when kFindOptionCxx11RegEx is set.

### 160.2.684 kFindOptionRegExp = & h00200000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the search flag constants.
**Notes:**

The search string should be interpreted as a regular expression.
Uses Scintilla's base implementation unless combined with kFindOptionCxx11RegEx.

### 160.2.685 kFindOptionWholeWord = & h2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the search flag constants.
**Notes:** A match only occurs if the characters before and after are not word characters as defined by WordChars property.

### 160.2.686 kFindOptionWordStart = & h00100000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the search flag constants.
**Notes:** A match only occurs if the character before is not a word character as defined by WordChars.

### 160.2.687 kFoldActionContract = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the folder action constants.
**Notes:** Contract.

### 160.2.688 kFoldActionExpand = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the folder action constants.
**Notes:** Expand.

### 160.2.689 kFoldActionToggle = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the folder action constants.
**Notes:** Toggle between contracted and expanded.

### 160.2.690 kFoldDisplayTextStyleBoxed = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the folder display text style constants.
**Notes:** Display the text tags with a box drawn around them.

### 160.2.691 kFoldDisplayTextStyleHidden = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the folder display text style constants.
**Notes:** Do not display the text tags. This is the default.

### 160.2.692 kFoldDisplayTextStyleStandard = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the folder display text style constants.
**Notes:** Display the text tags.

### 160.2.693 kFoldFlagLevelNumbers = & h0040

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the flags for folders.
**Notes:** Display hexadecimal fold levels in line margin to aid debugging of folding. The appearance of this feature may change in the future.

### 160.2.694 kFoldFlagLineAfterContracted = & h0010

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the flags for folders.
**Notes:** Draw below if not expanded

### 160.2.695 kFoldFlagLineAfterExpanded = & h0008

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the flags for folders.
**Notes:** Draw below if expanded

### 160.2.696 kFoldFlagLineBeforeContracted = & h0004

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the flags for folders.
**Notes:** Draw above if not expanded

### 160.2.697 kFoldFlagLineBeforeExpanded = & h0002

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the flags for folders.
**Notes:** Draw above if expanded

### 160.2.698 kFoldFlagLineState = & h0080

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the flags for folders.
**Notes:** Display hexadecimal line state in line margin to aid debugging of lexing and folding. May not be used at the same time as kFoldFlagLevelNumbers.

### 160.2.699 kFoldFlagNone = & h0000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the flags for folders.
**Notes:** Default value.

### 160.2.700 kFoldLevelBase = & h400

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the folder levels.
**Notes:** The initial fold level.

### 160.2.701 kFoldLevelHeaderFlag = & h2000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the folder levels.
**Notes:** Indicates that the line is a header (fold point).

### 160.2.702 kFoldLevelNone = & h0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the folder levels.
**Notes:** Default level that may occur before folding.

### 160.2.703 kFoldLevelNumberMask = & h0FFF

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the folder levels.
**Notes:** The mask for numbers.

### 160.2.704 kFoldLevelWhiteFlag = & h1000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the folder levels.
**Notes:** Indicates that the line is blank and allows it to be treated slightly different then its level may indicate.

### 160.2.705 kFontQualityQualityAntialiased = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for font quality.
**Notes:** Antialiased

### 160.2.706 kFontQualityQualityDefault = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for font quality.
**Notes:** Default.

### 160.2.707 kFontQualityQualityLcdOptimized = 3

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for font quality.
**Notes:** LCD Optimized

### 160.2.708 kFontQualityQualityMask = & hF

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for font quality.
**Notes:** In case it is necessary to squeeze more options into this property, only a limited number of bits defined by kFontQualityQualityMask will be used for quality.

### 160.2.709 kFontQualityQualityNonAntialiased = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for font quality.
**Notes:** Non Antialiased

### 160.2.710 kIdleStylingAfterVisible = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the idle styling constants.
**Notes:** Text after the currently visible portion may be styled in the background.

### 160.2.711 kIdleStylingAll = 3

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the idle styling constants.
**Notes:** Style both before and after the visible text.

### 160.2.712 kIdleStylingNone = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the idle styling constants.
**Notes:** Syntax styling is performed for all the currently visible text before displaying it.

### 160.2.713 kIdleStylingToVisible = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the idle styling constants.
**Notes:** A small amount of styling is performed before display and then further styling is performed incrementally in the background as an idle-time task.

### 160.2.714 kIMEInteractionInline = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for IME Interaction Mode.
**Notes:** Show inline.

### 160.2.715 kIMEInteractionWindowed = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for IME Interaction Mode.
**Notes:** Show on window.

### 160.2.716 kIndentViewLookBoth = 3

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the indentation guide constants.
**Notes:** Indentation guides are shown beyond the actual indentation up to the level of the next non-empty line or previous non-empty line whichever is the greater. This setting is good for most languages.

### 160.2.717 kIndentViewLookForward = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the indentation guide constants.
**Notes:** Indentation guides are shown beyond the actual indentation up to the level of the next non-empty line. If the previous non-empty line was a fold header then indentation guides are shown for one more level of indent than that line. This setting is good for Python.

### 160.2.718 kIndentViewNone = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the indentation guide constants.
**Notes:** No indentation guides are shown.

### 160.2.719 kIndentViewReal = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the indentation guide constants.
**Notes:** Indentation guides are shown inside real indentation white space.

### 160.2.720 kInvalidPosition = -1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** Invalid position constant.

### 160.2.721 kKeyModAlt = 4

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for an modifier keys.
**Notes:** Alt key. (named Option on MacOS usually)

### 160.2.722 kKeyModCtrl = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for an modifier keys.
**Notes:** Control key (the Command key on Mac, the Ctrl key on other platforms).

### 160.2.723 kKeyModMeta = 16

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for an modifier keys.
**Notes:** Meta key (the Ctrl key on Mac, the Windows key on other platforms).

### 160.2.724 kKeyModNorm = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for an modifier keys.
**Notes:** No modifier key.

### 160.2.725 kKeyModShift = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for an modifier keys.
**Notes:** Shift Key

### 160.2.726 kKeyModSuper = 8

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for an modifier keys.
**Notes:** This is the same as kKeyModMeta on all platforms.

### 160.2.727 kKeysAdd = 310

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.2.728 kKeysBack = 8

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.2.729 kKeysDelete = 308

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.2.730 kKeysDivide = 312

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.2.731 kKeysDown = 300

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.2.732 kKeysEnd = 305

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.2.733 kKeysEscape = 7

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.2.734 kKeysHome = 304

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.2.735 kKeysInsert = 309

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.2.736 kKeysLeft = 302

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.2.737 kKeysMenu = 315

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.2.738 kKeysNext = 307

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.2.739 kKeysPrior = 306

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.2.740 kKeysReturn = 13

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.2.741 kKeysRight = 303

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.2.742 kKeysRWin = 314

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.2.743 kKeysSubtract = 311

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.2.744 kKeysTab = 9

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.2.745 kKeysUp = 301

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.2.746 kKeysWin = 313

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special key constants.

### 160.2.747 kLayerBase = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the layer constants.
**Notes:** Draw the selection background opaquely on the base layer

### 160.2.748 kLayerOverText = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the layer constants.
**Notes:** Draw the selection background translucently over the text.

### 160.2.749 kLayerUnderText = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the layer constants.
**Notes:**

Draw the selection background translucently under the text.
This will not work in single phase drawing mode as there is no under-text phase.

### 160.2.750 kLineCacheCaret = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for line cache.
**Notes:** One line is cached. This is the default.

### 160.2.751 kLineCacheDocument = 3

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for line cache.
**Notes:** All lines in the document.

### 160.2.752 kLineCacheNone = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for line cache.
**Notes:** No lines are cached.

### 160.2.753 kLineCachePage = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for line cache.
**Notes:** Visible lines plus the line containing the caret.

### 160.2.754 kLineCharacterIndexTypeNone = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of line character index type constants.
**Notes:** Bytewise.

### 160.2.755 kLineCharacterIndexTypeUtf16 = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of line character index type constants.
**Notes:** UTF-16 code units are indexed.

### 160.2.756 kLineCharacterIndexTypeUtf32 = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of line character index type constants.
**Notes:** Whole characters are indexed.

### 160.2.757 kLineEndTypeDefault = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the line end types constants.

### 160.2.758 kLineEndTypeUnicode = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the line end types constants.

### 160.2.759 kMarginOptionNone = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the margin option constants.
**Notes:** Whole wrapped line is selected.

### 160.2.760 kMarginOptionSubLineSelect = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the margin option constants.
**Notes:** Only sub line of wrapped line is selected.

### 160.2.761 kMaskFolders = & hFE000000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** The mask for folder flags.

### 160.2.762 kModificationFlagsBeforeDelete = & h800

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** Text is about to be deleted from the document.

### 160.2.763 kModificationFlagsBeforeInsert = & h400

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** Text is about to be inserted into the document.

### 160.2.764 kModificationFlagsChangeAnnotation = & h20000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** An annotation has changed.

### 160.2.765 kModificationFlagsChangeEOLAnnotation = & h400000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** An annotation has changed.

### 160.2.766 kModificationFlagsChangeFold = & h8

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** A folding change has occurred.

### 160.2.767 kModificationFlagsChangeIndicator = & h4000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** An indicator has been added or removed from a range of text.

### 160.2.768 kModificationFlagsChangeLineState = & h8000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** A line state has changed because SCI_SETLINESTATE was called.

### 160.2.769 kModificationFlagsChangeMargin = & h10000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** A text margin has changed.

### 160.2.770 kModificationFlagsChangeMarker = & h200

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** One or more markers has changed in a line.

### 160.2.771 kModificationFlagsChangeStyle = & h4

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** A style change has occurred.

### 160.2.772 kModificationFlagsChangeTabStops = & h200000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** The explicit tab stops on a line have changed because ClearTabStops or AddTabStop was called.

### 160.2.773 kModificationFlagsContainer = & h40000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** This is set on for actions that the container stored into the undo stack with AddUndoAction.

### 160.2.774 kModificationFlagsDeleteText = & h2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** Text has been removed from the document.

### 160.2.775 kModificationFlagsEventMaskAll = & h7FFFFF

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** This is a mask for all valid flags. This is the default mask state set by ModEventMask.

### 160.2.776 kModificationFlagsInsertCheck = & h100000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** Text is about to be inserted. The handler may change the text being inserted by calling ChangeInsertion method. No other modifications may be made in this handler.

### 160.2.777 kModificationFlagsInsertText = & h1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** Text has been inserted into the document.

### 160.2.778 kModificationFlagsLastStepInUndoRedo = & h100

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** This is the final step in an Undo or Redo transaction.

### 160.2.779 kModificationFlagsLexerState = & h80000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** The internal state of a lexer has changed over a range.

### 160.2.780 kModificationFlagsMultilineUndoRedo = & h1000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** This is part of an Undo or Redo with multi-line changes.

### 160.2.781 kModificationFlagsMultiStepUndoRedo = & h80

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** This is part of a multi-step Undo or Redo transaction.

### 160.2.782 kModificationFlagsNone = & h0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:**

Base value with no fields valid. Will not occur but is useful in tests.

### 160.2.783 kModificationFlagsRedo = & h40

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** Information: this was the result of a Redo.

### 160.2.784 kModificationFlagsStartAction = & h2000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** This is set on a kModificationFlagsUser action when it is the first or only step in an undo transaction. This can be used to integrate the Scintilla undo stack with an undo stack in the container application by adding a Scintilla action to the container's stack for the currently opened container transaction or to open a new container transaction if there is no open container transaction.

### 160.2.785 kModificationFlagsUndo = & h20

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** Information: this was the result of an Undo.

### 160.2.786 kModificationFlagsUser = & h10

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the modifications flags.
**Notes:** Information: the operation was done by the user.

### 160.2.787 kMultiAutoCompleteEach = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants to specify how auto complete should handle multiple selections.
**Notes:** Each selection.

### 160.2.788 kMultiAutoCompleteOnce = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants to specify how auto complete should handle multiple selections.
**Notes:** Only first selection.

### 160.2.789 kMultiPasteEach = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the multi paste option constants.
**Notes:** The paste text can go into each selection.

### 160.2.790 kMultiPasteOnce = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the multi paste option constants.
**Notes:** The pasted text can go into just the main selection.

### 160.2.791 kOrderingCustom = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the ordering option constants.
**Notes:** Custom sorting.

### 160.2.792 kOrderingPerformSort = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the ordering option constants.
**Notes:** The control will sort for you.

### 160.2.793 kOrderingPreSorted = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the ordering option constants.
**Notes:** You pass list pre-sorted.

### 160.2.794 kPopUpAll = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special popup modus constants.
**Notes:** Show default editing menu if clicking on scintilla.

### 160.2.795 kPopUpNever = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special popup modus constants.
**Notes:** Never show default editing menu.

### 160.2.796 kPopUpText = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the special popup modus constants.
**Notes:** Show default editing menu only if clicking on text area.

### 160.2.797 kPrintOptionBlackOnWhite = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of print option constants.
**Notes:** Print all text as black on a white background.

### 160.2.798 kPrintOptionColourOnWhite = 3

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of print option constants.
**Notes:** Everything prints in its own colour on a white background.

### 160.2.799 kPrintOptionColourOnWhiteDefaultBG = 4

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of print option constants.
**Notes:** Everything prints in its own foreground colour but all styles up to and including kStylesCommonLineNumber will print on a white background.

### 160.2.800 kPrintOptionInvertLight = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of print option constants.
**Notes:** If you use a dark screen background this saves ink by inverting the light value of all colours and printing on a white background.

### 160.2.801 kPrintOptionNormal = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of print option constants.
**Notes:** Print using the current screen colours with the exception of line number margins which print on a white background. This is the default.

### 160.2.802 kPrintOptionScreenColours = 5

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of print option constants.
**Notes:** Print using the current screen colours for both foreground and background. This is the only mode that does not set the background colour of the line number margin to white.

### 160.2.803 kRepresentationAppearanceBlob = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the representation appearance constants.
**Notes:** Draw the representation text inverted in a rounded rectangle. This is the default appearance.

### 160.2.804 kRepresentationAppearanceColour = & h10

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the representation appearance constants.
**Notes:** Draw the representation in the colour set with RepresentationColour() instead of in the colour of the style of the text being represented.

### 160.2.805 kRepresentationAppearancePlain = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the representation appearance constants.
**Notes:** Draw the representation text with no decorations.

### 160.2.806 kSelectionModeLines = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the selection mode constants.
**Notes:** Line selection.

### 160.2.807 kSelectionModeRectangle = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the selection mode constants.
**Notes:** Rectangular

### 160.2.808 kSelectionModeStream = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the selection mode constants.
**Notes:** Stream

### 160.2.809 kSelectionModeThin = 3

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the selection mode constants.
**Notes:** Thin rectangular selection

### 160.2.810 kStatusBadAlloc = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the status constants.
**Notes:** Memory is exhausted.

### 160.2.811 kStatusFailure = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the status constants.
**Notes:** Generic failure.

### 160.2.812 kStatusOk = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the status constants.
**Notes:** No failures.

### 160.2.813 kStatusRegEx = 1001

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the status constants.
**Notes:** Regular expression is invalid.

### 160.2.814 kStatusWarnStart = 1000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the status constants.
**Notes:** Warnings start with this value.

### 160.2.815 kSupportsFractionalStrokeWidth = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the support constants.
**Notes:** Can lines be drawn with fractional widths like 1.5 or 0.5 pixels?

### 160.2.816 kSupportsLineDrawsFinal = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the support constants.
**Notes:** Whether drawing a line draws its final position. Only false on Win32 GDI.

### 160.2.817 kSupportsPixelDivisions = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the support constants.
**Notes:**

Are logical pixels larger than physical pixels?
Currently only true for macOS Cocoa with 'retina' displays. When true, creating pixmaps at twice the resolution can produce clearer output with less blur.

### 160.2.818 kSupportsPixelModification = 4

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the support constants.
**Notes:** Can individual pixels be modified? This is false for character cell platforms like curses.

### 160.2.819 kSupportsTranslucentStroke = 3

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the support constants.
**Notes:** Can translucent lines, polygons, ellipses, and text be drawn?

### 160.2.820 kTabDrawModeLongArrow = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the tab draw mode constants.

### 160.2.821 kTabDrawModeStrikeOut = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the tab draw mode constants.

### 160.2.822 kTechnologyDefault = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the drawing technology constants.
**Notes:** Default

### 160.2.823 kTechnologyDirectWrite = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the drawing technology constants.
**Notes:** Use DirectWrite API.

### 160.2.824 kTechnologyDirectWriteDC = 3

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the drawing technology constants.
**Notes:** DirectWrite to draw into a GDI DC.

### 160.2.825 kTechnologyDirectWriteRetain = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the drawing technology constants.
**Notes:** Use DirectWrite API with retaining frame.

### 160.2.826 kTimeForever = 10000000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** The constant for MouseDwellTime to mean forever in duration.

### 160.2.827 kTypePropertyBoolean = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the property type constants.
**Notes:** Property is a boolean.

### 160.2.828 kTypePropertyInteger = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the property type constants.
**Notes:** Property is an integer.

### 160.2.829 kTypePropertyString = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the property type constants.
**Notes:** Property is a string.

### 160.2.830 kUndoFlagsMayCoalesce = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of line undo flag constants.
**Notes:** If the container action may be coalesced along with any insertion and deletion actions into a single compound action.

### 160.2.831 kUndoFlagsNone = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of line undo flag constants.
**Notes:** Coalescing treats coalescible container actions as transparent so will still only group together insertions that look like typing or deletions that look like multiple uses of the Backspace or Delete keys.

### 160.2.832 kUpdateContent = & h1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the flags to report what was updated.
**Notes:** Contents, styling or markers may have been changed.

### 160.2.833 kUpdateHScroll = & h8

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the flags to report what was updated.
**Notes:** May have scrolled horizontally.

### 160.2.834 kUpdateNone = & h0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the flags to report what was updated.
**Notes:** Value without any changes.

### 160.2.835 kUpdateSelection = & h2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the flags to report what was updated.
**Notes:** Selection may have been changed.

### 160.2.836 kUpdateVScroll = & h4

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the flags to report what was updated.
**Notes:** May have scrolled vertically.

### 160.2.837 kVirtualSpaceNone = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants to define virtual space behavior.
**Notes:** Disables all use of virtual space.

### 160.2.838 kVirtualSpaceNoWrapLineStart = 4

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants to define virtual space behavior.
**Notes:** Prevents left arrow movement and selection from wrapping to the previous line. This is most commonly desired in conjunction with virtual space but is an independent setting so works without virtual space.

### 160.2.839 kVirtualSpaceRectangularSelection = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants to define virtual space behavior.
**Notes:** Rectangular selection.

### 160.2.840 kVirtualSpaceUserAccessible = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants to define virtual space behavior.
**Notes:** User accessible.

### 160.2.841 kVisiblePolicySlop = & h01

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for the visibility policy.
**Notes:** If set, we can define a slop value: caretSlop. This value defines an unwanted zone (UZ) where the caret is... unwanted. This zone is defined as a number of pixels near the vertical margins, and as a number of lines near the horizontal margins. By keeping the caret away from the edges, it is seen within its context. This makes it likely that the identifier that the caret is on can be completely seen, and that the current line is seen with some of the lines following it, which are often dependent on that line.

### 160.2.842 kVisiblePolicyStrict = & h04

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for the visibility policy.
**Notes:** If set, the policy set by slop is kVisiblePolicySlop... strictly. The caret is centred on the display if caretSlop is not set, and cannot go in the UZ if caretSlop is set.

### 160.2.843 kWhiteSpaceInvisible = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the white space visibility constants.
**Notes:** The normal display mode with white space displayed as an empty background colour.

### 160.2.844 kWhiteSpaceVisibleAfterIndent = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the white space visibility constants.
**Notes:** White space used for indentation is displayed normally but after the first visible character, it is shown as dots and arrows.

### 160.2.845 kWhiteSpaceVisibleAlways = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the white space visibility constants.
**Notes:** White space characters are drawn as dots and arrows,

### 160.2.846 kWhiteSpaceVisibleOnlyInIndent = 3

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the white space visibility constants.
**Notes:** White space used for indentation is displayed as dots and arrows.

### 160.2.847 kWrapChar = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the wrap constants.
**Notes:** Enable wrapping between any characters.

### 160.2.848 kWrapIndentModeDeepIndent = 3

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the wrap indent mode constants.
**Notes:** Wrapped sublines are aligned to first subline indent plus two more levels of indentation

### 160.2.849 kWrapIndentModeFixed = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the wrap indent mode constants.
**Notes:** Wrapped sublines aligned to left of window plus amount set by WrapStartIndent.

### 160.2.850 kWrapIndentModeIndent = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the wrap indent mode constants.
**Notes:** Wrapped sublines are aligned to first subline indent plus one more level of indentation

### 160.2.851 kWrapIndentModeSame = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the wrap indent mode constants.
**Notes:** Wrapped sublines are aligned to first subline indent

### 160.2.852 kWrapNone = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the wrap constants.
**Notes:** Disable line wrapping.

### 160.2.853 kWrapVisualFlagEnd = & h0001

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the wrap visual flag constants.
**Notes:** Visual flag at end of subline of a wrapped line.

### 160.2.854 kWrapVisualFlagMargin = & h0004

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the wrap visual flag constants.
**Notes:** Visual flag in line number margin.

### 160.2.855 kWrapVisualFlagNone = & h0000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the wrap visual flag constants.
**Notes:** No visual flags

### 160.2.856 kWrapVisualFlagStart = & h0002

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the wrap visual flag constants.
**Notes:** Visual flag at begin of subline of a wrapped line. Subline is indented by at least 1 to make room for the flag.

### 160.2.857 kWrapVisualLocationDefault = & h0000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the wrap visual location constants.
**Notes:** Visual flags drawn near border

### 160.2.858 kWrapVisualLocationEndByText = & h0001

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the wrap visual location constants.
**Notes:** Visual flag at end of subline drawn near text

### 160.2.859 kWrapVisualLocationStartByText = & h0002

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the wrap visual location constants.
**Notes:** Visual flag at beginning of subline drawn near text

### 160.2.860 kWrapWhiteSpace = 3

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the wrap constants.
**Notes:** Enable wrapping on whitespace.

### 160.2.861 kWrapWord = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the wrap constants.
**Notes:** Enable wrapping on word or style boundaries.

## 160.3 class ScintillaFailureExceptionMBS

### 160.3.1 class ScintillaFailureExceptionMBS

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The class for an exception in Scintilla.
**Notes:** Subclass of the RuntimeException class.

### 160.3.2 Blog Entries

- MBS Xojo Plugins, version 21.6pr2

### 160.3.3 Blog Entries

- MBS Xojo Plugins, version 21.6pr2

## 160.4 class ScintillaIndicatorMBS

### 160.4.1 class ScintillaIndicatorMBS

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The class for an indicator.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 160.4.2 Blog Entries

- MBS Xojo Plugins, version 21.6pr2

### 160.4.3 Blog Entries

- MBS Xojo Plugins, version 21.6pr2

### 160.4.4 Methods

### 160.4.5 Constructor

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The private constructor.

### 160.4.6 IndicatorEnd(pos as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Find the end of a range with one value from a position within the range.
**Notes:** Can be used to iterate through the document to discover all the indicator positions.

### 160.4.7 IndicatorStart(pos as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Find the start of a range with one value from a position within the range.
**Notes:** Can be used to iterate through the document to discover all the indicator positions.

### 160.4.8 IndicatorValueAt(pos as Integer) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Retrieve the value of a particular indicator at a position.

### 160.4.9 Properties

### 160.4.10 Alpha as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The alpha for drawing indicator.
**Notes:**

Set and get the alpha transparency used for drawing the fill colour of the kIndicatorStyleRoundBox and kIndicatorStyleStraightBox rectangle. The alpha value can range from 0 (completely transparent) to 255 (no transparency).
(Read and Write property)

### 160.4.11 Flags as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set and get the flags associated with an indicator.
**Notes:**

There is currently one flag defined, kIndicFlagValueFore: when this flag is set the colour used by the indicator is not from the indicator's fore setting but instead from the value of the indicator at that point in the file. kIndicFlagNone is the default. This allows many colours to be displayed for a single indicator. The value is an RGB integer colour that has been ored with kIndicValueBit(& h1000000) when setting Value. To find the colour from the value, and the value with kIndicValueMask(& hFFFFFF).
(Read and Write property)

### 160.4.12 ForeColor as Color

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set and get the colour used to draw an indicator.
**Example:**

```
// The default indicator colours are equivalent to:

Indicator(0).ForeColor = & c007f00 // (dark green)
```

```
Indicator(1).ForeColor = & cff0000 // (light blue)
Indicator(2).ForeColor = & c0000ff // (light red)
```

**Notes:** (Read and Write property)

### 160.4.13 HoverForeColor as Color

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set and get the colour used to draw indicators when the mouse is over them or the caret moved into them.
**Notes:**

The mouse cursor also changes when an indicator is drawn in hover style. The default is for the hover appearance to be the same as the normal appearance and calling ForeColor or Style properties will also reset the hover attribute.
(Read and Write property)

### 160.4.14 HoverStyle as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set and get the style used to draw indicators when the mouse is over them or the caret moved into them.
**Notes:**

The mouse cursor also changes when an indicator is drawn in hover style. The default is for the hover appearance to be the same as the normal appearance and calling ForeColor or Style properties will also reset the hover attribute.
(Read and Write property)

### 160.4.15 Indicator as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The indicator index.
**Notes:** (Read only property)

### 160.4.16 OutlineAlpha as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The alpha for outline drawing.
**Notes:**

Set and get the alpha transparency used for drawing the outline colour of the kIndicatorStyleRoundBox and kIndicatorStyleStraightBox rectangle. The alpha value can range from 0 (completely transparent) to 255 (no transparency).
(Read and Write property)

### 160.4.17 Parent as Variant

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The parent control.
**Notes:** (Read only property)

### 160.4.18 StrokeWidth as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set and get the stroke width used to draw an indicator in hundredths of a pixel.
**Notes:**

The default value is 100 indicating a width of one pixel. Some indicator styles do not support setting stroke width, generally where it makes no sense (kIndicatorStylePoint) or wasn't simple (kIndicatorStyleSquigglePixmap). The indicators supporting stroke width are: kIndicatorStyleFullBoxPlain, kIndicatorStyleSquiggle, kIndicatorStyleTT, INDIC_DIAGONAL, kIndicatorStyleFullBoxStrike, kIndicatorStyleFullBoxBox, kIndicatorStyleFullBoxRoundBox, kIndicatorStyleStraightBox, kIndicatorStyleFullBox, kIndicatorStyleFullBoxDash, kIndicatorStyleFullBoxDots, kIndicatorStyleSquiggleLow.
Fractional pixel widths are possible such as 50 for half a pixel wide. On many systems a half pixel value will appear as a fainter line but it allows drawing very thin lines on systems with multiple physical pixels per logical pixel. Half (logical) pixel lines are available on macOS with 'retina' displays, see kSupportsPixelDivisions.
(Read and Write property)

### 160.4.19 Style as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The style for the indicator.
**Example:**

// The default indicator styles are equivalent to:

Indicator(0).style = kIndicatorStyleSquiggle
Indicator(1).style = kIndicatorStyleTT
Indicator(2).style = kIndicatorStylePlain

**Notes:** (Read and Write property)

### 160.4.20 Tag as Variant

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The tag value.
**Notes:**

A variable for you to put any reference information you like.
(Read only property)

### 160.4.21 Under as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set and get whether an indicator is drawn under text or over(default).
**Notes:**

Drawing under text does not work with the deprecated single phase drawing mode.
(Read and Write property)

### 160.4.22 Constants

### 160.4.23 kIndicatorNumbersContainer = 8

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the indicator special numbers.

### 160.4.24 kIndicatorNumbersIme = 32

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the indicator special numbers.

### 160.4.25 kIndicatorNumbersImeMax = 35

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the indicator special numbers.

### 160.4.26 kIndicatorNumbersMax = 35

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the indicator special numbers.

### 160.4.27 kIndicatorStyleBox = 6

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for an indicator style.
**Notes:** A rectangle around the text.

### 160.4.28 kIndicatorStyleCompositionThick = 14

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for an indicator style.
**Notes:** A 2-pixel thick underline located at the bottom of the line to try to avoid touching the character base. Each side is inset 1 pixel so that different indicators in this style covering a range appear isolated. This is similar to an appearance used for the target in Asian language input composition.

### 160.4.29 kIndicatorStyleCompositionThin = 15

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for an indicator style.
**Notes:** A 1-pixel thick underline located just before the bottom of the line. Each side is inset 1 pixel so that different indicators in this style covering a range appear isolated. This is similar to an appearance used for non-target ranges in Asian language input composition.

### 160.4.30 kIndicatorStyleDash = 9

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for an indicator style.
**Notes:** A dashed underline.

### 160.4.31 kIndicatorStyleDiagonal = 3

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for an indicator style.
**Notes:** Diagonal hatching.

### 160.4.32 kIndicatorStyleDotBox = 12

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for an indicator style.
**Notes:** A dotted rectangle around the text using translucent drawing. Translucency alternates between the alpha and outline alpha settings with the top-left pixel using the alpha setting. Alpha and OutlineAlpha control the alpha transparency values. The default values are 30 for alpha and 50 for outline alpha. To avoid excessive memory allocation the maximum width of a dotted box is 4000 pixels.

### 160.4.33 kIndicatorStyleDots = 10

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for an indicator style.
**Notes:** A dotted underline.

### 160.4.34 kIndicatorStyleFullBox = 16

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for an indicator style.
**Notes:** A rectangle around the text using translucent drawing similar to kIndicatorStyleStraightBox but covering the entire character area.

### 160.4.35 kIndicatorStyleGradient = 20

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for an indicator style.
**Notes:** A vertical gradient between a colour and alpha at top to fully transparent at bottom.

### 160.4.36 kIndicatorStyleGradientCentre = 21

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for an indicator style.
**Notes:** A vertical gradient with the specified colour and alpha in the middle fading to fully transparent at top and bottom.

### 160.4.37 kIndicatorStyleHidden = 5

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for an indicator style.
**Notes:** An indicator with no visual effect.

### 160.4.38 kIndicatorStylePlain = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for an indicator style.
**Notes:** Underlined with a single, straight line.

### 160.4.39 kIndicatorStylePoint = 18

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for an indicator style.
**Notes:** Draw a triangle below the start of the indicator range.

### 160.4.40 kIndicatorStylePointCharacter = 19

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for an indicator style.
**Notes:** Draw a triangle below the centre of the first character of the indicator range.

### 160.4.41 kIndicatorStyleRoundBox = 7

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for an indicator style.
**Notes:** A rectangle with rounded corners around the text using translucent drawing with the interior usually more transparent than the border. You can use Alpha and OutlineAlpha property to control the alpha transparency values. The default alpha values are 30 for fill colour and 50 for outline colour.

### 160.4.42 kIndicatorStyleSquiggle = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for an indicator style.
**Notes:** A squiggly underline. Requires 3 pixels of descender space.

### 160.4.43 kIndicatorStyleSquiggleLow = 11

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for an indicator style.
**Notes:** Similar to kIndicatorStyleSquiggle but only using 2 vertical pixels so will fit under small fonts.

### 160.4.44 kIndicatorStyleSquigglePixmap = 13

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for an indicator style.
**Notes:** A version of kIndicatorStyleSquiggle that draws using a pixmap instead of as a series of line segments for performance.

### 160.4.45 kIndicatorStyleStraightBox = 8

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for an indicator style.
**Notes:** A rectangle around the text using translucent drawing with the interior usually more transparent

than the border. You can use Alpha and OutlineAlpha to control the alpha transparency values. The default alpha values are 30 for fill colour and 50 for outline colour. This indicator does not colour the top pixel of the line so that indicators on contiguous lines are visually distinct and disconnected.

### 160.4.46 kIndicatorStyleStrike = 4

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for an indicator style.
**Notes:** Strike out.

### 160.4.47 kIndicatorStyleTextFore = 17

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for an indicator style.
**Notes:** Change the colour of the text to the indicator's fore colour.

### 160.4.48 kIndicatorStyleTT = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for an indicator style.
**Notes:** A line of small T shapes.

### 160.4.49 kIndicFlagNone = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the flag constants.
**Notes:** Default value for flags.

### 160.4.50 kIndicFlagValueFore = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the flag constants.
**Notes:** When this flag is set the colour used by the indicator is not from the indicator's fore setting but instead from the value of the indicator at that point in the file.

### 160.4.51 kIndicValueBit = & h1000000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** The value bit set if this is a color value.
**Notes:** use Bitwise AND and kIndicValueMask to get the color value.

### 160.4.52 kIndicValueMask = & hFFFFFF

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** The mask to get the color part of the value.

## 160.5 class ScintillaLoaderMBS

### 160.5.1 class ScintillaLoaderMBS

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The class for loading data in chunks.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 160.5.2 Blog Entries

- MBS Xojo Plugins, version 21.6pr3

### 160.5.3 Blog Entries

- MBS Xojo Plugins, version 21.6pr3

### 160.5.4 Methods

### 160.5.5 AddData(data as MemoryBlock) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The application should call the AddData method with each block of data read from the file.
**Notes:**

AddData will return kStatusOk unless a failure, such as memory exhaustion occurs. If a failure occurs in AddData or in a file reading call then loading can be abandoned and the loader released with the Release call. When the whole file has been read, Finished should be called to load the final document into the control. There is no need to call Release after ConvertToDocument.

- 160.5.6 AddData(data as String) as Integer 24454

### 160.5.6 AddData(data as String) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The application should call the AddData method with each block of data read from the file.
**Notes:**

AddData will return kStatusOk unless a failure, such as memory exhaustion occurs. If a failure occurs in AddData or in a file reading call then loading can be abandoned and the loader released with the Release call.

When the whole file has been read, Finished should be called to load the final document into the control.
There is no need to call Release after ConvertToDocument.

### 160.5.7 Constructor

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The private constructor.

### 160.5.8 Finished as boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Finishes the document loading.
**Notes:** Returns true on success.

### 160.5.9 Properties

### 160.5.10 Handle as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The internal objet reference.
**Notes:** (Read only property)

### 160.5.11 Parent as Variant

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The parent control.
**Notes:** (Read only property)

### 160.5.12 Tag as Variant

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The tag value.
**Notes:**

A variable for you to put any reference information you like.
(Read only property)

## 160.6 class ScintillaMarginMBS

### 160.6.1 class ScintillaMarginMBS

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The class for a margin.
**Notes:**

Margin areas are used for line numbers, breakpoints or folder.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 160.6.2 Blog Entries

- MBS Xojo Plugins, version 21.6pr2

### 160.6.3 Blog Entries

### 160.6.4 Methods

### 160.6.5 Constructor

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The private constructor.

### 160.6.6 Properties

### 160.6.7 BackColor as Color

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** A margin of type kMarginTypeBack may have its colour set with this property.
**Notes:** (Read and Write property)

### 160.6.8 Cursor as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** A reversed arrow cursor is normally shown over all margins.
**Notes:**

This may be changed to a normal arrow with Cursor = kCursorShapeArrow or restored to a reversed arrow with Cursor = kCursorShapeReverseArrow.
(Read and Write property)

### 160.6.9 Layer as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The layer number for this marker.
**Notes:**

See kLayerBase, kLayerOverText and kLayerUnderText constants.
(Read and Write property)

### 160.6.10 Margin as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The margin number.
**Notes:** (Read only property)

### 160.6.11 Mask as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The mask is a 32-bit value.
**Notes:**

Each bit corresponds to one of 32 logical symbols that can be displayed in a margin that is enabled for symbols. There is a useful constant, kMaskFolders (& hFE000000 or -33554432), that is a mask for the 7 logical symbols used to denote folding. You can assign a wide range of symbols and colours to each of the 32 logical symbols, see Markers for more information. If (mask & kMaskFolders) = 0, the margin background colour is controlled by style 33 (kStylesCommonLineNumber).
You add logical markers to a line with SCI_MARKERADD. If a line has an associated marker that does not appear in the mask of any margin with a non-zero width, the marker changes the background colour of the line. For example, suppose you decide to use logical marker 10 to mark lines with a syntax error and you want to show such lines by changing the background colour. The mask for this marker is 1 shifted left 10 times (1«10) which is 0x400. If you make sure that no symbol margin includes 0x400 in its mask, any line with the marker gets the background colour changed.
To set a non-folding margin 1 use Styles(1). Mask = not kMaskFolders which is the default set by Scintilla.
To set a folding margin 2 use Styles(2). Mask = kMaskFolders)

textasciitilde kMaskFolders is & h1FFFFFF in hexadecimal or 33554431 decimal. Of course, you may need to display all 32 symbols in a margin, in which case use Maks = -1.
(Read and Write property)

### 160.6.12 Parent as Variant

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The parent control.
**Notes:** (Read only property)

### 160.6.13 Sensitive as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Each of the five margins can be set sensitive or insensitive to mouse clicks.
**Notes:**

A click in a sensitive margin sends a MarginClick event to the container. Margins that are not sensitive act as selection margins which make it easy to select ranges of lines. By default, all margins are insensitive.
(Read and Write property)

### 160.6.14 Tag as Variant

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The tag value.
**Notes:**

A variable for you to put any reference information you like.
(Read only property)

### 160.6.15 Type as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Set and get the type of a margin.
**Notes:**

The margin argument should be 0, 1, 2, 3 or 4.
You can use the predefined constants kMarginTypeSymbol (0) and kMarginTypeNumber (1) to set a margin as either a line number or a symbol margin. A margin with application defined text may use kMarginTypeText (4) or kMarginTypeRText (5) to right justify the text. By convention, margin 0 is used for line

numbers and the next two are used for symbols. You can also use the constants kMarginTypeBack (2), kMarginTypeFore (3), and kMarginTypeColour (6) for symbol margins that set their background colour to match the kCommonStylesDefault background and foreground colours or a specified colour.
(Read and Write property)

### 160.6.16 Width as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The width of a margin in pixels.
**Notes:**

A margin with zero width is invisible. By default, Scintilla sets margin 1 for symbols with a width of 16 pixels, so this is a reasonable guess if you are not sure what would be appropriate. Line number margins widths should take into account the number of lines in the document and the line number style. You could use something like Styles(kStylesCommonLineNumber).TextWidth("_99999") to get a suitable width.
(Read and Write property)

### 160.6.17 Constants

### 160.6.18 kMarginTypeBack = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the margin type constants.
**Notes:** Background colour

### 160.6.19 kMarginTypeColour = 6

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the margin type constants.
**Notes:** Color

### 160.6.20 kMarginTypeFore = 3

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the margin type constants.
**Notes:** Foreground colour

### 160.6.21 kMarginTypeNumber = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the margin type constants.
**Notes:** line number

### 160.6.22 kMarginTypeRText = 5

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the margin type constants.
**Notes:** Right text

### 160.6.23 kMarginTypeSymbol = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the margin type constants.
**Notes:** symbol

### 160.6.24 kMarginTypeText = 4

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the margin type constants.
**Notes:** text

## 160.7 class ScintillaMarkerMBS

### 160.7.1 class ScintillaMarkerMBS

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The class for a marker.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 160.7.2 Blog Entries

- MBS Xojo Plugins, version 21.6pr2

### 160.7.3 Blog Entries

- MBS Xojo Plugins, version 21.6pr2

### 160.7.4 Methods

### 160.7.5 Constructor

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The private constructor.

### 160.7.6 Properties

### 160.7.7 Alpha as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The degree of translucency can be chosen by setting an alpha value.
**Notes:**

This is only for the content area - in margins, translucency is achieved through the color with alpha.
(Read and Write property)

### 160.7.8 BackColor as Color

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The background color of the marker.
**Notes:** (Read and Write property)

### 160.7.9 BackColorSelected as Color

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The highlight background color.
**Notes:**

Sets the highlight background colour of a marker number when its folding block is selected. The default colour is & cFF0000.
(Read and Write property)

### 160.7.10 ForeColor as Color

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The foreground color of the marker.
**Notes:** (Read and Write property)

### 160.7.11 Layer as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Defines the layer where marker is drawn.
**Notes:**

When markers are drawn in the content area, either because there is no margin for them or they are of Background or Underline types, they may be drawn translucently over text or opaquely on the base layer. The layer to draw on is defined by this property.
See kLayer* constants.
(Read and Write property)

### 160.7.12 Marker as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The marker number.
**Notes:** (Read only property)

### 160.7.13 Parent as Variant

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The parent control.
**Notes:** (Read only property)

### 160.7.14 StrokeWidth as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The stroke width.
**Notes:**

Sets the stroke width used to draw the marker in hundredths of a pixel. The default value is 100 indicating a single pixel wide line.
(Read and Write property)

### 160.7.15 Symbol as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The symbol used for this marker.
**Notes:** (Read and Write property)

### 160.7.16 Tag as Variant

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The tag value.
**Notes:**

A variable for you to put any reference information you like.
(Read only property)

### 160.7.17 Constants

### 160.7.18 kMarkerOutlineFolder = 30

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker outline constants.
**Notes:** Folder entry.

### 160.7.19 kMarkerOutlineFolderEnd = 25

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker outline constants.
**Notes:** End of folder line.

### 160.7.20 kMarkerOutlineFolderMidTail = 27

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker outline constants.
**Notes:** Middle part of tail.

### 160.7.21 kMarkerOutlineFolderOpen = 31

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker outline constants.
**Notes:** Open folder.

### 160.7.22 kMarkerOutlineFolderOpenMid = 26

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker outline constants.
**Notes:** Middle of an open folder.

### 160.7.23 kMarkerOutlineFolderSub = 29

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker outline constants.
**Notes:** Sub folder.

### 160.7.24 kMarkerOutlineFolderTail = 28

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker outline constants.
**Notes:** The tail line on a folder.

### 160.7.25 kMarkerSymbolArrow = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker symbol constants.
**Notes:** An arrow to right.

### 160.7.26 kMarkerSymbolArrowDown = 6

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker symbol constants.
**Notes:** An arrow to down.

### 160.7.27 kMarkerSymbolArrows = 24

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker symbol constants.
**Notes:** Several arrows.

### 160.7.28 kMarkerSymbolAvailable = 28

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker symbol constants.
**Notes:** Available number.

### 160.7.29 kMarkerSymbolBackground = 22

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker symbol constants.
**Notes:** Background color filled.

### 160.7.30 kMarkerSymbolBookmark = 31

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker symbol constants.
**Notes:** Bookmark symbols left to right.

### 160.7.31 kMarkerSymbolBoxMinus = 14

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker symbol constants.
**Notes:** A circle with minus.

### 160.7.32 kMarkerSymbolBoxMinusConnected = 15

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker symbol constants.
**Notes:** Box with minus and connected with line.

### 160.7.33 kMarkerSymbolBoxPlus = 12

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker symbol constants.
**Notes:** A circle with plus.

### 160.7.34 kMarkerSymbolBoxPlusConnected = 13

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker symbol constants.
**Notes:** Box with plus and connected with lines.

### 160.7.35 kMarkerSymbolCharacter = 10000

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker symbol constants.
**Notes:** Character.

### 160.7.36 kMarkerSymbolCircle = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker symbol constants.
**Notes:** A circle.

### 160.7.37 kMarkerSymbolCircleMinus = 20

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker symbol constants.
**Notes:** Circle with minus.

### 160.7.38 kMarkerSymbolCircleMinusConnected = 21

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker symbol constants.
**Notes:** Circle with minus and connected with lines.

### 160.7.39 kMarkerSymbolCirclePlus = 18

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker symbol constants.
**Notes:** Circle with plus.

### 160.7.40 kMarkerSymbolCirclePlusConnected = 19

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker symbol constants.
**Notes:** Circle with plus and connected with lines.

### 160.7.41 kMarkerSymbolDotDotDot = 23

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker symbol constants.
**Notes:** Three dots.

### 160.7.42 kMarkerSymbolEmpty = 5

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker symbol constants.
**Notes:** Empty marker.

### 160.7.43 kMarkerSymbolFullRect = 26

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker symbol constants.
**Notes:** Full rectangle.

### 160.7.44 kMarkerSymbolLCorner = 10

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker symbol constants.
**Notes:** Line from top to right.

### 160.7.45 kMarkerSymbolLCornerCurve = 16

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker symbol constants.
**Notes:** Line from top to right with curve.

### 160.7.46 kMarkerSymbolLeftRect = 27

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker symbol constants.
**Notes:** Rectangle on the left side.

### 160.7.47 kMarkerSymbolMinus = 7

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker symbol constants.
**Notes:** Symbol with minus.

### 160.7.48 kMarkerSymbolPixmap = 25

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker symbol constants.
**Notes:** A picture.

### 160.7.49 kMarkerSymbolPlus = 8

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker symbol constants.
**Notes:** Symbol with plus.

### 160.7.50 kMarkerSymbolRgbaImage = 30

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker symbol constants.
**Notes:** RGBA picture.

### 160.7.51 kMarkerSymbolRoundRect = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker symbol constants.
**Notes:** Round rectangle.

### 160.7.52 kMarkerSymbolShortArrow = 4

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker symbol constants.
**Notes:** Short arrow.

### 160.7.53 kMarkerSymbolSmallRect = 3

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker symbol constants.
**Notes:** Small rectangle.

### 160.7.54 kMarkerSymbolTCorner = 11

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker symbol constants.
**Notes:** Line from top to bottom with line to right.

### 160.7.55 kMarkerSymbolTCornerCurve = 17

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker symbol constants.
**Notes:** Line from top to bottom with line to right with curves.

### 160.7.56 kMarkerSymbolUnderline = 29

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker symbol constants.
**Notes:** Underline

### 160.7.57 kMarkerSymbolVerticalBookmark = 32

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker symbol constants.
**Notes:** Bookmark symbols top to bottom.

### 160.7.58 kMarkerSymbolVLine = 9

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the marker symbol constants.
**Notes:** Vertical line.

## 160.8 class ScintillaSpanMBS

### 160.8.1 class ScintillaSpanMBS

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The class for a span.

### 160.8.2 Blog Entries

- MBS Xojo Plugins, version 21.6pr2

### 160.8.3 Blog Entries

- MBS Xojo Plugins, version 21.6pr2

### 160.8.4 Methods

### 160.8.5 Constructor(Location as Integer, Length as Integer)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The constructor with values.
See also:

- 160.8.6 Constructor(other as ScintillaSpanMBS) 24473

### 160.8.6 Constructor(other as ScintillaSpanMBS)

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The constructor.
See also:

- 160.8.5 Constructor(Location as Integer, Length as Integer) 24473

### 160.8.7 Equal(other as ScintillaSpanMBS) as boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether two spans are equal.

### 160.8.8 Properties

### 160.8.9 EndPosition as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The end position.
**Notes:**

This is equal to Length + StartPosition.
(Read and Write property)

### 160.8.10 Length as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The length of the span.
**Notes:** (Read only property)

### 160.8.11 StartPosition as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The start position in the text.
**Notes:**

Zero based.
(Read and Write property)

## 160.9 class ScintillaStyleMBS

### 160.9.1 class ScintillaStyleMBS

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The class for style definitions.
**Notes:**

Styles are used to style the various text parts found via the lexer.
The lexer classifies words and assigns them a style, so you can now define how to style the words, e.g. bold keywords.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 160.9.2 Blog Entries

- Tips and tricks for Scintilla Control
- MBS Xojo Plugins, version 21.6pr2

### 160.9.3 Blog Entries

- Tips and tricks for Scintilla Control
- MBS Xojo Plugins, version 21.6pr2

### 160.9.4 Methods

### 160.9.5 Constructor

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The private constructor.

### 160.9.6 TextWidth(style as Integer, text as String) as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Measures the text width for this style.
**Notes:** This returns the pixel width of a string drawn in the given style which can be used, for example, to decide how wide to make the line number margin in order to display a given number of numerals.

### 160.9.7 Properties

### 160.9.8 BackColor as Color

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The text background color.
**Notes:**

Text is drawn in the foreground colour. The space in each character cell that is not occupied by the character is drawn in the background colour.
(Read and Write property)

### 160.9.9 Bold as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether font is bold.
**Notes:**

When you set this to true, the weight is set to kFontWeightBold, otherwise to kFontWeightNormal.
(Read and Write property)

### 160.9.10 CaseVisible as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The value of caseVisible determines how text is displayed.
**Notes:**

You can set upper case (kCaseVisibleUpper, 1) or lower case (kCaseVisibleLower, 2) or camel case (kCaseVisibleCamel, 3) or display normally (kCaseVisibleMixed, 0). This does not change the stored text, only how it is displayed.
(Read and Write property)

### 160.9.11 Changeable as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether this text is editable.
**Notes:**

This is an experimental and incompletely implemented style attribute. The default setting is changeable set true but when set false it makes text read-only. The user can not move the caret within not-changeable text

and not-changeable text may not be deleted by the user. The application may delete not-changeable text by calling DeleteRange().
(Read and Write property)

### 160.9.12 CheckMonospaced as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether font is mono spaced.
**Notes:**

This attribute indicates that the font may be monospaced over the ASCII graphics characters (' ' ,Ä¶ ' textasciitilde ', including letters ('a',Ä¶'z', 'A',Ä¶'Z') and numbers ('0',Ä¶'9')). This allows optimizing speed and memory use for some common scenarios where documents are mostly composed from ASCII characters. Fonts are rarely monospaced over all possible characters. Emoji 'üòÉ', Arabic characters 'ÿ¥' and Chinese ideographs 'Êº¢' are often different widths to Roman letters. Even when a font is designed as monospaced, not all characters may be present and platforms may substitute other fonts for any missing characters with the substitute characters taking more or less space. However, fonts are often reliably monospaced over ASCII text (disregarding control characters) and many documents contain mostly ASCII characters. This setting allows simplified position calculations for text runs that are purely ASCII graphics characters.
Before treating the font as monospaced, it is first checked over the ' ' ,Ä¶ '
textasciitilde ' range and for some known combinations of characters that may have different spacings because of kerning or ligatures. Applications may apply the 'check monospaced' attribute just to fonts known to be monospaced or on all fonts, leaving it to Scintilla to reject fonts that are proportional.
(Read and Write property)

### 160.9.13 Description as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The style description.
**Notes:**

Retrieve an English-language description of a style which may be suitable for display in a user interface. This looks like "Doc comment: block comments beginning with /** or /*!".
(Read only property)

### 160.9.14 EOLFilled as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether to fill till end of line.
**Notes:**

If the last character in the line has a style with this attribute set, the remainder of the line up to the right edge of the window is filled with the background colour set for the last character. This is useful when a document contains embedded sections in another language such as HTML pages with embedded JavaScript. By setting eolFilled to true and a consistent background colour (different from the background colour set for the HTML styles) to all JavaScript styles then JavaScript sections will be easily distinguished from HTML.
(Read and Write property)

### 160.9.15 Font as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The fontName is a string holding the name of a font.
**Example:**

```
dim c as ScintillaControlMBS // your control
Dim style As ScintillaStyleMBS = c.Style(ScintillaStyleMBS.kStylesCommonDefault)
// Set font to be system font
style.Font = SystemInformationMBS.SystemFont
```

**Notes:**

Under Windows, only the first 32 characters of the name are used, the name is decoded as UTF-8, and the name is not case sensitive. For internal caching, Scintilla tracks fonts by name and does care about the casing of font names, so please be consistent. On GTK, Pango is used to display text and the name is sent directly to Pango without transformation. On Qt, the name is decoded as UTF-8. On Cocoa, the name is decoded as MacRoman.
(Read and Write property)

### 160.9.16 ForeColor as Color

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The text foreground color.
**Notes:**

Text is drawn in the foreground colour. The space in each character cell that is not occupied by the character is drawn in the background colour.
(Read and Write property)

### 160.9.17 HotSpot as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** This style is used to mark ranges of text that can detect mouse clicks.
**Notes:**

The cursor changes to a hand over hotspots, and the foreground, and background colours may change and an underline appear to indicate that these areas are sensitive to clicking. This may be used to allow hyperlinks to other documents.
(Read and Write property)

### 160.9.18 Identifiers as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The identifiers associated to a sub style.
**Notes:** (Read and Write property)

### 160.9.19 Italic as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether this style uses an italic style.
**Notes:** (Read and Write property)

### 160.9.20 Name as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Retrieve the name of a style.
**Notes:**

This is a C preprocessor symbol like "SCE_C_COMMENTDOC".
(Read only property)

### 160.9.21 Parent as Variant

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The parent control.
**Notes:** (Read only property)

### 160.9.22 Size as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The font size.
**Notes:**

Sizes can be set to a whole number of points with Size property or to a fractional point size in hundredths of a point with SizeFractional property by multiplying the size by 100. For example, a text size of 9.4 points is set with SizeFractional = 940.
(Read and Write property)

### 160.9.23 SizeFractional as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The font size in 100th.
**Notes:**

Sizes can be set to a whole number of points with Size property or to a fractional point size in hundredths of a point with SizeFractional property by multiplying the size by 100. For example, a text size of 9.4 points is set with SizeFractional = 940.
(Read and Write property)

### 160.9.24 Style as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The style number for this style.
**Notes:** (Read only property)

### 160.9.25 Tag as Variant

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The tag value.
**Notes:**

A variable for you to put any reference information you like.
(Read only property)

### 160.9.26 Tags as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The tags of a style.
**Notes:**

This is a space-separated set of words like "comment documentation".
(Read only property)

### 160.9.27 Underline as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** You can set a style to be underlined.
**Notes:**

The underline is drawn in the foreground colour. All characters with a style that includes the underline attribute are underlined, even if they are white space.
(Read and Write property)

### 160.9.28 Visible as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether to show this text.
**Notes:**

Text is normally visible. However, you can completely hide it by giving it a style with the visible set to 0. This could be used to hide embedded formatting instructions or hypertext keywords in HTML or XML. Invisible text may not be deleted by user actions but the application may delete invisible text by calling DeleteRange().
(Read and Write property)

### 160.9.29 Weight as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The weight of the font.
**Notes:**

The weight or boldness of a font can be set with Bold or Weight properties. The weight is a number between 1 and 999 with 1 being very light and 999 very heavy. While any value can be used, fonts often only support between 2 and 4 weights with three weights being common enough to have symbolic names: kFontWeightNormal (400), kFontWeightSemiBold (600), and kFontWeightBold (700).

(Read and Write property)

### 160.9.30 Constants

### 160.9.31 kCaseVisibleCamel = 3

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the case constants for how to show text.
**Notes:** Camel case.

### 160.9.32 kCaseVisibleLower = 2

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the case constants for how to show text.
**Notes:** Uppercase letters.

### 160.9.33 kCaseVisibleMixed = 0

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the case constants for how to show text.
**Notes:** Mixed case.

### 160.9.34 kCaseVisibleUpper = 1

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the case constants for how to show text.
**Notes:** Uppercase letters.

### 160.9.35 kFontWeightBold = 700

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for font weight.
**Notes:** Bold font.

### 160.9.36 kFontWeightNormal = 400

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for font weight.
**Notes:** Normal font, not bold.

### 160.9.37 kFontWeightSemiBold = 600

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for font weight.
**Notes:** Semi bold.

### 160.9.38 kStylesCommonBraceBad = 35

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for a style.
**Notes:** This style sets the display attributes used when marking an unmatched brace with the BraceBadLight method.

### 160.9.39 kStylesCommonBraceLight = 34

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for a style.
**Notes:** This style sets the attributes used when highlighting braces with the BraceHighlight method and when highlighting the corresponding indentation with HighlightGuide.

### 160.9.40 kStylesCommonCallTip = 38

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for a style.
**Notes:** Call tips normally use the font attributes defined by kStylesCommonDefault. Use of CallTipUseStyle causes call tips to use this style instead. Only the font face name, font size, foreground and background colours and character set attributes are used.

### 160.9.41 kStylesCommonControlChar = 36

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for a style.
**Notes:** This style sets the font used when drawing control characters. Only the font, size, bold, italics, and character set attributes are used and not the colour attributes. See also: ControlCharSymbol method.

### 160.9.42 kStylesCommonDefault = 32

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for a style.
**Notes:** This style defines the attributes that all styles receive when the StyleClearAll method is used.

### 160.9.43 kStylesCommonFoldDisplayText = 39

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for a style.
**Notes:** This is the style used for drawing text tags attached to folded text.

### 160.9.44 kStylesCommonIndentGuide = 37

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for a style.
**Notes:** This style sets the foreground and background colours used when drawing the indentation guides.

### 160.9.45 kStylesCommonLastPredefined = 39

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for a style.
**Notes:** To make it easier for client code to discover the range of styles that are predefined, this is set to the style number of the last predefined style.

### 160.9.46 kStylesCommonLineNumber = 33

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for a style.
**Notes:** This style sets the attributes of the text used to display line numbers in a line number margin. The background colour set for this style also sets the background colour for all margins that do not have any folding mask bits set. That is, any margin for which mask & kMaskFolders is 0. See Mask in ScintillaMarginMBS class for more about masks.

### 160.9.47 kStylesCommonMax = 255

MBS Scintilla Plugin, Plugin Version: 22.0.

**Function:** One of the constants for a style.
**Notes:** This is not a style but is the number of the maximum style that can be set. Styles between kStylesCommonLastPredefined and kStylesCommonMax may be used.

# Chapter 161

# Screenshot

## 161.1 Globals

### 161.1.1 ScreenshotDisplayMBS(index as Integer) as picture

MBS Picture Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the Screenshot from the display with the given index.
**Example:**

Backdrop = ScreenshotDisplayMBS(0)

**Notes:**

Index starts at 0 for the main display.
Works on Linux only for first screen.

Plugin version 10.4 added support for multiple displays on Windows.

### 161.1.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.4pr7
- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr3

### 161.1.3 ScreenshotFromStringMBS(Width as Integer, Height as Integer, RowBytes as Integer, data as string) as picture

MBS Picture Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates the picture from a string returnd by ScreenshotStringMBS.
**Example:**

```
dim p as Picture
dim s as string

dim w,h,r as Integer

s=ScreenshotStringMBS(w,h,r)

p=ScreenshotFromStringMBS(w,h,r,s)

Backdrop=p
```

**Notes:**

Returns nil on any error.
(for example if width, height and rowwidth doesn't fit together.)

### 161.1.4 ScreenshotMBS as picture

MBS Picture Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a picture of the screen content in screen resolution.
**Example:**

```
dim p as picture
p=screenshotMBS
```

**Notes:**

For a rectangle only you can use ScreenShotRectMBS.

Plugin Version 7.2 adds Windows Vista Support.

### 161.1.5 Blog Entries

- MBS Xojo Plugins, version 19.2pr6
- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr3
- MBS Plugins 10.3 Release Notes
- MBS REALbasic Plugins, version 10.3pr9

### 161.1.6 ScreenshotRectMBS(left as Integer, top as Integer, width as Integer, height as Integer) as picture

MBS Picture Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a picture of the screen rectangle in screen resolution.
**Example:**

```
// write picture of window to desktop
# if TargetMacOS then
const f = 1
# else
dim f as double = screen(0).ScaleFactor
# endif

dim p as Picture = ScreenshotRectMBS(self.left*F, self.top*F, self.Width*F, self.Height*F)
dim ff as FolderItem = SpecialFolder.Desktop.Child("test.jpg")

p.Save(ff, p.SaveAsJPEG)
```

**Notes:**

Improved in Version 3.2 to support multiple displays on Mac OS.

Plugin Version 10.4 adds Windows support.
Coordinates given in pixel on screen, so for High DPI on Windows, you need to multiply them before passing parameters.

### 161.1.7 Blog Entries

- MBS Xojo Plugins, version 20.3pr2
- MBS Real Studio Plugins, version 11.2pr2

- MBS REALbasic Plugins, version 11.0pr13
- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr3
- MBS REALbasic plug-ins version 9.3

### 161.1.8 Xojo Developer Magazine

- 7.4, page 8: News

### 161.1.9 ScreenshotStringDisplayMBS(byref Width as Integer, byref Height as Integer, byref RowBytes as Integer, index as Integer) as string

MBS Picture Plugin, Plugin Version: 8.6, Platform: macOS, Targets: All.

**Function:** Returns a picture of the screen content in screen resolution.
**Example:**

```
dim s as string
dim w,h,r as Integer
dim index as Integer=0

s=ScreenshotStringDisplayMBS(w,h,r, index)
```

**Notes:**

Returns nil on any error.
Use ScreenshotFromStringMBS to get the picture from the string.

### 161.1.10 ScreenshotStringMBS(byref Width as Integer, byref Height as Integer, byref RowBytes as Integer) as string

MBS Picture Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a picture of the screen content in screen resolution.
**Example:**

```
dim s as string
dim w,h,r as Integer
s=ScreenshotStringMBS(w,h,r)
```

**Notes:**

Returns nil on any error.
Use ScreenshotFromStringMBS to get the picture from the string.

# Chapter 162

# SerialPort

## 162.1 class SerialPortMBS

### 162.1.1 class SerialPortMBS

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enumerate serial ports and send/receive data.
**Notes:** While we compiled this class also for iOS, we don't expect anyone to find a serial port on an iPhone.

### 162.1.5 Xojo Developer Magazine

- 20.6, page 9: News

### 162.1.6 Methods

### 162.1.7 AvailableBytes as Integer

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries number of bytes available in buffer.

### 162.1.8 Clear

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Clears incoming buffer.

### 162.1.9 Close

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Closes serial port.
**Notes:** This happens automatically in the destructor.

### 162.1.10 Constructor

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor.
**Notes:** Please call Open() to open a device.

### 162.1.11 HasDataAvailable as Boolean

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether data is available to read.

### 162.1.12 HasLine as Boolean

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Checks if a line is available.
**Notes:** The plugin checks the input buffer for a newline character.

### 162.1.13 List(Mode as Integer = 0) as String()

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns list of names of serial ports.
**Notes:**

Returns list of names of serial ports.
On Windows can list ports with textual name.

Mode can be 1 on Windows to return friendly names of ports.

### 162.1.14 Open(Name as String, Index as Integer = 0)

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens the serial port.
**Example:**

```
dim port as new SerialPortMBS

// open a port
```

```
port.Open("COM1")

// check the path
MessageBox port.Path
```

**Notes:**

You get the names from List function.
The port is opened with default settings.

Even if port is not showing in list, it may still open here, e.g. virtual COM ports on Windows.
You can open several ports with different connections, e.g. by calling Open once for each SerialPortMBS object.

### 162.1.15 Poll

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Polls to see if there is new data.
**Notes:** The plugin regularly checks if there is new data and raises the DataAvailable event if needed.

### 162.1.16 Read(MaxByteSizeToRead as Integer) as String

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads bytes from serial port and returns them as text.
**Notes:**

Reads bytes from serial port and returns them as text.
The text returned may be shorter than length bytes.
See also AvailableBytes function.

### 162.1.17 ReadByte as Integer

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the byte value or an error message.
**Notes:**

This is very useful for reading control characters which you can't easily put in a text in FileMaker.
Like 13 for a LF (line feed) or 10 for CR (carriage return).
See also AvailableBytes function.

### 162.1.18 ReadLine as String

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads a line of text from serial port.
**Notes:** The plugin buffers input and reads text until first newline character. Returns text without that newline character.

### 162.1.19 Resume

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Resumes serial port.
**Notes:** While suspended, we do not trigger event and clear incoming buffer regularly.

### 162.1.20 Suspend

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Suspends serial port.
**Notes:**

While suspended, we do not trigger event and clear incoming buffer regularly.
Please call Resume later.

### 162.1.21 Write(value as String) as Integer

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the number of bytes written or an error message.
**Notes:** Be aware that text encoding conversion may result in different bytes than expected, so please verify on other side the text encoding matches the expectations.

### 162.1.22 WriteByte(value as Integer) as Integer

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the number of bytes written.
**Notes:**

This is very useful for sending control characters which you can't easily put in a text in Xojo.
Like 13 for a LF (line feed) or 10 for CR (carriage return).

### 162.1.23 Properties

### 162.1.24 Handle as Integer

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read only property)

### 162.1.25 Lasterror as Integer

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The last error code.
**Notes:**

The error code is zero for no error.
On Windows you get the windows system error codes and on macOS and Linux the unix system error codes.

The methods and properties raise IOException in case of errors and include the error codes.
(Read only property)

### 162.1.26 Path as String

MBS Util Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The path used to open the serial port.
**Example:**

```
dim port as new SerialPortMBS

// open a port
port.Open("COM1")

// check the path
MessageBox port.Path
```

**Notes:**

Set by Open() method.
Value is e.g. "COM1"

(Read only property)

### 162.1.27 Suspended as Boolean

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Checks suspension state.
**Notes:**

Checks suspension state.
While suspended, we do not trigger event and clear incoming buffer regularly.
(Read only property)

### 162.1.28 Tag as Variant

MBS Util Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tag property.
**Notes:**

You can store whatever you like in this property to read it later.
(Read and Write property)

### 162.1.29 BaudRate as Integer

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries or sets the baud rate.
**Notes:** (Read and Write computed property)

### 162.1.30 CTS as Boolean

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The current CTS mode.
**Notes:**

If enabled, the CTS (clear-to-send) signal is monitored for output flow control.
Than if CTS is turned off, output is suspended until CTS is sent again.
(Read and Write computed property)

### 162.1.31 DataBits as Integer

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries or sets the data bit size.
**Notes:**

Value is 5, 6, 7 or 8.
(Read and Write computed property)

### 162.1.32 DSR as Boolean

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries or sets whether DSR mode is used.
**Notes:**

If enabled DSR (data-set-ready) signal is monitored for output flow control.
(Read and Write computed property)

### 162.1.33 DTR as Boolean

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries or sets whether DTR (data-terminal-ready) flow control is used.
**Notes:** (Read and Write computed property)

### 162.1.34 Parity as Integer

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries or sets parity setting.
**Notes:**

Can be 0 (off), 1 (odd) or 2 (even), see constants.
(Read and Write computed property)

### 162.1.35 RTS as Boolean

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries or sets whether to use RTS (request-to-send) flow control.
**Notes:** (Read and Write computed property)

### 162.1.36 StopBits as Double

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries or sets number of stop bits.
**Notes:**

Can be 1 or 2 on Mac/Linux and 1, 1.5 or 2 on Windows.
(Read and Write computed property)

### 162.1.37 WinRTSControl as Integer

MBS Util Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The RTS (request-to-send) flow control.
**Notes:**

This property gives you direct access to the RTS control setting on Windows.
And this is set to either disabled or handshake by the RTS property.

Raises an exception if used on MacOS or Linux.
(Read and Write computed property)

### 162.1.38 XON as Boolean

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries or sets if XON/XOFF flow control is used.
**Notes:** (Read and Write computed property)

### 162.1.39 Events

### 162.1.40 DataAvailable

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called when data is available.
**Notes:** Please call the Read methods here to process data.

### 162.1.41 Constants

### 162.1.42 kParityEven = 2

MBS Util Plugin, Plugin Version: 22.3.

**Function:** One of the parity modes.
**Notes:** Even parity

### 162.1.43 kParityNone = 0

MBS Util Plugin, Plugin Version: 22.3.

**Function:** One of the parity modes.
**Notes:** No parity

### 162.1.44 kParityOdd = 1

MBS Util Plugin, Plugin Version: 22.3.

**Function:** One of the parity modes.
**Notes:** Odd parity

### 162.1.45 kWinRTSControlDisabled = 0

MBS Util Plugin, Plugin Version: 22.4.

**Function:** One of the RTS (request-to-send) flow control constants for Windows.
**Notes:** Disables the RTS line when the device is opened and leaves it disabled.

### 162.1.46 kWinRTSControlEnabled = 1

MBS Util Plugin, Plugin Version: 22.4.

**Function:** One of the RTS (request-to-send) flow control constants for Windows.
**Notes:** Enables the RTS line when the device is opened and leaves it on.

### 162.1.47 kWinRTSControlHandshake = 2

MBS Util Plugin, Plugin Version: 22.4.

**Function:** One of the RTS (request-to-send) flow control constants for Windows.
**Notes:** Enables RTS handshaking. The driver raises the RTS line when the "type-ahead" (input) buffer is less than one-half full and lowers the RTS line when the buffer is more than three-quarters full.

### 162.1.48 kWinRTSControlToggle = 3

MBS Util Plugin, Plugin Version: 22.4.

**Function:** One of the RTS (request-to-send) flow control constants for Windows.
**Notes:** Specifies that the RTS line will be high if bytes are available for transmission. After all buffered bytes have been sent, the RTS line will be low.

# Chapter 163

# SFPassword

## 163.1 class SFPasswordAssistantMBS

### 163.1.1 class SFPasswordAssistantMBS

MBS MacExtras Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

**Function:** The class to help the user to create a new password.
**Notes:**

This is an Apple internal class with no public interface. It works for Mac OS X 10.4 and should work on 10.3 and 10.5.

You need to keep the reference to the SFPasswordAssistantMBS object in a global property. If the object in Xojo is destroyed while the panel is still visible, it will crash.

Do not call Close or PerformClose methods to close this window, use BaseWindowWillClose.
Not supported for 64 bit target.
Subclass of the NSPanelMBS class.

### 163.1.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 17.4
- MBS Xojo Plugins, version 17.4pr5
- MBS Plugins 10.3 Release Notes

### 163.1.3 Videos

- Presentation from Munich conference about MBS Plugins.

### 163.1.4 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 17.4
- MBS Xojo Plugins, version 17.4pr5
- MBS Plugins 10.3 Release Notes

### 163.1.5 Videos

- Presentation from Munich conference about MBS Plugins.

### 163.1.6 Methods

### 163.1.7 BaseWindowWillClose

MBS MacExtras Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

**Function:** Tells the panel that the base window will close.
**Notes:** If your window which uses the panel will close, you should call that method from the CancelClose method of your window.

### 163.1.8 Constructor

MBS MacExtras Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop only.

**Function:** The constructor to create a new password assistant panel.

### 163.1.9 ShowPanel

MBS MacExtras Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

**Function:** Shows the panel.
**Notes:**

This method does a bit more than just show.
It will create the panel, create a new password and run the password quality check.

### 163.1.10 Properties

### 163.1.11 Password as string

MBS MacExtras Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

**Function:** The current password.
**Notes:**

If you set the value, the new password is checked for quality and the TextChanged event may be fired.
(Read and Write computed property)

### 163.1.12 Events

### 163.1.13 TextChanged(text as string)

MBS MacExtras Plugin, Plugin Version: 7.5, Platform: macOS, Targets: .

**Function:** The text was changed.
**Notes:**

This event fires often.
It fires if the text changed (e.g. a letter was added) or sometimes it fires if the text was not changed.

So best if you need to update GUI, to check the text parameter and use timer. Restart the timer every time you get an event with a period of maybe 500 ms. So in case you don't get new events and the timer fires, you can update your GUI.

# Chapter 164

# Sharing Panel

## 164.1 class SharingPanelMBS

### 164.1.1 class SharingPanelMBS

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: Desktop & iOS.

**Function:** A view controller that you use to offer standard services from your app.
**Notes:**

The system provides several standard services, such as copying items to the pasteboard, posting content to social media sites, sending items via email or SMS, and more. Apps can also define custom services.
Your app is responsible for configuring, presenting, and dismissing this view controller. Configuration for the view controller involves specifying the data objects on which the view controller should act. (You can also specify the list of custom services your app supports.)

### 164.1.5 Xojo Developer Magazine

- 19.6, page 10: News

### 164.1.6 Methods

### 164.1.7 AddData(Data as MemoryBlock, subject as string = "")

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

**Function:** Add data to the list of items to share.

### 164.1.8 AddFile(File as FolderItem, subject as string = "")

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

**Function:** Add a file as URL to the list of items to share.

### 164.1.9 AddImage(image as NSImageMBS, subject as string = "")

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

**Function:** Add an image to the list of items to share.

### 164.1.10 AddPicture(pic as Picture, subject as string = "")

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

**Function:** Add an image to the list of items to share.

### 164.1.11 AddStyledText(text as NSAttributedStringMBS, subject as string = "")

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

**Function:** Add styled text to the list of items to share.
**Notes:** Subject is optional subject passed to email app.

### 164.1.12 AddText(text as string, subject as string = "")

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

**Function:** Add text to the list of items to share.
**Notes:** Subject is optional subject passed to email app.

### 164.1.13 AddURL(URL as string, subject as string = "")

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

**Function:** Add an URL to the list of items to share.

### 164.1.14 Constructor

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

**Function:** The constructor.

### 164.1.15 Destructor

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

**Function:** The destructor.

### 164.1.16 Dismiss

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

**Function:** Dismisses the controller.

### 164.1.17 ExcludedActivityTypes as String()

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

**Function:** Queries the list of excluded activity types.

### 164.1.18 Items as Variant()

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

**Function:** Copies the items to share.

### 164.1.19 Present

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

**Function:** Presents the controller.

### 164.1.20 SetExcludedActivityTypes(ActivityTypess() as String)

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

**Function:** Sets the list of excluded activity types.

### 164.1.21 SetItems(items() as Variant)

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

**Function:** Sets the items to share with an variant array.

### 164.1.22 UIActivityTypeAddToReadingList as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

**Function:** One of the activity types.
**Notes:**

A type of activity that adds the URL to Safari,Äôs reading list.
When using this service, you can provide an URL whose contents uses the http or https scheme that points

to the page to add.

### 164.1.23 UIActivityTypeAirDrop as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

**Function:** One of the activity types.
**Notes:**

A type of activity that makes the provided content available through AirDrop.
When using this service, you can provide String, NSAttributedStringMBS, picture, and URLs as data for the activity items. You may also provide Array or Dictionary objects that contain the listed data types.

### 164.1.24 UIActivityTypeAssignToContact as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

**Function:** One of the activity types.
**Notes:**

A type of activity that assigns the image to a contact.
When using this service, you can provide a picture object as data for the activity items.

### 164.1.25 UIActivityTypeCopyToPasteboard as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

**Function:** One of the activity types.
**Notes:**

A type of activity that posts the provided content to the pasteboard.

When using this service, you can provide string, picture, URL, color, and Dictionary objects as data for the activity items.

### 164.1.26 UIActivityTypeMail as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

**Function:** One of the activity types.
**Notes:**

A type of activity that posts the provided content to a new email message.

When using this service, you can provide string and picture objects and URLs pointing to local files as data for the activity items.
Optional subject for items are passed for email subject.

### 164.1.27 UIActivityTypeMarkupAsPDF as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

**Function:** One of the activity types.
**Notes:** A type of activity that marks up the provided content as a PDF file.

### 164.1.28 UIActivityTypeMessage as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

**Function:** One of the activity types.
**Notes:**

A type of activity that posts the provided content to the Messages app.
When using this service, you can provide string and NSAttributedStringMBS objects as data for the activity items. You may also specify URLs whose contents use the sms scheme.
If the device has MMS or FaceTime enabled, you can provide picture, and URLs as data for the activity items.

### 164.1.29 UIActivityTypeOpenInIBooks as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

**Function:** One of the activity types.
**Notes:** A type of activity that opens the content in iBooks.

### 164.1.30 UIActivityTypePostToFacebook as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

**Function:** One of the activity types.
**Notes:**

A type of activity that posts the provided content to the user,Äôs wall on Facebook.
When using this service, you can provide String, NSAttributedStringMBS, picture, and URLs as data for

the activity items.

### 164.1.31 UIActivityTypePostToFlickr as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

**Function:** One of the activity types.
**Notes:**

A type of activity that posts the provided image to the user,Äôs Flickr account.
When using this service, you can provide picture and URLs whose contents use the file scheme and point to an image. You can also use MemoryBlock whose contents are image data as data for the activity items.

### 164.1.32 UIActivityTypePostToTencentWeibo as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

**Function:** One of the activity types.
**Notes:**

A type of activity that posts the provided content to the user,Äôs Tencent Weibo feed.
When using this service, you can provide String, NSAttributedStringMBS, picture, and URL as data for the activity items.

### 164.1.33 UIActivityTypePostToTwitter as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

**Function:** One of the activity types.
**Notes:**

A type of activity that posts the provided content to the user,Äôs Twitter feed.
When using this service, you can provide String, NSAttributedStringMBS, picture, and URL as data for the activity items.

### 164.1.34 UIActivityTypePostToVimeo as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

**Function:** One of the activity types.
**Notes:**

A type of activity that posts the provided video to the user,Äôs Vimeo account.
When using this service, you can provide data from URL/folderItem whose contents use the file scheme and point to a video. You can use MemoryBlock objects whose contents are video data as data for the activty items.

### 164.1.35 UIActivityTypePostToWeibo as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

**Function:** One of the activity types.
**Notes:**

A type of activity that posts the provided content to the user,Äôs Weibo feed.
When using this service, you can provide picture and URLs whose contents use the file scheme and point to an image. You can also use MemoryBlock whose contents are image data as data for the activity items.

### 164.1.36 UIActivityTypePrint as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

**Function:** One of the activity types.
**Notes:**

A type of activity that prints the provided content.

When using this service, you can provide picture and MemoryBlock objects and URL/folderitem pointing to local files as data for the activity items.

### 164.1.37 UIActivityTypeSaveToCameraRoll as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

**Function:** One of the activity types.
**Notes:**

A type of activity that assigns the image or video to the user,Äôs camera roll.

When using this service, you can provide a picture as data for image-based activity items. For image and video items, you can provide an URL/file with a path to the video.

### 164.1.38 Properties

### 164.1.39 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 164.1.40 isBeingPresented as Boolean

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

**Function:** A Boolean value indicating whether the view controller is being presented.
**Notes:** (Read only property)

### 164.1.41 Events

### 164.1.42 Completed(activityType as String, completed as Boolean, activityError as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: .

**Function:** The event called after the activity view controller is dismissed.
**Notes:**

Upon the completion of an activity, or the dismissal of the activity view controller, the view controller,Äôs completion block is executed. You can use this block to execute any final code related to the service. The parameters of this block are as follows:

activityType: The type of the service that was selected by the user. For custom services, this is the value returned by the activityType method of a UIActivity object. For system-defined activities, it is one of the strings listed in "Built-in Activity Types,Äù in UIActivity.
completed: True if the service was performed or false if it was not. This parameter is also set to false when the user dismisses the view controller without selecting a service.
activityError: An error object if the activity failed to complete, or nil if the the activity completed normally.

# Chapter 165

# Shell

## 165.1 Globals

### 165.1.1 ConsoleExecuteMBS(path as folderitem, arguments() as string, environment() as string) as Integer

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

**Function:** Executes a new application.
**Notes:**

Use WindowsShellExecuteMBS on Windows.

Launch GUI tools on Mac OS X using /bin/open.
Returned value is the PID of the new process.
If the execution fails you still get a PID, but this process is terminated in a few milliseconds.

arguments must have at least one member.

See also WindowsProcessMBS and WindowsShellExecuteMBS (Windows only), NSTask (Mac only) and ShellMBS (cross platform).
See also:

- 165.1.2 ConsoleExecuteMBS(path as string, arguments() as string, environment() as string) as Integer 24520

### 165.1.2 ConsoleExecuteMBS(path as string, arguments() as string, environment() as string) as Integer

MBS Util Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

**Function:** Executes a new application.
**Example:**

```
// launch an app using open

const sShellPath="/usr/bin/open"

dim a(1) as string
dim e(-1) as string

a(0)="open" // must be the application name
a(1)="/Applications/TextEdit.app" // first parameter

print str(ConsoleExecuteMBS(sShellPath,a,e))

// Launch app binary directly:

dim aa(1) as string
dim ee(-1) as string

dim f as FolderItem

f=GetFolderItem("test.app").Child("Contents").Child("MacOS").Child("test")

aa(0)=f.ShellPath

print str(ConsoleExecuteMBS(f.ShellPath,aa,ee))
```

**Notes:**

Use WindowsShellExecuteMBS on Windows.

Launch GUI tools on Mac OS X using /bin/open.
Returned value is the PID of the new process.
If the execution fails you still get a PID, but this process is terminated in a few milliseconds.

arguments must have at least one member.

See also WindowsProcessMBS, WindowsShellExecuteAsAdminMBS and WindowsShellExecuteMBS (Windows only), NSTask (Mac only) and ShellMBS (cross platform).

### 165.1.3 Blog Entries

- MBS Xojo Plugins, version 21.5pr2

See also:

- 165.1.1 ConsoleExecuteMBS(path as folderitem, arguments() as string, environment() as string) as Integer 24519

## 165.2 class ShellMBS

### 165.2.1 class ShellMBS

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The class in MBS Plugins to run executables.
**Example:**

```
Dim s As New ShellMBS

s.Execute "/usr/bin/whoami"
s.Wait 5

Dim output As String = s.ReadOutput
Dim errors As String = s.ReadError

Break // see in debugger

MsgBox "whoami: "+output
```

**Notes:**

Via input stream, we can send data to the process.
And via output and error streams, we can read data coming back.

While this class does the same as Shell class in Xojo, we have the possibility to add more in the future.
For now you can benefit from an alternative implementation with stderr and stdout as two streams. Also we feature terminate methods to kill the child process.

See also WindowsProcessMBS, WindowsShellExecuteAsAdminMBS and WindowsShellExecuteMBS (Windows only), ConsoleExecuteMBS and NSTaskMBS (Mac only).

### 165.2.8 Methods

### 165.2.9 Arguments as String()

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Queries arguments array.
**Example:**

```
// query execution policy in PowerShell
Dim s As New ShellMBS

s.Arguments.Append "-Command"
s.Arguments.Append "Get-ExecutionPolicy -List"

s.Execute "powershell.exe"
s.Wait 5

Dim output As String = s.ReadOutput
Dim errors As String = s.ReadError

Break // see in debugger
```

**Notes:** You can add arguments to this array.

### 165.2.10 CloseInput

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Closes stdin to the process.
**Notes:** Sometimes this is needed as some processes wait till stdin is closed.

### 165.2.11 CloseStreams

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Closes the streams.
**Notes:** Automatically done in destructor.

### 165.2.12 Constructor

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.

### 165.2.13 Destructor

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The destructor.

### 165.2.14 Execute(Executable as String)

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Runs the executable.
**Example:**

```
// run PowerShell and get help
Dim s As New ShellMBS

s.SetArguments array("/?")
s.Execute "powershell.exe"
s.Wait 5

Dim output As String = s.ReadOutput
Dim errors As String = s.ReadError

Break // see in debugger
```

**Notes:**

Pass path to executable to run.
Opens the streams stdin, stdout and stderr.

### 165.2.15 ExitCode as Integer

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Queries the exit code of the terminated process.

### 165.2.16 Poll

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Polls for events.
**Notes:**

This will check for pending event and fire events if needed.
Internally we call this with a timer for the shell object, but you can call this in a tight loop.

### 165.2.17 ReadError as String

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Reads data from stderr.
**Notes:** Queries available bytes to return all the data in the buffer.

### 165.2.18 ReadOutput as String

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Reads data from stdout.
**Notes:** Queries available bytes to return all the data in the buffer.

### 165.2.19 SetArguments(arguments() as String)

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Assigns a new array of arguments.
**Example:**

```
Dim sh as new ShellMBS
Dim args() As String

args.Append "-c"
args.Append "5"
args.Append "monkeybreadsoftware.com"

sh.SetArguments args
```

### 165.2.20 Terminate(WinExitCode as Integer = 255) as boolean

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Terminates the app with the given exit code.
**Notes:**

ExitCode is only used on Windows.
Returns true on success.

### 165.2.21 Wait(TimeOut as double = 30.0)

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Waits for process to quit.
**Notes:** Yields time and waits until time passed or process terminates.

### 165.2.22 WriteInput(data as string) as Integer

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sends data to stdin of the running process.
**Notes:** Returns number of bytes written.

### 165.2.23 Properties

### 165.2.24 ApplicationName as String

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The path to the application.
**Notes:**

Can be empty when application is part of command line.
Only for Windows.
(Read and Write property)

### 165.2.25 AvailableBytesError as Integer

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Queries number of available bytes on stderr.
**Notes:** (Read only property)

### 165.2.26 AvailableBytesOutput as Integer

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Queries number of available bytes on stdout.
**Notes:** (Read only property)

### 165.2.27 CurrentDirectory as String

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The current directory for the process.
**Notes:**

You can set this before calling Execute to specify the start directory.
If this parameter is "", the new process will have the same current drive and directory as the calling process.

(Read and Write property)

### 165.2.28 Domain as String

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The domain name.
**Notes:**

Only used on Windows.
You can set username and password to run app with different user. Domain is optional to specify network domain.
(Read and Write property)

### 165.2.29 Environment as Dictionary

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The environment variables to use.
**Notes:** (Read and Write property)

### 165.2.30 ErrorCode as Integer

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Last native error code.
**Notes:**

Zero is success.
(Read only property)

### 165.2.31 Executable as String

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The command line to run.
**Notes:**

On Mac and Linux just the path to executable.
If applicationName is set for Windows, this should only provide parameters.
(Read only property)

### 165.2.32 IsRunning as Boolean

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Checks whether process is running.
**Notes:**

Returns true if running or false if not.

The process may not terminate if there is still output data in the pipes. So please read error/stdout regularly.
(Read only property)

### 165.2.33 Password as String

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The password.
**Notes:**

You can set username and password to run app with different user. Domain is optional to specify network domain.
Only for Windows.
(Read and Write property)

### 165.2.34 PID as Integer

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The process ID of the child process.
**Notes:** (Read only property)

### 165.2.35 ProcessHandle as Integer

MBS Util Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** For Windows the process handle.
**Notes:** (Read only property)

### 165.2.36 Tag as Variant

MBS Util Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The tag property.
**Notes:**

You can store whatever you like in this property to read it later.
(Read and Write property)

### 165.2.37 ThreadHandle as Integer

MBS Util Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** For Windows the thread handle for the child process.
**Notes:** (Read only property)

### 165.2.38 Username as String

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The user name.
**Notes:**

You can set username and password to run app with different user. Domain is optional to specify network domain.
Only for Windows.
(Read and Write property)

### 165.2.39 Events

### 165.2.40 Completed

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called when process terminated.

### 165.2.41 DataAvailable(AvailableBytesError as Integer, AvailableBytesOutput as Integer)

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Event called when new data is available on stderr or stdout.
**Notes:** You need to use read commands to query data.

## 165.3 class WindowsProcessMBS

### 165.3.1 class WindowsProcessMBS

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The class to run processes on Windows.
**Example:**

```
// run command
dim w as new WindowsProcessMBS

w.CommandLine = "cmd /c dir"
w.CurrentDirectory = "C:"

if not w.run then
MsgBox w.LastErrorMessage
Return
end if

// wait
while w.Running
app.YieldToNextThread
wend

// show result
dim a as Integer = w.AvailableBytesOutput
dim r as string = w.ReadOutput(a)
MsgBox r
```

**Notes:**

Can be used like shell, but with more windows specific options.
For interactive shell, you need to run cmd.exe yourself.
This shell is asynchronously. For synchrones mode, please write yourself a loop waiting for process to finish.

Please read Microsoft documentation for more details:
https://msdn.microsoft.com/en-us/library/windows/desktop/ms682425(v=vs.85).aspx

See also NSTask (Mac only), WindowsShellExecuteAsAdminMBS, WindowsShellExecuteMBS (Windows only), ConsoleExecuteMBS and ShellMBS (cross platform).

- Presentation from London conference about MBS Plugins.

### 165.3.8 Methods

### 165.3.9 Close

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Closes the process.
**Notes:** Same as destructor.

### 165.3.10 PeekError(Length as Integer = 0) as String

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Peeks in stderr.

### 165.3.11 PeekOutput(Length as Integer = 0) as String

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Peeks in stdout.

### 165.3.12 ReadError(Length as Integer = 0) as String

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Reads data from stderr.
**Notes:** Please pass maximum number of bytes to read.

### 165.3.13 ReadOutput(Length as Integer = 0) as String

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Reads data from stdout.
**Notes:** Please pass maximum number of bytes to read.

### 165.3.14 Run as Boolean

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Starts the process.
**Notes:** Returns true on success or false on failure.

### 165.3.15 SetKillProcessWhenParentDies as boolean

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Sets process to be killed automatically.
**Notes:**

When Xojo application ends, the process you started is killed automatically.
Returns true if option is set or false on failure.

### 165.3.16 Terminate(ExitCode as Integer) as Boolean

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Terminates the app with the given exit code.
**Notes:** Returns true on success.

### 165.3.17 Write(Data as MemoryBlock) as Integer

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Sends data to stdin of the running process.
**Notes:** Returns number of bytes written.
See also:

- 165.3.18 Write(Data as String) as Integer 24535

### 165.3.18 Write(Data as String) as Integer

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Sends data to stdin of the running process.
**Notes:** Returns number of bytes written.
See also:

- 165.3.17 Write(Data as MemoryBlock) as Integer 24535

### 165.3.19 Properties

### 165.3.20 ApplicationName as String

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The path to the application.
**Notes:**

Can be empty when application is part of command line.
(Read and Write property)

### 165.3.21 AvailableBytesError as Integer

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Queries number of available bytes on stderr.
**Notes:** (Read only property)

### 165.3.22 AvailableBytesOutput as Integer

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Queries number of available bytes on stdout.
**Notes:** (Read only property)

### 165.3.23 CommandLine as String

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The command line to run.
**Example:**

```
// Run PowerShell to query execution policy

Dim s As New WindowsProcessMBS
s.CommandLine = "powershell.exe -Command ""Get-ExecutionPolicy -List"""

if s.run then
DelayMBS 0.5

while s.Running
// wait
app.YieldToNextThread
```

```
DelayMBS 0.1
wend

dim a as Integer = s.AvailableBytesOutput
Dim output As String = s.ReadOutput(a)

Break // see in debugger

else
break // failed
end if
```

**Notes:**

If applicationName is set, this should only provide parameters.
(Read and Write property)

### 165.3.24 CurrentDirectory as String

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The current directory for the process.
**Notes:**

You can set this before calling Run to specify the start directory.
If this parameter is "", the new process will have the same current drive and directory as the calling process.
(Read and Write property)

### 165.3.25 Domain as String

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The domain name.
**Notes:**

You can set username and password to run app with different user. Domain is optional to specify network domain.
(Read and Write property)

### 165.3.26 Environment as Dictionary

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The environment variables to use.
**Example:**

```
// run command
dim w as new WindowsProcessMBS

w.CommandLine = "cmd /c echo % TEST% "

// set environment
dim env as new Dictionary
env.Value("TEST") = "Hello World"
w.Environment = env

if not w.run then
MsgBox w.LastErrorMessage
Return
end if

// wait
while w.Running
app.YieldToNextThread
wend

// show result
dim a as Integer = w.AvailableBytesOutput
dim r as string = w.ReadOutput(a)
MsgBox r
```

**Notes:** (Read and Write property)

### 165.3.27 ExitCode as Integer

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Queries the exit code of the terminated process.
**Notes:** (Read only property)

### 165.3.28 LastError as Integer

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Last windows error code.
**Notes:** (Read only property)

### 165.3.29 LastErrorMessage as String

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The message text for the last error.
**Notes:** (Read only property)

### 165.3.30 Password as String

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The password.
**Notes:**

You can set username and password to run app with different user. Domain is optional to specify network domain.
(Read and Write property)

### 165.3.31 ProcessHandle as Integer

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** For Windows the process handle.
**Notes:** (Read only property)

### 165.3.32 ProcessID as Integer

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The process ID of the process.
**Notes:** (Read only property)

### 165.3.33 Running as Boolean

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Checks whether process is running.
**Notes:**

Returns true if running or false if not.

The process may not terminate if there is still output data in the pipes. So please read error/stdout regularly.
(Read only property)

### 165.3.34 ThreadHandle as Integer

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** For Windows the thread handle for the child process.
**Notes:** (Read only property)

### 165.3.35 ThreadID as Integer

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The thread ID of the main thread for the process.
**Notes:** (Read only property)

### 165.3.36 UserName as String

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The user name.
**Notes:**

You can set username and password to run app with different user. Domain is optional to specify network domain.
(Read and Write property)

### 165.3.37 Events

### 165.3.38 DataAvailable(AvailableBytesOutput as Integer, AvailableBytesError as Integer)

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: .

**Function:** The event called when data is available for stdout or stderr.

### 165.3.39 Terminated(ExitCode as Integer)

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: .

**Function:** The event called when process terminated.

# Chapter 166

# SmartCard

## 166.1 class SmartCardContextMBS

### 166.1.1 class SmartCardContextMBS

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The class for a SmartCard context.
**Example:**

```
dim c as new SmartCardContextMBS
dim list() as string = c.Readers
MsgBox Join(list, EndOfLine)
```

### 166.1.2 Blog Entries

- MBS Xojo Plugins, version 19.6pr1

### 166.1.3 Blog Entries

- MBS Xojo Plugins, version 19.6pr1

### 166.1.4 Methods

### 166.1.5 Cancel

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Terminates all outstanding actions within a specific resource manager context.
**Notes:**

The only requests that you can cancel are those that require waiting for external action by the smart card or user. Any such outstanding action requests will terminate with a status indication that the action was canceled. This is especially useful to force outstanding GetStatusChange calls to terminate.

Lasterror is set.

### 166.1.6 Connect(reader as string, ShareMode as UInt32, PreferredProtocols as UInt32) as SmartCardMBS

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Connects to a smartcard.
**Example:**

```
dim c as new SmartCardContextMBS

dim s as SmartCardMBS
s = c.Connect("MyReader", SmartCardMBS.kShareShared, SmartCardMBS.kProtocolAny)
if s <>nil then
MsgBox "Connected"
else
MsgBox "Error: "+str(c.Lasterror)
end if
```

**Notes:**

Establishes a connection (using a specific resource manager context) between the calling application and a smart card contained by a specific reader. If no card exists in the specified reader, an error is returned.

Reader: The name of the reader that contains the target card.
ShareMode: A flag that indicates whether other applications may form connections to the card. Use one of SmartCardMBS.kShare* constants. e.g. kShareExclusive
PreferredProtocols: A bitmask of acceptable protocols for the connection. Possible values may be combined

with the OR operation. Use SmartCardMBS.kProtocol* constants. e.g. kProtocolT1

Lasterror and ActiveProtocol are set.
Returns on success a smartcard object, else returns nil.

### 166.1.7 Constructor

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Initializes a smartcard context.

### 166.1.8 IsValid as boolean

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Determines whether a smart card context handle is valid.
**Notes:** Returns true if valid or false if not valid.

### 166.1.9 ReaderGroups as string()

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Provides the list of reader groups that have previously been introduced to the system.
**Notes:**

The groups may be SCard$ AllReaders, SCard$ DefaultReaders, SCard$ LocalReaders and SCard$ SystemReaders.
Lasterror is set.

### 166.1.10 Readers as string()

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Provides the list of readers within a set of named reader groups, eliminating duplicates.
**Example:**

```
dim c as new SmartCardContextMBS
dim list() as string = c.Readers
```

MsgBox Join(list, EndOfLine)

**Notes:** Lasterror is set.
See also:

- 166.1.11 Readers(ReaderGroups() as string) as string() 24546

### 166.1.11 Readers(ReaderGroups() as string) as string()

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Provides the list of readers within a set of named reader groups, eliminating duplicates.
**Notes:**

The caller supplies a list of reader groups, and receives the list of readers within the named groups. Unrecognized group names are ignored. This function only returns readers within the named groups that are currently attached to the system and available for use.

ReaderGroups: The reader groups you like to query.
Lasterror is set.
See also:

- 166.1.10 Readers as string() 24545

### 166.1.12 Properties

### 166.1.13 Available as Boolean

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Whether the smartcard API is available.
**Notes:**

This should be available on Mac and Windows.

Loads on Mac the PCSC.framework.
For Linux you need pcsclite library installed. We try to load libpcsclite.so or /usr/lib/libpcsclite.so.
On Windows we use winscard.dll built into Windows.
(Read only property)

### 166.1.14 Handle as Integer

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

### 166.1.15 Lasterror as Integer

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The last error code.
**Notes:** (Read and Write property)

### 166.1.16 Constants

### 166.1.17 kErrorBadSeek = & H80100029

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** An error occurred in setting the smart card file object pointer.

### 166.1.18 kErrorCancelled = & H80100002

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** The action was canceled by an Cancel request.

### 166.1.19 kErrorCancelledByUser = & H8010006E

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** The action was canceled by the user.

### 166.1.20 kErrorCantDispose = & H8010000E

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** The system could not dispose of the media in the requested manner.

### 166.1.21 kErrorCardNotAuthenticated = & H8010006F

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** No PIN was presented to the smart card.

### 166.1.22 kErrorCardUnsupported = & H8010001C

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** The smart card does not meet minimal requirements for support.

### 166.1.23 kErrorCertificateUnavailable = & H8010002D

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** The requested certificate could not be obtained.

### 166.1.24 kErrorChvBlocked = & H8010006C

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** The card cannot be accessed because the maximum number of PIN entry attempts has been reached.

### 166.1.25 kErrorCommDataLost = & H8010002F

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** A communications error with the smart card has been detected.

### 166.1.26 kErrorCommError = & H80100013

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** An internal communications error has been detected.

### 166.1.27 kErrorDirNotFound = & H80100023

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** The specified directory does not exist in the smart card.

### 166.1.28 kErrorDuplicateReader = & H8010001B

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** The reader driver did not produce a unique reader name.

### 166.1.29 kErrorEof = & H8010006D

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** The end of the smart card file has been reached.

### 166.1.30 kErrorFileNotFound = & H80100024

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** The specified file does not exist in the smart card.

### 166.1.31 kErrorIccCreateorder = & H80100021

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** The requested order of object creation is not supported.

### 166.1.32 kErrorIccInstallation = & H80100020

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** No primary provider can be found for the smart card.

### 166.1.33 kErrorInsufficientBuffer = & H80100008

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** The data buffer for returned data is too small for the returned data.

### 166.1.34 kErrorInternalError = & H80100001

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** An internal consistency check failed.

### 166.1.35 kErrorInvalidAtr = & H80100015

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** An ATR string obtained from the registry is not a valid ATR string.

### 166.1.36 kErrorInvalidChv = & H8010002A

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** The supplied PIN is incorrect.

### 166.1.37 kErrorInvalidHandle = & H80100003

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** The supplied handle was not valid.

### 166.1.38 kErrorInvalidParameter = & H80100004

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** One or more of the supplied parameters could not be properly interpreted.

### 166.1.39 kErrorInvalidTarget = & H80100005

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** Registry startup information is missing or not valid.

### 166.1.40 kErrorInvalidValue = & H80100011

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** One or more of the supplied parameter values could not be properly interpreted.

### 166.1.41 kErrorNoAccess = & H80100027

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** Access is denied to the file.

### 166.1.42 kErrorNoDir = & H80100025

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** The supplied path does not represent a smart card directory.

### 166.1.43 kErrorNoFile = & H80100026

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** The supplied path does not represent a smart card file.

### 166.1.44 kErrorNoKeyContainer = & H80100030

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** The requested key container does not exist on the smart card.

### 166.1.45 kErrorNoMemory = & H80100006

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** Not enough memory available to complete this command.

### 166.1.46 kErrorNoReadersAvailable = & H8010002E

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** No smart card reader is available.

### 166.1.47 kErrorNoService = & H8010001D

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** The smart card resource manager is not running.

### 166.1.48 kErrorNoSmartcard = & H8010000C

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** The operation requires a smart card, but no smart card is currently in the device.

### 166.1.49 kErrorNoSuchCertificate = & H8010002C

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** The requested certificate does not exist.

### 166.1.50 kErrorNotReady = & H80100010

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** The reader or card is not ready to accept commands.

### 166.1.51 kErrorNotTransacted = & H80100016

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** An attempt was made to end a nonexistent transaction.

### 166.1.52 kErrorPciTooSmall = & H80100019

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** The PCI receive buffer was too small.

### 166.1.53 kErrorProtoMismatch = & H8010000F

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** The requested protocols are incompatible with the protocol currently in use with the card.

### 166.1.54 kErrorReaderUnavailable = & H80100017

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** The specified reader is not currently available for use.

### 166.1.55 kErrorReaderUnsupported = & H8010001A

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** The reader driver does not meet minimal requirements for support.

### 166.1.56 kErrorRemovedCard = & H80100069

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** The smart card has been removed, so further communication is not possible.

### 166.1.57 kErrorResetCard = & H80100068

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** The smart card was reset.

### 166.1.58 kErrorSecurityViolation = & H8010006A

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** Access was denied because of a security violation.

### 166.1.59 kErrorServerTooBusy = & H80100031

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** The smart card resource manager is too busy to complete this operation.

### 166.1.60 kErrorServiceStopped = & H8010001E

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** The smart card resource manager has shut down.

### 166.1.61 kErrorSharingViolation = & H8010000B

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** The smart card cannot be accessed because of other outstanding connections.

### 166.1.62 kErrorShutdown = & H80100018

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** The operation has been aborted to allow the server application to exit.

### 166.1.63 kErrorSuccess = 0

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** No error.

### 166.1.64 kErrorSystemCancelled = & H80100012

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** The action was canceled by the system, presumably to log off or shut down.

### 166.1.65 kErrorTimeout = & H8010000A

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** The user-specified time-out value has expired.

### 166.1.66 kErrorUnexpected = & H8010001F

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** An unexpected card error has occurred.

### 166.1.67 kErrorUnknownCard = & H8010000D

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** The specified smart card name is not recognized.

### 166.1.68 kErrorUnknownError = & H80100014

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** An internal error has been detected, but the source is unknown.

### 166.1.69 kErrorUnknownReader = & H80100009

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** The specified reader name is not recognized.

### 166.1.70 kErrorUnknownResMng = & H8010002B

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** An unrecognized error code was returned.

### 166.1.71 kErrorUnpoweredCard = & H80100067

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** Power has been removed from the smart card, so that further communication is not possible.

### 166.1.72 kErrorUnresponsiveCard = & H80100066

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** The smart card is not responding to a reset.

### 166.1.73 kErrorUnsupportedCard = & H80100065

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** The reader cannot communicate with the card, due to ATR string configuration conflicts.

### 166.1.74 kErrorUnsupportedFeature = & H80100022

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** This smart card does not support the requested feature.

### 166.1.75 kErrorWaitedTooLong = & H80100007

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** An internal consistency timer has expired.

### 166.1.76 kErrorWriteTooMany = & H80100028

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** An attempt was made to write more data than would fit in the target object.

### 166.1.77 kErrorWrongChv = & H8010006B

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the error codes.
**Notes:** The card cannot be accessed because the wrong PIN was presented.

## 166.2 class SmartCardMBS

### 166.2.1 class SmartCardMBS

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The class for a smartcard.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- New functions for smart card reading

### 166.2.4 Methods

### 166.2.5 BeginTransaction

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Starts a transaction.
**Notes:**

The function waits for the completion of all other transactions before it begins. After the transaction starts, all other applications are blocked from accessing the smart card while the transaction is in progress.

If a transaction is held on the card for more than five seconds with no operations happening on that card, then the card is reset. Calling any of the Smart Card and Reader Access Functions or Direct Card Access Functions on the card that is transacted results in the timer being reset to continue allowing the transaction to be used.
The BeginTransaction function is a smart card and reader access function. For more information about other access functions, see Smart Card and Reader Access Functions.

Lasterror is set.

### 166.2.6 CancelTransaction

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Cancels current transaction.
**Notes:** Lasterror is set.

### 166.2.7 Constructor

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The private constructor.

### 166.2.8 Control(ControlCode as Integer, input as ptr, inputLength as UInt32, output as ptr, byref outputLength as UInt32)

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Direct control of the reader.
**Notes:**

You can call it any time after a successful call to SmartCard.Connect and before a successful call to SmartCard.Disconnect. The effect on the state of the reader depends on the control code.

ControlCode: Control code for the operation. This value identifies the specific operation to be performed.

Input: Pointer to a buffer that contains the data required to perform the operation. This parameter can be nil if the ControlCode parameter specifies an operation that does not require input data.
inputLength: Size, in bytes, of the buffer pointed to by Input.
output: Pointer to a buffer that receives the operation's output data. This parameter can be nil if the ControlCode parameter specifies an operation that does not produce output data.
outputLength: On input the size, in bytes, of the buffer pointed to by output. On output the receives the size, in bytes, of the data stored into the buffer pointed to by output.

Lasterror is set.

### 166.2.9 Disconnect(Disposition as Integer = 0)

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Terminates a connection previously opened between the calling application and a smart card in the target reader.
**Notes:**

Disposition: Action to take on the card in the connected reader on close.
can be:

| | |
|---|---|
| kUnpowerCard | Power down the card and reset it (Cold Reset). |
| kResetCard | Reset the card (Warm Reset). |
| kLeaveCard | Do not do anything special on reconnect. |
| kEjectCard | Eject card. |

Lasterror is set.

### 166.2.10 EndTransaction(Disposition as Integer = 0)

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Ends transaction.
**Notes:**

Completes a previously declared transaction, allowing other applications to resume interactions with the card.

Disposition: Action to take on the card in the connected reader on close. Can be Eject, Leave, Reset or Unpower. See constants.

Lasterror is set.

### 166.2.11 GetAttrib(AttrId as UInt32) as Memoryblock

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Retrieves the current reader attributes for the given handle.
**Notes:**

It does not affect the state of the reader, driver, or card.
The plugin first queries for size of attribute and on success queries again to get the data and return it as a memoryblock.

AttrId: The attribute ID. See kAttribute* constants.

Lasterror is set.

### 166.2.12 ReadFile(FileID as MemoryBlock) as MemoryBlock

MBS Tools Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Read file from smart card with APDU protocol.
**Notes:**

Returns data as MemoryBlock or error message.
The first two bytes are status code.

For Swiss health cards, the relevant IDs are 2F06 and 2F07.

For Belgian EID:

You find the IDs for files usually in documentation or your card!

| | |
|---|---|
| 4031 | ID RN |
| 4032 | SGN RN |
| 4033 | ID Address |
| 4034 | SGN Address |
| 4035 | ID Photo |

For some cards you may first need to move down a hierarchy of folders to get an item via Transmit().

### 166.2.13 Reconnect(ShareMode as UInt32, PreferredProtocols as UInt32, Initialization as UInt32)

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The Reconnect function reestablishes an existing connection between the calling application and a smart card.
**Notes:**

This function moves a card handle from direct access to general access, or acknowledges and clears an error condition that is preventing further access to the card.

Initialization can be one of the following:

| | |
|---|---|
| kUnpowerCard | Power down the card and reset it (Cold Reset). |
| kResetCard | Reset the card (Warm Reset). |
| kLeaveCard | Do not do anything special on reconnect. |

ShareMode: A flag that indicates whether other applications may form connections to the card. Use one of SmartCardMBS.kShare* constants. e.g. kShareExclusive
PreferredProtocols: A bitmask of acceptable protocols for the connection. Possible values may be combined with the OR operation. Use SmartCardMBS.kProtocol* constants. e.g. kProtocolT1

Lasterror and ActiveProtocol are set.

### 166.2.14 SetAttrib(AttrId as UInt32, mem as Memoryblock)

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the given reader attribute.
**Notes:**

It does not affect the state of the reader, reader driver, or smart card. Not all attributes are supported by all readers (nor can they be set at all times) as many of the attributes are under direct control of the transport protocol.

AttrId: The attribute ID. See kAttribute* constants.
Mem: The data to store.

Lasterror is set.

### 166.2.15 SplitValues(Data as MemoryBlock) as Dictionary

MBS Tools Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Split values read from smart card.
**Notes:**

Files on smartcard can contain key/value data.
Returns Dictionary with numbers (key) and values as strings.

### 166.2.16 Status(byref Reader as string, byref State as Integer, byref Protocol as Integer, byref CardID as string)

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Provides the current status of a smart card in a reader.
**Notes:**

You can call it any time after a successful call to SCardConnect and before a successful call to SCardDisconnect. It does not affect the state of the reader or reader driver.

Provides reader name, state of card (see kState constants), Protocol (see kProtocol constants) and CardID.

State: Current state of the smart card in the reader. Upon success, it receives one of the following state indicators.
Protocol: Current protocol, if any. The returned value is meaningful only if the returned value of pdwState is kCardStateSpecific.
CardID: 32-byte buffer that receives the ATR string from the currently inserted card, if available.

Lasterror is set.
See also:

- 166.2.17 Status(byref State as Integer, byref Protocol as Integer, byref CardID as string) 24565

### 166.2.17 Status(byref State as Integer, byref Protocol as Integer, byref CardID as string)

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Provides the current status of a smart card in a reader.
**Notes:**

Same as other Status function, but without querying the name.
Lasterror is set.
See also:

- 166.2.16 Status(byref Reader as string, byref State as Integer, byref Protocol as Integer, byref CardID as string) 24564

### 166.2.18 Transmit(ioSendPci as Ptr, SendBuffer as ptr, SendLength as UInt32, ioRecvPci as ptr, RecvBuffer as Ptr, byref RecvLength as UInt32)

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sends a service request to the smart card and expects to receive data back from the card.
**Example:**

```
dim card as SmartCardMBS // your card

dim header as new memoryBlock(8)

header.Int32Value(0) = 2 // T1
header.Int32Value(4) = 8 // size of this block

dim command as new MemoryBlock(5)
command.Int8Value(0) = 0
command.Int8Value(1) = & hCA
command.Int8Value(2) = 1
command.Int8Value(3) = & h82
command.Int8Value(4) = 2

dim buffer as new MemoryBlock(512)
dim ReceiveHeader as new MemoryBlock(8)
```

```
dim RecvLength as UInt32
card.Transmit(header, command, command.Size, ReceiveHeader, buffer, RecvLength)

MsgBox "Received "+str(RecvLength)+" bytes"
```

**Notes:**

ioSendPci:
A pointer to the protocol header structure for the instruction. This buffer is in the format of an SCARD_IO_REQUEST structure, followed by the specific protocol control information (PCI).
For the T=0, T=1, and Raw protocols, the PCI structure is constant. The smart card subsystem supplies a global T=0, T=1, or Raw PCI structure, which you can reference by using the symbols SCARD_PCI_T0, SCARD_PCI_T1, and SCARD_PCI_RAW respectively.

SendBuffer:
A pointer to the actual data to be written to the card.
For T=0, the data parameters are placed into the address pointed to by SendBuffer according to the following structure:

| Type | name | Description |
|---|---|---|
| Byte | Cla | The instruction class |
| Byte | Ins | The instruction code |
| Byte | P1 | Parameter to the instruction |
| Byte | P2 | Parameter to the instruction |
| Byte | P3 | Size of I/O transfer |

The data sent to the card should immediately follow the send buffer. In the special case where no data is sent to the card and no data is expected in return, P3 is not sent.

SendLength:
The length, in bytes, of the SendBuffer parameter.
For T=0, in the special case where no data is sent to the card and no data expected in return, this length must reflect that the P3 member is not being sent; the length should be 4.

ioRecvPci:
Pointer to the protocol header structure for the instruction, followed by a buffer in which to receive any returned protocol control information (PCI) specific to the protocol in use. This parameter can be nil if no PCI is returned.

RecvBuffer:
Pointer to any data returned from the card.
For T=0, the data is immediately followed by the SW1 and SW2 status bytes. If no data is returned from

the card, then this buffer will only contain the SW1 and SW2 status bytes.

RecvLength:
Supplies the length, in bytes, of the RecvBuffer parameter and receives the actual number of bytes received from the smart card. This value cannot be SCARD_AUTOALLOCATE because Transmit does not support SCARD_AUTOALLOCATE.
For T=0, the receive buffer must be at least two bytes long to receive the SW1 and SW2 status bytes.

Lasterror is set.

### 166.2.19 Properties

### 166.2.20 ActiveProtocol as Integer

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The active protocol.
**Notes:** (Read and Write property)

### 166.2.21 Handle as Integer

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 166.2.22 Lasterror as Integer

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The last error code.
**Notes:** (Read and Write property)

### 166.2.23 Constants

### 166.2.24 kAttributeAtrString = 590595

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:** Answer to reset (ATR) string.

### 166.2.25 kAttributeChannelId = 131344

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:**

DWORD encoded as & hDDDDCCCC, where DDDD = data channel type and CCCC = channel number.

The following encodings are defined for DDDD:
& h01 serial I/O; CCCC is a port number.
& h02 parallel I/O; CCCC is a port number.
& h04 PS/2 keyboard port; CCCC is zero.
& h08 SCSI; CCCC is SCSI ID number.
& h10 IDE; CCCC is device number.
& h20 USB; CCCC is device number.
& hFy vendor-defined interface with y in the range zero through 15; CCCC is vendor defined.

### 166.2.26 kAttributeCharacteristics = 393552

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:**

Integer indicating which mechanical characteristics are supported. If zero, no special characteristics are supported.
Note that multiple bits can be set:
& h00000001 Card swallowing mechanism
& h00000002 Card ejection mechanism
& h00000004 Card capture mechanism
All other values are reserved for future use (RFU).

### 166.2.27 kAttributeCurrentBwt = 524809

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:** Current block waiting time.

### 166.2.28 kAttributeCurrentClk = 524802

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:** Current clock rate, in kHz.

### 166.2.29 kAttributeCurrentCwt = 524810

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:** Current character waiting time.

### 166.2.30 kAttributeCurrentD = 524804

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:** Bit rate conversion factor.

### 166.2.31 kAttributeCurrentEbcEncoding = 524811

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:**

Current error block control encoding.
0 = longitudinal redundancy check (LRC)
1 = cyclical redundancy check (CRC)

### 166.2.32 kAttributeCurrentF = 524803

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:** Clock conversion factor.

### 166.2.33 kAttributeCurrentIfsc = 524807

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:** Current byte size for information field size card.

### 166.2.34 kAttributeCurrentIfsd = 524808

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:** Current byte size for information field size device.

### 166.2.35 kAttributeCurrentIoState = 590594

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:** Current IO state

### 166.2.36 kAttributeCurrentN = 524805

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:** Current guard time.

### 166.2.37 kAttributeCurrentProtocolType = 524801

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:** Integer encoded as 0x0rrrpppp where rrr is RFU and should be 0x000. pppp encodes the current protocol type. Whichever bit has been set indicates which ISO protocol is currently in use. (For example, if bit zero is set, T=0 protocol is in effect.)

### 166.2.38 kAttributeCurrentW = 524806

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:** Current work waiting time.

### 166.2.39 kAttributeDefaultClk = 196897

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:** Default clock rate, in kHz.

### 166.2.40 kAttributeDefaultDataRate = 196899

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:** Default data rate, in bps.

### 166.2.41 kAttributeDeviceFriendlyNameA = 2147418115

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:** Reader's display name. Windows ANSI encoding.

### 166.2.42 kAttributeDeviceFriendlyNameW = 2147418117

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:** Reader's display name. Unicode encoding.

### 166.2.43 kAttributeDeviceInUse = 2147418114

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:** Reserved for future use.

### 166.2.44 kAttributeDeviceSystemNameA = 2147418116

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:** Reader's system name. Windows ANSI encoding.

### 166.2.45 kAttributeDeviceSystemNameW = 2147418118

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:** Reader's system name. Unicode encoding.

### 166.2.46 kAttributeDeviceUnit = 2147418113

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:** Instance of this vendor's reader attached to the computer. The first instance will be device unit 0, the next will be unit 1 (if it is the same brand of reader) and so on. Two different brands of readers will both have zero for this value.

### 166.2.47 kAttributeEscAuthrequest = 499717

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:** Esc authentication request

### 166.2.48 kAttributeEscCancel = 499715

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:** Esc cancel

### 166.2.49 kAttributeEscReset = 499712

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:** Esc reset

### 166.2.50 kAttributeExtendedBwt = 524812

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:** Extended block wait time.

### 166.2.51 kAttributeIccInterfaceStatus = 590593

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:** Single byte. Zero if smart card electrical contact is not active; nonzero if contact is active.

### 166.2.52 kAttributeIccPresence = 590592

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:**

Single byte indicating smart card presence:
0 = not present
1 = card present but not swallowed (applies only if reader supports smart card swallowing)
2 = card present (and swallowed if reader supports smart card swallowing)
4 = card confiscated.

### 166.2.53 kAttributeIccTypePerAtr = 590596

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:**

Single byte indicating smart card type.
0 = unknown type
1 = 7816 Asynchronous
2 = 7816 Synchronous
Other values RFU.

### 166.2.54 kAttributeMaxClk = 196898

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:** Maximum clock rate, in kHz.

### 166.2.55 kAttributeMaxDataRate = 196900

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:** Maximum data rate, in bps.

### 166.2.56 kAttributeMaxIfsd = 196901

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:** Maximum bytes for information file size device.

### 166.2.57 kAttributeMaxinput = 499719

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:** Maximum input

### 166.2.58 kAttributePowerMgmtSupport = 262449

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:** Zero if device does not support power down while smart card is inserted. Nonzero otherwise.

### 166.2.59 kAttributeProtocolTypes = 196896

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:**

Integer encoded as 0x0rrrpppp where rrr is RFU and should be 0x000.
pppp encodes the supported protocol types. A '1' in a given bit position indicates support for the associated ISO protocol, so if bits zero and one are set, both T=0 and T=1 protocols are supported.

### 166.2.60 kAttributeSupressT1IfsRequest = 2147418119

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:** Supress T1 information file size request.

### 166.2.61 kAttributeUserAuthInputDevice = 328002

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:** User authentication input device.

### 166.2.62 kAttributeUserToCardAuthDevice = 328000

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:** User to card authentication device

### 166.2.63 kAttributeVendorIfdSerialNo = 65795

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:** Vendor-supplied interface device serial number.

### 166.2.64 kAttributeVendorIfdType = 65793

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:** Vendor-supplied interface device type (model designation of reader).

### 166.2.65 kAttributeVendorIfdVersion = 65794

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:** Vendor-supplied interface device version (DWORD in the form 0xMMmmbbbb where MM = major version, mm = minor version, and bbbb = build number).

### 166.2.66 kAttributeVendorName = 65792

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the attribute ID constants.
**Notes:** Vendor name.

### 166.2.67 kCardStateAbsent = 2

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the card state constants.
**Notes:** There is no card in the reader.

### 166.2.68 kCardStateNegotiable = 32

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the card state constants.
**Notes:** The card has been reset and is awaiting PTS negotiation.

### 166.2.69 kCardStatePowered = 16

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the card state constants.
**Notes:** Power is being provided to the card, but the reader driver is unaware of the mode of the card.

### 166.2.70 kCardStatePresent = 4

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the card state constants.
**Notes:** There is a card in the reader, but it has not been moved into position for use.

### 166.2.71 kCardStateSpecific = 64

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the card state constants.
**Notes:** The card has been reset and specific communication protocols have been established.

### 166.2.72 kCardStateSwallowed = 8

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the card state constants.
**Notes:** There is a card in the reader in position for use. The card is not powered.

### 166.2.73 kCardStateUnknown = 1

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the card state constants.
**Notes:** Unknown state.

### 166.2.74 kEjectCard = 3

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the card initialization modes.
**Notes:** Eject card.

### 166.2.75 kLeaveCard = 0

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the card initialization modes.
**Notes:** Do not do anything special on reconnect.

### 166.2.76 kProtocolAny = 3

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the protocol constants.
**Notes:** Any protocol is welcome

### 166.2.77 kProtocolRAW = 4

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the protocol constants.
**Notes:** Raw protocol

### 166.2.78 kProtocolT0 = 1

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the protocol constants.
**Notes:** T=0 is the active protocol.

### 166.2.79 kProtocolT1 = 2

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the protocol constants.
**Notes:** T=1 is the active protocol.

### 166.2.80 kProtocolT15 = 8

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the protocol constants.
**Notes:** T=15 protocol (not on Windows)

### 166.2.81 kProtocolUndefined = 0

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the protocol constants.
**Notes:** kShareDirect has been specified, so that no protocol negotiation has occurred. It is possible that there is no card in the reader.

### 166.2.82 kProtocolUnset = 0

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the protocol constants.
**Notes:** Unset

### 166.2.83 kResetCard = 1

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the card initialization modes.
**Notes:** Reset the card (Warm Reset).

### 166.2.84 kShareDirect = 3

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the flags that indicates whether other applications may form connections to the card.
**Notes:** This application is allocating the reader for its private use, and will be controlling it directly. No other applications are allowed access to it.

### 166.2.85 kShareExclusive = 1

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the flags that indicates whether other applications may form connections to the card.
**Notes:** This application is not willing to share the card with other applications.

### 166.2.86 kShareShared = 2

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the flags that indicates whether other applications may form connections to the card.
**Notes:** This application is willing to share the card with other applications.

### 166.2.87 kUnpowerCard = 2

MBS Tools Plugin, Plugin Version: 16.3.

**Function:** One of the card initialization modes.
**Notes:** Power down the card and reset it (Cold Reset).

# 166.3 class TKBERTLVRecordMBS

## 166.3.1 class TKBERTLVRecordMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** An object that parses BER-encoded data and produces DER-encoded data for TLV records.
**Notes:**

Available in macOS 10.12 or newer.
Subclass of the TKTLVRecordMBS class.

## 166.3.2 Methods

## 166.3.3 Constructor(tag as UInt64, data as MemoryBlock)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Initializes a BER-TLV record with the specified tag and value.
**Notes:**

tag: The tag field of the record.
value: The value field of the record.

Returns a new TLV record containing the specified tag and value fields.
See also:

- 166.3.4 Constructor(tag as UInt64, records() as TKTLVRecordMBS) 24581

## 166.3.4 Constructor(tag as UInt64, records() as TKTLVRecordMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Initializes a BER-TLV record with the specified tag and an array of TLV subrecords.
**Notes:**

tag: The tag field of the record.
records: The TLV subrecords of the record.

Returns a new TLV record containing the specified tag field and subrecords.
See also:

- 166.3.3 Constructor(tag as UInt64, data as MemoryBlock) 24581

### 166.3.5 dataForTag(tag as UInt64) as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Encodes a specified tag using BER-TLV tag encoding rules.
**Notes:**

tag: The tag value to encode.

Returns a data object that encodes a tag value using BER-TLV encoding.

## 166.4 class TKCompactTLVRecordMBS

### 166.4.1 class TKCompactTLVRecordMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** An object that implements encoding using Compact-TLV encoding according to ISO 7816-4.
**Notes:** Subclass of the TKTLVRecordMBS class.

### 166.4.2 Methods

### 166.4.3 Constructor(tag as integer, data as MemoryBlock)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Initializes a TLV record with the specified tag and value.
**Notes:**

tag: The tag field of the record.
value: The value field of the record.

Returns a new TLV record containing the specified tag and value fields.

## 166.5 class TKSimpleTLVRecordMBS

### 166.5.1 class TKSimpleTLVRecordMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** An object that implements encoding using Simple-TLV encoding according to ISO 7816-4.
**Notes:** Subclass of the TKTLVRecordMBS class.

### 166.5.2 Methods

### 166.5.3 Constructor(tag as integer, data as MemoryBlock)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Initializes a TLV record with the specified tag and value.
**Notes:**

tag: The tag field of the record.
value: The value field of the record.

Returnes a new TLV record containing the specified tag and value fields.

## 166.6 class TKSmartCardATRInterfaceGroupMBS

### 166.6.1 class TKSmartCardATRInterfaceGroupMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** A single interface-bytes group for a Smart Card ATR (Answer to Reset).
**Notes:**

You access instances of this class by calling the interfaceGroupAtIndex and interfaceGroupForProtocol methods on an TKSmartCardATRMBS object.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 166.6.2 Methods

### 166.6.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The private constructor.

### 166.6.4 Properties

### 166.6.5 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

### 166.6.6 HasProtocol as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Whether protocol is defined.
**Notes:** (Read only property)

### 166.6.7 HasTA as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Whether we have a TA value defined.
**Notes:** (Read only property)

### 166.6.8 HasTB as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Whether we have a TB value defined.
**Notes:** (Read only property)

### 166.6.9 HasTC as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Whether we have a TC value defined.
**Notes:** (Read only property)

### 166.6.10 Protocol as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The protocol for this group.
**Notes:**

This property returns the protocol number. See kProtocol* constants.
This property is zero for the first interface group (global), as it has no assigned protocol.
(Read only property)

### 166.6.11 TA as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The TA interface byte of ATR group.
**Notes:** (Read only property)

### 166.6.12 TB as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The TB interface byte of ATR group.
**Notes:** (Read only property)

### 166.6.13 TC as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The TC interface byte of ATR group.
**Notes:** (Read only property)

## 166.7 class TKSmartCardATRMBS

### 166.7.1 class TKSmartCardATRMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** A parsed ATR (Answer To Reset) message from a Smart Card.
**Notes:**

This class declares a programmatic interface to parsing an ATR from data or a byte stream, and accessing the individual parts.

The TKSmartCardATR class parses ATR messages according to the ISO/IEC 7816-3 specification.

### 166.7.2 Methods

### 166.7.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Whether this class is available.
**Notes:** Returns true on MacOS 10.10 or newer.

### 166.7.4 Constructor(data as MemoryBlock)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Initializes a TKSmartCardATR object from a provided data object.
**Notes:**

bytes: The ATR data to be parsed.

Returns a TKSmartCardATR object initialized with the parsed data. If bytes does not contain a valid ATR, raises UnsupportedOperationException.

### 166.7.5 historicalRecords as TKCompactTLVRecordMBS()

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** A list of compact TLV records parsed from historical bytes.

### 166.7.6 interfaceGroupAtIndex(index as Integer) as TKSmartCardATRInterfaceGroupMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Returns the interface group at the specified index.
**Notes:**

index: The index of the desired interface group.

Interface group indexes start at 1, as specified by ISO 7816-3.

Returns the interface group at the specified index, or nil if not present.

### 166.7.7 interfaceGroupForProtocol(protocol as Integer) as TKSmartCardATRInterfaceGroupMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Returns the interface group with the specified protocol.
**Notes:**

protocol: The protocol used by the desired interface group.

Returns the interface group with the specified protocol, or nil if none exists.

### 166.7.8 protocols as Integer()

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** An array of protocols indicated in the ATR.
**Notes:**

Each element in the returned array is an integer value corresponding to a member of the kProtocol* constants.
The returned protocols are ordered such that the default protocol is at index 0, and any duplicate values are removed.

### 166.7.9 Properties

### 166.7.10 bytes as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The ATR message data.
**Notes:** (Read only property)

### 166.7.11 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

### 166.7.12 historicalBytes as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The ATR historical bytes, not including interface bytes or the TCK (check byte).
**Notes:** (Read only property)

### 166.7.13 Constants

### 166.7.14 kProtocolAny = 65535

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the protocol constants.
**Notes:** Any available transmission protocols.

### 166.7.15 kProtocolNone = 0

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the protocol constants.
**Notes:** No transmission protocols.

### 166.7.16 kProtocolT0 = 1

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the protocol constants.
**Notes:** T=0 transmission protocol.

### 166.7.17 kProtocolT1 = 2

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the protocol constants.
**Notes:** T=1 transmission protocol.

### 166.7.18 kProtocolT15 = 32768

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the protocol constants.
**Notes:** T=15 transmission protocol.

## 166.8 class TKSmartCardMBS

### 166.8.1 class TKSmartCardMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** A representation of a smart card.
**Notes:**

This class provides an interface for managing sessions with a smart card, transmitting requests, and facilitating user interaction.
You can create a TKSmartCardMBS object when a smart card is inserted into a slot, by calling the makeSmartCard method on the corresponding TKSmartCardSlotMBS object. To start communicating with the smart card, call the beginSession method on the TKSmartCardMBS object. Once an exclusive session has been established, you transmit data using the transmitRequest:reply: method. After you,Äôve finished communicating with a smart card, you call the endSession method.
If the smart card is physically removed from its slot, the session object becomes invalid, and any further calls to transmitRequest will return an error.

### 166.8.2 Methods

### 166.8.3 beginSession(tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Begins a session with the Smart Card.
**Notes:**

This method will fail if there is already an existing session for the Smart Card.
Calls to this method must be balanced with calls to endSession.

Calls beginSessionCompleted event later.

### 166.8.4 beginSessionSync(byref error as NSErrorMBS) as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Begins a session with the Smart Card.
**Notes:**

This is the synchronous version, which waits for callback from operation system.
Returns true on success and false on failure.

This method will fail if there is already an existing session for the Smart Card.

Calls to this method must be balanced with calls to endSession.

### 166.8.5 beginSessionWithDelegate(handler as beginSessionCompletedDelegateMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Transmits data in Application Protocol Data Unit (APDU) format to the Smart Card.
**Notes:**

request: The APDU request data.

You should only call this method after a session to the Smart Card has been established using the beginSessionWithReply: method, and before the session is terminated using the endSession method.

Invokes handler later, which has this declaration:
beginSessionCompletedDelegate(success as Boolean, error as NSErrorMBS, tag as Variant)

### 166.8.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The constructor.

### 166.8.7 Destructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The destructor.

### 166.8.8 endSession

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Completes any pending transmissions and ends the session to the Smart Card.
**Notes:** Calls to this method should balance calls to beginSession.

### 166.8.9 inSession(byref error as NSErrorMBS, tag as variant = nil) as boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Synchronously begins a session, executes the given block, and ends the session.
**Notes:**

error: On return, if an error occurred when attempting to create a session or execute the block, contains details about the error.

Returns true if the session was successfully created and the inSession event returns true; otherwise, false.
See also:

- 166.8.32 inSession(byref error as NSErrorMBS, tag as Variant) as Boolean 24601

### 166.8.10 readFileWithDelegate(FileName as MemoryBlock, handler as readFileCompletedDelegateMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Reads file with given filename.
**Notes:**

This is for Belgian ID card to read a file.

You should only call this method after a session to the Smart Card has been established using the beginSessionWithReply: method, and before the session is terminated using the endSession method.

Invokes handler later, which has this declaration:
readFileCompletedDelegateMBS(FileName as MemoryBlock, Content as MemoryBlock, error as NSErrorMBS, tag as Variant)

### 166.8.11 sendIns(ins as UInt8, p1 as UInt8, p2 as UInt8, requestData as MemoryBlock, le as Integer = 0, byref sw as Uint16, byref error as NSErrorMBS) as Memoryblock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Synchronously transmits an APDU command to the card and returns the response.
**Notes:**

ins: The instruction code.
p1: The first parameter.
p2: The second parameter.
requestData: The data field of the APDU, or nil if no input data field should be present,Äîfor example, a

case1 or case2 APDU.
The length of the data serves as Lc field of the APDU.
le: The expected number of bytes to be returned, or zero if no output data are expected,Äîfor example, a case1 or case3 APDU. Pass 0 to accept as many bytes as the card provides.
sw: On return, contains the result code as represented by the first two bytes (SW1SW2) of the returned data.
error: On return, if an error occurred when attempting to create a session or execute the block, contains details about the error.

Returns the returned data without the first two bytes (SW1SW2), or nil if an error occurred.
See also:

- 166.8.12 sendIns(ins as UInt8, p1 as UInt8, p2 as UInt8, requestData as MemoryBlock, le as Integer = 0, tag as variant = nil) 24595

### 166.8.12 sendIns(ins as UInt8, p1 as UInt8, p2 as UInt8, requestData as MemoryBlock, le as Integer = 0, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Asynchronously transmits an APDU command to the card, returning the response in a completion handler.
**Notes:**

ins: The instruction code.
p1: The first parameter.
p2: The second parameter.
requestData: The data field of the APDU, or nil if no input data field should be present,Äîfor example, a case1 or case2 APDU.
The length of the data serves as Lc field of the APDU.
le: The expected number of bytes to be returned, or zero if no output data are expected,Äîfor example, a case1 or case3 APDU. Pass 0 to accept as many bytes as the card provides.

Calls sendInsCompleted event later.
See also:

- 166.8.11 sendIns(ins as UInt8, p1 as UInt8, p2 as UInt8, requestData as MemoryBlock, le as Integer = 0, byref sw as Uint16, byref error as NSErrorMBS) as Memoryblock 24594

### 166.8.13 SetDelegate

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Sets the observer to call validChanged event.
**Notes:** Called for you by constructor.

### 166.8.14 transmitRequest(request as MemoryBlock, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Transmits data in Application Protocol Data Unit (APDU) format to the Smart Card.
**Notes:**

request: The APDU request data.

You should only call this method after a session to the Smart Card has been established using the beginSessionWithReply: method, and before the session is terminated using the endSession method.

Calls transmitRequestCompleted method later.

### 166.8.15 transmitRequestSync(request as MemoryBlock, byref response as MemoryBlock, byref error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Transmits data in Application Protocol Data Unit (APDU) format to the Smart Card.
**Notes:**

This is the synchronous version, which waits for callback from operation system.

request: The APDU request data.
response: The response.

You should only call this method after a session to the Smart Card has been established using the beginSessionWithReply: method, and before the session is terminated using the endSession method.

### 166.8.16 transmitRequestWithDelegate(request as MemoryBlock, handler as transmitRequestCompletedDelegateMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Transmits data in Application Protocol Data Unit (APDU) format to the Smart Card.
**Notes:**

request: The APDU request data.

You should only call this method after a session to the Smart Card has been established using the beginSessionWithReply: method, and before the session is terminated using the endSession method.

Invokes handler later, which has this declaration:
transmitRequestCompletedDelegate(request as MemoryBlock, response as MemoryBlock, error as NSErrorMBS, tag as Variant)

### 166.8.17 userInteractionForSecurePINChange(PINFormat as TKSmartCardPINFormatMBS, APDU as MemoryBlock, currentPINByteOffset as Integer, newPINByteOffset as Integer) as TKSmartCardUserInteractionForSecurePINChangeMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Creates a new user interaction object for secure PIN change using the smart card reader facilities (typically a HW keypad).
**Notes:**

PINFormat: The PIN format descriptor.
APDU: The Application Protocol Data Unit (APDU) used by the Smart Card to fill in PIN data.
currentPINByteOffset: The offset, in bytes, within the Application Protocol Data Unit (APDU) field to mark a location of a PIN block for filling in the entered PIN.
newPINByteOffset: The offset, in bytes, within the Application Protocol Data Unit (APDU) field to mark a location of a PIN block for filling in the new PIN.

Returns a new user interaction object for secure PIN verification, or nil if this feature is not supported by the Smart Card reader.

You should only call this method after a session to the Smart Card has been established using the beginSession method, and before the session is terminated using the endSession method.
Once the interaction has been successfully completed, the results are available via the resultData and resultSW properties of the returned TKSmartCardUserInteractionForSecurePINVerificationMBS object.

### 166.8.18 userInteractionForSecurePINVerification(PINFormat as TKSmartCardPINFormatMBS, APDU as MemoryBlock, PINByteOffset as Integer) as TKSmartCardUserInteractionForSecurePINVerificationMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Creates and returns a new user interaction object for secure PIN verification using the Smart Card reader facilities.
**Notes:**

PINFormat: The PIN format descriptor.
APDU: The Application Protocol Data Unit (APDU) used by the Smart Card to fill in PIN data.
PINByteOffset: The offset, in bytes, within the Application Protocol Data Unit (APDU) field to mark a

location of a PIN block for filling in the entered PIN.

This parameter is not currently used. Pass 0.

Returns a new user interaction object for secure PIN verification, or nil if this feature is not supported by the Smart Card reader.

You should only call this method after a session to the Smart Card has been established using the beginSession method, and before the session is terminated using the endSession method.
Once the interaction has been successfully completed, the results are available via the resultData and resultSW properties of the returned TKSmartCardUserInteractionForSecurePINVerificationMBS object.

### 166.8.19 Properties

### 166.8.20 AllowedProtocols as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The protocols allowed for communication with the Smart Card.
**Notes:**

kProtocolAny by default.
This property is consulted only when beginning a session to a Smart Card. Any changes to this property will not be reflected by the current session, if one is already established.
(Read and Write property)

### 166.8.21 cla as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The CLA byte used for APDU transmission.
**Notes:**

0 by default.
(Read and Write property)

### 166.8.22 Context as Variant

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** User-specified information.
**Notes:**

This property is automatically set to nil if the Smart Card is removed or another TKSmartCardMBS object begins a session.
(Read and Write property)

### 166.8.23 CurrentProtocol as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The protocol used for communication with the Smart Card.
**Notes:**

Returns kProtocolNone if no session is currently established.
(Read only property)

### 166.8.24 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

### 166.8.25 Sensitive as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Whether sessions established for the Smart Card should be considered sensitive.
**Notes:**

False by default.
When this property is set to true, any sessions established for the receiver will begin and end by sending a reset command to the Smart Card. This is recommended anytime potentially sensitive information is transferred.
(Read and Write property)

### 166.8.26 Slot as TKSmartCardSlotMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The slot in which the Smart Card is inserted.
**Notes:** (Read only property)

### 166.8.27 UseCommandChaining as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Whether to use command chaining of APDU with a data field longer than 255 bytes.
**Notes:**

By default, this property is set to true when the Smart Card ATR announces that command chaining is supported.
(Read and Write property)

### 166.8.28 UseExtendedLength as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Whether to use extended length APDU.
**Notes:**

By default, this property is set to true when the Smart Card slot supports transmitting extended length commands, and the ATR announces that extended length APDU is supported.
(Read and Write property)

### 166.8.29 Valid as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Whether the Smart Card is valid and accessible from its slot.
**Notes:** (Read only property)

### 166.8.30 Events

### 166.8.31 beginSessionCompleted(success as Boolean, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

**Function:** Event called when session begun.
**Notes:**

success: Whether the session could be established successfully.
error: Contains information about the the error preventing the transaction from being established.
The NSError object is created in the TKErrorDomain domain with a code in the TKErrorCode enumeration.

### 166.8.32 inSession(byref error as NSErrorMBS, tag as Variant) as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

**Function:** The event called in session.
**Notes:**

The event to be called in the context of the created session. This event returns a Boolean value indicating whether communication was successful.

error: To indicate that an error occurred during the session, populate this with an NSError object containing details and return false.
See also:

- 166.8.9 inSession(byref error as NSErrorMBS, tag as variant = nil) as boolean 24594

### 166.8.33 sendInsCompleted(ins as UInt8, p1 as UInt8, p2 as UInt8, requestData as MemoryBlock, le as integer, replyData as MemoryBlock, sw as UInt16, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

**Function:** Event called when sendIns completed.
**Notes:**

replyData: The returned data without the first two bytes (SW1SW2), or nil if an error occurred.
sw: The result code as represented by the first two bytes (SW1SW2) of the returned data.
error: If a communication error occurred or the sw result code is anything other than & h9000, contains details about the error.

### 166.8.34 transmitRequestCompleted(request as MemoryBlock, response as MemoryBlock, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

**Function:** The event called when transmit is done.
**Notes:**

response: The APDU response data, or nil if communication with the Smart Card failed.
error: Contains information about the the error preventing the transaction from being established.
The NSError object is created in the TKErrorDomain domain with a code in the TKErrorCode enumeration.

### 166.8.35 ValidChanged

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

**Function:** Event called when valid property changed.

### 166.8.36 Constants

### 166.8.37 kProtocolAny = 65535

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the protocol constants.
**Notes:** Any available transmission protocols.

### 166.8.38 kProtocolNone = 0

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the protocol constants.
**Notes:** No transmission protocols.

### 166.8.39 kProtocolT0 = 1

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the protocol constants.
**Notes:** T=0 transmission protocol.

### 166.8.40 kProtocolT1 = 2

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the protocol constants.
**Notes:** T=1 transmission protocol.

### 166.8.41 kProtocolT15 = 32768

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the protocol constants.
**Notes:** T=15 transmission protocol.

### 166.8.42 TKErrorCodeAuthenticationFailed = -5

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the error constants.
**Notes:** Authentication failed.

### 166.8.43 TKErrorCodeAuthenticationNeeded = -9

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the error constants.
**Notes:** Authentication is needed.

### 166.8.44 TKErrorCodeBadParameter = -8

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the error constants.
**Notes:** An invalid parameter was provided.

### 166.8.45 TKErrorCodeCanceledByUser = -4

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the error constants.
**Notes:** The operation was canceled by the user.

### 166.8.46 TKErrorCodeCommunicationError = -2

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the error constants.
**Notes:** A communication error occurred.

### 166.8.47 TKErrorCodeCorruptedData = -3

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the error constants.
**Notes:** The data was corrupted.

### 166.8.48 TKErrorCodeNotImplemented = -1

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the error constants.
**Notes:** The functionality is not implemented.

### 166.8.49 TKErrorCodeObjectNotFound = -6

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the error constants.
**Notes:** The object was not found.

### 166.8.50 TKErrorCodeTokenNotFound = -7

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the error constants.
**Notes:** The token was not found.

### 166.8.51 Delegates

### 166.8.52 beginSessionCompletedDelegateMBS(success as Boolean, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The delegate for the beginSessionWithDelegate method.

### 166.8.53 readFileCompletedDelegateMBS(FileName as MemoryBlock, Content as MemoryBlock, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The delegate for the readFileWithDelegate method.

### 166.8.54 transmitRequestCompletedDelegateMBS(request as MemoryBlock, response as MemoryBlock, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The delegate for the transmitRequestWithDelegate method.

## 166.9 class TKSmartCardPINFormatMBS

### 166.9.1 class TKSmartCardPINFormatMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The formatting properties for a PIN, such as character encoding and length constraints.
**Notes:**

You typically interact with TKSmartCardPINFormatMBS objects when calling the userInteractionForSecurePINChange and userInteractionForSecurePINVerification methods on an instance of TKSmartCardMBS.

Available in macOS 10.11 or newer.

### 166.9.2 Methods

### 166.9.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The constructor.

### 166.9.4 Properties

### 166.9.5 Charset as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The format of PIN characters.
**Notes:**

kCharsetNumeric by default.
(Read and Write property)

### 166.9.6 Encoding as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The encoding of PIN characters.
**Notes:**

kEncodingASCII by default.
(Read and Write property)

### 166.9.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

### 166.9.8 MaxPINLength as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The maximum number of characters to form a valid PIN.
**Notes:**

8 by default.
(Read and Write property)

### 166.9.9 MinPINLength as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The minimum number of characters to form a valid PIN.
**Notes:**

4 by default.
(Read and Write property)

### 166.9.10 PINBitOffset as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The offset, in bits, within the PIN block to mark a location for filling in the formatted PIN, which is justified with respect to the PINJustification property value.
**Notes:**

0 by default.

The value of PINBitOffset indirectly controls the internal system units indicator. If PINBitOffset is byte aligned (that is, PINBitOffset % 8 == 0), the internal representation of PINBitOffset gets converted from bits to bytes.

(Read and Write property)

### 166.9.11 PINBlockByteLength as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The total length of the PIN block in bytes.
**Notes:**

8 by default.
(Read and Write property)

### 166.9.12 PINJustification as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The justification within the PIN block.
**Notes:**

kJustificationLeft by default.
(Read and Write property)

### 166.9.13 PINLengthBitOffset as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The offset, in bits, within the PIN block to mark a location for filling in the PIN length, which is always left justified.
**Notes:**

0 by default.

The value of PINLengthBitOffset indirectly controls the internal system units indicator. If PINLengthBitOffset is byte aligned (that is, PINLengthBitOffset % 8 == 0), the internal representation of PINLengthBitOffset gets converted from bits to bytes.
(Read and Write property)

### 166.9.14 PINLengthBitSize as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The size, in bits, of the PIN length field. If set to 0, PIN length is not written.
**Notes:**

0 by default.
(Read and Write property)

### 166.9.15 Constants

### 166.9.16 kCharsetAlphanumeric = 1

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the possible PIN character set constants.
**Notes:** PIN can be composed of digits and letters.

### 166.9.17 kCharsetNumeric = 0

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the possible PIN character set constants.
**Notes:** PIN is only composed of digits.

### 166.9.18 kCharsetUpperAlphanumeric = 2

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the possible PIN character set constants.
**Notes:** PIN can be composed of digits and uppercase letters.

### 166.9.19 kEncodingASCII = 1

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the encoding constants.
**Notes:** Characters are encoded in ASCII format (for example, 1234 is encoded as 31h 32h 33h 34h).

### 166.9.20 kEncodingBCD = 2

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the encoding constants.
**Notes:** Characters (only digits) are encoded in BCD format (for example, 1234 is encoded as 12h 34h).

### 166.9.21 kEncodingBinary = 0

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the encoding constants.
**Notes:** Characters are encoded in Binary format (for example, 1234 is encoded as 01h 02h 03h 04h).

### 166.9.22 kJustificationLeft = 0

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the possible PIN justification constants.
**Notes:** Justify to the left.

### 166.9.23 kJustificationRight = 1

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the possible PIN justification constants.
**Notes:** Justify to the right.

# 166.10 class TKSmartCardSlotManagerMBS

## 166.10.1 class TKSmartCardSlotManagerMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** An interface to all available smart card reader slots.
**Notes:**

Get a list of all known smart card reader slots in the system using the slotNames property, and access individual slots by name using the getSlotWithName method.

The com.apple.security.smartcard entitlement is required in order to use TKSmartCardSlotManager.

## 166.10.2 Methods

## 166.10.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Whether this class is available.
**Notes:** Returns true on MacOS 10.11 or newer.

## 166.10.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The constructor.

## 166.10.5 defaultManager as TKSmartCardSlotManagerMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The shared singleton Smart Card reader slot manager.
**Notes:** This method returns nil unless the com.apple.security.smartcard entitlement is enabled.

## 166.10.6 Destructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The destructor.

### 166.10.7 getSlotWithName(name as string, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Asynchronously calls a block with a Smart Card reader slot for a specified name.
**Notes:**

name: The name of the Smart Card reader slot.

Calls gotSlotWithName later.

### 166.10.8 SetDelegate

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Sets the observer to call slowNamesChanged event.
**Notes:** Called for you by constructor.

### 166.10.9 slotNamed(name as string) as TKSmartCardSlotMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Returns the Smart Card slot with a given name.
**Notes:** Returns the slot with the specified name, or nil if no slot with that name exists.

### 166.10.10 slotNames as string()

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** A list of identifiers for all the Smart Card reader slots available to the system.

### 166.10.11 Properties

### 166.10.12 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

### 166.10.13 Events

### 166.10.14 gotSlotWithName(name as string, slot as TKSmartCardSlotMBS, tag as variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

**Function:** The event called when the slow with the name is found.

### 166.10.15 slotNamesChanged

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

**Function:** Event called when slot name list changed.

## 166.11 class TKSmartCardSlotMBS

### 166.11.1 class TKSmartCardSlotMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** A single smart card reader slot in the system.
**Notes:** Use the TKSmartCardSlotManagerMBS class to manage all the smart card reader slots available to the system. You can retrieve the names of available smart card reader slots for a system using the slotNames property of a manager object, and access instances of TKSmartCardSlotMBS using the getSlotWithName method.

### 166.11.2 Methods

### 166.11.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The constructor.

### 166.11.4 Destructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The destructor.

### 166.11.5 makeSmartCard as TKSmartCardMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Creates a new TKSmartCardMBS object representing the currently inserted Smart Card.
**Notes:**

A new TKSmartCardMBS object, or nil if no Smart Card is currently inserted.

You can create multiple instances of TKSmartCardMBS that represent the same Smart Card. Exclusivity of data transfer is handled by sessions on the individual TKSmartCardMBS objects.

### 166.11.6 SetDelegate

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Sets the observer to call stateChanged event.
**Notes:** Called for you by constructor.

### 166.11.7 Properties

### 166.11.8 ATR as TKSmartCardATRMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The ATR (Answer to Reset) of the inserted Smart Card, or nil if no Smart Card is inserted or the inserted Smart Card is mute.
**Notes:** (Read only property)

### 166.11.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

### 166.11.10 maxInputLength as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The maximum length of input APDU (Application Protocol Data Unit) that the Smart Card reader slot is able to transfer to the Smart Card.
**Notes:** (Read only property)

### 166.11.11 maxOutputLength as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The maximum length of output APDU (Application Protocol Data Unit) that the Smart Card reader slot is able to transfer from the Smart Card.
**Notes:** (Read only property)

### 166.11.12 Name as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The name of the Smart Card reader slot.
**Notes:** (Read only property)

### 166.11.13 State as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The current state of the Smart Card reader slot.
**Notes:** (Read only property)

### 166.11.14 Events

### 166.11.15 StateChanged

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

**Function:** Event called when state changed.

### 166.11.16 Constants

### 166.11.17 kStateEmpty = 1

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the states constants.
**Notes:** The Smart Card reader slot is empty; no card is inserted.

### 166.11.18 kStateMissing = 0

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the states constants.
**Notes:**

The Smart Card reader slot is no longer known to the system.

This is the terminal state of a TKSmartCardSlotThis instance; once it has reached this state, the Smart Card reader slot cannot be reinitialized.

### 166.11.19 kStateMuteCard = 3

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the states constants.
**Notes:** A Smart Card is inserted, but is mute, or does not provide responses to commands.

### 166.11.20 kStateProbing = 2

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the states constants.
**Notes:** A Smart Card was inserted into the slot and an initial probe is in underway.

### 166.11.21 kStateValidCard = 4

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the states constants.
**Notes:** A Smart Card is inserted and properly answered to a reset command.

## 166.12 class TKSmartCardTokenDriverMBS

### 166.12.1 class TKSmartCardTokenDriverMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The driver that acts as an entry point for smart card app extensions.
**Notes:** Subclass of the TKTokenDriverMBS class.

### 166.12.2 Methods

### 166.12.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The constructor.

# 166.13 class TKSmartCardTokenMBS

## 166.13.1 class TKSmartCardTokenMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** A representation of a smart card based cryptographic token.#
**Notes:** Subclass of the TKTokenMBS class.

## 166.13.2 Methods

## 166.13.3 Constructor(smartCard as TKSmartCardMBS, AID as MemoryBlock, instanceID as String, tokenDriver as TKSmartCardTokenDriverMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Initializes a smart card token with the specified smart card, application identifier, and token driver.
**Notes:**

smartCard: The smart card on which the created token should operate.
AID: The ISO 7816-4 application identifier for the smart card.
instanceID: A unique, persistent identifier for this token. This value is typically generated from the serial number of the target hardware.
tokenDriver: The driver associated with the created token.
See also:

- 166.13.4 Constructor(tokenDriver as TKTokenDriverMBS, instanceID as String) 24619

## 166.13.4 Constructor(tokenDriver as TKTokenDriverMBS, instanceID as String)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The private constructor.
See also:

- 166.13.3 Constructor(smartCard as TKSmartCardMBS, AID as MemoryBlock, instanceID as String, tokenDriver as TKSmartCardTokenDriverMBS) 24619

## 166.13.5 Properties

## 166.13.6 AID as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The ISO 7816-4 application identifiers of the Smart Card.
**Notes:**

This value is specified in the Smart Card token extension's NSExtensionAttributes property list by the com.apple.ctk.aid attribute. If this attribute specifies multiple AIDs, this parameter represents the application identifier found on the card that is already preselected. If the com.apple.ctk.aid attribute is not present, no application is automatically preselected and the value of this property is nil.
(Read only property)

# 166.14 class TKSmartCardTokenSessionMBS

## 166.14.1 class TKSmartCardTokenSessionMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** A token session that is based on a smart card token.
**Notes:**

You can use the smartCard property to access and send APDUs to the underlying smart card.

Available on MacOS 10.12 or newer.
Subclass of the TKTokenSessionMBS class.

## 166.14.2 Methods

## 166.14.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The private constructor.
See also:

- 166.14.4 Constructor(token as TKTokenMBS) 24621

## 166.14.4 Constructor(token as TKTokenMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Initializes a token session with the specified token.
**Notes:**

token: The token to which the initialized session is bound.

Returns a new token session created with the specified token.
See also:

- 166.14.3 Constructor 24621

### 166.14.5 Properties

### 166.14.6 smartCard as TKSmartCardMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The smart card for the active exclusive session and selected application.
**Notes:**

This property can only be accessed in the implementation of a TKTokenSessionDelegate protocol delegate method. If the associated token has a value set for the AID property, this property opens an exclusive session to the card, with the application already selected.

You should not call beginSession or endSession on the returned value. Instead, the system will take care of beginning the exclusive session and terminating it when the current token request servicing is finished.
You can store any kind of information representing state of the card using the context property. This property will be automatically set to nil if the card is reset or accessed by different TKSmartCard instance, such as by another process. You can check the context property for any previously stored values as a way to avoid costly state restoration before performing an operation.
(Read only property)

# 166.15 class TKSmartCardUserInteractionForPINOperationMBS

## 166.15.1 class TKSmartCardUserInteractionForPINOperationMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** A representation of user interaction for secure PIN operations on a Smart Card reader.
**Notes:**

There are two types of user interactions: those for secure PIN change and those for secure PIN validation. These interactions are instances of the TKSmartCardUserInteractionForSecurePINChangeMBS, or TKSmartCardUserInteractionForSecurePINVerificationMBS subclasses of TKSmartCardUserInteractionForPINOperationMBS, respectively.

You interact with instances of one of the subclasses of TKSmartCardUserInteractionForPINOperationMBS when calling the userInteractionForSecurePINChange and userInteractionForSecurePINVerification methods on an TKSmartCard object.
The result of a user interaction is available once the interaction has completed.

Available in macOS 10.11 or newer.
Subclass of the TKSmartCardUserInteractionMBS class.

## 166.15.2 Methods

## 166.15.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The constructor.

## 166.15.4 PINMessageIndices as Integer()

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** A list of message indices referring to a predefined message table, used to specify the type and number of messages displayed during the PIN operation. nil by default.
**Notes:** If nil, the reader does not display any message (reader specific). Typically, PIN verification takes 1 message; PIN modification takes 1 ,Äì 3 messages.

### 166.15.5 Properties

### 166.15.6 locale as NSLocaleMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The locale for the displayed messages.
**Notes:**

If nil, the user,Äôs current locale is used. By default, this value is the current locale of the system.
(Read and Write property)

### 166.15.7 PINCompletion as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The conditions under which PIN entry should be considered complete.
**Notes:** (Read and Write property)

### 166.15.8 resultData as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The returned data without SW1-SW2 bytes, if any.
**Notes:** (Read and Write property)

### 166.15.9 resultSW as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The SW1-SW2 status bytes.
**Notes:** (Read and Write property)

### 166.15.10 Constants

### 166.15.11 kPINCompletionKey = 2

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the PIN completion constants.
**Notes:** Key

### 166.15.12 kPINCompletionMaxLength = 1

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the PIN completion constants.
**Notes:** MaxLength

### 166.15.13 kPINCompletionTimeout = 4

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the PIN completion constants.
**Notes:** Timeout

## 166.16 class TKSmartCardUserInteractionForSecurePINChangeMBS

### 166.16.1 class TKSmartCardUserInteractionForSecurePINChangeMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** A representation of the user interaction for secure PIN change operations on a Smart Card reader.
**Notes:**

The result of a user interaction is available once the interaction has completed.
Available in macOS 10.11+.
Subclass of the TKSmartCardUserInteractionForPINOperationMBS class.

### 166.16.2 Methods

### 166.16.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The constructor.

### 166.16.4 Properties

### 166.16.5 PINConfirmation as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The way PIN confirmation is requested.
**Notes:**

kPINConfirmationNone by default.
(Read and Write property)

### 166.16.6 Constants

### 166.16.7 kPINConfirmationCurrent = 2

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the PIN confirmation constants.
**Notes:** Current PIN confirmation.

### 166.16.8 kPINConfirmationNew = 1

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the PIN confirmation constants.
**Notes:** New PIN confirmation.

### 166.16.9 kPINConfirmationNone = 0

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the PIN confirmation constants.
**Notes:** No PIN confirmation.

## 166.17 class TKSmartCardUserInteractionForSecurePINVerificationMBS

### 166.17.1 class TKSmartCardUserInteractionForSecurePINVerificationMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** A representation of the user interaction for secure PIN change verification on a Smart Card reader.
**Notes:**

The result of a user interaction is available once the interaction has completed.
Subclass of the TKSmartCardUserInteractionForPINOperationMBS class.

### 166.17.2 Methods

### 166.17.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The constructor.

# 166.18 class TKSmartCardUserInteractionMBS

## 166.18.1 class TKSmartCardUserInteractionMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The base class for encapsulating user interaction with a Smart Card reader.
**Notes:**

There are two types of user interactions: those for secure PIN change and those for secure PIN validation. These interactions are instances of the TKSmartCardUserInteractionForSecurePINChangeMBS, or TKSmartCardUserInteractionForSecurePINVerificationMBS subclasses of TKSmartCardUserInteractionForPINOperationMBS, respectively. TKSmartCardUserInteractionForPINOperationMBS is a subclass of TKSmartCardUserInteractionMBS.

You interact with instances of one of the subclasses of TKSmartCardUserInteractionForPINOperationwhenMBS calling the userInteractionForSecurePINChange and userInteractionForSecurePINVerification methods on an TKSmartCardMBS object.

Available in macOS 10.11+.

## 166.18.2 Methods

## 166.18.3 Cancel as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Attempts to cancel an interaction started by calling run.
**Notes:**

Returns false if the operation is not running, or if cancelation is not supported.
For certain interactions, cancellation may not be available.

## 166.18.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The constructor.

## 166.18.5 Destructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The destructor.

### 166.18.6 Run

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Runs the user interaction and asynchronously receives a reply.
**Notes:** Calls RunCompleted event later.

### 166.18.7 Properties

### 166.18.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

### 166.18.9 initialTimeout as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The timeout, in seconds, for initial interaction.
**Notes:**

If set to 0, the reader-defined default timeout is used. 0 by default.
(Read and Write property)

### 166.18.10 interactionTimeout as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The timeout, in seconds, after the first key stroke.
**Notes:**

If set to 0, the reader-defined default timeout is used. 0 by default.
(Read and Write property)

### 166.18.11 Events

### 166.18.12 characterEnteredInUserInteraction

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

**Function:** Tells the delegate that a valid character has been entered.

### 166.18.13 correctionKeyPressedInUserInteraction

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

**Function:** Tells the delegate that a correction key has been pressed.

### 166.18.14 invalidCharacterEnteredInUserInteraction

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

**Function:** Tells the delegate that an invalid character has been entered.

### 166.18.15 newPINConfirmationRequestedInUserInteraction

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

**Function:** Tells the delegate that the new PIN needs to be re-entered for confirmation.

### 166.18.16 newPINRequestedInUserInteraction

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

**Function:** Tells the delegate that the new PIN needs to be entered.

### 166.18.17 oldPINRequestedInUserInteraction

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

**Function:** Tells the delegate that the old PIN needs to be entered.

### 166.18.18 runCompleted(success as boolean, error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

**Function:** Called when run method is done.
**Notes:**

success: Whether the user interaction was successful.
error: Contains information about the the error that occurred during the user interaction.
The NSError object is created in the TKErrorDomain domain with a code in the TKErrorCode enumeration.

### 166.18.19 validationKeyPressedInUserInteraction

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

**Function:** Tells the delegate that the validation key has been pressed, indicating the end of PIN entry.

# 166.19 class TKTLVRecordMBS

## 166.19.1 class TKTLVRecordMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The base class encapsulating a Tag-Length-Value record.
**Notes:**

The CryptoTokenKit framework provides the following concrete subclasses for various TLV record encodings:

- TKBERTLVRecordMBS for BER-TLV encoding rules
- TKSimpleTLVRecordMBS for Simple-TLV encoding according to ISO 7816-4
- TKCompactTLVRecordMBS for Compact-TLV encoding according to ISO 7816-4

Requires macOS 10.12 or newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 166.19.2 Methods

## 166.19.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Whether this class is available.
**Notes:** Returns true on macOS 10.12 or newer.

## 166.19.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The private constructor.

## 166.19.5 recordFromData(data as MemoryBlock) as TKTLVRecordMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Creates and returns a TLV record from by parsing the specified data.
**Notes:**

data: A data object containing the serialized representation of a TLV record.

Returns a TLV record, or nil if data does not specify a valid record.

### 166.19.6 sequenceOfRecordsFromData(data as MemoryBlock) as TKTLVRecordMBS()

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Creates and returns an array of TLV records from the specified data.
**Notes:**

data: A data object containing the serialized representation of zero or more TLV records.

Returns a sequence of TLV records, or nil if data does not specify a sequence of valid records.

### 166.19.7 Properties

### 166.19.8 Data as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The record data, including the tag, length, and value fields.
**Notes:** (Read only property)

### 166.19.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

### 166.19.10 Tag as UInt64

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The tag field of the record.
**Notes:** (Read only property)

### 166.19.11 Value as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The value field of the record.
**Notes:** (Read only property)

## 166.20 class TKTokenAuthOperationMBS

### 166.20.1 class TKTokenAuthOperationMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** An authentication operation for a cryptographic token.
**Notes:** The CryptoTokenKit framework provides the following concrete subclasses: TKTokenPasswordAuthOperationMBS, for password-based authentication, and TKTokenSmartCardPINAuthOperationMBS for Smart Card PIN-based authentication.

### 166.20.2 Methods

### 166.20.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The constructor.

### 166.20.4 finishWithError(byref error as NSErrorMBS) as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Finishes the authentication operation.
**Notes:**

error: On return, if an error occurred, contains an object with details of the error.
The NSError object is created in the TKErrorDomain domain with a code in the TKErrorCode enumeration.

Return true if the authentication operation finished successfully; otherwise false.

### 166.20.5 Properties

### 166.20.6 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

# 166.21 class TKTokenDriverMBS

## 166.21.1 class TKTokenDriverMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The abstract base class for building token drivers.
**Notes:** When working with Smart Card tokens, use or inherit from the TKSmartCardTokenDriverMBS subclass instead.

## 166.21.2 Methods

## 166.21.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The constructor.

## 166.21.4 Destructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The destructor.

## 166.21.5 SetDelegate

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Sets delegate, so events fire.
**Notes:** Called by constructor for you.

## 166.21.6 Properties

## 166.21.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

### 166.21.8 Events

### 166.21.9 createTokenForSmartCard(smartCard as TKSmartCardMBS, AID as MemoryBlock, byref error as NSErrorMBS) as TKSmartCardTokenMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

**Function:** Tells the delegate that a new Smart Card is detected.
**Notes:**

self: The Smart Card token driver.
smartCard: The detected Smart Card.
AID: The ISO 7816-4 application identifier that is selected on the Smart Card. If the com.apple.ctk.aid attributes is not present in the Smart Card token extension property list, no application is selected.
error: If an error occured, this parameter should be populated with an NSError object containing details about the error.

Return the token created for the Smart Card, or nil if an error occurs or the delegate decides not to provide a token.

This event is only for TKSmartCardTokenDriverMBS class.

### 166.21.10 terminateToken(token as TKTokenMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

**Function:** Tells the delegate to terminate the specified token.

# 166.22 class TKTokenKeyAlgorithmMBS

## 166.22.1 class TKTokenKeyAlgorithmMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Cryptographic algorithms used by token keys.
**Notes:**

Typically, the supported algorithm for a token key can be represented by a value of the SecKeyAlgorithm enumeration. However, tokens such as Smart Cards require that input data for operations take the format of a more specific algorithm. For example, a token may accept raw data to generate a cryptographic signature, but require that raw data to be formatted according to PKCS1 padding rules. To express such a requirement, a TKTokenKeyAlgorithm object defines a target algorithm and a set of other algorithms that were used. In the previous example, the target algorithm is kSecKeyAlgorithmRSASignatureRaw and the kSecKeyAlgorithmRSASignatureDigestPKCS1v15SHA1 algorithm is also reported as being used.

Requires macOS 10.12+ or newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 166.22.2 Methods

## 166.22.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The private constructor.

## 166.22.4 isAlgorithm(algorithm as string) as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Returns whether the specified algorithm is the target operation algorithm.
**Notes:**

algorithm: The algorithm to be checked.

Returns true if algorithm is the target operation algorithm; otherwise, false.

## 166.22.5 supportsAlgorithm(algorithm as string) as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Whether the specified algorithm is the target operation algorithm, or one of the other algorithms used.
**Notes:**

algorithm: The algorithm to be checked.

Returns true if algorithm is the target operation algorithm or one of the other algorithms used; otherwise, false.

### 166.22.6 Properties

### 166.22.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

# 166.23 class TKTokenKeychainCertificateMBS

## 166.23.1 class TKTokenKeychainCertificateMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** A token,Äôs certificate as stored in the keychain.
**Notes:** Subclass of the TKTokenKeychainItemMBS class.

## 166.23.2 Methods

## 166.23.3 Constructor(CertificateData as MemoryBlock, TKTokenObjectID as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Initializes a token keychain certificate with data from the specified certificate reference and a given object ID.
**Notes:**

CertificateData: The certificate as data block.
objectID: The object ID.

Returns a new token keychain certificate.
See also:

- 166.23.4 Constructor(TKTokenObjectID as Variant) 24641

## 166.23.4 Constructor(TKTokenObjectID as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The private constructor.
See also:

- 166.23.3 Constructor(CertificateData as MemoryBlock, TKTokenObjectID as Variant) 24641

## 166.23.5 Properties

## 166.23.6 data as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Returns a DER-encoded representation of an X.509 certificate.
**Notes:** (Read only property)

# 166.24 class TKTokenKeychainContentsMBS

## 166.24.1 class TKTokenKeychainContentsMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** A representation of the state of the keychain for a particular token.
**Notes:**

Available on macOS 10.12+.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 166.24.2 Methods

## 166.24.3 certificateForObjectID(TKTokenObjectID as Variant, byref error as NSErrorMBS) as TKTokenKeychainCertificateMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Returns the key for a specified object identifier.
**Notes:**

objectID: The object identifier for the keychain item.
error: On return, if no such certificate exists, contains information about the error.

Returns the certificate, or nil if no certificate exists.

## 166.24.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The private constructor.

## 166.24.5 fillWithItems(items() as TKTokenKeychainItemMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Fills the keychain with the specified items.
**Notes:**

items: The items to be added to the keychain.

All existing items for the token are first removed from the keychain before filling the keychain with items.

### 166.24.6 items as TKTokenKeychainItemMBS()

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Returns all items for token in the keychain.

### 166.24.7 keyForObjectID(TKTokenObjectID as Variant, byref error as NSErrorMBS) as TKTokenKeychainKeyMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Returns the key for a specified object identifier.
**Notes:**

objectID: The object identifier for the keychain item.
error: On return, if no such key exists, contains information about the error.

Returns the key, or nil if no key exists.

### 166.24.8 Properties

### 166.24.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

# 166.25 class TKTokenKeychainItemMBS

## 166.25.1 class TKTokenKeychainItemMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** An abstract base class for managing a token,Äôs contents as keychain items.
**Notes:**

Don't use this base class directly. Instead, use one of its subclasses, such as TKTokenKeychainCertificateMBS for managing certificates or TKTokenKeychainKeyMBS for managing cryptographic keys.
Available on macOS 10.12+.

## 166.25.2 Methods

## 166.25.3 Constructor(TKTokenObjectID as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Initializes a token keychain item with the specified object ID.

## 166.25.4 Properties

## 166.25.5 constraints as Dictionary

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Access constraints for the keychain item, keyed by TKTokenOperation values wrapped in integers.
**Notes:** (Read and Write property)

## 166.25.6 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

### 166.25.7 Label as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The user-visible label for the keychain item.
**Notes:**

This property is equivalent to the kSecAttrLabel attribute type.
(Read and Write property)

### 166.25.8 objectID as Variant

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Returns the object ID used for keychain item identification.
**Notes:** (Read only property)

# 166.26 class TKTokenKeychainKeyMBS

## 166.26.1 class TKTokenKeychainKeyMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** A token's key as stored in the keychain.
**Notes:**

Available on macOS 10.12+.
Subclass of the TKTokenKeychainItemMBS class.

## 166.26.2 Methods

## 166.26.3 Constructor(CertificateData as MemoryBlock, TKTokenObjectID as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Initializes a token keychain key with data from the specified certificate and a given object ID.
**Notes:**

certificateData: The certificate data.
objectID: The object ID.

Returns a new token keychain certificate.
See also:

- 166.26.4 Constructor(TKTokenObjectID as Variant) 24647

## 166.26.4 Constructor(TKTokenObjectID as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The private constructor.
See also:

- 166.26.3 Constructor(CertificateData as MemoryBlock, TKTokenObjectID as Variant) 24647

## 166.26.5 Properties

## 166.26.6 applicationTag as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The private tag data.
**Notes:**

This property is equivalent to the kSecAttrApplicationTag type attribute.
(Read and Write property)

### 166.26.7 canDecrypt as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Whether the key can be used to decrypt data.
**Notes:**

This property is equivalent to the kSecAttrCanDecrypt type attribute.
(Read and Write property)

### 166.26.8 canPerformKeyExchange as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Whether the key can be used to perform Diffie-Hellman style cryptographic key exchange.
**Notes:** (Read and Write property)

### 166.26.9 canSign as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Whether the key can be used to sign data.
**Notes:** (Read and Write property)

### 166.26.10 keySizeInBits as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The key size in bits.
**Notes:** (Read and Write property)

### 166.26.11 keyType as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The type of the key.
**Notes:**

Currently, only kSecAttrKeyTypeRSA and kSecAttrKeyTypeECSECPrimeRandom are supported values.
(Read and Write property)

### 166.26.12 publicKeyData as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The public key data.
**Notes:** (Read and Write property)

### 166.26.13 publicKeyHash as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The SHA1 hash of the raw public key.
**Notes:**

This property is equivalent to the kSecAttrApplicationLabel type attribute.
(Read and Write property)

### 166.26.14 SuitableForLogin as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Whether the key can be used for system login.
**Notes:** (Read and Write property)

## 166.27 class TKTokenKeyExchangeParametersMBS

### 166.27.1 class TKTokenKeyExchangeParametersMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Parameters used to perform specific key exchange operations.
**Notes:**

Available on macOS 10.12+.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 166.27.2 Methods

### 166.27.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The private constructor.

### 166.27.4 Properties

### 166.27.5 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

### 166.27.6 requestedSize as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Returns the requested output size, in bytes, of key exchange result.
**Notes:**

This property should be ignored if the output size is not configurable for the specified key exchange algorithm.
(Read only property)

### 166.27.7 sharedInfo as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Returns shared information typically used during the key derivation (KDF) step of a key exchange algorithm.
**Notes:**

This property should be ignored if shared information isn,Äôt used by the specified key exchange algorithm. (Read only property)

## 166.28 class TKTokenMBS

### 166.28.1 class TKTokenMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** A representation of a hardware-based cryptographic token.
**Notes:**

When working with Smart Card tokens, use or inherit from the TKSmartCardToken subclass instead.
Available in macOS 10.12+.

### 166.28.2 Methods

### 166.28.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The private constructor.
See also:

- 166.28.4 Constructor(tokenDriver as TKTokenDriverMBS, instanceID as String) 24652

### 166.28.4 Constructor(tokenDriver as TKTokenDriverMBS, instanceID as String)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Initializes a token using the specified driver.
**Notes:**

tokenDriver: The driver of the token.
instanceID: A unique, persistent identifier for this token. This value is typically generated from the serial number of the target hardware.

Returns a new token object.
See also:

- 166.28.3 Constructor 24652

### 166.28.5 Destructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The destructor.

### 166.28.6 SetDelegate

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Sets the delegate, so you receive events.
**Notes:** Called by Constructor for you.

### 166.28.7 Properties

### 166.28.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

### 166.28.9 keychainContents as TKTokenKeychainContentsMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The contents of the keychain for this token.
**Notes:** (Read only property)

### 166.28.10 tokenDriver as TKTokenDriverMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The token driver.
**Notes:** (Read only property)

### 166.28.11 Events

### 166.28.12 createSession(byref error as NSErrorMBS) as TKTokenSessionMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

**Function:** Tells the delegate to create a session for the specified token.
**Notes:**

token: The token.
error: If an error occurred, this method should return nil and populate this parameter with an object con-

taining details of the error. The error object should have a domain equal to TKErrorDomain and a code equal to a value defined by the TKErrorCode enumeration.

Return a new token session, or nil if an error occurred.

All operations for a token are performed within a session representing an authentication context. This delegate method is called whenever new authentication context is needed. For example, a client may want to perform a token operation using a keychain object that has an associated LAContext.

### 166.28.13 terminateSession(session as TKTokenSessionMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

**Function:** Tells the delegate to terminate the specified token session.

# 166.29 class TKTokenPasswordAuthOperationMBS

## 166.29.1 class TKTokenPasswordAuthOperationMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** An authentication operation for a cryptographic token.
**Notes:**

The CryptoTokenKit framework provides the following concrete subclasses: TKTokenPasswordAuthOperationMBS, for password-based authentication, and TKTokenSmartCardPINAuthOperationMBS for Smart Card PIN-based authentication.
Subclass of the TKTokenAuthOperationMBS class.

## 166.29.2 Methods

## 166.29.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The constructor.

## 166.29.4 Properties

## 166.29.5 password as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The password to be filled in when the finishWithError method is called.
**Notes:** (Read and Write property)

## 166.30 class TKTokenSessionMBS

### 166.30.1 class TKTokenSessionMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** A token session that manages the authentication state of a token.
**Notes:**

A token session communicates with its delegate to perform operations with its token that are bound to the authentication state.

A session is always instantiated by a TKTokenMBS instance through the token's delegate when the framework detects access to the token from a new authentication session.

Never share the authentication status of a token, such as the PIN entered to unlock a smart card, with other token sessions.

### 166.30.2 Methods

### 166.30.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The private constructor.
See also:

- 166.30.4 Constructor(token as TKTokenMBS) 24656

### 166.30.4 Constructor(token as TKTokenMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Initializes a token session with the specified token.
**Notes:**

token: The token to which the initialized session is bound.

Returns a new token session created with the specified token.
See also:

- 166.30.3 Constructor 24656

### 166.30.5 Destructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The destructor.

### 166.30.6 SetDelegate

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Sets the delegat, so events fire.
**Notes:** Called for you by constructor.

### 166.30.7 Properties

### 166.30.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

### 166.30.9 token as TKTokenMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The token to which the session is bound.
**Notes:** (Read only property)

### 166.30.10 Events

### 166.30.11 beginAuthForOperation(operation as Integer, constraint as Variant, byref error as NSErrorMBS) as TKTokenAuthOperationMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

**Function:** Tells the delegate that authentication has begun for the specified operation and constraint.
**Notes:**

self: The token session.
operation: The kind of operation.

constraint: The constraint to be satisfied.
error: If an error occurred, this method should return nil and populate this parameter with an object containing details of the error. The error object should have a domain equal to TKErrorDomain and a code equal to a value defined by the TKErrorCode enumeration.

Return the resulting context of the operation, or nil if an error occurred.

If you return an instance of a subclass of TKTokenAuthOperation that is provided by the CryptoTokenKit framework, the system will first fill in the context-specific properties, such as the password, before calling the finishWithError: method on the context.

### 166.30.12 decryptData(ciphertext as MemoryBlock, keyObjectID as Variant, algorithm as TKTokenKeyAlgorithmMBS, byref error as NSErrorMBS) as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

**Function:** Tells the delegate to decrypt a data object using the specified key and algorithm.
**Notes:**

self: The token session.
ciphertext: The data to decrypt.
keyObjectID: The identifier of the public key object.
algorithm: The algorithm to be used for decryption.
error: If an error occurred, this method should return nil and populate this parameter with an object containing details of the error. The error object should have a domain equal to TKErrorDomain and a code equal to a value defined by the TKErrorCode enumeration.

Returns the decrypted data, or nil if an error occurred.

### 166.30.13 performKeyExchangeWithPublicKey(otherPartyPublicKeyData as MemoryBlock, keyObjectID as Variant, algorithm as TKTokenKeyAlgorithmMBS, parameters as TKTokenKeyExchangeParametersMBS, byref error as NSErrorMBS) as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

**Function:** Tells the delegate to perform a key exchange using the specified key and algorithm.
**Notes:**

self: The token session.
otherPartyPublicKeyData: The public key of the other party.
keyObjectID: The identifier of the private key object.

algorithm: The algorithm to be used for key exchange.
parameters: Additional parameters used by algorithm to perform the key exchange.
error: If an error occurred, this method should return nil and populate this parameter with an object containing details of the error. The error object should have a domain equal to TKErrorDomain and a code equal to a value defined by the TKErrorCode enumeration.

Returns the result of the key exchange, or nil if an error occurred.

### 166.30.14 signData(dataToSign as MemoryBlock, keyObjectID as Variant, algorithm as TKTokenKeyAlgorithmMBS, byref error as NSErrorMBS) as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

**Function:** Tells the delegate to sign a data object using the specified key and algorithm.
**Notes:**

self: The token session.
data: The data to sign.
keyObjectID: The identifier of the private key object.
algorithm: The algorithm to be used for signing.
error: If an error occurred, this method should return nil and populate this parameter with an object containing details of the error. The error object should have a domain equal to TKErrorDomain and a code equal to a value defined by the TKErrorCode enumeration.

Return the signed data, or nil if an error occurred.

### 166.30.15 supportsOperation(operation as Integer, keyObjectID as Variant, algorithm as TKTokenKeyAlgorithmMBS) as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

**Function:** Asks the delegate whether the token session supports a given operation using the specified key and algorithm.
**Notes:**

self: The token session.
operation: The operation to perform. For possible values, see kTokenOperation* constants.
keyObjectID: The identifier of the private key object.
algorithm: The algorithm to be used by the operation.

Returns true if the operation is supported; otherwise, false.

### 166.30.16 Constants

### 166.30.17 kTokenOperationDecryptData = 3

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the token operation constants.
**Notes:** Decrypt data using a private key.

### 166.30.18 kTokenOperationNone = 0

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the token operation constants.
**Notes:** No operation.

### 166.30.19 kTokenOperationPerformKeyExchange = 4

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the token operation constants.
**Notes:** Perform a Diffie-Hellman style cryptographic key exchange using a private key.

### 166.30.20 kTokenOperationReadData = 1

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the token operation constants.
**Notes:** Read raw data of a certificate.

### 166.30.21 kTokenOperationSignData = 2

MBS Mac64bit Plugin, Plugin Version: 18.5.

**Function:** One of the token operation constants.
**Notes:** Create a cryptographic signature using a private key.

# 166.31 class TKTokenSmartCardPINAuthOperationMBS

## 166.31.1 class TKTokenSmartCardPINAuthOperationMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** A Smart Card PIN authentication operation.
**Notes:** Subclass of the TKTokenAuthOperationMBS class.

## 166.31.2 Methods

## 166.31.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The constructor.

## 166.31.4 Properties

## 166.31.5 APDUTemplate as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The template into which the PIN is filled in. nil by default.
**Notes:**

If nil, the system will not attempt to authenticate by sending the formatted APDU to the Smart Card. Instead, the token itself is expected to perform the authentication. You are encouraged to provide an APDU template, if possible, as it allows the use of a hardware interface for secure PIN entry, provided one exists. (Read and Write property)

## 166.31.6 PIN as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The PIN value resulting from performing the operation.
**Notes:**

This property is set to the result of the operation after finishWithError: is called.

If the APDUTemplate property has a set value, this property is not set, as the PIN is automatically sent to the Smart Card using the specified template.

(Read and Write property)

### 166.31.7 PINByteOffset as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The offset, in bytes, within the APDU template to mark the location for filling in the PIN.
**Notes:** (Read and Write property)

### 166.31.8 PINFormat as TKSmartCardPINFormatMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The PIN format.
**Notes:**

By default, this property is set to a TKSmartCardPINFormatMBS object initialized without any further configuration.
(Read and Write property)

### 166.31.9 smartCard as TKSmartCardMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** A Smart Card to which the formatted APDU is sent in order to authenticate.
**Notes:**

This property is only used if the APDUTemplate property has a set value.
(Read and Write property)

# 166.32 class TKTokenWatcherMBS

## 166.32.1 class TKTokenWatcherMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** An object that tracks the tokens available in the system.
**Notes:** Create a token watcher and register an insertion handler to be notified when tokens are added to the system. You can also add removal handlers for specific tokens to be notified when those tokens are removed from the system.

## 166.32.2 Methods

## 166.32.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Initializes a token watcher.

## 166.32.4 Destructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The destructor.

## 166.32.5 SetDelegate

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Sets the observer to call tokenIDsChanged event.
**Notes:** Called for you by constructor.

## 166.32.6 tokenIDs as String()

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** The token IDs currently available in the system.
**Notes:** Each string in tokenIDs corresponds to the name of the token instance.

### 166.32.7 Properties

### 166.32.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

### 166.32.9 Events

### 166.32.10 Inserted(tokenID as string)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

**Function:** The event called when the given token is inserted.

### 166.32.11 Removed(tokenID as string)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

**Function:** The event called when the given token is removed.

### 166.32.12 tokenIDsChanged

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

**Function:** Event called when tokenID list changed.

# Chapter 167

# Social

## 167.1 class ACAccountCredentialMBS

### 167.1.1 class ACAccountCredentialMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** An ACAccountCredential object encapsulates the information needed to authenticate a user.
**Notes:** To create an account credential that uses the OAuth open authentication standard, use the Constructor.

### 167.1.2 Methods

### 167.1.3 Constructor(token as string, refreshToken as string, expiryDate as date)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Initializes an account credential using OAuth 2.
**Notes:**

token: The client application,Äôs token.
refreshToken: The client application,Äôs refresh token.
expiryDate: The date the token expires.

Accounts can optionally use the OAuth open authentication standard to authenticate your client application. Instead of the user giving their username and password to log in, the server authenticates the user, and your client application receives a token that grants it access to specific resources for a defined duration. The authentication mechanism uses a key and secret scheme similar to the public and private keys used by ssh. A token is a unique, random string of letters and numbers that is paired with a secret to protect the token

from being abused. You initialize account credentials using this token and secret token.

To learn more about OAuth, go to Hueniverse OAuth.
http://hueniverse.com/oauth/

- 167.1.5 Constructor(token as string, tokenSecret as string) 24666

### 167.1.4 Constructor(token as string, refreshToken as string, expiryDate as dateTime)

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

**Function:** Initializes an account credential using OAuth 2.
See also:

- 167.1.3 Constructor(token as string, refreshToken as string, expiryDate as date) 24665
- 167.1.5 Constructor(token as string, tokenSecret as string) 24666

### 167.1.5 Constructor(token as string, tokenSecret as string)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** Initializes an account credential using OAuth.
**Notes:**

Accounts can optionally use the OAuth open authentication standard to authenticate your client application. Instead of the user giving their username and password to log in, the server authenticates the user, and your client application receives a token that grants it access to specific resources for a defined duration. The authentication mechanism uses a key and secret scheme similar to the public and private keys used by ssh. A token is a unique, random string of letters and numbers that is paired with a secret to protect the token from being abused. You initialize account credentials using this token and secret token.

To learn more about OAuth, go to Hueniverse OAuth.
http://hueniverse.com/oauth/
See also:

- 167.1.3 Constructor(token as string, refreshToken as string, expiryDate as date) 24665
- 167.1.4 Constructor(token as string, refreshToken as string, expiryDate as dateTime) 24666

### 167.1.6 Properties

### 167.1.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 167.1.8 oauthToken as String

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** The token used for the credential.
**Notes:** (Read and Write property)

## 167.2 class ACAccountMBS

### 167.2.1 class ACAccountMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** The account class.
**Notes:**

An ACAccount object encapsulates information about a user account stored in the Accounts database. You can create and retrieve accounts using an ACAccountStore object. The ACAccountStore object provides an interface to the persistent Accounts database. For each user, all account objects belong to a single ACAccountStore object.

Available in OS X v10.8 and later in 64-bit applications.

### 167.2.2 Methods

### 167.2.3 Constructor(type as ACAccountTypeMBS)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** Initializes a new account of the specified type.
**Notes:** Available in OS X v10.8 and later.

### 167.2.4 Destructor

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** The destructor.

### 167.2.5 Properties

### 167.2.6 accountDescription as String

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** A human-readable description of the account.
**Notes:**

This property is available if the user grants the application access to this account; otherwise it is "".
(Read and Write property)

### 167.2.7 accountType as ACAccountTypeMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** The type of service account.
**Notes:**

This property is required. You specify the account type using the Constructor. You can use the accountsWithAccountType method to retrieve all accounts of a particular type.
(Read and Write property)

### 167.2.8 credential as ACAccountCredentialMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** The credential used to authenticate the user of this account.
**Notes:**

This property is required and must be set before the account is saved. For privacy reasons, this property is inaccessible after the account is saved.
(Read and Write property)

### 167.2.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

### 167.2.10 identifier as String

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** A unique identifier for this account.
**Notes:**

Use the accountWithIdentifier method to get an account with the specified identifier.
(Read only property)

### 167.2.11 Parent as ACAccountStoreMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** The account store for this account.
**Notes:** (Read only property)

### 167.2.12 username as String

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** The username for this account.
**Notes:**

This property must be set before the account is saved. After the account is saved, this property is available if the user grants the application access to this account; otherwise it is "".
(Read and Write property)

## 167.3 class ACAccountStoreMBS

### 167.3.1 class ACAccountStoreMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** The ACAccountStore class provides an interface for accessing, manipulating, and storing accounts.
**Notes:**

To create and retrieve accounts from the Accounts database, you must create an ACAccountStore object. Each ACAccount object belongs to a single ACAccountStore object.

Available on Mac OS X 10.8 and later in 64-bit applications.

### 167.3.2 Methods

### 167.3.3 ACAccountStoreDidChangeNotification as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** One of the notification names.
**Notes:**

Posted when the accounts managed by this account store changed in the database. There is no userInfo dictionary associated with this notification.

This notification is sent if an account is saved or removed locally or externally. If you receive this notification, you should refetch all account objects.

The plugin automatically registeres this for the Changed event.

### 167.3.4 accounts as ACAccountMBS()

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** The accounts managed by this account store.

### 167.3.5 accountsWithAccountType(type as ACAccountTypeMBS) as ACAccountMBS()

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** Returns all accounts of the specified type.

### 167.3.6 accountTypeWithAccountTypeIdentifier(identifier as string) as ACAccountTypeMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** Returns an account type that matches the specified identifier.
**Notes:** typeIdentifier: The account type identifier.

### 167.3.7 accountWithIdentifier(identifier as string) as ACAccountMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** Returns the account with the specified identifier.

### 167.3.8 ACErrorDomain as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** The error domain for account framework.

### 167.3.9 available as boolean

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** Whether class is available.
**Notes:** Returns true on Mac OS X 10.8 in a 64-bit application.

### 167.3.10 Constructor

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** The constructor.

### 167.3.11 Destructor

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** The destructor.

### 167.3.12 removeAccount(account as ACAccountMBS, tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** Removes an account from the account store.
**Notes:**

account: The account to remove.

This call will fail if you don't have sufficient rights to remove the account.

### 167.3.13 renewCredentialsForAccount(account as ACAccountMBS, tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** Renews account credentials when the credentials are no longer valid.
**Notes:**

account: The account to renew credentials.

For Twitter and Sina Weibo accounts, this method will prompt the user to go to Settings to re-enter their password.
For Facebook accounts, if the access token has become invalid due to a regular expiration, this method will obtain a new one.
If the user has deauthorized your app, this renewal request will return ACAccountCredentialRenewResultRejected.

### 167.3.14 requestAccessToAccountsWithType(accountType as ACAccountTypeMBS, dic as dictionary, tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** Obtains permission to access protected user properties.
**Notes:**

accountType: The account type.

options: The account options.

Certain account types (such as Facebook) require an options dictionary. This method will throw an NSInvalidArgumentException if the options dictionary is not provided for such account types. Conversely, if the account type does not require an options dictionary, the options parameter must be nil.

### 167.3.15 saveAccount(account as ACAccountMBS, tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** Saves an account to the Accounts database.
**Notes:**

account: The account to save.

If the account type supports authentication and the account is not authenticated, the account server uses the account's credentials to authenticate it. If the authentication is successful, the account is saved; otherwise it is not saved.

### 167.3.16 Properties

### 167.3.17 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 167.3.18 Events

### 167.3.19 Changed

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: .

**Function:** Event called when database changed.
**Notes:**

Posted when the accounts managed by this account store changed in the database. There is no userInfo dictionary associated with this notification.

This notification is sent if an account is saved or removed locally or externally. If you receive this notification,

you should refetch all account objects.

### 167.3.20 removeAccountCompleted(account as ACAccountMBS, success as boolean, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: .

**Function:** The event called when account removing completed.

### 167.3.21 renewCredentialsForAccountCompleted(account as ACAccountMBS, renewResult as Integer, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: .

**Function:** Event called when renew credentials completed.

### 167.3.22 requestAccessCompleted(granted as boolean, error as NSErrorMBS, accountType as ACAccountTypeMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: .

**Function:** The event called when requestAccessToAccountsWithType completed.

### 167.3.23 saveAccountCompleted(success as boolean, error as NSErrorMBS, account as ACAccountMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: .

**Function:** The account save completed.

### 167.3.24 Constants

### 167.3.25 ACAccountCredentialRenewResultFailed = 2

MBS Mac64bit Plugin, Plugin Version: 15.3.

**Function:** One of the status codes of credential renewal requests.
**Notes:** A non-user-initiated cancel of the prompt. Try again.

### 167.3.26 ACAccountCredentialRenewResultRejected = 1

MBS Mac64bit Plugin, Plugin Version: 15.3.

**Function:** One of the status codes of credential renewal requests.
**Notes:** Renewal failed because the user revoked your access to their account.

### 167.3.27 ACAccountCredentialRenewResultRenewed = 0

MBS Mac64bit Plugin, Plugin Version: 15.3.

**Function:** One of the status codes of credential renewal requests.
**Notes:** The account,Äôs credentials have been renewed and are now associated with the account.

### 167.3.28 ACErrorAccessDeniedByProtectionPolicy = 10

MBS Mac64bit Plugin, Plugin Version: 15.3.

**Function:** One of the error constants.
**Notes:** Due to the current protection policy in effect, we couldn't fetch a credential

### 167.3.29 ACErrorAccessInfoInvalid = 8

MBS Mac64bit Plugin, Plugin Version: 15.3.

**Function:** One of the error constants.
**Notes:** The client's access info dictionary has incorrect or missing values.

### 167.3.30 ACErrorAccountAlreadyExists = 5

MBS Mac64bit Plugin, Plugin Version: 15.3.

**Function:** One of the error constants.
**Notes:** Account wasn't added because it already exists.

### 167.3.31 ACErrorAccountAuthenticationFailed = 3

MBS Mac64bit Plugin, Plugin Version: 15.3.

**Function:** One of the error constants.
**Notes:** Account wasn't saved because authentication of the supplied credential failed.

### 167.3.32 ACErrorAccountMissingRequiredProperty = 2

MBS Mac64bit Plugin, Plugin Version: 15.3.

**Function:** One of the error constants.
**Notes:** Account wasn't saved because it is missing a required property.

### 167.3.33 ACErrorAccountNotFound = 6

MBS Mac64bit Plugin, Plugin Version: 15.3.

**Function:** One of the error constants.
**Notes:** Account wasn't deleted because it could not be found.

### 167.3.34 ACErrorAccountTypeInvalid = 4

MBS Mac64bit Plugin, Plugin Version: 15.3.

**Function:** One of the error constants.
**Notes:** Account wasn't saved because the account type is invalid.

### 167.3.35 ACErrorClientPermissionDenied = 9

MBS Mac64bit Plugin, Plugin Version: 15.3.

**Function:** One of the error constants.
**Notes:** Your client does not have access to the requested data.

### 167.3.36 ACErrorCredentialNotFound = 11

MBS Mac64bit Plugin, Plugin Version: 15.3.

**Function:** One of the error constants.
**Notes:** Yo, I tried to find your credential, but it must have run off!

### 167.3.37 ACErrorFetchCredentialFailed = 12

MBS Mac64bit Plugin, Plugin Version: 15.3.

**Function:** One of the error constants.
**Notes:** Something bad happened on the way to the keychain

### 167.3.38 ACErrorInvalidClientBundleID = 16

MBS Mac64bit Plugin, Plugin Version: 15.3.

**Function:** One of the error constants.
**Notes:** The client making the request does not have a valid bundle ID.

### 167.3.39 ACErrorPermissionDenied = 7

MBS Mac64bit Plugin, Plugin Version: 15.3.

**Function:** One of the error constants.
**Notes:** The operation didn't complete because the user denied permission.

### 167.3.40 ACErrorRemoveCredentialFailed = 14

MBS Mac64bit Plugin, Plugin Version: 15.3.

**Function:** One of the error constants.
**Notes:** Unable to remove credential

### 167.3.41 ACErrorStoreCredentialFailed = 13

MBS Mac64bit Plugin, Plugin Version: 15.3.

**Function:** One of the error constants.
**Notes:** Unable to store credential

### 167.3.42 ACErrorUnknown = 1

MBS Mac64bit Plugin, Plugin Version: 15.3.

**Function:** One of the error constants.
**Notes:** Unknown error

### 167.3.43 ACErrorUpdatingNonexistentAccount = 15

MBS Mac64bit Plugin, Plugin Version: 15.3.

**Function:** One of the error constants.
**Notes:** Account save failed because the account being updated has been removed.

## 167.4 class ACAccountTypeMBS

### 167.4.1 class ACAccountTypeMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** An ACAccountType object encapsulates information about all accounts of a particular type.
**Notes:**

You do not create account type objects directly. To obtain an account type, use the Constructor or the accountType property of an account object. Account Type Identifiers describes the identifiers for currently supported account types. You can also use the accountsWithAccountType method to obtain all accounts of a particular type.

Available in OS X v10.8 and later in 64-bit applications.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 167.4.2 Blog Entries

- MBS Xojo Plugins, version 18.5pr3

### 167.4.3 Blog Entries

- MBS Xojo Plugins, version 18.5pr3

### 167.4.4 Methods

### 167.4.5 ACAccountTypeIdentifierFacebook as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** Identifier for the Facebook account type.

### 167.4.6 ACAccountTypeIdentifierLinkedIn as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** Identifier for the LinkedIn account type.
**Notes:** Available in OS X v10.9 and later.

### 167.4.7 ACAccountTypeIdentifierSinaWeibo as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** Identifier for the Sina Weibo account type.

### 167.4.8 ACAccountTypeIdentifierTencentWeibo as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** Identifier for the Tencent Weibo account type.
**Notes:** Available in OS X v10.9 and later.

### 167.4.9 ACAccountTypeIdentifierTwitter as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** Identifier for the Twitter account type.

### 167.4.10 accessGranted as boolean

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** A Boolean value indicating whether the user granted the application access to accounts of this type.
**Notes:** True if the application has access to accounts of this type; otherwise false.

### 167.4.11 accountTypeDescription as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** A human-readable description of the account type.

### 167.4.12 ACFacebookAppIdKey as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** Your Facebook App ID, as it appears on the Facebook website.

### 167.4.13 ACFacebookAudienceEveryone as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** Posts from your app are visible to everyone.

### 167.4.14 ACFacebookAudienceFriends as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** Posts are visible only to friends.

### 167.4.15 ACFacebookAudienceKey as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** Only required when posting permissions are requested.

### 167.4.16 ACFacebookAudienceOnlyMe as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** Posts are visible to the user only.

### 167.4.17 ACFacebookPermissionsKey as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** An array of of the permissions you're requesting.

### 167.4.18 ACLinkedInAppIdKey as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** Your LinkedIn App ID (or API Key), as it appears on the LinkedIn website.

### 167.4.19 ACLinkedInPermissionsKey as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** An array of of the LinkedIn permissions you're requesting.

### 167.4.20 ACTencentWeiboAppIdKey as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** Tencent App ID

### 167.4.21 Constructor

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** The private constructor.

### 167.4.22 identifier as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** The unique identifier for the account type.

### 167.4.23 Properties

### 167.4.24 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

## 167.5 class CustomNSSharingServiceMBS

### 167.5.1 class CustomNSSharingServiceMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** The class for a custom sharing service.
**Notes:**

You only use it to get your own service inside your app into sharing picker.

Please call Close method when you want to stop the service.
Subclass of the NSSharingServiceMBS class.

### 167.5.4 Methods

### 167.5.5 Constructor(title as string, image as NSImageMBS, alternateImage as NSImageMBS = nil, DelegateHandler as NSSharingServiceDelegateMBS = nil, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Creates a custom sharing service object.
**Notes:**

title: The custom sharing service name.
image: The image that represents the sharing service
alternateImage: The alternate image that represents the sharing service
Delegate: The delegate where events are called for this service.

Custom sharing services can be added to the NSSharingServicePicker with the sharingServicesForItems event. Available in OS X v10.8 and later.

Please call Close method when you want to stop the service.

### 167.5.6 Events

### 167.5.7 performCustomService(tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

**Function:** Called when user selected this service and you need to perform your work.

## 167.6 class NSSharingServiceDelegateMBS

### 167.6.1 class NSSharingServiceDelegateMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** The NSSharingServiceDelegate protocol allows customization of the position and animation of the share sheet as well as be notified of the success or failure of the item being shared.
**Notes:** Available in OS X v10.8 and later.

### 167.6.4 Methods

### 167.6.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** The constructor.

### 167.6.6 Destructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** The destructor.

### 167.6.7 Properties

### 167.6.8 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 167.6.9 Events

### 167.6.10 didCompleteForItems(service as NSSharingServiceMBS, items as NSSharingServiceItemsMBS, error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** Sharing did complete.
**Notes:** When an NSSharingServiceNameCloudSharing sharing service is dismissed it will invoke this method on the delegate, with an error if there was any. If the delegate implements this method, NSSharingServiceNameCloudSharing will not send didFailToShareItems or didShareItems events.

### 167.6.11 didFailToShareItems(service as NSSharingServiceMBS, items as NSSharingServiceItemsMBS, error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

**Function:** Invoked when the sharing service encountered an error when sharing items.
**Notes:**

sharingService: The sharing service.
items: The items being shared.
error: The error that was encountered when trying to share the item. If the error is NSUserCancelledError, the user simply cancelled the error.

Available in OS X v10.8 and later.

### 167.6.12 didSaveShare(service as NSSharingServiceMBS, share as Variant)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** Cloud sharing did save.
**Notes:** When an NSSharingServiceNameCloudSharing sharing service successfully saves modifications to

the CKShare, it will invoke this method on the delegate with the last-known state of the CKShareMBS on the server.

### 167.6.13 didShareItems(service as NSSharingServiceMBS, items as NSSharingServiceItemsMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

**Function:** Invoked when the sharing service has finished sharing the items.
**Notes:**

sharingService: The sharing service.
items: The items being shared.

Available in OS X v10.8 and later.

### 167.6.14 didStopSharing(service as NSSharingServiceMBS, share as Variant)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** Cloud sharing did stop.
**Notes:** When an NSSharingServiceNameCloudSharing sharing service stops sharing it will delete the CKShare from the server, then invoke this method on the delegate with the last-known state of the CKShareMBS.

### 167.6.15 optionsForSharingService(service as NSSharingServiceMBS, provider as Variant) as Integer

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** Queries what options are allowed for the share.
**Notes:** The options returned by this method describe how the user is allowed to configure the share: whether the share is public or private, and whether participants have read-only or read/write permissions. If this method is not implemented, NSCloudKitSharingServiceStandard is assumed.

### 167.6.16 sourceFrameOnScreenForShareItem(service as NSSharingServiceMBS, item as Variant) as NSRectMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

**Function:** Invoked when the sharing service is performed and the sharing window is displayed, to present a transition between the original items and the sharing window.

**Notes:**

sharingService: The sharing service.
item: The item being shared.

Return the rectangle, in screen coordinates, to display the transition.

### 167.6.17 sourceWindowForShareItems(service as NSSharingServiceMBS, items as NSSharingServiceItemsMBS, scope as Integer) as NSWindowMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

**Function:** Returns the window that contained the share items.
**Notes:**

sharingService: The sharing service.
items: The items being shared.
sharingContentScope: The sharing content scope. The sharing scope can be modified from the default value of NSSharingContentScopeItem by setting a different value in the out parameter sharingContentScope.

Return the window of the shared items.

### 167.6.18 transitionImageForShareItem(service as NSSharingServiceMBS, item as Variant, contentRect as NSRectMBS) as NSImageMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

**Function:** Invoked to allow returning a custom transition image when sharing an item.
**Notes:**

sharingService: The sharing service.
item: The shared item.
contentRect: The content rectangle is the frame of the actual content inside the transition image, excluding all decorations. For example, if the transition image is a QuickLook thumbnail, the value would be QLThumbnailGetContentRect.

Return the image to display for the sharing transition. Its size should exactly match that of the original image.

### 167.6.19 willShareItems(service as NSSharingServiceMBS, items as NSSharingServiceItemsMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

**Function:** Invoked when the sharing service will share the specified items.
**Notes:**

sharingService: The sharing service.
items: The items being shared.
Available in OS X v10.8 and later.

### 167.6.20 Constants

### 167.6.21 NSCloudKitSharingServiceAllowPrivate = 2

MBS MacFrameworks Plugin, Plugin Version: 21.5.

**Function:** One of the Cloud Sharing Service Options constants
**Notes:** The user is allowed to share privately.

### 167.6.22 NSCloudKitSharingServiceAllowPublic = 1

MBS MacFrameworks Plugin, Plugin Version: 21.5.

**Function:** One of the Cloud Sharing Service Options constants
**Notes:** The user is allowed to share publicly.

### 167.6.23 NSCloudKitSharingServiceAllowReadOnly = 16

MBS MacFrameworks Plugin, Plugin Version: 21.5.

**Function:** One of the Cloud Sharing Service Options constants
**Notes:** The user is allowed to grant participants read-only permissions.

### 167.6.24 NSCloudKitSharingServiceAllowReadWrite = 32

MBS MacFrameworks Plugin, Plugin Version: 21.5.

**Function:** One of the Cloud Sharing Service Options constants
**Notes:** The user is allowed to grant participants read/write permissions.

### 167.6.25 NSCloudKitSharingServiceStandard = 0

MBS MacFrameworks Plugin, Plugin Version: 21.5.

**Function:** One of the Cloud Sharing Service Options constants
**Notes:** Allow the user to configure the share with the standard set of options.

### 167.6.26 NSSharingContentScopeFull = 2

MBS MacFrameworks Plugin, Plugin Version: 12.3.

**Function:** One of the sharing scope constants to specify the nature of the things you are sharing.
**Notes:**

Used when sharing the whole content of the current document, for example, the URL of the webpage.
Available in OS X v10.8 and later.

### 167.6.27 NSSharingContentScopeItem = 0

MBS MacFrameworks Plugin, Plugin Version: 12.3.

**Function:** One of the sharing scope constants to specify the nature of the things you are sharing.
**Notes:**

Used when sharing a clearly identified item, for example, a file represented by its icon.
Available in OS X v10.8 and later.

### 167.6.28 NSSharingContentScopePartial = 1

MBS MacFrameworks Plugin, Plugin Version: 12.3.

**Function:** One of the sharing scope constants to specify the nature of the things you are sharing.
**Notes:**

Used when sharing a portion of a more global content, for example, part of a webpage.
Available in OS X v10.8 and later.

## 167.7 class NSSharingServiceItemsMBS

### 167.7.1 class NSSharingServiceItemsMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** A collection class for files, images, texts and URLs.
**Example:**

```
dim p as Picture = LogoMBS(500)
dim t as new NSSharingServiceItemsMBS
dim image as new NSImageMBS(p)
t.AddImage image
t.AddText "Hello World. This is a great app!"
```

**Notes:** Create an object from this class, add some items and pass to the share methods.

### 167.7.2 Methods

### 167.7.3 AddAttributedString(AttributedString as NSAttributedStringMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Adds one attributed string to the collection.
See also:

- 167.7.4 AddAttributedString(AttributedStrings() as NSAttributedStringMBS) 24692

### 167.7.4 AddAttributedString(AttributedStrings() as NSAttributedStringMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Adds attributed strings to the collection.
See also:

- 167.7.3 AddAttributedString(AttributedString as NSAttributedStringMBS) 24692

### 167.7.5 AddFile(file as folderitem)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Adds one file to the collection.

### 167.7.6 AddFiles(files() as folderitem)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Adds an array of files to the collection.

### 167.7.7 AddImage(image as NSImageMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Adds one image to the collection.

### 167.7.8 AddImages(images() as NSImageMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Adds an array of images to the collection.

### 167.7.9 AddText(text as string)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Adds one text to the collection.
See also:

- 167.7.10 AddText(texts() as string) 24693

### 167.7.10 AddText(texts() as string)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Adds an array of texts to the collection.
See also:

- 167.7.9 AddText(text as string) 24693

### 167.7.11 AddURL(URL as string)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Add one URL to the collection.
See also:

- 167.7.12 AddURL(URLs() as string) 24694

### 167.7.12 AddURL(URLs() as string)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Adds an array of URLs to the collection.
See also:

- 167.7.11 AddURL(URL as string) 24693

### 167.7.13 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** The constructor.

### 167.7.14 count as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Returns the number of items in this collection.

### 167.7.15 Images as NSImageMBS()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Returns all images in the collection.

### 167.7.16 objectAtIndex(index as Integer) as Variant

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Returns object at the given index.
**Notes:**

Index is from 0 to count-1.
Returns URLs and files as string with URL.

### 167.7.17 Texts as string()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Returns array with all texts in this collection.

### 167.7.18 URLs as string()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Returns array with all URLs.
**Notes:** As files are also handled as URLs, the array contains also files in the collections as URLs.

### 167.7.19 Properties

### 167.7.20 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

## 167.8 class NSSharingServiceMBS

### 167.8.1 class NSSharingServiceMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** The NSSharingService class is used to provide a consistent user experience when sharing items on OS X.
**Notes:**

For example, items can be: NSURL objects, NSString objects, NSImage objects, video (through file URLs), or any object which implements the NSPasteboardWriting protocol.

For any item or group of items, the NSSharingServiceMBS will display a sharing sheet to allow the user to pre-visualize what will be shared to the service. A sharing service can: create a post on a social network like Twitter or Facebook, send a message by email or iMessage, upload videos to viewing services, or send a file by AirDrop.

### 167.8.4 Methods

### 167.8.5 attachmentFileURLs as String()

MBS MacFrameworks Plugin, Plugin Version: 21.2, Platform: macOS, Targets: Desktop only.

**Function:** Array of file URLs representing the files that were shared.

### 167.8.6 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Whether sharing services are available.
**Notes:** Returns true on Mac OS X 10.8.

### 167.8.7 canPerformWithItems(items as NSSharingServiceItemsMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Returns whether the service can share all the specified items.
**Notes:**

items: The items to share.

Return true if the service can share all the items; false otherwise. If items is nil, the method will return true when the service is configured.

This method can be used to validate a custom user interface such as a dedicated Twitter button. Therefore you could call it once at launch time with nil items to check whether to display the button or not, and then with real items to enable and disable the button depending on the context or selection.

Available in OS X v10.8 and later.

### 167.8.8 Close

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

**Function:** Closes the sharing services.
**Notes:** Same as destructor, but closes now, not later.

### 167.8.9 Constructor(name as string)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Create a sharing service instance representing the specified service name.
**Notes:** name: The service name. See NSSharingServiceName* methods.

### 167.8.10 Destructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** The destructor.

### 167.8.11 NSSharingServiceNameAddToAperture as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the sharing service names.
**Notes:**

Adds the content to Aperture.
Available in OS X v10.8 and later.

### 167.8.12 NSSharingServiceNameAddToIPhoto as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the sharing service names.
**Notes:**

Adds the content to iPhoto.
Available in OS X v10.8 and later.

### 167.8.13 NSSharingServiceNameAddToSafariReadingList as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the sharing service names.
**Notes:**

Add the content to the Safari Reading List.
Available in OS X v10.8 and later.

### 167.8.14 NSSharingServiceNameCloudSharing as string

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the sharing service names.
**Notes:**

Share via iCloud.
Available in macOS 10.12 and later.

### 167.8.15 NSSharingServiceNameComposeEmail as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the sharing service names.
**Notes:**

Creates an email messages with the content.
Available in OS X v10.8 and later.

### 167.8.16 NSSharingServiceNameComposeMessage as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the sharing service names.
**Notes:**

Creates a Messages methods with the content.
Available in OS X v10.8 and later.

### 167.8.17 NSSharingServiceNamePostImageOnFlickr as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the sharing service names.
**Notes:**

Posts the image on Flickr.
Available in OS X v10.8 and later.

### 167.8.18 NSSharingServiceNamePostOnFacebook as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the sharing service names.
**Notes:**

Post the content to Facebook.
Available in OS X v10.8 and later.

### 167.8.19 NSSharingServiceNamePostOnSinaWeibo as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the sharing service names.
**Notes:**

Posts the content on a Sina Weibo, Chinese microblogging (weibo) website. Akin to a hybrid of Twitter and Facebook.
Available in OS X v10.8 and later.

### 167.8.20 NSSharingServiceNamePostOnTwitter as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the sharing service names.
**Notes:**

Posts the content on Twitter.
Available in OS X v10.8 and later.

### 167.8.21 NSSharingServiceNamePostVideoOnTudou as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the sharing service names.
**Notes:**

Posts the video on the video sharing service Tudou, based in the People's Republic of China.
Available in OS X v10.8 and later.

### 167.8.22 NSSharingServiceNamePostVideoOnVimeo as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the sharing service names.
**Notes:**

Posts the video on the video sharing service Vimeo.
Available in OS X v10.8 and later.

### 167.8.23 NSSharingServiceNamePostVideoOnYouku as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the sharing service names.
**Notes:**

Posts the video on the video sharing service Youku, based in the People's Republic of China.
Available in OS X v10.8 and later.

### 167.8.24 NSSharingServiceNameSendViaAirDrop as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the sharing service names.
**Notes:**

Sends the file via Air Drop.
Available in OS X v10.8 and later.

### 167.8.25 NSSharingServiceNameUseAsDesktopPicture as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the sharing service names.
**Notes:**

Replaces the user's desktop image with the content.
Available in OS X v10.8 and later.

### 167.8.26 NSSharingServiceNameUseAsTwitterProfileImage as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the sharing service names.
**Notes:**

Replaces the Twitter profile image with the content.
Available in OS X v10.8 and later.

### 167.8.27 performWithItems(items as NSSharingServiceItemsMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Manually performs the service on the provided items.
**Notes:**

items: The items to share.

In most cases this will display a sharing window.
Available in OS X v10.8 and later.

### 167.8.28 recipients as String()

MBS MacFrameworks Plugin, Plugin Version: 21.2, Platform: macOS, Targets: Desktop only.

**Function:** The list of recipients.

### 167.8.29 SetDelegate(DelegateHandler as NSSharingServiceDelegateMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Specifies the delegate of the sharing service.

### 167.8.30 setRecipients(recipients() as String)

MBS MacFrameworks Plugin, Plugin Version: 21.2, Platform: macOS, Targets: Desktop only.

**Function:** Sets the list of recipients.
**Example:**

```
// compose email
Dim items As New NSSharingServiceItemsMBS

// styled text from text area control
Dim tv As NSTextViewMBS = TextArea1.NSTextViewMBS
items.AddAttributedString tv.textStorage

// find service
Dim service As New NSSharingServiceMBS("com.apple.share.Mail.compose")

service.subject = "Test Email"
service.setRecipients Array("test@test.test")

service.performWithItems items
```

**Notes:** List of emails for sending an email message.

### 167.8.31 sharingServiceNamed(name as string) as NSSharingServiceMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Returns a sharing service instance representing the specified service name.
**Notes:**

serviceName: The service name. See NSSharingServiceName* methods.

Returns an instance of NSSharingService for the specified service name.
Available in OS X v10.8 and later.

### 167.8.32 sharingServicesForItems(items as NSSharingServiceItemsMBS) as NSSharingServiceMBS()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Returns a list of sharing services which could share all the provided items together.
**Example:**

```
// get an image
dim logo as Picture = LogoMBS(500)
Dim nsi as new NSImageMBS( logo )

// make items object
Dim nshi as new NSSharingServiceItemsMBS
nshi.AddImage nsi

// query services which are supported
Dim ssl(-1) as NSSharingServiceMBS = NSSharingServiceMBS.sharingServicesForItems( nshi )

// show services
for each s as NSSharingServiceMBS in ssl
msgBox s.title
next
```

**Notes:**

items: The items to share.

Returns an array of sharing services to allow for items.

This method can be used to build a custom user interface or to populate a contextual menu.
Available in OS X v10.8 and later.

### 167.8.33 Properties

### 167.8.34 accountName as String

MBS MacFrameworks Plugin, Plugin Version: 21.2, Platform: macOS, Targets: Desktop only.

**Function:** Account name used for sending on Twitter or Sina Weibo
**Notes:** (Read only property)

### 167.8.35 alternateImage as NSImageMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** The alternate image representing the sharing service. (read-only)
**Notes:**

Available in OS X v10.8 and later.
(Read only property)

### 167.8.36 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 167.8.37 image as NSImageMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** The primary image representing the sharing service. (read-only)
**Notes:** (Read only property)

### 167.8.38 menuItemTitle as String

MBS MacFrameworks Plugin, Plugin Version: 21.2, Platform: macOS, Targets: Desktop only.

**Function:** Title of the service in the Share menu.
**Notes:**

Can be modified.
(Read and Write property)

### 167.8.39 messageBody as String

MBS MacFrameworks Plugin, Plugin Version: 21.2, Platform: macOS, Targets: Desktop only.

**Function:** Message body as string.
**Notes:** (Read only property)

### 167.8.40 permanentLink as String

MBS MacFrameworks Plugin, Plugin Version: 21.2, Platform: macOS, Targets: Desktop only.

**Function:** URL to access the post on Facebook, Twitter, Sina Weibo, etc. (also known as permalink)
**Notes:** (Read only property)

### 167.8.41 subject as String

MBS MacFrameworks Plugin, Plugin Version: 21.2, Platform: macOS, Targets: Desktop only.

**Function:** Subject for email or text message.
**Example:**

```
// compose email
Dim items As New NSSharingServiceItemsMBS

// styled text from text area control
Dim tv As NSTextViewMBS = TextArea1.NSTextViewMBS
items.AddAttributedString tv.textStorage

// find service
Dim service As New NSSharingServiceMBS("com.apple.share.Mail.compose")

service.subject = "Test Email"
service.setRecipients Array("test@test.test")

service.performWithItems items
```

**Notes:** (Read and Write property)

### 167.8.42 title as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** The title of the sharing service. (read-only)
**Example:**

```
// get an image
dim logo as Picture = LogoMBS(500)
Dim nsi as new NSImageMBS( logo )

// make items object
Dim nshi as new NSSharingServiceItemsMBS
nshi.AddImage nsi

// query services which are supported
Dim ssl(-1) as NSSharingServiceMBS = NSSharingServiceMBS.sharingServicesForItems( nshi )

// show services
for each s as NSSharingServiceMBS in ssl
msgBox s.title
next
```

**Notes:** (Read only property)

## 167.9 class NSSharingServicePickerMBS

### 167.9.1 class NSSharingServicePickerMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** The NSSharingServicePicker class presents a list of sharing services, so that the user can choose a service to share an item.
**Notes:**

When a service is chosen, the picker automatically executes it, which presents the sharing window.

The events in this class allows customizing the picker's available services, where it appears, and allows assigning the delegate object for the NSSharingService delegate.

Available in OS X v10.8 and later.

### 167.9.2 Methods

### 167.9.3 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Whether sharing services are available.
**Notes:** Returns true on Mac OS X 10.8.

### 167.9.4 Constructor(items as NSSharingServiceItemsMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Initializes a new sharing service picker for the selected items.
**Notes:** Available in OS X v10.8 and later.

### 167.9.5 Destructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** The destructor.

### 167.9.6 showRelativeToRect(r as NSRectMBS, view as NSViewMBS, preferredEdge as Integer)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Shows the picker, populated with sharing services related to the instance items.
**Notes:**

rect: The rectangle the picker should be shown relative to. The coordinates are in the view coordinate system. Passing NSRectMBS.Zero causes the view bounds to be used.
view: The view.
preferredEdge: The preferred edge of the view to display the picker. See edge constants for the possible values.

When the user selects one of the sharing services, the sharing service will be performed. This method must be called on mouseDown.

Available in OS X v10.8 and later.

### 167.9.7 Properties

### 167.9.8 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 167.9.9 Events

### 167.9.10 delegateForSharingService(service as NSSharingServiceMBS) as NSSharingServiceDelegateMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

**Function:** Invoked to provide the delegate to the sharing service when the user has selected a service.
**Notes:**

sharingServicePicker: The sharing service picker.
sharingService: The selected sharing service.

Return a NSSharingServiceDelegateMBS object the sharing service should use for this item's transfer.
Available in OS X v10.8 and later.

### 167.9.11 didChooseSharingService(service as NSSharingServiceMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

**Function:** Invoked when the user has selected a service and before it is executed.
**Notes:**

sharingServicePicker: The sharing service picker.
service: The sharing service the user selected. Invoked to give the delegate to the sharing service that is about to be executed.

Available in OS X v10.8 and later.

### 167.9.12 sharingServicesForItems(items as NSSharingServiceItemsMBS, proposedServices() as NSSharingServiceMBS) as NSSharingServiceMBS()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

**Function:** Invoked to allow the delegate to customize exactly what appears in the sharing service picker before it is presented.
**Notes:**

sharingServicePicker: The sharing service picker.
items: The items to share.
proposedServices: The proposed services to share the content.

Return the sharing services to use.
If you have no code in the event, the proposedServices are returned automatically.

The delegate can reorder, remove default services or add custom services before the picker is presented. It's possible to add custom services by mutating the proposedSharingServices array and adding new NSSharingService instances.

Available in OS X v10.8 and later.

### 167.9.13 Constants

### 167.9.14 NSMaxXEdge = 2

MBS MacFrameworks Plugin, Plugin Version: 12.3.

**Function:** One of the Cocoa edge constants.
**Notes:** the maximum X edge. Typically right side.

### 167.9.15 NSMaxYEdge = 3

MBS MacFrameworks Plugin, Plugin Version: 12.3.

**Function:** One of the Cocoa edge constants.
**Notes:** The maximum Y edge. Topically the top edge of a window.

### 167.9.16 NSMinXEdge = 0

MBS MacFrameworks Plugin, Plugin Version: 12.3.

**Function:** One of the Cocoa edge constants.
**Notes:** the minimum X edge. Typically left side.

### 167.9.17 NSMinYEdge = 1

MBS MacFrameworks Plugin, Plugin Version: 12.3.

**Function:** One of the Cocoa edge constants.
**Notes:** Minimum Y. As coordinates are upside down in the Cocoa world, this is the bottom edge of a window.

# 167.10 class SLRequestMBS

## 167.10.1 class SLRequestMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** The SLRequest object encapsulates the properties of an HTTP request, providing a convenient template for you to make requests.
**Notes:**

You send a request to a social networking service to perform some operation on behalf of the user or to retrieve user information.

HTTP requests have these common components: an HTTP request method (GET, POST, PUT, or DELETE), a URL identifying the operation to perform, a set of query parameters, and an optional multipart POST body containing additional data. The values for these properties depend on the request you are sending and the target service provider. Refer to each supported social networking site,Äôs documentation for possible values. Links to documentation are provided in Table 1.

Use the requestForServiceType:requestMethod:URL:parameters: method to initialize a newly created SLRequest object passing the required property values. Use the addMultipartData:withName:type: to optionally specify a multipart POST body. After you create your request, use the performRequestWithHandler: method to send the request, specifying the handler to call when the request is done.

If you already have a sending mechanism, you can use the preparedURLRequest method to create the request that you send using an NSURLConnection object. If the request requires user authorization, set the account property to an ACAccount object.

Available in OS X v10.8 and later. 64bit only.

## 167.10.2 Methods

## 167.10.3 addMultipartData(data as memoryblock, name as string, type as string, filename as string)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** Specifies a named multipart POST body for this request.
**Notes:**

data: The data for the multipart POST body, such as an image or text.
name: The name of the multipart POST body. This is the name that a specific social service expects.
type: The type of the multipart POST body. This is the MIME content type of the multipart data.
filename: The filename of the attachment that you want to POST. Many social services require a filename

in order to accept certain POST requests, such as uploading an image or video. If your multipart data does not require a filename, pass in nil.

Possible parameter values are dependent on the target service. This information, as well as guidance on when to use a multipart POST body, is documented by the service provider.

### 167.10.4 Available as boolean

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** Whether this class is available.
**Notes:** Returns true on OS X 10.8 and newer in a 64-bit app.

### 167.10.5 Constructor(serviceType as string, requestMethod as Integer, URL as string, parameters as dictionary)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** Initializes a newly created request object with the specified properties.
**Notes:**

serviceType: The social networking service type. e.g. SLServiceTypeTwitter
requestMethod: The method to use for this HTTP request. e.g. SLRequestMethodPOST
url: The destination URL for this HTTP request. The values and formatting for the URL are dependent on the target service and are documented by the service provider.
parameters: The parameters for this HTTP request. The values and formatting are dependent on the target service and are documented by the service provider.

The newly initialized request object.
Use this method to initialize an SLRequest. The value and formatting of each parameter is dependent on the target service.

### 167.10.6 performRequest(tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** Performs an asynchronous request and calls the RequestHandler event when done.

### 167.10.7 preparedURLRequest as NSURLRequestMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** Returns an authorized URL request that can be sent using an NSURLConnectionMBS object.
**Notes:**

An OAuth-compatible NSURLRequest object that allows an app to act on behalf of the user while keeping the user,Äôs password private. The NSURLRequest is signed as OAuth1 by default, or OAuth2 by adding the appropriate token based on the user,Äôs account.

Use this method to modify your request before sending. By setting the account correctly, this method will automatically add any necessary tokens.

### 167.10.8 SLServiceTypeFacebook as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** A string constant that identifies the social networking site, Facebook.

### 167.10.9 SLServiceTypeLinkedIn as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** A string constant that identifies the social networking site, LinkedIn.

### 167.10.10 SLServiceTypeSinaWeibo as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** A string constant that identifies the social networking site, Sina Weibo.

### 167.10.11 SLServiceTypeTencentWeibo as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** A string constant that identifies the social networking site, Tencent Weibo.

### 167.10.12 SLServiceTypeTwitter as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** A string constant that identifies the social networking site, Twitter.

### 167.10.13 Properties

### 167.10.14 account as ACAccountMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** Account information used to authenticate the request.
**Notes:**

The account is used to sign a request with OAuth1 services or to add an access token for OAuth2 services. By associating the account with the request, the necessary tokens are added automatically. The default value is nil.
(Read and Write property)

### 167.10.15 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 167.10.16 parameters as Dictionary

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** The parameters for this request.
**Notes:**

Use this property to look up the query parameters of the HTTP request that was set in Constructor. Possible values are dependent on the target service and are documented by the service provider.
(Read only property)

### 167.10.17 requestMethod as Integer

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** The method to use for this request.
**Notes:**

Use this property to look up the method of the HTTP request that was set in requestForServiceType.
(Read only property)

### 167.10.18 URL as String

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

**Function:** The destination URL for this request.
**Notes:** (Read only property)

### 167.10.19 Events

### 167.10.20 performRequestCompleted(responseData as memoryblock, urlResponse as NSURLResponseMBS, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: .

**Function:** The callback handler for a request..
**Notes:**

responseData: The data returned by the request. The format of this data is dependent on the target service.
urlResponse: The URL response returned by the request that includes the HTTP response codes.
error: An error identifier.
Possible values are dependent on the target service and are documented by the service provider.

### 167.10.21 Constants

### 167.10.22 SLRequestMethodDELETE = 2

MBS Mac64bit Plugin, Plugin Version: 15.3.

**Function:** One of the request types.
**Notes:**

Deletes the specified resource.

Available in OS X v10.8 and later.

### 167.10.23 SLRequestMethodGET = 0

MBS Mac64bit Plugin, Plugin Version: 15.3.

**Function:** One of the request types.
**Notes:**

Requests information from the specified resource. Use a GET request to fetch information from the specified server such as character limits or a user,Äôs timeline.

Available in OS X v10.8 and later.

### 167.10.24 SLRequestMethodPOST = 1

MBS Mac64bit Plugin, Plugin Version: 15.3.

**Function:** One of the request types.
**Notes:**

Submits data to be processed. Use a POST request to submit information to the specified server such as a status update or an image.

Available in OS X v10.8 and later.

### 167.10.25 SLRequestMethodPUT = 3

MBS Mac64bit Plugin, Plugin Version: 15.3.

**Function:** One of the request types.
**Notes:**

Uses a PUT request to submit the data.

Available in OS X v10.9 and later.

# Chapter 168

# Spamsum

## 168.1 class SpamSumMBS

### 168.1.1 class SpamSumMBS

MBS Util Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A class for the spamsum tool.
**Notes:**

Overview
———

spamsum is a tool for generating and testing signatures on files. The signature is designed to be particularly suitable for producing a result that can be used to compare two emails and see if they are 'similar'. This can provide the core of a SPAM detection system.

The algorithms in spamsum are in two parts. The first part generates a signature which is encoded as a string of ascii characters less than 72 characters long. The second part takes a new signature and a database of existing signatures (actually just a text file with one signature per line) and finds the existing signature that best matches the new signature. A match result in the range of 0 to 100 is generated, where 100 is a perfect match and 0 is a complete mismatch.

Signature Algorithm
————————-

The signature algorithm in spamsum has a number of interesting properties that make is especially suitable for SPAM detection.

- non-propogation

In most hash algorithms a change in any part of a plaintext will either change the resulting hash completely or will change all parts of the hash after the part corresponding with the changed plaintext. In the spamsum algorithm only the part of the spamsum signature that corresponds linearly with the changed part of the plaintext will be changed. This means that small changes in any part of the plaintext will leave most of the signature the same. This is essential for SPAM detection as it is common for varients of the same SPAM to have small changes in their body and we need to ensure that the matching algorithm can cope with these changes.

- alignment robustness

Most hash algorithms are very alignment sensitive. If you shift the plaintext by a byte (say by inserting a character at the start) then a completely different hash is generated. The spamsum algorithm is robust to alignment changes, and will automatically re-align the resulting signature after insertions or deletions. This works in combination with the non-propogation property to make spamsum suitable for telling if two emails are 'similar'.

The core of the spamsum algorithm is a rolling hash similar to the rolling hash used in 'rsync'. The rolling hash is used to produce a series of 'reset points' in the plaintext that depend only on the immediate context (with a default context width of seven characters) and not on the earlier or later parts of the plaintext. A stronger hash based on the FNV algorithm is then used to produce hash values of the areas between two reset points. The resulting signature comes from the concatenation of a single character from the FNV hash per reset point.

The frequency of the reset points determines how many characters in the plaintext will be used for each character of output in the signature. At startup spamsum scans the plaintext to determine how many valid input characters are in the plaintext (whitespace is ignored). The algorithm then estimates the reset frequency needed to produce a signature of length 64 and starts producing the
signature. If after the signature is produced the result is less than a third of the desired length then the reset frequency is adjusted and the signature re-generated.

Similarity Testing

Once a set of signatures has been generated you need to be able to take a new plaintext and see if it matches one of the signatures. The way this is done is to generate a spamsum signature of the new plaintext then compute a distance measure between each of the existing signatures and the new signature.

The distance measure that spamsum uses is based on the 'string edit distance'. The string edit distance is a measure of how many edit operations are required to take one of the signatures and turn it into the other. In spamsum the 'insert' and 'delete' edit operations are given a weight of 1 while substitution is given a weight of 3 and transposition is given a weight of 5.

The resulting string edit distance is then scaled to produce a 'score' in the range 0-100. A score of 100 indicates a perfect match and a score of 0 indicates a complete mismatch. If the two signatures used a different 'reset frequency' (also known as block_size) then the score is automatically set as 0.

The score is weighted so that a value of 50 is a reasonable threshold to use for a 'good match'.

Dual hashes

A significant problem with the above algorithm is the sensitivity to the chosen hash strength of the rolling hash. The initial implementation used a single hash strength chosen based on the file size and rounded to a power of 2. This works, but it means that if the two files being compared cross over a boundary then they will not be able to be compared. To reduce this problem the current implementation chooses two different hash strengths and generates two hashes for each file. This means that the two files will have to have very different lengths for their respected spamsum signatures not to share a common hash strength.

Infrastructure

spamsum is useless without a good quality database of signatures for known spam. I am hoping that the spamsum algorithm will be incorportated into a online system for capturing known SPAM (such as razor).

Author

spamsum was written by Andrew Tridgell tridge @ samba.org

### 168.1.2 Methods

### 168.1.3 Match(sum1 as string, sum2 as string) as Integer

MBS Util Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates a percent value representing
**Example:**

```
dim s as SpamSumMBS
dim t1,t2 as string

s=new SpamSumMBS

t1=S.Spamsum("Hello Welt, wie geht es? Mir geht es manchmal gut.",0,0)
```

```
t2=S.Spamsum("Hallo Welt, wie geht es? Mir geht es manchmal gut.",0,0)

MsgBox t1+" "+t2+" "+str(s.Match(t1,t2))
// 17 percent here. This needs longer texts...
```

**Notes:** Returns a value from 0 (not equal) to 100 (equal).

### 168.1.4 Spamsum(text as string, flags as Integer, blocksize as Integer) as string

MBS Util Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates a checksum for a given text.
**Notes:**

You can specify for flags a combination of FlagsIgnoreWhitespace=1 and FlagsIgnoreHeaders=2.
Blocksize is linked to the length of the checksum. You can try values like 0, 3 or 90 and check what is best for you.
The text strings must be longer than just a few words as they are designed to take whole emails.

### 168.1.5 Properties

### 168.1.6 FlagsIgnoreHeaders as Integer

MBS Util Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The value used for the Spamsum call as flags.
**Notes:**

Value is 2.
(Read only property)

### 168.1.7 FlagsIgnoreWhitespace as Integer

MBS Util Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The value used for the Spamsum call as flags.
**Notes:**

Value is 1.
(Read only property)

# Chapter 169

# Sparkle

## 169.1 class SUAppcastItemMBS

### 169.1.1 class SUAppcastItemMBS

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

**Function:** The class for items in the appcast file.

### 169.1.2 Blog Entries

- News from the MBS Xojo Plugins Version 22.2
- MonkeyBread Software Releases the MBS Xojo Plugins in version 22.2
- MBS Xojo Plugins, version 22.2pr1
- MBS Xojo Plugins, version 20.3pr6
- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr7

### 169.1.3 Blog Entries

### 169.1.4 Methods

### 169.1.5 Constructor

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

**Function:** Private constructor.
See also:

- 169.1.6 Constructor(dict as dictionary) 24722
- 169.1.7 Constructor(dict as dictionary, byref error as string) 24722
- 169.1.8 Constructor(dict as dictionary, relativeToAppcastURL as string, byref error as string) 24723

### 169.1.6 Constructor(dict as dictionary)

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

**Function:** Initializes with data from a dictionary provided by the RSS class.
See also:

- 169.1.5 Constructor 24722
- 169.1.7 Constructor(dict as dictionary, byref error as string) 24722

### 169.1.7 Constructor(dict as dictionary, byref error as string)

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

**Function:** Initializes with data from a dictionary provided by the RSS class.
See also:

- 169.1.5 Constructor 24722
- 169.1.6 Constructor(dict as dictionary) 24722
- 169.1.8 Constructor(dict as dictionary, relativeToAppcastURL as string, byref error as string) 24723

### 169.1.8 Constructor(dict as dictionary, relativeToAppcastURL as string, byref error as string)

MBS MacExtras Plugin, Plugin Version: 22.2, Platform: macOS, Targets: Desktop only.

**Function:** Initializes with data from a dictionary provided by the RSS class.
See also:

- 169.1.5 Constructor 24722
- 169.1.6 Constructor(dict as dictionary) 24722
- 169.1.7 Constructor(dict as dictionary, byref error as string) 24722

### 169.1.9 emptyAppcastItem as SUAppcastItemMBS

MBS MacExtras Plugin, Plugin Version: 22.2, Platform: macOS, Targets: Desktop only.

**Function:** An empty appcast item.
**Notes:** This may be used as a potential return value in bestValidUpdateInAppcast event.

### 169.1.10 Properties

### 169.1.11 channel as String

MBS MacExtras Plugin, Plugin Version: 22.2, Platform: macOS, Targets: Desktop only.

**Function:** The channel the update item is on if provided.
**Notes:**

An update item may specify a custom channel name (such as beta) that can only be found by updaters that filter for that channel.
If no channel is provided, the update item is assumed to be on the default channel.

This is extracted from the <sparkle:channel>element.
Old applications must be using Sparkle 2 or later to interpret the channel element and to ignore unmatched channels.
(Read only property)

### 169.1.12 ContentLength as Int64

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

**Function:** The content length.
**Notes:** (Read only property)

### 169.1.13 CriticalUpdate as Boolean

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop only.

**Function:** Whether this is a critical update.
**Notes:** (Read only property)

### 169.1.14 date as date

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The release date for this app cast item.
**Notes:** (Read only property)

### 169.1.15 DateString as String

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

**Function:** The date string.
**Notes:** (Read only property)

### 169.1.16 DateTime as DateTime

MBS MacExtras Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop only.

**Function:** The release date for this app cast item.
**Notes:** (Read only property)

### 169.1.17 DeltaUpdate as Boolean

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop only.

**Function:** Whether this is a delta update.
**Notes:** (Read only property)

### 169.1.18 DeltaUpdates as Dictionary

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

**Function:** Dictionary with properties about delta updates.
**Notes:** (Read only property)

### 169.1.19 displayVersionString as string

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

**Function:** The display version number for this app cast item.
**Notes:**

Maybe "1.1de"
(Read only property)

### 169.1.20 fileURL as string

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

**Function:** The file URL for this app cast item.
**Notes:** (Read only property)

### 169.1.21 fullReleaseNotesURL as String

MBS MacExtras Plugin, Plugin Version: 22.2, Platform: macOS, Targets: Desktop only.

**Function:** The full release notes URL of the appcast item if provided.
**Notes:**

The link should point to the product's full changelog.

Sparkle's standard user interface offers to show these full release notes when a user checks for a new update and no new update is available.

This is extracted from the <sparkle:fullReleaseNotesLink>element.
(Read only property)

### 169.1.22 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

**Function:** The internal handle used for this object.
**Notes:** (Read and Write property)

### 169.1.23 ignoreSkippedUpgradesBelowVersion as String

MBS MacExtras Plugin, Plugin Version: 22.2, Platform: macOS, Targets: Desktop only.

**Function:** Previously skipped upgrades by the user will be ignored if they skipped an update whose version precedes this version.
**Notes:**

This can only be applied if the update is a 'majorUpgrade'.

This version string corresponds to the application's CFBundleVersion

This is extracted from the <sparkle:ignoreSkippedUpgradesBelowVersion>element.

Old applications must be using Sparkle 2.1 or later, otherwise this property will be ignored.
(Read only property)

### 169.1.24 InformationOnlyUpdate as Boolean

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop only.

**Function:** Whether this is only an information only update.
**Notes:**

Only available in newer Sparkle in 64-bit.
For older version this is always false.
(Read only property)

### 169.1.25 InfoURL as String

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

**Function:** The info URL.
**Notes:** (Read only property)

### 169.1.26 installationType as String

MBS MacExtras Plugin, Plugin Version: 22.2, Platform: macOS, Targets: Desktop only.

**Function:** The installation type of the update at file URL.
**Notes:**

This may be:

- application - indicates this is a regular application update.
- package - indicates this is a guided package installer update.
- interactive-package - indicates this is an interactive package installer update (deprecated; use "package" instead)

This is extracted from the sparkle:installationType attribute in the <enclosure>element.

If no installation type is provided in the enclosure, the installation type is inferred from the 'fileURL' file extension instead.

If the file extension is pkg or mpkg, the installation type is package otherwise it is application

Hence, the installation type in the enclosure element only needs to be specified for package based updates distributed inside of a zip or other archive format.

Old applications must be using Sparkle 1.26 or later to support downloading bare package updates ('pkg' or 'mpkg') that are not additionally archived inside of a zip or other archive format.
(Read only property)

### 169.1.27 itemDescription as string

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

**Function:** The description for this app cast item.
**Notes:** (Read only property)

### 169.1.28 MacOsUpdate as Boolean

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

**Function:** Whether this is a MacOS update.
**Notes:** (Read only property)

### 169.1.29 majorUpgrade as Boolean

MBS MacExtras Plugin, Plugin Version: 22.2, Platform: macOS, Targets: Desktop only.

**Function:** Indicates whether or not the update item is a major upgrade.
**Notes:**

An update is a major upgrade if the application's bundle version doesn't meet the 'minimumAutoupdateVersion' requirement.
(Read only property)

### 169.1.30 maximumOperatingSystemVersionIsOK as Boolean

MBS MacExtras Plugin, Plugin Version: 22.2, Platform: macOS, Targets: Desktop only.

**Function:** Indicates whether or not the current running system passes the 'maximumSystemVersion' requirement.
**Notes:** (Read only property)

### 169.1.31 MaximumSystemVersion as String

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

**Function:** The maximum system version for this app cast item.
**Notes:**

The update will not be offered to users with newer system versions.
(Read only property)

### 169.1.32 minimumAutoupdateVersion as String

MBS MacExtras Plugin, Plugin Version: 22.2, Platform: macOS, Targets: Desktop only.

**Function:** The minimum bundle version string this update requires for automatically downloading and installing updates if provided.
**Notes:**

If an application's bundle version meets this version requirement, it can install the new update item in the background automatically.

Otherwise if the requirement is not met, the user is always prompted to install the update. In this case, the update is assumed to be a 'majorUpgrade'.

If the update is a 'majorUpgrade' and the update is skipped by the user, other future update alerts with

the same ‘minimumAutoupdateVersion‘ will also be skipped automatically unless an update specifies ‘ignoreSkippedUpgradesBelowVersion‘.

This version string corresponds to the application’s CFBundleVersion

This is extracted from the <sparkle:minimumAutoupdateVersion>element.
(Read only property)

### 169.1.33 minimumOperatingSystemVersionIsOK as Boolean

MBS MacExtras Plugin, Plugin Version: 22.2, Platform: macOS, Targets: Desktop only.

**Function:** Indicates whether or not the current running system passes the ‘minimumSystemVersion‘ requirement.
**Notes:** (Read only property)

### 169.1.34 minimumSystemVersion as string

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

**Function:** The minimum system version for this app cast item.
**Notes:**

The update will not be offered to users with older system versions.
(Read only property)

### 169.1.35 OSString as String

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

**Function:** The operation system string.
**Notes:** (Read only property)

### 169.1.36 phasedRolloutInterval as Variant

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

**Function:** The phased rollout interval.
**Notes:**

May be nil.
(Read only property)

### 169.1.37 propertiesDictionary as dictionary

MBS MacExtras Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** A dictionary with all the properties for this item.
**Notes:** (Read only property)

### 169.1.38 releaseNotesURL as string

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

**Function:** The release notes URL for this app cast item.
**Notes:** (Read only property)

### 169.1.39 title as string

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

**Function:** The title for this app cast item.
**Example:**

```
dim a as SUAppcastItemMBS

// get item somehow
MsgBox a.title
```

**Notes:** (Read only property)

### 169.1.40 versionString as string

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

**Function:** The version string for this app cast item.
**Notes:** (Read only property)

## 169.2 class SUAppcastMBS

### 169.2.1 class SUAppcastMBS

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

**Function:** The class for an appcast.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 169.2.2 Blog Entries

- MBS Xojo Plugins, version 22.2pr1
- MBS Xojo Plugins, version 20.3pr6

### 169.2.4 Methods

### 169.2.5 Constructor

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

**Function:** The private construtor.

### 169.2.6 items as SUAppcastItemMBS()

MBS MacExtras Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** The items in this appcast.

### 169.2.7 Properties

### 169.2.8 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

**Function:** The internal handle for the appcast.
**Notes:** (Read and Write property)

## 169.3 class SUUpdaterMBS

### 169.3.1 class SUUpdaterMBS

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

**Function:** The class for Sparkle.
**Notes:** This class is for use with the Sparkle 1.5b6 framework and implements the Cocoa classes inside this framework.

### 169.3.4 Methods

### 169.3.5 checkForUpdateInformation

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

**Function:** Checks for new update information.
**Notes:** This begins a "probing" check for updates which will not actually offer to update to that version. The events, though, (up to didFindValidUpdate and updaterDidNotFindUpdate), are called, so you can use that information in your UI.

### 169.3.6 checkForUpdates

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

**Function:** Performs a check for updates.
**Notes:** Call this method from a menu item where the user can check for updates manually. Sparkle will check for updates and report back its findings verbosely.

### 169.3.7 checkForUpdatesInBackground

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

**Function:** This kicks off an update meant to be programmatically initiated.
**Notes:** That is, it will display no UI unless it actually finds an update, in which case it proceeds as usual. If the fully automated updating is turned on, however, this will invoke that behavior, and if an update is found, it will be downloaded and prepped for installation.

### 169.3.8 Constructor

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

**Function:** The constructor for the updater.
**Notes:** Please create only one instance of the SUUpdaterMBS class in your application using this constructor.
See also:

- 169.3.9 Constructor(Bundle as folderitem) 24734

### 169.3.9 Constructor(Bundle as folderitem)

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

**Function:** The constructor for the updater.
**Notes:**

Targets for the update the bundle you specify. This can be used to update a preference panel for example.

Please create only one instance of the SUUpdaterMBS class in your application using this constructor.
See also:

- 169.3.8 Constructor 24734

### 169.3.10 installUpdatesIfAvailable

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop only.

**Function:** Checks for updates and, if available, immediately downloads and installs them.
**Notes:**

A progress dialog is shown but the user will never be prompted to read the release notes.

You may want to respond to the userDidCancelDownload event in case the user clicks the "Cancel" button while the update is downloading.

Only available in newer Sparkle version for 64-bit.

Not available in newer Sparkle versions.

### 169.3.11 InvokeImmediateInstallation

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

**Function:** If installation was moved to quit of app, you can call this method to update now.
**Notes:** New in version 1.6 of Sparkle.

### 169.3.12 InvokeUpdate

MBS MacExtras Plugin, Plugin Version: 14.0, Platform: macOS, Targets: Desktop only.

**Function:** Invokes a postponed updated.
**Notes:** Call this after you returned true in shouldPostponeRelaunchForUpdate event and have time to restart.

### 169.3.13 IsFrameworkLoaded as boolean

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

**Function:** Whether the framework has been loaded.
**Notes:** Returns true if the Sparkle framework has been loaded.

### 169.3.14 LoadFramework(path as folderitem) as boolean

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

**Function:** Loads the Sparkle framework from the given folderitem.
**Notes:**

Returns false on Windows and Linux or on Mac OS X if the framework failed to load.
Return true if the framework was loaded already or was loaded successfully.

Be aware that the Sparkle Framework needs correct file permissions:

$ { APPFILENAME } /Contents/Frameworks/Sparkle.framework/Versions/A/Sparkle"
$ { APPFILENAME } /Contents/Frameworks/Sparkle.framework/Versions/A/Resources/relaunch"

If the permissions are set wrong the relaunch does not work.

You can run app from Terminal to see any error message while loading framework. You may need to code sign both the Sparkle framework and the app with your code signing certificate. Finally make sure platform (32 or 64bit) match between app and framework.

### 169.3.15 resetUpdateCycle

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

**Function:** Resets the update cycle.
**Notes:** Call this to appropriately schedule or cancel the update checking timer according to the preferences for time interval and automatic checks. This call does not change the date of the next check, but only the internal timer.

### 169.3.16 SUSparkleErrorDomain as String

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop only.

**Function:** The error domain for all Sparkle errors.

### 169.3.17 SUUpdaterAppcastItemNotificationKey as String

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

**Function:** One of the keys for user info dictionary.
**Notes:** Key for the SUAppcastItem object in the SUUpdaterDidFindValidUpdateNotification userInfo dictionaries.

### 169.3.18 SUUpdaterAppcastNotificationKey as String

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

**Function:** Key for the SUAppcast object in the SUUpdaterDidFinishLoadingAppCastNotification userInfo.

### 169.3.19 SUUpdaterDidFindValidUpdateNotification as String

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification constants for use with NSNotificationObserverMBS class.
**Notes:** Object for this notification is the updater.

### 169.3.20 SUUpdaterDidFinishLoadingAppCastNotification as String

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification constants for use with NSNotificationObserverMBS class.
**Notes:** Object for this notification is the updater.

### 169.3.21 SUUpdaterDidNotFindUpdateNotification as String

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification constants for use with NSNotificationObserverMBS class.
**Notes:** Object for this notification is the updater.

### 169.3.22 SUUpdaterWillRestartNotification as String

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop only.

**Function:** The notification sent when updater will restart app.

### 169.3.23 validateMenuItem(menuItem as NSMenuItemMBS) as Boolean

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

**Function:** he menu item validation used for the checkForUpdates action

### 169.3.24 Properties

### 169.3.25 automaticallyChecksForUpdates as boolean

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

**Function:** Whether update checks are performed automatically.
**Notes:** (Read and Write property)

### 169.3.26 automaticallyDownloadsUpdates as boolean

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

**Function:** Whether downloads should be downloaded automatically.
**Notes:** (Read and Write property)

### 169.3.27 decryptionPassword as String

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

**Function:** A property indicating the decryption password used for extracting updates shipped as Apple Disk Images (dmg)
**Notes:** (Read and Write property)

### 169.3.28 feedURL as string

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

**Function:** The URL of the appcast feed.
**Notes:** (Read and Write property)

### 169.3.29 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

**Function:** The internal handle to the object used.
**Notes:** (Read and Write property)

### 169.3.30 hostBundle as Variant

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop only.

**Function:** The target application to update.
**Notes:**

Value is a NSBundleMBS object.
You can query BundleFolder on the NSBundle object to know where your app is.
(Read only property)

### 169.3.31 httpHeaders as Dictionary

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop only.

**Function:** The HTTP headers to include with fetchAppcastFromURL call.
**Notes:**

You can check this dictionary for HTTP headers.
Or make a new dictionary and assign it to this property to set http headers to include in transfer.
(Read and Write property)

### 169.3.32 lastUpdateCheckDate as date

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The date of the last update check.
**Notes:**

Returns nil if no check has been performed.
(Read only property)

### 169.3.33 lastUpdateCheckDateTime as DateTime

MBS MacExtras Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop only.

**Function:** The date of the last update check.
**Notes:**

Returns nil if no check has been performed.
(Read only property)

### 169.3.34 sendsSystemProfile as boolean

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

**Function:** Whether the system profile is sent to the server.
**Notes:** (Read and Write property)

### 169.3.35 sparkleBundle as Variant

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop only.

**Function:** The sparkle bundle.
**Notes:**

Value is a NSBundleMBS object.
You can query BundleFolder on the NSBundle object to know where your app is.
(Read only property)

### 169.3.36 updateCheckInterval as Double

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

**Function:** After which time the next update check is performed.
**Notes:** (Read and Write property)

### 169.3.37 updateInProgress as boolean

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

**Function:** Whether an update is in progress.
**Notes:** (Read only property)

### 169.3.38 userAgentString as String

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

**Function:** Which user agent string to use for the http download.
**Notes:** (Read and Write property)

### 169.3.39 Events

### 169.3.40 bestValidUpdateInAppcast(appcast as SUAppcastMBS) as SUAppcastItemMBS

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: .

**Function:** The event called to decide which appcast item is the best to use.
**Notes:**

If you're using special logic or extensions in your appcast, implement this to use your own logic for finding a valid update, if any, in the given appcast.

If you leave this event empty the default handler will be called. If you add code here, the default handle will not be called!

### 169.3.41 didAbortWithError(error as NSErrorMBS)

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: .

**Function:** Called after an update is aborted due to an error.
**Notes:**

error: The error that caused the abort

This is a newer event which is only called in 64-bit version.

### 169.3.42 didCancelInstallUpdateOnQuit(update as SUAppcastItemMBS)

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: .

**Function:** Called when an update is scheduled to be silently installed on quit and cancelled.
**Notes:** New in version 1.6 of Sparkle.

### 169.3.43 didDismissUpdateAlertPermanently(permanently as boolean, item as SUAppcastItemMBS)

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: .

**Function:** Called after the user dismisses the update alert.
**Notes:** permanently: true if the alert will not appear again for this update; false if it may reappear.

### 169.3.44 didDownloadUpdate(item as SUAppcastItemMBS)

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: .

**Function:** Called immediately after succesfull download of the specified update.
**Notes:** item: The appcast item corresponding to the update that has been downloaded.

### 169.3.45 didExtractUpdate(item as SUAppcastItemMBS)

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: .

**Function:** Called immediately after extracting the specified downloaded update.
**Notes:** item: The appcast item corresponding to the update that has been extracted.

### 169.3.46 didFindValidUpdate(update as SUAppcastItemMBS)

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: .

**Function:** This event is called when a valid update is found by the update driver.
**Notes:**

If you leave this event empty the default handler will be called. If you add code here, the default handle will not be called!

Plugin version 8.7 makes sure this method is executed on the main thread.

### 169.3.47 didFinishLoadingAppcast(update as SUAppcastMBS)

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: .

**Function:** The event called when the appcast has been loaded.
**Notes:**

Implement this if you want to do some special handling with the appcast once it finishes loading.

If you leave this event empty the default handler will be called. If you add code here, the default handle will not be called!

Plugin version 8.7 makes sure this method is executed on the main thread.

### 169.3.48 failedToDownloadUpdate(item as SUAppcastItemMBS, error as NSErrorMBS)

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: .

**Function:** Called after the specified update failed to download.
**Notes:**

item: The appcast item corresponding to the update that failed to download.
error: The error generated by the failed download.

This is a newer event which is only called in 64-bit version.

### 169.3.49 feedParametersForUpdater(sendingProfile as boolean) as dictionary()

MBS MacExtras Plugin, Plugin Version: 14.0, Platform: macOS, Targets: .

**Function:** Provide additional parameters for updater.
**Notes:** This method allows you to add extra parameters to the appcast URL, potentially based on whether or not Sparkle will also be sending along the system profile. This method should return an array of dictionaries with keys: "key", "value", "displayKey", "displayValue", the latter two being specifically for display to the user.

### 169.3.50 feedURLStringForUpdater as String

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: .

**Function:** Override this to dynamically specify the entire feed URL.
**Notes:** New in version 1.6 of Sparkle.

### 169.3.51 pathToRelaunchForUpdater as string

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: .

**Function:** This event is called so you can customize the installation destination of the update.
**Notes:**

This event returns the path which is used to relaunch the client after the update is installed. By default, the path of the host bundle.

If you leave this event empty the default handler will be called. If you add code here, the default handle will not be called!

### 169.3.52 shouldPostponeRelaunchForUpdate(sendingProfile as SUAppcastItemMBS) as boolean

MBS MacExtras Plugin, Plugin Version: 14.0, Platform: macOS, Targets: .

**Function:** Return true to delay the relaunch until you do some processing.
**Notes:**

Invoke the update later by calling InvokeUpdate method.
This is not called if the user didn't relaunch on the previous update, in that case it will immediately restart.

### 169.3.53 updaterDidNotFindUpdate

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: .

**Function:** The event called when a valid update is not found.
**Notes:** Plugin version 8.7 makes sure this method is executed on the main thread.

### 169.3.54 updaterDidRelaunchApplication

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: .

**Function:** Called immediately after relaunching. SUUpdater delegate must be set before applicationDidFinishLaunching: to catch this event.

### 169.3.55 updaterDidShowModalAlert

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: .

**Function:** Called after an updater shows a modal alert window, to give the host the opportunity to hide attached windows etc. that may get in the way.
**Notes:** New in version 1.6 of Sparkle.

### 169.3.56 updaterMayCheckForUpdates as boolean

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: .

**Function:** Use this to keep Sparkle from popping up e.g. while your setup assistant is showing.
**Notes:** New in version 1.6 of Sparkle.

### 169.3.57 updaterShouldPromptForPermissionToCheckForUpdates as boolean

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: .

**Function:** The event to decide whether the updater should prompt for permission to check for updates.
**Notes:**

Use this to override the default behavior for Sparkle prompting the user about automatic update checks.

If you leave this event empty the default handler will be called. If you add code here, the default handle will not be called!

### 169.3.58 updaterShouldRelaunchApplication as boolean

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: .

**Function:** Whether app should be relaunched.
**Notes:**

Some apps *can not* be relaunched in certain circumstances. They can use this method to prevent a relaunch "hard".
New in version 1.6 of Sparkle.

### 169.3.59 updaterShouldShowUpdateAlertForScheduledUpdate(item as SUAppcastItemMBS) as boolean

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: .

**Function:** Called just before the scheduled update driver prompts the user to install an update.
**Notes:** Yes to allow the update prompt to be shown (the default behavior), or no to suppress it.

### 169.3.60 updaterWillRelaunchApplication

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: .

**Function:** The event called immediately before relaunching.
**Notes:**

Plugin version 8.7 makes sure this method is executed on the main thread.

The current Sparkle (1.5b6) implementation seems to force quit the application so this method is the last chance for your application to clean up.

### 169.3.61 updaterWillShowModalAlert

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: .

**Function:** Called before an updater shows a modal alert window, to give the host the opportunity to hide attached windows etc. that may get in the way.
**Notes:** New in version 1.6 of Sparkle.

### 169.3.62 userDidCancelDownload

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: .

**Function:** Called when the user clicks the cancel button while and update is being downloaded.
**Notes:** This is a newer event which is only called in 64-bit version.

### 169.3.63 userDidSkipThisVersion(item as SUAppcastItemMBS)

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: .

**Function:** Called when the user clicks the Skip This Version button.

### 169.3.64 versionComparatorForUpdater as SUVersionComparisonMBS

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: .

**Function:** This event allows you to provide a custom version comparator.
**Notes:**

If you don't implement this event or return nil, the standard version comparator will be used.

Please makes ure that the SUVersionComparisonMBS object lives longer, so it can be used later. e.g. keep a reference in an app property.

### 169.3.65 willDownloadUpdate(item as SUAppcastItemMBS, request as Variant)

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: .

**Function:** Called immediately before downloading the specified update.
**Notes:**

item: The appcast item corresponding to the update that is proposed to be downloaded.
request: The mutable URL request that will be used to download the update. (NSMutableURLRequestMBS object)

This is a newer event which is only called in 64-bit version.

### 169.3.66 willExtractUpdate(item as SUAppcastItemMBS)

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: .

**Function:** Called immediately before extracting the specified downloaded update.
**Notes:** item: The appcast item corresponding to the update that is proposed to be extracted.

### 169.3.67 willInstallUpdate(update as SUAppcastItemMBS)

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: .

**Function:** This event is called immediately before installing the specified update.
**Notes:**

If you leave this event empty the default handler will be called. If you add code here, the default handle will not be called!

Plugin version 8.7 makes sure this method is executed on the main thread.

### 169.3.68 willInstallUpdateOnQuit(update as SUAppcastItemMBS)

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: .

**Function:** Called when an update is scheduled to be silently installed on quit.
**Notes:**

New in version 1.6 of Sparkle.
If you like to install now instead, you can call InvokeImmediateInstallation method.

### 169.3.69 Constants

### 169.3.70 SUAppcastError = 1002

MBS MacExtras Plugin, Plugin Version: 16.1.

**Function:** One of the Sparkle error codes.
**Notes:** An error occurred in retrieving update information.

### 169.3.71 SUAppcastParseError = 1000

MBS MacExtras Plugin, Plugin Version: 16.1.

**Function:** One of the Sparkle error codes.
**Notes:**

An error occurred while parsing the update feed.
The appcast must be valid xml.

### 169.3.72 SUAuthenticationFailure = 4001

MBS MacExtras Plugin, Plugin Version: 16.1.

**Function:** One of the Sparkle error codes.
**Notes:** Unable to grant authorization to perform action because it is explicitly turned off.

### 169.3.73 SUDowngradeError = 4006

MBS MacExtras Plugin, Plugin Version: 16.1.

**Function:** One of the Sparkle error codes.
**Notes:** The update contains an older version.

### 169.3.74 SUDownloadError = 2001

MBS MacExtras Plugin, Plugin Version: 20.3.

**Function:** One of the Sparkle error codes.
**Notes:** Download error.

### 169.3.75 SUFileCopyFailure = 4000

MBS MacExtras Plugin, Plugin Version: 16.1.

**Function:** One of the Sparkle error codes.
**Notes:** File copy failed.

### 169.3.76 SUInstallationCancelledError = 4007

MBS MacExtras Plugin, Plugin Version: 20.3.

**Function:** One of the Sparkle error codes.
**Notes:** Installation was cancelled.

### 169.3.77 SUInstallationError = 4005

MBS MacExtras Plugin, Plugin Version: 16.1.

**Function:** One of the Sparkle error codes.
**Notes:** An error occurred while installing the update.

### 169.3.78 SUMissingInstallerToolError = 4003

MBS MacExtras Plugin, Plugin Version: 16.1.

**Function:** One of the Sparkle error codes.
**Notes:** The installer tool is missing.

### 169.3.79 SUMissingUpdateError = 4002

MBS MacExtras Plugin, Plugin Version: 16.1.

**Function:** One of the Sparkle error codes.
**Notes:**

Couldn't find an appropriate update in the downloaded package.
App name or bundle ID must match to current app.

### 169.3.80 SUNoUpdateError = 1001

MBS MacExtras Plugin, Plugin Version: 16.1.

**Function:** One of the Sparkle error codes.
**Notes:** You already have the newest version.

### 169.3.81 SURelaunchError = 4004

MBS MacExtras Plugin, Plugin Version: 16.1.

**Function:** One of the Sparkle error codes.
**Notes:** Failed to relaunch.

### 169.3.82 SURunningFromDiskImageError = 1003

MBS MacExtras Plugin, Plugin Version: 16.1.

**Function:** One of the Sparkle error codes.
**Notes:** The app runs from disk image and can't update.

### 169.3.83 SURunningTranslocated = 1004

MBS MacExtras Plugin, Plugin Version: 20.3.

**Function:** One of the Sparkle error codes.
**Notes:** The application got translocated.

### 169.3.84 SUSignatureError = 3001

MBS MacExtras Plugin, Plugin Version: 16.1.

**Function:** One of the Sparkle error codes.
**Notes:** The signture doesn't match.

### 169.3.85 SUSystemPowerOffError = 5000

MBS MacExtras Plugin, Plugin Version: 16.1.

**Function:** One of the Sparkle error codes.
**Notes:** The update will not be installed because the user requested for the system to power off.

### 169.3.86 SUTemporaryDirectoryError = 2000

MBS MacExtras Plugin, Plugin Version: 16.1.

**Function:** One of the Sparkle error codes.
**Notes:** Failed to get temp file.

### 169.3.87 SUUnarchivingError = 3000

MBS MacExtras Plugin, Plugin Version: 16.1.

**Function:** One of the Sparkle error codes.
**Notes:** Failed to unarchive the update.

## 169.4 class SUVersionComparisonMBS

### 169.4.1 class SUVersionComparisonMBS

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

**Function:** Implement this class to provide version comparison facilities for Sparkle.
**Notes:** Or use the default implementation by not implementing the versionComparatorForUpdater event.

### 169.4.2 Methods

### 169.4.3 Constructor

MBS MacExtras Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop only.

**Function:** The constructor.

### 169.4.4 Destructor

MBS MacExtras Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop only.

**Function:** The destructor.

### 169.4.5 Properties

### 169.4.6 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

**Function:** The internal handle for this object.
**Notes:** (Read and Write property)

### 169.4.7 Events

### 169.4.8 compareVersion(VersionA as string, VersionB as string) as Integer

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: .

**Function:** The method to compare two version strings.
**Notes:**

Should return NSOrderedAscending if b >a, NSOrderedDescending if b <a, and NSOrderedSame if they are equivalent.

This function may be called on the main thread or some other thread, so disable stack checking in your event.

### 169.4.9 Constants

### 169.4.10 NSOrderedAscending = -1

MBS MacExtras Plugin, Plugin Version: 8.6.

**Function:** One of the order constants.

### 169.4.11 NSOrderedDescending = 1

MBS MacExtras Plugin, Plugin Version: 8.6.

**Function:** One of the order constants.

### 169.4.12 NSOrderedSame = 0

MBS MacExtras Plugin, Plugin Version: 8.6.

**Function:** One of the order constants.

## 169.5 class WinSparkleMBS

### 169.5.1 class WinSparkleMBS

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The class for WinSparkle library.
**Notes:**

Please first use LoadLibrary, than set properties and finally call Initialize.
Optionally you can later call Check methods.

### 169.5.2 Methods

### 169.5.3 CheckUpdateWithoutUI

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Checks if an update is available.
**Example:**

WinSparkleMBS.CheckUpdateWithoutUI

**Notes:**

No progress UI is shown to the user when checking. If an update is available, the usual "update available" window is shown; this function is *not* completely UI-less.
Use with caution, it usually makes more sense to use the automatic update checks on interval option or manual check with visible UI.
This function returns immediately.
This function respects "Skip this version" choice by the user.

### 169.5.4 CheckUpdateWithUI

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Checks if an update is available, showing progress UI to the user.
**Example:**

WinSparkleMBS.CheckUpdateWithUI

**Notes:**

Normally, WinSparkle checks for updates on startup and only shows its UI when it finds an update. If the application disables this behavior, it can hook this function to "Check for updates..." menu item.

When called, background thread is started to check for updates. A small window is shown to let the user know the progress. If no update is found, the user is told so. If there is an update, the usual "update available" window is shown.
This function returns immediately.

Because this function is intended for manual, user-initiated checks for updates, it ignores "Skip this version" even if the user checked it previously.

### 169.5.5 CheckUpdateWithUIAndInstall

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Checks if an update is available, showing progress UI to the user and immediately installing the update if one is available.
**Example:**

WinSparkleMBS.CheckUpdateWithUIAndInstall

**Notes:**

This is useful for the case when users should almost always use the newest version of your software. When called, WinSparkle will check for updates showing a progress UI to the user. If an update is found the update prompt will be skipped and the update will be installed immediately.
If your application expects to do something after checking for updates you may wish to use DidNotFindUpdate and UpdateCancelled events.

### 169.5.6 Cleanup

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Cleans up after WinSparkle.
**Example:**

WinSparkleMBS.Cleanup

**Notes:** Should be called by the app when it's shutting down. Cancels any pending Sparkle operations and shuts down its helper threads.

### 169.5.7 Initialize

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Starts WinSparkle.
**Example:**

```
WinSparkleMBS.Initialize
```

**Notes:**

If WinSparkle is configured to check for updates on startup, proceeds to perform the check. You should only call this function when your app is initialized and shows its main window.

This call doesn't block and returns almost immediately. If an update is available, the respective UI is shown later from a separate thread.

### 169.5.8 LoadLibrary(File as folderitem) as boolean

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Loads the WinSparkle DLL.
**Example:**

```
dim f as FolderItem = GetFolderItem("WinSparkle.dll")

if WinSparkleMBS.LoadLibrary(f) then
MsgBox "OK"
else
MsgBox "Failed to load DLL."
end if
```

**Notes:** Returns true on success.
See also:

- 169.5.9 LoadLibrary(Path as string) as boolean 24756

### 169.5.9 LoadLibrary(Path as string) as boolean

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Loads the WinSparkle DLL.
**Example:**

```
if WinSparkleMBS.LoadLibrary("Libs\WinSparkle.dll") then
MsgBox "OK"
else
MsgBox "Failed to load DLL."
end if
```

**Notes:** Returns true on success.
See also:

- 169.5.8 LoadLibrary(File as folderitem) as boolean 24756

### 169.5.10 Properties

### 169.5.11 AppCastURL as String

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Sets URL for the app's appcast.
**Example:**

```
WinSparkleMBS.AppCastURL = "https://www.monkeybreadsoftware.test/test/test.xml"
```

**Notes:**

Only http and https schemes are supported.

If this function isn't called by the app, the URL is obtained from Windows resource named "FeedURL" of type "APPCAST".

Always use HTTPS feeds, do not use unencrypted HTTP! This is necessary to prevent both leaking user information and preventing various MITM attacks.

See https://github.com/vslavik/winsparkle/wiki/Appcast-Feeds for more information about appcast feeds.
(Read and Write property)

### 169.5.12 AppName as String

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Application name.
**Example:**

WinSparkleMBS.CompanyName = "Monkeybread Software"
WinSparkleMBS.AppName = "Test App"
WinSparkleMBS.AppVersion = "1.2.3"

**Notes:**

This is both shown to the user and used in HTTP User-Agent header.

CompanyName and AppName are used to determine the location of WinSparkle settings in registry. (HKCU\Software\<CompanyName>\<AppName>\WinSparkle is used.)

If not set, this value is read from VERSIONINFO/StringFileInfo resources.
(Read and Write property)

### 169.5.13 AppVersion as String

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Version of the app, as string (e.g. "1.2" or "1.2rc1").
**Example:**

WinSparkleMBS.CompanyName = "Monkeybread Software"
WinSparkleMBS.AppName = "Test App"
WinSparkleMBS.AppVersion = "1.2.3"

**Notes:**

If not set, this value is read from VERSIONINFO/StringFileInfo resources.
(Read and Write property)

### 169.5.14 AutomaticCheckForUpdates as Boolean

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Whether updates are checked automatically or only through a manual call.
**Example:**

WinSparkleMBS.AutomaticCheckForUpdates = true

**Notes:**

If disabled, CheckUpdateWithUI must be used explicitly.

True to have updates checked automatically, false otherwise.
Defaults to false when not yet configured (as happens on first start).
(Read and Write property)

### 169.5.15 BuildVersion as String

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Sets application build version number.
**Example:**

WinSparkleMBS.BuildVersion = "123"

**Notes:**

This is the internal version number that is not normally shown to the user. It can be used for finer granularity that official release versions, e.g. for interim builds.

If this function is called, then the provided *build* number is used for comparing versions; it is compared to the "version" attribute in the appcast and corresponds to OS X Sparkle's CFBundleVersion handling. If used, then the appcast must also contain the "shortVersionString" attribute with human-readable display version string. The version passed to AppVersion property corresponds to this and is used for display.
(Read and Write property)

### 169.5.16 CanShutdown as Boolean

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Whether your app can shutdown now.
**Example:**

WinSparkleMBS.CanShutdown = false

**Notes:**

By default true.
Set to false when you have something like an open edited document.
(Read and Write property)

### 169.5.17 CompanyName as String

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The name of the vendor.
**Example:**

WinSparkleMBS.CompanyName = "Monkeybread Software"
WinSparkleMBS.AppName = "Test App"
WinSparkleMBS.AppVersion = "1.2.3"

**Notes:**

CompanyName and AppName are used to determine the location of WinSparkle settings in registry. (HKCU\Software\<CompanyName>\<AppName>\WinSparkle is used.)

If not set, this value is read from VERSIONINFO/StringFileInfo resources.
(Read and Write property)

### 169.5.18 DSAPubPEM as String

MBS Win Plugin, Plugin Version: 19.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The public key in PEM format.
**Notes:**

If not set, the framework will look into the app resources.
(Read and Write property)

### 169.5.19 Language as String

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Sets UI language from its ISO code.
**Example:**

WinSparkleMBS.Language = "en-US"

**Notes:**

Language and LanguageID properties set user interface language. One must be set before
Initialize to have any effect. If none of them is called, WinSparkle detects the UI language automatically.

ISO 639 language code with an optional ISO 3116 country code, e.g. ”fr”, ”pt-PT”, ”pt-BR” or ”pt_BR”,
(Read and Write property)

### 169.5.20 LanguageID as Integer

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Sets UI language from its Win32 LANGID code.
**Notes:**

Language and LanguageID properties set user interface language. One must be set before
Initialize to have any effect. If none of them is called, WinSparkle detects the UI language automatically.
(Read and Write property)

### 169.5.21 LastCheckTime as Integer

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Gets the time for the last update check.
**Notes:**

Default value is -1, indicating that the update check has never run.
(Read only property)

### 169.5.22 RegistryPath as String

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The registry path where settings will be stored.
**Example:**

WinSparkleMBS.RegistryPath = ”Software\My App\Updates”

**Notes:**

Normally, these are stored in ”HKCU\Software\<company_name>\<app_name>\WinSparkle” but if your application needs to store the data elsewhere for some reason, using this function is an alternative.
Note that path is relative to HKCU/HKLM root and the root is not part of it. For example:
(Read and Write property)

### 169.5.23 UpdateCheckInterval as Integer

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The automatic update interval.
**Example:**

WinSparkleMBS.UpdateCheckInterval = 7200

**Notes:**

The interval in seconds between checks for updates. The minimum update interval is 3600 seconds (1 hour). (Read and Write property)

### 169.5.24 Events

### 169.5.25 DidFindUpdate

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: .

**Function:** Called when an update was found.

### 169.5.26 DidNotFindUpdate

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: .

**Function:** Called when an update was not found.

### 169.5.27 Error

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: .

**Function:** Called when an update failed due to an error.

### 169.5.28 ShutdownRequest

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: .

**Function:** The event to ask the host to shut down immediately after launching the installer.
**Notes:** Its implementation should gracefully terminate the application.

### 169.5.29 UpdateCancelled

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: .

**Function:** The update was cancelled.

# Chapter 170

# Special Folders

## 170.1 Globals

### 170.1.1 ALMLocationsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = ALMLocationsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateALMLocationsFolder function.

### 170.1.2 ALMModulesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = ALMModulesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateALMModulesFolder function.

### 170.1.3 ALMPreferencesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = ALMPreferencesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateALMPreferencesFolder function.

### 170.1.4 AppearanceFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = AppearanceFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateAppearanceFolder function.

### 170.1.5 AppleExtrasFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = AppleExtrasFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateAppleExtrasFolder function.

### 170.1.6 AppleMenuFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = AppleMenuFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateAppleMenuFolder function.

### 170.1.7 AppleShareAuthenticationFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = AppleShareAuthenticationFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateAppleShareAuthenticationFolder function.

### 170.1.8 AppleshareAutomountServerAliasesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = AppleshareAutomountServerAliasesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateAppleshareAutomountServerAliasesFolderMBS function.

### 170.1.9 Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr5

### 170.1.10 AppleShareSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = AppleShareSupportFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateAppleShareSupportFolder function.

### 170.1.11 ApplicationsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = ApplicationsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateApplicationsFolder function.
On Windows, only the System Domain is supported.

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

### 170.1.12 ApplicationSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
dim f as folderitem

f=preferencesFolderMBS(-32763)
if f=nil then // On Windows always nil
f=applicationsupportFolderMBS(-32763)
end if

msgBox f.NativePath

// example output:
// "Mac OS X:Users:cs:Library:Preferences:" on Mac OS X
// "Mac OS 9:Systemordner:Preferences" on a german Mac OS 9
// "C:\Dokumente und Einstellungen\Christian\Anwendungsdaten\" on a german Windows XP.
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateApplicationSupportFolder function.

Xojo ApplicationSupport function points to "/Library/Application Support" while ApplicationSupportFolderMBS points to different locations on my test system depending on the domain code:

-32768 ->"/Library/Application Support"
-32767 ->"/Library/Application Support"

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

-32766 ->nil
-32765 ->"/Library/Application Support"
-32764 ->nil
-32763 ->"/Users/cs/Library/Application Support"
-32762 ->"/Volumes/Mac OS 9/Systemordner/Application Support"
0 ->"/Library/Application Support"

At last it is your decision to use the correct one!

### 170.1.13 AssistantsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = AssistantsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateAssistantsFolder function.

### 170.1.14 AudioAlertSoundsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = AudioAlertSoundsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateAudioAlertSoundsFolder function.

### 170.1.15 AudioComponentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = AudioComponentsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateAudioComponentsFolder function.

### 170.1.16 AudioDigidesignFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = AudioDigidesignFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateAudioDigidesignFolderMBS function.

Also take a look on the CreateClassicDesktopFolder function.

### 170.1.36 ClassicPreferencesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = ClassicPreferencesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateClassicPreferencesFolderMBS function.

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateColorSyncFolder function.

### 170.1.42 ColorSyncProfilesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = ColorSyncProfilesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateColorSyncProfilesFolder function.

### 170.1.43 ColorSyncScriptingFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = ColorSyncScriptingFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateColorSyncScriptingFolder function.

### 170.1.44 ComponentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = ComponentsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateComponentsFolder function.

### 170.1.45 CompositionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CompositionsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateCompositionsFolderMBS function.

### 170.1.47 ContextualMenuItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = ContextualMenuItemsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateContextualMenuItemsFolder function.

### 170.1.48 ControlPanelDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = ControlPanelDisabledFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |

Also take a look on the CreateControlPanelDisabledFolder function.

### 170.1.49 ControlPanelFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = ControlPanelFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateControlPanelFolder function.

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

### 170.1.50 ControlStripModulesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = ControlStripModulesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateControlStripModulesFolder function.

### 170.1.51 CoreServicesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CoreServicesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateCoreServicesFolder function.

### 170.1.52 CreateALMLocationsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateALMLocationsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the ALMLocationsFolder function.

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

### 170.1.53 CreateALMModulesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateALMModulesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the ALMModulesFolder function.

### 170.1.54 CreateALMPreferencesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateALMPreferencesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the ALMPreferencesFolder function.

### 170.1.55 CreateAppearanceFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateAppearanceFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the AppearanceFolder function.

### 170.1.56 CreateAppleExtrasFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateAppleExtrasFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the AppleExtrasFolder function.

### 170.1.57 CreateAppleMenuFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateAppleMenuFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the AppleMenuFolder function.

### 170.1.58 CreateAppleShareAuthenticationFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateAppleShareAuthenticationFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder

could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the AppleShareAuthenticationFolder function.

### 170.1.59 CreateAppleshareAutomountServerAliasesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateAppleshareAutomountServerAliasesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the AppleshareAutomountServerAliasesFolderMBS function.

### 170.1.60 CreateAppleShareSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateAppleShareSupportFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the AppleShareSupportFolder function.

### 170.1.61 CreateApplicationsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
```

```
dim f as folderitem = CreateApplicationsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the ApplicationsFolder function.
On Windows, only the System Domain is supported.

### 170.1.62 CreateApplicationSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateApplicationSupportFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the ApplicationSupportFolder function.

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Xojo ApplicationSupport function points to "/Library/Application Support" while ApplicationSupportFolderMBS points to different locations on my test system depending on the domain code:

-32768 ->"/Library/Application Support"
-32767 ->"/Library/Application Support"
-32766 ->nil
-32765 ->"/Library/Application Support"
-32764 ->nil
-32763 ->"/Users/cs/Library/Application Support"
-32762 ->"/Volumes/Mac OS 9/Systemordner/Application Support"
0 ->"/Library/Application Support"

At last it is your decision to use the correct one!

### 170.1.63 CreateAssistantsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateAssistantsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the AssistantsFolder function.

### 170.1.64 CreateAudioAlertSoundsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateAudioAlertSoundsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the AudioAlertSoundsFolder function.

### 170.1.65 CreateAudioComponentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateAudioComponentsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the AudioComponentsFolder function.

### 170.1.66 CreateAudioDigidesignFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateAudioDigidesignFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder

could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the AudioDigidesignFolderMBS function.

### 170.1.67 CreateAudioPlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateAudioPlugInsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the AudioPlugInsFolder function.

### 170.1.68 CreateAudioPresetsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

```
const kUserDomain = -32763
dim f as folderitem = CreateAudioPresetsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the AudioPresetsFolderMBS function.

### 170.1.69 CreateAudioSoundBanksFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateAudioSoundBanksFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the AudioSoundBanksFolder function.

### 170.1.70 CreateAudioSoundsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateAudioSoundsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the AudioSoundsFolder function.

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

### 170.1.71 CreateAudioSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateAudioSupportFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the AudioSupportFolder function.

### 170.1.72 CreateAudioVSTFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateAudioVSTFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the AudioVSTFolderMBS function.

### 170.1.73 CreateAutomatorWorkflowsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateAutomatorWorkflowsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the AutomatorWorkflowsFolderMBS function.

### 170.1.74 CreateAutosaveInformationFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateAutosaveInformationFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the AutosaveInformationFolderMBS function.

### 170.1.75 CreateBootTimeStartupItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateBootTimeStartupItemsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the BootTimeStartupItemsFolderMBS function.

### 170.1.76 CreateCachedDataFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateCachedDataFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder

could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CachedDataFolder function.

### 170.1.77 CreateCarbonLibraryFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateCarbonLibraryFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CarbonLibraryFolder function.

### 170.1.78 CreateChewableItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

```
const kUserDomain = -32763
dim f as folderitem = CreateChewableItemsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the ChewableItemsFolder function.

### 170.1.79 CreateClassicDesktopFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateClassicDesktopFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the ClassicDesktopFolder function.

### 170.1.80 CreateClassicPreferencesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateClassicPreferencesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the ClassicPreferencesFolderMBS function.

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

### 170.1.81 CreateColorPickersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateColorPickersFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the ColorPickersFolderMBS function.

### 170.1.82 CreateColorSyncCMMFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateColorSyncCMMFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the ColorSyncCMMFolder function.

### 170.1.83 CreateColorSyncFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateColorSyncFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the ColorSyncFolder function.

### 170.1.84 CreateColorSyncProfilesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateColorSyncProfilesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the ColorSyncProfilesFolder function.

### 170.1.85 CreateColorSyncScriptingFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateColorSyncScriptingFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the ColorSyncScriptingFolder function.

### 170.1.86 CreateComponentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateComponentsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder

could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the ComponentsFolder function.

### 170.1.87 CreateCompositionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateCompositionsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CompositionsFolderMBS function.

### 170.1.88 CreateContextualMenuItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

```
const kUserDomain = -32763
dim f as folderitem = CreateContextualMenuItemsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the ContextualMenuItemsFolder function.

### 170.1.89 CreateControlPanelDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateControlPanelDisabledFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the ControlPanelDisabledFolder function.

### 170.1.90 CreateControlPanelFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateControlPanelFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the ControlPanelFolder function.

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

### 170.1.91 CreateControlStripModulesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateControlStripModulesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the ControlStripModulesFolder function.

### 170.1.92 CreateCoreServicesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateCoreServicesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CoreServicesFolder function.

### 170.1.93 CreateCurrentUserFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateCurrentUserFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CurrentUserFolder function.

### 170.1.94 CreateCurrentUserRemoteFolderLocationFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateCurrentUserRemoteFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CurrentUserRemoteFolder function.

### 170.1.95 CreateCurrentUserRemoteFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateCurrentUserRemoteFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CurrentUserRemoteFolder function.

### 170.1.96 CreateDesktopFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateDesktopFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the SpecialFolder.Desktop function.

### 170.1.97 CreateDesktopPicturesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateDesktopPicturesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the DesktopPicturesFolder function.

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

### 170.1.98 CreateDeveloperApplicationsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

**Function:** The developer application folder.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateDeveloperApplicationsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the DeveloperApplicationsFolderMBS function.

### 170.1.99 CreateDeveloperDocsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateDeveloperDocsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the DeveloperDocsFolder function.

### 170.1.100 CreateDeveloperFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateDeveloperFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the DeveloperFolder function.

### 170.1.101 CreateDeveloperHelpFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateDeveloperHelpFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the DeveloperHelpFolder function.

### 170.1.102 CreateDictionariesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

**Function:** The folder for the dictionaries.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateDictionariesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the DictionariesFolderMBS function.

### 170.1.103 CreateDirectoryServicesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateDirectoryServicesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder

could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the DirectoryServicesFolder function.

### 170.1.104 CreateDirectoryServicesPlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateDirectoryServicesPlugInsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the DirectoryServicesPlugInsFolder function.

### 170.1.105 CreateDisplayExtensionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

```
const kUserDomain = -32763
dim f as folderitem = CreateDisplayExtensionsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the DisplayExtensionsFolder function.

### 170.1.106 CreateDocumentationFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateDocumentationFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the DocumentationFolder function.

### 170.1.107 CreateDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateDocumentsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the DocumentsFolder function.
On Windows only the user and the system domain are supported.

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

### 170.1.108 CreateDomainLibraryFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateDomainLibraryFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the DomainLibraryFolder function.

### 170.1.109 CreateDomainTopLevelFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateDomainTopLevelFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the DomainTopLevelFolder function.

### 170.1.110 CreateDownloadsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateDownloadsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the DownloadsFolderMBS function.

### 170.1.111 CreateEditorsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateEditorsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the EditorsFolder function.

### 170.1.112 CreateExtensionDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateExtensionDisabledFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the ExtensionDisabledFolder function.

### 170.1.113 CreateExtensionFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateExtensionFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder

could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the ExtensionFolder function.

### 170.1.114 CreateFavoritesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateFavoritesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the FavoritesFolder function.

### 170.1.115 CreateFileSystemSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

```
const kUserDomain = -32763
dim f as folderitem = CreateFileSystemSupportFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the FileSystemSupportFolder function.

### 170.1.116 CreateFindByContentFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateFindByContentFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the FindByContentFolder function.

### 170.1.117 CreateFindByContentIndexesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateFindByContentIndexesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the FindByContentIndexesFolderMBS function.

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

### 170.1.118 CreateFindByContentPluginsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateFindByContentPluginsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the FindByContentPluginsFolder function.

### 170.1.119 CreateFindSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateFindSupportFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the FindSupportFolder function.

### 170.1.120 CreateFolderActionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateFolderActionsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the FolderActionsFolder function.

### 170.1.121 CreateFontCollectionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateFontCollectionsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the FontCollectionsFolderMBS function.

### 170.1.122 CreateFontsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateFontsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the FontsFolder function.

### 170.1.123 CreateFrameworksFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateFrameworksFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder

could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the FrameworksFolder function.

### 170.1.124 CreateGenEditorsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateGenEditorsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the GenEditorsFolder function.

### 170.1.125 CreateHelpFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

```
const kUserDomain = -32763
dim f as folderitem = CreateHelpFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the HelpFolder function.

### 170.1.126 CreateiMovieFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateiMovieFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the iMovieFolderMBS function.

### 170.1.127 CreateiMoviePlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateiMoviePlugInsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the iMoviePlugInsFolderMBS function.

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

### 170.1.128 CreateiMovieSoundEffectsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = iMovieSoundEffectsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateiMovieSoundEffectsFolderMBS function.

### 170.1.129 CreateIndexFilesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = IndexFilesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateIndexFilesFolderMBS function.

### 170.1.130 CreateInputManagersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateInputManagersFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the InputManagersFolderMBS function.

### 170.1.131 CreateInputMethodsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = InputMethodsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateInputMethodsFolderMBS function.

### 170.1.132 CreateInstallerLogsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateInstallerLogsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the InstallerLogsFolder function.

### 170.1.133 CreateInstallerReceiptsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateInstallerReceiptsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder

could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the InstallerReceiptsFolder function.

### 170.1.134 CreateInternetFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateInternetFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the InternetFolder function.

### 170.1.135 CreateInternetPlugInFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

```
const kUserDomain = -32763
dim f as folderitem = CreateInternetPlugInFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the InternetPlugInFolder function.

### 170.1.136 CreateInternetSearchSitesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateInternetSearchSitesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the InternetSearchSitesFolder function.

### 170.1.137 CreateInternetSitesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateInternetSitesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the InternetSitesFolder function.

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

### 170.1.138 CreateISSDownloadsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateISSDownloadsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the ISSDownloadsFolder function.

### 170.1.139 CreateKernelExtensionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateKernelExtensionsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the KernelExtensionsFolder function.

### 170.1.140 CreateKeyboardLayoutsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = KeyboardLayoutsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateKeyboardLayoutsFolderMBS function.

### 170.1.141 CreateKeychainFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateKeychainFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the KeychainFolder function.

### 170.1.142 CreateLauncherItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateLauncherItemsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the LauncherItemsFolder function.

### 170.1.143 CreateLibraryAssistantsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = LibraryAssistantsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder

could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateLibraryAssistantsFolderMBS function.

### 170.1.144 CreateLocalesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateLocalesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the LocalesFolder function.

### 170.1.145 CreateLogsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

**Function:** The log files folder.
**Example:**

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

```
const kUserDomain = -32763
dim f as folderitem = CreateLogsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the LogsFolderMBS function.

### 170.1.146 CreateMacOSReadMesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateMacOSReadMesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the MacOSReadMesFolder function.

### 170.1.147 CreateMagicTemporaryItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = MagicTemporaryItemsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateMagicTemporaryItemsFolderMBS function.

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

### 170.1.148 CreateManagedItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateManagedItemsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the ManagedItemsFolderMBS function.

### 170.1.149 CreateMIDIDriversFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateMIDIDriversFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the MIDIDriversFolder function.

### 170.1.150 CreateModemScriptsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateModemScriptsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the ModemScriptsFolder function.

### 170.1.151 CreateMovieDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateMovieDocumentsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the MovieDocumentsFolder function.

### 170.1.152 CreateMultiprocessingFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateMultiprocessingFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the MultiprocessingFolder function.

### 170.1.153 CreateMusicDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateMusicDocumentsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder

could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the MusicDocumentsFolder function.

### 170.1.154 CreateOpenDocEditorsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateOpenDocEditorsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the OpenDocEditorsFolder function.

### 170.1.155 CreateOpenDocFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

```
const kUserDomain = -32763
dim f as folderitem = CreateOpenDocFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the OpenDocFolder function.

### 170.1.156 CreateOpenDocLibrariesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateOpenDocLibrariesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the OpenDocLibrariesFolder function.

### 170.1.157 CreateOpenDocShellPlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateOpenDocShellPlugInsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the OpenDocShellPlugInsFolder function.

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

### 170.1.158 CreatePictureDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreatePictureDocumentsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the PictureDocumentsFolder function.
As there is no such folder on Mac OS Classic, you always get nil there.

### 170.1.159 CreatePreferencePanesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

**Function:** The preferences panes folder.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreatePreferencePanesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the PreferencePanesFolderMBS function.

### 170.1.160 CreatePreferencesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreatePreferencesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder

could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the PreferencesFolder function.

### 170.1.161 CreatePrinterDescriptionFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreatePrinterDescriptionFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the PrinterDescriptionFolder function.

### 170.1.162 CreatePrinterDriverFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

```
const kUserDomain = -32763
dim f as folderitem = CreatePrinterDriverFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the PrinterDriverFolder function.

### 170.1.163 CreatePrintersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreatePrintersFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the PrintersFolder function.

### 170.1.164 CreatePrintingPlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreatePrintingPlugInsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the PrintingPlugInsFolder function.

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

### 170.1.165 CreatePrintMonitorDocsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreatePrintMonitorDocsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the PrintMonitorDocsFolder function.

### 170.1.166 CreatePrivateFrameworksFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreatePrivateFrameworksFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the PrivateFrameworksFolder function.

### 170.1.167 CreatePublicFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreatePublicFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the PublicFolder function.

### 170.1.168 CreateQuickLookFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateQuickLookFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the QuickLookFolderMBS function.

### 170.1.169 CreateQuickTimeComponentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateQuickTimeComponentsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the QuickTimeComponentsFolder function.

### 170.1.170 CreateQuickTimeExtensionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateQuickTimeExtensionsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder

could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the QuickTimeExtensionsFolder function.

### 170.1.171 CreateRecentApplicationsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateRecentApplicationsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the RecentApplicationsFolder function.

### 170.1.172 CreateRecentDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

```
const kUserDomain = -32763
dim f as folderitem = CreateRecentDocumentsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the RecentDocumentsFolder function.

### 170.1.173 CreateRecentServersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateRecentServersFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the RecentServersFolder function.

### 170.1.174 CreateScriptingAdditionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateScriptingAdditionsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the ScriptingAdditionsFolder function.

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

### 170.1.175 CreateScriptsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateScriptsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the ScriptsFolder function.

### 170.1.176 CreateSharedLibrariesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateSharedLibrariesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the SharedLibrariesFolder function.

### 170.1.177 CreateSharedUserDataFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateSharedUserDataFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the SharedUserDataFolder function.

### 170.1.178 CreateShutdownFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateShutdownFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the ShutdownFolder function.

### 170.1.179 CreateShutdownItemsDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateShutdownItemsDisabledFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the ShutdownItemsDisabledFolder function.

### 170.1.180 CreateSoundSetsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateSoundSetsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder

could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the SoundSetsFolder function.

### 170.1.181 CreateSpeakableItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateSpeakableItemsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the SpeakableItemsFolder function.

### 170.1.182 CreateSpeechFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

```
const kUserDomain = -32763
dim f as folderitem = CreateSpeechFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the SpeechFolder function.

### 170.1.183 CreateSpotlightImportersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = SpotlightImportersFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateSpotlightImportersFolderMBS function.

### 170.1.184 CreateSpotlightMetadataCacheFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = SpotlightMetadataCacheFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateSpotlightMetadataCacheFolderMBS function.

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

### 170.1.185 CreateSpotlightSavedSearchesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateSpotlightSavedSearchesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the SpotlightSavedSearchesFolderMBS function.

### 170.1.186 CreateStartupFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateStartupFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the StartupFolder function.

### 170.1.187 CreateStartupItemsDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateStartupItemsDisabledFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the StartupItemsDisabledFolder function.

### 170.1.188 CreateStationeryFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateStationeryFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the StationeryFolder function.

### 170.1.189 CreateSystemControlPanelFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateSystemControlPanelFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the SystemControlPanelFolder function.

### 170.1.190 CreateSystemDesktopFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateSystemDesktopFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder

could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the SystemDesktopFolder function.

### 170.1.191 CreateSystemExtensionDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateSystemExtensionDisabledFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the SystemExtensionDisabledFolder function.

### 170.1.192 CreateSystemFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

```
const kUserDomain = -32763
dim f as folderitem = CreateSystemFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the SystemFolder function.

### 170.1.193 CreateSystemPreferencesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateSystemPreferencesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the SystemPreferencesFolder function.

### 170.1.194 CreateSystemSoundsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateSystemSoundsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the SystemSoundsFolder function.

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

### 170.1.195 CreateSystemTrashFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateSystemTrashFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the SystemTrashFolder function.

### 170.1.196 CreateTemporaryFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateTemporaryFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the TemporaryFolder function.

### 170.1.197 CreateTemporaryItemsInCacheDataFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateTemporaryItemsInCacheDataFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the TemporaryItemsInCacheDataFolderMBS function.

### 170.1.198 CreateTemporaryItemsInUserDomainFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateTemporaryItemsInUserDomainFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the TemporaryItemsInUserDomainFolderMBS function.

### 170.1.199 CreateTextEncodingsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateTextEncodingsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the TextEncodingsFolder function.

### 170.1.200 CreateThemesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateThemesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the ThemesFolder function.

### 170.1.201 CreateTrashFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateTrashFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the TrashFolder function.

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

### 170.1.202 CreateUsersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateUsersFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the UsersFolder function.

### 170.1.203 CreateUserSpecificTmpFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateUserSpecificTmpFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the UserSpecificTmpFolder function.

### 170.1.204 CreateUtilitiesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateUtilitiesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the UtilitiesFolder function.

### 170.1.205 CreateVoicesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateVoicesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the VoicesFolder function.

### 170.1.206 CreateVolumeRootFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateVolumeRootFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the VolumeRootFolder function.

### 170.1.207 CreateVolumeSettingsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateVolumeSettingsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder

could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the VolumeSettingsFolder function.

### 170.1.208 CreateWhereToEmptyTrashFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateWhereToEmptyTrashFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the WhereToEmptyTrashFolder function.

### 170.1.209 CurrentUserFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

```
const kUserDomain = -32763
dim f as folderitem = CurrentUserFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateCurrentUserFolder function.

### 170.1.210 CurrentUserRemoteFolderLocationFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CurrentUserRemoteFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateCurrentUserRemoteFolder function.

### 170.1.211 CurrentUserRemoteFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CurrentUserRemoteFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateCurrentUserRemoteFolder function.

### 170.1.212 DesktopFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = DesktopFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateDesktopFolder function.

### 170.1.213 DesktopPicturesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = DesktopPicturesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateDesktopPicturesFolder function.

### 170.1.214 DeveloperApplicationsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

**Function:** The developer application folder.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = DeveloperApplicationsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateDeveloperApplicationsFolderMBS function.

### 170.1.215 DeveloperDocsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = DeveloperDocsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateDeveloperDocsFolder function.

### 170.1.216 DeveloperFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = DeveloperFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateDeveloperFolder function.

### 170.1.217 DeveloperHelpFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = DeveloperHelpFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateDeveloperHelpFolder function.

### 170.1.218 DictionariesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

**Function:** The folder for the dictionaries.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = DictionariesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateDictionariesFolderMBSfunction.

### 170.1.219 DirectoryServicesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = DirectoryServicesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateDirectoryServicesFolder function.

### 170.1.220 DirectoryServicesPlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = DirectoryServicesPlugInsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateDirectoryServicesPlugInsFolder function.

### 170.1.221 DisplayExtensionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = DisplayExtensionsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateDisplayExtensionsFolder function.

### 170.1.222 DocumentationFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = DocumentationFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateDocumentationFolder function.
On Windows only the user and the system domain are supported.

### 170.1.223 DocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = DocumentsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateDocumentsFolder function.

### 170.1.224 DomainLibraryFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = DomainLibraryFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateDomainLibraryFolder function.

### 170.1.225 DomainTopLevelFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = DomainTopLevelFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateDomainTopLevelFolder function.

### 170.1.226 DownloadsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = DownloadsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateDownloadsFolderMBS function.

### 170.1.228 EditorsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = EditorsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateEditorsFolder function.

### 170.1.229 ExtensionDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = ExtensionDisabledFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |

| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateFavoritesFolder function.

### 170.1.232 FileSystemSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```
const kUserDomain = -32763
dim f as folderitem = FileSystemSupportFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateFileSystemSupportFolder function.

### 170.1.233 FindByContentFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = FindByContentFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateFindByContentFolder function.

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |

### 170.1.244 HelpFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = HelpFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateHelpFolder function.

### 170.1.245 iMovieFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = iMovieFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateiMovieFolderMBS function.

**Example:**

```
const kUserDomain = -32763
dim f as folderitem = MIDIDriversFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateMIDIDriversFolder function.

### 170.1.279 ModemScriptsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = ModemScriptsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateModemScriptsFolder function.

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

### 170.1.280 MovieDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = MovieDocumentsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateMovieDocumentsFolder function.

### 170.1.281 MultiprocessingFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```
const kUserDomain = -32763
dim f as folderitem = MultiprocessingFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateMultiprocessingFolder function.

### 170.1.282 MusicDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = MusicDocumentsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateMusicDocumentsFolder function.

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

### 170.1.283 OpenDocEditorsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = OpenDocEditorsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateOpenDocEditorsFolder function.

### 170.1.284 OpenDocFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```
const kUserDomain = -32763
dim f as folderitem = OpenDocFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateOpenDocFolder function.

### 170.1.285 OpenDocLibrariesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = OpenDocLibrariesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateOpenDocLibrariesFolder function.

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

### 170.1.286 OpenDocShellPlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = OpenDocShellPlugInsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateOpenDocShellPlugInsFolder function.

### 170.1.287 PictureDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```
const kUserDomain = -32763
dim f as folderitem = PictureDocumentsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreatePictureDocumentsFolder function.
As there is no such folder on Mac OS Classic, you always get nil there.

### 170.1.288 PreferencePanesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

**Function:** The preferences panes folder.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = PreferencePanesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreatePreferencePanesFolderMBS function.

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

### 170.1.289 PreferencesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
dim f as folderitem

f=preferencesFolderMBS(-32763)
if f=nil then // On Windows always nil
f=applicationsupportFolderMBS(-32763)
end if

msgBox f.NativePath

// example output:
// "Mac OS X:Users:cs:Library:Preferences:" on Mac OS X
// "Mac OS 9:Systemordner:Preferences" on a german Mac OS 9
// "C:\Dokumente und Einstellungen\Christian\Anwendungsdaten\" on a german Windows XP.
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreatePreferencesFolder function.

### 170.1.290 PrinterDescriptionFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

**Example:**

```
const kUserDomain = -32763
dim f as folderitem = PrinterDescriptionFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreatePrinterDescriptionFolder function.

### 170.1.291 PrinterDriverFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = PrinterDriverFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreatePrinterDriverFolder function.

### 170.1.292 PrintersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = PrintersFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreatePrintersFolder function.

### 170.1.293 PrintingPlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = PrintingPlugInsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreatePrintingPlugInsFolder function.

### 170.1.294 PrintMonitorDocsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = PrintMonitorDocsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreatePrintMonitorDocsFolder function.

### 170.1.295 PrivateFrameworksFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = PrivateFrameworksFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreatePrivateFrameworksFolder function.

### 170.1.296 PublicFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = PublicFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreatePublicFolder function.

### 170.1.297 QuickLookFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = QuickLookFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateQuickLookFolderMBS function.
