**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateQuickTimeExtensionsFolder function.

### 170.1.301 RecentApplicationsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```
const kUserDomain = -32763
dim f as folderitem = RecentApplicationsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateRecentApplicationsFolder function.

### 170.1.302 RecentDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = RecentDocumentsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateRecentDocumentsFolder function.

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

### 170.1.303 RecentServersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = RecentServersFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateRecentServersFolder function.

### 170.1.304 ScriptingAdditionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```
const kUserDomain = -32763
dim f as folderitem = ScriptingAdditionsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateScriptingAdditionsFolder function.

### 170.1.305 ScriptsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = ScriptsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateScriptsFolder function.

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

### 170.1.306 SharedLibrariesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = SharedLibrariesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateSharedLibrariesFolder function.

### 170.1.307 SharedUserDataFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```
const kUserDomain = -32763
dim f as folderitem = SharedUserDataFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateSharedUserDataFolder function.

### 170.1.308 ShutdownFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = ShutdownFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateShutdownFolder function.

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

### 170.1.309 ShutdownItemsDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = ShutdownItemsDisabledFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateShutdownItemsDisabledFolder function.

### 170.1.310 SoundSetsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```
const kUserDomain = -32763
dim f as folderitem = SoundSetsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateSoundSetsFolder function.

### 170.1.311 SpeakableItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = SpeakableItemsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateSpeakableItemsFolder function.

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

### 170.1.312 SpeechFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = SpeechFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateSpeechFolder function.

### 170.1.313 SpotlightImportersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```
const kUserDomain = -32763
dim f as folderitem = SpotlightImportersFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateSpotlightImportersFolderMBS function.

|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateStartupItemsDisabledFolder function.

### 170.1.321 StationeryFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = StationeryFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateStationeryFolder function.

### 170.1.322 SystemControlPanelFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = SystemControlPanelFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateSystemControlPanelFolder function.

### 170.1.323 SystemDesktopFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = SystemDesktopFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateSystemDesktopFolder function.

### 170.1.324 SystemExtensionDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = SystemExtensionDisabledFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateSystemExtensionDisabledFolder function.

### 170.1.325 SystemFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = SystemFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateSystemFolder function.

### 170.1.326 SystemPreferencesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = SystemPreferencesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateSystemPreferencesFolder function.

### 170.1.327 SystemSoundsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = SystemSoundsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateSystemSoundsFolder function.

### 170.1.328 SystemTrashFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = SystemTrashFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateSystemTrashFolder function.

### 170.1.329 TemporaryFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = TemporaryFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateTemporaryFolder function.

### 170.1.330 TemporaryItemsInCacheDataFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = TemporaryItemsInCacheDataFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateTemporaryItemsInCacheDataFolderMBS function.

| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

### 170.1.334 TextEncodingsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = TextEncodingsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateTextEncodingsFolder function.

### 170.1.335 ThemesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```
const kUserDomain = -32763
dim f as folderitem = ThemesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateThemesFolder function.

### 170.1.336 TrashFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = TrashFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateTrashFolder function.

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

### 170.1.337 UsersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = UsersFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateUsersFolder function.

### 170.1.338 UserSpecificTmpFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```
const kUserDomain = -32763
dim f as folderitem = UserSpecificTmpFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateUserSpecificTmpFolder function.

### 170.1.339 UtilitiesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = UtilitiesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateUtilitiesFolder function.

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

### 170.1.340 VoicesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = VoicesFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateVoicesFolder function.

### 170.1.341 VolumeRootFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```
const kUserDomain = -32763
dim f as folderitem = VolumeRootFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateVolumeRootFolder function.

### 170.1.342 VolumeSettingsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = VolumeSettingsFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateVolumeSettingsFolder function.

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

### 170.1.343 WhereToEmptyTrashFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
const kUserDomain = -32763
dim f as folderitem = WhereToEmptyTrashFolderMBS(kUserDomain)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

| | |
|---|---|
| -32768 | On System Disk |
| -32767 | On Appropriate Disk |
| -32766 | System Domain, on Mac OS X mostly inside the folder /System. |
| -32765 | Local Domain (on Netbooting for example) |
| -32764 | Network Domain (on Netbooting for example) |
| -32763 | User Domain, on Mac OS X mostly inside the users folder. |
| -32762 | Classic Domain, the current used Classic System folder. |

Also take a look on the CreateWhereToEmptyTrashFolder function.

### 170.1.344 WindowsBurnAreaFolderMBS as folderitem

MBS Util Plugin, Plugin Version: 8.5, Platform: Windows, Targets: All.

**Function:** Returns the folder which Windows uses to store temporary data for burning a CD/DVD.

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:** Returns nil on any error.

### 170.1.345 WindowsFolderMBS as folderitem

MBS Util Plugin, Platform: Windows, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
dim f as folderitem
f=WindowsFolderMBS
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead.

### 170.1.346 WindowsSystemFolderMBS as folderitem

MBS Util Plugin, Platform: Windows, Targets: All.

**Function:** Returns a folderitem to this folder if it exists on that system.
**Example:**

```
dim f as folderitem
f=WindowsSystemFolderMBS
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SpecialFolder module instead.

# Chapter 171

# Speech

## 171.1 class NSSpeechRecognizerMBS

### 171.1.1 class NSSpeechRecognizerMBS

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The class to handle the cocoa speech recognition.
**Notes:**

Available in Mac OS X v10.3 and later.

See newer SFSpeechRecognizerMBS class.

### 171.1.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr7

### 171.1.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr7

### 171.1.4 Methods

### 171.1.5 commands as string()

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the current list of commands.

### 171.1.6 Destructor

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The destructor.

### 171.1.7 SetCommands(commands() as string)

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Sets the list of commands for which the receiver should listen to commands.
**Notes:** If the receiver is already listening, the current command list is updated and listening continues. commands should be an array of strings. The commands must be in U.S. English.

### 171.1.8 StartListening

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Tells the speech recognition engine to begin listening for commands.
**Notes:** When a command is recognized the message didRecognizeCommand is called.

### 171.1.9 StopListening

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Tells the speech recognition engine to suspend listening for commands.

### 171.1.10 Properties

### 171.1.11 BlocksOtherRecognizers as boolean

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Whether the receiver should block all other recognizers (that is, other applications attempting to understand spoken commands) when listening.
**Notes:** (Read and Write property)

### 171.1.12 DisplayedCommandsTitle as string

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the title of the commands section or "" if there is no title.
**Notes:**

Commands are displayed in the Speech Commands window indented under a section with this title.
(Read and Write property)

### 171.1.13 ListensInForegroundOnly as boolean

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Whether the receiver should only enable its commands when the receiver's application is the frontmost one.
**Notes:** (Read and Write property)

### 171.1.14 Events

### 171.1.15 DidRecognizeCommand(command as string)

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: .

**Function:** Invoked when the recognition engine has recognized the application command command.
**Notes:** command is one of the strings from the array passed to setCommands. The delegate typically evaluates which command was recognized and performs the related action.

## 171.2 class NSSpeechSynthesizerMBS

### 171.2.1 class NSSpeechSynthesizerMBS

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The class to handle the cocoa speech synthesizing.
**Notes:**

Available in Mac OS X v10.3 and later.

More details on Apple's website:
https://developer.apple.com/library/mac/documentation/Cocoa/Reference/ApplicationKit/Classes/NSSpeech-Synthesizer_Class/

### 171.2.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr9
- MBS Xojo / Real Studio Plugins, version 13.2pr7
- MBS Real Studio Plugins, version 13.1pr11

### 171.2.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr9
- MBS Xojo / Real Studio Plugins, version 13.2pr7
- MBS Real Studio Plugins, version 13.1pr11

### 171.2.4 Methods

### 171.2.5 addSpeechDictionary(speechDictionary as dictionary)

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Registers the given speech dictionary with the receiver.
**Notes:**

speechDictionary: Speech dictionary to add to the receiver's dictionaries.

See the discussion of UseSpeechDictionary in Speech Synthesis Manager Reference for more information.
Available in OS X v10.5 and later.

### 171.2.6 attributesForVoice(voice as String) as NSVoiceMBS

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns information about a voice or nil.

### 171.2.7 availableVoice(index as Integer) as String

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns name of a voice.
**Notes:**

The available voices can be listed using this function.
Index is from 0 to count-1.

### 171.2.8 availableVoices as String()

MBS MacCocoa Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the array with the identifiers for the available voices.
**Example:**

MsgBox Join(NSSpeechSynthesizerMBS.availableVoices)

**Notes:** Same as availableVoice() and availableVoicesCount, but this function returns an array which is very useful for for-each-loops.

### 171.2.9 availableVoicesCount as Integer

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Number of voices available.

### 171.2.10 Constructor

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Initializes the class with the default voice.
**Notes:**

This constructor is needed for the events to fire.
The given voice must be valid!
See also:

- 171.2.11 Constructor(voice as string) 24992

### 171.2.11 Constructor(voice as string)

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Initializes the class with a voice.
**Notes:** This constructor is needed for the events to fire.
See also:

- 171.2.10 Constructor 24991

### 171.2.12 continueSpeaking

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Continues speaking after it has been paused.
**Notes:** Mac OS X 10.5 only.

### 171.2.13 defaultVoice as String

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Provides the identifier of the default voice.
**Example:**

```
dim s as NSSpeechSynthesizerMBS

s=new NSSpeechSynthesizerMBS

MsgBox s.defaultVoice
```

### 171.2.14 Destructor

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The destructor.

### 171.2.15 isAnyApplicationSpeaking as boolean

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Indicates whether any other application is currently speaking through the sound output device.

### 171.2.16 NSSpeechCharacterModeProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
**Example:**

```
dim s as new NSSpeechSynthesizerMBS
dim e as NSErrorMBS

call s.setObjectForProperty(s.NSSpeechModeLiteral, s.NSSpeechCharacterModeProperty, e)
msgBox s.objectForProperty(s.NSSpeechCharacterModeProperty, e)

call s.setObjectForProperty(s.NSSpeechModeNormal, s.NSSpeechCharacterModeProperty, e)
msgBox s.objectForProperty(s.NSSpeechCharacterModeProperty, e)
```

**Notes:**

Get or set the synthesizer's current text-processing mode. A string that specifies whether the channel is currently in text input mode or phoneme input mode.
When the character-processing mode is NSSpeechModeNormal, input characters are spoken as you would expect to hear them. When the mode is NSSpeechModeLiteral, each character is spoken literally, so that the word "cat" is spoken "C,ÄìA,ÄìT".
Available in OS X v10.5 and later.

### 171.2.17 NSSpeechCommandDelimiterProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
**Notes:**

Set the embedded speech command delimiter characters to be used for the synthesizer. A dictionary that contains the delimiter information. See "Command Delimiter Keys" for the keys you can use to specify values in this dictionary.
By default, the opening delimiter is " [ [ " and the closing delimiter is " ] ] ". Your application might need

to change these delimiters temporarily if those character sequences occur naturally in a text buffer that is to be spoken. Your application can also disable embedded command processing by passing empty delimiters (as empty strings). See "Speech Command Delimiter" for the keys you can use to specify values in this dictionary.
Available in OS X v10.5 and later.

### 171.2.18 NSSpeechCommandPrefix as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants speech-command delimiters keys used in NSSpeechCommandDelimiter-Property.
**Notes:**

The command delimiter string that prefixes a command, by default, this is [ [ .
Available in OS X v10.5 and later.

### 171.2.19 NSSpeechCommandSuffix as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants speech-command delimiters keys used in NSSpeechCommandDelimiter-Property.
**Notes:**

The command delimiter string that suffixes a command,by default, this is ] ] .
Available in OS X v10.5 and later.

### 171.2.20 NSSpeechCurrentVoiceProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
**Notes:**

Set the current voice on the synthesizer to the specified voice. A dictionary that contains the phoneme symbols and example words defined for the current synthesizer.
Your application might use this information to show the user what symbols to use when entering phonemic text directly. See "NSSpeechPhonemeSymbolsProperty Dictionary Keys" for the keys you can use to specify values in this dictionary.
Available in OS X v10.5 and later.

### 171.2.21 NSSpeechDictionaryAbbreviations as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants identify key-value pairs used to add vocabulary to the dictionary using addSpeechDictionary.
**Notes:**

An array of dictionary objects containing the keys NSSpeechDictionaryEntrySpelling and NSSpeechDictionaryEntryPhonemes.
Available in OS X v10.5 and later.

### 171.2.22 NSSpeechDictionaryEntryPhonemes as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants identify key-value pairs used to add vocabulary to the dictionary using addSpeechDictionary.
**Notes:**

The phonemic representation of an entry. A string.
Available in OS X v10.5 and later.

### 171.2.23 NSSpeechDictionaryEntrySpelling as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants identify key-value pairs used to add vocabulary to the dictionary using addSpeechDictionary.
**Notes:**

The spelling of an entry. A string.
Available in OS X v10.5 and later.

### 171.2.24 NSSpeechDictionaryLocaleIdentifier as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants identify key-value pairs used to add vocabulary to the dictionary using addSpeechDictionary.
**Notes:**

The canonical locale identifier string describing the dictionary's locale. A locale is generally composed of three pieces of ordered information: a language code, a region code, and a variant code. Refer to documentation about NSLocale or Locales Programming Guide for more information

Available in OS X v10.5 and later.

### 171.2.25 NSSpeechDictionaryModificationDate as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants identify key-value pairs used to add vocabulary to the dictionary using addSpeechDictionary.
**Notes:**

A string representation of the dictionary's last modification date in the international format (YYYY-MM-DD HH:MM:SS ¬±HHMM). If the same word appears across multiple dictionaries, the one from the dictionary with the most recent date will be used.
Available in OS X v10.5 and later.

### 171.2.26 NSSpeechDictionaryPronunciations as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants identify key-value pairs used to add vocabulary to the dictionary using addSpeechDictionary.
**Notes:** An array of dictionary objects containing the keys NSSpeechDictionaryEntrySpelling and NSSpeechDictionaryEntryPhonemes.

### 171.2.27 NSSpeechErrorCount as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the key constants identify errors that may occur during speech synthesis. They are used with NSSpeechErrorsProperty.
**Notes:**

The number of errors that have occurred in processing the current text string, since the last call to objectForProperty with the NSSpeechErrorsProperty property. A Number
Using the NSSpeechErrorOldestCode keys and the NSSpeechErrorNewestCode keys, you can get information about the oldest and most recent errors that occurred since the last call to objectForProperty, but you cannot get information about any intervening errors.
Available in OS X v10.5 and later.

### 171.2.28 NSSpeechErrorNewestCharacterOffset as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the key constants identify errors that may occur during speech synthesis. They are used with NSSpeechErrorsProperty.
**Notes:**

The position in the text string of the most recent error that occurred since the last call to objectForProperty with the NSSpeechErrorsProperty property. A Number.
Available in OS X v10.5 and later.

### 171.2.29 NSSpeechErrorNewestCode as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the key constants identify errors that may occur during speech synthesis. They are used with NSSpeechErrorsProperty.
**Notes:**

The error code of the most recent error that occurred since the last call to objectForProperty with the NSSpeechErrorsProperty property. A number
Available in OS X v10.5 and later.

### 171.2.30 NSSpeechErrorOldestCharacterOffset as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the key constants identify errors that may occur during speech synthesis. They are used with NSSpeechErrorsProperty.
**Notes:**

The position in the text string of the first error that occurred since the last call to objectForProperty with the NSSpeechErrorsProperty property. A number
Available in OS X v10.5 and later.

### 171.2.31 NSSpeechErrorOldestCode as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the key constants identify errors that may occur during speech synthesis. They are used with NSSpeechErrorsProperty.
**Notes:**

The error code of the first error that occurred since the last call to objectForProperty with the NSSpeechErrorsProperty property. A Number
Available in OS X v10.5 and later.

### 171.2.32 NSSpeechErrorsProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
**Notes:**

Get speech-error information for the synthesizer. An Dictionary object that contains speech-error information. See "NSSpeechErrorProperty Dictionary Keys" for a description of the keys present in the dictionary. This property lets you get information about various run-time errors that occur during speaking, such as the detection of badly formed embedded commands. Errors returned directly by the Speech Synthesis Manager are not reported here.
If your application implements the didEncounterErrorAtIndex event, the event can use this property to get error information.
Available in OS X v10.5 and later.

### 171.2.33 NSSpeechInputModeProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
**Notes:**

Get or set the synthesizer's current text-processing mode. A string that specifies whether the channel is currently in text input mode or phoneme input mode.The supported values are listed in "Speaking Modes for NSSpeechInputModeProperty."
When in phoneme-processing mode, a text string is interpreted to be a series of characters representing various phonemes and prosodic controls. Some synthesizers might support additional input-processing modes and define constants for these modes.
Available in OS X v10.5 and later.

### 171.2.34 NSSpeechModeLiteral as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants defining the available text-processing and number-processing modes for a synthesizer. This key is used with NSSpeechInputModeProperty and NSSpeechNumberModeProperty)
**Notes:**

Indicates that each digit or character is spoken literally (so that 12 is spoken as "one, two", or the word "cat" is spoken as "C A T").
Available in OS X v10.5 and later.

### 171.2.35 NSSpeechModeNormal as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants defining the available text-processing and number-processing modes for a synthesizer. This key is used with NSSpeechInputModeProperty and NSSpeechNumberModeProperty)
**Notes:**

Indicates that the synthesizer assembles digits into numbers (so that 12 is spoken as "twelve") and text into words.
Available in OS X v10.5 and later.

### 171.2.36 NSSpeechModePhoneme as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants identify input modes are used with NSSpeechInputModeProperty.
**Notes:**

Indicates that the synthesizer is in phoneme-processing mode. When in phoneme-processing mode, a text buffer is interpreted to be a series of characters representing various phonemes and prosodic controls.
Available in OS X v10.5 and later.

### 171.2.37 NSSpeechModeText as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants identify input modes are used with NSSpeechInputModeProperty.
**Notes:**

Indicates that the synthesizer is in text-processing mode.
Available in OS X v10.5 and later.

### 171.2.38 NSSpeechNumberModeProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
**Example:**

```
dim s as new NSSpeechSynthesizerMBS
dim e as NSErrorMBS

call s.setObjectForProperty(s.NSSpeechModeLiteral, s.NSSpeechNumberModeProperty, e)
```

msgBox s.objectForProperty(s.NSSpeechNumberModeProperty, e)

call s.setObjectForProperty(s.NSSpeechModeNormal, s.NSSpeechNumberModeProperty, e)
msgBox s.objectForProperty(s.NSSpeechNumberModeProperty, e)

**Notes:**

Get or set the synthesizer's current number-processing mode. A string that specifies whether the synthesizer is currently in normal or literal number-processing mode. The constants NSSpeechModeNormal and NSSpeechModeLiteral are the possible values of this string.
When the number-processing mode is NSSpeechModeNormal, the synthesizer assembles digits into numbers (so that "12" is spoken as "twelve"). When the mode is NSSpeechModeLiteral, each digit is spoken literally (so that "12" is spoken as "one, two").
Available in OS X v10.5 and later.

### 171.2.39 NSSpeechOutputToFileURLProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
**Notes:**

Set the speech output destination to a file or to the computer's speakers. A NSURL object. To write the speech output to a file, use the file's NSURL; to generate the sound through the computer's speakers, use nil.
Available in OS X v10.5 and later.

### 171.2.40 NSSpeechPhonemeInfoExample as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the keys used in the NSSpeechPhonemeSymbolsProperty dictionary.
**Notes:**

An example word that illustrates the use of the phoneme.
Available in OS X v10.5 and later.

### 171.2.41 NSSpeechPhonemeInfoHiliteEnd as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the keys used in the NSSpeechPhonemeSymbolsProperty dictionary.
**Notes:**

The character offset into the example word that identifies the location of the end of the phoneme.
Available in OS X v10.5 and later.

### 171.2.42 NSSpeechPhonemeInfoHiliteStart as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the keys used in the NSSpeechPhonemeSymbolsProperty dictionary.
**Notes:**

The character offset into the example word that identifies the location of the beginning of the phoneme.
Available in OS X v10.5 and later.

### 171.2.43 NSSpeechPhonemeInfoOpcode as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the keys used in the NSSpeechPhonemeSymbolsProperty dictionary.
**Notes:**

The opcode as Number.
Available in OS X v10.5 and later.

### 171.2.44 NSSpeechPhonemeInfoSymbol as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the keys used in the NSSpeechPhonemeSymbolsProperty dictionary.
**Notes:**

The symbol used to represent the phoneme.
The symbol does not necessarily have a phonetic connection to the phoneme, but might simply be an abstract textual representation of it.
Available in OS X v10.5 and later.

### 171.2.45 NSSpeechPhonemeSymbolsProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
**Notes:**

Get a list of phoneme symbols and example words defined for the synthesizer. A Dictionary object that contains the phoneme symbols and example words defined for the current synthesizer
Your application might use this information to show the user what symbols to use when entering phonemic text directly. See "NSSpeechPhonemeSymbolsProperty Dictionary Keys" for a description of the keys present in the dictionary.
Available in OS X v10.5 and later.

### 171.2.46 NSSpeechPitchBaseProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
**Example:**

```
dim s as new NSSpeechSynthesizerMBS
dim e as NSErrorMBS

dim n as Integer = s.objectForProperty(s.NSSpeechPitchBaseProperty, e)
msgBox str(n)
```

**Notes:**

Get or set a synthesizer's baseline speech pitch. An number that specifies the baseline speech pitch.
Typical voice frequencies range from around 90 hertz for a low-pitched male voice to perhaps 300 hertz for a high-pitched child's voice. These frequencies correspond to approximate pitch values in the ranges of 30.000 to 40.000 and 55.000 to 65.000, respectively.
Note: The change in speech pitch may not be noticeable until the next sentence or paragraph is spoken.
Available in OS X v10.5 and later.

### 171.2.47 NSSpeechPitchModProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
**Example:**

```
dim s as new NSSpeechSynthesizerMBS
dim e as NSErrorMBS
```

```
dim n as Double = s.objectForProperty(s.NSSpeechPitchModProperty, e)
msgBox str(n)
```

**Notes:**

Get or set a synthesizer's pitch modulation. A number object that specifies the synthesizer's pitch modulation.
Pitch modulation is also expressed as a floating-point value in the range of 0.000 to 127.000. These values correspond to MIDI note values, where 60.000 is equal to middle C on a piano scale. The most useful speech pitches fall in the range of 40.000 to 55.000. A pitch modulation value of 0.000 corresponds to a monotone in which all speech is generated at the frequency corresponding to the speech pitch. Given a speech pitch value of 46.000, a pitch modulation of 2.000 would mean that the widest possible range of pitches corresponding to the actual frequency of generated text would be 44.000 to 48.000.

Note: The change in pitch modulation may not be noticeable until the next sentence or paragraph is spoken.
Available in OS X v10.5 and later.

### 171.2.48 NSSpeechRateProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
**Example:**

```
dim s as new NSSpeechSynthesizerMBS
dim e as NSErrorMBS
dim value as Double = s.objectForProperty(s.NSSpeechRateProperty, e)
MsgBox str(value)
```

**Notes:**

Get or set the synthesizer's baseline speech pitch. A number that specifies the synthesizer's baseline speech pitch.
Typical voice frequencies range from around 90 hertz for a low-pitched male voice to perhaps 300 hertz for a high-pitched child's voice. These frequencies correspond to approximate pitch values in the ranges of 30.000 to 40.000 and 55.000 to 65.000, respectively.
Available in OS X v10.5 and later.

### 171.2.49 NSSpeechRecentSyncProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
**Notes:**

Get the message code for the most recently encountered synchronization command. A number that specifies the most recently encountered synchronization command.

Available in OS X v10.5 and later.

### 171.2.50 NSSpeechResetProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants used with setObjectForProperty to get or set the characteristics of a synthesizer.
**Notes:**

Set a synthesizer back to its default state. There is no value associated with this property; to reset the channel to its default state, set the key to nil.
You can use this function to, for example, set speech pitch and speech rate to default values.
Available in OS X v10.5 and later.

### 171.2.51 NSSpeechStatusNumberOfCharactersLeft as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants identify speech status keys used with NSSpeechStatusProperty.
**Notes:**

The number of characters left in the input string of text.
When the value of this key is zero, you can destroy the input string.
Available in OS X v10.5 and later.

### 171.2.52 NSSpeechStatusOutputBusy as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants identify speech status keys used with NSSpeechStatusProperty.
**Notes:**

Indicates whether the synthesizer is currently producing speech.
A synthesizer is considered to be producing speech even at some times when no audio data is being produced through the computer's speaker. This occurs, for example, when the synthesizer is processing input, but has not yet initiated speech or when speech output is paused.

Available in OS X v10.5 and later.

### 171.2.53 NSSpeechStatusOutputPaused as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants identify speech status keys used with NSSpeechStatusProperty.
**Notes:**

Indicates whether speech output in the synthesizer has been paused by sending the message pauseSpeakingAtBoundary.
Available in OS X v10.5 and later.

### 171.2.54 NSSpeechStatusPhonemeCode as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants identify speech status keys used with NSSpeechStatusProperty.
**Notes:**

Indicates that the synthesizer is in phoneme-processing mode. When in phoneme-processing mode, a text buffer is interpreted to be a series of characters representing various phonemes and prosodic controls.
Available in OS X v10.5 and later.

### 171.2.55 NSSpeechStatusProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
**Example:**

```
dim s as new NSSpeechSynthesizerMBS
dim e as NSErrorMBS

call s.startSpeakingString "Hello"

dim status as Dictionary = s.objectForProperty(s.NSSpeechStatusProperty, e)
dim CharactersLeft as Integer = status.Value(s.NSSpeechStatusNumberOfCharactersLeft)

MsgBox str(CharactersLeft)+" Characters left"
```

**Notes:**

Get speech-status information for the synthesizer. A dictionary that contains speech-status information for the synthesizer. See "NSSpeechStatusProperty Dictionary Keys" for a description of the keys present in the dictionary.
Available in OS X v10.5 and later.

### 171.2.56 NSSpeechSynthesizerInfoIdentifier as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants are keys used in the NSSpeechSynthesizerInfoProperty dictionary.
**Notes:**

The identifier of the speech synthesizer.
Available in OS X v10.5 and later.

### 171.2.57 NSSpeechSynthesizerInfoProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
**Notes:**

Get information about the speech synthesizer being used on the specified synthesizer. A dictionary object that contains information about the speech synthesizer being used on the specified synthesizer. See "Speech Synthesizer Property Keys" for a description of the keys present in the dictionary.
Available in OS X v10.5 and later.

### 171.2.58 NSSpeechSynthesizerInfoVersion as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants are keys used in the NSSpeechSynthesizerInfoProperty dictionary.
**Notes:**

The version of the speech synthesizer.
Available in OS X v10.5 and later.

### 171.2.59 NSSpeechVolumeProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
**Example:**

```
dim s as new NSSpeechSynthesizerMBS
dim e as NSErrorMBS
dim value as Double = s.objectForProperty(s.NSSpeechVolumeProperty, e)
MsgBox str(value)
```

**Notes:**

Get or set the speech volume for a synthesizer. A Number that specifies the synthesizer's speech volume. Volumes are expressed in floating-point values ranging from 0.0 through 1.0. A value of 0.0 corresponds to silence, and a value of 1.0 corresponds to the maximum possible volume. Volume units lie on a scale that is linear with amplitude or voltage. A doubling of perceived loudness corresponds to a doubling of the volume. Available in OS X v10.5 and later.

You may prefer to simply use the volume property.

### 171.2.60 objectForProperty(PropertyName as string, byref error as NSErrorMBS) as Variant

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Provides the value of a receiver's property.
**Notes:**

PropertyName: Property to get.
error: On output, error that occurred while obtaining the value of speechProperty.

Returns the value of speechProperty.
Available in OS X v10.5 and later.

### 171.2.61 pauseSpeakingAtBoundary(boundary as Integer)

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Pauses the speaking on the given boundary.
**Example:**

```
dim s as NSSpeechSynthesizerMBS // your synthesizer
s.pauseSpeakingAtBoundary s.NSSpeechSentenceBoundary // pause on end of sentence.
```

**Notes:**

Mac OS X 10.5 only.
boundary can be NSSpeechImmediateBoundary, NSSpeechSentenceBoundary or NSSpeechWordBoundary.

### 171.2.62 phonemesFromText(text as string) as string

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the phonems from a given text.
**Example:**

```
dim s as new NSSpeechSynthesizerMBS

MsgBox s.phonemesFromText("Hello")

// shows "_hEHl1OW."
```

**Notes:** Mac OS X 10.5 only.

### 171.2.63 setObjectForProperty(value as Variant, PropertyName as string, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Specifies the value of a receiver's property.
**Notes:**

PropertyName: Property to set.
Error: On output, error that occurred while setting speechProperty.

Returns true when the speechProperty was set. False when there was an error, specified in error.
Available in OS X v10.5 and later.

### 171.2.64 SetVoice(voice as string) as boolean

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Sets the receiver's current voice.
**Notes:** Returns true on success.

### 171.2.65 StartSpeakingString(text as string) as boolean

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Begins speaking synthesized text through the system's default sound output device.
**Example:**

```
dim s as new NSSpeechSynthesizerMBS

s.rate=300 // not slow
s.volume=0.5 // not loud
call s.startSpeakingString "Hello World"
```

**Notes:**

Returns true when synthesis starts successfully, false otherwise.

If the receiver is currently speaking synthesized speech when startSpeakingString is called, that process is stopped before text is spoken.

When synthesis of text finishes normally or is stopped, the message didFinishSpeaking(true) is called.
See also:

- 171.2.66 StartSpeakingString(text as string, file as folderitem) as boolean 25009
- 171.2.67 startSpeakingString(Text as String, URL as string) as boolean 25010

### 171.2.66 StartSpeakingString(text as string, file as folderitem) as boolean

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Begins synthesizing text into a sound (AIFF) file.
**Notes:**

Returns true when synthesis starts successfully, false otherwise.

When synthesis of text finishes normally or is stopped, the message didFinishSpeaking(True) is called.

One example of how you might use this method is in an email program that automatically converts new messages into sound files that can be stored on an iPod for later listening.
See also:

- 171.2.65 StartSpeakingString(text as string) as boolean 25009
- 171.2.67 startSpeakingString(Text as String, URL as string) as boolean 25010

### 171.2.67 startSpeakingString(Text as String, URL as string) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Begins synthesizing text into a sound (AIFF) file.
**Notes:**

Returns true when synthesis starts successfully, false otherwise.

When synthesis of text finishes normally or is stopped, the message didFinishSpeaking(True) is called.

One example of how you might use this method is in an email program that automatically converts new messages into sound files that can be stored on an iPod for later listening.
See also:

- 171.2.65 StartSpeakingString(text as string) as boolean 25009
- 171.2.66 StartSpeakingString(text as string, file as folderitem) as boolean 25009

### 171.2.68 StopSpeaking

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Stops synthesis in progress.
**Notes:** If the receiver is currently generating speech, synthesis is halted, and the message didFinishSpeaking(false) is called.

### 171.2.69 stopSpeakingAtBoundary(boundary as Integer)

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Stops speech on the next w
**Notes:** Mac OS X 10.5 only.

### 171.2.70 Properties

### 171.2.71 IsSpeaking as boolean

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Indicates whether the receiver is currently generating synthesized speech.
**Notes:**

true when the receiver is generating synthesized speech, false otherwise.
(Read only property)

### 171.2.72 rate as Double

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The current rate of the speech.
**Example:**

```
dim s as NSSpeechSynthesizerMBS
s=new NSSpeechSynthesizerMBS
MsgBox str(s.rate)
// shows e.g. "160"
```

**Notes:**

Mac OS X 10.5 only.
The range of supported rates is not predefined by the Speech Synthesis framework; but the synthesizer may only respond to a limited range of speech rates. Average human speech occurs at a rate of 180 to 220 words per minute.
(Read and Write property)

### 171.2.73 UsesFeedbackWindow as boolean

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Indicates whether the receiver uses the speech feedback window.
**Notes:** (Read and Write property)

### 171.2.74 Voice as string

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The current voice.
**Example:**

```
dim s as new NSSpeechSynthesizerMBS
MsgBox s.voice
// shows e.g. "com.apple.speech.synthesis.voice.Zarvox"
```

**Notes:** (Read and Write property)

### 171.2.75 volume as Double

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The volume of the speech.
**Example:**

```
dim s as new NSSpeechSynthesizerMBS
MsgBox str(s.volume)
// shows e.g. 1
```

**Notes:**

No sound is zero, full sound one.
Mac OS X 10.5 only.

Volumes are expressed in floating-point units ranging from 0.0 through 1.0. A value of 0.0 corresponds to silence, and a value of 1.0 corresponds to the maximum possible volume. Volume units lie on a scale that is linear with amplitude or voltage. A doubling of perceived loudness corresponds to a doubling of the volume.

Setting a value outside this range is undefined.
(Read and Write property)

### 171.2.76 Events

### 171.2.77 didEncounterErrorAtIndex(characterIndex as Integer, text as string, message as string)

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: .

**Function:** An event called when an error has been found in the text while speaking.
**Notes:** Mac OS X 10.5 only.

### 171.2.78 didEncounterSyncMessage(message as string)

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: .

**Function:** A sync message was found in the text.
**Notes:**

See Apple Speech documentation about the special tags you need to place in the text to get this event.
Mac OS X 10.5 only.

### 171.2.79 didFinishSpeaking(finishedSpeaking as boolean)

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: .

**Function:** Called when speaking through the sound output device is done.
**Notes:** finishedSpeaking is true when finished normally and false when StopSpeaking was called.

### 171.2.80 willSpeakPhoneme(phonemeOpcode as Integer)

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: .

**Function:** Sent just before a synthesized phoneme is spoken through the sound output device.
**Notes:**

phonemeOpcode: Phoneme that sender is about to speak into the sound output device.

One use of this method might be to animate a mouth on screen to match the generated speech.

Important: The delegate is not sent this message when the SpeechSynthesizer object is synthesizing speech to a file (startSpeakingString).

### 171.2.81 willSpeakWord(Position as Integer, Length as Integer, Text as String)

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: .

**Function:** Sent just before a synthesized word is spoken through the sound output device.
**Notes:**

Position and Length: Word that sender is about to speak into the sound output device.
text: Text that is being synthesized by sender.

One use of this method might be to visually highlight the word being spoken.

Important: The delegate is not sent this message when the SpeechSynthesizer object is synthesizing speech to a file (startSpeakingString).

### 171.2.82 Constants

### 171.2.83 NSSpeechImmediateBoundary=0

MBS MacCocoa Plugin, Plugin Version: 7.7.

**Function:** One of the constants for the pauseSpeakingAtBoundary method.
**Notes:** Mac OS X 10.5 only.

### 171.2.84 NSSpeechSentenceBoundary=2

MBS MacCocoa Plugin, Plugin Version: 7.7.

**Function:** One of the constants for the pauseSpeakingAtBoundary method.
**Notes:** Mac OS X 10.5 only.

### 171.2.85 NSSpeechWordBoundary=1

MBS MacCocoa Plugin, Plugin Version: 7.7.

**Function:** One of the constants for the pauseSpeakingAtBoundary method.
**Notes:** Mac OS X 10.5 only.

## 171.3 class NSVoiceMBS

### 171.3.1 class NSVoiceMBS

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A voice on Mac OS X with its attributes.
**Notes:**

Available in Mac OS X v10.3 and later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 171.3.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr7

### 171.3.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr7

### 171.3.4 Methods

### 171.3.5 Age as Integer

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The perceived age (in years) of the voice.

### 171.3.6 Constructor

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The private constructor.

### 171.3.7 Demotext as String

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A demonstration string to speak.

### 171.3.8 Gender as String

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The perceived gender of the voice.
**Notes:** May be either GenderNeuter ("VoiceGenderNeuter), GenderFemale ("VoiceGenderFemale"), or GenderMale ("VoiceGenderMale").

### 171.3.9 GenderFemale as String

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the possible values for the gender property.

### 171.3.10 GenderMale as String

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the possible values for the gender property.

### 171.3.11 GenderNeuter as String

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the possible values for the gender property.

### 171.3.12 Identifier as String

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A unique string identifying the voice. The identifiers of the system voices are listed below.
**Notes:**

Identifiers of the Mac OS X system voices
com.apple.speech.synthesis.voice.Agnes
com.apple.speech.synthesis.voice.Albert
com.apple.speech.synthesis.voice.BadNews
com.apple.speech.synthesis.voice.Bahh
com.apple.speech.synthesis.voice.Bells
com.apple.speech.synthesis.voice.Boing
com.apple.speech.synthesis.voice.Bruce
com.apple.speech.synthesis.voice.Bubbles

com.apple.speech.synthesis.voice.Cellos
com.apple.speech.synthesis.voice.Deranged
com.apple.speech.synthesis.voice.Fred
com.apple.speech.synthesis.voice.GoodNews
com.apple.speech.synthesis.voice.Hysterical
com.apple.speech.synthesis.voice.Junior
com.apple.speech.synthesis.voice.Kathy
com.apple.speech.synthesis.voice.Organ
com.apple.speech.synthesis.voice.Princess
com.apple.speech.synthesis.voice.Ralph
com.apple.speech.synthesis.voice.Trinoids
com.apple.speech.synthesis.voice.Vicki
com.apple.speech.synthesis.voice.Victoria
com.apple.speech.synthesis.voice.Whisper
com.apple.speech.synthesis.voice.Zarvox

### 171.3.13 Language as String

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The language of the voice (currently US English only).
**Notes:** Language has been replaced by LocaleIdentifier in Mac OS X 10.5.

### 171.3.14 LocaleIdentifier as String

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The locale identifier.
**Example:**

```
dim v as NSVoiceMBS
dim s as NSSpeechSynthesizerMBS
dim n as string

s=new NSSpeechSynthesizerMBS

n=s.voice
v=s.attributesForVoice(n)

MsgBox n+EndOfLine+v.LocaleIdentifier
// shows for example "en_US"
```

**Notes:**

Mac OS X 10.5 only.

Language has been replaced by LocaleIdentifier in Mac OS X 10.5.

### 171.3.15 Name as String

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The name of the voice suitable for display.

### 171.3.16 NSVoiceAge as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the properties names.
**Notes:** The perceived age (in years) of the voice. A string.

### 171.3.17 NSVoiceDemoText as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the properties names.
**Notes:** A demonstration string to speak. A String.

### 171.3.18 NSVoiceGender as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the properties names.
**Notes:** The perceived gender of the voice.

### 171.3.19 NSVoiceIdentifier as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the properties names.
**Notes:**

A unique string identifying the voice.

Identifiers of the OS X system voices:
com.apple.speech.synthesis.voice.Agnes
com.apple.speech.synthesis.voice.Albert
com.apple.speech.synthesis.voice.Alex
com.apple.speech.synthesis.voice.BadNews
com.apple.speech.synthesis.voice.Bahh
com.apple.speech.synthesis.voice.Bells
com.apple.speech.synthesis.voice.Boing
com.apple.speech.synthesis.voice.Bruce
com.apple.speech.synthesis.voice.Bubbles
com.apple.speech.synthesis.voice.Cellos
com.apple.speech.synthesis.voice.Deranged
com.apple.speech.synthesis.voice.Fred
com.apple.speech.synthesis.voice.GoodNews
com.apple.speech.synthesis.voice.Hysterical
com.apple.speech.synthesis.voice.Junior
com.apple.speech.synthesis.voice.Kathy
com.apple.speech.synthesis.voice.Organ
com.apple.speech.synthesis.voice.Princess
com.apple.speech.synthesis.voice.Ralph
com.apple.speech.synthesis.voice.Trinoids
com.apple.speech.synthesis.voice.Vicki
com.apple.speech.synthesis.voice.Victoria
com.apple.speech.synthesis.voice.Whisper
com.apple.speech.synthesis.voice.Zarvox

### 171.3.20 NSVoiceIndividuallySpokenCharacters as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the properties names.
**Notes:**

A list of unicode character id ranges that define the unicode characters that can be spoken in character-by-character mode by this voice. ach list entry is a dictionary containing two keys: "UnicodeCharBegin", an integer value containing the beginning unicode id of this range; and "UnicodeCharBegin", an integer value containing the ending unicode id of this range.
These ranges can be used by your application to determine if the voice can speak the name of an individual character when spoken in character-by-character mode.
Some voices may not provide this attribute.
Available in OS X v10.5 and later.

### 171.3.21 NSVoiceLanguage as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the properties names.
**Notes:**

The language of the voice (currently US English only). A string
Deprecated: Use NSVoiceLocaleIdentifier instead.
Deprecated in OS X v10.5.

### 171.3.22 NSVoiceLocaleIdentifier as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the properties names.
**Notes:**

The language of the voice. A string
The canonical locale identifier string describing the voice's locale. A locale is generally composed of three pieces of ordered information: a language code, a region code, and a variant code. Refer to documentation about the NSLocale class or Locales Programming Guide for more information.
Available in OS X v10.5 and later.

### 171.3.23 NSVoiceName as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the properties names.
**Notes:** The name of the voice suitable for display. A String.

### 171.3.24 NSVoiceSupportedCharacters as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the properties names.
**Notes:**

A list of unicode character id ranges that define the unicode characters supported by this voice. a dictionary containing two keys: "UnicodeCharBegin", an integer value containing the beginning unicode id of this range; and "UnicodeCharBegin", an integer value containing the ending unicode id of this range. The synthesizer will convert or ignore any characters not contained in the range of supported characters.
Some voices may not provide this attribute.
Available in OS X v10.5 and later.

### 171.3.25 Properties as Dictionary

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns dictionary with all the properties for this voice.
**Notes:** This dictionary may contain additional information if Apple adds more features in newer Mac OS X versions.

## 171.4 class SpeechChannelMBS

### 171.4.1 class SpeechChannelMBS

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** A SpeechMBS channel.
**Example:**

```
dim s as new SpeechMBS
dim c as SpeechChannelMBS = s.Voice(1).NewChannel

call c.Speak("Hello")

MsgBox str(c.TextBytesToSpeak)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use NSSpeechSynthesizerMBS instead.

### 171.4.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr9

### 171.4.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr9

### 171.4.4 Methods

### 171.4.5 close

MBS MacClassic Plugin, Plugin Version: 3.4, Platform: macOS, Targets: Desktop only.

**Function:** The destructor.
**Notes:** There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

### 171.4.6 ContinueSpeech as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** Continue speaking.
**Example:**

```
dim c as SpeechChannelMBS // your channel

MsgBox str(C.ContinueSpeech)
```

**Notes:** Renamed from Continue to ContinueSpeech in v5.3 to fix a problem with Xojo 2005r3.

### 171.4.7 PauseEndOfSentence as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** Pauses speaking at the end of the current sentence.
**Example:**

```
dim c as SpeechChannelMBS // your channel

MsgBox str(C.PauseEndOfSentence)
```

### 171.4.8 PauseEndOfWord as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** Pauses speaking at the end of the current word.
**Example:**

```
dim c as SpeechChannelMBS // your channel

MsgBox str(C.PauseEndOfWord)
```

### 171.4.9 PauseImmediate as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** Pauses speaking.
**Example:**

```
dim c as SpeechChannelMBS // your channel

MsgBox str(C.PauseImmediate)
```

### 171.4.10 Reset

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** Resets the SpeechMBS channel to some default values.
**Example:**

```
dim c as SpeechChannelMBS // your channel

c.reset
```

**Notes:** Resets e.g. pitchbase, pitchmodulation, volume, rate.

### 171.4.11 SetOutputFile(file as folderitem) as boolean

MBS MacClassic Plugin, Plugin Version: 4.1, Platform: macOS, Targets: Desktop only.

**Function:** Sets the destination file.
**Example:**

```
dim s as new SpeechMBS
dim c as SpeechChannelMBS = s.Voice(1).NewChannel
dim f as FolderItem = SpecialFolder.Desktop.Child("test.aiff")

call c.SetOutputFile(f)
call c.Speak("Hello")

MsgBox str(c.TextBytesToSpeak)
```

**Notes:**

Returns true on success and false on any error.
Requires Mac OS X 10.3.

### 171.4.12 Speak(s as string) as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** Speak the given text.
**Example:**

```
dim s as new SpeechMBS
dim c as SpeechChannelMBS = s.Voice(1).NewChannel

MsgBox str(c.Speak("Hello"))
```

**Notes:** v5.1: Now encoding safe and stores result in lasterror property.

### 171.4.13 SpeechBusy as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** Returns how much SpeechChannels are currently in use of you application.
**Example:**

```
dim c as SpeechChannelMBS // your channel

MsgBox str(c.SpeechBusy)
```

### 171.4.14 SpeechBusySystemWide as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** Returns how much SpeechChannels are currently in use on this Mac.
**Example:**

```
dim c as SpeechChannelMBS // your channel

MsgBox str(c.SpeechBusySystemWide)
```

### 171.4.15 Stop as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** Stops speaking.
**Example:**

```
dim c as SpeechChannelMBS // your channel
```

```
MsgBox str(c.Stop)
```

### 171.4.16 StopEndOfSentence as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** Stops speaking at the end of the current sentence.
**Example:**

```
dim c as SpeechChannelMBS // your channel

MsgBox str(c.StopEndOfSentence)
```

### 171.4.17 StopEndOfWord as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** Stops speaking at the end of the current word.
**Example:**

```
dim c as SpeechChannelMBS // your channel

MsgBox str(c.StopEndOfWord)
```

### 171.4.18 StopImmediate as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** Stops speaking.
**Example:**

```
dim c as SpeechChannelMBS // your channel

MsgBox str(c.StopImmediate)
```

### 171.4.19 Properties

### 171.4.20 Lasterror as Integer

MBS MacClassic Plugin, Plugin Version: 5.1, Platform: macOS, Targets: Desktop only.

**Function:** The last error code.
**Example:**

```
dim c as SpeechChannelMBS // your channel

MsgBox str(c.Lasterror)
```

**Notes:**

A Mac OS error code.
from the plugin -1 is bad parameter and 0 is success.
(Read only property)

### 171.4.21 Paused as boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** Are we paused?
**Example:**

```
dim s as new SpeechMBS
dim c as SpeechChannelMBS = s.Voice(1).NewChannel

MsgBox str(c.Paused)
```

**Notes:** (Read only property)

### 171.4.22 PitchBase as Double

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** The pich base used for speaking.
**Example:**

```
dim c as SpeechChannelMBS // your channel

MsgBox str(C.PitchBase)
```

**Notes:** (Read and Write property)

### 171.4.23 PitchModulation as Double

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** The pich modulation used for speaking.
**Example:**

```
dim c as SpeechChannelMBS // your channel

MsgBox str(C.PitchModulation)
```

**Notes:** (Read and Write property)

### 171.4.24 Playing as boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** Are we playing?
**Example:**

```
dim c as SpeechChannelMBS // your channel

MsgBox str(C.Playing)
```

**Notes:** (Read only property)

### 171.4.25 Rate as Double

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** The rate used for speaking.
**Example:**

```
dim c as SpeechChannelMBS // your channel

MsgBox str(C.Rate)
```

**Notes:**

Normally around 175 words/minute.
(Read and Write property)

### 171.4.26 SpeakCharactersLiteral as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** whether to speak characters literal.
**Example:**

```
dim c as SpeechChannelMBS // your channel

MsgBox str(c.SpeakCharactersLiteral)
```

**Notes:**

Speaks Hello like "H-E-L-L-O"
(Read and Write property)

### 171.4.27 SpeakNumbersLiteral as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** whether to speak numbers literal.
**Example:**

```
dim c as SpeechChannelMBS // your channel

MsgBox str(c.SpeakNumbersLiteral)
```

**Notes:**

Speaks 11 not like "elven", but like "one, one".
(Read and Write property)

### 171.4.28 TextBytesToSpeak as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** How much text is left in the text buffer?
**Example:**

```
dim s as new SpeechMBS
dim c as SpeechChannelMBS = s.Voice(1).NewChannel

call c.Speak("Hello")

MsgBox str(c.TextBytesToSpeak)
```

**Notes:** (Read only property)

### 171.4.29 Voice as VoiceMBS

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** The VoiceMBS used for that SpeechChannelMBS.
**Example:**

```
dim c as SpeechChannelMBS // your channel

MsgBox c.Voice.Name
```

**Notes:** (Read and Write property)

### 171.4.30 Volume as Double

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** The current volume.
**Example:**

```
dim c as SpeechChannelMBS // your channel

MsgBox str(c.Volume)
```

**Notes:**

From 0 to 65535.
(Read and Write property)

## 171.5 class SpeechMBS

### 171.5.1 class SpeechMBS

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** The class for the Mac OS speech synthesizer.
**Deprecated:** This item is deprecated and should no longer be used. You can use NSSpeechSynthesizerMBS instead. **Notes:**

For Mac OS X you can also use the NSSpeechSynthesizerMBS class and for recognition the NSSpeechRecognizerMBS class.

You can try Speech with some declares, but your app won't start if the Speech extension is not installed. This plugin won't stop, but simply will just tell you that the Speech is not available, so you can react in your application.

### 171.5.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr9

### 171.5.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr9

### 171.5.4 Methods

### 171.5.5 close

MBS MacClassic Plugin, Plugin Version: 3.4, Platform: macOS, Targets: Desktop only.

**Function:** The destructor.
**Notes:** There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

### 171.5.6 DefaultVoice as VoiceMBS

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** Returns the default VoiceMBS.
**Example:**

```
dim s as new SpeechMBS
dim v as VoiceMBS = s.DefaultVoice

MsgBox v.Name
```

### 171.5.7 Speak(s as string) as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** Speaks a text using the default settings.
**Example:**

```
dim s as new SpeechMBS

call s.Speak("Hello")

MsgBox "you hear me?"
```

**Notes:**

Returns directly to caller.
Returns true if speaking is working.

v5.1: Now encoding safe and stores result in lasterror property.

### 171.5.8 SpeechBusy as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** Returns how much SpeechChannels are currently in use of you application.
**Example:**

```
dim s as new SpeechMBS

MsgBox str(s.SpeechBusy)
```

### 171.5.9 SpeechBusySystemWide as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** Returns how much SpeechChannels are currently in use on this Mac.
**Example:**

```
dim s as new SpeechMBS

MsgBox str(s.SpeechBusySystemWide)
```

### 171.5.10 Voice(index as Integer) as VoiceMBS

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** Returns the VoiceMBS with this number.
**Example:**

```
dim s as new SpeechMBS

MsgBox s.Voice(1).Name
```

**Notes:** Index is from 1 to VoiceCount.

### 171.5.11 Properties

### 171.5.12 Available as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** Is SpeechMBS available?
**Notes:** (Read only property)

### 171.5.13 Lasterror as Integer

MBS MacClassic Plugin, Plugin Version: 5.1, Platform: macOS, Targets: Desktop only.

**Function:** The last error code.
**Notes:**

A Mac OS error code.
from the plugin -1 is bad parameter and 0 is success.
(Read only property)

### 171.5.14 VersionMajor as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** The major Version number.
**Example:**

```
dim s as SpeechMBS
s=new SpeechMBS
msgbox hex(s.VersionMajor)+"."+hex(s.versionMinor\16)+"."+hex(s.versionMinor mod 16)
```

**Notes:** (Read only property)

### 171.5.15 versionMinor as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** The minor Version number.
**Example:**

```
dim s as SpeechMBS
s=new SpeechMBS
msgbox hex(s.VersionMajor)+"."+hex(s.versionMinor\16)+"."+hex(s.versionMinor mod 16)
```

**Notes:** (Read only property)

### 171.5.16 VersionRev as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** The revision Version number.
**Example:**

```
dim s as new SpeechMBS

MsgBox str(s.VersionRev)
```

**Notes:** (Read only property)

### 171.5.17 VersionStage as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** The Stage Version number.
**Example:**

```
dim s as new SpeechMBS

MsgBox str(s.VersionStage)
```

**Notes:**

Some constants:

| | |
|---|---|
| developStage | & h20 |
| alphaStage | & h40 |
| betaStage | & h60 |
| finalStage | & h80 |

(Read only property)

### 171.5.18 VoiceCount as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** How much voices are present?
**Example:**

```
dim s as new SpeechMBS

MsgBox str(s.VoiceCount)
```

**Notes:**

If you add or remove VoiceMBS files, please call this function as SpeechMBS can then recognice those changes.
(Read only property)

## 171.6 class VoiceMBS

### 171.6.1 class VoiceMBS

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** This class represents a voice.
**Example:**

```
dim s as new SpeechMBS

MsgBox s.Voice(2).name
```

**Deprecated:** This item is deprecated and should no longer be used. You can use NSVoiceMBS instead.

### 171.6.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr9

### 171.6.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr9

### 171.6.4 Methods

### 171.6.5 close

MBS MacClassic Plugin, Plugin Version: 3.4, Platform: macOS, Targets: Desktop only.

**Function:** The destructor.
**Notes:** There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

### 171.6.6 NewChannel as SpeechChannelMBS

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** Creates a new SpeechChannel using the given voice.
**Example:**

```
dim s as new SpeechMBS
dim c as SpeechChannelMBS = s.Voice(1).NewChannel
```

```
MsgBox str(c.Speak("Hello"))
```

**Notes:** Returns nil on any error.

### 171.6.7 Properties

### 171.6.8 age as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** The approximate age in years of the individual represented by the VoiceMBS.
**Example:**

```
dim s as new SpeechMBS

MsgBox str(s.Voice(1).age)
```

**Notes:** (Read only property)

### 171.6.9 comment as string

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** Additional text information about the VoiceMBS. The information might indicate how much memory the VoiceMBS requires. Some synthesizers use this field to store a phrase that can be spoken.
**Example:**

```
dim s as new SpeechMBS
MsgBox s.Voice(1).comment
```

**Notes:** (Read only property)

### 171.6.10 file as folderitem

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** The file of this VoiceMBS.
**Notes:**

May be nil.
(Read only property)

### 171.6.11 gender as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** The gender of this VoiceMBS.
**Example:**

```
dim s as new SpeechMBS

MsgBox str(s.Voice(1).gender)
```

**Notes:**

Some constants for this property:

| | |
|---|---|
| kNeuter | 0 |
| kMale | 1 |
| kFemale | 2 |

(Read only property)

### 171.6.12 language as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** A code that indicates the language of VoiceMBS output.
**Example:**

```
dim s as new SpeechMBS

MsgBox str(s.Voice(1).language)
```

**Notes:**

Language constants:

(Read only property)

### 171.6.13 name as string

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** The name of this VoiceMBS.
**Example:**

```
dim s as new SpeechMBS
MsgBox s.Voice(1).name
```

**Notes:** (Read only property)

### 171.6.14 region as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** A code that indicates the region represented by the VoiceMBS.
**Example:**

```
dim s as new SpeechMBS

MsgBox str(s.Voice(1).region)
```

**Notes:**

Some region constants:

(Read only property)

### 171.6.15 ResID as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** There can be several voices in one file, but this VoiceMBS has this ResID.
**Example:**

```
dim s as new SpeechMBS

MsgBox str(s.Voice(1).ResID)
```

**Notes:** (Read only property)

### 171.6.16 script as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** The script code of text that the VoiceMBS can process.
**Example:**

```
dim s as new SpeechMBS

MsgBox str(s.Voice(1).script)
```

**Notes:**

Script constants:

(Read only property)

### 171.6.17 version as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

**Function:** The version of this VoiceMBS.
**Example:**

```
dim s as new SpeechMBS

MsgBox str(s.Voice(1).Version)
```

**Notes:** (Read only property)

## 171.7 class WinSpeechMBS

### 171.7.1 class WinSpeechMBS

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** A class for speech on Windows.
**Notes:**

You need to install the "Microsoft Reader" to get this working.

see also:
http://msdn.microsoft.com/en-us/library/ms719576(v=vs.85).aspx

### 171.7.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.3pr6
- MBS Real Studio Plugins, version 12.3pr2
- MonkeyBread Software Releases the MBS Plugins 8.1

### 171.7.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.3pr6
- MBS Real Studio Plugins, version 12.3pr2
- MonkeyBread Software Releases the MBS Plugins 8.1

### 171.7.4 Methods

### 171.7.5 close

MBS Win Plugin, Plugin Version: 3.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The destructor.
**Notes:** There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

### 171.7.6 DisplayUI(type as string, title as string, parent as DesktopWindow)

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

**Function:** Displays the UI from the underlying text-to-speech engine's object token.
**Notes:**

Type specifies which UI you want.
Title is optional the title of the window.
You can optionally specify a parent window.
Lasterror is set.
See also:

- 171.7.7 DisplayUI(type as string, title as string, parent as window) 25046
- 171.7.8 DisplayUI(type as string, title as string="") 25046

### 171.7.7 DisplayUI(type as string, title as string, parent as window)

MBS Win Plugin, Plugin Version: 8.1, Platform: Windows, Targets: Desktop only.

**Function:** Displays the UI from the underlying text-to-speech engine's object token.
**Notes:**

Type specifies which UI you want.
Title is optional the title of the window.
You can optionally specify a parent window.
Lasterror is set.
See also:

- 171.7.6 DisplayUI(type as string, title as string, parent as DesktopWindow) 25045
- 171.7.8 DisplayUI(type as string, title as string="") 25046

### 171.7.8 DisplayUI(type as string, title as string="")

MBS Win Plugin, Plugin Version: 8.1, Platform: Windows, Targets: Desktop only.

**Function:** Displays the UI from the underlying text-to-speech engine's object token.
**Notes:**

Type specifies which UI you want.
Title is optional the title of the window.
You can optionally specify a parent window.
Lasterror is set.
See also:

- 171.7.6 DisplayUI(type as string, title as string, parent as DesktopWindow) 25045
- 171.7.7 DisplayUI(type as string, title as string, parent as window) 25046

### 171.7.9 IsUISupported(type as string) as boolean

MBS Win Plugin, Plugin Version: 8.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Checks if the underlying text-to-speech engine's object token supports the requested UI.
**Notes:**

Returns whether the specified UI is supported. True indicates the UI is supported, and false indicates the UI is not supported.
Lasterror is set.

### 171.7.10 ListVoices as boolean

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Makes a list of voices which is later returned using the NextVoice function.

### 171.7.11 NextVoice as WinVoiceMBS

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Returns the next voice in the list.
**Notes:** Returns nil on the end of the list.

### 171.7.12 Pause

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Pauses speech.

### 171.7.13 Resume

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Resumes speech.

### 171.7.14 Skip(sentenceCount as Integer) as Integer

MBS Win Plugin, Plugin Version: 8.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Causes the voice to skip forward or backward the specified number of items within the text of the current speak call.
**Notes:**

sentenceCount is the number of sentences to skip. If negative, you skip backward.
Returns the actual number of items skipped.
Lasterror is set.

### 171.7.15 Speak(text as string, Purge as Boolean = false, ContainsXML as boolean = false)

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Speaks a string.
**Notes:**

The string must be a 16bit unicode string.

Version 7.8 of the plugins convert to unicode automatically.

If Purge is true an existing speech will be stopped.

If ContainsXML is true, you can include xml commands in the text. See MSDN page:
http://msdn.microsoft.com/en-us/library/ms717077% 28v=vs.85% 29.aspx

### 171.7.16 SpeakFile(file as folderitem, unicodestring as string, AudioFormat as Integer = 0, ContainsXML as boolean = false)

MBS Win Plugin, Plugin Version: 4.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Speaks a string to a file.
**Notes:**

The string must be a 16bit unicode string.
File is a valid folderitem where the WAV file is stored.
The function will not return before the speaking is complete.
Lasterror is set.

Version 7.8 of the plugins convert to unicode automatically.

For AudioFormat, please use kAudioFormat* constants. Default is 22Khz Mono which is default format for speech API.

If ContainsXML is true, you can include xml commands in the text. See MSDN page:
http://msdn.microsoft.com/en-us/library/ms717077% 28v=vs.85% 29.aspx

### 171.7.17 WaitUntilDone(msTimeout as Integer)

MBS Win Plugin, Plugin Version: 8.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Blocks the caller until either the voice has completed speaking or the specified time interval has elapsed.
**Notes:**

msTimeout: Timeout period in milliseconds. INFINITE may be used to prevent this method from timing out.

INFINITE is -1.

Lasterror is set.

### 171.7.18 Properties

### 171.7.19 Handle as Integer

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The handle to the speech object.
**Notes:**

If handle is 0 there is no Speech software installed.
(Read only property)

### 171.7.20 IsDone as Boolean

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Returns true if the voice has finished speaking.
**Notes:**

Lasterror is set.
(Read only property)

### 171.7.21 IsSpeaking as Boolean

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Returns true if the voice is speaking.
**Notes:**

Lasterror is set.
(Read only property)

### 171.7.22 Lasterror as Integer

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The last error code reported.
**Notes:**

You may get the Speech SDK from Microsoft for more details.
(Read only property)

### 171.7.23 Priority as Integer

MBS Win Plugin, Plugin Version: 8.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The current voice priority level.
**Notes:**

The default priority is SPVPRI_NORMAL.
Lasterror is set.

Assuming an output object which implements ISpAudio, speak requests of similar priority voices are queued, and are spoken one at a time in the order they are issued. That is, speak requests from normal priority voices are put in one queue, while speak requests from alert priority voices (with priority SPVPRI_ALERT) are put in another queue.

Alert priority voices take priority over normal voices. If one or more speak requests from alert priority voices are pending, a normal voice that is speaking will be interrupted on the next alert boundary (see ISpVoice::SetAlertBoundary). When all the queued alert priority voice speak requests have been processed, the normal voice will continue.

Voices with the SPVPRI_OVER priority speak over (mix with) all other audio in the system with no synchronization. SPVPRI_OVER priority voices only mix on Windows 2000.

If the output object does not implement ISpAudio, no serialization will occur, and all voices will be treated

as if their priority is SPVPRI_OVER.
(Read and Write property)

### 171.7.24 Rate as Integer

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The current text rendering rate adjustment.
**Notes:**

Ranges from kMinRate to kMaxRate.
(Read and Write property)

### 171.7.25 SyncSpeakTimeout as Integer

MBS Win Plugin, Plugin Version: 8.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The timeout interval in milliseconds after which, synchronous Speak calls to this instance of the voice will timeout.
**Notes:**

Timeouts occur when waiting for access to the output object. This means that for a normal priority voice (see Priority for more information on priorities) and an output device which implements ISpAudio, a timeout may occur while waiting to reacquire the output object after an interruption by an alert priority voice. For voices of both normal and alert priorities, a timeout may also occur while waiting to reacquire the output object after the voice has been paused and resumed (see Pause and Resume).

Wait times are not accumulated - that is, if a voice waits for n milliseconds to initially acquire the output object, and is then paused and resumed, it will again wait for up to msTimeout milliseconds to reacquire the output object, not msTimeout - n milliseconds.
(Read and Write property)

### 171.7.26 Voice as WinVoiceMBS

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The current used voice.
**Notes:**

Set to nil to use the default voice.
(Read and Write property)

### 171.7.27 Volume as Integer

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The volume for the voice.
**Notes:**

Ranges from kMinVolume to kMaxVolume.
(Read and Write property)

### 171.7.28 Constants

### 171.7.29 kAudioFormat_11kHz16BitMono = 10

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** 11 kHz, 16 Bit, Mono

### 171.7.30 kAudioFormat_11kHz16BitStereo = 11

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** 11 kHz, 16 Bit, Stereo

### 171.7.31 kAudioFormat_11kHz8BitMono = 8

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** 11 kHz, 8 Bit, Mono

### 171.7.32 kAudioFormat_11kHz8BitStereo = 9

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** 11 kHz, 8 Bit, Stereo

### 171.7.33 kAudioFormat_12kHz16BitMono = 14

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** 12 kHz, 16 Bit, Mono

### 171.7.34 kAudioFormat_12kHz16BitStereo = 15

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** 12 kHz, 16 Bit, Stereo

### 171.7.35 kAudioFormat_12kHz8BitMono = 12

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** 12 kHz, 8 Bit, Mono

### 171.7.36 kAudioFormat_12kHz8BitStereo = 13

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** 12 kHz, 8 Bit, Stereo

### 171.7.37 kAudioFormat_16kHz16BitMono = 18

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** 16 kHz, 16 Bit, Mono

### 171.7.38 kAudioFormat_16kHz16BitStereo = 19

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** 16 kHz, 16 Bit, Stereo

### 171.7.39 kAudioFormat_16kHz8BitMono = 16

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** 16 kHz, 8 Bit, Mono

### 171.7.40 kAudioFormat_16kHz8BitStereo = 17

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** 16 kHz, 8 Bit, Stereo

### 171.7.41 kAudioFormat_22kHz16BitMono = 22

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** 22 kHz, 16 Bit, Mono

### 171.7.42 kAudioFormat_22kHz16BitStereo = 23

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** 22 kHz, 16 Bit, Stereo

### 171.7.43 kAudioFormat_22kHz8BitMono = 20

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** 22 kHz, 8 Bit, Mono

### 171.7.44 kAudioFormat_22kHz8BitStereo = 21

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** 22 kHz, 8 Bit, Stereo

### 171.7.45 kAudioFormat_24kHz16BitMono = 26

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** 24 kHz, 16 Bit, Mono

### 171.7.46 kAudioFormat_24kHz16BitStereo = 27

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** 24 kHz, 16 Bit, Stereo

### 171.7.47 kAudioFormat_24kHz8BitMono = 24

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** 24 kHz, 8 Bit, Mono

### 171.7.48 kAudioFormat_24kHz8BitStereo = 25

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** 24 kHz, 8 Bit, Stereo

### 171.7.49 kAudioFormat_32kHz16BitMono = 30

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** 32 kHz, 16 Bit, Mono

### 171.7.50 kAudioFormat_32kHz16BitStereo = 31

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** 32 kHz, 16 Bit, Stereo

### 171.7.51 kAudioFormat_32kHz8BitMono = 28

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** 32 kHz, 8 Bit, Mono

### 171.7.52 kAudioFormat_32kHz8BitStereo = 29

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** 32 kHz, 8 Bit, Stereo

### 171.7.53 kAudioFormat_44kHz16BitMono = 34

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** 44 kHz, 16 Bit, Mono

### 171.7.54 kAudioFormat_44kHz16BitStereo = 35

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** 44 kHz, 16 Bit, Stereo

### 171.7.55 kAudioFormat_44kHz8BitMono = 32

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** 44 kHz, 8 Bit, Mono

### 171.7.56 kAudioFormat_44kHz8BitStereo = 33

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** 44 kHz, 8 Bit, Stereo

### 171.7.57 kAudioFormat_48kHz16BitMono = 38

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** 48 kHz, 16 Bit, Mono

### 171.7.58 kAudioFormat_48kHz16BitStereo = 39

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** 48 kHz, 16 Bit, Stereo

### 171.7.59 kAudioFormat_48kHz8BitMono = 36

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** 48 kHz, 8 Bit, Mono

### 171.7.60 kAudioFormat_48kHz8BitStereo = 37

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** 48 kHz, 8 Bit, Stereo

### 171.7.61 kAudioFormat_8kHz16BitMono = 6

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** 8 kHz, 16 Bit, Mono

### 171.7.62 kAudioFormat_8kHz16BitStereo = 7

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** 8 kHz, 16 Bit, Stereo

### 171.7.63 kAudioFormat_8kHz8BitMono = 4

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** 8 KHz, 8 Bit, Mono

### 171.7.64 kAudioFormat_8kHz8BitStereo = 5

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** 8 kHz, 8 Bit, Stereo

### 171.7.65 kAudioFormat_ADPCM_11kHzMono = 59

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** ADPCM, 11 kHz, Mono

### 171.7.66 kAudioFormat_ADPCM_11kHzStereo = 60

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** ADPCM, 11 kHz, Stereo

### 171.7.67 kAudioFormat_ADPCM_22kHzMono = 61

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** ADPCM, 22 kHz, Mono

### 171.7.68 kAudioFormat_ADPCM_22kHzStereo = 62

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** ADPCM, 22 kHz, Stereo

### 171.7.69 kAudioFormat_ADPCM_44kHzMono = 63

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** ADPCM, 44 kHz, Mono

### 171.7.70 kAudioFormat_ADPCM_44kHzStereo = 64

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** ADPCM, 44 kHz, Stereo

### 171.7.71 kAudioFormat_ADPCM_8kHzMono = 57

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** ADPCM, 8 kHz, Mono

### 171.7.72 kAudioFormat_ADPCM_8kHzStereo = 58

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** ADPCM, 8 kHz, Stereo

### 171.7.73 kAudioFormat_CCITT_ALaw_11kHzMono = 43

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** CCITT, ALaw, 11 kHz, Mono

### 171.7.74 kAudioFormat_CCITT_ALaw_11kHzStereo = 44

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** CCITT, ALaw, 11 kHz, Stereo

### 171.7.75 kAudioFormat_CCITT_ALaw_22kHzMono = 45

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** CCITT, ALaw, 22 kHz, Mono

### 171.7.76 kAudioFormat_CCITT_ALaw_22kHzStereo = 46

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** CCITT, ALaw, 22 kHz, Stereo

### 171.7.77 kAudioFormat_CCITT_ALaw_44kHzMono = 47

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** CCITT, ALaw, 44 kHz, Mono

### 171.7.78 kAudioFormat_CCITT_ALaw_44kHzStereo = 48

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** CCITT, ALaw, 44 kHz, Stereo

### 171.7.79 kAudioFormat_CCITT_ALaw_8kHzMono = 41

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** CCITT, ALaw, 8 kHz, Mono

### 171.7.80 kAudioFormat_CCITT_ALaw_8kHzStereo = 42

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** CCITT, ALaw, 8 kHz, Stereo

### 171.7.81 kAudioFormat_CCITT_uLaw_11kHzMono = 51

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** CCITT, uLaw, 11 kHz, Mono

### 171.7.82 kAudioFormat_CCITT_uLaw_11kHzStereo = 52

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** CCITT, uLaw, 11 kHz, Stereo

### 171.7.83 kAudioFormat_CCITT_uLaw_22kHzMono = 53

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** CCITT, uLaw, 22 kHz, Mono

### 171.7.84 kAudioFormat_CCITT_uLaw_22kHzStereo = 54

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** CCITT, uLaw, 22 kHz, Stereo

### 171.7.85 kAudioFormat_CCITT_uLaw_44kHzMono = 55

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** CCITT, uLaw, 44 kHz, Mono

### 171.7.86 kAudioFormat_CCITT_uLaw_44kHzStereo = 56

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** CCITT, uLaw, 44 kHz, Stereo

### 171.7.87 kAudioFormat_CCITT_uLaw_8kHzMono = 49

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** CCITT, uLaw, 8 kHz, Mono

### 171.7.88 kAudioFormat_CCITT_uLaw_8kHzStereo = 50

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** CCITT, uLaw, 8 kHz, Stereo

### 171.7.89 kAudioFormat_GSM610_11kHzMono = 66

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** GSM 610, 11 kHz, Mono

### 171.7.90 kAudioFormat_GSM610_22kHzMono = 67

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** GSM 610, 22 kHz, Mono

### 171.7.91 kAudioFormat_GSM610_44kHzMono = 68

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** GSM 610, 44 kHz Mono

### 171.7.92 kAudioFormat_GSM610_8kHzMono = 65

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** GSM 610, 8 kHz, Mono

### 171.7.93 kAudioFormat_TrueSpeech_8kHz1BitMono = 40

MBS Win Plugin, Plugin Version: 14.3.

**Function:** One of the audio format constants.
**Notes:** TrueSpeech, 8 kHz, 1 Bit, Mono

### 171.7.94 kMaxRate = 10

MBS Win Plugin, Plugin Version: 3.3.

**Function:** The maximum for the rate property.

### 171.7.95 kMaxVolume = 100

MBS Win Plugin, Plugin Version: 3.3.

**Function:** The maximum for the volume property.

### 171.7.96 kMinRate = -10

MBS Win Plugin, Plugin Version: 3.3.

**Function:** The minimum for the rate property.

### 171.7.97 kMinVolume = 0

MBS Win Plugin, Plugin Version: 3.3.

**Function:** The minimum for the volume property.

### 171.7.98 PriorityAlert = 1

MBS Win Plugin, Plugin Version: 8.1.

**Function:** One of the priority constants.

### 171.7.99 PriorityNormal = 0

MBS Win Plugin, Plugin Version: 8.1.

**Function:** One of the priority constants.

### 171.7.100 PriorityOver = 2

MBS Win Plugin, Plugin Version: 8.1.

**Function:** One of the priority constants.

### 171.7.101 SPDUI_AddRemoveWord = "AddRemoveWord"

MBS Win Plugin, Plugin Version: 8.1.

**Function:** One of the constants for the User Interfaces used with IsUISupported and DisplayUI.

### 171.7.102 SPDUI_AudioProperties = "AudioProperties"

MBS Win Plugin, Plugin Version: 8.1.

**Function:** One of the constants for the User Interfaces used with IsUISupported and DisplayUI.

### 171.7.103 SPDUI_AudioVolume = "AudioVolume"

MBS Win Plugin, Plugin Version: 8.1.

**Function:** One of the constants for the User Interfaces used with IsUISupported and DisplayUI.

### 171.7.104 SPDUI_EngineProperties = "EngineProperties"

MBS Win Plugin, Plugin Version: 8.1.

**Function:** One of the constants for the User Interfaces used with IsUISupported and DisplayUI.

### 171.7.105 SPDUI_MicTraining = "MicTraining"

MBS Win Plugin, Plugin Version: 8.1.

**Function:** One of the constants for the User Interfaces used with IsUISupported and DisplayUI.

### 171.7.106 SPDUI_RecoProfileProperties = "RecoProfileProperties"

MBS Win Plugin, Plugin Version: 8.1.

**Function:** One of the constants for the User Interfaces used with IsUISupported and DisplayUI.

### 171.7.107 SPDUI_UserTraining = "UserTraining"

MBS Win Plugin, Plugin Version: 8.1.

**Function:** One of the constants for the User Interfaces used with IsUISupported and DisplayUI.

## 171.8 class WinVoiceMBS

### 171.8.1 class WinVoiceMBS

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** A class for a voice.

### 171.8.2 Methods

### 171.8.3 Description as string

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The name of the voice.
**Notes:** Returns a 16bit unicode string.

### 171.8.4 Properties

### 171.8.5 Handle as Integer

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The handle to the voice.
**Notes:** (Read only property)

### 171.8.6 Lasterror as Integer

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The last error code reported.
**Notes:** (Read only property)

# Chapter 172

# SpeechRecognition

## 172.1 class SFAcousticFeatureMBS

### 172.1.1 class SFAcousticFeatureMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** The value of a voice analysis metric.
**Notes:**

Requires MacOS 10.15 or later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 172.1.2 Blog Entries

- Playing with SpeechRecognition

### 172.1.3 Blog Entries

- Playing with SpeechRecognition

### 172.1.4 Methods

### 172.1.5 acousticFeatureValuePerFrame as Double()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** An array of feature values, one value per audio frame, corresponding to a transcript segment of

recorded audio.

### 172.1.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** The private constructor.

### 172.1.7 copy as SFAcousticFeatureMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** Creates a copy of the object.

### 172.1.8 Properties

### 172.1.9 frameDuration as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** The duration of the audio frame.
**Notes:**

In seconds.
(Read only property)

### 172.1.10 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

## 172.2 class SFSpeechAudioBufferRecognitionRequestMBS

### 172.2.1 class SFSpeechAudioBufferRecognitionRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** A request to recognize speech from captured audio content, such as audio from the device's microphone.
**Notes:**

Use an SFSpeechAudioBufferRecognitionRequestMBS object to perform speech recognition on live audio, or on a set of existing audio buffers. For example, use this request object to route audio from a device's microphone to the speech recognizer.

The request object contains no audio initially. As you capture audio, call appendAudioPCMBuffer or appendAudioSampleBuffer to add audio samples to the request object. The speech recognizer continuously analyzes the audio you appended, stopping only when you call the endAudio method. (You must call endAudio explicitly to stop the speech recognition process.)

Requires MacOS 10.15 or later.
Subclass of the SFSpeechRecognitionRequestMBS class.

### 172.2.2 Blog Entries

- Playing with SpeechRecognition

### 172.2.3 Blog Entries

- Playing with SpeechRecognition

### 172.2.4 Methods

### 172.2.5 appendAudioPCMBuffer(audioPCMBuffer as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** Appends audio in the PCM format to the end of the recognition request.
**Notes:**

audioPCMBuffer: An audio buffer (AVAudioPCMBufferMBS class) that contains audio in the PCM format.

The audio must be in a native format and uncompressed.

### 172.2.6 appendAudioSampleBuffer(sampleBuffer as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** Appends audio to the end of the recognition request.
**Notes:**

sampleBuffer: A buffer of audio. Must be CMSampleBufferMBS class.

The audio must be in a native format.

### 172.2.7 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** The constructor.

### 172.2.8 endAudio

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** Marks the end of audio input for the recognition request.
**Notes:** Call this method explicitly to let the speech recognizer know that no more audio input is coming.

### 172.2.9 Properties

### 172.2.10 nativeAudioFormat as Variant

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** The preferred audio format for optimal speech recognition.
**Notes:**

Use the audio format in this property as a hint for optimal recording, but don't depend on the value remaining unchanged.
Value is an AVAudioFormatMBS object.
(Read only property)

## 172.3 class SFSpeechRecognitionRequestMBS

### 172.3.1 class SFSpeechRecognitionRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** An abstract class representing a request to recognize speech from an audio source.
**Notes:**

Do not create SFSpeechRecognitionRequestMBS objects directly. Create an SFSpeechURLRecognitionRequestMBS or SFSpeechAudioBufferRecognitionRequestMBS object instead. Use the properties of this class to configure various aspects of your request object before you start the speech recognition process. For example, use the shouldReportPartialResults property to specify whether you want partial results or only the final result of speech recognition.

Requires MacOS 10.15 or later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 172.3.2 Blog Entries

- Playing with SpeechRecognition

### 172.3.3 Blog Entries

- Playing with SpeechRecognition

### 172.3.4 Methods

### 172.3.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** The private constructor.

### 172.3.6 contextualStrings as String()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** An array of phrases that should be recognized, even if they are not in the system vocabulary.
**Notes:**

Use this property to specify short custom phrases that are unique to your app. You might include phrases with the names of characters, products, or places that are specific to your app. You might also include

domain-specific terminology or unusual or made-up words. Assigning custom phrases to this property improves the likelihood of those phrases being recognized.
Keep phrases relatively brief, limiting them to one or two words whenever possible. Lengthy phrases are less likely to be recognized. In addition, try to limit each phrase to something the user can say without pausing. Limit the total number of phrases to no more than 100.

### 172.3.7 setContextualStrings(contextualStrings() as String)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** Sets array of phrases that should be recognized, even if they are not in the system vocabulary.
**Notes:**

Use this property to specify short custom phrases that are unique to your app. You might include phrases with the names of characters, products, or places that are specific to your app. You might also include domain-specific terminology or unusual or made-up words. Assigning custom phrases to this property improves the likelihood of those phrases being recognized.
Keep phrases relatively brief, limiting them to one or two words whenever possible. Lengthy phrases are less likely to be recognized. In addition, try to limit each phrase to something the user can say without pausing. Limit the total number of phrases to no more than 100.

### 172.3.8 Properties

### 172.3.9 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

### 172.3.10 interactionIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** An identifier string that you use to describe the type of interaction associated with the speech recognition request.
**Notes:**

If different parts of your app have different speech recognition needs, you can use this property to identify the part of your app that is making each request. For example, if one part of your app lets users speak phone numbers and another part lets users speak street addresses, consistently identifying the part of the app that makes a recognition request may help improve the accuracy of the results.
(Read and Write property)

### 172.3.11 requiresOnDeviceRecognition as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** A Boolean value that determines whether a request must keep its audio data on the device.
**Notes:**

Set this property to true to prevent an SFSpeechRecognitionRequestMBS from sending audio over the network. However, on-device requests won,Äôt be as accurate.

The request only honors this setting if the supportsOnDeviceRecognition (SFSpeechRecognizerMBS) property is also YES.
(Read and Write property)

### 172.3.12 shouldReportPartialResults as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** A Boolean value that indicates whether you want intermediate results returned for each utterance.
**Notes:**

The default value of this property is true. If you want only final results (and you don't care about intermediate results), set this property to false to prevent the system from doing extra work.
(Read and Write property)

### 172.3.13 taskHint as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** A value that indicates the type of speech recognition being performed.
**Notes:**

The default value of this property is kTaskHintUnspecified. See SFSpeechRecognitionResultMBS for constants.
(Read and Write property)

## 172.4 class SFSpeechRecognitionResultMBS

### 172.4.1 class SFSpeechRecognitionResultMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** An object containing the partial or final results of a speech recognition request.
**Notes:**

Use an SFSpeechRecognitionResultMBS object to retrieve the results of a speech recognition request. You do not create these objects directly. Instead, the Speech framework creates them and passes them to the handler block or delegate object you specified when starting your speech recognition task.
A speech recognition result object contains one or more transcriptions of the current utterance. Each transcription has a confidence rating indicating how likely it is to be correct. (You can also get the transcription with the highest rating directly from the bestTranscription property.)
If you requested partial results from the speech recognizer, the transcriptions may represent only part of the total audio content. Use the final property to determine if the request contains partial or final results.

Requires MacOS 10.15 or later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 172.4.2 Blog Entries

- Playing with SpeechRecognition

### 172.4.3 Blog Entries

- Playing with SpeechRecognition

### 172.4.4 Methods

### 172.4.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** The private constructor.

### 172.4.6 copy as SFSpeechRecognitionResultMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** Creates a copy of the object.

### 172.4.7 transcriptions as SFTranscriptionMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** An array of potential transcriptions, sorted in descending order of confidence.
**Notes:** All transcriptions correspond to the same utterance, which can be a partial or final result of the overall request. The first transcription in the array has the highest confidence rating, followed by transcriptions with decreasing confidence ratings.

### 172.4.8 Properties

### 172.4.9 bestTranscription as SFTranscriptionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** The transcription with the highest confidence level.
**Notes:** (Read only property)

### 172.4.10 final as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** A Boolean value that indicates whether speech recognition is complete and whether the transcriptions are final.
**Notes:**

When a speech recognition request is final, its transcriptions do not change.
(Read only property)

### 172.4.11 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

### 172.4.12 Constants

### 172.4.13 kTaskHintConfirmation = 3

MBS MacFrameworks Plugin, Plugin Version: 19.4.

**Function:** One of the task hints.
**Notes:**

A task that uses captured speech for short, confirmation-style requests.
Use this hint type when you are using speech recognition to handle confirmation commands, such as "yes," "no," or "maybe."

### 172.4.14 kTaskHintDictation = 1

MBS MacFrameworks Plugin, Plugin Version: 19.4.

**Function:** One of the task hints.
**Notes:**

A task that uses captured speech for text entry.
Use this hint type when you are using speech recognition for a task that's similar to the keyboard's built-in dictation function.

### 172.4.15 kTaskHintSearch = 2

MBS MacFrameworks Plugin, Plugin Version: 19.4.

**Function:** One of the task hints.
**Notes:**

A task that uses captured speech to specify seach terms.
Use this hint type when you are using speech recognition to identify search terms.

### 172.4.16 kTaskHintUnspecified = 0

MBS MacFrameworks Plugin, Plugin Version: 19.4.

**Function:** One of the task hints.
**Notes:**

An unspecified type of task.
Use this hint type when the intended use for captured speech does not match the other task types.

## 172.5 class SFSpeechRecognitionTaskMBS

### 172.5.1 class SFSpeechRecognitionTaskMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** A task object that you use to monitor the speech recognition progress.
**Notes:**

Use an SFSpeechRecognitionTaskMBS object to determine the state of a speech recognition task, to cancel an ongoing task, or to signal the end of the task.
You do not create speech recognition task objects directly. Instead, you receive one of these objects after calling recognitionTaskWithRequest.

Requires MacOS 10.15 or later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 172.5.2 Blog Entries

- Playing with SpeechRecognition

### 172.5.3 Blog Entries

- Playing with SpeechRecognition

### 172.5.4 Methods

### 172.5.5 Cancel

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** Cancels the current speech recognition task.
**Notes:**

You can cancel recognition tasks for both prerecorded and live audio input. For example, you might cancel a task in response to a user action or because the recording was interrupted.
When canceling a task, be sure to release any resources associated with the task, such as the audio input resources you are using to capture audio samples.

### 172.5.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** The private constructor.

### 172.5.7 Finish

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** Stops accepting new audio and finishes processing on the audio input that has already been accepted.
**Notes:** For audio buffer,Äìbased recognition, recognition does not finish until this method is called, so be sure to call it when the audio source is exhausted.

### 172.5.8 Properties

### 172.5.9 Cancelled as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** A Boolean value that indicates whether the speech recognition task was canceled.
**Notes:**

By default, the value of this property is false.
(Read only property)

### 172.5.10 Error as NSErrorMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** An error object that specifies the error that occurred during a speech recognition task.
**Notes:** (Read only property)

### 172.5.11 Finishing as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** A Boolean value that indicates whether audio input has stopped.
**Notes:**

By default, the value of this property is false.
(Read only property)

### 172.5.12 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

### 172.5.13 State as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** The current state of the speech recognition task.
**Notes:**

Check the value of this property to get the state of the in-progress speech recognition session. For valid values, see constants.
(Read only property)

### 172.5.14 Constants

### 172.5.15 kStateCanceling = 3

MBS MacFrameworks Plugin, Plugin Version: 19.4.

**Function:** One of the constants for the state of the task associated with the recognition request.
**Notes:** Delivery of recognition results has finished, but audio recording may be ongoing.

### 172.5.16 kStateCompleted = 4

MBS MacFrameworks Plugin, Plugin Version: 19.4.

**Function:** One of the constants for the state of the task associated with the recognition request.
**Notes:** Delivery of recognition requests has finished and audio recording has stopped.

### 172.5.17 kStateFinishing = 2

MBS MacFrameworks Plugin, Plugin Version: 19.4.

**Function:** One of the constants for the state of the task associated with the recognition request.
**Notes:** Audio recording has stopped, but delivery of recognition results may continue.

### 172.5.18 kStateRunning = 1

MBS MacFrameworks Plugin, Plugin Version: 19.4.

**Function:** One of the constants for the state of the task associated with the recognition request.
**Notes:** Speech recognition (potentially including audio recording) is in progress.

### 172.5.19 kStateStarting = 0

MBS MacFrameworks Plugin, Plugin Version: 19.4.

**Function:** One of the constants for the state of the task associated with the recognition request.
**Notes:** Speech recognition (potentially including audio recording) has not yet started.

## 172.6 class SFSpeechRecognizerMBS

### 172.6.1 class SFSpeechRecognizerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** An object you use to check for the availability of the speech recognition service, and to initiate the speech recognition process.
**Notes:**

An SFSpeechRecognizerMBS object is the central object for managing the speech recognizer process. Use this object to:

- Request authorization to use speech recognition services.
- Specify the language to use during the recognition process.
- Initiate new speech recognition tasks.

Set Up Speech Recognition
Each speech recognizer supports only one language, which you specify at creation time. The successful creation of a speech recognizer does not guarantee that speech recognition services are available. For some languages, the recognizer might require an Internet connection. Use the available property to find out if speech recognition services are available for the current language.

To initiate the speech recognition process, do the following:

- Request authorization to use speech recognition.
- Create an SFSpeechRecognizerMBS object.
- Verify the availability of services using the available property of your speech recognizer object.
- Prepare your audio content.
- Create a recognition request object,Äîan object that descends from SFSpeechRecognitionRequest.
- Call the recognitionTaskWithRequest method to begin the recognition process.

The type of recognition request object you create depends on whether you are processing an existing audio file or an incoming stream of audio. For existing audio files, create a SFSpeechURLRecognitionRequestMBS object. For audio streams, create a SFSpeechAudioBufferRecognitionRequestMBS object.

Create a Great User Experience for Speech Recognition
Here are some tips to consider when adding speech recognition support to your app.

- Be prepared to handle failures caused by speech recognition limits. Because speech recognition is a network-based service, limits are enforced so that the service can remain freely available to all apps. Individual devices may be limited in the number of recognitions that can be performed per day, and each app may be throttled globally based on the number of requests it makes per day. If a recognition request fails quickly (within a second or two of starting), check to see if the recognition service became unavailable. If it is, you may want to ask users to try again later.
- Plan for a one-minute limit on audio duration. Speech recognition places a relatively high burden on battery life and network usage. To minimize this burden, the framework stops speech recognition tasks that last longer than one minute. This limit is similar to the one for keyboard-related dictation.
- Remind the user when your app is recording. For example, display a visual indicator and play sounds at the beginning and end of speech recognition to help users understand that they're being actively recorded. You can also display speech as it is being recognized so that users understand what your app is doing and see any mistakes made during the recognition process.
- Do not perform speech recognition on private or sensitive information. Some speech is not appropriate for recognition. Don't send passwords, health or financial data, and other sensitive speech for recognition.

Requires MacOS 10.15 or later.

### 172.6.2 Blog Entries

- Playing with SpeechRecognition

### 172.6.3 Blog Entries

- Playing with SpeechRecognition

### 172.6.4 Methods

### 172.6.5 authorizationStatus as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** Returns your app's current authorization to perform speech recognition.
**Notes:** The user can reject your app's request to perform speech recognition, but your request can also be denied if speech recognition is not supported on the device. The app can also change your app's authorization status at any time from the Settings app.

### 172.6.6 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** Whether the Speech Framework was loaded.
**Notes:** Returns true on MacOS 10.15 or newer.

### 172.6.7 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** Creates a speech recognizer associated with the user's default language settings.
**Notes:**

Returns an initialized speech recognizer object, or nil if there was a problem creating the object.

If the user's default language is not supported for speech recognition, this method attempts to fall back to the language used by the keyboard for dictation. If that fails, this method returns nil.
Even if this method returns a valid speech recognizer object, the speech recognition services may be temporarily unavailable. To determine whether speech recognition services are available, check the available property.
See also:

- 172.6.8 Constructor(locale as NSLocaleMBS) 25085

### 172.6.8 Constructor(locale as NSLocaleMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** Creates a speech recognizer associated with the specified locale.
**Notes:**

locale: The locale object representing the language you want to use for speech recognition. For a list of languages supported by the speech recognizer, see supportedLocales.

Returns an initialized speech recognizer object, or nil if the specified language was not supported.

If you specify a language that is not supported by the speech recognizer, this method attempts to fall back to the language used by the keyboard for dictation. If that fails, this method returns nil.
Even if this method returns a valid speech recognizer object, the speech recognition services may be temporarily unavailable. To determine whether speech recognition services are available, check the available property.
See also:

- 172.6.7 Constructor 25085

### 172.6.9 Destructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** The destructor.

### 172.6.10 recognitionTaskWithRequest(request as SFSpeechRecognitionRequestMBS) as SFSpeechRecognitionTaskMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** Recognizes speech from the audio source associated with the specified request, using the specified events to manage the results.
**Notes:**

request: A request (encapsulated in an SFSpeechRecognitionRequestMBS object) to recognize speech from an audio source.

Returns the task object you can use to manage an in-progress recognition request.

Use this method to initiate the speech recognition process on the audio contained in the request object. This method executes asynchronously and returns a SFSpeechRecognitionTaskMBS object that you can use to cancel or finalize the recognition process later. As results become available, the method calls the methods of the provided delegate object.
Note that the SFSpeechRecognitionTaskMBS object returned by this method does not retain your delegate object. You must maintain a strong reference to your delegate while speech recognition is in progress.
See also:

- 172.6.11 recognitionTaskWithRequest(request as SFSpeechRecognitionRequestMBS, delegateHandler as recognitionTaskWithRequestCompletedMBS, tag as Variant = nil) as SFSpeechRecognitionTaskMBS 25086

### 172.6.11 recognitionTaskWithRequest(request as SFSpeechRecognitionRequestMBS, delegateHandler as recognitionTaskWithRequestCompletedMBS, tag as Variant = nil) as SFSpeechRecognitionTaskMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** Executes the speech recognition request and delivers the results to the specified handler delegate.
**Notes:**

request: A request (in an SFSpeechRecognitionRequestMBS object) to recognize speech from an audio source.
delegateHandler: The method to call when partial or final results are available, or when an error occurs. If the shouldReportPartialResults property is true, this event may be called multiple times to deliver the

partial and final results.

The delegare has no return value and takes the following parameters:
result: A SFSpeechRecognitionResultMBS containing the partial or final transcriptions of the audio content.
error: An error object if a problem occurred. This parameter is nil if speech recognition was successful.

Request and Tag parameters are passed through to delegate.

Returns the task object you can use to manage an in-progress recognition request.

Use this method to initiate the speech recognition process on the audio contained in the request object. This method executes asynchronously and returns a SFSpeechRecognitionTaskMBS object that you can use to cancel or finalize the recognition process later. As results become available, the method calls the delegate in the delegateHandler parameter.
See also:

- 172.6.10 recognitionTaskWithRequest(request as SFSpeechRecognitionRequestMBS) as SFSpeechRecognitionTaskMBS 25086

### 172.6.12 requestAuthorization(delegateHandler as requestAuthorizationCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** Asks the user to allow your app to perform speech recognition.
**Notes:**

delegateHandler: The delegate to execute when your app's authorization status is known. The status parameter of the delegate contains your app's authorization status.

Call this method before performing any other tasks associated with speech recognition. This method executes asynchronously, returning shortly after you call it. At some point later, the system calls the provided handler block with the results.
When your app's authorization status is SFSpeechRecognizerAuthorizationStatusNotDetermined, this method causes the system to prompt the user to grant or deny permission for your app to use speech recognition. The prompt includes the custom message you specify in the NSSpeechRecognitionUsageDescription key of your app's Info.plist file. The user's response is saved so that future calls to this method do not prompt the user again.

Your app's Info.plist file must contain the NSSpeechRecognitionUsageDescription key with a valid usage description. If this key is not present, your app will crash when you call this method.
For more information about requesting authorization, see Asking Permission to Use Speech Recognition.

### 172.6.13 supportedLocales as NSLocaleMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** Returns the set of locales that are supported by the speech recognizer.
**Notes:**

This method returns the locales for which speech recognition is supported. Support for a locale does not guarantee that speech recognition is currently possible for that locale. For some locales, the speech recognizer requires an active Internet connection to communicate with Apple's servers. If the speech recognizer is currently unable to process requests, available returns NO.
Speech recognition supports the same locales that are supported by the keyboard's dictation feature. For a list of these locales, see QuickType Keyboard: Dictation.

### 172.6.14 Properties

### 172.6.15 defaultTaskHint as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** A hint that indicates the type of speech recognition being requested.
**Example:**

```
dim recognizer as New MySFSpeechRecognizer
recognizer.defaultTaskHint = SFSpeechRecognitionResultMBS.kTaskHintDictation
```

**Notes:**

By default, the value of this property overrides the SFSpeechRecognitionTaskHintUnspecified value for requests.
(Read and Write property)

### 172.6.16 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

### 172.6.17 isAvailable as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** A Boolean value that indicates whether the speech recognizer is currently available.
**Notes:**

When the value of this property is true, you may create new speech recognition tasks. When value of this property is false, speech recognition services are not available.
(Read only property)

### 172.6.18 locale as NSLocaleMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** The locale of the speech recognizer.
**Notes:**

The locale of the speech recognizer is an NSLocaleMBS object. The default value of this property is the system locale (that is, systemLocale).
(Read only property)

### 172.6.19 supportsOnDeviceRecognition as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** A Boolean value that indicates whether the speech recognizer can operate without network access.
**Notes:**

An SFSpeechRecognitionRequestMBS can only honor its requiresOnDeviceRecognition property if supportsOnDeviceRecognition is true. If supportsOnDeviceRecognition is false, the SFSpeechRecognizer requires a network in order to recognize speech.
(Read only property)

### 172.6.20 Events

### 172.6.21 availabilityDidChange(available as Boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: .

**Function:** Tells you that the availability of its associated speech recognizer changed.
**Notes:** available: A Boolean value that indicates the new availability of the speech recognizer.

### 172.6.22 didDetectSpeech(task as SFSpeechRecognitionTaskMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: .

**Function:** Tells you when the task first detects speech in the source audio.
**Notes:** task: The speech recognition task (an SFSpeechRecognitionTaskMBS object) that represents the request.

### 172.6.23 TaskDidFinishRecognition(task as SFSpeechRecognitionTaskMBS, recognitionResult as SFSpeechRecognitionResultMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: .

**Function:** Tells you when the final utterance is recognized.
**Notes:**

task: The speech recognition task (an SFSpeechRecognitionTaskMBS object) that represents the request.
recognitionResult: A recognized utterance that contains one or more transcription hypotheses in an SFSpeechRecognitionResultMBS object.

When this method is called, the delegate should expect no further information about the utterance to be reported.

### 172.6.24 TaskDidFinishSuccessfully(task as SFSpeechRecognitionTaskMBS, successfully as boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: .

**Function:** Tells you when the recognition of all requested utterances is finished.
**Notes:**

task: The speech recognition task (an SFSpeechRecognitionTaskMBS object) that represents the request.
successfully: A Boolean value that indicates whether the task was successful. When this parameter is false, use the error property of the task to get information about why the task was unsuccessful.

### 172.6.25 TaskDidHypothesizeTranscription(task as SFSpeechRecognitionTaskMBS, transcription as SFTranscriptionMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: .

**Function:** Tells you that a hypothesized transcription is available.
**Notes:**

task: The speech recognition task (an SFSpeechRecognitionTaskMBS object) that represents the request.
transcription: The hypothesized transcription in an SFTranscriptionMBS object.

This method is called for all recognitions, including partial recognitions.

### 172.6.26 TaskFinishedReadingAudio(task as SFSpeechRecognitionTaskMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: .

**Function:** Tells you when the task is no longer accepting new audio input, even if final processing is in progress.
**Notes:** task: The speech recognition task (an SFSpeechRecognitionTask object) that represents the request.

### 172.6.27 TaskWasCancelled(task as SFSpeechRecognitionTaskMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: .

**Function:** Tells you that the task has been canceled.
**Notes:**

task: The speech recognition task (an SFSpeechRecognitionTaskMBS object) that represents the request.

A speech recognition task can be canceled by the user, by your app, or by the system.

### 172.6.28 Constants

### 172.6.29 kAuthorizationStatusAuthorized = 3

MBS MacFrameworks Plugin, Plugin Version: 19.4.

**Function:** One of the constants for app's authorization to perform speech recognition.
**Notes:** The user granted your app's request to perform speech recognition.

### 172.6.30 kAuthorizationStatusDenied = 1

MBS MacFrameworks Plugin, Plugin Version: 19.4.

**Function:** One of the constants for app's authorization to perform speech recognition.
**Notes:** The user denied your app's request to perform speech recognition.

### 172.6.31 kAuthorizationStatusNotDetermined = 0

MBS MacFrameworks Plugin, Plugin Version: 19.4.

**Function:** One of the constants for app's authorization to perform speech recognition.
**Notes:** The app's authorization status has not yet been determined.

### 172.6.32 kAuthorizationStatusRestricted = 2

MBS MacFrameworks Plugin, Plugin Version: 19.4.

**Function:** One of the constants for app's authorization to perform speech recognition.
**Notes:** The device prevents your app from performing speech recognition.

### 172.6.33 Delegates

### 172.6.34 recognitionTaskWithRequestCompletedMBS(request as SFSpeechRecognitionRequestMBS, result as SFSpeechRecognitionResultMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** The delegate for the callback when recognition is done.

### 172.6.35 requestAuthorizationCompletedMBS(status as integer, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** The delegate to call when authorization request finished.

## 172.7 class SFSpeechURLRecognitionRequestMBS

### 172.7.1 class SFSpeechURLRecognitionRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** A request to recognize speech in a recorded audio file.
**Notes:**

Use an SFSpeechURLRecognitionRequest object to perform speech recognition on the contents of an existing audio file.

Requires MacOS 10.15 or later.
Subclass of the SFSpeechRecognitionRequestMBS class.

### 172.7.4 Methods

### 172.7.5 Constructor(File as FolderItem)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** Creates a speech recognition request, initialized with the specified folderitem.
**Notes:** Use this method to create a request to recognize speech in a recorded audio file that resides at the specified URL. Pass the request to the recognizer's recognitionTaskWithRequest method to start recognition.
See also:

- 172.7.6 Constructor(URL as String) 25093

### 172.7.6 Constructor(URL as String)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** Creates a speech recognition request, initialized with the specified URL.
**Notes:** Use this method to create a request to recognize speech in a recorded audio file that resides at the

specified URL. Pass the request to the recognizer's recognitionTaskWithRequest method to start recognition.
See also:

- 172.7.5 Constructor(File as FolderItem) 25093

### 172.7.7 Properties

### 172.7.8 File as FolderItem

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** The folderitem of the audio file.
**Notes:** (Read only property)

### 172.7.9 URL as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** The URL of the audio file.
**Notes:** (Read only property)

## 172.8 class SFTranscriptionMBS

### 172.8.1 class SFTranscriptionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** A textual representation of the given speech it its entirety, as recognized by the speech recognizer.
**Notes:**

Use SFTranscriptionMBS to obtain all the recognized utterances from your audio content. An utterance is a vocalized word or group of words that represent a single meaning to the speech recognizer (SFSpeechRecognizerMBS).
Use the formattedString property to retrieve the entire transcription of utterances, or use the segments property to retrieve an individual utterance (SFTranscriptionSegmentMBS).
You don,Äôt create an SFTranscriptionMBS directly. Instead, you retrieve it from an SFSpeechRecognitionResultMBS instance. The speech recognizer sends a speech recognition result to your app in one of two ways, depending on how your app started a speech recognition task.
You can start a speech recognition task by using the speech recognizer,Äôs recognitionTaskWithRequest method. When the task is complete, the speech recognizer sends an SFSpeechRecognitionResult instance to your resultHandler closure. Alternatively, you can use the speech recognizer,Äôs recognitionTaskWithRequest method to start a speech recognition task. When the task is complete, the speech recognizer uses events to send a SFSpeechRecognitionResultMBS by using the TaskDidFinishRecognition event.
An SFTranscriptionMBS represents only a potential version of the speech. It might not be an accurate representation of the utterances.

Requires MacOS 10.15 or later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 172.8.2 Blog Entries

### 172.8.3 Blog Entries

- Playing with SpeechRecognition

### 172.8.4 Methods

### 172.8.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** The private constructor.

### 172.8.6 copy as SFTranscriptionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** Creates a copy of the object.

### 172.8.7 segments as SFTranscriptionSegmentMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** An array of transcription segments that represent the parts of the transcription, as identified by the speech recognizer.
**Notes:** The order of the segments in the array matches the order in which the corresponding utterances occur in the spoken content.

### 172.8.8 Properties

### 172.8.9 averagePauseDuration as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** The average pause duration between words, measured in seconds.
**Notes:** (Read only property)

### 172.8.10 formattedString as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** The entire transcription of utterances, formatted into a single, user-displayable string.
**Notes:** (Read only property)

### 172.8.11 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

### 172.8.12 speakingRate as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** The number of words spoken per minute.
**Notes:** (Read only property)

## 172.9 class SFTranscriptionSegmentMBS

### 172.9.1 class SFTranscriptionSegmentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** A discrete part of an entire transcription, as identified by the speech recognizer.
**Notes:**

Use SFTranscriptionSegmentMBS to get details about a part of an overall SFTranscriptionMBS. An SFTranscriptionSegmentMBS represents an utterance, which is a vocalized word or group of words that represent a single meaning to the speech recognizer (SFSpeechRecognizerMBS).

You don,Äôt create transcription object segments directly. Instead, you access them from a transcription,Äôs segments property.
A transcription segment includes the following information:

- The text of the utterance, plus any alternative interpretations of the spoken word.
- The character range of the segment within the formattedString of its parent SFTranscriptionMBS.
- A confidence value, indicating how likely it is that the specified string matches the audible speech.
- A timestamp and duration value, indicating the position of the segment within the provided audio stream.
- A voiceAnalytics metric, indicating the likelihood of a voice in a segment, and that voice,Äôs pitch, jitter, and shimmer properties.

Requires MacOS 10.15 or later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 172.9.4 Methods

### 172.9.5 alternativeSubstrings as String()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** An array of alternate interpretations of the utterance in the transcription segment.

### 172.9.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** The private constructor.

### 172.9.7 copy as SFTranscriptionSegmentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** Creates a copy of the object.

### 172.9.8 Properties

### 172.9.9 confidence as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** The level of confidence the speech recognizer has in its recognition of the speech transcribed for the segment.
**Notes:**

This property reflects the overall confidence in the recognition of the entire phrase. The value is 0 if there was no recognition, and it is closer to 1 when there is a high certainty that a transcription matches the user's speech exactly. For example, a confidence value of 0.94 represents a very high confidence level, and is more likely to be correct than a transcription with a confidence value of 0.72.
(Read only property)

### 172.9.10 duration as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** The number of seconds it took for the user to speak the utterance represented by the segment.
**Notes:** (Read only property)

### 172.9.11 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

### 172.9.12 substring as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** The string representation of the utterance in the transcription segment.
**Notes:** (Read only property)

### 172.9.13 substringRange as NSRangeMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** The range information for the transcription segment,Äôs substring, relative to the overall transcription.
**Notes:**

Use the range information to find the position of the segment within the formattedString property of the SFTranscription object containing this segment.
(Read only property)

### 172.9.14 timestamp as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** The start time of the segment in the processed audio stream.
**Notes:**

The timestamp is the number of seconds between the beginning of the audio content and when the user spoke the word represented by the segment. For example, if the user said the word ,Äútime,Äù one second into the transcription ,ÄúWhat time is it,Äù, the timestamp would be equal to 1.0.
(Read only property)

### 172.9.15 voiceAnalytics as SFVoiceAnalyticsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** An analysis of the transcription segment,Äôs vocal properties.
**Notes:** (Read only property)

## 172.10 class SFVoiceAnalyticsMBS

### 172.10.1 class SFVoiceAnalyticsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** A collection of vocal analysis metrics.
**Notes:**

Requires MacOS 10.15 or later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 172.10.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** The private constructor.

### 172.10.6 copy as SFVoiceAnalyticsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** Creates a copy of the object.

### 172.10.7 Properties

### 172.10.8 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

### 172.10.9 jitter as SFAcousticFeatureMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** The variation in pitch in each frame of a transcription segment, expressed as a percentage of the frame,Äôs fundamental frequency.
**Notes:** (Read only property)

### 172.10.10 pitch as SFAcousticFeatureMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** The highness or lowness of the tone (fundamental frequency) in each frame of a transcription segment, expressed as a logarithm.
**Notes:**

The value is a logarithm (base e) of the normalized pitch estimate for each frame.
(Read only property)

### 172.10.11 shimmer as SFAcousticFeatureMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** The variation in vocal volume stability (amplitude) in each frame of a transcription segment, expressed in decibels.
**Notes:** (Read only property)

### 172.10.12 voicing as SFAcousticFeatureMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** The likelihood of a voice in each frame of a transcription segment, expressed as a probability in the range [ 0.0, 1.0 ] .
**Notes:** (Read only property)

# Chapter 173

# Spell Checking

## 173.1 class NSSpellCheckerMBS

### 173.1.1 class NSSpellCheckerMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The spell checker class.
**Notes:**

The NSSpellChecker object is used by a client (e.g. a document in an application) to spell-check a given String.
There is only one NSSpellChecker instance per application (since spell-checking is interactive and you only have one mouse and one keyboard).

The string being spell-checked need only be valid for the duration of the call to checkSpellingOfString or countWordsInString.

Requires Mac OS X 10.2.

### 173.1.6 Methods

### 173.1.7 availableLanguages as string()

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns a list of the available languages.
**Notes:** Requires Mac OS X 10.5.

### 173.1.8 checkGrammarOfString(text as string, start as Integer, language as string, wrap as boolean) as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Initiates a grammatical analysis of a given string.
**Notes:**

text: String to analyze.
start: Location within string at which to start the analysis.
language: Language use in string. When nil, the language selected in the Spelling panel is used.
wrap: true to specify that the analysis continue to the beginning of string when the end is reached. false to have the analysis stop at the end of string.
outDetails: Optional. On output, dictionaries describing grammar-analysis details within the flagged grammatical unit. See the NSSpellServer class for information about these dictionaries.

Returns Location of the first flagged grammatical unit.

Available in Mac OS X v10.5 and later.
See also:

- 173.1.9 checkGrammarOfString(text as string, start as Integer, language as string, wrap as boolean, Details() as dictionary) as NSRangeMBS 25105

### 173.1.9 checkGrammarOfString(text as string, start as Integer, language as string, wrap as boolean, Details() as dictionary) as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Initiates a grammatical analysis of a given string.
**Notes:**

text: String to analyze.
start: Location within string at which to start the analysis.
language: Language use in string. When nil, the language selected in the Spelling panel is used.
wrap: true to specify that the analysis continue to the beginning of string when the end is reached. false to have the analysis stop at the end of string.
outDetails: Optional. On output, dictionaries describing grammar-analysis details within the flagged grammatical unit. See the NSSpellServer class for information about these dictionaries.

Returns Location of the first flagged grammatical unit.

Available in Mac OS X v10.5 and later.
See also:

- 173.1.8 checkGrammarOfString(text as string, start as Integer, language as string, wrap as boolean)

as NSRangeMBS 25105

### 173.1.10 checkSpellingOfString(text as string, start as Integer) as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Initiates a spell-check of a string.
**Notes:** Returns the range of the first misspelled word.
See also:

- 173.1.11 checkSpellingOfString(text as string, start as Integer, language as string, wrap as boolean) as NSRangeMBS 25106
- 173.1.12 checkSpellingOfString(text as string, start as Integer, language as string, wrap as boolean, byref WordCount as Integer) as NSRangeMBS 25106

### 173.1.11 checkSpellingOfString(text as string, start as Integer, language as string, wrap as boolean) as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Initiates a spell-check of a string.
**Notes:** Returns the range of the first misspelled word.
See also:

- 173.1.10 checkSpellingOfString(text as string, start as Integer) as NSRangeMBS 25106
- 173.1.12 checkSpellingOfString(text as string, start as Integer, language as string, wrap as boolean, byref WordCount as Integer) as NSRangeMBS 25106

### 173.1.12 checkSpellingOfString(text as string, start as Integer, language as string, wrap as boolean, byref WordCount as Integer) as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Initiates a spell-check of a string.
**Notes:** Returns the range of the first misspelled word (and optionally the wordCount by reference).
See also:

- 173.1.10 checkSpellingOfString(text as string, start as Integer) as NSRangeMBS 25106
- 173.1.11 checkSpellingOfString(text as string, start as Integer, language as string, wrap as boolean) as NSRangeMBS 25106

### 173.1.13 checkString(text as string, range as NSRangeMBS = nil, checkingTypes as Int64 = -1, options as Dictionary = nil, byref orthography as NSOrthographyMBS, byref wordCount as Integer) as NSTextCheckingResultMBS()

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Requests unified text checking for the given range of the given string.
**Notes:**

text: The string to check.
range: The range of the string to check.
checkingTypes: The type of checking to be performed. The possible constants are listed in NSTextCheckingType and can be combined using the C bit-wise OR operator to perform multiple checks at the same time.
options: The options dictionary specifying the types of checking to perform. See Spell Checking Option Dictionary Keys for the possible keys and expected values.

orthography: Returns by-reference, the orthography of the range of the string. See NSOrthographyMBS for more information.
wordCount: Returns by-reference, the word count for the range of the string.

Returns an array of NSTextCheckingResultMBS objects describing particular items found during checking and their individual ranges, sorted by range origin, then range end, then result type.

### 173.1.14 completionsForPartialWordRange(start as Integer, length as Integer, text as string, language as string="") as string()

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Searches possible completions for the given word.
**Notes:**

Returns an array of strings, in the order in which they should be presented, representing complete words that the user might be trying to type when starting by typing the partial word at the given range in the given string.

Within the text, length characters are picked starting at at position (0 based) and matched agains the dictionary defined by language.
Up to around 100 words are returned.

Requires Mac OS X 10.3.
Returns an empty string on any error.

### 173.1.15 correctionForWordRange(range as NSRangeMBS, text as string, language as string) as string

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns a single proposed correction if a word is mis-spelled.
**Notes:**

range: The range of the word to be corrected.
text: The string containing the proposed correction.
language: The language.

Returns the proposed correct string.

### 173.1.16 countWordsInString(word as string, language as string="") as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Just counts the words without checking spelling.
**Example:**

```
dim text as string = "Hello World"
dim spell as NSSpellCheckerMBS // your spellchecker

msgBox str(spell.countWordsInString(text,"en"))
```

**Notes:**

Returns the number of words in text. The language argument specifies the language used in the string. If language is the empty string, the current selection in the Spelling panel's pop-up menu is used.

Returns -1 if text is nil or this spellchecker function is not available.

Returns -1 if counting words isn't supported by the spell server selected.

### 173.1.17 deletesAutospaceBetweenString(precedingString as string, followingString as string, language as String = "") as Boolean

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Deletes auto space between strings.
**Notes:** In some cases the space automatically inserted after an accepted candidate should be deleted when

the next text is typed (e.g. if it is a period or comma). This method allows clients to recognize these cases in a standardized way.

### 173.1.18 dismissCorrectionIndicatorForView(view as NSViewMBS)

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop only.

**Function:** Dismisses the correction indicator for the specified view.

### 173.1.19 forgetWord(word as string)

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Removes the given word from the user dictionary.

### 173.1.20 guessesForWord(range as NSRangeMBS, word as string, language as string) as string()

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns an array of possible substitutions for the specified string.
**Notes:**

range: The range of the string to check.
word: The string to guess
language: The language of the string

Returns an array of strings containing possible replacement words.
Available in Mac OS X v10.6 and later.
See also:

- 173.1.21 guessesForWord(word as string) as string() 25109

### 173.1.21 guessesForWord(word as string) as string()

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns an array with words matching the given word.
**Example:**

```
dim a() as string
dim s as new NSSpellCheckerMBS
```

```
a=s.guessesForWord("Hell")

msgbox str(ubound(a)+1)+" suggestions."
```

**Notes:**

Returns nil on any error.

Returns an array of suggested spellings for the misspelled word word. If word contains all capital letters, or its first letter is capitalized, the suggested words are capitalized in the same way.
See also:

- 173.1.20 guessesForWord(range as NSRangeMBS, word as string, language as string) as string() 25109

### 173.1.22 hasLearnedWord(word as string) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Checks whether a word has been learned.
**Notes:**

Returns true if the word is known.
Requires Mac OS X 10.5.

### 173.1.23 ignoredWords as string()

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The list of ignored words.
**Example:**

```
dim spell as new NSSpellCheckerMBS
dim f as FolderItem
dim i,c as Integer
dim t as TextOutputStream
dim n(-1) as string

f=SpecialFolder.Preferences.Child("SpellCheck RB.pref")
t=f.CreateTextFile
if t<>nil and spell<>nil then
n=spell.ignoredWords
MsgBox Join(n,EndOfLine)
end if
```

**Notes:** Returns nil on any error.

### 173.1.24 ignoreWord(word as string)

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Adds the word to the ignore list so it will be ignored for spell checking in this NSSpellCheckerMBS object.
**Notes:** Requires Mac OS X 10.2.

### 173.1.25 isAutomaticCapitalizationEnabled as boolean

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Whether automatic capitalization is enabled by the user.

### 173.1.26 isAutomaticDashSubstitutionEnabled as boolean

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Whether automatic dash substitution is enabled by the user.

### 173.1.27 isAutomaticPeriodSubstitutionEnabled as boolean

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Whether automatic period substitution is enabled by the user.

### 173.1.28 isAutomaticQuoteSubstitutionEnabled as boolean

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Whether automatic quote substitution is enabled by the user.

### 173.1.29 isAutomaticSpellingCorrectionEnabled as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Whether automatic spelling correction is enabled.
**Notes:** Available in Mac OS X v10.6 and later.

### 173.1.30 isAutomaticTextCompletionEnabled as boolean

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Whether automatic text completion is enabled by the user.

### 173.1.31 isAutomaticTextReplacementEnabled as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Whether automatic spelling replacement is enabled.
**Notes:** Available in Mac OS X v10.6 and later.

### 173.1.32 languageForWordRange(range as NSRangeMBS, text as string, orthography as NSOrthographyMBS = nil) as string

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Clients who have an NSOrthography from NSTextCheckingTypeOrthography checking and wish to determine a specific language from it for a particular word.

### 173.1.33 languageMenuEntries as string()

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The entries from the language menu of the panel.
**Notes:**

Copies the list of menu entries from the panel.

Currently you can use this names to show to the user and see what languages are available. It uses a private property which works for Mac OS X 10.4 and 10.5.
For the language function you need the short names:

| | |
|---|---|
| Australian English | en_AU |
| British English | en_GB |
| Canadian English | en_CA |
| Deutsch | de |
| English | en |
| Espa√±ol | es |
| Fran√ßais | fr |
| Italiano | it |
| Multilingual | Multilingual |
| Nederlands | nl |
| Portugu√™s | pt |
| Protugu√™s do Brasil | pt_BR |
| Svenska | sv |

### 173.1.34 learnWord(word as string)

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Learns the given word.
**Notes:** Requires Mac OS X 10.5.

### 173.1.35 menuForResult(TextCheckingResult as NSTextCheckingResultMBS, checkedString as string, options as Dictionary = nil, atLocation as NSPointMBS, view as NSViewMBS) as NSMenuMBS

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop only.

**Function:** Provides a menu containing contextual menu items suitable for certain kinds of detected results.
**Notes:**

TextCheckingResult: The NSTextCheckingResult instance for the checked string.
checkedString: The string that has been checked.
options: The options dictionary allows clients to pass in information associated with the document. See Spell Checking Option Dictionary Keys for possible key-value pairs.
location: The location, in the view,Äôs coordinate system, to display the menu.
view: The view object over which to display the contextual menu.

Returns a menu suitable for displaying as a contextual menu, or adding to another contextual menu as a submenu.

### 173.1.36 NSSpellCheckerDidChangeAutomaticCapitalizationNotification as string

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The notification named used when automatic capitalization setting changed.

### 173.1.37 NSSpellCheckerDidChangeAutomaticDashSubstitutionNotification as string

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The notification named used when automatic dash substitution setting changed.

### 173.1.38 NSSpellCheckerDidChangeAutomaticPeriodSubstitutionNotification as string

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The notification named used when automatic period substitution setting changed.

### 173.1.39 NSSpellCheckerDidChangeAutomaticQuoteSubstitutionNotification as string

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The notification named used when automatic quote substitution setting changed.

### 173.1.40 NSSpellCheckerDidChangeAutomaticSpellingCorrectionNotification as string

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the notification names.
**Notes:**

Use with NSNotificationObserverMBS class.
This notification is posted when the spell checker did change text using automatic spell checking correction.
The are posted to the application's default notification center.
Available in Mac OS X v10.7 and later.

### 173.1.41 NSSpellCheckerDidChangeAutomaticTextCompletionNotification as string

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The notification named used when automatic text completion setting changed.

### 173.1.42 NSSpellCheckerDidChangeAutomaticTextReplacementNotification as string

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the notification names.
**Notes:**

Use with NSNotificationObserverMBS class.
This notification is posted when the spell checker changed text using automatic text replacement. The are posted application's to the default notification center.
Available in Mac OS X v10.7 and later.

### 173.1.43 NSTextCheckingDocumentAuthorKey as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants for the options dictionary.
**Notes:**

An string containing the name of an author to be associated with the document

Available in Mac OS X v10.6 and later.

### 173.1.44 NSTextCheckingDocumentTitleKey as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants for the options dictionary.
**Notes:**

A string containing the title to be associated with the document.

Available in Mac OS X v10.6 and later.

### 173.1.45 NSTextCheckingDocumentURLKey as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants for the options dictionary.
**Notes:**

An NSURL to be associated with the document.

Available in Mac OS X v10.6 and later.

### 173.1.46 NSTextCheckingOrthographyKey as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants for the options dictionary.
**Notes:**

An NSOrthography instance indicating an orthography to be used as a starting point for orthography checking, or as the orthography if orthography checking is not enabled.

Available in Mac OS X v10.6 and later.

### 173.1.47 NSTextCheckingQuotesKey as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants for the options dictionary.
**Notes:**

An NSArray containing four strings to be used with NSTextCheckingTypeQuote (opening double quote, closing double quote, opening single quote, and closing single quote in that order); if not specified, values will be taken from user's preferences.

Available in Mac OS X v10.6 and later.

### 173.1.48 NSTextCheckingReferenceDateKey as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants for the options dictionary.
**Notes:**

An NSDate to be associated with the document, used as a referent for relative dates; if not specified, the current date will be used.

Available in Mac OS X v10.6 and later.

### 173.1.49 NSTextCheckingReferenceTimeZoneKey as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants for the options dictionary.
**Notes:**

An NSTimeZone to be associated with the document, used as a reference for dates without time zones; if not specified, the current time zone will be used.

Available in Mac OS X v10.6 and later.

### 173.1.50 NSTextCheckingRegularExpressionsKey as string

MBS MacCocoa Plugin, Plugin Version: 12.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants for the options dictionary.
**Notes:**

Available in Mac OS X 10.7 or newer.
Currently not directly supported with our plugins.

### 173.1.51 NSTextCheckingReplacementsKey as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants for the options dictionary.
**Notes:**

A dictionary containing replacements to be used with NSTextCheckingTypeReplacement; if not specified, values will be taken from user's preferences.

Available in Mac OS X v10.6 and later.

### 173.1.52 NSTextCheckingSelectedRangeKey as string

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the constants for the options dictionary.
**Notes:** NSValueMBS containing NSRangeMBS, should be the portion of the selected range intersecting the string being checked, or a zero-length range if there is an insertion point in or adjacent to the string being checked, or New NSRangeMBS(NSNotFound, 0) if the selection is entirely outside of the string being checked.

### 173.1.53 preventsAutocorrectionBeforeString(text as string, language as String = "") as Boolean

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** In some cases the next typing should prevent a pending correction (if it is an @, for example).
**Notes:** This method allows clients to recognize these cases in a standardized way.

### 173.1.54 recordResponse(response as Integer, correction as string, word as string, language as String = "")

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Records the user response to the correction indicator being displayed.
**Notes:**

response: The user,Äôs response. The possible values are shown in NSCorrectionResponse.
correction: The corrected word. This should match the original correction.
word: The original word. This should match the original correction.
language: The language being edited. This should match the original correction.

When a correction is automatically proposed, the user may respond in one of several ways. Clients may report this to the spell checker so that it can learn from the user's response and adjust future correction behavior accordingly.

Use of this method implies that the client stored the original word and original correction at least from the point at which the user accepts it until the user edits or reverts it.

### 173.1.55 requestCandidatesForSelectedRange(selectedRange as NSRangeMBS, stringToCheck as string, types as Int64 = -1, options as Dictionary = nil, tag as Variant = nil) as Integer

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Requests candidates in background.

### 173.1.56 requestCheckingOfString(stringToCheck as string, range as NSRangeMBS, types as Int64 = -1, options as Dictionary = nil, tag as Variant = nil) as Integer

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Requests that the string be checked in the background.
**Notes:**

stringToCheck: The string to check.
range: The range of the string to check.
types: The type of checking to be performed. The possible constants are listed in NSTextCheckingType and can be combined using the C bit-wise OR operator to perform multiple checks at the same time.
options: The options dictionary specifying the types of checking to perform. See Spell Checking Option Dictionary Keys for the possible keys and expected values.
tag: An identifier unique within the application used to inform the spell checker which document that text is associated, potentially for many purposes, not necessarily just for ignored words. A value of 0 can be passed in for text not associated with a particular document.

The return value is a monotonically increasing sequence number that can be used to keep track of requests in flight.

Calls requestCheckingOfStringCompleted event later on main thread.

### 173.1.57 setIgnoredWords(words() as string)

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Sets the ignored word list.
**Example:**

```
dim spell as NSSpellCheckerMBS // your spellchecker

dim f as FolderItem
dim t as TextInputStream
dim words(-1),line as string
```

```
f=SpecialFolder.Preferences.Child("SpellCheck RB.pref")
t=f.OpenAsTextFile
if t<>nil and spell<>nil then

while not t.eof
line=t.ReadLine(encodings.UTF8)
if line<>"" then
words.Append line
end if
wend

spell.setIgnoredWords words

end if
```

### 173.1.58 setLanguage(language as string) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Allows programmatic setting of the language to spell-check in.
**Notes:**

Normally chosen by a pop-up-list in the spelling panel and defaulted to the user's preferred language, so call this with care.
Set to "" to use the language from the panel popup menu.

### 173.1.59 sharedSpellCheckerExists as boolean

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns whether the application's NSSpellChecker has already been created.
**Notes:** Returns true if the shared spell checker already exists, otherwise false.

### 173.1.60 spellingPanel as NSPanelMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** The spelling panel used for spell checking.

### 173.1.61 unlearnWord(word as string)

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Tells the spell checker to unlearn a given word.
**Notes:**

Available in Mac OS X v10.5 and later.
Same as the older forgetWord.

### 173.1.62 updatePanels

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Updates the available panels to account for user changes.
**Notes:**

This method should be called when a client changes some relevant setting, such as what kind of spelling, grammar checking, or substitutions it uses.

Available in Mac OS X v10.6 and later.

### 173.1.63 updateSpellingPanelWithGrammarString(lang as string, detail as dictionary)

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Specifies a grammar-analysis detail to highlight in the Spelling panel.
**Notes:**

problemString: Problematic grammatical unit identified by checkGrammarOfString.
detail: One of the grammar-analysis details provided by checkGrammarOfString.

Available in Mac OS X v10.5 and later.

### 173.1.64 updateSpellingPanelWithMisspelledWord(word as string)

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Updates the panel with the word.
**Notes:** The checkSpellingOfString methods return the range of the misspelled word found. It is up to the client to select that word in their document and to cause the spelling panel to update itself to reflect the found misspelling. Clients can call updateSpellPanelWithMisspelledWord to insure that the spell panel is

up to date.

### 173.1.65 userPreferredLanguages as string()

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Provides a subset of the available languages to be used for spell checking.
**Notes:**

Returns an array containing the user's preferred languages for spell checking. The order is set in the system preferences.

If automaticallyIdentifiesLanguages is true, then text checking will automatically use this method as appropriate; otherwise, it will use the language set by Language property.

The older checkSpellingOfString and checkGrammarOfString methods will use the language set by Language property, if they are called with an empty language argument.

Available in Mac OS X v10.6 and later.

### 173.1.66 userQuotesArrayForLanguage(lang as string) as string()

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the default values for quote replacement.
**Example:**

```
dim n as new NSSpellCheckerMBS

dim en(-1) as string = n.userQuotesArrayForLanguage("en")

MsgBox Join(en," ")
```

**Notes:**

An array of quote replacements used by the NSTextCheckingQuotesKey key-value pair.

Available in Mac OS X v10.6 and later.

### 173.1.67 userReplacementsDictionary as dictionary

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the dictionary used when replacing words.
**Notes:**

The key-value pairs in this dictionary are used by the NSTextCheckingQuotesKey when replacing characters and words.

Available in Mac OS X v10.6 and later.

### 173.1.68 Properties

### 173.1.69 accessoryView as NSViewMBS

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** The Spelling panel's accessory view.
**Notes:**

The accessory view can be any custom view you want to display with the spelling panel. The accessory view is displayed below the spelling checker and the panel automatically resizes to accommodate the accessory view.

This method posts a notification named NSWindowDidResizeNotification with the Spelling panel object to the default notification center.

The accessory view or nil if there is none.
(Read and Write property)

### 173.1.70 automaticallyIdentifiesLanguages as boolean

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Whether the spell checker will automatically identify languages.
**Notes:**

Available in Mac OS X v10.6 and later.
(Read and Write property)

### 173.1.71 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The handle to the used NSSpellChecker reference.
**Notes:** (Read and Write property)

### 173.1.72 language as string

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The current language used.
**Example:**

```
dim c as NSSpellCheckerMBS

c=new NSSpellCheckerMBS

c.Language="en"

MsgBox c.Language // shows en

c.Language="Dutch"

MsgBox c.Language // shows nl

c.Language="Multilingual"

MsgBox c.Language // shows Multilingual
```

**Notes:** (Read and Write property)

### 173.1.73 Length as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The last length of the position where an error was found.
**Notes:**

Length is 0 if no location was found.
(Read and Write property)

### 173.1.74 Location as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The last location where an error was found.
**Notes:** (Read and Write property)

### 173.1.75 substitutionsPanel as NSPanelMBS

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** The substitutions panel.
**Notes:** (Read only property)

### 173.1.76 substitutionsPanelAccessoryViewController as NSViewControllerMBS

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop only.

**Function:** Sets the substitutions panel,Äôs accessory view.
**Notes:**

accessoryController: The accessory view controller or nil if there is none.

The accessory view controller can accommodate any custom view you want to display with the substitutions panel. The accessory view controller,Äôs view is displayed below the substitutions list and the panel automatically resizes to accommodate the accessory view.
This method posts a notification named NSWindowDidResizeNotification with the substitutions panel object to the default notification center.
(Read only property)

### 173.1.77 Tag as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The document tag for the current document.
**Notes:**

Every NSSpellCheckerMBS gets a new tag. The tag identifies which ignore list is used. This value is set automatically.
(Read and Write property)

### 173.1.78 WordFieldValue as string

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The word textfield content string.
**Notes:** (Read and Write computed property)

### 173.1.79 Events

### 173.1.80 Correct

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: .

**Function:** An event sent whenever the Correct button is pressed.

### 173.1.81 FindNext

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: .

**Function:** An event sent whenever the Find Next button is pressed.

### 173.1.82 Ignore

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: .

**Function:** An event sent whenever the Ignore button is pressed.

### 173.1.83 requestCandidatesForSelectedRangeCompleted(sequenceNumber as Integer, candidates() as NSTextCheckingResultMBS, stringToCheck as String, selectedRange as NSRangeMBS, checkingTypes as Int64, options as Dictionary, tag as Variant)

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: .

**Function:** Called later by requestCandidatesForSelectedRange method.

### 173.1.84 requestCheckingOfStringCompleted(sequenceNumber as Integer, results() as NSTextCheckingResultMBS, orthography as NSOrthographyMBS, wordCount as Integer, stringToCheck as String, Range as NSRangeMBS, checkingTypes as Int64, options as Dictionary, tag as Variant)

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: .

**Function:** Called later by requestCheckingOfString method.
**Notes:**

sequenceNumber: A monotonically increasing sequence number.
results: An array of NSTextCheckingResultMBS objects describing particular items found during checking and their individual ranges, sorted by range origin, then range end, then result type..
orthography: The orthography of the string.
wordCount: The number of words in the range of the string.

### 173.1.85 Constants

### 173.1.86 NSCorrectionIndicatorTypeDefault = 0

MBS MacCocoa Plugin, Plugin Version: 11.3.

**Function:** One of the correction indicator type constants.
**Notes:**

The default indicator that shows a proposed correction.
Available in Mac OS X v10.7 and later.

### 173.1.87 NSCorrectionIndicatorTypeGuesses = 2

MBS MacCocoa Plugin, Plugin Version: 11.3.

**Function:** One of the correction indicator type constants.
**Notes:**

Shows multiple alternatives from which the user may choose the appropriate spelling.
Available in Mac OS X v10.7 and later.

### 173.1.88 NSCorrectionIndicatorTypeReversion = 1

MBS MacCocoa Plugin, Plugin Version: 11.3.

**Function:** One of the correction indicator type constants.
**Notes:**

Provides the option to revert to the original form after a correction has been made.
Available in Mac OS X v10.7 and later.

### 173.1.89 NSCorrectionResponseAccepted = 1

MBS MacCocoa Plugin, Plugin Version: 11.3.

**Function:** One of the constants passed to recordresponse method.
**Notes:**

The user accepted the correction.
Available in Mac OS X v10.7 and later.

### 173.1.90 NSCorrectionResponseEdited = 4

MBS MacCocoa Plugin, Plugin Version: 11.3.

**Function:** One of the constants passed to recordresponse method.
**Notes:**

After the correction was accepted, the user edited the corrected word (to something other than its original form.
Available in Mac OS X v10.7 and later.

### 173.1.91 NSCorrectionResponseIgnored = 3

MBS MacCocoa Plugin, Plugin Version: 11.3.

**Function:** One of the constants passed to recordresponse method.
**Notes:**

The user continued in such a way as to ignore the correction.
Available in Mac OS X v10.7 and later.

### 173.1.92 NSCorrectionResponseNone = 0

MBS MacCocoa Plugin, Plugin Version: 11.3.

**Function:** One of the constants passed to recordresponse method.
**Notes:**

No response was received from the user.
Available in Mac OS X v10.7 and later.

### 173.1.93 NSCorrectionResponseRejected = 2

MBS MacCocoa Plugin, Plugin Version: 11.3.

**Function:** One of the constants passed to recordresponse method.
**Notes:**

The user rejected the correction by dismissing the correction indicator.
Available in Mac OS X v10.7 and later.

### 173.1.94 NSCorrectionResponseReverted = 5

MBS MacCocoa Plugin, Plugin Version: 11.3.

**Function:** One of the constants passed to recordresponse method.
**Notes:**

After the correction was accepted, the user reverted the correction back to the original word.
Available in Mac OS X v10.7 and later.

### 173.1.95 NSGrammarCorrections = "NSGrammarCorrections"

MBS MacCocoa Plugin, Plugin Version: 9.6.

**Function:** One of the key constants for the dictionaries in the details array.

### 173.1.96 NSGrammarRange = "NSGrammarRange"

MBS MacCocoa Plugin, Plugin Version: 9.6.

**Function:** One of the key constants for the dictionaries in the details array.

### 173.1.97 NSGrammarUserDescription = "NSGrammarUserDescription"

MBS MacCocoa Plugin, Plugin Version: 9.6.

**Function:** One of the key constants for the dictionaries in the details array.

## 173.2 class WinSpellCheckerExceptionMBS

### 173.2.1 class WinSpellCheckerExceptionMBS

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

**Function:** The class for an exception with spell checking classes.
**Notes:** Subclass of the RuntimeException class.

## 173.3 class WinSpellCheckerMBS

### 173.3.1 class WinSpellCheckerMBS

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

**Function:** Represents a particular spell checker for a particular language.
**Example:**

```
Dim w As New WinSpellCheckerMBS("en-US")

Dim Text As String = "Helo World"
Dim errors() As WinSpellingErrorMBS = w.Check(Text)
Dim Error As WinSpellingErrorMBS = errors(0)

MsgBox "Spelling error in """ + text.Mid(error.StartIndex+1, error.Length)+"""
```

**Notes:** Requires Windows 8.

- 19.4, page 10: News

### 173.3.6 Methods

### 173.3.7 Add(word as String)

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

**Function:** Treats the provided word as though it were part of the original dictionary.
**Notes:**

The word will no longer be considered misspelled, and will also be considered as a candidate for suggestions.

Raises WinSpellCheckerExceptionMBS in case of an error.

### 173.3.8 AutoCorrect(FromWord as String, ToWord as String)

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

**Function:** Causes occurrences of one word to be replaced by another.
**Notes:**

FromWord: The incorrectly spelled word to be autocorrected.
ToWord: The correctly spelled word that should replace from.

Raises WinSpellCheckerExceptionMBS in case of an error.

### 173.3.9 Check(text as String) as WinSpellingErrorMBS()

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

**Function:** Checks the spelling of the supplied text and returns a collection of spelling errors.
**Example:**

```
Dim w As New WinSpellCheckerMBS("en-US")

Dim Text As String = "Helo World"
Dim errors() As WinSpellingErrorMBS = w.Check(Text)
Dim Error As WinSpellingErrorMBS = errors(0)

MsgBox "Spelling error in """ + text.Mid(error.StartIndex+1, error.Length)+"""
```

**Notes:**

text: The text to check.

Returns an array of error objects.

Raises WinSpellCheckerExceptionMBS in case of an error.

### 173.3.10 ComprehensiveCheck(text as String) as WinSpellingErrorMBS()

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

**Function:** Checks the spelling of the supplied text in a more thorough manner than Check, and returns a collection of spelling errors.
**Notes:** Raises WinSpellCheckerExceptionMBS in case of an error.

### 173.3.11 Constructor(languageTag as String)

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

**Function:** Creates a spell checker that supports the specified language.
**Notes:**

languageTag: A BCP47 language tag that identifies the language for the requested spell checker.

Raises WinSpellCheckerExceptionMBS in case of an error.

### 173.3.12 Destructor

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

**Function:** The destructor.

### 173.3.13 Ignore(word as String)

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

**Function:** Ignores the provided word for the rest of this session.
**Notes:**

Until this WinSpellCheckerMBS object is released, the word will no longer be considered misspelled, but it will not be considered as a candidate for suggestions.

Raises WinSpellCheckerExceptionMBS in case of an error.

### 173.3.14 IsSupported(languageTag as String) as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

**Function:** Determines if the specified language is supported by a registered spell checker.
**Example:**

```
If WinSpellCheckerMBS.IsSupported("en-US") Then
MsgBox "US-English is supported."
Else
MsgBox "US-English is not supported!"
End If

If WinSpellCheckerMBS.IsSupported("de-CH") Then
MsgBox "Swiss German is supported."
Else
MsgBox "Swiss German is not supported!"
End If
```

**Notes:**

languageTag: A BCP47 language tag that identifies the language for the requested spell checker. e.g. "en-US"

Returns true if supported; false if not supported.

Raises WinSpellCheckerExceptionMBS in case of an error.

### 173.3.15 OptionDescription(optionId as String) as WinSpellCheckerOptionDescriptionMBS

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

**Function:** Retrieves the information (id, description, heading and labels) of a specific option.
**Notes:**

optionId: Identifier of the option to be retrieved.
Returns WinSpellCheckerOptionDescriptionMBS interface that contains the information about optionId.

Raises WinSpellCheckerExceptionMBS in case of an error.

### 173.3.16 OptionIds as String()

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

**Function:** Gets all of the declared option identifiers.
**Notes:** Raises WinSpellCheckerExceptionMBS in case of an error.

### 173.3.17 OptionValue(optionId as String) as Integer

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

**Function:** Retrieves the value associated with the given option.
**Notes:**

optionId: The option identifier.

Returns the value associated with optionId.

Raises WinSpellCheckerExceptionMBS in case of an error.

### 173.3.18 RegisterUserDictionary(dictionaryPath as String, languageTag as String)

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

**Function:** Registers a file to be used as a user dictionary for the current user, until unregistered.
**Notes:**

dictionaryPath: The path of the dictionary file to be registered.
languageTag: The language for which this dictionary should be used. If left empty, it will be used for any language.

Raises WinSpellCheckerExceptionMBS in case of an error.

### 173.3.19 Remove(word as String)

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

**Function:** Removes a word that was previously added by Add, or set by Ignore to be ignored.
**Notes:**

Word: The word to be removed from the list of added words, or from the list of ignored words. If the word is not present, nothing will be removed.

Raises exception if word is an empty string, or its length is greater than MAX_WORD_LENGTH (128).

Available on Windows 10 and later.

Raises WinSpellCheckerExceptionMBS in case of an error.

### 173.3.20 Suggest(word as String) as String()

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

**Function:** Retrieves spelling suggestions for the supplied text.
**Example:**

```
Dim w As New WinSpellCheckerMBS("en-US")

Dim suggestions() As String = w.Suggest("Helo")

MsgBox Join(suggestions, EndOfLine)
```

**Notes:**

word: The word or phrase to get suggestions for.

Returns the list of suggestions, returned as string array.

Raises WinSpellCheckerExceptionMBS in case of an error.

### 173.3.21 SupportedLanguages as String()

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

**Function:** Gets the set of languages/dialects supported by any of the registered spell checkers.
**Example:**

MsgBox Join(WinSpellCheckerMBS.SupportedLanguages, EndOfLine)

**Notes:**

The supported languages are specific, not neutral.
For Hebrew, for example, the supported language is "he-IL", not "he".

Raises WinSpellCheckerExceptionMBS in case of an error.

### 173.3.22 UnregisterUserDictionary(dictionaryPath as String, languageTag as String)

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

**Function:** Unregisters a previously registered user dictionary. The dictionary will no longer be used by the spell checking functionality.
**Notes:**

dictionaryPath: The path of the dictionary file to be unregistered.
languageTag: The language for which this dictionary was used. It must match the language passed to RegisterUserDictionary.

Raises WinSpellCheckerExceptionMBS in case of an error.

### 173.3.23 Properties

### 173.3.24 Handle as Integer

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

**Function:** The internal object reference.
**Notes:** (Read only property)

### 173.3.25 Id as String

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

**Function:** Gets the identifier for this spell checker.
**Example:**

```
Dim w As New WinSpellCheckerMBS("en-US")

MsgBox w.Id
```

**Notes:**

Raises WinSpellCheckerExceptionMBS in case of an error.
(Read only property)

### 173.3.26 LanguageTag as String

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

**Function:** Gets the BCP47 language tag this instance of the spell checker supports.
**Example:**

```
Dim w As New WinSpellCheckerMBS("en-US")

MsgBox w.LanguageTag
```

**Notes:**

Raises WinSpellCheckerExceptionMBS in case of an error.
(Read only property)

### 173.3.27 LocalizedName as String

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

**Function:** Gets text, suitable to display to the user, that describes this spell checker.
**Example:**

```
Dim w As New WinSpellCheckerMBS("en-US")

MsgBox w.LocalizedName
```

**Notes:**

Raises WinSpellCheckerExceptionMBS in case of an error.

(Read only property)

### 173.3.28 Events

### 173.3.29 Changed

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: .

**Function:** The changed event.
**Notes:** The SpellCheckerChanged event fires whenever the state of the spell checker changes in a way such that any text that has been checked should be rechecked. This should happen when the contents of a word list changes, when an option changes, or when the default spell checker changes.

## 173.4 class WinSpellCheckerOptionDescriptionMBS

### 173.4.1 class WinSpellCheckerOptionDescriptionMBS

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

**Function:** Represents the description of a spell checker option.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 173.4.2 Blog Entries

- MBS Xojo Plugins, version 21.2pr3

### 173.4.3 Blog Entries

- MBS Xojo Plugins, version 21.2pr3

### 173.4.4 Methods

### 173.4.5 Constructor

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

**Function:** The private constructor.

### 173.4.6 Destructor

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

**Function:** The destructor.

### 173.4.7 Labels as String()

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

**Function:** Gets the label enumerator for the spell checker option.
**Notes:**

When there is a single label, the valid values for this option are 0 (not chosen) and 1 (chosen). When there is more than one label, the first label is associated with the value 0, the second with 1, and so on, effectively

forming an enumeration. The labels should be in the language of the spell checker or localized to the user's UI language.

Raises WinSpellCheckerExceptionMBS in case of an error.

### 173.4.8 Properties

### 173.4.9 Description as String

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

**Function:** Get the description of the spell checker option.
**Notes:**

The description explains the implications of making the various choices associated with the option. This should be in the language of the spell checker or localized to the user's UI language.

Raises WinSpellCheckerExceptionMBS in case of an error.
(Read only property)

### 173.4.10 Handle as Integer

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

**Function:** The internal object reference.
**Notes:** (Read only property)

### 173.4.11 Heading as String

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

**Function:** Gets the heading for the spell checker option.
**Notes:**

The heading can be used to group sets of options by placing the header on the first item of that group. This should be in the language of the spell checker or localized to the user's UI language.

Raises WinSpellCheckerExceptionMBS in case of an error.
(Read only property)

### 173.4.12 Id as String

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

**Function:** Gets the identifier of the spell checker option.
**Notes:**

Option identifiers all exist in the same area. Spell checker providers should use the engine identifier and the language tag (if the option is language-specific) to disambiguate potential collisions.

Specifically, the structure for naming the option identifiers should be:

For the Microsoft spell checker engine: <language tag>:<option name>. For example, "pt-BR:2009Reform." For spell check provider engines: <engine id>:<language tag>:<option name>(the language tag may be omitted if the option is not language specific). For example, "samplespell:fr-FR:AccentedUppercase".

Spell check providers are allowed to support existing Microsoft option identifiers, but they must not create new option identifiers in the Microsoft namespace. That is, spell check providers must use the engine identifier as a prefix.

An option identifier is linked to the set of labels and the semantics associated with them. If any change needs to be made between versions to the option (adding a label to the set of labels), a new option with a new identifier must be used. The only valid change that does not require a new identifier is to change from a single label to two labels and vice-versa when the semantics for values 0 and 1 do not change.

Raises WinSpellCheckerExceptionMBS in case of an error.
(Read only property)

## 173.5 class WinSpellingErrorMBS

### 173.5.1 class WinSpellingErrorMBS

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

**Function:** Provides information about a spelling error.
**Example:**

```
Dim w As New WinSpellCheckerMBS("en-US")

// tell it to capitalize Xojo!
w.AutoCorrect "xojo", "Xojo"

Dim Text As String = "Hello xojo!"
Dim errors() As WinSpellingErrorMBS = w.check(Text)
Dim Error As WinSpellingErrorMBS = errors(0)

MsgBox "Spelling error in """ + Text.Mid(error.StartIndex+1, error.Length)+"""". Must be "+error.Replacement
```

**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- Spell Checking on Windows for Xojo
- MBS Xojo Plugins, version 21.2pr3

### 173.5.4 Methods

### 173.5.5 Constructor

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

**Function:** The private constructor.

### 173.5.6 Destructor

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

**Function:** The destructor.

### 173.5.7 Properties

### 173.5.8 CorrectiveAction as Integer

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

**Function:** Indicates which corrective action should be taken for the spelling error.
**Notes:**

Raises WinSpellCheckerExceptionMBS in case of an error.
(Read only property)

### 173.5.9 Length as Integer

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

**Function:** Gets the length of the erroneous text.
**Notes:**

Raises WinSpellCheckerExceptionMBS in case of an error.
(Read only property)

### 173.5.10 Replacement as String

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

**Function:** Gets the text to use as replacement text when the corrective action is replace.
**Example:**

```
Dim w As New WinSpellCheckerMBS("en-US")

// tell it to capitalize Xojo!
w.AutoCorrect "xojo", "Xojo"
```

```
Dim Text As String = "Hello xojo!"
Dim errors() As WinSpellingErrorMBS = w.check(Text)
Dim Error As WinSpellingErrorMBS = errors(0)

MsgBox "Spelling error in """ + Text.Mid(error.StartIndex+1, error.Length)+"""". Must be "+error.Replacement
```

**Notes:**

If the CorrectiveAction returned by CorrectiveAction is not kCorrectiveActionReplace, value is the empty string.

Raises WinSpellCheckerExceptionMBS in case of an error.

If empty, you may better go with Suggest() function in WinSpellCheckerMBS class.
(Read only property)

### 173.5.11 StartIndex as Integer

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

**Function:** Gets the position in the checked text where the error begins.
**Notes:**

Index is zero based!

Raises WinSpellCheckerExceptionMBS in case of an error.
(Read only property)

### 173.5.12 Text as String

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

**Function:** The text referenced.
**Notes:**

For your convenience we prepare Text.Middle(StartIndex, Length) for you here.
(Read only property)

### 173.5.13 Constants

### 173.5.14 kCorrectiveActionDelete = 3

MBS WinFrameworks Plugin, Plugin Version: 21.2.

**Function:** One of the constants of corrective action to be taken for a spelling error.
**Notes:** The user should be prompted to delete the indicated erroneous text.

### 173.5.15 kCorrectiveActionGetSuggestions = 1

MBS WinFrameworks Plugin, Plugin Version: 21.2.

**Function:** One of the constants of corrective action to be taken for a spelling error.
**Notes:** The user should be prompted with a list of suggestions as returned by Suggest.

### 173.5.16 kCorrectiveActionNone = 0

MBS WinFrameworks Plugin, Plugin Version: 21.2.

**Function:** One of the constants of corrective action to be taken for a spelling error.
**Notes:** There are no errors.

### 173.5.17 kCorrectiveActionReplace = 2

MBS WinFrameworks Plugin, Plugin Version: 21.2.

**Function:** One of the constants of corrective action to be taken for a spelling error.
**Notes:** Replace the indicated erroneous text with the text provided in the suggestion. The user does not need to be prompted.

# Chapter 174

# Spotlight

## 174.1 class MDItemMBS

### 174.1.1 class MDItemMBS

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** This is the class that represents a file and the metadata associated with the file.
**Notes:** Available in Mac OS X version 10.4 and later.

### 174.1.2 Blog Entries

- Query URL from downloaded file
- MBS Xojo / Real Studio Plugins, version 15.1pr8
- MBS Real Studio Plugins, version 12.3pr3
- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr7
- MBS REALbasic plug-in 9.6

### 174.1.3 Blog Entries

- Query URL from downloaded file
- MBS Xojo / Real Studio Plugins, version 15.1pr8
- MBS Real Studio Plugins, version 12.3pr3

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr7
- MBS REALbasic plug-in 9.6

### 174.1.4 Methods

### 174.1.5 AllAttributes as string()

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns a list with all possible attribute names in the system.
**Notes:**

dim item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox join(item.AllAttributes, EndOfLine)

### 174.1.6 AttributeBoolean(name as string) as boolean

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the value for this attribute.

### 174.1.7 AttributeDouble(name as string) as Double

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the value for this attribute.

### 174.1.8 AttributeMultiValued(name as string) as boolean

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Whether the given attribute is an array of multiple values.

### 174.1.9 AttributeNames as string()

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns an array containing the attribute names existing in the metadata item.
**Example:**

```
dim item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox join(item.AttributeNames, EndOfLine)
```

**Notes:** Available in Mac OS X version 10.4 and later.

### 174.1.10 AttributeString(name as string) as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the value for this attribute.
**Example:**

```
dim item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox item.AttributeString(item.kMDItemFSName)
```

### 174.1.11 AttributeStringArray(name as string) as string()

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the value for this attribute.

### 174.1.12 AttributeType(name as string) as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The type of the attribute.
**Example:**

```
dim item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox item.AttributeType(item.kMDItemFSName) // "String"
```

**Notes:** Returns "Boolean", "Number", "Date" or "String".

### 174.1.13 Constructor(path as folderitem)

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates an MDItem object for a file at the specified path.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.rtf")
dim m as new MDItemMBS(f)

MsgBox m.DisplayName
```

**Notes:**

path: A path to the file from which to create the MDItem.

Available in Mac OS X version 10.4 and later.

### 174.1.14 DisplayDescriptionForAttribute(name as string) as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The display description for the attribute.
**Notes:**

```
dim item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox item.DisplayDescriptionForAttribute(item.kMDItemDisplayName)
// shows "Lokalisiert angezeigter Name der Datei" in German
```

### 174.1.15 DisplayNameForAttribute(name as string) as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The display name for this attribute.
**Example:**

```
dim item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox item.DisplayNameForAttribute(item.kMDItemDisplayName)
// shows "Anzeigename" in German
```

### 174.1.16 GetAttribute(name as string) as Variant

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the value of the given attribute for the item.
**Notes:**

name: The name of the desired attribute.

A variant, or nil on failure, or if the attribute does not exist, of if the attribute is not readable.

### 174.1.17 GetAttributes as dictionary

MBS MacOSX Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Queries all attributes with all names and values.
See also:

- 174.1.18 GetAttributes(names() as string) as dictionary 25151

### 174.1.18 GetAttributes(names() as string) as dictionary

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the values of the given attributes for the item.
**Notes:**

names: An array of the names of the desired attributes.
A dictionary where the keys are the attribute names, and the values are the attribute values, or nil on failure.
If an attribute does not exist, or is unreadable, there will be no key-value pair for it in the dictionary.
See also:

- 174.1.17 GetAttributes as dictionary 25151

### 174.1.19 kMDItemAcquisitionMake as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The manufacturer of the device used to aquire the document contents. A string.

### 174.1.20 kMDItemAcquisitionModel as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The model of the device used to aquire the document contents. For example, 100, 200, 400, etc. A string.

### 174.1.21 kMDItemAlbum as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The title for a collection of media. This is analagous to a record album, or photo album. A string.

### 174.1.22 kMDItemAltitude as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The altitude of the item in meters above sea level, expressed using the WGS84 datum. Negative values lie below sea level. A number.

### 174.1.23 kMDItemAperture as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The aperture setting used to acquire the document contents. This unit is the APEX value. A number.

### 174.1.24 kMDItemAppleLoopDescriptors as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:**

Specifies multiple pieces of descriptive information about a loop. An array of strings.

Besides genre and instrument, files can contain descriptive information that help users in refining searches.

### 174.1.25 kMDItemAppleLoopsKeyFilterType as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:**

Specifies key filtering information about a loop. Loops are matched against projects that often in a major or minor key. A string.

To assist users in identifying loops that will "fit" with their compositions, loops can be tagged with one of the following key filters: "AnyKey" "Minor" "Major" "NeitherKey" "BothKeys". "AnyKey" means that it fits with anything (whether in a major key, minor key or neither). "Minor" fits with compositions in a minor key. "NeitherKey" doesn't work well with compositions that are in major or minor key. "BothKeys" means it fits with major or minor key.

### 174.1.26 kMDItemAppleLoopsLoopMode as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:**

Specifies how a file should be played. A string.

Tagged files can either be loops or non-loops (e.g., a cymbal crash). "Looping" indicates if the file should be treated as a loop. "Non-looping" indicates the file should not be treated as a loop.

### 174.1.27 kMDItemAppleLoopsRootKey as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Specifies the loop's original key. The key is the root note or tonic for the loop, and does not include the scale type. A string.

### 174.1.28 kMDItemApplicationCategories as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Available in Mac OS X 10.7 and later.

### 174.1.29 kMDItemAttributeChangeDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The date and time of the last change made to a metadata attribute. A date.

### 174.1.30 kMDItemAudiences as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The audience for which the file is intended. The audience may be determined by the creator or the publisher or by a third party. An array of strings.

### 174.1.31 kMDItemAudioBitRate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The audio bit rate. A number.

### 174.1.32 kMDItemAudioChannelCount as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:**

Number of channels in the audio data contained in the file. A number.

This integer value only represents the number of discreet channels of audio data found in the file. It does not indicate any configuration of the data in regards to a user's speaker setup.

### 174.1.33 kMDItemAudioEncodingApplication as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The name of the application that encoded the data contained in the audio file. A string.

### 174.1.34 kMDItemAudioSampleRate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Sample rate of the audio data contained in the file. The sample rate is a float value representing hz (audio_frames/second). For example: 44100.0, 22254.54. A number.

### 174.1.35 kMDItemAudioTrackNumber as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The track number of a song or composition when it is part of an album. A number (integer).

### 174.1.36 kMDItemAuthorAddresses as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:**

This attribute indicates the author addresses of the document.
An array of string. Requires Mac OS X 10.6.

### 174.1.37 kMDItemAuthorEmailAddresses as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** This attribute indicates the author of the emails message addresses. (This is always the email address, and not the human readable version). An array of string. Requires Mac OS X 10.5.

### 174.1.38 kMDItemAuthors as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:**

The author, or authors, of the contents of the file. An array of strings.
The order of the authors is preserved, but does not represent the main author or relative importance of the

authors.

### 174.1.39 kMDItemBitsPerSample as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The number of bits per sample. For example, the bit depth of an image (8-bit, 16-bit etc...) or the bit depth per audio sample of uncompressed audio data (8, 16, 24, 32, 64, etc..). A number.

### 174.1.40 kMDItemCameraOwner as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Available in Mac OS X 10.7 and later.

### 174.1.41 kMDItemCFBundleIdentifier as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** If this item is a bundle, then this is the CFBundleIdentifier. A string

### 174.1.42 kMDItemCity as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:**

Identifies city of origin according to guidelines established by the provider. A string.

For example, ”New York”, ”Cupertino”, or ”Toronto”.

### 174.1.43 kMDItemCodecs as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The codecs used to encode/decode the media. An array of strings.

### 174.1.44 kMDItemColorSpace as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The color space model used by the document contents. For example, "RGB", "CMYK", "YUV", or "YCbCr". A string.

### 174.1.45 kMDItemComment as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** A comment related to the file. This differs from the Finder comment, kMDItemFinderComment. A string.

### 174.1.46 kMDItemComposer as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The composer of the music contained in the audio file. A string.

### 174.1.47 kMDItemContactKeywords as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** A list of contacts that are associated with this document, not including the authors. An array of strings.

### 174.1.48 kMDItemContentCreationDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:**

The date that the contents of the file were created. A date.

This is different than the file creation date. Its can be used to store when the file contents were first created, or first modified.

### 174.1.49 kMDItemContentModificationDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:**

The date and time that the contents of the file were last modified. A date.

This is not necessarily the file modification date.

### 174.1.50 kMDItemContentType as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** For example, a jpeg image file will have a value of public.jpeg/public.image/public.data. The value of this attribute is set by the MDImporter. Changes to this value are lost when the file attributes are next imported.

### 174.1.51 kMDItemContentTypeTree as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Array of string

### 174.1.52 kMDItemContributors as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:**

The entities responsible for making contributions to the content of the resource. An array of strings.

Examples of a contributor include a person, an organization or a service.

### 174.1.53 kMDItemCopyright as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The copyright owner of the file contents. A string.

### 174.1.54 kMDItemCountry as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The full, publishable name of the country or primary location where the intellectual property of the item was created, according to guidelines of the provider. A string.

### 174.1.55 kMDItemCoverage as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:**

The extent or scope of the content of the resource. A string.

Coverage will typically include spatial location (a place name or geographic co-ordinates), temporal period (a period label, date, or date range) or jurisdiction (such as a named administrative entity).

Recommended best practice is to select a value from a controlled vocabulary, and that, where appropriate, named places or time periods be used in preference to numeric identifiers such as sets of co-ordinates or date ranges.

### 174.1.56 kMDItemCreator as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Application used to create the document content (e.g. ”Word”, ”AppleWorks”, etc.). A string.

### 174.1.57 kMDItemDateAdded as string

MBS MacOSX Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:**

This is the date that the file was moved into the current location.
Not all files will have this attribute.
Not all file systems support this attribute.

### 174.1.58 kMDItemDeliveryType as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The delivery type. Values are "Fast start" or "RTSP". A string.

### 174.1.59 kMDItemDescription as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** A description of the content of the resource. The description may include an abstract, table of contents, reference to a graphical representation of content or a free-text account of the content. A string.

### 174.1.60 kMDItemDirector as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Director of the movie. A string. Requires Mac OS X 10.5.

### 174.1.61 kMDItemDisplayName as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The localized version of the file name. A string.

### 174.1.62 kMDItemDownloadedDate as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Available in Mac OS X 10.7 and later.

### 174.1.63 kMDItemDueDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Date this item is due. A date.

### 174.1.64 kMDItemDurationSeconds as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The duration, in seconds, of the content of file. A value of 10.5 represents media that is 10 and 1/2 seconds long. A number.

### 174.1.65 kMDItemEditors as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The list of editor/editors that has worked on this file. There could be 0 or more editors of a particular file. The order of the editors in the array is preserved, but is not intended to represent the main editor or relative importance of the editors. Type is An array of strings.

### 174.1.66 kMDItemEmailAddresses as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Email addresses related to this item. An array of strings.

### 174.1.67 kMDItemEncodingApplications as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Application used to convert the original content into it's current form. For example, a PDF file might have an encoding application set to "Distiller". An array of strings.

### 174.1.68 kMDItemExecutableArchitectures as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Available in Mac OS X 10.7 and later.

### 174.1.69 kMDItemEXIFGPSVersion as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The version of GPSInfoIFD header that was used to generate the metadata. A string. Requires Mac OS X 10.5.

### 174.1.70 kMDItemEXIFVersion as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The version of the EXIF header used to generate the metadata. A string.

### 174.1.71 kMDItemExposureMode as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:**

The exposure mode used to acquire the document contents. A number.

Possible values are 0 (auto exposure), 1 (manual exposure) and 2 (auto bracket).

### 174.1.72 kMDItemExposureProgram as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The class of the exposure program used by the camera to set exposure when the image is taken. Possible values include: Manual, Normal, and Aperture priority. A string.

### 174.1.73 kMDItemExposureTimeSeconds as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The exposure time, in seconds, used to acquire the document contents. A number.

### 174.1.74 kMDItemExposureTimeString as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The time of the exposure. A string.

### 174.1.75 kMDItemFinderComment as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Finder comments for this file. A string.

### 174.1.76 kMDItemFlashOnOff as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Indicates if a camera flash was used. A number.

### 174.1.77 kMDItemFNumber as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The diameter of the diaphragm aperture in terms of the effective focal length of the lens.

### 174.1.78 kMDItemFocalLength as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The actual focal length of the lens, in millimeters. A number.

### 174.1.79 kMDItemFocalLength35mm as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Available in Mac OS X 10.7 and later.

### 174.1.80 kMDItemFonts as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Fonts used in this item. You should store the font's full name, the postscript name, or the font family name, based on the available information. An array of strings.

### 174.1.81 kMDItemFSContentChangeDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The date the file contents last changed. A date.

### 174.1.82 kMDItemFSCreationDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The date and time that the file was created. A date.

### 174.1.83 kMDItemFSExists as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** This attribute is deprecated and was never implemented.

### 174.1.84 kMDItemFSHasCustomIcon as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Boolean indicating if this file has a custom icon. Type is a boolean.

### 174.1.85 kMDItemFSInvisible as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Indicates whether the file is invisible. A boolean.

### 174.1.86 kMDItemFSIsExtensionHidden as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Indicates whether the file extension of the file is hidden. A boolean.

### 174.1.87 kMDItemFSIsReadable as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** This attribute is deprecated and was never implemented.

### 174.1.88 kMDItemFSIsStationery as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Boolean indicating if this file is stationery. Type is a boolean.

### 174.1.89 kMDItemFSIsWriteable as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** This attribute is deprecated and was never implemented.

### 174.1.90 kMDItemFSLabel as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Index of the Finder label of the file. Possible values are 0 through 7. A number.

### 174.1.91 kMDItemFSName as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The file name of the item. A string.

### 174.1.92 kMDItemFSNodeCount as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Number of files in a directory. A number.

### 174.1.93 kMDItemFSOwnerGroupID as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The group ID of the owner of the file. A number.

### 174.1.94 kMDItemFSOwnerUserID as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The user ID of the owner of the file. A number.

### 174.1.95 kMDItemFSSize as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The size, in bytes, of the file on disk. A number.

### 174.1.96 kMDItemGenre as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:**

Genre of the movie. A string.
Requires Mac OS X 10.5.

### 174.1.97 kMDItemGPSAreaInformation as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Available in Mac OS X 10.7 and later.

### 174.1.98 kMDItemGPSDateStamp as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Available in Mac OS X 10.7 and later.

### 174.1.99 kMDItemGPSDestBearing as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Available in Mac OS X 10.7 and later.

### 174.1.100 kMDItemGPSDestDistance as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Available in Mac OS X 10.7 and later.

### 174.1.101 kMDItemGPSDestLatitude as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Available in Mac OS X 10.7 and later.

### 174.1.102 kMDItemGPSDestLongitude as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Available in Mac OS X 10.7 and later.

### 174.1.103 kMDItemGPSDifferental as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Available in Mac OS X 10.7 and later.

### 174.1.104 kMDItemGPSDOP as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Available in Mac OS X 10.7 and later.

### 174.1.105 kMDItemGPSMapDatum as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Available in Mac OS X 10.7 and later.

### 174.1.106 kMDItemGPSMeasureMode as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Available in Mac OS X 10.7 and later.

### 174.1.107 kMDItemGPSProcessingMethod as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Available in Mac OS X 10.7 and later.

### 174.1.108 kMDItemGPSStatus as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Available in Mac OS X 10.7 and later.

### 174.1.109 kMDItemGPSTrack as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:**

The direction of travel of the item, in degrees from true north. A number.
Requires Mac OS X 10.5.

### 174.1.110 kMDItemHasAlphaChannel as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Indicates if this image file has an alpha channel. A boolean.

### 174.1.111 kMDItemHeadline as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** A publishable entry providing a synopsis of the contents of the file. For example, "Apple Introduces the iPod Photo". A string.

### 174.1.112 kMDItemIdentifier as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** A formal identifier used to reference the resource within a given context. A string.

### 174.1.113 kMDItemImageDirection as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:**

The direction of the item's image, in degrees from true north. A number.
Requires Mac OS X 10.5.

### 174.1.114 kMDItemInformation as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:**

Information about the item. A string.
Requires Mac OS X 10.5.

### 174.1.115 kMDItemInstantMessageAddresses as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Instant message addresses related to this item. An array of strings.

### 174.1.116 kMDItemInstructions as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Editorial instructions concerning the use of the item, such as embargoes and warnings. For example, "Second of four stories". A string.

### 174.1.117 kMDItemIsApplicationManaged as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Available in Mac OS X 10.7 and later.

### 174.1.118 kMDItemIsGeneralMIDISequence as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Indicates whether the MIDI sequence contained in the file is setup for use with a General MIDI device. A boolean.

### 174.1.119 kMDItemIsLikelyJunk as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Available in Mac OS X 10.7 and later.

### 174.1.120 kMDItemISOSpeed as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The ISO speed used to acquire the document contents. A number.

### 174.1.121 kMDItemKeySignature as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The key of the music contained in the audio file. For example: C, Dm, F# m, Bb. A string.

### 174.1.122 kMDItemKeywords as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Keywords associated with this file. For example, "Birthday", "Important", etc. An array of strings.

### 174.1.123 kMDItemKind as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** A description of the kind of item this file represents. A string.

### 174.1.124 kMDItemLabelIcon as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Available in Mac OS X 10.7 and later.

### 174.1.125 kMDItemLabelID as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Available in Mac OS X 10.7 and later.

### 174.1.126 kMDItemLabelKind as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Available in Mac OS X 10.7 and later.

### 174.1.127 kMDItemLabelUUID as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Available in Mac OS X 10.7 and later.

### 174.1.128 kMDItemLanguages as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Indicates the languages of the intellectual content of the resource. Recommended best practice for the values of the Language element is defined by RFC 3066. An array of strings.

### 174.1.129 kMDItemLastUsedDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The date and time that the file was last used. This value is updated automatically by LaunchServices everytime a file is opened by double clicking, or by asking LaunchServices to open a file. A date.

### 174.1.130 kMDItemLatitude as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:**

The latitude of the item in degrees north of the equator, expressed using the WGS84 datum. Negative values lie south of the equator. A number.
Requires Mac OS X 10.5.

### 174.1.131 kMDItemLayerNames as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The names of the layers in the file. An array of strings.

### 174.1.132 kMDItemLensModel as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Available in Mac OS X 10.7 and later.

### 174.1.133 kMDItemLongitude as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:**

The longitude of the item in degrees east of the prime meridian, expressed using the WGS84 datum. Negative values lie west of the prime meridian. A number.
Requires Mac OS X 10.5.

### 174.1.134 kMDItemLyricist as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The lyricist, or text writer, of the music contained in the audio file. A string.

### 174.1.135 kMDItemMaxAperture as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The smallest f-number of the lens. Ordinarily it is given in the range of 00.00 to 99.99. A number.

### 174.1.136 kMDItemMediaTypes as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The media types present in the content. An array of strings.

### 174.1.137 kMDItemMeteringMode as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:**

The metering mode used to take the image. A string.

Possible values are: Unknown, Average, CenterWeightedAverage, Spot, MultiSpot, Pattern, and Partial.

### 174.1.138 kMDItemMusicalGenre as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The musical genre of the song or composition contained in the audio file. For example: Jazz, Pop, Rock, Classical. A string.

### 174.1.139 kMDItemMusicalInstrumentCategory as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:**

Specifies the category of an instrument. A string.

Files should have an instrument associated with them (”Other Instrument” is provided as a catch-all). For some categories, such as ”Keyboards”, there are instrument names which provide a more detailed instrument definition, for example ”Piano” or ”Organ”.

### 174.1.140 kMDItemMusicalInstrumentName as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:**

Specifies the name of instrument relative to the instrument category. A string.

Files can have an instrument name associated with them if they have certain instrument categories. For example, the "Percussion" category has multiple instruments, including "Conga" and "Bongo".

### 174.1.141 kMDItemNamedLocation as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The name of the location or point of interest associated with the item. The name may be user provided. A string

### 174.1.142 kMDItemNumberOfPages as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Number of pages in the document. A number.

### 174.1.143 kMDItemOrganizations as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The company or organization that created the document. An array of strings.

### 174.1.144 kMDItemOrientation as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The orientation of the document contents. Possible values are 0 (landscape) and 1 (portrait). A

number.

### 174.1.145 kMDItemOriginalFormat as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:**

Original format of the movie.
A string.
Requires Mac OS X 10.5

### 174.1.146 kMDItemOriginalSource as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:**

Original source of the movie. A string.
Requires Mac OS X 10.5.

### 174.1.147 kMDItemPageHeight as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Height of the document page, in points (72 points per inch). For PDF files this indicates the height of the first page only. A number.

### 174.1.148 kMDItemPageWidth as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Width of the document page, in points (72 points per inch). For PDF files this indicates the width of the first page only. A number.

### 174.1.149 kMDItemParticipants as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:**

The list of people who are visible in an image or movie or written about in a document. Type is array of strings.
Requires Mac OS X 10.6.

### 174.1.150 kMDItemPath as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The complete path to the file. A string.

### 174.1.151 kMDItemPerformers as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:**

Performers in the movie. An array of string.
Requires Mac OS X 10.5.

### 174.1.152 kMDItemPhoneNumbers as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Phone numbers related to this item. An array of strings.

### 174.1.153 kMDItemPixelCount as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The total number of pixels in the contents. Same as kMDItemPixelWidth x kMDItemPixelHeight.

A number.

### 174.1.154 kMDItemPixelHeight as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The height, in pixels, of the contents. For example, the image height or the video frame height. A number.

### 174.1.155 kMDItemPixelWidth as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The width, in pixels, of the contents. For example, the image width or the video frame width. A number.

### 174.1.156 kMDItemProducer as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Producer of the content. A string. Requires Mac OS X 10.5.

### 174.1.157 kMDItemProfileName as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The name of the color profile used by the document contents. A string.

### 174.1.158 kMDItemProjects as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The list of projects that this file is part of. For example, if you were working on a movie all of the files could be marked as belonging to the project "My Movie". An array of strings.

### 174.1.159 kMDItemPublishers as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The entity responsible for making the resource available. For example, a person, an organization, or a service. Typically, the name of a publisher should be used to indicate the entity. An array of strings.

### 174.1.160 kMDItemRecipientAddresses as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** This attribute indicates the recipient addresses of the document. array of string. Requires Mac OS X 10.6.

### 174.1.161 kMDItemRecipientEmailAddresses as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:**

This attribute indicates the reciepients email addresses. (This is always the email address, and not the human readable version). An array of string.
Requires Mac OS X 10.5.

### 174.1.162 kMDItemRecipients as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Recipients of this item. An array of strings.

### 174.1.163 kMDItemRecordingDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:**

The recording date of the song or composition. A date.

This is in contrast to kMDItemContentCreationDate which, could indicate the creation date of an edited or 'mastered' version of the original art.

### 174.1.164 kMDItemRecordingYear as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Indicates the year the item was recorded. For example, 1964, 2003, etc. A number.

### 174.1.165 kMDItemRedEyeOnOff as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:**

Indicates if red-eye reduction was used to take the picture. A boolean.

Possible values are 0 (no red-eye reduction mode or unknown) and 1 (red-eye reduction used).

### 174.1.166 kMDItemResolutionHeightDPI as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Resolution height of this image in DPI. A number.

### 174.1.167 kMDItemResolutionWidthDPI as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Resolution width, in DPI, of this image. A number.

### 174.1.168 kMDItemRights as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:**

Provides a link to information about rights held in and over the resource. A string.

Contains a rights management statement for the resource, or reference a service providing such information. Rights information often encompasses Intellectual Property Rights (IPR), Copyright, and various Property Rights.

If this attribute is absent, no assumptions can be made about the status of these and other rights with respect to the resource.

### 174.1.169 kMDItemSecurityMethod as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The security or encryption method used for the file. A number.

### 174.1.170 kMDItemSpeed as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:**

The speed of the item, in kilometers per hour. A number.

Requires Mac OS X 10.5

### 174.1.171 kMDItemStarRating as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** User rating of this item. For example, the stars rating of an iTunes track. A number.

### 174.1.172 kMDItemStateOrProvince as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Identifies the province or state of origin according to guidelines established by the provider. For example, "CA", "Ontario", or "Sussex". A string.

### 174.1.173 kMDItemStreamable as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Whether the content is prepared for streaming. A boolean.

### 174.1.174 kMDItemSubject as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Subject of the this item. Type is a string.

### 174.1.175 kMDItemSupportFileType as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** array of strings

### 174.1.176 kMDItemTempo as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** A float value that specifies the beats per minute of the music contained in the audio file. A number.

### 174.1.177 kMDItemTextContent as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:**

Contains a text representation of the content of the document. Data in multiple fields should be combined using a whitespace character as a separator. A string.

An application's Spotlight importer provides the content of this attribute. Applications can search for values in this attribute, but are not able to read the content of this attribute directly.

### 174.1.178 kMDItemTheme as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** Theme of the this item. Type is a string.

### 174.1.179 kMDItemTimeSignature as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The time signature of the musical composition contained in the audio/MIDI file. For example: "4/4", "7/8". A string.

### 174.1.180 kMDItemTimestamp as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:**

The timestamp on the item. This generally is used to indicate the time at which the event captured by the item took place.

Mac OS X 10.5

### 174.1.181 kMDItemTitle as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The title of the file. For example, this could be the title of a document, the name of an song, or the subject of an email message. A string.

### 174.1.182 kMDItemTotalBitRate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The total bit rate, audio and video combined, of the media. A number.

### 174.1.183 kMDItemURL as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:**

URL of the item.

Mac OS X 10.5

### 174.1.184 kMDItemVersion as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The version number of this file. A string

### 174.1.185 kMDItemVideoBitRate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The video bit rate. A number.

### 174.1.186 kMDItemWhereFroms as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Example:**

```
dim file as FolderItem = DownloadsFolderMBS(0).Child("test.html")
dim item as new MDItemMBS(file)
dim value as Variant = item.GetAttribute(MDItemMBS.kMDItemWhereFroms)

if value <>nil then
dim values() as Variant = value
dim Link as String = values(0)
MsgBox link
end if
```

**Notes:**

Describes where the file was obtained from. An array of strings.

For example, a downloaded file may refer to the URL, files received by email may indicate the sender's email address, message subject, etc.

### 174.1.187 kMDItemWhiteBalance as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the item attribute constants.
**Notes:** The white balance setting used to acquire the document contents. Possible values are 0 (auto white balance) and 1 (manual). A number.

### 174.1.188 Properties

### 174.1.189 DisplayName as String

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The localized version of the file name.
**Example:**

```
dim item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox item.DisplayName // shows "Schreibtisch"
```

**Notes:**

This is a shortcut for AttributeString(kMDItemDisplayName).
(Read only property)

### 174.1.190 FSName as String

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The file name of the item.
**Example:**

```
dim item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox item.FSName // shows "Desktop"
```

**Notes:**

This is a shortcut for AttributeString(kMDItemFSName).
(Read only property)

### 174.1.191 FSSize as Int64

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The size, in bytes, of the file on disk.
**Example:**

```
dim item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox str(item.FSSize) // shows 0
```

**Notes:**

This is a shortcut for AttributeString(kMDItemFSSize).
(Read only property)

### 174.1.192 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The internal reference to the item.
**Notes:** (Read and Write property)

### 174.1.193 Path as String

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The complete path to the file.
**Example:**

```
dim item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox item.path // shows "/Users/cs/Desktop"
```

**Notes:**

This is a shortcut for AttributeString(kMDItemPath).
(Read only property)

### 174.1.194 Tag as Variant

MBS MacOSX Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The attached value.
**Notes:**

You can use this property as you like.
(Read and Write property)

## 174.2 class MDQueryBatchingParamsMBS

### 174.2.1 class MDQueryBatchingParamsMBS

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** This class containing the progress notification batching parameters of an MDQuery.
**Notes:** The first notification can be triggered by the either firstmaxnum or firstmaxms limit being exceeded. Subsequent notifications are triggered by either the progressmaxnum or progressmaxms limit. The default batching parameters are undefined and subject to change.

### 174.2.2 Properties

### 174.2.3 firstMaxMS as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The maximum number of milliseconds that can pass before a progress notification is sent out.
**Notes:**

This value is advisory, in that the notification will be triggered "at some point after firstmaxms milliseconds have passed since the query began accumulating results", but generally not very long after, for the first progress notification.
(Read and Write property)

### 174.2.4 firstMaxNum as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The maximum number of results that can accumulate before a progress notification is sent out by the MDQuery, for the first notification.
**Notes:** (Read and Write property)

### 174.2.5 progressMaxMS as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The maximum number of milliseconds that can pass before a progress notification is sent out.
**Notes:**

This value is advisory, in that the notification will be triggered "at some point after firstmaxms milliseconds have passed since the query began accumulating results", but generally not very long after, for progress notifications after the first, during the initial gathering phase of the query.

(Read and Write property)

### 174.2.6 progressMaxNum as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The maximum number of results that can accumulate before a progress notification is sent out by the MDQuery, for notifications after the first, during the initial gathering phase of the query.
**Notes:** (Read and Write property)

### 174.2.7 updateMaxMS as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The maximum number of milliseconds that can pass before a progress notification is sent out.
**Notes:**

This value is advisory, in that the notification will be triggered "at some point after firstmaxms milliseconds have passed since the query began accumulating results", but generally not very long after, for update notifications after the gathering phase of the query has finished.
(Read and Write property)

### 174.2.8 updateMaxNum as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The maximum number of results that can accumulate before an update notification is sent out by the MDQuery, for update notifications after the gathering phase of the query has finished.
**Notes:** (Read and Write property)

## 174.3 class MDQueryMBS

### 174.3.1 class MDQueryMBS

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** MDQuery encapsulates all queries against the MetaData database.
**Example:**

```
dim m as new MDQueryMBS("* == ""Hello""wcd | | kMDItemTextContent = ""Hello""c")

call m.Execute(m.kMDQuerySynchronous)

MsgBox str(m.ResultCount) // shows a lot of results
```

**Notes:**

Depending on what and how you want to search, you can decide whether MDQueryMBS or CatSearchMBS is the better choice.

Available in Mac OS X version 10.4 and later.

Queries gather results or process updates only while the current thread's run loop is running. Queries normally operate asynchronously, and only send out progress notificiations as the list is being collected. The query list is kept up to date with respect to value lists and sorting as the progress notifications are sent out, so the query is in a good state during those events.

An MDQuery presents its results as if it were a simple array object. The results are MDItem.

Query Sorting Sorting the results from a query can be performed in one of two ways. First is to let the library sort the results for you by passing an array of attributes to sort on to constructor. The default sort provided by the constructor is a assending sort strings are compared using CFStringCompare() with the options kCFCompareNonliteral | kCFCompareLocalized | kCFCompareNumerically.

If used in a thread, please use a loop with calling NSRunLoopMBS.currentRunLoop.runUntilDate(nil) to give time for update events to fire.

### 174.3.4 Methods

### 174.3.5 AttributeValueOfResultAtIndex(name as string, index as UInt32) as Variant

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the value of the named attribute for the result at the given index.
**Notes:**

name: The attribute name for which to return the values. If the attribute is not one of those requested in the valueListAttrs or sortingAttrs parameters to one of the query creation functions, the result will be nil.
index: The index into the query's result list. If the index is negative, or is equal to or larger than the current number of results in the query, the behavior is undefined.
Returns he value of the attribute, or nil if the attribute doesn't exist in the query on that result.

### 174.3.6 Constructor(query as MDQueryMBS, queryString as string)

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a new query, which is a subset of the given query.
**Notes:**

Only results matched by the given query can be matched by the query expression of this query.

query: The parent query of the new query.
queryString: The query expression string for this query. This expression in effect may further restrict the matches found by the parent query. If the string is empty the behavior is undefined.

valueListAttributes: An optional array of attribute names. The query will collect the values of these attributes into uniqued lists, which can be used or displayed to summarize the results of the query, or allow a user to further qualify the items for which they are searching. This parameter may be empty if no value lists are desired. Value list collection increases CPU usage and significantly increases the memory usage of an MDQuery. The attribute names are strings.
sortingAttributes: An optional array of attribute names. The query will results of the query based on the values of these attributes. The first name in the array is used as the primary sort key, the second as the secondary key, and so on. The comparison of like-typed values is a simple, literal comparison. This parameter may be empty if no sorting is desired. Sorting increases memory usage and significantly increases the CPU usage of an MDQuery. However, when possible, it is almost always cheaper to have the MDQuery do the sorting, rather than you fetching all the results and attributes from each of them and doing the sorting yourself. The attribute names are strings.

### 174.3.7 Constructor(query as MDQueryMBS, queryString as string, valueListAttributes() as string)

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a new query, which is a subset of the given query.
**Notes:**

Only results matched by the given query can be matched by the query expression of this query.

query: The parent query of the new query.
queryString: The query expression string for this query. This expression in effect may further restrict the matches found by the parent query. If the string is empty the behavior is undefined.
valueListAttributes: An optional array of attribute names. The query will collect the values of these attributes into uniqued lists, which can be used or displayed to summarize the results of the query, or allow a user to further qualify the items for which they are searching. This parameter may be empty if no value lists are desired. Value list collection increases CPU usage and significantly increases the memory usage of an MDQuery. The attribute names are strings.
sortingAttributes: An optional array of attribute names. The query will results of the query based on the values of these attributes. The first name in the array is used as the primary sort key, the second as the secondary key, and so on. The comparison of like-typed values is a simple, literal comparison. This parameter may be empty if no sorting is desired. Sorting increases memory usage and significantly increases the

CPU usage of an MDQuery. However, when possible, it is almost always cheaper to have the MDQuery do the sorting, rather than you fetching all the results and attributes from each of them and doing the sorting yourself. The attribute names are strings.

### 174.3.8 Constructor(query as MDQueryMBS, queryString as string, valueListAttributes() as string, sortingAttributes() as string)

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a new query, which is a subset of the given query.
**Notes:**

Only results matched by the given query can be matched by the query expression of this query.

query: The parent query of the new query.
queryString: The query expression string for this query. This expression in effect may further restrict the matches found by the parent query. If the string is empty the behavior is undefined.
valueListAttributes: An optional array of attribute names. The query will collect the values of these attributes into uniqued lists, which can be used or displayed to summarize the results of the query, or allow a user to further qualify the items for which they are searching. This parameter may be empty if no value lists are desired. Value list collection increases CPU usage and significantly increases the memory usage of an MDQuery. The attribute names are strings.
sortingAttributes: An optional array of attribute names. The query will results of the query based on the values of these attributes. The first name in the array is used as the primary sort key, the second as the secondary key, and so on. The comparison of like-typed values is a simple, literal comparison. This parameter may be empty if no sorting is desired. Sorting increases memory usage and significantly increases the CPU usage of an MDQuery. However, when possible, it is almost always cheaper to have the MDQuery do the sorting, rather than you fetching all the results and attributes from each of them and doing the sorting yourself. The attribute names are strings.

### 174.3.9 Constructor(queryString as string)

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a new query with the given query expression.
**Notes:**

queryString: The query expression string for this query. The syntax for query expressions is explained above in the header overview documentation.

valueListAttributes: An optional array of attribute names. The query will collect the values of these attributes into uniqued lists, which can be used or displayed to summarize the results of the query, or allow a user to further qualify the items for which they are searching. This parameter may be empty if no value lists are desired. Value list collection increases CPU usage and significantly increases the memory usage of an MDQuery. The attribute names are string.

sortingAttributes: An optional array of attribute names. The query will results of the query based on the values of these attributes. The first name in the array is used as the primary sort key, the second as the secondary key, and so on. The comparison of like-typed values is a simple, literal comparison. This parameter may be empty if no sorting is desired. Sorting increases memory usage and significantly increases the CPU usage of an MDQuery. However, when possible, it is almost always cheaper to have the MDQuery do the sorting, rather than you fetching all the results and attributes from each of them and doing the sorting yourself. The attribute names are strings.

The handle value is zero on failure.
See also:

### 174.3.10 Constructor(queryString as string, valueListAttributes() as string)

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a new query with the given query expression.
**Notes:**

queryString: The query expression string for this query. The syntax for query expressions is explained above in the header overview documentation.

valueListAttributes: An optional array of attribute names. The query will collect the values of these attributes into uniqued lists, which can be used or displayed to summarize the results of the query, or allow a user to further qualify the items for which they are searching. This parameter may be empty if no value lists are desired. Value list collection increases CPU usage and significantly increases the memory usage of an MDQuery. The attribute names are string.

sortingAttributes: An optional array of attribute names. The query will results of the query based on the values of these attributes. The first name in the array is used as the primary sort key, the second as the secondary key, and so on. The comparison of like-typed values is a simple, literal comparison. This parameter may be empty if no sorting is desired. Sorting increases memory usage and significantly increases the CPU usage of an MDQuery. However, when possible, it is almost always cheaper to have the MDQuery do the sorting, rather than you fetching all the results and attributes from each of them and doing the sorting yourself. The attribute names are strings.

The handle value is zero on failure.

### 174.3.11 Constructor(queryString as string, valueListAttributes() as string, sortingAttributes() as string)

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a new query with the given query expression.
**Notes:**

queryString: The query expression string for this query. The syntax for query expressions is explained above in the header overview documentation.

valueListAttributes: An optional array of attribute names. The query will collect the values of these attributes into uniqued lists, which can be used or displayed to summarize the results of the query, or allow a user to further qualify the items for which they are searching. This parameter may be empty if no value lists are desired. Value list collection increases CPU usage and significantly increases the memory usage of an MDQuery. The attribute names are string.

sortingAttributes: An optional array of attribute names. The query will results of the query based on the values of these attributes. The first name in the array is used as the primary sort key, the second as the secondary key, and so on. The comparison of like-typed values is a simple, literal comparison. This parameter may be empty if no sorting is desired. Sorting increases memory usage and significantly increases the CPU usage of an MDQuery. However, when possible, it is almost always cheaper to have the MDQuery do the sorting, rather than you fetching all the results and attributes from each of them and doing the sorting yourself. The attribute names are strings.

The handle value is zero on failure.

- 174.3.7 Constructor(query as MDQueryMBS, queryString as string, valueListAttributes() as string) 25194
- 174.3.8 Constructor(query as MDQueryMBS, queryString as string, valueListAttributes() as string, sortingAttributes() as string) 25195
- 174.3.9 Constructor(queryString as string) 25196
- 174.3.10 Constructor(queryString as string, valueListAttributes() as string) 25197

### 174.3.12 CountOfResultsWithAttributeValue(name as string, Value as Variant) as UInt32

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the number of results which have the given attribute and attribute value. Note that this count may change over time, as the query's result list is updated.
**Notes:**

name: The attribute name for which to return the number of results with the given value. If the attribute is not one of those requested in the valueListAttrs parameter to one of the query creation functions, the behavior is undefined.

value: The attribute value for which to return the number of results with that value. This parameter may be nil, in which case the number of results that do not contain the named attribute is returned.

Returns the number of results with that attribute and value.

### 174.3.13 DisableUpdates

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Disables updates to the query result list.
**Notes:** This should be called before iterating through the list of results to prevent the result list from changing during the iteration. The disabled state is a counter, and disabling can be done recursively and from different threads.

### 174.3.14 EnableUpdates

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Re-enables updates to the query result list.
**Notes:** This should be called when finished iterating through the list of results, to allow changes to the result list to occur. Changes will be allowed when all the disables have been matched by a corresponding enable.

### 174.3.15 Execute(flags as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Run the query, and populate the query with the results.
**Example:**

```
dim q as new MDQueryMBS("kMDItemContentModificationDate>=$ time.now")
// you will want to use a MDQueryMBS subclass here to catch the events

if not q.Execute(q.kMDQueryWantsUpdates) then
MsgBox "Failed to query"
end if
```

**Notes:**

Queries only gather results or process updates while the current thread's run loop is running. Queries normally operate asynchronously, and send out progress and update notifications to report changes to the list of results that has been collected. Queries have two phases: the initial gathering of all currently matching results, and a second live-update phase where queries monitor the state of the system and update themselves

to external changes in files or the operating environment (for example, as time advances, files which did not match the query when it was started may later match the query). Query notifications are posted within the context of the same thread which executes the query. [

here are three operational modes: (1) synchronous static queries, which collect the list of current results and then do not watch for updates to the results, (2) asynchronous static queries, which collect the results asychronously after this function returns, and then do not watch for updates to the results, and (3) asynchronous live queries which collect the initial results asychronously after this function returns, and then do watch for updates to the results, until the query is destroyed. There is little reason not to allow the fourth case, synchronous collection of initial results, followed by asynchronous monitoring for updates, so this may change in the future.

Flags: Options for the query.

Returns true if the query was started (executed in the case of a synchronous query), false otherwise. Queries cannot be executed more than once.

### 174.3.16 GetSortOptionFlagsForAttribute(fieldName as string) as Integer

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Gets the sort option flags for a sorting attribute.
**Notes:**

fieldName: The attribute name for which sort option flags are to be fetched.
Returns an integer with flags. Currently can be 0 or 1.

Available on Mac OS X 10.7 or later.

### 174.3.17 IndexOfResult(it as MDItemMBS) as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the current index of the given result.
**Notes:**

Note that the index of a result will change over time, as the query's result list is updated.

Returns the index of the given result, or -1 if the value is not one of the query's existing results.

### 174.3.18 IsGatheringComplete as boolean

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns true if the first phase of a query, the initial result gathering, has finished.
**Notes:** A boolean indicating whether or not the first phase of a query has completed.

### 174.3.19 QueryString as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the query string of the query.

### 174.3.20 ResultAtIndex(index as Integer) as MDItemMBS

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the current result at the given index.
**Notes:**

This function causes the result object to be created if it hasn't been created already. For performance reasons, it is not advisable to ask for results that you don't need, to avoid the cost of creating them. If possible, call this function to fetch only the results you need to display or otherwise process. Note that the index of a particular result will change over time, as the query's result list is updated.

index: The index into the query's result list.

If the index is negative, or is equal to or larger than the current number of results in the query, the behavior is undefined.

Returns the MDItem currently at the given index, or if a result-create function has been set, returns the result returned by that function.

### 174.3.21 ResultCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the number of results currently collected by the query.
**Example:**

```
dim m as new MDQueryMBS("kMDItemContentModificationDate>=$ time.today")
```

```
call m.Execute(m.kMDQuerySynchronous)

MsgBox str(m.ResultCount)+" files modified today"
```

**Notes:** Note that the number of results in a query will change over time as the query's result list is updated.

### 174.3.22 Results(limit as Integer = -1) as MDItemMBS()

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Queries result items.
**Notes:**

Internally does what ResultAtIndex does for up to limit entries.
Limit with -1 will cause no limit.
If possible, call this function to fetch only the results you need to display or otherwise process.

### 174.3.23 SetMaxCount(size as Integer)

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Use SetMaxCount to limit the number of results returned by the query engine.
**Notes:**

This must be called before the query is executed.
size: The maximum number of results desired.

### 174.3.24 SetSearchScope(paths() as folderitem, options() as string)

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Use SetSearchScope to limit the results returned by the query engine to those MDItem that appear within the specified directories.
**Example:**

```
dim q as MDQueryMBS // your query

q.SetSearchScope nil, array(q.kMDQueryScopeComputer)
```

**Notes:**

This may be used to limit searching to particular volumes. Tilde paths, or environment variables are not expanded. Calling this multiple times will replace the previous options. This must be called before the query is executed.

paths: An array of directories where you want to search. This array can be empty.
options: An array of scope options. Pass the kMDQueryScope* constants. This array can be empty.

### 174.3.25 SetSortOptionFlagsForAttribute(fieldName as string, flags as UInt32) as Boolean

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Sets the sort flags for a query.
**Notes:**

fieldName: The attribute name for which sort option flags are to be set.

The attribute name must have been part of the sortingFlags when the query was created.

flags: An integer containing MDQuerySortOptionFlags to be applied to the attibute

Returns a boolean, true on success, false on failure.

Available on Mac OS X 10.7 or later.

### 174.3.26 SetSortOrder(sortingAttrs() as string) as Boolean

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Sets the sort order for a query.
**Notes:**

sortingAttrs An array of attribute names, as in MDQueryCreate.
The query's result set will be sorted according to the order of these attributes. All names in the array have to have been passed as sortingAttrs when the query was created. The attribute names are strings.

Returns a boolean, true on success, false on failure.

Available on Mac OS X 10.7 or later.

### 174.3.27 SortingAttributes as string()

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the list of attribute names the query is using to sort the results.

### 174.3.28 Stop

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Stops the query from ever generating more results.
**Notes:** Queries may be executed only once, so a stopped query cannot be restarted. The query will also not generate any result updates. The query is static after this function returns. The query will do final processing of results that have come in but not yet been processed (because, say, the batching parameters hasn't triggered that yet). That may trigger a progress notification, so be aware of that if you are stopping a query from within your progress note handler; that is, during this function, a recursive progress and/or finished notification might occur, which might recursively call your notification handler. It is safe to call this function recursively. You would call this function to stop a query that is generating way too many results to be useful, but still want to access the results that have come in so far. If a query is stopped before the gathering phase finishes, it will not report itself as finished, nor will it send out a finished notification.

### 174.3.29 ValueListAttributes as string()

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the list of attribute names for which the query is collecting the lists of values.

### 174.3.30 ValuesOfAttribute(name as string) as Variant()

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the list of values, from the results of the query, of the named attribute.
**Notes:**

The list is not ordered in any way. The list contains only one occurrence of each value. Note that this list may change over time, as the query's result list is updated.

name: The attribute name for which to return the values. If the attribute is not one of those requested in the valueListAttrs parameter to one of the query creation functions, the behavior is undefined.

Returns an array holding the value objects for that attribute.

### 174.3.31 Properties

### 174.3.32 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The internal reference for the MDQuery.
**Notes:** (Read and Write property)

### 174.3.33 Tag as Variant

MBS MacOSX Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The attached value.
**Notes:**

You can use this property as you like.
(Read and Write property)

### 174.3.34 BatchingParameters as MDQueryBatchingParamsMBS

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The query whose batching parameters are to be set.
**Notes:** (Read and Write computed property)

### 174.3.35 Events

### 174.3.36 Finish()

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: .

**Function:** The event called when the query has finished.
**Notes:** Called when the query has finished with the initial result-gathering phase, and may now proceed into the live-update phase (if that option was chosen when the query was executed). This event often shortly follows after the last progress notification. It is usually not necessary to update any displayed UI in response to this event, since it doesn't indicate any change in the result list of a query.

### 174.3.37 Progress(AddedItems() as MDItemMBS, ChangedItems() as MDItemMBS, RemovedItems() as MDItemMBS)

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: .

**Function:** The event sent to indicate changes to the query's results list during the initial gathering phase of a query's execution.
**Notes:**

Mostly adds will occur during this phase, but removals and changes can also occur, as in any update.
For performance reasons the arrays are empty in newer Mac OS X SDK versions.
In that case please use the result functions.

### 174.3.38 Update(AddedItems() as MDItemMBS, ChangedItems() as MDItemMBS, RemovedItems() as MDItemMBS)

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: .

**Function:** The event is sent to indicate changes to the query's results list during the second, live-update, phase of a query's execution.

### 174.3.39 Constants

### 174.3.40 kMDQueryReverseSortOrderFlag=1

MBS MacOSX Plugin, Plugin Version: 11.2.

**Function:** A flag constant for calling SetSortOptionFlagsForAttribute.
**Notes:**

Sort the attribute in reverse order.
Available on Mac OS X 10.7 or later.

### 174.3.41 kMDQueryScopeAllIndexed="kMDQueryScopeAllIndexed"

MBS MacOSX Plugin, Plugin Version: 9.6.

**Function:** One of the option constants for the search scope.
**Notes:** A constant, which can be passed in the scopeDirectories array, to specify that the search should be restricted to indexed, locally mounted volumes and indexed user mounted remote volumes, plus the user's home directory.

### 174.3.42 kMDQueryScopeComputer="kMDQueryScopeComputer"

MBS MacOSX Plugin, Plugin Version: 9.6.

**Function:** One of the option constants for the search scope.
**Notes:** A constant, which can be passed in the scopeDirectories array, to specify that the search should be restricted to all locally mounted volumes, plus the user's home directory (which may be on a remote volume).

### 174.3.43 kMDQueryScopeComputerIndexed="kMDQueryScopeComputerIndexed"

MBS MacOSX Plugin, Plugin Version: 9.6.

**Function:** One of the option constants for the search scope.
**Notes:** A constant, which can be passed in the scopeDirectories array, to specify that the search should be restricted to indexed, locally mounted volumes, plus the user's home directory (which may be on a remote volume).

### 174.3.44 kMDQueryScopeHome="kMDQueryScopeHome"

MBS MacOSX Plugin, Plugin Version: 9.6.

**Function:** One of the option constants for the search scope.
**Notes:** A constant, which can be passed in the scopeDirectories array, to specify that the search should be restricted to the volume and directory that contains the current user's home directory

### 174.3.45 kMDQueryScopeNetwork="kMDQueryScopeNetwork"

MBS MacOSX Plugin, Plugin Version: 9.6.

**Function:** One of the option constants for the search scope.
**Notes:** A constant, which can be passed in the scopeDirectories array, to specify that the search should include all user mounted remote volumes.

### 174.3.46 kMDQueryScopeNetworkIndexed="kMDQueryScopeNetworkIndexed"

MBS MacOSX Plugin, Plugin Version: 9.6.

**Function:** One of the option constants for the search scope.
**Notes:** A constant, which can be passed in the scopeDirectories array, to specify that the search should include indexed user mounted remote volumes.

### 174.3.47 kMDQuerySynchronous=1

MBS MacOSX Plugin, Plugin Version: 9.6.

**Function:** One of the constants for executing a query.
**Notes:** Block during the gathering phase. If this parameter is true, the function will not return until the query has finished gathering the initial results. The run loop will run in the default mode, which will allow anything registered in that mode with this run loop to execute as well. If this parameter is false, the function returns immediately after starting the query asychronously.

### 174.3.48 kMDQueryWantsUpdates=4

MBS MacOSX Plugin, Plugin Version: 9.6.

**Function:** One of the constants for executing a query.
**Notes:**

When set, after gathering the initial results the query will watch for changes in the system which should update the list of results. This can be changes which cause new files to now match the query, or changes which cause files in the result list to continue to match, or no longer match, the query. Files which begin to match the query are added to the result list, and files which no longer match the query expression are removed from the result list.
Currently, this parameter is ignored if the synchronous parameter is true. This is subject to change, and you should always pass in the value you want here.

## 174.4 Globals

### 174.4.1 SpotlightMBS(searchString as string) as Integer

MBS MacOSX Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Displays a Spotlight search window.
**Example:**

call SpotlightMBS("Hello")

**Notes:**

searchString: An initial query string. Pass "" to open the search window with no initial query string.

Returns a Mac OS error code and -1 if the function is not available and 0 on success.
Requires Mac OS X 10.4.

# Chapter 175

# SQL

## 175.1 class Database

### 175.1.1 class Database

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The Xojo Database class is the base class for the database subclasses that communicate with a variety of databases.
**Notes:** Use one of the subclasses to connect to your database.

### 175.1.2 Methods

### 175.1.3 AddRow(TableName as String, row as DatabaseRow)

MBS SQL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Inserts Data (a populated DatabaseRow) as a new row in TableName.

### 175.1.4 BeginTransaction

MBS SQL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new transaction.
**Notes:** Changes to the database made after this call can be saved with CommitTransaction or undone with RollbackTransaction.

### 175.1.5 Close

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Closes or disconnects the database.
**Notes:**

Calling Close does not issue a Commit, but some databases will automatically Commit changes in a transaction when you Close the connection and some database will automatically Rollback changes in a transaction when the connection is closed. Refer to the documentation for your database to check what its behavior is.

For desktop applications, you will often Connect to the database when the app starts and Close it when the app quits.

For web applications, you usually Connect to the database when the Session starts and Close it when the Session quits.

### 175.1.6 Commit

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Commits an open transaction. This permanently saves changes to the database.
**Notes:**

You have to have an open transaction to be able to use Commit. On SQLite (and other databases), you can start a transaction with this command:

BEGIN TRANSACTION

It can be sent using SQLExecute:

DB.SQLExecute("BEGIN TRANSACTION")

### 175.1.7 CommitTransaction

MBS SQL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Commits an open transaction. This permanently saves changes to the database.

### 175.1.8 Connect

MBS SQL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Connects to the database so that you can begin using it.
See also:

- 175.1.9 Connect as boolean 25213

### 175.1.9 Connect as boolean

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Connects to the database so that you can begin using it.
**Notes:**

Before proceeding with database operations, test to be sure that Connect returns True.
If Connect returns False, you should also check the ErrorCode and ErrorMessage.

See Option() for various options you can set before connecting.
e.g. c.Option("SQLiteVFSFlags") = "1" for SQLite for read only access.
See also:

- 175.1.8 Connect 25213

### 175.1.10 ExecuteSQL(sql As String, ParamArray values As Variant)

MBS SQL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Used to execute an SQL command.
**Notes:** Use this for commands that do not return any data, such as CREATE TABLE or INSERT.
See also:

- 175.1.11 ExecuteSQL(sql As String, values() As Variant) 25213

### 175.1.11 ExecuteSQL(sql As String, values() As Variant)

MBS SQL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Used to execute an SQL command.
**Notes:** Use this for commands that do not return any data, such as CREATE TABLE or INSERT.
See also:

- 175.1.10 ExecuteSQL(sql As String, ParamArray values As Variant) 25213

### 175.1.12 InsertRecord(TableName as String, Data as DatabaseRecord)

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Inserts Data (a populated DatabaseRecord) as a new row in TableName.
**Notes:** Always check the Error property to verity that the data was added.

### 175.1.13 Prepare(statement as String) as PreparedSQLStatement

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a PreparedSQLStatement using the SQL statement for use with the various database prepared statement classes.
**Notes:** A prepared statement is an SQL statement with parameters that has been pre-processed by the database so that it can be executed more quickly if it is re-used with different parameters. Prepared statements also mitigate the risk of SQL injection in web apps.

### 175.1.14 Rollback

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Cancels an open transaction restoring the database to the state it was in before the transaction began.
**Notes:**

You will generally want to rollback database changes if a database error occurs within the transaction.
You have to have an open transaction to be able to use Rollback. On SQLite (and other databases), you can start a transaction with this command:

BEGIN TRANSACTION

It can be sent using SQLExecute:

DB.SQLExecute("BEGIN TRANSACTION")

### 175.1.15 RollbackTransaction

MBS SQL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Cancels an open transaction restoring the database to the state it was in before the transaction began.

### 175.1.16 SelectSQL(sql As String, ParamArray values As Variant) as RowSet

MBS SQL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Executes a SQL SELECT statement and returns the results in a RowSet.
See also:

- 175.1.17 SelectSQL(sql As String, values() As Variant) as RowSet 25215

### 175.1.17 SelectSQL(sql As String, values() As Variant) as RowSet

MBS SQL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Executes a SQL SELECT statement and returns the results in a RowSet.
See also:

- 175.1.16 SelectSQL(sql As String, ParamArray values As Variant) as RowSet 25215

### 175.1.18 SQLExecute(ExecuteString as string)

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Used to execute an SQL command. Use this for commands that do not return any data, such as CREATE TABLE or INSERT. ExecuteString contains the SQL statement.
**Notes:** To avoid SQL Injection, be sure to use Prepared SQL Statements.

### 175.1.19 SQLSelect(SelectString as string) as RecordSet

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This is an SQL statement that returns a RecordSet.
**Notes:**

SelectString contains the SQL statement.

Typically only SQL SELECT statements return a RecordSet, but some databases return a RecordSet for SQL commands such as INSERT, UPDATE or stored procedures.

If the SQL does not return data then Nil is returned. Nil is also usually returned if there is an error in the SQL statement, but you should instead check Database.Error to check if an error occurred.

To avoid SQL Injection, be sure to use Prepared SQL Statements.

### 175.1.20 Properties

### 175.1.21 DatabaseName as String

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The name of the database to open.
**Example:**

```
dim db as new SQLDatabaseMBS
db.DatabaseName="PostgreSQL:127.0.0.1,5432@dbname=postgres connect_timeout=10 sslmode=require"
```

**Notes:**

The DatabaseName is typically used with server databases (such as MySQL or PostgreSQL) to identify the specific database to use on the server.

Please set the DatabaseName, UserName and Password properties when using SQLDatabaseMBS class. The Host property is ignored.
The database name must contain the complete information and a prefix for the kind of database.
(Read and Write property)

### 175.1.22 Error as Boolean

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** True if an error is returned from the database engine.
**Notes:**

See the values of the ErrorCode and ErrorMessage properties to learn the specifics of the error.

You should check the Error property after each database operation to see if there was an error. If there is an error, you can display or log the ErrorCode and ErrorMessage.
(Read and Write property)

### 175.1.23 ErrorCode as Integer

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The error code returned from the database.
**Notes:**

Error codes and error messages are different for each database.

(Read and Write property)

### 175.1.24 ErrorMessage as String

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Text of the error message returned from the database.
**Notes:**

Error codes and error messages are different for each database.
You should check the Error property after each database operation to see if there was an error. If there is an error, you can display or log the ErrorCode and ErrorMessage.
(Read and Write property)

### 175.1.25 Host as String

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The database host name or IP address of the database server.
**Notes:** (Read and Write property)

### 175.1.26 Password as String

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The password that is required for access to the database.
**Notes:**

Typically used in conjunction with UserName.
(Read and Write property)

### 175.1.27 UserName as String

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The username that is required for access to the database.
**Notes:** (Read and Write property)

## 175.2 class DB2MBS

### 175.2.1 class DB2MBS

MBS SQL Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for some DB2 related API commands.
**Example:**

```
dim cmd as new SQLCommandMBS // your command
dim con as new SQLConnectionMBS // your connection
dim api as DB2MBS = con.NativeAPI

// now use an API function
MsgBox str(api.SQLRowCount(cmd))
```

**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

More commands are added as requested.

Deprecated in favor of direct methods on SQLCommandMBS. Please let us know if you need more DB2 specific functions.
Subclass of the SQLAPIMBS class.

### 175.2.2 Blog Entries

- MBS Xojo Plugins, version 19.5pr1
- MBS Xojo / Real Studio Plugins, version 17.1pr1
- MonkeyBread Software Releases the MBS Real Studio plug-ins in version 13.2
- MBS Xojo / Real Studio Plugins, version 13.2pr11

- MBS Xojo / Real Studio Plugins, version 13.2pr11

### 175.2.4 Methods

### 175.2.5 SQLExecDirect(cmd as SQLCommandMBS, text as string)

MBS SQL Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Executes an SQL command directly without any preprocessing in the plugin.
**Example:**

```
dim cmd as new SQLCommandMBS // your command
dim con as new SQLConnectionMBS // your connection
dim api as DB2MBS = con.NativeAPI

// now use an API function
const sql = "some sql command"
api.SQLExecDirect cmd, sql
```

**Notes:** Lasterror is set.

### 175.2.6 SQLRowCount(cmd as SQLCommandMBS) as Int64

MBS SQL Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the affected number of rows for the last operation.
**Notes:** Lasterror is set.

### 175.2.7 Properties

### 175.2.8 Lasterror as Integer

MBS SQL Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The last error code.
**Notes:** (Read and Write property)

## 175.3 class InformixMBS

### 175.3.1 class InformixMBS

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for Informix specific functions.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

Deprecated in favor of direct methods on SQLConnectionMBS. Please let us know if you need more Informix specific functions.
Subclass of the SQLAPIMBS class.

### 175.3.2 Blog Entries

- MBS Xojo Plugins, version 19.5pr1
- MBS Xojo / Real Studio Plugins, version 17.1pr1
- MonkeyBread Software Releases the MBS Real Studio plug-ins in version 13.1

- MonkeyBread Software Releases the MBS Real Studio plug-ins in version 13.0
- MBS Real Studio Plugins, version 13.0fc1

### 175.3.4 Methods

### 175.3.5 Error(cmd as SQLCommandMBS, byref SQLState as string, byref NativeError as Integer, byref ErrorMsg as string) as Integer

MBS SQL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the error status.

### 175.3.6 GetCursorName(cmd as SQLCommandMBS) as string

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries cursor name for given recordset.

### 175.3.7 HDBC as Integer

MBS SQL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns Database Connection handle.

### 175.3.8 HENV as Integer

MBS SQL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The environment handle.

### 175.3.9 HSTMT(cmd as SQLCommandMBS) as Integer

MBS SQL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the statement handle for the command object.
**Notes:** Returns 0 on any error.

### 175.3.10 SetCursorName(cmd as SQLCommandMBS, name as string) as boolean

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets cursor name for given recordset.
**Notes:** Returns true on success.

## 175.4 module InternalCubeSQLLibraryMBS

### 175.4.1 module InternalCubeSQLLibraryMBS

MBS SQL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The module for our internal CubeSQL client connector.
**Example:**

```
if InternalCubeSQLLibraryMBS.Use then
MsgBox "Using internal CubeSQL library."
else
MsgBox "Failed, so please use library file."
end if

Dim db As SQLDatabaseMBS // or SQLConnectionMBS

db.Option("ConnectionTimeout") = "30" // 30 seconds timeout
db.Option("ConnectionEncryption") = "SSL+AES256"
db.Option("SSLCertificatePath") = SSLCertificatePath

// connect...
```

**Notes:**

This is a CubeSQL client library built into a plugin, so you can decide with use of MBS SQL Plugin to use this plugin instead of providing your own external copy of CubeSQL shared library.

Version 19.4 or newer have CubeSQL with SSL included.
You can use Option("ConnectionEncryption") with SSL, SSL+AES128, SSL+AES192 and SSL+AES256 as values.

If ConnectionEncryption is SSL, we can pass path from Option("SSLCertificatePath") with the certificate file.

### 175.4.2 Blog Entries

- CubeSQL Library for Mac
- MBS Xojo Plugins, version 18.3pr1
- CubeSQL support for MBS Xojo SQL Plugin

### 175.4.3 Videos

- Presentation from Xojo Developer Conference 2019 in Miami.

### 175.4.4 Blog Entries

- CubeSQL Library for Mac
- MBS Xojo Plugins, version 18.3pr1
- CubeSQL support for MBS Xojo SQL Plugin

### 175.4.5 Videos

- Presentation from Xojo Developer Conference 2019 in Miami.

### 175.4.6 Methods

### 175.4.7 SSLVersion as String

MBS SQL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries SSL version of library.

### 175.4.8 Use as boolean

MBS SQL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Registers the built in CubeSQL client library for use.
**Example:**

```
if InternalCubeSQLLibraryMBS.Use then
MsgBox "Using internal CubeSQL library."
else
MsgBox "Failed, so please use library file."
end if
```

**Notes:** So instead of having SQL Plugin load CubeSQL shared library from file, we use the one built into this plugin.

### 175.4.9 Version as String

MBS SQL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries version of library.

## 175.5 module InternalPostgreSQLLibraryMBS

### 175.5.1 module InternalPostgreSQLLibraryMBS

MBS SQL Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Targets: All.

**Function:** The module for our internal PostgreSQL engine.
**Example:**

```
if InternalPostgreSQLLibraryMBS.Use then
MsgBox "Using internal PostgreSQL."
else
MsgBox "Failed, so please use library file."
end if
```

**Deprecated:** This item is deprecated and should no longer be used. You can use postgres driver libraries instead. **Notes:**

This is a PostgreSQL library built into a plugin, so you can decide with use of MBS SQL Plugin to use this plugin instead of providing your own external copy of PostgreSQL shared library.

Deprecated since the library version is outdated. Please use PostgreSQL libraries, e.g. from our libraries page:
https://www.monkeybreadsoftware.de/xojo/download/plugin/Libs/

### 175.5.4 Methods

### 175.5.5 OpenSSLVersion as String

MBS SQL Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Targets: All.

**Function:** Returns the version of the OpenSSL library.
**Example:**

```
MsgBox InternalPostgreSQLLibraryMBS.OpenSSLVersion
```

### 175.5.6 Use as boolean

MBS SQL Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Targets: All.

**Function:** Registers the built in PostgreSQL client library for use.
**Example:**

```
if InternalPostgreSQLLibraryMBS.Use then
MsgBox "Using internal PostgreSQL."
else
MsgBox "Failed, so please use library file."
end if
```

**Notes:** So instead of having SQL Plugin load libpg shared library from file, we use the one built into this plugin.

### 175.5.7 Version as Integer

MBS SQL Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Targets: All.

**Function:** Returns version of PostgreSQL version.
**Example:**

```
MsgBox str(InternalPostgreSQLLibraryMBS.Version)
// e.g. 90501 for 9.5.1
```

## 175.6 module InternalSQLiteLibraryMBS

### 175.6.1 module InternalSQLiteLibraryMBS

MBS SQL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The module for our internal SQLite3 engine.
**Example:**

```
// enable our built-in SQLite library, which supports encryption
Call InternalSQLiteLibraryMBS.Use

// where to store?
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.db")
Dim storage_database As New SQLDatabaseMBS ' SQLiteDatabase
storage_database.SQLiteEncryptionKey = "aes256:password" ' <- password with AES256 as prefix to pick algorithm
storage_database.DatabaseName = "sqlite:"+ f.NativePath

If storage_database.Connect Then

// create table if this is not yet here
storage_database.SQLExecute "Create table if not exists pics(pic_id integer PRIMARY KEY AUTOINCREMENT, name varchar(20), pic blob)"

// done
MsgBox "Ready"
Else
MsgBox storage_database.ErrorMessage
End If
```

**Notes:** This is a SQLite3 library built into a plugin, so you can decide with use of MBS SQL Plugin to use this plugin instead of providing your own external copy of SQLite shared library.

### 175.6.6 Methods

### 175.6.7 CompileOption(index as Integer) as String

MBS SQL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries name of a compile option.
**Example:**

```
dim list() as string

for i as Integer = 0 to 100
dim s as string = InternalSQLiteLibraryMBS.CompileOption(i)
if s = "" then exit
dim b as Boolean = InternalSQLiteLibraryMBS.CompileOptionUsed(s)
dim t as string
if b then
t = ": yes"
else
t = ": no"
end if
list.Append s + t
next

MsgBox Join(list, EndOfLine)
```

**Notes:** Index index starting with zero until you get back an empty name.

### 175.6.8 CompileOptionUsed(optionName as String) as Boolean

MBS SQL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries if a given compile option was set on or off.
**Example:**

```
dim list() as string

for i as Integer = 0 to 100
dim s as string = InternalSQLiteLibraryMBS.CompileOption(i)
if s = "" then exit
dim b as Boolean = InternalSQLiteLibraryMBS.CompileOptionUsed(s)
dim t as string
if b then
t = ": yes"
else
t = ": no"
end if
list.Append s + t
next

MsgBox Join(list, EndOfLine)
```

**Notes:** If you need a specific option set, please contact MBS support.

### 175.6.9 DumpToFile(SqliteDBConectionHandle as Ptr, File as FolderItem, TableName as string = """, PreserveRowid as Boolean = false, Newlines as Boolean = false, DumpDataOnly as Boolean = false, DumpNoSys as Boolean = false)

MBS SQL Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Dumps SQLite database to text file just like dump command in SQLite command line tool.
**Example:**

```
Call InternalSQLiteLibraryMBS.Use

Dim con As New SQLConnectionMBS

// connect....

Dim handle As ptr = con.SQLiteConnectionHandle
Dim file As FolderItem = SpecialFolder.Desktop.Child("dump.txt")
InternalSQLiteLibraryMBS.DumpToFile(handle, file)
```

**Notes:**

Must use the internal SQLite database, otherwise it will crash.
Raises exception if handle or file is nil.
SQL errors are output by SQLite to the output file.

### 175.6.10 DumpToString(SqliteDBConectionHandle as Ptr, byref Data as String, MaximumSize as Integer = 10000000, TableName as string = """, PreserveRowid as Boolean = false, Newlines as Boolean = false, DumpDataOnly as Boolean = false, DumpNoSys as Boolean = false)

MBS SQL Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Dumps SQLite database to text file just like dump command in SQLite command line tool.
**Example:**

```
Call InternalSQLiteLibraryMBS.Use

Dim con As New SQLConnectionMBS

// connect....
```

```
Dim handle As ptr = con.SQLiteConnectionHandle
dim data as string
InternalSQLiteLibraryMBS.DumpToFile(handle, data, 1000000)
```

**Notes:**

Must use the internal SQLite database, otherwise it will crash.
Raises exception if handle is nil or we run out of memory.
SQL errors are output by SQLite to the output file.

Please pass size of memory we should allocate. Then we can run the dump.
if the final COMMIT is missing or the size is close to the limit you gave, you may run again with higher limit.

### 175.6.11 isKeyword(name as string) as boolean

MBS SQL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Checks if an identifier is a keyword.
**Example:**

```
if InternalSQLiteLibraryMBS.isKeyword("TABLE") then
MsgBox "Table is a keyword"
else
MsgBox "Table is not a keyword!"
end if
```

### 175.6.12 Keywords as String()

MBS SQL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries list of keywords.
**Example:**

```
MsgBox Join(InternalSQLiteLibraryMBS.Keywords,EndOfLine)
```

### 175.6.13 LoadICU as Boolean

MBS SQL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Loads ICU libraries now.
**Notes:**

Returns true on success.
Normally we load them when SQLite initializes and we then add the ICU extension if we find the library.
Call this function toe explicit load them now.

If MBS Plugin can find International Components for Unicode library files, we can load them and use them for proper unicode handling in SQLite.

### 175.6.14 SourceID as String

MBS SQL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The source code ID.
**Example:**

```
MsgBox InternalSQLiteLibraryMBS.SourceID
```

### 175.6.15 Use as boolean

MBS SQL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Registers the built in SQLite library for use.
**Example:**

```
if InternalSQLiteLibraryMBS.Use then
MsgBox "Using internal SQLite"
else
MsgBox "Failed, so please use library file."
end if
```

**Notes:** So instead of having SQL Plugin load sqlite3 shared library from file, we use the one built into this plugin.

### 175.6.16 Version as String

MBS SQL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the version number.
**Example:**

```
MsgBox InternalSQLiteLibraryMBS.Version
```

### 175.6.17 VersionNumber as Integer

MBS SQL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the sqlite version number.
**Example:**

MsgBox str(InternalSQLiteLibraryMBS.VersionNumber)

### 175.6.18 Properties

### 175.6.19 ICUEnabled as Boolean

MBS SQL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether ICU libraries are enabled.
**Notes:**

If MBS Plugin can find International Components for Unicode library files, we can load them and use them for proper unicode handling in SQLite.
Default is true to enable them, if possible.
(Read and Write property)

### 175.6.20 ICULoaded as Boolean

MBS SQL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether ICU libraries are loaded.
**Notes:**

If MBS Plugin can find International Components for Unicode library files, we can load them and use them for proper unicode handling in SQLite.
(Read only property)

### 175.6.21 ICUUsed as Boolean

MBS SQL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether ICU libraries have been used.
**Notes:**

Once SQLite is initialized, we set this to 1 if we passed the functionality to SQLite.
Starts with false and should later turn true if ICU libraries are loaded and enabled for usage.
(Read only property)

### 175.6.22 MemoryHighwater as Int64

MBS SQL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries high water memory usage mark.
**Example:**

```
MsgBox "SQLite uses "+_
str(InternalSQLiteLibraryMBS.MemoryUsed)+_
" bytes and has a high mark of "+_
str(InternalSQLiteLibraryMBS.MemoryHighwater)+" bytes."
```

**Notes:** (Read only property)

### 175.6.23 MemoryUsed as Int64

MBS SQL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries current memory usage.
**Example:**

```
MsgBox "SQLite uses "+_
str(InternalSQLiteLibraryMBS.MemoryUsed)+_
" bytes and has a high mark of "+_
str(InternalSQLiteLibraryMBS.MemoryHighwater)+" bytes."
```

**Notes:** (Read only property)

## 175.7 class MySQLMBS

### 175.7.1 class MySQLMBS

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for MySQL specific functionality.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

Deprecated in favor of direct methods on SQLConnectionMBS. Please let us know if you need more MySQL or MariaDB specific functions.
Subclass of the SQLAPIMBS class.

### 175.7.2 Blog Entries

- MBS Xojo Plugins, version 19.5pr1
- MBS Xojo / Real Studio Plugins, version 17.1pr1

- MonkeyBread Software Releases the MBS Real Studio plug-ins in version 12.5
- MBS Real Studio Plugins, version 12.5pr7
- MBS Real Studio Plugins, version 12.5pr4

### 175.7.4 Methods

### 175.7.5 AffectedRows as UInt64

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the number of affected rows in the last statement.
**Notes:**

see also
http://dev.mysql.com/doc/refman/5.1/en/mysql-affected-rows.html

### 175.7.6 Error as string

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the last error text.
**Notes:**

see also
http://dev.mysql.com/doc/refman/5.1/en/mysql-error.html

### 175.7.7 ErrorNumber as UInt32

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the last error code.
**Notes:**

see also
http://dev.mysql.com/doc/refman/5.1/en/mysql-errno.html

### 175.7.8 FieldCount as UInt32

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the number of columns for the most recent query on the connection.
**Notes:**

see also
http://dev.mysql.com/doc/refman/5.1/en/mysql-field-count.html

### 175.7.9 Info as string

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Retrieves an info string providing information about the most recently executed statement.
**Notes:**

see also
http://dev.mysql.com/doc/refman/5.1/en/mysql-info.html

### 175.7.10 InsertID as Int64

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the last auto increment value from last insert command.
**Notes:**

Please query value right after doing Insert. This value is reset when you call commit.

see also
http://dev.mysql.com/doc/refman/5.1/en/mysql-insert-id.html

### 175.7.11 NumberOfRows(cmd as SQLCommandMBS) as UInt64

MBS SQL Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries number of records in a command.

### 175.7.12 SetSSL(keyPath as string, CertificatePath as string, AuthorityPath as string, authorityFolderPath as string, Cipher as string)

MBS SQL Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets SSL connection parameters.
**Notes:**

Calls mysql_ssl_set internally.
Used for establishing secure connections using SSL. It must be called before Connect(). It does nothing unless SSL support is enabled in the client library.

keyPath is the path name to the key file.
CertificatePath is the path name to the certificate file.
AuthorityPath is the path name to the certificate authority file.
authorityFolderPath is the path name to a directory that contains trusted SSL CA certificates in PEM format.
Cipher is a list of permissible ciphers to use for SSL encryption.

Any unused SSL parameters may be given as empty string.
For paths, please use folderitem.NativePath and not folderitem.ShellPath.

Please switch to using the following options on the connection:

MYSQL_SSL_KEY
MYSQL_SSL_CERT
MYSQL_SSL_CA
MYSQL_SSL_CAPATH

MYSQL_SSL_CIPHER

They should be specified before the connection is made.
e.g.

db.Option("MYSQL_SSL_CIPHER") = "DHE-RSA-AES256-SHA"

Allows to specify MySQL SSL parameters that will be used with mysql_ssl_set. MySQL API method called only when at least one parameter specified. See MySQL documentation for more information about these options.

## 175.8 class PostgreSQLAPIMBS

### 175.8.1 class PostgreSQLAPIMBS

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for Postgre SQL specific functions.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

The Listen method and Notification event are in the SQLDatabaseMBS/SQLConnectionMBS classes directly.

Deprecated in favor of direct methods on SQLCommandMBS. Please let us know if you need more postgreSQL specific functions.
Subclass of the SQLAPIMBS class.

### 175.8.2 Blog Entries

### 175.8.4 Methods

### 175.8.5 DB as string

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The database name used to create the connection.

### 175.8.6 ErrorMessage as string

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The last error message.

### 175.8.7 Field(cmd as SQLCommandMBS, RecordIndex as Integer, FieldIndex as Integer) as string

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries a field by index for the row with the RecordIndex.
See also:

- 175.8.8 Field(cmd as SQLCommandMBS, RecordIndex as Integer, FieldName as string) as string 25241

### 175.8.8 Field(cmd as SQLCommandMBS, RecordIndex as Integer, FieldName as string) as string

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries a field by name for the row with the RecordIndex.
See also:

- 175.8.7 Field(cmd as SQLCommandMBS, RecordIndex as Integer, FieldIndex as Integer) as string 25241

### 175.8.9 FieldCount(cmd as SQLCommandMBS) as Integer

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of fields in the result.

### 175.8.10 Host as string

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The host used to create the connection.

### 175.8.11 Options as string

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The options used to create the connection.

### 175.8.12 Password as string

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The password used to create the connection.

### 175.8.13 Port as string

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The port used to create the connection.

### 175.8.14 RecordCount(cmd as SQLCommandMBS) as Integer

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of records in the result.

### 175.8.15 TTY as string

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tty used to create the connection.

### 175.8.16 User as string

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The user name used to create the connection.

## 175.9 Globals

### 175.9.1 BuildRecordSetMBS(fieldNames() as string, values() as string) as RecordSet

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Builds a recordset from strings.
**Example:**

```
dim names() as string = array("Firstname", "Lastname")
dim values() as string

values.append "Stefan"
values.append "Miller"
values.append "Patrick"
values.append "Maier"

dim r as RecordSet = BuildRecordSetMBS(names, values)
```

**Notes:**

First array has field names. Second array has all values.
As plugin can't access multi dimensional arrays, we have to flatten it into one dimension and concat all rows.
Returns nil on low memory.
Array sizes should be like: Ubound(values)+1 = (ubound(fieldNames)+1) * RecordCount

See also BuildRowSetMBS for newer Xojo versions.

### 175.9.2 Blog Entries

### 175.9.3 BuildRowSetMBS(fieldNames() as string, values() as string) as RowSet

MBS SQL Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Builds a recordset from strings.
**Example:**

```
dim names() as string = array("Firstname", "Lastname")
dim values() as string

values.append "Stefan"
values.append "Miller"
values.append "Patrick"
values.append "Maier"

dim r as RowSet = BuildRowSetMBS(names, values)
```

**Notes:**

First array has field names. Second array has all values.
As plugin can't access multi dimensional arrays, we have to flatten it into one dimension and concat all rows.
Returns nil on low memory.
Array sizes should be like: Ubound(values)+1 = (ubound(fieldNames)+1) * RecordCount

RowSet requires Xojo 2019r2 or newer.

### 175.9.5 CloneRecordSetMBS(rec as RecordSet) as RecordSet

MBS SQL Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates an in memory copy of the RecordSet.
**Notes:** This copied record set can be used instead of the original one and even after the original database connection is closed.

### 175.9.6 Blog Entries

### 175.11.4 Properties

### 175.11.5 ClassName as String

MBS SQL Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class name of the underlying C++ class.
**Notes:**

Sometimes useful to see a which API currently is used.
(Read only property)

### 175.11.6 Connection as Variant

MBS SQL Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The database connection this API is used with.
**Notes:** (Read only property)

# 175.12 class SQLBLobMBS

## 175.12.1 class SQLBLobMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A class for a blob.
**Notes:**

Basicly this is a SQLStringMBS which is always marked to contain binary data. You only need this class to use the constructor with dataprovider to stream data to the database.
Subclass of the SQLLongOrLobMBS class.

## 175.12.2 Blog Entries

## 175.12.4 Methods

## 175.12.5 Constructor

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.
See also:

- 175.12.6 Constructor(Data as MemoryBlock) 25247
- 175.12.7 Constructor(data as SQLStringMBS) 25248
- 175.12.8 Constructor(Data as string, isText as Boolean = True) 25248
- 175.12.9 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 25248

## 175.12.6 Constructor(Data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new string object with data, e.g. for blob.
See also:

- 175.12.5 Constructor 25247
- 175.12.7 Constructor(data as SQLStringMBS) 25248
- 175.12.8 Constructor(Data as string, isText as Boolean = True) 25248
- 175.12.9 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 25248

### 175.12.7 Constructor(data as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new blob object from a string object.
See also:

- 175.12.5 Constructor 25247
- 175.12.6 Constructor(Data as MemoryBlock) 25247
- 175.12.8 Constructor(Data as string, isText as Boolean = True) 25248
- 175.12.9 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 25248

### 175.12.8 Constructor(Data as string, isText as Boolean = True)

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new string object with data or text copied from the data string.
**Notes:** If isText is true, the data is interpreted as text and string encoding conversion may modify it. If isText is false the bytes are copied raw.
See also:

- 175.12.5 Constructor 25247
- 175.12.6 Constructor(Data as MemoryBlock) 25247
- 175.12.7 Constructor(data as SQLStringMBS) 25248
- 175.12.9 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 25248

### 175.12.9 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new blob object from a data provider.
**Notes:**

The blocksize specifies in which sizes data is requested from the provider.
You must make sure that the data provider and this new blob object life long enough. Because the actual

data is requested later when you do the update on the database.

If BlockSize is 0, the default block size is used.

## 175.13 class SQLBytesMBS

### 175.13.1 class SQLBytesMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a string of bytes.
**Notes:** Subclass of the SQLStringMBS class.

### 175.13.2 Blog Entries

- MBS Real Studio Plugins, version 12.4pr1

### 175.13.3 Blog Entries

- MBS Real Studio Plugins, version 12.4pr1

### 175.13.4 Methods

### 175.13.5 Constructor

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.
See also:

- 175.13.6 Constructor(Data as MemoryBlock) 25250
- 175.13.7 Constructor(data as SQLStringMBS) 25251
- 175.13.8 Constructor(Data as string, isText as Boolean = True) 25251

### 175.13.6 Constructor(Data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new string object with data, e.g. for blob.
See also:

- 175.13.5 Constructor 25250
- 175.13.7 Constructor(data as SQLStringMBS) 25251
- 175.13.8 Constructor(Data as string, isText as Boolean = True) 25251

### 175.13.7 Constructor(data as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new bytes object based on the given string object.
See also:

- 175.13.5 Constructor 25250
- 175.13.6 Constructor(Data as MemoryBlock) 25250
- 175.13.8 Constructor(Data as string, isText as Boolean = True) 25251

### 175.13.8 Constructor(Data as string, isText as Boolean = True)

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new string object with data or text copied from the data string.
**Notes:** If isText is true, the data is interpreted as text and string encoding conversion may modify it. If isText is false the bytes are copied raw.
See also:

- 175.13.5 Constructor 25250
- 175.13.6 Constructor(Data as MemoryBlock) 25250
- 175.13.7 Constructor(data as SQLStringMBS) 25251

## 175.14 class SQLCLobMBS

### 175.14.1 class SQLCLobMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A class for a clob (character large object).
**Notes:**

Basicly this is a SQLStringMBS which is always marked to contain text. You only need this class to use the constructor with dataprovider to stream data to the database.
Subclass of the SQLLongOrLobMBS class.

### 175.14.6 Constructor(data as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new clob object from a string object.
See also:

- 175.14.5 Constructor 25252

- 175.14.7 Constructor(Data as string, isText as boolean=true) 25253
- 175.14.8 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 25253

### 175.14.7 Constructor(Data as string, isText as boolean=true)

MBS SQL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new string object with data or text copied from the data string.
**Notes:** If isText is true, the data is interpreted as text and string encoding conversion may modify it. If isText is false the bytes are copied raw.
See also:

- 175.14.5 Constructor 25252
- 175.14.6 Constructor(data as SQLStringMBS) 25252
- 175.14.8 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 25253

### 175.14.8 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new clob object from a data provider.
**Notes:**

The blocksize specifies in which sizes data is requested from the provider.
You must make sure that the data provider and this new clob object life long enough. Because the actual data is requested later when you do the update on the database.

If BlockSize is 0, the default block size is used.
See also:

- 175.14.5 Constructor 25252
- 175.14.6 Constructor(data as SQLStringMBS) 25252
- 175.14.7 Constructor(Data as string, isText as boolean=true) 25253

## 175.15 class SQLCommandMBS

### 175.15.1 class SQLCommandMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This is the central class for the using the SQL database access.
**Example:**

```
dim con as SQLConnectionMBS
dim cmd as SQLCommandMBS

try

con = new SQLConnectionMBS // connection object
cmd = new SQLCommandMBS // create command object

// where is the library?
con.SetFileOption con.kOptionLibraryMySQL, SpecialFolder.UserHome.Child("libmysqlclient.dylib")

// connect to database (mySQL in our example)
// server: 192.168.1.80
// port: 3306
// database: test
// name: root
// no password
con.Connect("192.168.1.80,3306@test","root","",SQLConnectionMBS.kMySQLClient)
// associate a command with connection
// connection can also be specified in SACommand constructor
cmd.Connection=con

// create table
cmd.setCommandText("Create table test_tbl(fid integer, fvarchar20 varchar(20), fblob blob)")
cmd.Execute

// insert value
cmd.setCommandText("Insert into test_tbl(fid, fvarchar20) values (1, 'Some string (1)')")
cmd.Execute

// commit changes on success
con.Commit

MsgBox("Table created, row inserted!")

catch r as SQLErrorExceptionMBS
// SAConnection::Rollback()
// can also throw an exception
// (if a network error for example),
```

```
// we will be ready
try

// on error rollback changes
if con<>nil then
con.rollback
end if
catch x as SQLErrorExceptionMBS
// ignore
end try

// show error message
MsgBox r.message
end try
```

**Notes:**

The plugin can cache the recordset locally. To enable you can call SQLCommandMBS.Cache or use the Option("AutoCache") = "true" on either command or connection or database objects. The plugin will than fetch all records and store them in memory. After this you can walk over the recordset and use FetchPos, FetchFirst, FetchLast, FetchPrev and FetchNext to locate the rows you need. When you call Field() you always get last row, but to read from cached result set, please use Value() function. When using RecordSet, the values are read via Value() functions automatically.

### 175.15.6 Methods

### 175.15.7 AsRecordSet as RecordSet

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a recordset using the command to query fields.
**Notes:**

You can use normal RecordSet functions to walk through fields and they simply control the command object. This is for convenience like passing RecordSet to report functions in Xojo.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RecordSet functionality.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

### 175.15.8 AsRowSet as RowSet

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a RowSet using the command to query fields.
**Notes:**

You can use normal RowSet functions to walk through fields and they simply control the command object. This is for convenience like passing RowSet to other functions in Xojo.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RowSet functionality.

The RowSet may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

Requires Xojo 2019r2 or newer.

### 175.15.9 Cache

MBS SQL Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Caches values.
**Notes:**

The plugin will load the whole recordset and store it in memory.
Now you can move forward/backward as needed to read data.

If you set Option("AutoCache") = "true", the plugin will call Cache automatically for all result sets.
We can only cache first result set.

### 175.15.10 Cancel

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Attempts to cancel the pending result set, or current statement execution.
**Notes:**

Only if isExecuting is true, doing cancel makes sense.

Cancel can cancel the following types of processing on a statement:

A function running asynchronously on the statement.
A function running on the statement on another thread.
After an application calls a function asynchronously, it checks repeatedly to determine whether it has finished processing. While the function is processing, an application can call Cancel to cancel the function.

In a multithread application, the application can cancel a function that is running synchronously on a statement.

see also
https://www.sqlapi.com/ApiDoc/class_s_a_command.html

### 175.15.11 Close

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Closes the specified command object.
**Notes:**

Use the Close method to close the command explicitly.

A command will be implicitly closed in destructor, so you don't have to call Close method explicitly.

### 175.15.12 Constructor

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new command object with no connection and no command text.
See also:

- 175.15.13 Constructor(connection as SQLConnectionMBS, SQLCommand as String, CommandType as Integer = 0)

### 175.15.13 Constructor(connection as SQLConnectionMBS, SQLCommand as String, CommandType as Integer = 0)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This constructor initializes a new SQLCommandMBS object.
**Example:**

```
// your connection
dim con as SQLConnectionMBS
dim SQL as string = "Insert into test_tbl(fid, fvarchar20) values(:id, :name)"

// create command object
dim cmd as new SQLCommandMBS(con, sql)

// assign values by name of parameter:
cmd.Param("id").setAsLong(2)
cmd.Param("name").setAsString(new SQLStringMBS("Some string (2)"))

// Insert first row
cmd.Execute
```

**Notes:**

Connection: the connection to associated with the command.
SQLCommand: A string which represents command text string (an SQL statement or a stored procedure name). If it is an empty string, no command text is associated with the command, and you have to call setCommandText method later.
CommandType: The type of command like kCommandTypeUnknown, kCommandTypeSQLStatement, kCommandTypeSQLStatementRaw or kCommandTypeStoredProcedure.

All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.
See also:

- 175.15.12 Constructor 25258

### 175.15.14 CreateParam(name as string, ParamType as Integer, DirType as Integer=0) as SQLParamMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates parameter associated with the specified command.
**Notes:**

Parameters

| | |
|---|---|
| name: | A string representing the name of parameter. |
| ParamType: | Type of the parameter's value. Use the kDataType constants. |
| ParamSize: | An integer value represents parameter's value size. |
| ParamPrecision: | An integer value represents parameter's value precision. |
| ParamScale: | An integer value represents parameter's value scale. |
| DirType: | Type of the parameter. Use the kParamDirType* constants. |

Returns a new SQLParamMBS object on success or nil on any error.

Normally you should not create parameters by yourself. The Library automatically detects whether the command has parameters in terms of the command text and implicitly creates a set of SAParam objects.

Nevertheless, if you call CreateParam explicitly you have to delete all SAParam objects created automatically by the Library before. Use DestroyParams method before the first call of CreateParam method.
See also:

- 175.15.15 CreateParam(name as string, ParamType as Integer, NativeType as Integer, ParamSize as Integer, ParamPrecision as Integer, ParamScale as Integer, DirType as Integer=0) as SQLParamMBS 25260

### 175.15.15 CreateParam(name as string, ParamType as Integer, NativeType as Integer, ParamSize as Integer, ParamPrecision as Integer, ParamScale as Integer, DirType as Integer=0) as SQLParamMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates parameter associated with the specified command.
**Notes:**

Parameters

| | |
|---|---|
| name: | A string representing the name of parameter. |
| ParamType: | Type of the parameter's value. Use the kDataType constants. |
| ParamSize: | An integer value represents parameter's value size. |
| ParamPrecision: | An integer value represents parameter's value precision. |
| ParamScale: | An integer value represents parameter's value scale. |
| DirType: | Type of the parameter. Use the kParamDirType* constants. |

Returns a new SQLParamMBS object on success or nil on any error.

Normally you should not create parameters by yourself. The Library automatically detects whether the command has parameters in terms of the command text and implicitly creates a set of SAParam objects.

Nevertheless, if you call CreateParam explicitly you have to delete all SAParam objects created automatically by the Library before. Use DestroyParams method before the first call of CreateParam method.
See also:

- 175.15.14 CreateParam(name as string, ParamType as Integer, DirType as Integer=0) as SQLParamMBS 25259

### 175.15.16 DB2SQLExecDirect(sql as string)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Executes an SQL command directly without any preprocessing in the plugin.
**Example:**

```
dim cmd as new SQLCommandMBS // your command
dim con as new SQLConnectionMBS // your connection

// now use an API function
const sql = "some sql command"
cmd.DB2SQLExecDirect sql
```

**Notes:** Lasterror is set.

### 175.15.17 DB2SQLRowCount as Int64

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the affected number of rows for the last operation.
**Notes:** Lasterror is set.

### 175.15.18 DestroyParams

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Destroys all parameters associated with the specified command.
**Notes:**

DestroyParams method destroys all parameters either created automatically by the Library or by user.

Normally you should not create and delete parameters by yourself. The Library automatically detects whether the command has parameters, implicitly creates a set of SAParam objects and then deletes them in SACommanddestructor. But if you have some reason to create parameters explicitly use CreateParam method and then call DestroyParams method to delete all parameters after your work with parameters is over.

### 175.15.19 Execute

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Executes the current command.
**Example:**

```
// your connection
dim con as SQLConnectionMBS
dim SQL as string = "Insert into test_tbl(fid, fvarchar20) values(:id, :name)"

// create command object
dim cmd as new SQLCommandMBS(con, sql)

// assign values by name of parameter:
cmd.Param("id").setAsLong(2)
cmd.Param("name").setAsString(new SQLStringMBS("Some string (2)"))

// Insert first row
cmd.Execute
```

**Notes:**

Use the Execute method to execute the query or stored procedure specified in the command text. Execute method calls Prepare method implicitly if needed. If the command has input parameters, they should be bound before calling Execute method. Input parameters represented by SAParam object. To bind input variables assign a value to SAParam object returning by Param or ParamByIndex methods.

A command (an SQL statement or procedure) can have a result set after executing. To check whether a result set exists use isResultSet method. If result set exists, a set of SAField objects is created after command execution. Rows from the result set can be fetched one by one using FetchNext method. To get field description or value use Field method.

Output parameters represented by SAParam objects. They are available after command execution. To get parameter description or value use Param or ParamByIndex methods.

### 175.15.20 ExecuteCommand(SQLCommand as string, CommandType as Integer=0)

MBS SQL Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Executes the given command.
**Notes:**

This is a convenience function.
Internally it calls setCommandText with the given command and calls Execute.

All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.

### 175.15.21 ExecuteCommandMT(SQLCommand as string, CommandType as Integer=0)

MBS SQL Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Executes the given command.
**Notes:**

This is a convenience function.
Internally it calls setCommandText with the given command and calls Execute.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.

### 175.15.22 ExecuteMT

MBS SQL Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Executes the current command.
**Notes:**

Use the Execute method to execute the query or stored procedure specified in the command text. Execute method calls Prepare method implicitly if needed. If the command has input parameters, they should be bound before calling Execute method. Input parameters represented by SAParam object. To bind input variables assign a value to SAParam object returning by Param or ParamByIndex methods.

A command (an SQL statement or procedure) can have a result set after executing. To check whether a result set exists use isResultSet method. If result set exists, a set of SAField objects is created after command execution. Rows from the result set can be fetched one by one using FetchNext method. To get field description or value use Field method.

Output parameters represented by SAParam objects. They are available after command execution. To get parameter description or value use Param or ParamByIndex methods.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

### 175.15.23 FetchFirst as boolean

MBS SQL Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Fetches first row from a result set.
**Notes:**

Same as FetchNext, but jumps to the first row.
Returns true if the row was fetched; otherwise false.

Not supported for Interbase and SQLite.

When you cache the result set, you can always move within the result set.

### 175.15.24 FetchLast as boolean

MBS SQL Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Fetches last row from a result set.
**Notes:**

Same as FetchNext, but jumps to the last row.
Returns true if the row was fetched; otherwise false.

Not supported for Interbase and SQLite.

When you cache the result set, you can always move within the result set.

### 175.15.25 FetchNext as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Fetches next row from a result set.
**Notes:**

Returns true if the next row was fetched; otherwise false .

Use FetchNext method to fetch row by row from the result set.

Each column of fetched row is represented by SAField object. If a result set exists after the last command execution, a set of SAField objects is created implicitly. To check whether a result set exists use isResultSet method. FetchNext method updates value parts of SAField objects.

To get field description or value use Field method.

When you cache the result set, you can always move within the result set.

### 175.15.26 FetchPos(offset as Integer, relative as boolean = false) as boolean

MBS SQL Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Fetches a row by index.
**Notes:**

Returns true if the row was fetched; otherwise false.
You may need to request recordset to be scrollable to have this work.
For that, please set Option("Scrollable") = "true" before doing the query.

When you cache the result set, you can always move within the result set.

### 175.15.27 FetchPrior as boolean

MBS SQL Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Fetches previous row from a result set.
**Notes:**

Returns true if the row was fetched; otherwise false.
Same as FetchNext, just going back inside the result set.

Not supported for Interbase and SQLite.

When you cache the result set, you can always move within the result set.

### 175.15.28 Field(index as Integer) as SQLFieldMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the column specified by its position in the result set.
**Example:**

```
dim c as SQLCommandMBS // your command object

// get field by name
dim f1 as SQLFieldMBS = c.Field("FirstName")

// get field by Index
dim f2 as SQLFieldMBS = c.Field(1)
```

**Notes:**

index: A one-based field number in a result set.

Use Field method to access a field by its name or position in the result set.
For Cached result sets, please use Value() function to get values.

Using an index smaller than 1 and greater then the value returned by FieldCount method will result in a failed assertion.

A set of SAField objects creates implicitly after the command execution if the result set exists.SAField object contains full information about a column: name, type, size, value.

Raises OutOfBoundsException exception if index parameter is out of range.
See also:

- 175.15.29 Field(name as string) as SQLFieldMBS 25266

### 175.15.29 Field(name as string) as SQLFieldMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the column specified by its name in the result set.

**Example:**

```
dim c as SQLCommandMBS // your command object

// get field by name
dim f1 as SQLFieldMBS = c.Field("FirstName")

// get field by Index
dim f2 as SQLFieldMBS = c.Field(1)
```

**Notes:**

name: A string that represents a name of the requested field.

Returns a reference to a SAField object.

Use Field method to access a field by its name or position in the result set.
For Cached result sets, please use Value() function to get values.

Using a non-existent field name will throw an exception.

A set of SAField objects creates implicitly after the command execution if the result set exists.SAField object contains full information about a column: name, type, size, value.
See also:

- 175.15.28 Field(index as Integer) as SQLFieldMBS 25266

### 175.15.30 FieldExists(name as string) as Boolean

MBS SQL Plugin, Plugin Version: 21.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Checks whether a field exists.
**Notes:** Returns true if field is found or false if not.

### 175.15.31 FieldNames as String()

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns an array with all the field names for quick inspection.
**Example:**

```
dim cmd as SQLCommandMBS // your command
```

```
dim FieldNames() as String = cmd.FieldNames
```

### 175.15.32 Open

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens the specified command object.
**Notes:**

Use the Open method to open the command explicitly.

A command will be implicitly opened by any method that needs an open command, therefore you don't have to call it explicitly.

To test whether a command is opened use isOpened method.

### 175.15.33 Param(ID as Integer) as SQLParamMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the command parameter specified by its position.
**Notes:**

ID: A position of parameter specified in the command text. Normally position is a number stated in the command text after a colon (for example, 1 for :1, 5 for :5).

Returns a reference to a SAParam object which is only valid as long as the param object is not deleted by the library.

Use Param method to access a parameter by its name or position (in SQL statement). If, for example, you want to walk through all the parameters use ParamByIndex method.

If parameters were not created before calling Param method the Library creates them implicitly (can query native API if needed and therefore can throw exception on error) and then returns the specified parameter.

Passing a value of name or position which does not specified in the command text will throw an exception.

SAParam object contains full information about a parameter: name, type, size, etc. Values for the input parameters can be assigned to SAParam object.
See also:

• 175.15.34 Param(name as string) as SQLParamMBS 25269

### 175.15.34 Param(name as string) as SQLParamMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the command parameter specified by its name.
**Example:**

```
// your connection
dim con as SQLConnectionMBS
dim SQL as string = "Insert into test_tbl(fid, fvarchar20) values(:id, :name)"

// create command object
dim cmd as new SQLCommandMBS(con, sql)

// assign values by name of parameter:
cmd.Param("id").setAsLong(2)
cmd.Param("name").setAsString(new SQLStringMBS("Some string (2)"))

// Insert first row
cmd.Execute
```

**Notes:**

Name: A string that represents a name of the requested parameter. Normally name is a string stated in the command text after a colon (for example, 'city' for :city, 'my city' for :"my city") or a parameter name in a stored procedure or function.

Returns a reference to a SAParam object which is only valid as long as the param object is not deleted by the library.

Use Param method to access a parameter by its name or position (in SQL statement). If, for example, you want to walk through all the parameters use ParamByIndex method.

If parameters were not created before calling Param method the Library creates them implicitly (can query native API if needed and therefore can throw exception on error) and then returns the specified parameter.

Passing a value of name or position which does not specified in the command text will throw an exception.

SAParam object contains full information about a parameter: name, type, size, etc. Values for the input parameters can be assigned to SAParam object.
See also:

- 175.15.33 Param(ID as Integer) as SQLParamMBS 25268

### 175.15.35 ParamByIndex(index as Integer) as SQLParamMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the command parameter specified by index.
**Notes:**

Index: A zero-based index of the requested parameter in the array of SAParam objects. It must be greater than or equal to 0 and 1 less than the value returned by ParamCount method.

Returns a reference to a SAParam object.

Normally you should use Param method to access a parameter by its name or position (in SQL statement). ParamByIndex method can be used if, for example, you want to walk through all the parameters.

If parameters were not created before calling ParamByIndex method the Library creates them implicitly (can query native API if needed and therefore can throw exception on error) and then returns the specified parameter.

Passing a negative value of index or a value greater or equal than the value returned by ParamCount method will result in a failed assertion.

SAParam object contains full information about a parameter: name, type, size, etc. Values for the input parameters can be assigned to SAParam object.

Raises OutOfBoundsException exception if index parameter is out of range.

### 175.15.36 PostgreSQLField(RecordIndex as integer, FieldIndex as integer) as string

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries a field by index for the row with the RecordIndex.
See also:

- 175.15.37 PostgreSQLField(RecordIndex as integer, FieldName as string) as string 25271

### 175.15.37 PostgreSQLField(RecordIndex as integer, FieldName as string) as string

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries a field by name for the row with the RecordIndex.
See also:

- 175.15.36 PostgreSQLField(RecordIndex as integer, FieldIndex as integer) as string 25270

### 175.15.38 PostgreSQLFieldCount as Integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of fields in the result.

### 175.15.39 PostgreSQLRowCount as Integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of records in the result.

### 175.15.40 Prepare

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Prepares command before execution.
**Notes:**

Prepare method compiles the command, but does not execute it. The method detects syntax errors in command text and verifies the existence of database objects.

Execute method calls Prepare method implicitly if needed, therefore you don't have to call it explicitly.

### 175.15.41 setCommandText(SQLCommand as string, CommandType as Integer = 0)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the command text.
**Example:**

```
dim s as new SQLCommandMBS

s.setCommandText "select * from test"

MsgBox s.CommandText
```

**Notes:**

SQLCommand: A string which represents command text string (an SQL statement or a stored procedure name).
CommandType: The type of command like kCommandTypeUnknown, kCommandTypeSQLStatement, kCommandTypeSQLStatementRaw or kCommandTypeStoredProcedure.

It's not necessary to set a command type explicitly, because it is defined automatically in terms of command text string. But if you still have any reason to do it, use one of the kCommandType* constants. To get command type use CommandType method.

### 175.15.42 SetParameters(Params as dictionary)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the parameters based on the keys and values in the dictionary.
**Example:**

```
dim con as SQLConnectionMBS // your connection
dim pic as picture // some picture

// get picture data
dim jpegData as MemoryBlock = pic.GetData(Picture.FormatJPEG, 80)

// parse a SQL command
dim sql as string = "Insert into BlobTest(name, image) values (:name, :image)"
dim cmd as new SQLCommandMBS(con, sql)

dim d as new Dictionary
// set by param index
d.Value(0) = "test.jpg"
// set by param name
d.Value("image") = jpegData

// set all parameters together
cmd.SetParameters d
cmd.Execute
```

**Notes:**

Keys can be String, Text or numeric types. Text and String are used to pick parameters by name. Numeric values are used to pick parameter by index (zero based).
MemoryBlock and Strings without text encoding are converted to byte values (BLOB).
Texts and Strings with encoding are converted to text values.
Raises exceptions if you pass anything which is not recognized.
Other types are translated as good as possible.

Raises OutOfBoundsException exception if index parameter is out of range.

### 175.15.43 Value(index as Integer) as SQLValueReadMBS

MBS SQL Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the value specified by its position in the result set.
**Example:**

```
dim c as SQLCommandMBS // your command object

// get field by name
dim f1 as SQLValueReadMBS = c.Value("FirstName")

// get field by Index
dim f2 as SQLValueReadMBS = c.Value(1)
```

**Notes:**

You can use Value() to get values for normal or cached result sets.

index: A one-based field number in a result set.

Use Value method to access a field by its name or position in the result set.
For Cached result sets, please use Value() function to get values.

Using an index smaller than 1 and greater then the value returned by FieldCount method will result in a failed assertion.

A set of SAField objects creates implicitly after the command execution if the result set exists. SAField object contains full information about a column: name, type, size, value.

Raises OutOfBoundsException exception if index parameter is out of range.

See also:

- 175.15.44 Value(name as string) as SQLValueReadMBS 25274

### 175.15.44 Value(name as string) as SQLValueReadMBS

MBS SQL Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the value specified by its name in the result set.
**Example:**

```
dim c as SQLCommandMBS // your command object

// get value by name
dim f1 as SQLValueReadMBS = c.Value("FirstName")

// get value by Index
dim f2 as SQLValueReadMBS = c.Value(1)
```

**Notes:**

You can use Value() to get values for normal or cached result sets.

name: A string that represents a name of the requested field.

Returns a reference to a SAValueRead object.

Use Value method to access a field by its name or position in the result set.
Using a non-existent field name will throw an exception.

A set of SAField objects creates implicitly after the command execution if the result set exists.SAField object contains full information about a column: name, type, size, value.
See also:

- 175.15.43 Value(index as Integer) as SQLValueReadMBS 25273

### 175.15.45 Properties

### 175.15.46 CommandCount as Integer

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries number of current command objects.
**Notes:**

This method should help you find leaked objects by keeping track of current count from the plugin perspective.
This includes SQLCommandMBS and RecordSet objects.
(Read only property)

### 175.15.47 CommandText as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Gets the command text associated with the SACommand object.
**Example:**

```
dim s as new SQLCommandMBS(nil, "select * from test")

MsgBox s.CommandText
```

**Notes:**

Use the CommandText method to return the command text declared in SACommand constructor or setCommandText method.

All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.
(Read and Write property)

### 175.15.48 CommandType as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Gets the command type currently associated with the SACommand object.
**Notes:**

One of the following values from SACommandType_t enum:

- kCommandTypeUnknown Command type is not defined. Library will detect command type automatically when needed.
- kCommandTypeSQLStmt Command is an SQL statement.
- kCommandTypeSQLStmtRaw Command is an SQL statement that mustn't be interpreted by SQLAPI++.

- kCommandTypeStoredProc Command is a stored procedure or a function.

Remarks

The command type can be explicitly set in SACommand constructor and setCommandText method, but it's not necessary to do it.

The CommandTypemethod returns the command type value that was specified in SACommand constructor or setCommandText method. If you declared the command type value as kCommandTypeUnknown (the default value) then command type is detected by the Library and the CommandType method returns this detected value.
(Read only property)

### 175.15.49 Connection as SQLConnectionMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The connection for the command.
**Notes:**

When you set the connection on a command object that already has associated connection, the previous association will be correctly discarded (with closing opened command if needed) and new connection will be set.

If you attempt to call any method on a SACommand object that requires database access with no valid connection, an error occurs.
(Read and Write property)

### 175.15.50 FieldCount as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the number of fields (columns) in a result set.
**Notes:**

FieldCount method returns the number of fields created implicitly after the command execution if a result set exists.

A field is represented by SAField object. You can get field value and description using Field method.
(Read only property)

### 175.15.51 Fields as Dictionary

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Provides dictionary with all fields.
**Notes:**

This dictionary should help for debugging to inspect all fields and their text value.
(Read only property)

### 175.15.52 hasCache as Boolean

MBS SQL Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether cache is active.
**Notes:** (Read only property)

### 175.15.53 isExecuted as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this command was already executed.
**Notes:** (Read only property)

### 175.15.54 isExecuting as Boolean

MBS SQL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this command is executing.
**Notes:**

You only see this true if you use threaded queries and look on the property from another thread.
(Read only property)

### 175.15.55 isOpened as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns true if the SACommand object is opened; otherwise false.
**Notes:** (Read only property)

### 175.15.56 isResultSet as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Tests whether a result set exists after the command execution.
**Notes:**

Returns true if the result set exists; otherwise false.
(Read only property)

### 175.15.57 Options as Dictionary

MBS SQL Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a dictionary with all options.
**Notes:**

For debugging, it may be useful to inspect options in debugger.
(Read only property)

### 175.15.58 ParamCount as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the number of parameters associated with the SACommand object.
**Notes:**

ParamCount method returns the number of parameters created explicitly by using CreateParam method or (if parameters were not created before) creates them implicitly (can query native API if needed and therefore can throw exception on error) and returns the number of created parameters.

Command parameter is represented by SAParam object. You can look SAParam objects through and assign their values with Param and ParamByIndex methods.
(Read only property)

### 175.15.59 Parameters as Dictionary

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Provides dictionary with all parameters.
**Notes:**

This dictionary should help for debugging to inspect all parameters and their text value.
(Read only property)

### 175.15.60 RowsAffected as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the number of rows affected by the last insert/update/delete command execution.
**Example:**

```
dim con as SQLConnectionMBS // your connection

dim sql as string = "UPDATE Test SET MyField=1"
dim c as new SQLCommandMBS(con, sql)

c.Execute

MsgBox str(c.RowsAffected)
```

**Notes:** (Read only property)

### 175.15.61 Tag as Variant

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tag property.
**Example:**

```
dim c as SQLCommandMBS // your command object

// store reference to window/control, so we have it available in events
c.Tag = self
```

**Notes:**

You can store here whatever you like.
(Read and Write property)

### 175.15.62 Option(name as string) as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A string value of a specific command option.

**Example:**

```
dim cmd as SQLCommandMBS // your command

// turn on auto cache
cmd.Option("AutoCache") = "true"
```

**Notes:**

see also:
https://www.sqlapi.com/ApiDoc/class_s_a_command.html
(Read and Write computed property)

### 175.15.63 Events

### 175.15.64 Trace(traceInfo as Integer, SQL as string)

MBS SQL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event to trace SQL commands.

### 175.15.65 Working

MBS SQL Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called while the ExecuteMT and ExecuteCommandMT methods are running.

### 175.15.66 Constants

### 175.15.67 kCommandTypeSQLStatement = 1

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the constants for the command type.
**Notes:** Command is an SQL statement.

### 175.15.68 kCommandTypeSQLStatementRaw = 2

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the constants for the command type.
**Notes:** Command is an SQL statement that mustn't be interpreted by SQLAPI.

### 175.15.69 kCommandTypeStoredProcedure = 3

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the constants for the command type.
**Notes:** Command is a stored procedure or a function.

### 175.15.70 kCommandTypeUnknown = 0

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the constants for the command type.
**Notes:** Used by default. Library detects command type automatically.

### 175.15.71 kOptionPreFetchRows = "PreFetchRows"

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the option constants.
**Example:**

```
dim cmd as new SQLCommandMBS
// do something

dim nBulkSize as Integer = 1000
cmd.Option(SQLCommandMBS.kOptionPreFetchRows) = str(nBulkSize)
```

### 175.15.72 kParamDirTypeInput = 0

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the parameter direction type constants.
**Notes:** Input parameter.

### 175.15.73 kParamDirTypeInputOutput = 1

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the parameter direction type constants.
**Notes:** Input/output parameter.

### 175.15.74 kParamDirTypeOutput = 2

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the parameter direction type constants.
**Notes:** Output parameter.

### 175.15.75 kParamDirTypeReturn = 3

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the parameter direction type constants.
**Notes:** Returning parameter.

# 175.16 class SQLConnectionMBS

## 175.16.1 class SQLConnectionMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a SQL Plugin Database connection.
**Example:**

```
dim con as new SQLConnectionMBS

try

// where is the library?
con.SetFileOption con.kOptionLibraryMySQL, SpecialFolder.UserHome.Child("libmysqlclient.dylib")

// connect to database
// in this example it is Oracle,
// but can also be Sybase, Informix, DB2
// SQLServer, InterBase, SQLBase and ODBC

dim server as string = "192.168.1.80,3306@test"

con.Connect(server,"root","",SQLConnectionMBS.kMySQLClient)

MsgBox "We are connected!"

// Disconnect is optional
// autodisconnect will ocur in destructor if needed
con.Disconnect

msgbox "We are disconnected!"

catch r as RuntimeException
MsgBox r.message

// SAConnection::Rollback()
// can also throw an exception
// (if a network error for example),
// we will be ready
try

// on error rollback changes
con.Rollback

catch rr as runtimeexception
MsgBox rr.message
end try
```

end try

**Notes:**

Supported databases: CubeSQL, Centura SQLBase, DB2, DuckDB, Firebird, Informix, InterBase, MariaDB, Microsoft Access, Microsoft SQL Server, MySQL, ODBC, Oracle Database Server, PostgreSQL, SQL Anywhere, SQLite, SQLCipher and Sybase.
Connect to Microsoft Access, FileMaker Server (or Pro), Microsoft Visual FoxPro and others via ODBC.

With Xojo 2013r1, you only need a database server license from Xojo, Inc. if you use the SQLDatabaseMBS class. The SQLConnectionMBS class does not require this license. But some features like getting a recordset do need the license as they refer to the SQLDatabaseMBS class.

Please free all RecordSets and SQLCommand objects before you close the SQLConnection or the SQLDatabase. The plugin keeps references from RecordSets and SQLCommand to prevent automatic destruction of the database connection. If you close a database connection while you have RecordSets and SQLCommand in use, things may go wrong.

The plugin can cache the recordset locally. To enable you can call SQLCommandMBS.Cache or use the Option("AutoCache") = "true" on either command or connection or database objects. The plugin will than fetch all records and store them in memory. After this you can walk over the recordset and use FetchPos, FetchFirst, FetchLast, FetchPrev and FetchNext to locate the rows you need. When you call Field() you always get last row, but to read from cached result set, please use Value() function. When using RecordSet, the values are read via Value() functions automatically.

You can use InternalPostgreSQLLibraryMBS or InternalSQLiteLibraryMBS if you like to use our built in SQLite or PostgreSQL database libraries.

see also
https://www.sqlapi.com/ApiDoc/class_s_a_connection.html

The class pings the database every minute by checking whether it's alive and to avoid server dropping connection. This can be disabled by setting Option("Ping") = "false". Ping is not used for SQLite.

MBS Database connections are implemented via SQLConnectionMBS and SQLCommandMBS classes. We provide a thin layer on top with SQLDatabaseMBS class to make it compatible to the Xojo database class. And when you use SQLDatabaseMBS, you can always get the matching SQLConnectionMBS objet via Connection property. Instead of SQLCommandMBS class, you may just use SelectSQL/ExecuteSQL or older SQLSelect/SQLExecute functions.

We have a collection of library files here:
https://www.monkeybreadsoftware.de/xojo/download/plugin/Libs/

### 175.16.8 Methods

### 175.16.9 BeginTransaction

MBS SQL Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Begins a transaction.
**Notes:**

This method does nothing. Why?
Well, if auto commit is on, you don't need to call this.
If auto commit is off, we call BeginTransaction for you, so if you call this method you would call it a second time and get an error.
We have this method for compatibility to other SQL database classes from Xojo.

### 175.16.10 CancelAllCommands

MBS SQL Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Cancel all commands for the connection.
**Notes:** This loops over the list of commands associated with this connection and calls Cancel on them.

### 175.16.11 Commands as SQLCommandMBS()

MBS SQL Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries list of all command objects related to the connection.

### 175.16.12 Commit

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Saves any changes and ends the current transaction.
**Notes:**

Use Commit method to write transaction changes permanently to a database. It commits the work of all commands that associated with that connection.

All changes to the database since the last commit are made permanent and cannot be undone. Before a commit, all changes made since the start of the transaction can be rolled back using Rollback method.

### 175.16.13 Connect(DBString as string, UserID as string, Password as string, client as Integer = 0)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens the connection to a data source.
**Example:**

```
dim con as SQLConnectionMBS// your connection

// some calls for MS SQL Server:
con.Connect("srv2@pubs","", "", SQLConnectionMBS.kSQLServerClient)
con.Connect("@pubs", "", "", SQLConnectionMBS.kSQLServerClient)
con.Connect("BEDLAM\SQL2005EX_EN@pubs", "", "", SQLConnectionMBS.kSQLServerClient)
con.Connect("BEDLAM\SQLEXPRESS@master", "", "", SQLConnectionMBS.kSQLServerClient)

// for MySQL:

con.Connect("192.168.1.80,3306@test","root","password", SQLConnectionMBS.kMySQLClient)

// for Postgre SQL:

con.Connect("somedb", "name", "password",SQLConnectionMBS.kPostgreSQLClient)
// with options
con.Connect("127.0.0.1,5432@dbname=postgres connect_timeout=10 sslmode=require", "name", "password",SQL-
ConnectionMBS.kPostgreSQLClient)
```

```
// for SQLite:

con.Connect("/test.db", "", "",SQLConnectionMBS.kSQLiteClient)
```

**Notes:**

| | |
|---|---|
| DBString: | Name of database this connection will connect to (see Server specific notes). |
| UserID: | A string containing a user name to use when establishing the connection (see Server specific notes). |
| Password: | A string containing a password to use when establishing the connection. |
| client: | Optional. One of the following values from k*Client constants. |

Using the Connect method on a SAConnection object establishes the physical connection to a data source. After this method successfully completes, the connection is live and you can issue commands against it and process the results.

If you use the default value of Client parameter, you should set Client before using Connect.

To check whether a connection established use isConnected method. To check whether a connection is broken or not use isAlive method.

see also for server specific notes:
https://www.sqlapi.com/ApiDoc/class_s_a_connection.html

For IPv6 we changed plugin to use , instead of : for the port separator. So please use , to separate port from IP or host.

For Firebird, if you connect to a database and you have 32/64bit mismatch, you get error number 3.

See Option() for various options you can set before connecting.
e.g. c.Option("SQLiteVFSFlags") = "1" for SQLite for read only access.

Raises OutOfBoundsException exception if client parameter is out of range.

### 175.16.14 ConnectMT(DBString as string, UserID as string, Password as string, client as Integer = 0)

MBS SQL Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens the connection to a data source.
**Notes:**

| | |
|---|---|
| DBString: | Name of database this connection will connect to (see Server specific notes). |
| UserID: | A string containing a user name to use when establishing the connection (see Server specific notes). |
| Password: | A string containing a password to use when establishing the connection. |
| client: | Optional. One of the following values from k*Client constants. |

Using the Connect method on a SAConnection object establishes the physical connection to a data source. After this method successfully completes, the connection is live and you can issue commands against it and process the results.

If you use the default value of Client parameter, you should set Client before using Connect.

To check whether a connection established use isConnected method. To check whether a connection is broken or not use isAlive method.

see also for server specific notes:
https://www.sqlapi.com/ApiDoc/class_s_a_connection.html

For IPv6 we changed plugin to use , instead of : for the port separator. So please use , to separate port from IP or host.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

The MT method will not trigger WillConnect and DidConnect events.
Raises OutOfBoundsException exception if client parameter is out of range.

### 175.16.15 CubeSQLLastInsertID as Int64

MBS SQL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the last auto increment value from last insert command.

**Notes:** Only for CubeSQL connections. May raise error if not available.

### 175.16.16 CubeSQLReceiveData(byref data as String, byref IsEndChunk as Boolean) as Boolean

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Receives a data chunk for file download.
**Notes:**

Returns true on success.
Data is set with data and IsEndChunk is set to true for last chunk.

### 175.16.17 CubeSQLSendData(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sends data chunk for file upload.
**Notes:** This is the sendchunk function in CubeSQL.
See also:

- 175.16.18 CubeSQLSendData(data as String) 25290

### 175.16.18 CubeSQLSendData(data as String)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sends data chunk for file upload.
**Notes:** This is the sendchunk function in CubeSQL.
See also:

- 175.16.17 CubeSQLSendData(data as MemoryBlock) 25290

### 175.16.19 CubeSQLSendEndData

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sends end data packet.
**Notes:** This is the send_enddata function in CubeSQL.

### 175.16.20 Disconnect

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Disconnects the connection from the database.
**Notes:** Closes all commands objects and RecordSets.

### 175.16.21 InsertRecord(TableName as String, Record as Dictionary)

MBS SQL Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Convenience function to insert a record.
**Example:**

```
dim con as SQLConnectionMBS // your database connection

dim d as new Dictionary

d.Value("ID")=2
d.Value("text")="test insert"
d.Value("other")="Just a test"

con.InsertRecord("test_tbl", d)
```

**Notes:**

The plugin builds for you SQL statement with prepared statement and runs the insert command with values. Lasterror is set or exception raised as with SQLExecute.

Internally this uses a prepared statement. You can check the generated statement via LastStatement property.

### 175.16.22 Listen

MBS SQL Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Start listening for notifications.
**Notes:**

Works only for PostgresSQL Client.
Please set client or connect before calling this method.

### 175.16.23 MySQLInsertID as Int64

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the last auto increment value from last insert command.
**Notes:**

Please query value right after doing Insert. This value is reset when you call commit.

see also
http://dev.mysql.com/doc/refman/5.1/en/mysql-insert-id.html

### 175.16.24 Rollback

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Cancels any changes made during the current transaction and ends the transaction.
**Notes:**

Rollback method rolls back the database to the state it was in at the completion of the last commit operation. All uncommitted work is undone.

Rollback method rolls back the work of all commands that associated with that connection.

To commit all changes made since the start of the transaction use Commit method.

### 175.16.25 SetFileOption(name as string, file as folderitem)

MBS SQL Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets an option with passing a file path.
**Example:**

```
dim db as new SQLConnectionMBS

// where is the library?
db.SetFileOption SQLConnectionMBS.kOptionLibraryMySQL, SpecialFolder.UserHome.Child("libmysqlclient.dylib")
```

**Notes:** Makes sure the path is correct and you have a 32 or 64-bit library matching the architecture of your application.

### 175.16.26 SQLExecute(command as string, CommandType as Integer = 0)

MBS SQL Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Executes a SQL command and ignores result.
**Notes:**

This is a convenience function.
Internally it creates a SQLCommandMBS with the given command and calls Execute.

All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.

### 175.16.27 SQLExecuteMT(command as string, CommandType as Integer = 0)

MBS SQL Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Executes a SQL command and ignores result.
**Notes:**

This is a convenience function.
Internally it creates a SQLCommandMBS with the given command and calls Execute.

All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

### 175.16.28 SQLiteBackupFinish(Backup as SQLite3BackupMBS) as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Finishes a backup run.
**Notes:**

When BackupStep has returned kErrorDone, or when the application wishes to abandon the backup operation, the application should destroy the SQLite3BackupMBS by passing it to BackupFinish. The BackupFinish interfaces releases all resources associated with the SQLite3BackupMBS object. If BackupStep has not yet returned kErrorDone, then any active write-transaction on the destination database is rolled back. The SQLite3BackupMBS object is invalid and may not be used following a call to BackupFinish.
The value returned by BackupFinish is kErrorOK if no BackupStep errors occurred, regardless or whether or not BackupStep completed. If an out-of-memory condition or IO error occurred during any prior BackupStep

call on the same SQLite3BackupMBS object, then BackupFinish returns the corresponding error code.
A return of kErrorBusy or kErrorLocked from BackupStep is not a permanent error and does not affect the return value of BackupFinish.

### 175.16.29 SQLiteBackupInit(Dest as Variant, DestName as String, Source as Variant, SourceName as String) as SQLite3BackupMBS

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Initializes a backup.
**Notes:**

The backup API copies the content of one database into another. It is useful either for creating backups of databases or for copying in-memory databases to or from persistent files.

see also
http://www.sqlite.org/c3ref/backup_finish.html

Exclusive access is required to the destination database for the duration of the operation. However the source database is only read-locked while it is actually being read; it is not locked continuously for the entire backup operation. Thus, the backup may be performed on a live source database without preventing other users from reading or writing to the source database while the backup is underway.

To perform a backup operation:

- BackupInit is called once to initialize the backup,
- BackupStep is called one or more times to transfer the data between the two databases, and finally
- BackupFinish is called to release all resources associated with the backup operation.

There should be exactly one call to BackupFinish for each successful call to BackupInit.

The D and N arguments to BackupInit(D,N,S,M) are the database connection associated with the destination database and the database name, respectively. The database name is "main" for the main database, "temp" for the temporary database, or the name specified after the AS keyword in an ATTACH statement for an attached database. The S and M arguments passed to BackupInit(D,N,S,M) identify the database connection and database name of the source database, respectively. The source and destination database connections (parameters S and D) must be different or else BackupInit(D,N,S,M) will file with an error.
If an error occurs within BackupInit(D,N,S,M), then nil is returned and an error code and error message are store3d in the destination database connection D. The error code and message for the failed call to BackupInit can be retrieved using the ErrCode and ErrMessage functions. A successful call to BackupInit returns a SQLite3BackupMBS object. The SQLite3BackupMBS object may be used with the BackupStep

and BackupFinish functions to perform the specified backup operation.

Concurrent Usage of Database Handles
The source database connection may be used by the application for other purposes while a backup operation is underway or being initialized. If SQLite is compiled and configured to support threadsafe database connections, then the source database connection may be used concurrently from within other threads.
However, the application must guarantee that the destination database connection is not passed to any other API (by any thread) after BackupInit is called and before the corresponding call to BackupFinish. SQLite does not currently check to see if the application incorrectly accesses the destination database connection and so no error code is reported, but the operations may malfunction nevertheless. Use of the destination database connection while a backup is in progress might also also cause a mutex deadlock.
If running in shared cache mode, the application must guarantee that the shared cache used by the destination database is not accessed while the backup is running. In practice this means that the application must guarantee that the disk file being backed up to is not accessed by any connection within the process, not just the specific connection that was passed to BackupInit.
The SQLite3BackupMBS object itself is partially threadsafe. Multiple threads may safely make multiple concurrent calls to BackupStep. However, the BackupRemaining and BackupPageCount APIs are not strictly speaking threadsafe. If they are invoked at the same time as another thread is invoking BackupStep it is possible that they return invalid values.

Source and Dest can be SQLConnectionMBS or SQLDatabaseMBS. You need to pass source and dest, even if one is self as we give you the option to decide where to pass the current database connection.

### 175.16.30 SQLiteBackupPageCount(Backup as SQLite3BackupMBS) as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the number of pages in total.
**Notes:**

Each call to BackupStep sets two values inside the SQLite3BackupMBS object: the number of pages still to be backed up and the total number of pages in the source databae file. The BackupRemaining and BackupPageCount interfaces retrieve these two values, respectively.
The values returned by these functions are only updated by BackupStep. If the source database is modified during a backup operation, then the values are not updated to account for any extra pages that need to be updated or the size of the source database file changing.

### 175.16.31 SQLiteBackupRemaining(Backup as SQLite3BackupMBS) as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the number of pages remaining.
**Notes:**

Each call to BackupStep sets two values inside the SQLite3BackupMBS object: the number of pages still to be backed up and the total number of pages in the source databae file. The BackupRemaining and BackupPageCount interfaces retrieve these two values, respectively.
The values returned by these functions are only updated by BackupStep. If the source database is modified during a backup operation, then the values are not updated to account for any extra pages that need to be updated or the size of the source database file changing.

### 175.16.32 SQLiteBackupStep(Backup as SQLite3BackupMBS, Pages as Integer) as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Copies up to Pages pages between the source and destination databases specified by SQLite3BackupMBS object.
**Notes:**

If N is negative, all remaining source pages are copied. If BackupStep(B,N) successfully copies N pages and there are still more pages to be copied, then the function resturns kErrorOK. If BackupStep(B,N) successfully finishes copying all pages from source to destination, then it returns kErrorDone. If an error occurs while running BackupStep(B,N), then an error code is returned. As well as kErrorOK and kErrorDone, a call to BackupStep may return kErrorReadOnly, kErrorNoMem, kErrorBusy, kErrorLocked, or an kErrorIOACCESS | kErrorIOXXX extended error code.
The BackupStep might return kErrorReadOnly if the destination database was opened read-only or if the destination is an in-memory database with a different page size from the source database.
If BackupStep cannot obtain a required file-system lock, then the sqlite3_busy_handler | busy-handler function is invoked (if one is specified). If the busy-handler returns non-zero before the lock is available, then kErrorBusy is returned to the caller. In this case the call to BackupStep can be retried later. If the source database connection is being used to write to the source database when BackupStep is called, then kErrorLocked is returned immediately. Again, in this case the call to BackupStep can be retried later on. (If kErrorIOACCESS | kErrorIOXXX, kErrorNoMem, or kErrorReadOnly is returned, then there is no point in retrying the call to BackupStep. These errors are considered fatal.) The application must accept that the backup operation has failed and pass the backup operation handle to the BackupFinish to release associated resources.
The first call to BackupStep obtains an exclusive lock on the destination file. The exclusive lock is not released until either BackupFinish is called or the backup operation is complete and BackupStep returns kErrorDone. Every call to BackupStep obtains a shared lock on the source database that lasts for the duration of the BackupStep call. Because the source database is not locked between calls to BackupStep, the source database may be modified mid-way through the backup process. If the source database is modified by an external process or via a database connection other than the one being used by the backup operation, then the backup will be automatically restarted by the next call to BackupStep. If the source database is modified by the using the same database connection as is used by the backup operation, then the backup database is automatically updated at the same time.

### 175.16.33 SQLiteConnectionHandle as Ptr

MBS SQL Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the current connection reference for the database.
**Notes:** sqlite3 pointer for using in declares.

### 175.16.34 SQLiteEnableLoadExtension(OnOff as boolean)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enables/disables extension loading for the given connection.

### 175.16.35 SQLiteLastInsertRowID as Int64

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns Last Insert Rowid.
**Notes:**

Each entry in an SQLite table has a unique 64-bit signed integer key called the ROWID. The rowid is always available as an undeclared column named ROWID, OID, or _ROWID_ as long as those names are not also used by explicitly declared columns. If the table has a column of type INTEGER PRIMARY KEY then that column is another alias for the rowid.

This routine returns the rowid of the most recent successful INSERT into the database from the database connection in the first argument. If no successful INSERTs have ever occurred on that database connection, zero is returned.

(If an INSERT occurs within a trigger, then the rowid of the inserted row is returned by this routine as long as the trigger is running. But once the trigger terminates, the value returned by this routine reverts to the last value inserted before the trigger fired.)

An INSERT that fails due to a constraint violation is not a successful INSERT and does not change the value returned by this routine. ^Thus INSERT OR FAIL, INSERT OR IGNORE, INSERT OR ROLLBACK, and INSERT OR ABORT make no changes to the return value of this routine when their insertion fails. ^(When INSERT OR REPLACE encounters a constraint violation, it does not fail. The INSERT continues to completion after deleting rows that caused the constraint problem so INSERT OR REPLACE will always change the return value of this interface.)^

For the purposes of this routine, an INSERT is considered to be successful even if it is subsequently rolled back.

This function is accessible to SQL statements via the last_insert_rowid() SQL function.

If a separate thread performs a new INSERT on the same database connection while the LastInsertRowID function is running and thus changes the last insert rowid, then the value returned by LastInsertRowID is unpredictable and might not equal either the old or the new last insert rowid.

### 175.16.36 SQLiteLibVersion as String

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the version string of the SQLite library.

### 175.16.37 SQLiteLoadExtension(file as FolderItem, ByRef ErrorMessage as String) as Integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Loads an SQLite extension library from the named file.
**Notes:**

The LoadExtension interface attempts to load an SQLite extension library contained in the file.

Returns kErrorOk on success and kErrorError if something goes wrong.
Extension loading must be enabled using EnableLoadExtension prior to calling this API, otherwise an error will be returned.
See also:

- 175.16.38 SQLiteLoadExtension(path as String, ByRef ErrorMessage as String) as Integer 25298

### 175.16.38 SQLiteLoadExtension(path as String, ByRef ErrorMessage as String) as Integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Loads an SQLite extension library from the named file.
**Notes:**

The LoadExtension interface attempts to load an SQLite extension library contained in the file.

Returns kErrorOk on success and kErrorError if something goes wrong.
Extension loading must be enabled using EnableLoadExtension prior to calling this API, otherwise an error will be returned.
See also:

• 175.16.37 SQLiteLoadExtension(file as FolderItem, ByRef ErrorMessage as String) as Integer 25298

### 175.16.39 SQLiteMemoryHighwater(reset as boolean = false) as Int64

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries maximum memory usage so far.
**Notes:** Can be reset with reset parameter being true.

### 175.16.40 SQLiteMemoryUsed as Int64

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries memory in use by SQLite.
**Notes:**

This is memory allocated, but not yet freed.
Value is zero until SQLite3 initialized.

### 175.16.41 SQLiteReKey(Key as String) as Integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** You can change the key on a database using the Rekey Function.
**Notes:**

An empty key decrypts the database.

Rekeying requires that every page of the database file be read, decrypted, reencrypted with the new key, then written out again. Consequently, rekeying can take a long time on a larger database.

Most SEE variants allow you to encrypt an existing database that was created using the public domain version of SQLite. This is not possible when using the authenticating version of the encryption extension in see-aes128-ccm. If you do encrypt a database that was created with the public domain version of SQLite, no nonce will be used and the file will be vulnerable to a chosen-plaintext attach. If you call SetKey() immediately after Open when you are first creating the database, space will be reserved in the database for a nonce and the encryption will be much stronger. If you do not want to encrypt right away, call SetKey() anyway, with an empty key, and the space for the nonce will be reserved in the database even though no encryption is done initially.

A public domain version of the SQLite library can read and write an encrypted database with an empty key. You only need the encryption extension if the key is non-empty.

Returns a SQLite error code.

### 175.16.42 SQLiteSetBusyHandler(MaxAttempts as Integer = 5)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Installs busy handler for this connection.
**Notes:**

This routine sets a callback function that might be invoked whenever an attempt is made to open a database table that another thread or process has locked.

The plugin has an busy handler which will wait up to MaxAttemps and yield to other Xojo threads while waiting.
Passing 5 should wait up to 100ms.

There can only be a single busy handler defined for each [ database connection ] . Setting a new busy handler clears any previously set handler.) Note that calling SetBusyTimeout will also set or clear the busy handler.

The busy callback should not take any actions which modify the database connection that invoked the busy handler. Any such actions result in undefined behavior.

### 175.16.43 SQLiteSetBusyTimeout(TimeOutMS as Integer = 20)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This routine sets a busy handler that sleeps for a specified amount of time when a table is locked.
**Notes:**

The handler will sleep multiple times until at least "ms" milliseconds of sleeping have accumulated. ^After at least "ms" milliseconds of sleeping, the handler returns 0 which causes SQLite query to return SQLite Busy or IO Blocked error.

Calling this routine with an argument less than or equal to zero turns off all busy handlers.

(There can only be a single busy handler for a particular database connection any any given moment. If another busy handler was defined (using SetBusyHandler prior to calling this routine, that other busy handler is cleared.)

### 175.16.44 SQLiteSetKey(Key as String) as Integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Applies encryption to a database connection.
**Notes:**

Returns a SQLite error code.

The amount of key material actually used by the encryption extension depends on which variant of SEE you are using. With RC4, the first 256 byte of key are used. With the AES128, the first 16 bytes of the key are used. With AES256, the first 32 bytes of key are used.

If you specify a key that is shorter than the maximum key length, then the key material is repeated as many times as necessary to complete the key. If you specify a key that is larger than the maximum key length, then the excess key material is silently ignored.

The key must begin with an ASCII prefix to specify which algorithm to use. The prefix must be one of "rc4:", "aes128:", or "aes256:". The prefix is not used as part of the key sent into the encryption algorithm. So the real key should begin on the first byte after the prefix.

The string provided to the plugin is used with it's current encoding. So be sure you use right text encoding for what you want. e.g. using "M√ºller" as key in text encoding Windows ANSI will not open a database which used that key in UTF-8 encoding.

The Xojo database encryption in SQLiteDatabase class uses AES-128 OFB.

### 175.16.45 SQLiteTableColumnMetaData(DBName as string, TableName as string, ColumnName as string, byref DataType as string, byref CollationSequence as string, byref NotNull as boolean, byref PrimaryKey as boolean, byref AutoIncrement as Boolean) as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Extract Metadata About A Column Of A Table
**Notes:**

Not available in all sqlite libraries!

This routine returns metadata about a specific column of a specific database table accessible using the database connection handle passed as the first function argument.
The column is identified by the second, third and fourth parameters to this function. The second parameter is either the name of the database (i.e. "main", "temp", or an attached database) containing the specified

table or NULL. If it is NULL, then all attached databases are searched for the table using the same algorithm used by the database engine to resolve unqualified table references.
The third and fourth parameters to this function are the table and column name of the desired column, respectively. Neither of these parameters may be NULL.
Metadata is returned by writing to the memory locations passed as the 5th and subsequent parameters to this function. Any of these arguments may be NULL, in which case the corresponding element of metadata is omitted.

CollationSequence is assigned the Name of default collation sequence. NotNull is set to true if column has a NOT NULL constraint. PrimaryKey is set to true if column is part of the PRIMARY KEY and AutoIncrement is set to true if column is AUTOINCREMENT.

If the specified table is actually a view, an error code is returned.

If the specified column is "rowid", "oid" or "_rowid_" and an INTEGER PRIMARY KEY column has been explicitly declared, then the output parameters are set for the explicitly declared column. (If there is no explicitly declared INTEGER PRIMARY KEY column, then the output parameters are set as follows:

data type: "INTEGER"
collation sequence: "BINARY"
not null: false
primary key: true
auto increment: false

(This function may load one or more schemas from database files. If an error occurs during this process, or if the requested table or column cannot be found, an error code is returned and an error message left in the database connection (to be retrieved using ErrMessage).)

This API is only available if the library was compiled with the SQLITE_ENABLE_COLUMN_METADATA C-preprocessor symbol defined.

### 175.16.46 SQLiteThreadsafe as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Test To See If The Library Is Threadsafe.
**Notes:**

The threadsafe() function returns zero if and only if SQLite was compiled mutexing code omitted due to the SQLITE_THREADSAFE compile-time option being set to 0.

SQLite can be compiled with or without mutexes. When the SQLITE_THREADSAFE C preprocessor

macro is 1 or 2, mutexes are enabled and SQLite is threadsafe. When the SQLITE_THREADSAFE macro is 0, the mutexes are omitted. Without the mutexes, it is not safe to use SQLite concurrently from more than one thread.

Enabling mutexes incurs a measurable performance penalty. So if speed is of utmost importance, it makes sense to disable the mutexes. But for maximum safety, mutexes should be enabled. The default behavior is for mutexes to be enabled.

This interface can be used by an application to make sure that the version of SQLite that it is linking against was compiled with the desired setting of the SQLITE_THREADSAFE macro.

This interface only reports on the compile-time mutex setting of the SQLITE_THREADSAFE flag. If SQLite is compiled with SQLITE_THREADSAFE=1 or =2 then mutexes are enabled by default but can be fully or partially disabled using a call to sqlite3_config() with the verbs SQLITE_CONFIG_SINGLETHREAD, SQLITE_CONFIG_MULTITHREAD, or SQLITE_CONFIG_MUTEX. ^(The return value of the sqlite3_threadsafe() function shows only the compile-time setting of thread safety, not any run-time changes to that setting made by sqlite3_config(). In other words, the return value from sqlite3_threadsafe() is unchanged by calls to sqlite3_config().)^

See the threading mode documentation for additional information.

### 175.16.47 SQLSelect(command as string, CommandType as Integer = 0) as string

MBS SQL Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Executes a SQL command and returns the first field's string value.
**Notes:**

This is a convenience function.
Internally it creates a SQLCommandMBS with the given command and calls Execute.
If the result is a record set, the first field from the first row is returned.
This is basicly useful for commands like "select sqlite_version()".

All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.

### 175.16.48 SQLSelectAsRecordSet(command as string, CommandType as Integer = 0) as RecordSet

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Executes a SQL command and returns the result as RecordSet object.
**Notes:**

This is a convenience function.
Internally it creates a SQLCommandMBS with the given command and calls Execute.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RecordSet functionality.

If Scrollable property is true, the recordset will be requested to be scrollable.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

### 175.16.49 SQLSelectAsRecordSetMT(command as string, CommandType as Integer = 0) as RecordSet

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Executes a SQL command and returns the result as RecordSet object.
**Notes:**

This is a convenience function.
Internally it creates a SQLCommandMBS with the given command and calls Execute.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RecordSet functionality.

If Scrollable property is true, the recordset will be requested to be scrollable.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

### 175.16.50 SQLSelectAsRowSet(command as string, CommandType as integer = 0) as RowSet

MBS SQL Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Executes a SQL command and returns the result as RowSet object.
**Notes:**

This is a convenience function.
Internally it creates a SQLCommandMBS with the given command and calls Execute.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RowSet functionality.

If Scrollable property is true, the RowSet will be requested to be scrollable.

The RowSet may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

For Xojo 2019r2 and newer. See SQLSelectAsRecordSet for older versions.

### 175.16.51 SQLSelectAsRowSetMT(command as string, CommandType as integer = 0) as RowSet

MBS SQL Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Executes a SQL command and returns the result as RowSet object.
**Notes:**

This is a convenience function.
Internally it creates a SQLCommandMBS with the given command and calls Execute.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RowSet functionality.

If Scrollable property is true, the RowSet will be requested to be scrollable.

The RowSet may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will

block, but keep other background threads running.

For Xojo 2019r2 and newer. See SQLSelectAsRecordSetMT for older versions.

### 175.16.52 SQLSelectMT(command as string, CommandType as Integer = 0) as string

MBS SQL Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Executes a SQL command and returns the first field's string value.
**Notes:**

This is a convenience function.
Internally it creates a SQLCommandMBS with the given command and calls Execute.
If the result is a record set, the first field from the first row is returned.
This is basicly useful for commands like "select sqlite_version()".

All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

### 175.16.53 UpdateRecord(TableName as String, Record as Dictionary, Keys as Dictionary)

MBS SQL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Convenience function to update a record.
**Example:**

```
dim con as SQLConnectionMBS // your database connection

dim d as new Dictionary

d.Value("text")="new text"
d.Value("other")="second value"

con.UpdateRecord("test_tbl", d, new dictionary("ID":2))
```

**Notes:**

The plugin builds for you SQL statement with prepared statement and runs the update command with given values for records with given key values.

You can put multiple field names in the keys dictionary.

Lasterror is set or exception raised as with SQLExecute.
Internally this uses a prepared statement. You can check the generated statement via LastStatement property.

### 175.16.54 Properties

### 175.16.55 AutoCommit as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether autocommit is enabled or disabled for the current connection.
**Example:**

```
Dim con as SQLConnectionMBS // your database connection
con.AutoCommit = SQLConnectionMBS.kAutoCommitOn
```

**Notes:**

If autocommit is on, the database is committed automatically after each SQL command. Otherwise, transaction is committed only after Commit calling.
(Read and Write property)

### 175.16.56 Client as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The current DBMS client assigned for the connection.
**Notes:**

Raises OutOfBoundsException exception if value parameter is out of range on setting.
(Read and Write property)

### 175.16.57 ClientVersion as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Gets the DBMS client API version number.
**Notes:**

The higher word contains the major client version (the XX value in the XX.YY version number); the lower word contains the minor client version (the YY value in the XX.YY version number).

If an DBMS client was not set calling ClientVersion method will throw an exception.
(Read only property)

### 175.16.58 ConnectionCount as Integer

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries number of current connection objects.
**Notes:**

This method should help you find leaked objects by keeping track of current count from the plugin perspective.
This includes SQLConnectionMBS and SQLDatabaseMBS objects.
(Read only property)

### 175.16.59 Error as Boolean

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether an error occurred.
**Notes:**

This is set always when an error occurs and cleared if no error happened.
Be aware that the next call to a plugin function may reset error status.
If you look on this property in debugger, it's probably already cleared by the debugger querying a property.
(Read only property)

### 175.16.60 ErrorCode as Integer

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The last error code.
**Notes:**

This is set always when an error occurs and cleared if no error happened.
(Read only property)

### 175.16.61 ErrorMessage as string

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The last error message.
**Notes:**

This is set always when an error occurs and cleared if no error happened.
(Read only property)

### 175.16.62 isAlive as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the database server connection status for a particular connection object.
**Notes:**

Returns true if the database server is active and accessible; otherwise false.
This method uses the safe query execution for most supported DBMS-es. The query uses the well known database table or procedure (mysql_ping is used for MySQL). If the query fails the method returns false.
(Read only property)

### 175.16.63 isConnected as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the connection state for a particular connection object.
**Notes:**

Returns true if connected; otherwise false.
(Read only property)

### 175.16.64 IsolationLevel as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The transaction isolation level.
**Notes:**

Use the kReadCommitted, kReadUncommitted, kRepeatableRead, kSerializable and kLevelUnknown constants.
(Read and Write property)

### 175.16.65 LastStatement as String

MBS SQL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The last executed SQL Statement.
**Notes:** (Read only property)

### 175.16.66 NativeAPI as Variant

MBS SQL Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a set of functions of native DBMS client API.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

Returns a SQLAPIMBS object.
Deprecated in version 19.5 in favor of direct methods in SQLDatabaseMBS and SQLConnectionMBS classes.
(Read only property)

### 175.16.67 Options as Dictionary

MBS SQL Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a dictionary with all options.
**Notes:**

For debugging, it may be useful to inspect options in debugger.
(Read only property)

### 175.16.68 RaiseExceptions as Boolean

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether to raise exceptions.
**Notes:**

Default is true which means we set error, ErrorCode and ErrorMessage properties and than raise SQLErrorExceptionMBS exception.
If you set to false, we don't raise the exception and you have similar behavior as with database class.
We recommend to use exceptions as they are not so easily ignored like an error property being true.
(Read and Write property)

### 175.16.69 Scrollable as Boolean

MBS SQL Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether to make internally created SQLCommand objects scrollable.
**Notes:**

Since plugin version 15.0, Scrollable is false by default.
(Read and Write property)

### 175.16.70 ServerVersion as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Gets the currently connected DBMS server version number.
**Notes:**

The higher word contains the major server version (the XX value in the XX.YY version number); the lower word contains the minor server version (the YY value in the XX.YY version number).
(Read only property)

### 175.16.71 ServerVersionString as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Gets the currently connected DBMS server version string.
**Notes:**

A server version string may contain some useful information about server brand, configuration and so on. It is a good idea to display this information in all your applications.
(Read only property)

### 175.16.72 SQLiteEncryptionKey as String

MBS SQL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The encryption key to use.
**Example:**

```
dim db as new SQLConnectionMBS
db.SQLiteEncryptionKey = "Hello"
```

**Notes:**

This key is applied to the database after connecting. In case of an error, the plugin raises an exception. An empty key can be used for having no encryption.
Alternatively you can use SQLite3MBS.SetKey yourself.

The amount of key material actually used by the encryption extension depends on which variant of SEE you are using. With RC4, the first 256 byte of key are used. With the AES128, the first 16 bytes of the key are used. With AES256, the first 32 bytes of key are used.

If you specify a key that is shorter than the maximum key length, then the key material is repeated as many times as necessary to complete the key. If you specify a key that is larger than the maximum key length, then the excess key material is silently ignored.

The key must begin with an ASCII prefix to specify which algorithm to use. The prefix must be one of "rc4:", "aes128:", or "aes256:". The prefix is not used as part of the key sent into the encryption algorithm. So the real key should begin on the first byte after the prefix. If no prefix is given, we default to AES 128. To be compatible to Xojo, you can use AES128.

The string provided to the plugin is used with it's current encoding. So be sure you use right text encoding for what you want. e.g. using "M√ºller" as key in text encoding Windows ANSI will not open a database which used that key in UTF-8 encoding.

The Xojo database encryption in SQLiteDatabase class uses AES-128 OFB.
(Read and Write property)

### 175.16.73 Tag as Variant

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tag property.
**Notes:**

You can store here whatever you like.
(Read and Write property)

### 175.16.74 VariantsKeepSQLObjects as Boolean

MBS SQL Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether variants should use SQL types.
**Notes:**

If set to true, we return datetime and numeric as SQLDateTimeMBS and SQLNumericMBS objects.

If false, we return them as date and double.
(Read and Write property)

### 175.16.75 Option(name as string) as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A string value of a specific connection or command option.
**Example:**

```
dim c as SQLConnectionMBS // your connection

// for Microsoft SQL use OLEDB, so you don't need native SQL drivers installed...
c.Option("UseAPI") = "OLEDB"
c.Option("SQLNCLI.LIBS") = "sqlsrv32.dll" // Library included in Windows Vista and newer

// for SQLite, set flag to open database file read only:
c.Option("SQLiteVFSFlags") = "1"

// set 10 seconds timeout for MySQL
c.Option("MYSQL_OPT_CONNECT_TIMEOUT") = "10"

// turn on auto cache
c.Option("AutoCache") = "true"

// set connection timeout for ODBC:
c.Option("SQL_ATTR_CONNECTION_TIMEOUT") = "10"
```

**Notes:**

see also:
https://www.sqlapi.com/ApiDoc/class_s_a_connection.html

We have a collection of library files here:
https://www.monkeybreadsoftware.de/xojo/download/plugin/Libs/
(Read and Write computed property)

### 175.16.76 Events

### 175.16.77 DidConnect

MBS SQL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Event called after connection was made.
**Notes:** After we got connected, you can apply various options on the new connection here.

### 175.16.78 PostgresNotification(NotificationName as string, PID as Integer, Extras as String)

MBS SQL Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** A postgresSQL notification was received.
**Notes:** Provides notification name, process ID of app and optional extra information.

### 175.16.79 Trace(traceInfo as Integer, SQL as string, Command as SQLCommandMBS)

MBS SQL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event to trace SQL commands.

### 175.16.80 WillConnect

MBS SQL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Event called before connection is established.
**Notes:** Last chance to set connection options.

### 175.16.81 Working

MBS SQL Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called while the SQLExecuteMT and SQLSelectMT methods are running.

### 175.16.82 Constants

### 175.16.83 kANSILevel0 = 0

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the ANSI level constants.
**Notes:** ANSI Level 0

### 175.16.84 kANSILevel1 = 1

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the ANSI level constants.
**Notes:** ANSI Level 1

### 175.16.85 kANSILevel2 = 2

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the ANSI level constants.
**Notes:** ANSI Level 2

### 175.16.86 kANSILevel3 = 3

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the ANSI level constants.
**Notes:** ANSI Level 3

### 175.16.87 kAutoCommitOff = 0

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the constants for the autocommit property.
**Example:**

```
dim db as SQLConnectionMBS // your database connection

db.AutoCommit = SQLConnectionMBS.kAutoCommitOff
```

**Notes:** Autocommit is off.

### 175.16.88 kAutoCommitOn = 1

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the constants for the autocommit property.
**Example:**

```
dim db as SQLConnectionMBS // your database connection

db.AutoCommit = SQLConnectionMBS.kAutoCommitOn
```

**Notes:** Autocommit is on.

### 175.16.89 kAutoCommitUnknown = -1

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the constants for the autocommit property.
**Notes:** Autocommit unknown

### 175.16.90 kClientNotSpecified = 0

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the database client constants.
**Notes:** Client is not specified.

### 175.16.91 kCubeSQLClient = 13

MBS SQL Plugin, Plugin Version: 18.0.

**Function:** One of the database client constants.
**Notes:** CubeSQL client. (coming soon)

### 175.16.92 kDB2Client = 6

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the database client constants.
**Notes:** DB2 client.

### 175.16.93 kDuckDBClient = 14

MBS SQL Plugin, Plugin Version: 21.2.

**Function:** One of the database client constants.
**Notes:** DuckDB client

### 175.16.94 kErrorBindVarNotFound = 7

MBS SQL Plugin, Plugin Version: 16.0.

**Function:** One of the SQL Plugin error codes.
**Notes:** Bind variable not found.

### 175.16.95 kErrorClientInitFails = 6

MBS SQL Plugin, Plugin Version: 16.0.

**Function:** One of the SQL Plugin error codes.
**Notes:** Initialization failed for client.

### 175.16.96 kErrorClientNotSet = 1

MBS SQL Plugin, Plugin Version: 16.0.

**Function:** One of the SQL Plugin error codes.
**Notes:** Client not set.

### 175.16.97 kErrorClientNotSupported = 2

MBS SQL Plugin, Plugin Version: 16.0.

**Function:** One of the SQL Plugin error codes.
**Notes:** Unsupported client type for this platform.

### 175.16.98 kErrorClientVersionOld = 5

MBS SQL Plugin, Plugin Version: 16.0.

**Function:** One of the SQL Plugin error codes.
**Notes:** Library file is too old.

### 175.16.99 kErrorFieldNotFound = 8

MBS SQL Plugin, Plugin Version: 16.0.

**Function:** One of the SQL Plugin error codes.
**Notes:** Field not found.

### 175.16.100 kErrorGetLibraryVersionFails = 4

MBS SQL Plugin, Plugin Version: 16.0.

**Function:** One of the SQL Plugin error codes.
**Notes:** Failed to query library version.

### 175.16.101 kErrorLoadLibraryFails = 3

MBS SQL Plugin, Plugin Version: 16.0.

**Function:** One of the SQL Plugin error codes.
**Notes:** Failed to load a library. For example path could be wrong or 32/64bit mismatch.

### 175.16.102 kErrorNoMemory = 0

MBS SQL Plugin, Plugin Version: 16.0.

**Function:** One of the SQL Plugin error codes.
**Notes:** Out of memory.

### 175.16.103 kErrorUnknownColumnType = 11

MBS SQL Plugin, Plugin Version: 16.0.

**Function:** One of the SQL Plugin error codes.
**Notes:** Unknown column type.

### 175.16.104 kErrorUnknownDataType = 9

MBS SQL Plugin, Plugin Version: 16.0.

**Function:** One of the SQL Plugin error codes.
**Notes:** Unknown data type.

### 175.16.105 kErrorUnknownParameterType = 10

MBS SQL Plugin, Plugin Version: 16.0.

**Function:** One of the SQL Plugin error codes.
**Notes:** Unknown parameter type.

### 175.16.106 kErrorWrongConversion = 12

MBS SQL Plugin, Plugin Version: 16.0.

**Function:** One of the SQL Plugin error codes.
**Notes:** Failed to convert a value, e.g. string to number.

### 175.16.107 kErrorWrongDatetime = 13

MBS SQL Plugin, Plugin Version: 16.0.

**Function:** One of the SQL Plugin error codes.
**Notes:** Can't convert text to date.

### 175.16.108 kFirebirdClient = 4

MBS SQL Plugin, Plugin Version: 10.4.

**Function:** One of the database client constants.
**Example:**

```
Dim con As New SQLConnectionMBS

try

// where is the library?
Dim LibPath As String = GetFolderItem("FIREBIRD3").child("fbclient.dll").NativePath
System.DebugLog LibPath
```

```
con.Option( con.kOptionLibraryFirebird) = LibPath

// connect to database
// in this example it is Firebird/InterBase,
// but can also be Sybase, Informix, DB2, MySQL
// SQLServer, SQLBase and ODBC

// Read more here: http://www.sqlapi.com/ServerSpecific/InterBase.html

// Please enter values for your server here:

Dim DBFile As FolderItem = GetFolderItem("test.FDB")
Dim ConnectionString As String = DBFile.NativePath

// For local databases, this can be a file name.
// To connect to a database on a remote server using TCP/IP the syntax is <server name>:<filename>.
// To connect to a database on a remote server using NetBEUI, the syntax is \\<server name>\<filename>.
// To connect to a database on a remote server using SPX, the syntax is <server name>@<filename>.

dim username as string = "SYSDBA"
Dim password As String = "masterkey"

con.Connect(ConnectionString, username, password, SQLConnectionMBS.kFirebirdClient)

MsgBox "We are connected!"

// now use database

Catch r As RuntimeException
MsgBox "Failed: "+r.message
end try
```

**Notes:** InterBase/Firebird client.

### 175.16.109 kInformixClient = 7

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the database client constants.
**Notes:** Informix client.

### 175.16.110 kInterBaseClient = 4

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the database client constants.
**Notes:** InterBase/Firebird client.

### 175.16.111 kLevelUnknown = -1

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the isolation level constants.
**Notes:** Unknown

### 175.16.112 kMariaDBClient = 15

MBS SQL Plugin, Plugin Version: 22.3.

**Function:** One of the database client constants.
**Notes:** MariaDB client.

### 175.16.113 kMySQLClient = 9

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the database client constants.
**Notes:** MySQL client.

### 175.16.114 kODBCClient = 1

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the database client constants.
**Notes:** ODBC client.

### 175.16.115 kOptionAPPNAME = "APPNAME"

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** A constant for the options.

### 175.16.116 kOptionLibraryCubeSQL = "CUBESQL.LIBS"

MBS SQL Plugin, Plugin Version: 19.3.

**Function:** One of the option constant to specify the library with the SetFileOption method.
**Example:**

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("cubesql.dll")
con.SetFileOption con.kOptionLibraryCubeSQL, f
```

**Notes:** for CubeSQL.

### 175.16.117 kOptionLibraryDB2 = "DB2CLI.LIBS"

MBS SQL Plugin, Plugin Version: 10.5.

**Function:** One of the option constant to specify the library with the SetFileOption method.
**Example:**

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("db2cli.dll")
con.SetFileOption con.kOptionLibraryDB2, f
```

**Notes:** for DB2.

### 175.16.118 kOptionLibraryDuckDB = "DUCKDB.LIBS"

MBS SQL Plugin, Plugin Version: 21.2.

**Function:** ConstantsGroup: Options to specify the library with SetFileOption
**Example:**

One of the option constant to specify the library with the SetFileOption method.

**Notes:**

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("libduckdb.dylib")
con.SetFileOption con.kOptionLibrarySQLite, f
```

### 175.16.119 kOptionLibraryFirebird = "IBASE.LIBS"

MBS SQL Plugin, Plugin Version: 10.5.

**Function:** One of the option constant to specify the library with the SetFileOption method.
**Example:**

```
dim con as SQLConnectionMBS // your connection
```

```
dim f as FolderItem = GetFolderItem("fbclient.dll")
con.SetFileOption con.kOptionLibraryFirebird, f
```

**Notes:** for Firebird.

### 175.16.120 kOptionLibraryInformix = "INFCLI.LIBS"

MBS SQL Plugin, Plugin Version: 10.5.

**Function:** One of the option constant to specify the library with the SetFileOption method.
**Example:**

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("ICLIT09B.dll")
con.SetFileOption con.kOptionLibraryInformix, f
```

**Notes:** for Informix.

### 175.16.121 kOptionLibraryInterbase = "IBASE.LIBS"

MBS SQL Plugin, Plugin Version: 10.5.

**Function:** One of the option constant to specify the library with the SetFileOption method.
**Example:**

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("ibclient64.dll")
con.SetFileOption con.kOptionLibraryInterbase, f
```

**Notes:** for Interbase.

### 175.16.122 kOptionLibraryMySQL = "MYSQL.LIBS"

MBS SQL Plugin, Plugin Version: 10.5.

**Function:** One of the option constant to specify the library with the SetFileOption method.
**Example:**

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("libmysqlclient.18.dylib")
con.SetFileOption con.kOptionLibraryMySQL, f
```

**Notes:** for MySQL. Library extension on Mac is ".dylib", on Linux ".so" and on Windows ".dll". You get this library with the MySQL download on their homepage.

### 175.16.123 kOptionLibraryODBC = "ODBC.LIBS"

MBS SQL Plugin, Plugin Version: 10.5.

**Function:** One of the option constant to specify the library with the SetFileOption method.
**Example:**

```
dim con as SQLConnectionMBS // your connection

con.Option( con.kOptionLibraryODBC) = "/usr/lib/libiodbc.dylib"
```

**Notes:** for ODBC.

### 175.16.124 kOptionLibraryOracle = "OCI8.LIBS"

MBS SQL Plugin, Plugin Version: 10.5.

**Function:** One of the option constant to specify the library with the SetFileOption method.
**Example:**

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("oci.dll")
con.SetFileOption con.kOptionLibraryOracle, f
```

**Notes:** for Oracle.

### 175.16.125 kOptionLibraryPostgreSQL = "LIBPQ.LIBS"

MBS SQL Plugin, Plugin Version: 10.5.

**Function:** One of the option constant to specify the library with the SetFileOption method.
**Example:**

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("libpq.dll")
con.SetFileOption con.kOptionLibraryPostgreSQL, f
```

**Notes:** for Postgre SQL.

### 175.16.126 kOptionLibrarySeparator = ":"

MBS SQL Plugin, Plugin Version: 10.5.

**Function:** One of the option constant to specify the platform specific path separator.
**Notes:**

Use with SetFileOption to specify multiple file paths for a library.
Has a different value on the different platforms.

### 175.16.127 kOptionLibrarySQLanywhere = "SQLANY.LIBS"

MBS SQL Plugin, Plugin Version: 15.2.

**Function:** One of the option constant to specify the library with the SetFileOption method.
**Example:**

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("dbcapi.dll")
con.SetFileOption con.kOptionLibrarySQLanywhere, f
```

**Notes:** for SQL Anywhere.

### 175.16.128 kOptionLibrarySQLBase = "SQLBASE.LIBS"

MBS SQL Plugin, Plugin Version: 10.5.

**Function:** One of the option constant to specify the library with the SetFileOption method.
**Example:**

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("sqlwntm.dll")
con.SetFileOption con.kOptionLibrarySQLBase, f
```

**Notes:** for SQLbase.

### 175.16.129 kOptionLibrarySQLite = "SQLITE.LIBS"

MBS SQL Plugin, Plugin Version: 10.5.

**Function:** One of the option constant to specify the library with the SetFileOption method.
**Example:**

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("sqlite.dylib")
con.SetFileOption con.kOptionLibrarySQLite, f
```

**Notes:** for SQLite. Can also be the spatialite library.

### 175.16.130 kOptionLibrarySybaseComn = "SYBCOMN.LIBS"

MBS SQL Plugin, Plugin Version: 10.5.

**Function:** OOne of the option constant to specify the library with the SetFileOption method.
**Notes:** for Sybase.

### 175.16.131 kOptionLibrarySybaseCS = "SYBCS.LIBS"

MBS SQL Plugin, Plugin Version: 10.5.

**Function:** One of the option constant to specify the library with the SetFileOption method.
**Example:**

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("libsybcs.dll")
con.SetFileOption con.kOptionLibrarySybaseCS, f
```

**Notes:** for Sybase.

### 175.16.132 kOptionLibrarySybaseCT = "SYBCT.LIBS"

MBS SQL Plugin, Plugin Version: 10.5.

**Function:** One of the option constant to specify the library with the SetFileOption method.
**Example:**

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("libsybct.dll")
con.SetFileOption con.kOptionLibrarySybaseCT, f
```

**Notes:** for Sybase.

### 175.16.133 kOptionLibrarySybaseIntl = "SYBINTL.LIBS"

MBS SQL Plugin, Plugin Version: 10.5.

**Function:** One of the option constant to specify the library with the SetFileOption method.
**Notes:** for Sybase.

### 175.16.134 kOptionLibrarySybaseTCL = "SYBTCL.LIBS"

MBS SQL Plugin, Plugin Version: 10.5.

**Function:** One of the option constant to specify the library with the SetFileOption method.
**Notes:** for Sybase.

### 175.16.135 kOptionWSID = "WSID"

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** A constant for the options.

### 175.16.136 kOracleClient = 2

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the database client constants.
**Notes:**

Oracle client.

For Windows the file is "oci.dll", for Linux libclntsh.so and for Mac OS X libclntsh.dylib.

### 175.16.137 kPostgreSQLClient = 10

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the database client constants.
**Notes:** PostgreSQL client.

### 175.16.138 kReadCommitted = 1

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the isolation level constants.
**Notes:** Read committed.

### 175.16.139 kReadUncommitted = 0

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the isolation level constants.
**Notes:** Read uncommitted.

### 175.16.140 kRepeatableRead = 2

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the isolation level constants.
**Notes:** Repeatable read.

### 175.16.141 kSerializable = 3

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the isolation level constants.
**Notes:** Serializable.

### 175.16.142 kSnapshot = 4

MBS SQL Plugin, Plugin Version: 21.2.

**Function:** One of the isolation level constants.
**Notes:** Changes made in other transactions can not be seen. For Microsoft SQL Server.

### 175.16.143 kSQLAnywhereClient = 12

MBS SQL Plugin, Plugin Version: 18.0.

**Function:** One of the database client constants.
**Notes:** SQL Anywhere client.

### 175.16.144 kSQLBaseClient = 5

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the database client constants.
**Notes:** SQLbase client.

### 175.16.145 kSQLiteClient = 11

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the database client constants.
**Notes:** SQLite client. Or spatialite.

### 175.16.146 kSQLServerClient = 3

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the database client constants.
**Notes:**

Mircosoft SQL Server client.

You may need to download the client packages for accessing SQL Server. Files like the SQLNCLI dll may be missing. You can download for example the Feature Pack for Microsoft SQL Server 2005 from the microsoft download page.

### 175.16.147 kSybaseClient = 8

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the database client constants.
**Notes:** Sybase client.

### 175.16.148 SQLiteInMemory = ":memory:"

MBS SQL Plugin, Plugin Version: 19.2.

**Function:** Connection string for SQLite for a new in-memory database.

## 175.17 class SQLDatabaseMBS

### 175.17.1 class SQLDatabaseMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The database class for the SQL plugin
**Example:**

```
dim db as new SQLDatabaseMBS

// where is the library?
db.SetFileOption SQLConnectionMBS.kOptionLibrarySQLite, getfolderitem("/usr/lib/libsqlite3.0.dylib", folderitem.PathTy
Shell)

// connect to database
// in this example it is SQLite,
// but can also be Sybase, Oracle, Informix, DB2, SQLServer, InterBase, MySQL, SQLBase and ODBC

dim path as string

if TargetMacOS then
path = "/tmp/test.db" // put the database in the temporary folder
else
path = "test.db" // for Windows and Linux in the current folder the application is inside.
end if

db.DatabaseName = "sqlite:"+path

if db.Connect then

MsgBox "We are connected!"

// Disconnect is optional
// autodisconnect will ocur in destructor if needed
db.close

msgbox "We are disconnected!"
end if
```

**Notes:**

You can use the SQL plugin without using Xojo built in database classes if you use the SQLConnectionMBS and SQLCommandMBS classes.

Or you use the SQLDatabaseMBS class which is a subclass of the database class and can be used with Xojo's

RecordSet class. The current implementation is not complete. You can connect with passing the database URL in the DatabaseName property of the SQLDatabaseMBS class. You prefix this URL with the database type you are using.

You can use Execute and Select to run SQL statements. Errors can be queries with the lasterror properties. For the RecordSet, you can get the column count, the column names and values and move to the next row. All the other methods like deleting a record or updating a value are not implemented and you need to use SQL commands to do this.

Supported databases: CubeSQL, Centura SQLBase, DB2, DuckDB, Firebird, Informix, InterBase, MariaDB, Microsoft Access, Microsoft SQL Server, MySQL, ODBC, Oracle Database Server, PostgreSQL, SQL Anywhere, SQLite, SQLCipher and Sybase.
Connect to Microsoft Access, FileMaker Server (or Pro), Microsoft Visual FoxPro and others via ODBC.

As field and table schema functions are not implemented, you can't use this database with the database browser features in the Xojo IDE.
The plugin does not provide RecordCount on RecordSet class. For that you need to make a extra SELECT count(*) query.

With Xojo 2013r1, you only need a database server license from Xojo, Inc. if you use the SQLDatabaseMBS class. The SQLConnectionMBS class does not require this license. But some features like getting a recordset do need the license as they refer to the SQLDatabaseMBS class.

Please free all RecordSets and SQLCommand objects before you close the SQLConnection or the SQLDatabase. The plugin keeps references from RecordSets and SQLCommand to prevent automatic destruction of the database connection. If you close a database connection while you have RecordSets and SQLCommand in use, things may go wrong.

The plugin can cache the recordset locally. To enable you can call SQLCommandMBS.Cache or use the Option("AutoCache") = "true" on either command or connection or database objects. The plugin will than fetch all records and store them in memory. After this you can walk over the recordset and use FetchPos, FetchFirst, FetchLast, FetchPrev and FetchNext to locate the rows you need. When you call Field() you always get last row, but to read from cached result set, please use Value() function. When using RecordSet, the values are read via Value() functions automatically.

You can use InternalPostgreSQLLibraryMBS or InternalSQLiteLibraryMBS if you like to use our built in SQLite or PostgreSQL database libraries.

The class pings the database every minute by checking whether it's alive and to avoid server dropping connection. This can be disabled by setting Option("Ping") = "false". Ping is not used for SQLite.

MBS Plugin 21.1 adds support for Edit/Update methods in RecordSet and RowSet classes.

MBS Database connections are implemented via SQLConnectionMBS and SQLCommandMBS classes. We provide a thin layer on top with SQLDatabaseMBS class to make it compatible to the Xojo database class. And when you use SQLDatabaseMBS, you can always get the matching SQLConnectionMBS objet via Connection property. Instead of SQLCommandMBS class, you may just use SelectSQL/ExecuteSQL or older SQLSelect/SQLExecute functions.

We have a collection of library files here:
https://www.monkeybreadsoftware.de/xojo/download/plugin/Libs/
Subclass of the Database class.

### 175.17.8 Methods

### 175.17.9 BeginTransaction

MBS SQL Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Begins a transaction.
**Notes:**

This method does nothing. Why?
Well, if auto commit is on, you don't need to call this.
If auto commit is off, we call BeginTransaction for you, so if you call this method you would call it a second time and get an error.
We have this method for compatibility to other SQL database classes from Xojo.

### 175.17.10 CancelAllCommands

MBS SQL Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Cancel all commands for the connection.
**Notes:** This loops over the list of commands associated with this connection and calls Cancel on them.

### 175.17.11 Commands as SQLCommandMBS()

MBS SQL Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries list of all command objects related to the connection.

### 175.17.12 Connect as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Connects to the database.
**Example:**

```
dim db as new SQLDatabaseMBS

// where is the library?
db.SetFileOption SQLConnectionMBS.kOptionLibraryMySQL, SpecialFolder.UserHome.Child("libmysqlclient.dylib")

// connect to database
// in this example it is MySQL,
// but can also be Sybase, Informix, Oracle, DB2
// SQLServer, InterBase, SQLBase and ODBC

db.DatabaseName="mysql:192.168.1.80,3306@test"

db.UserName="root"
db.Password=""

// or postgreSQL with timeout and ssl mode
db.DatabaseName="PostgreSQL:127.0.0.1,5432@dbname=postgres connect_timeout=10 sslmode=require"

if db.Connect then

MsgBox "We are connected!"

MsgBox "Server Version: "+db.Connection.ServerVersionString

// Disconnect is optional
// autodisconnect will ocur in destructor if needed

else
MsgBox db.ErrorMessage
end if
```

**Notes:**

Returns true on success and false on failure.

Please set the DatabaseName, UserName and Password properties. The Host property is ignored.
The database name must contain the complete information and a prefix for the kind of database.

Use this prefixes: "CubeSQL:", "SQLAnywhere:", "ODBC:", "Oracle:", "SQLServer:", "Firebird:", "DuckDB:",

”InterBase:”, ”SQLBase:”, ”DB2:”, ”Informix:”, ”Sybase:”, ”MySQL:”, ”PostgreSQL:” or ”SQLite:”.
Connect to Microsoft Access, FileMaker Server (or Pro), Microsoft Visual FoxPro and others via ODBC.

For IPv6 we changed plugin to use , instead of : for the port separator. So please use , to separate port from IP or host.

For Firebird, if you connect to a database and you have 32/64bit mismatch, you get error number 3.

### 175.17.13 ConnectMT as Boolean

MBS SQL Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Connects to the database.
**Notes:**

Returns true on success and false on failure.

Please set the DatabaseName, UserName and Password properties. The Host property is ignored.
The database name must contain the complete information and a prefix for the kind of database.

Use this prefixes: ”CubeSQL:”, ”SQLAnywhere:”, ”ODBC:”, ”Oracle:”, ”SQLServer:”, ”Firebird:”, ”DuckDB:”, ”InterBase:”, ”SQLBase:”, ”DB2:”, ”Informix:”, ”Sybase:”, ”MySQL:”, ”PostgreSQL:” or ”SQLite:”.
Connect to Microsoft Access, FileMaker Server (or Pro), Microsoft Visual FoxPro and others via ODBC.

For IPv6 we changed plugin to use , instead of : for the port separator. So please use , to separate port from IP or host.

Same as Connect, but if you run this on a thread, the plugin gives time to other threads so the rest of your application runs just fine.

The MT method will not trigger WillConnect and DidConnect events.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

### 175.17.14 Constructor(globals as SQLGlobalsMBS = nil)

MBS SQL Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor.
**Notes:** Please don't call this directly as it's called automatically with using new command.

### 175.17.15 CubeSQLLastInsertID as Int64

MBS SQL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the last auto increment value from last insert command.
**Notes:** Only for CubeSQL connections. May raise error if not available.

### 175.17.16 CubeSQLReceiveData(byref data as String, byref IsEndChunk as Boolean) as Boolean

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Receives a data chunk for file download.
**Notes:**

Returns true on success.
Data is set with data and IsEndChunk is set to true for last chunk.

### 175.17.17 CubeSQLSendData(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sends data chunk for file upload.
**Notes:** This is the sendchunk function in CubeSQL.
See also:

- 175.17.18 CubeSQLSendData(data as String) 25339

### 175.17.18 CubeSQLSendData(data as String)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sends data chunk for file upload.
**Notes:** This is the sendchunk function in CubeSQL.
See also:

- 175.17.17 CubeSQLSendData(data as MemoryBlock) 25339

### 175.17.19 CubeSQLSendEndData

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sends end data packet.
**Notes:** This is the send_enddata function in CubeSQL.

### 175.17.20 InsertRecord(TableName as String, Record as Dictionary)

MBS SQL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Convenience function to insert a record.
**Example:**

```
dim db as SQLDatabaseMBS // your database connection

dim d as new Dictionary

d.Value("ID")=2
d.Value("text")="test insert"
d.Value("other")="Just a test"

db.InsertRecord("test_tbl", d)

if db.Error then
MsgBox db.ErrorMessage
end if
```

**Notes:**

The plugin builds for you SQL statement with prepared statement and runs the insert command with values.
Lasterror is set or exception raised as with SQLExecute.
Internally this uses a prepared statement. You can check the generated statement via LastStatement property.

### 175.17.21 Listen

MBS SQL Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Start listening for notifications.
**Notes:**

Works only for PostgresSQL Client.
Please set client or connect before calling this method.

### 175.17.22 MySQLInsertID as Int64

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the last auto increment value from last insert command.
**Notes:**

Please query value right after doing Insert. This value is reset when you call commit.

see also
http://dev.mysql.com/doc/refman/5.1/en/mysql-insert-id.html

### 175.17.23 Prepare(statement as string) as SQLPreparedStatementMBS

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Prepares a statement.
**Notes:**

Returns prepared statement or nil in case of error.
Please check ErrorMessage property for errors.

### 175.17.24 SetFileOption(name as string, file as folderitem)

MBS SQL Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets an option with passing a file path.
**Example:**

```
dim db as new SQLDatabaseMBS

// where is the library?
db.SetFileOption SQLConnectionMBS.kOptionLibraryMySQL, SpecialFolder.UserHome.Child("libmysqlclient.dylib")
```

**Notes:** Makes sure the path is correct and you have a 32 or 64-bit library matching the architecture of your application.

### 175.17.25 SQLExecute(ExecuteString as string, CommandType as Integer)

MBS SQL Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Runs the SQLExecute threaded.
**Notes:** Same as SQLExecute, but with additional CommandType parameter.

### 175.17.26 SQLExecuteMT(ExecuteString as string, CommandType as Integer = 0)

MBS SQL Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Runs the SQLExecute threaded.
**Notes:**

Same as SQLExecute, but if you run this on a thread, the plugin gives time to other threads so the rest of your application runs just fine.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

### 175.17.27 SQLiteBackupFinish(Backup as SQLite3BackupMBS) as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Finishes a backup run.
**Notes:**

When BackupStep has returned kErrorDone, or when the application wishes to abandon the backup operation, the application should destroy the SQLite3BackupMBS by passing it to BackupFinish. The BackupFinish interfaces releases all resources associated with the SQLite3BackupMBS object. If BackupStep has not yet returned kErrorDone, then any active write-transaction on the destination database is rolled back. The SQLite3BackupMBS object is invalid and may not be used following a call to BackupFinish.
The value returned by BackupFinish is kErrorOK if no BackupStep errors occurred, regardless or whether or not BackupStep completed. If an out-of-memory condition or IO error occurred during any prior BackupStep call on the same SQLite3BackupMBS object, then BackupFinish returns the corresponding error code.
A return of kErrorBusy or kErrorLocked from BackupStep is not a permanent error and does not affect the return value of BackupFinish.

### 175.17.28 SQLiteBackupInit(Dest as Variant, DestName as String, Source as Variant, SourceName as String) as SQLite3BackupMBS

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Initializes a backup.
**Notes:**

The backup API copies the content of one database into another. It is useful either for creating backups of databases or for copying in-memory databases to or from persistent files.

see also
http://www.sqlite.org/c3ref/backup_finish.html

Exclusive access is required to the destination database for the duration of the operation. However the source database is only read-locked while it is actually being read; it is not locked continuously for the entire backup operation. Thus, the backup may be performed on a live source database without preventing other users from reading or writing to the source database while the backup is underway.

To perform a backup operation:

- BackupInit is called once to initialize the backup,
- BackupStep is called one or more times to transfer the data between the two databases, and finally
- BackupFinish is called to release all resources associated with the backup operation.

There should be exactly one call to BackupFinish for each successful call to BackupInit.

The D and N arguments to BackupInit(D,N,S,M) are the database connection associated with the destination database and the database name, respectively. The database name is "main" for the main database, "temp" for the temporary database, or the name specified after the AS keyword in an ATTACH statement for an attached database. The S and M arguments passed to BackupInit(D,N,S,M) identify the database connection and database name of the source database, respectively. The source and destination database connections (parameters S and D) must be different or else BackupInit(D,N,S,M) will file with an error.
If an error occurs within BackupInit(D,N,S,M), then nil is returned and an error code and error message are store3d in the destination database connection D. The error code and message for the failed call to BackupInit can be retrieved using the ErrCode and ErrMessage functions. A successful call to BackupInit returns a SQLite3BackupMBS object. The SQLite3BackupMBS object may be used with the BackupStep and BackupFinish functions to perform the specified backup operation.

Concurrent Usage of Database Handles
The source database connection may be used by the application for other purposes while a backup operation is underway or being initialized. If SQLite is compiled and configured to support threadsafe database connections, then the source database connection may be used concurrently from within other threads.

However, the application must guarantee that the destination database connection is not passed to any other API (by any thread) after BackupInit is called and before the corresponding call to BackupFinish. SQLite does not currently check to see if the application incorrectly accesses the destination database connection and so no error code is reported, but the operations may malfunction nevertheless. Use of the destination database connection while a backup is in progress might also also cause a mutex deadlock.
If running in shared cache mode, the application must guarantee that the shared cache used by the destination database is not accessed while the backup is running. In practice this means that the application must guarantee that the disk file being backed up to is not accessed by any connection within the process, not just the specific connection that was passed to BackupInit.
The SQLite3BackupMBS object itself is partially threadsafe. Multiple threads may safely make multiple concurrent calls to BackupStep. However, the BackupRemaining and BackupPageCount APIs are not strictly speaking threadsafe. If they are invoked at the same time as another thread is invoking BackupStep it is possible that they return invalid values.

Source and Dest can be SQLConnectionMBS or SQLDatabaseMBS. You need to pass source and dest, even if one is self as we give you the option to decide where to pass the current database connection.

### 175.17.29 SQLiteBackupPageCount(Backup as SQLite3BackupMBS) as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the number of pages in total.
**Notes:**

Each call to BackupStep sets two values inside the SQLite3BackupMBS object: the number of pages still to be backed up and the total number of pages in the source databae file. The BackupRemaining and BackupPageCount interfaces retrieve these two values, respectively.
The values returned by these functions are only updated by BackupStep. If the source database is modified during a backup operation, then the values are not updated to account for any extra pages that need to be updated or the size of the source database file changing.

### 175.17.30 SQLiteBackupRemaining(Backup as SQLite3BackupMBS) as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the number of pages remaining.
**Notes:**

Each call to BackupStep sets two values inside the SQLite3BackupMBS object: the number of pages still to be backed up and the total number of pages in the source databae file. The BackupRemaining and BackupPageCount interfaces retrieve these two values, respectively.
The values returned by these functions are only updated by BackupStep. If the source database is modified during a backup operation, then the values are not updated to account for any extra pages that need to be updated or the size of the source database file changing.

### 175.17.31 SQLiteBackupStep(Backup as SQLite3BackupMBS, Pages as Integer) as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Copies up to Pages pages between the source and destination databases specified by SQLite3BackupMBS object.
**Notes:**

If N is negative, all remaining source pages are copied. If BackupStep(B,N) successfully copies N pages and there are still more pages to be copied, then the function resturns kErrorOK. If BackupStep(B,N) successfully finishes copying all pages from source to destination, then it returns kErrorDone. If an error occurs while running BackupStep(B,N), then an error code is returned. As well as kErrorOK and kErrorDone, a call to BackupStep may return kErrorReadOnly, kErrorNoMem, kErrorBusy, kErrorLocked, or an kErrorIOACCESS | kErrorIOXXX extended error code.
The BackupStep might return kErrorReadOnly if the destination database was opened read-only or if the destination is an in-memory database with a different page size from the source database.
If BackupStep cannot obtain a required file-system lock, then the sqlite3_busy_handler | busy-handler function is invoked (if one is specified). If the busy-handler returns non-zero before the lock is available, then kErrorBusy is returned to the caller. In this case the call to BackupStep can be retried later. If the source database connection is being used to write to the source database when BackupStep is called, then kErrorLocked is returned immediately. Again, in this case the call to BackupStep can be retried later on. (If kErrorIOACCESS | kErrorIOXXX, kErrorNoMem, or kErrorReadOnly is returned, then there is no point in retrying the call to BackupStep. These errors are considered fatal.) The application must accept that the backup operation has failed and pass the backup operation handle to the BackupFinish to release associated resources.
The first call to BackupStep obtains an exclusive lock on the destination file. The exclusive lock is not released until either BackupFinish is called or the backup operation is complete and BackupStep returns kErrorDone. Every call to BackupStep obtains a shared lock on the source database that lasts for the duration of the BackupStep call. Because the source database is not locked between calls to BackupStep, the source database may be modified mid-way through the backup process. If the source database is modified by an external process or via a database connection other than the one being used by the backup operation, then the backup will be automatically restarted by the next call to BackupStep. If the source database is modified by the using the same database connection as is used by the backup operation, then the backup database is automatically updated at the same time.

### 175.17.32 SQLiteConnectionHandle as Ptr

MBS SQL Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the current connection reference for the database.
**Notes:** sqlite3 pointer for using in declares.

### 175.17.33 SQLiteEnableLoadExtension(OnOff as boolean)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enables/disables extension loading for the given connection.

### 175.17.34 SQLiteLastInsertRowID as Int64

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns Last Insert Rowid.
**Notes:**

Each entry in an SQLite table has a unique 64-bit signed integer key called the ROWID. The rowid is always available as an undeclared column named ROWID, OID, or _ROWID_ as long as those names are not also used by explicitly declared columns. If the table has a column of type INTEGER PRIMARY KEY then that column is another alias for the rowid.

This routine returns the rowid of the most recent successful INSERT into the database from the database connection in the first argument. If no successful INSERTs have ever occurred on that database connection, zero is returned.

(If an INSERT occurs within a trigger, then the rowid of the inserted row is returned by this routine as long as the trigger is running. But once the trigger terminates, the value returned by this routine reverts to the last value inserted before the trigger fired.)

An INSERT that fails due to a constraint violation is not a successful INSERT and does not change the value returned by this routine. ^Thus INSERT OR FAIL, INSERT OR IGNORE, INSERT OR ROLLBACK, and INSERT OR ABORT make no changes to the return value of this routine when their insertion fails. ^(When INSERT OR REPLACE encounters a constraint violation, it does not fail. The INSERT continues to completion after deleting rows that caused the constraint problem so INSERT OR REPLACE will always change the return value of this interface.)^

For the purposes of this routine, an INSERT is considered to be successful even if it is subsequently rolled back.

This function is accessible to SQL statements via the last_insert_rowid() SQL function.

If a separate thread performs a new INSERT on the same database connection while the LastInsertRowID function is running and thus changes the last insert rowid, then the value returned by LastInsertRowID is unpredictable and might not equal either the old or the new last insert rowid.

### 175.17.35 SQLiteLibVersion as String

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the version string of the SQLite library.

### 175.17.36 SQLiteLoadExtension(file as FolderItem, ByRef ErrorMessage as String) as Integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Loads an SQLite extension library from the named file.
**Notes:**

The LoadExtension interface attempts to load an SQLite extension library contained in the file.

Returns kErrorOk on success and kErrorError if something goes wrong.
Extension loading must be enabled using EnableLoadExtension prior to calling this API, otherwise an error will be returned.
See also:

- 175.17.37 SQLiteLoadExtension(path as String, ByRef ErrorMessage as String) as Integer 25347

### 175.17.37 SQLiteLoadExtension(path as String, ByRef ErrorMessage as String) as Integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Loads an SQLite extension library from the named file.
**Notes:**

The LoadExtension interface attempts to load an SQLite extension library contained in the file.

Returns kErrorOk on success and kErrorError if something goes wrong.
Extension loading must be enabled using EnableLoadExtension prior to calling this API, otherwise an error will be returned.
See also:

- 175.17.36 SQLiteLoadExtension(file as FolderItem, ByRef ErrorMessage as String) as Integer 25347

### 175.17.38 SQLiteMemoryHighwater(reset as boolean = false) as Int64

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries maximum memory usage so far.
**Notes:** Can be reset with reset parameter being true.

### 175.17.39 SQLiteMemoryUsed as Int64

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries memory in use by SQLite.
**Notes:**

This is memory allocated, but not yet freed.
Value is zero until SQLite3 initialized.

### 175.17.40 SQLiteReKey(Key as String) as Integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** You can change the key on a database using the Rekey Function.
**Notes:**

An empty key decrypts the database.

Rekeying requires that every page of the database file be read, decrypted, reencrypted with the new key, then written out again. Consequently, rekeying can take a long time on a larger database.

Most SEE variants allow you to encrypt an existing database that was created using the public domain version of SQLite. This is not possible when using the authenticating version of the encryption extension in see-aes128-ccm. If you do encrypt a database that was created with the public domain version of SQLite, no nonce will be used and the file will be vulnerable to a chosen-plaintext attach. If you call SetKey() immediately after Open when you are first creating the database, space will be reserved in the database for a nonce and the encryption will be much stronger. If you do not want to encrypt right away, call SetKey() anyway, with an empty key, and the space for the nonce will be reserved in the database even though no encryption is done initially.

A public domain version of the SQLite library can read and write an encrypted database with an empty key. You only need the encryption extension if the key is non-empty.

Returns a SQLite error code.

### 175.17.41 SQLiteSetBusyHandler(MaxAttempts as Integer = 5)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Installs busy handler for this connection.
**Notes:**

This routine sets a callback function that might be invoked whenever an attempt is made to open a database table that another thread or process has locked.

The plugin has an busy handler which will wait up to MaxAttemps and yield to other Xojo threads while waiting.
Passing 5 should wait up to 100ms.

There can only be a single busy handler defined for each [ database connection ] . Setting a new busy handler clears any previously set handler.) Note that calling SetBusyTimeout will also set or clear the busy handler.

The busy callback should not take any actions which modify the database connection that invoked the busy handler. Any such actions result in undefined behavior.

### 175.17.42 SQLiteSetBusyTimeout(TimeOutMS as Integer = 20)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This routine sets a busy handler that sleeps for a specified amount of time when a table is locked.
**Notes:**

The handler will sleep multiple times until at least "ms" milliseconds of sleeping have accumulated. ^After at least "ms" milliseconds of sleeping, the handler returns 0 which causes SQLite query to return SQLite Busy or IO Blocked error.

Calling this routine with an argument less than or equal to zero turns off all busy handlers.

(There can only be a single busy handler for a particular database connection any any given moment. If another busy handler was defined (using SetBusyHandler prior to calling this routine, that other busy handler is cleared.)

### 175.17.43 SQLiteSetKey(Key as String) as Integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Applies encryption to a database connection.
**Notes:**

Returns a SQLite error code.

The amount of key material actually used by the encryption extension depends on which variant of SEE you are using. With RC4, the first 256 byte of key are used. With the AES128, the first 16 bytes of the key are used. With AES256, the first 32 bytes of key are used.

If you specify a key that is shorter than the maximum key length, then the key material is repeated as many times as necessary to complete the key. If you specify a key that is larger than the maximum key length, then the excess key material is silently ignored.

The key must begin with an ASCII prefix to specify which algorithm to use. The prefix must be one of "rc4:", "aes128:", or "aes256:". The prefix is not used as part of the key sent into the encryption algorithm. So the real key should begin on the first byte after the prefix.

The string provided to the plugin is used with it's current encoding. So be sure you use right text encoding for what you want. e.g. using "M√ºller" as key in text encoding Windows ANSI will not open a database which used that key in UTF-8 encoding.

The Xojo database encryption in SQLiteDatabase class uses AES-128 OFB.

### 175.17.44 SQLiteTableColumnMetaData(DBName as string, TableName as string, ColumnName as string, byref DataType as string, byref CollationSequence as string, byref NotNull as boolean, byref PrimaryKey as boolean, byref AutoIncrement as Boolean) as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Extract Metadata About A Column Of A Table
**Notes:**

Not available in all sqlite libraries!

This routine returns metadata about a specific column of a specific database table accessible using the database connection handle passed as the first function argument.
The column is identified by the second, third and fourth parameters to this function. The second parameter is either the name of the database (i.e. "main", "temp", or an attached database) containing the specified table or NULL. If it is NULL, then all attached databases are searched for the table using the same algorithm used by the database engine to resolve unqualified table references.
The third and fourth parameters to this function are the table and column name of the desired column, respectively. Neither of these parameters may be NULL.
Metadata is returned by writing to the memory locations passed as the 5th and subsequent parameters to this function. Any of these arguments may be NULL, in which case the corresponding element of metadata is omitted.

CollationSequence is assigned the Name of default collation sequence. NotNull is set to true if column has a NOT NULL constraint. PrimaryKey is set to true if column is part of the PRIMARY KEY and AutoIncrement is set to true if column is AUTOINCREMENT.

If the specified table is actually a view, an error code is returned.

If the specified column is "rowid", "oid" or "_rowid_" and an INTEGER PRIMARY KEY column has been explicitly declared, then the output parameters are set for the explicitly declared column. (If there is no explicitly declared INTEGER PRIMARY KEY column, then the output parameters are set as follows:

data type: "INTEGER"
collation sequence: "BINARY"
not null: false
primary key: true
auto increment: false

(This function may load one or more schemas from database files. If an error occurs during this process, or if the requested table or column cannot be found, an error code is returned and an error message left in the database connection (to be retrieved using ErrMessage).)

This API is only available if the library was compiled with the SQLITE_ENABLE_COLUMN_METADATA C-preprocessor symbol defined.

### 175.17.45 SQLiteThreadsafe as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Test To See If The Library Is Threadsafe.
**Notes:**

The threadsafe() function returns zero if and only if SQLite was compiled mutexing code omitted due to the SQLITE_THREADSAFE compile-time option being set to 0.

SQLite can be compiled with or without mutexes. When the SQLITE_THREADSAFE C preprocessor macro is 1 or 2, mutexes are enabled and SQLite is threadsafe. When the SQLITE_THREADSAFE macro is 0, the mutexes are omitted. Without the mutexes, it is not safe to use SQLite concurrently from more than one thread.

Enabling mutexes incurs a measurable performance penalty. So if speed is of utmost importance, it makes sense to disable the mutexes. But for maximum safety, mutexes should be enabled. The default behavior is for mutexes to be enabled.

This interface can be used by an application to make sure that the version of SQLite that it is linking against was compiled with the desired setting of the SQLITE_THREADSAFE macro.

This interface only reports on the compile-time mutex setting of the SQLITE_THREADSAFE flag. If SQLite is compiled with SQLITE_THREADSAFE=1 or =2 then mutexes are enabled by default but can be fully or partially disabled using a call to sqlite3_config() with the verbs SQLITE_CONFIG_SINGLETHREAD, SQLITE_CONFIG_MULTITHREAD, or SQLITE_CONFIG_MUTEX. ^(The return value of the sqlite3_threadsafe() function shows only the compile-time setting of thread safety, not any run-time changes to that setting made by sqlite3_config(). In other words, the return value from sqlite3_threadsafe() is unchanged by calls to sqlite3_config().)^

See the threading mode documentation for additional information.

### 175.17.46 SQLSelect(SelectString as string, CommandType as Integer) as RecordSet

MBS SQL Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Runs the SQLSelect threaded.
**Notes:**

Same as SQLSelect, but with additional CommandType parameter.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RecordSet functionality.

If Scrollable property is true, the recordset will be requested to be scrollable.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

### 175.17.47 SQLSelectMT(SelectString as string, CommandType as Integer = 0) as RecordSet

MBS SQL Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Runs the SQLSelect threaded.
**Notes:**

Same as SQLSelect, but if you run this on a thread, the plugin gives time to other threads so the rest of

your application runs just fine.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

If Scrollable property is true, the recordset will be requested to be scrollable.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

### 175.17.48 UpdateRecord(TableName as String, Record as Dictionary, Keys as Dictionary)

MBS SQL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Convenience function to update a record.
**Example:**

```
dim db as SQLDatabaseMBS // your database connection

dim d as new Dictionary

d.Value("text")="new text"
d.Value("other")="second value"

db.UpdateRecord("test_tbl", d, new dictionary("ID":2))

if db.Error then
MsgBox db.ErrorMessage
end if
```

**Notes:**

The plugin builds for you SQL statement with prepared statement and runs the update command with given values for records with given key values.

You can put multiple field names in the keys dictionary.

Lasterror is set or exception raised as with SQLExecute.
Internally this uses a prepared statement. You can check the generated statement via LastStatement property.

### 175.17.49 Properties

### 175.17.50 AutoCommit as Integer

MBS SQL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether autocommit is enabled or disabled for the current connection.
**Example:**

```
Dim db as SQLDatabaseMBS // your database connection
db.AutoCommit = SQLDatabaseMBS.kAutoCommitOn
```

**Notes:**

If autocommit is on, the database is committed automatically after each SQL command. Otherwise, transaction is committed only after Commit calling.
(Read and Write property)

### 175.17.51 Client as Integer

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The current DBMS client assigned for the connection.
**Notes:**

Raises OutOfBoundsException exception if value parameter is out of range on setting.
(Read and Write property)

### 175.17.52 ClientVersion as Integer

MBS SQL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Gets the DBMS client API version number.
**Notes:**

The higher word contains the major client version (the XX value in the XX.YY version number); the lower word contains the minor client version (the YY value in the XX.YY version number).

If an DBMS client was not set calling ClientVersion method will throw an exception.
(Read only property)

### 175.17.53 Connection as SQLConnectionMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The connection for this database used in the background.
**Notes:**

Note that methods on this connection object can raise exceptions while methods on the SQLDatabaseMBS class sets the error properties.
(Read only property)

### 175.17.54 isAlive as boolean

MBS SQL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the database server connection status for a particular connection object.
**Notes:**

Returns true if the database server is active and accessible; otherwise false.
This method uses the safe query execution for most supported DBMS-es. The query uses the well known database table or procedure (mysql_ping is used for MySQL). If the query fails the method returns false.
(Read only property)

### 175.17.55 isConnected as boolean

MBS SQL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the connection state for a particular connection object.
**Notes:**

Returns true if connected; otherwise false.
(Read only property)

### 175.17.56 IsolationLevel as Integer

MBS SQL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The transaction isolation level.
**Notes:**

Use the kReadCommitted, kReadUncommitted, kRepeatableRead, kSerializable and kLevelUnknown constants.
(Read and Write property)

### 175.17.57 LastStatement as String

MBS SQL Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The last executed SQL Statement.
**Notes:** (Read only property)

### 175.17.58 NativeAPI as Variant

MBS SQL Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a set of functions of native DBMS client API.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

Returns a SQLAPIMBS object.
Deprecated in version 19.5 in favor of direct methods in SQLDatabaseMBS and SQLConnectionMBS classes.
(Read only property)

### 175.17.59 Options as Dictionary

MBS SQL Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a dictionary with all options.
**Notes:**

For debugging, it may be useful to inspect options in debugger.
(Read only property)

### 175.17.60 RaiseExceptions as Boolean

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether to raise exceptions.
**Notes:**

Default is false which means we set error, ErrorCode and ErrorMessage properties and not raise SQLErrorExceptionMBS exception.
If you set to true, we do raise the exception and you have similar behavior as with SQLConnection class.
We recommend to use exceptions as they are not so easily ignored like an error property being true.
(Read and Write property)

### 175.17.61 Scrollable as Boolean

MBS SQL Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether to make internally created SQLCommand objects scrollable.
**Notes:**

Since plugin version 15.0, Scrollable is false by default.
(Read and Write property)

### 175.17.62 ServerVersion as Integer

MBS SQL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Gets the currently connected DBMS server version number.
**Notes:**

The higher word contains the major server version (the XX value in the XX.YY version number); the lower word contains the minor server version (the YY value in the XX.YY version number).
(Read only property)

### 175.17.63 ServerVersionString as string

MBS SQL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Gets the currently connected DBMS server version string.
**Notes:**

A server version string may contain some useful information about server brand, configuration and so on. It is a good idea to display this information in all your applications.
(Read only property)

### 175.17.64 SQLiteEncryptionKey as String

MBS SQL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The encryption key to use.
**Example:**

```
// enable our built-in SQLite library, which supports encryption
Call InternalSQLiteLibraryMBS.Use

// where to store?
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.db")
Dim storage_database As New SQLDatabaseMBS ' SQLiteDatabase
```

```
storage_database.SQLiteEncryptionKey = "aes256:password" ' <- password with AES256 as prefix to pick algorithm
storage_database.DatabaseName = "sqlite:"+ f.NativePath

If storage_database.Connect Then

// create table if this is not yet here
storage_database.SQLExecute "Create table if not exists pics(pic_id integer PRIMARY KEY AUTOINCREMENT, name varchar(20), pic blob)"

// done
MsgBox "Ready"
Else
MsgBox storage_database.ErrorMessage
End If
```

**Notes:**

This key is applied to the database after connecting. In case of an error, the plugin raises an exception. An empty key can be used for having no encryption.
Alternatively you can use SQLite3MBS.SetKey yourself.

The amount of key material actually used by the encryption extension depends on which variant of SEE you are using. With RC4, the first 256 byte of key are used. With the AES128, the first 16 bytes of the key are used. With AES256, the first 32 bytes of key are used.

If you specify a key that is shorter than the maximum key length, then the key material is repeated as many times as necessary to complete the key. If you specify a key that is larger than the maximum key length, then the excess key material is silently ignored.

The key must begin with an ASCII prefix to specify which algorithm to use. The prefix must be one of "rc4:", "aes128:", or "aes256:". The prefix is not used as part of the key sent into the encryption algorithm. So the real key should begin on the first byte after the prefix. If no prefix is given, we default to AES 128. To be compatible to Xojo, you can use AES128.

The string provided to the plugin is used with it's current encoding. So be sure you use right text encoding for what you want. e.g. using "M√ºller" as key in text encoding Windows ANSI will not open a database which used that key in UTF-8 encoding.

The Xojo database encryption in SQLiteDatabase class uses AES-128 OFB.
(Read and Write property)

### 175.17.65 Tag as Variant

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tag property.
**Notes:**

You can store here whatever you like.
(Read and Write property)

### 175.17.66 Option(name as string) as string

MBS SQL Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets an option for the connection.
**Example:**

```
dim c as SQLDatabaseMBS // your database connection

// for Microsoft SQL use OLEDB, so you don't need native SQL drivers installed...
c.Option("UseAPI") = "OLEDB"
c.Option("SQLNCLI.LIBS") = "sqlsrv32.dll" // Library included in Windows Vista and newer

// for SQLite, set flag to open database file read only:
c.Option("SQLiteVFSFlags") = "1"

// turn on auto cache
c.Option("AutoCache") = "true"

// set connection timeout for ODBC:
c.Option("SQL_ATTR_CONNECTION_TIMEOUT") = "10"

// cache insert statements for AddRow/InsertRecord
c.Option("CacheInsertStatement") = "true"
```

**Notes:**

We have a collection of library files here:
https://www.monkeybreadsoftware.de/xojo/download/plugin/Libs/
(Read and Write computed property)

### 175.17.67 Events

### 175.17.68 DidConnect

MBS SQL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Event called after connection was made.
**Notes:** After we got connected, you can apply various options on the new connection here.

### 175.17.69 PostgresNotification(NotificationName as string, PID as Integer, Extras as String)

MBS SQL Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** A postgresSQL notification was received.
**Notes:** Provides notification name, process ID of app and optional extra information.

### 175.17.70 Trace(traceInfo as Integer, SQL as string, Command as SQLCommandMBS)

MBS SQL Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event to trace SQL commands.

### 175.17.71 WillConnect

MBS SQL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Event called before connection is established.
**Notes:** Last chance to set connection options.

### 175.17.72 Constants

### 175.17.73 kANSILevel0 = 0

MBS SQL Plugin, Plugin Version: 12.3.

**Function:** One of the ANSI level constants.
**Notes:** ANSI Level 0

### 175.17.74 kANSILevel1 = 1

MBS SQL Plugin, Plugin Version: 12.3.

**Function:** One of the ANSI level constants.
**Notes:** ANSI Level 1

### 175.17.75 kANSILevel2 = 2

MBS SQL Plugin, Plugin Version: 12.3.

**Function:** One of the ANSI level constants.
**Notes:** ANSI Level 2

### 175.17.76 kANSILevel3 = 3

MBS SQL Plugin, Plugin Version: 12.3.

**Function:** One of the ANSI level constants.
**Notes:** ANSI Level 3

### 175.17.77 kAutoCommitOff = 0

MBS SQL Plugin, Plugin Version: 12.3.

**Function:** One of the constants for the autocommit property.
**Example:**

```
dim db as SQLDatabaseMBS // your database connection

db.AutoCommit = SQLDatabaseMBS.kAutoCommitOn
```

**Notes:** Autocommit is off.

### 175.17.78 kAutoCommitOn = 1

MBS SQL Plugin, Plugin Version: 12.3.

**Function:** One of the constants for the autocommit property.
**Example:**

```
dim db as SQLDatabaseMBS // your database connection

db.AutoCommit = SQLDatabaseMBS.kAutoCommitOn
```

**Notes:** Autocommit is on.

### 175.17.79 kAutoCommitUnknown = -1

MBS SQL Plugin, Plugin Version: 12.3.

**Function:** One of the constants for the autocommit property.
**Notes:** Autocommit unknown

### 175.17.80 kCommandTypeSQLStatement = 1

MBS SQL Plugin, Plugin Version: 14.1.

**Function:** One of the constants for the command type.
**Notes:** Command is an SQL statement.

### 175.17.81 kCommandTypeSQLStatementRaw = 2

MBS SQL Plugin, Plugin Version: 14.1.

**Function:** One of the constants for the command type.
**Notes:** Command is an SQL statement that mustn't be interpreted by SQLAPI.

### 175.17.82 kCommandTypeStoredProcedure = 3

MBS SQL Plugin, Plugin Version: 14.1.

**Function:** One of the constants for the command type.
**Notes:** Command is a stored procedure or a function.

### 175.17.83 kCommandTypeUnknown = 0

MBS SQL Plugin, Plugin Version: 14.1.

**Function:** One of the constants for the command type.
**Notes:** Used by default. Library detects command type automatically.

### 175.17.84 kErrorBindVarNotFound = 7

MBS SQL Plugin, Plugin Version: 16.0.

**Function:** One of the SQL Plugin error codes.
**Notes:** Bind variable not found.

### 175.17.85 kErrorClientInitFails = 6

MBS SQL Plugin, Plugin Version: 16.0.

**Function:** One of the SQL Plugin error codes.
**Notes:** Initialization failed for client.

### 175.17.86 kErrorClientNotSet = 1

MBS SQL Plugin, Plugin Version: 16.0.

**Function:** One of the SQL Plugin error codes.
**Notes:** Client not set.

### 175.17.87 kErrorClientNotSupported = 2

MBS SQL Plugin, Plugin Version: 16.0.

**Function:** One of the SQL Plugin error codes.
**Notes:** Unsupported client type for this platform.

### 175.17.88 kErrorClientVersionOld = 5

MBS SQL Plugin, Plugin Version: 16.0.

**Function:** One of the SQL Plugin error codes.
**Notes:** Library file is too old.

### 175.17.89 kErrorFieldNotFound = 8

MBS SQL Plugin, Plugin Version: 16.0.

**Function:** One of the SQL Plugin error codes.
**Notes:** Field not found.

### 175.17.90 kErrorGetLibraryVersionFails = 4

MBS SQL Plugin, Plugin Version: 16.0.

**Function:** One of the SQL Plugin error codes.
**Notes:** Failed to query library version.

### 175.17.91 kErrorLoadLibraryFails = 3

MBS SQL Plugin, Plugin Version: 16.0.

**Function:** One of the SQL Plugin error codes.
**Notes:** Failed to load a library. For example path could be wrong or 32/64bit mismatch.

### 175.17.92 kErrorNoMemory = 0

MBS SQL Plugin, Plugin Version: 16.0.

**Function:** One of the SQL Plugin error codes.
**Notes:** Out of memory.

### 175.17.93 kErrorUnknownColumnType = 11

MBS SQL Plugin, Plugin Version: 16.0.

**Function:** One of the SQL Plugin error codes.
**Notes:** Unknown column type.

### 175.17.94 kErrorUnknownDataType = 9

MBS SQL Plugin, Plugin Version: 16.0.

**Function:** One of the SQL Plugin error codes.
**Notes:** Unknown data type.

### 175.17.95 kErrorUnknownParameterType = 10

MBS SQL Plugin, Plugin Version: 16.0.

**Function:** One of the SQL Plugin error codes.
**Notes:** Unknown parameter type.

### 175.17.96 kErrorWrongConversion = 12

MBS SQL Plugin, Plugin Version: 16.0.

**Function:** One of the SQL Plugin error codes.
**Notes:** Failed to convert a value, e.g. string to number.

### 175.17.97 kErrorWrongDatetime = 13

MBS SQL Plugin, Plugin Version: 16.0.

**Function:** One of the SQL Plugin error codes.
**Notes:** Can't convert text to date.

### 175.17.98 kLevelUnknown = -1

MBS SQL Plugin, Plugin Version: 12.3.

**Function:** One of the isolation level constants.
**Notes:** Unknown

### 175.17.99 kOptionLibraryCubeSQL = "CUBESQL.LIBS"

MBS SQL Plugin, Plugin Version: 19.3.

**Function:** One of the option constant to specify the library with the SetFileOption method.
**Example:**

```
dim con as SQLConnectionMBS // your connection
```

```
dim f as FolderItem = GetFolderItem("cubesql.dll")
con.SetFileOption con.kOptionLibraryCubeSQL, f
```

**Notes:** for CubeSQL.

### 175.17.100 kOptionLibraryDB2 = "DB2CLI.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

**Function:** One of the option constant to specify the library with the SetFileOption method.
**Notes:** for DB2.

### 175.17.101 kOptionLibraryFirebird = "IBASE.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

**Function:** One of the option constant to specify the library with the SetFileOption method.
**Notes:** for Firebird.

### 175.17.102 kOptionLibraryInformix = "INFCLI.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

**Function:** One of the option constant to specify the library with the SetFileOption method.
**Notes:** for Informix.

### 175.17.103 kOptionLibraryInterbase = "IBASE.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

**Function:** One of the option constant to specify the library with the SetFileOption method.
**Notes:** for Interbase.

### 175.17.104 kOptionLibraryMySQL = "MYSQL.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

**Function:** One of the option constant to specify the library with the SetFileOption method.
**Notes:** for MySQL. Library extension on Mac is ".dylib", on Linux ".so" and on Windows ".dll". You get this library with the MySQL download on their homepage.

### 175.17.105 kOptionLibraryODBC = "ODBC.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

**Function:** One of the option constant to specify the library with the SetFileOption method.
**Notes:** for ODBC.

### 175.17.106 kOptionLibraryOracle = "OCI8.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

**Function:** One of the option constant to specify the library with the SetFileOption method.
**Notes:** for Oracle.

### 175.17.107 kOptionLibraryPostgreSQL = "LIBPQ.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

**Function:** One of the option constant to specify the library with the SetFileOption method.
**Notes:** for Postgre SQL.

### 175.17.108 kOptionLibrarySQLanywhere = "SQLANY.LIBS"

MBS SQL Plugin, Plugin Version: 15.2.

**Function:** One of the option constant to specify the library with the SetFileOption method.
**Notes:** for SQL Anywhere.

### 175.17.109 kOptionLibrarySQLBase = "SQLBASE.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

**Function:** One of the option constant to specify the library with the SetFileOption method.
**Notes:** for SQLbase.

### 175.17.110 kOptionLibrarySQLite = "SQLITE.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

**Function:** One of the option constant to specify the library with the SetFileOption method.
**Example:**

```
dim con as SQLDatabaseMBS // your database connection

dim f as FolderItem = GetFolderItem("sqlite.dylib")
con.SetFileOption con.kOptionLibrarySQLite, f
```

**Notes:** for SQLite. Can also be the spatialite or SQLcipher library.

### 175.17.111 kOptionLibrarySybaseComn = "SYBCOMN.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

**Function:** OOne of the option constant to specify the library with the SetFileOption method.
**Notes:** for Sybase.

### 175.17.112 kOptionLibrarySybaseCS = "SYBCS.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

**Function:** One of the option constant to specify the library with the SetFileOption method.
**Notes:** for Sybase.

### 175.17.113 kOptionLibrarySybaseCT = "SYBCT.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

**Function:** One of the option constant to specify the library with the SetFileOption method.
**Notes:** for Sybase.

### 175.17.114 kOptionLibrarySybaseIntl = "SYBINTL.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

**Function:** One of the option constant to specify the library with the SetFileOption method.
**Notes:** for Sybase.

### 175.17.115 kOptionLibrarySybaseTCL = "SYBTCL.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

**Function:** One of the option constant to specify the library with the SetFileOption method.
**Notes:** for Sybase.

### 175.17.116 kReadCommitted = 1

MBS SQL Plugin, Plugin Version: 12.3.

**Function:** One of the isolation level constants.
**Notes:** Read committed.

### 175.17.117 kReadUncommitted = 0

MBS SQL Plugin, Plugin Version: 12.3.

**Function:** One of the isolation level constants.
**Notes:** Read uncommitted.

### 175.17.118 kRepeatableRead = 2

MBS SQL Plugin, Plugin Version: 12.3.

**Function:** One of the isolation level constants.
**Notes:** Repeatable read.

### 175.17.119 kSerializable = 3

MBS SQL Plugin, Plugin Version: 12.3.

**Function:** One of the isolation level constants.
**Notes:** Serializable.

### 175.17.120 kSnapshot = 4

MBS SQL Plugin, Plugin Version: 21.2.

**Function:** One of the isolation level constants.
**Notes:** Changes made in other transactions can not be seen. For Microsoft SQL Server.

### 175.17.121 SQLiteInMemory = "Sqlite::memory:"

MBS SQL Plugin, Plugin Version: 19.2.

**Function:** Connection string for SQLite for a new in-memory database.
**Notes:** Prefixed with SQLite to use directly.

# 175.18 class SQLDataConsumerMBS

## 175.18.1 class SQLDataConsumerMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a data consumer.
**Notes:** If you query a clob/blob value, that value may not fit into memory, so you may prefer to get a callback for data and write it to a file in small chunks.

## 175.18.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.1pr4

- 14.1, page 30: The MBS SQL Plugin, An alternative way to connect to databases by Christian Schmitz

## 175.18.6 Events

## 175.18.7 Write(PieceType as Integer, data as string, Length as UInt32, BlobSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called to process data.
**Notes:**

PieceType is kOnePiece, kFirstPiece, kLastPiece or kNextPiece.
Data is the raw data in a binary string.
Length is the number of bytes and BlobSize the size of data blocks used.

### 175.18.8 Constants

### 175.18.9 kFirstPiece = 1

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the piece type constants.
**Notes:** The first piece is processed. You may setup everything you need to handle the data.

### 175.18.10 kLastPiece = 3

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the piece type constants.
**Notes:** The last piece is processed. You can close files/network connections.

### 175.18.11 kNextPiece = 2

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the piece type constants.
**Notes:** The next piece is processed. Not the first one or the last one, but one between.

### 175.18.12 kOnePiece = 4

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the piece type constants.
**Notes:** The whole data stream is delivered in one call of the event.

# 175.19 class SQLDataProviderMBS

## 175.19.1 class SQLDataProviderMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a data provider.
**Notes:** Use this to set a blob/clob object with streaming data. For example if you want to add a 1 GB big file to the database without loading it into RAM in one piece, you can use this class to read it in small chunks.

## 175.19.6 Events

## 175.19.7 Read(byref PieceType as Integer, Length as UInt32) as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called whenever new data is needed.
**Notes:**

PieceType is kOnePiece, kFirstPiece, kLastPiece or kNextPiece.
If your stream is on the end, you set this to kLastPiece.
Return the raw data in a string.
Length is the number of bytes.

### 175.19.8 Constants

### 175.19.9 kFirstPiece = 1

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the piece type constants.
**Notes:** The first piece is processed. You may setup everything you need to handle the data.

### 175.19.10 kLastPiece = 3

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the piece type constants.
**Notes:** The last piece is processed. You can close files/network connections.

### 175.19.11 kNextPiece = 2

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the piece type constants.
**Notes:** The next piece is processed. Not the first one or the last one, but one between.

### 175.19.12 kOnePiece = 4

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the piece type constants.
**Notes:** The whole data stream is delivered in one call of the event.

# 175.20 class SQLDateTimeMBS

## 175.20.1 class SQLDateTimeMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The SQL date/time value class.
**Example:**

```
dim d as new SQLDateTimeMBS(2008, 3, 4, 23, 10, 20)

MsgBox d.StringValue // shows "2008-03-04T23:10:20"
```

### 175.20.6 Methods

### 175.20.7 Constructor(DateTimeValue as DateTime)

MBS SQL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Initializes the datetime value with the given DateTime object.
See also:

- 175.20.8 Constructor(DateValue as Date) 25376
- 175.20.9 Constructor(Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0) 25377
- 175.20.10 Constructor(other as SQLDateTimeMBS) 25377
- 175.20.11 Constructor(StringValue as String) 25378
- 175.20.12 Constructor(value as Double) 25379
- 175.20.13 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0, TimeZone as String = "") 25379
- 175.20.14 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer, TimeZone as String) 25380

### 175.20.8 Constructor(DateValue as Date)

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Initializes the datetime value with the given date.
See also:

- 175.20.7 Constructor(DateTimeValue as DateTime) 25376
- 175.20.9 Constructor(Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0) 25377
- 175.20.10 Constructor(other as SQLDateTimeMBS) 25377
- 175.20.11 Constructor(StringValue as String) 25378
- 175.20.12 Constructor(value as Double) 25379

- 175.20.13 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0, TimeZone as String = "") 25379
- 175.20.14 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer, TimeZone as String) 25380

### 175.20.9 Constructor(Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0)

MBS SQL Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new SQL Datetime with the given values.
See also:

- 175.20.7 Constructor(DateTimeValue as DateTime) 25376
- 175.20.8 Constructor(DateValue as Date) 25376
- 175.20.10 Constructor(other as SQLDateTimeMBS) 25377
- 175.20.11 Constructor(StringValue as String) 25378
- 175.20.12 Constructor(value as Double) 25379
- 175.20.13 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0, TimeZone as String = "") 25379
- 175.20.14 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer, TimeZone as String) 25380

### 175.20.10 Constructor(other as SQLDateTimeMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a copy of the SQL Date Time.
**Example:**

```
dim d as new SQLDateTimeMBS(2008, 3, 4, 23, 10, 20)
dim e as new SQLDateTimeMBS(d)

MsgBox e.StringValue // shows "2008-03-04T23:10:20"
```

See also:

- 175.20.7 Constructor(DateTimeValue as DateTime) 25376
- 175.20.8 Constructor(DateValue as Date) 25376

- 175.20.9 Constructor(Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0) 25377
- 175.20.11 Constructor(StringValue as String) 25378
- 175.20.12 Constructor(value as Double) 25379
- 175.20.13 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0, TimeZone as String = "") 25379
- 175.20.14 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer, TimeZone as String) 25380

### 175.20.11 Constructor(StringValue as String)

MBS SQL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Initialized a date time value from a string.
**Example:**

```
Dim d As New SQLDateTimeMBS("2021-04-12T18:46:16.242")
msgbox d.StringValue

Dim d2 As New SQLDateTimeMBS("now")
MsgBox d2.StringValue
```

**Notes:** You can pass "now" for current time, a string containing a double value for seconds since epoche or a string formatted with SQL datetime. Either with T or space as separator. If fraction is given, it should be 3 digits for milliseconds.
See also:

- 175.20.7 Constructor(DateTimeValue as DateTime) 25376
- 175.20.8 Constructor(DateValue as Date) 25376
- 175.20.9 Constructor(Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0) 25377
- 175.20.10 Constructor(other as SQLDateTimeMBS) 25377
- 175.20.12 Constructor(value as Double) 25379
- 175.20.13 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0, TimeZone as String = "") 25379
- 175.20.14 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer, TimeZone as String) 25380

### 175.20.12 Constructor(value as Double)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new SQL date time value based on the double value.
**Example:**

```
dim d as new SQLDateTimeMBS(2008, 3, 4, 23, 10, 20)
dim e as new SQLDateTimeMBS(d.DoubleValue+1) // clone with one day more

MsgBox e.StringValue // shows "2008-03-05T23:10:20"
```

See also:

- 175.20.7 Constructor(DateTimeValue as DateTime) 25376
- 175.20.8 Constructor(DateValue as Date) 25376
- 175.20.9 Constructor(Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0) 25377
- 175.20.10 Constructor(other as SQLDateTimeMBS) 25377
- 175.20.11 Constructor(StringValue as String) 25378
- 175.20.13 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0, TimeZone as String = "") 25379
- 175.20.14 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer, TimeZone as String) 25380

### 175.20.13 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0, TimeZone as String = "")

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new SQL Datetime with the given values.
**Example:**

```
dim d as new SQLDateTimeMBS(2008, 3, 4, 23, 10, 20)

MsgBox d.StringValue // shows "2008-03-04T23:10:20"
```

See also:

- 175.20.7 Constructor(DateTimeValue as DateTime) 25376

- 175.20.8 Constructor(DateValue as Date) 25376
- 175.20.9 Constructor(Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0) 25377
- 175.20.10 Constructor(other as SQLDateTimeMBS) 25377
- 175.20.11 Constructor(StringValue as String) 25378
- 175.20.12 Constructor(value as Double) 25379
- 175.20.14 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer, TimeZone as String) 25380

### 175.20.14 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer, TimeZone as String)

MBS SQL Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new SQL Datetime with the given values.
See also:

- 175.20.7 Constructor(DateTimeValue as DateTime) 25376
- 175.20.8 Constructor(DateValue as Date) 25376
- 175.20.9 Constructor(Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0) 25377
- 175.20.10 Constructor(other as SQLDateTimeMBS) 25377
- 175.20.11 Constructor(StringValue as String) 25378
- 175.20.12 Constructor(value as Double) 25379
- 175.20.13 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0, TimeZone as String = "") 25379

### 175.20.15 Set(DateTimeValue as DateTime)

MBS SQL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Assigns the datetime value with the given dateTime object.
See also:

- 175.20.16 Set(value as Date) 25381

### 175.20.16 Set(value as Date)

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Assigns the datetime value with the given date.
See also:

- 175.20.15 Set(DateTimeValue as DateTime) 25380

### 175.20.17 Properties

### 175.20.18 DateTimeValue as DateTime

MBS SQL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the value of this datetime object as a date object.
**Notes:** (Read only property)

### 175.20.19 DateValue as Date

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Queries the value of this datetime object as a date object.
**Notes:** (Read only property)

### 175.20.20 Day as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the day this SADateTime object represents (1 ,Äì 31).
**Notes:** (Read only property)

### 175.20.21 DayOfWeek as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the day of the week this SADateTime object represents (Sunday = 1).
**Notes:** (Read only property)

### 175.20.22 DayOfYear as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the day of the year this SADateTime object represents (Jan 1 = 1).
**Notes:** (Read only property)

### 175.20.23 DoubleValue as Double

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The double value of this date/time.
**Notes:**

Use these operators to get current date/time value using standard double representation. Days are represented by whole number increments starting with 30 December 1899, midnight as time zero. Hour values are expressed as the absolute value of the fractional part of the number.

| Date and time | Representation |
|---|---|
| 30 December 1899, midnight | 0.00 |
| 1 January 1900, midnight | 2.00 |
| 4 January 1900, midnight | 5.00 |
| 4 January 1900, 6 A.M. | 5.25 |
| 4 January 1900, noon | 5.50 |
| 4 January 1900, 9 P.M. | 5.875 |

(Read only property)

### 175.20.24 Fraction as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the value of the fraction of second (0 to 999,999,999) this SQLDateTime object represents.
**Notes:**

The value of the fraction field is the number of billionths of a second and ranges from 0 through 999,999,999 (1 less than 1 billion). For example, the value of the fraction field for a half-second is 500,000,000, for a thousandth of a second (one millisecond) is 1,000,000, for a millionth of a second (one microsecond) is 1,000, and for a billionth of a second (one nanosecond) is 1.
(Read only property)

### 175.20.25 hasDate as Boolean

MBS SQL Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this date & time object contains a date.
**Notes:** (Read only property)

### 175.20.26 hasTime as Boolean

MBS SQL Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this date & time object contains a time.
**Notes:** (Read only property)

### 175.20.27 Hour as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the hour this SADateTime object represents (0 ,Äì 23).
**Notes:** (Read only property)

### 175.20.28 Minute as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the minute this SADateTime object represents (0 ,Äì 59).
**Notes:** (Read only property)

### 175.20.29 Month as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the month this SADateTime object represents (1 ,Äì 12).
**Notes:** (Read only property)

### 175.20.30 Second as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the second this SADateTime object represents (0 ,Äì 59).
**Notes:** (Read only property)

### 175.20.31 StringValue as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The string value for this date/time.
**Notes:** (Read only property)

### 175.20.32 TimeZone as String

MBS SQL Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The time zone.
**Notes:**

Should be in format "00:00" and should be supported for Oracle and Postgres.
(Read and Write property)

### 175.20.33 Year as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the year this SADateTime object represents.
**Notes:** (Read only property)

# 175.21 class SQLErrorExceptionMBS

## 175.21.1 class SQLErrorExceptionMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The error exception class to report SQL errors.
**Notes:**

The SQLDatabaseMBS class sets its error properties on an error. All other SQL classes raise exceptions where you can check the message property.
Subclass of the RuntimeException class.

- 14.1, page 27: The MBS SQL Plugin, An alternative way to connect to databases by Christian Schmitz

### 175.21.6 Properties

### 175.21.7 ErrorClass as Integer

MBS SQL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a class of error.
**Notes:**

Returns one of the following values:

| | | |
|---|---|---|
| SA_No_Error | 0 | No error occurred. |
| SA_UserGenerated_Error | 1 | User-generated error. |
| SA_Library_Error | 2 | The Library error occurred. |
| SA_DBMS_API_Error | 3 | DBMS API error occurred. |

A SQLErrorExceptionMBS object handles the next error classes:

- User-generated errors
- Library errors
- DBMS API errors

The Library errors are generated by the Library itself. It can be like detecting some mistake in passing arguments to the function or referencing the parameter with an inappropriate name. To get a Library-defined error text call ErrorMessage method.

The DBMS API errors come to the Library from the DBMS Client or Server. In this case the Library returns an error code and text Client- or Server-defined. To get error code and error text returned by the server call NativeError and ErrorMessage methods.

The User-generated exception is "SQLAPI++ compatible" exception thrown by the user. To throw user exception use throwUserException method.
(Read and Write property)

### 175.21.8 ErrorMessage as String

MBS SQL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Gets an error text.
**Notes:**

A error text depends on a class of error.

If error class is Library error the ErrorMessage method returns Library-defined error text. If error class is DBMS API error the ErrorMessage method returns an error text gotten from DBMS Server or Client. If error class is User-defined error the ErrorMessage method returns an error text specified by user (see throwUserException method).

To get the error class call ErrorClass method.
(same as Message property)
(Read and Write property)

### 175.21.9 ErrorPosition as Integer

MBS SQL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Gets an error position in SQL statement.
**Notes:**

Returns an integer value representing error position.
Not all DBMS servers allow to get error position. See Server specific notes to get detailed information about returned value.

If a command object's associated SQL statement contains any syntax errors, an exception will be thrown when you try to compile. ErrorPosition method returns the error position within the command string.

Server specific notes

| DBMS server | ErrorPosition method returned value |
|---|---|
| Oracle | ErrorPosition returns parse error offset. |
| SQL Server | ErrorPosition returns the number of line within SQL statement where error occurred. |
| Sybase | ErrorPosition returns the number of line within SQL statement where error occurred. |
| DB2 | ErrorPosition returns -1. DB2 does not support this function. |
| Informix | ErrorPosition returns -1. Informix does not support this function. |
| InterBase | ErrorPosition returns -1. InterBase does not support this function. |
| SQLBase | ErrorPosition returns character position of the syntax error within an SQL statement. The first character is position 0. |
| MySQL | ErrorPosition returns -1. MySQL does not support this function. |
| PostgreSQL | ErrorPosition returns -1. PostgreSQL does not support this function. |
| ODBC | ErrorPosition returns -1. ODBC does not support this function. |

(Read and Write property)

### 175.21.10 NativeError as Integer

MBS SQL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Gets a native code associated with current error.
**Notes:**

Returns an integer value represents a native code associated with current error.

If error class is DBMS API error the NativeError method returns error code received from DBMS Server or Client. If error class is User-defined error the NativeError method returns an error code specified by user (see throwUserException method). If error class is Library error the NativeError method returns -1.

To get the error class call ErrorClass method.

See server specific documentation to get more information about DBMS API error code.
(same as ErrorNumber property)
(Read and Write property)

### 175.21.11 SQL as String

MBS SQL Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The SQL string set when this error occurred.
**Notes:** (Read and Write property)

# 175.22 class SQLFieldMBS

## 175.22.1 class SQLFieldMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This is the class for a SQL field in a record.
**Notes:**

Be aware that field objects exists only as long as their SQLCommand exists.

see also
https://www.sqlapi.com/ApiDoc/class_s_a_field.html
Subclass of the SQLValueReadMBS class.

## 175.22.4 Methods

## 175.22.5 ReadLongOrLob(toConsumer as SQLDataConsumerMBS, BlockSize as Integer)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Starts reading of Long or BLob(CLob) value using the given data consumer.
**Notes:**

BlockSize: Size of piece of data you want to get to the consumer event.

After a command execution all output parameters are updated by their values, including Long and BLob(CLob) parameters. If you want to control piecewise reading of Long or BLob(CLob) data you should do the following:

Before a command execution set kLongOrLobReaderManual reading mode (see LongOrLobReaderMode) for Long or BLob(CLob) parameters you want to process by a data consumer. After that SQLAPI++ will skip reading output Long and BLob(CLob) parameters that you set to be read manually.
After command execution use ReadLongOrLob method for each output parameter defined to be read manually.
Note, that if the command has result set(s) (it is possible in some servers, see Server specific notes) then output parameters are available only after all result sets are completely processed using FetchNext method.
See also:

- 175.22.6 ReadLongOrLob(toFile as FolderItem) 25390
- 175.22.7 ReadLongOrLob(toStream as Writeable) 25390

### 175.22.6 ReadLongOrLob(toFile as FolderItem)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Starts reading of Long or BLob(CLob) value to the given file.
**Example:**

```
dim cmd as SQLCommandMBS // your command
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim field as SQLFieldMBS = cmd.Field("image")
// read blob content to binarystream
field.ReadLongOrLob(f)
```

**Notes:** May raise IOExceptions if things go wrong.
See also:

- 175.22.5 ReadLongOrLob(toConsumer as SQLDataConsumerMBS, BlockSize as Integer) 25389
- 175.22.7 ReadLongOrLob(toStream as Writeable) 25390

### 175.22.7 ReadLongOrLob(toStream as Writeable)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Starts reading of Long or BLob(CLob) value to the given writeable stream.
**Example:**

```
dim cmd as SQLCommandMBS // your command
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim b as BinaryStream = BinaryStream.Create(f, true)
dim field as SQLFieldMBS = cmd.Field("image")
// read blob content to binarystream
field.ReadLongOrLob(b)
```

**Notes:** This allows you to read in chunks the data to a stream, e.g. binarystream, textoutputstream or socket.
See also:

- 175.22.5 ReadLongOrLob(toConsumer as SQLDataConsumerMBS, BlockSize as Integer) 25389
- 175.22.6 ReadLongOrLob(toFile as FolderItem) 25390

### 175.22.8 Properties

### 175.22.9 FieldNativeType as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns native type code of the field.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

Deprecated. Please use NativeType property instead.
(Read only property)

### 175.22.10 FieldPrecision as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns precision of the field value (the total number of allowable digits).
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

Deprecated. Please use Precision property instead.
(Read only property)

### 175.22.11 FieldScale as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns scale of the field value (the number of digits to the right of the decimal point).
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

Deprecated. Please use Scale property instead.
(Read and Write property)

### 175.22.12 FieldSize as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns field data size.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

Deprecated. Please use Size property instead.
(Read only property)

### 175.22.13 FieldType as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns field data type.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

Value is one of the kDataType* constants.
Deprecated. Please use Type property instead.
(Read and Write property)

### 175.22.14 isFieldRequired as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Shows if it is possible for the field value to be null.
**Notes:**

Returns true if the field value can be null; false otherwise.
(Read only property)

### 175.22.15 Name as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns name of the field.
**Notes:** (Read only property)

### 175.22.16 NativeType as Integer

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns native type code of the field.
**Notes:** (Read only property)

### 175.22.17 Options as Dictionary

MBS SQL Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a dictionary with all options.
**Notes:**

For debugging, it may be useful to inspect options in debugger.
(Read only property)

### 175.22.18 Pos as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a one-based position of the field in a result set.
**Notes:** (Read only property)

### 175.22.19 Precision as Integer

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns precision of the field value (the total number of allowable digits).
**Notes:** (Read only property)

### 175.22.20 Scale as Integer

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns scale of the field value (the number of digits to the right of the decimal point).
**Notes:** (Read and Write property)

### 175.22.21 Size as Integer

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns field data size.
**Notes:** (Read only property)

### 175.22.22 Type as Integer

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns field data type.
**Example:**

```
dim db as SQLConnectionMBS
dim cmd as new SQLCommandMBS(db, "select * from test")

cmd.Execute

dim f as SQLFieldMBS = cmd.Field("test")

if f.Type = f.kDataTypeLong then
MsgBox "type is long"
end if
```

**Notes:**

Value is one of the kDataType* constants.
(Read and Write property)

### 175.22.23 Option(name as string) as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The string value of a specific field option.
**Notes:**

See for more details:
https://www.sqlapi.com/ApiDoc/class_s_a_field.html
(Read and Write computed property)

# 175.23 class SQLGlobalsMBS

## 175.23.1 class SQLGlobalsMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for the global methods of the SQL plugin.

### 175.23.4 Methods

### 175.23.5 FindTableName(SQL as String) as String

MBS SQL Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries table name used in a SQL SELECT statement.
**Example:**

```
Dim sql As String = "SELECT First, Last FROM MyTable WHERE ID = 1"
Dim TableName As String = SQLGlobalsMBS.FindTableName(sql)

MessageBox TableName // shows MyTable
```

**Notes:**

This is a helper function used by our Edit/Update methods in RecordSet.
Returns either the found table name or empty text if something got wrong. e.g. multiple tables affected due to JOIN operation.

If you find a case where the parser crashes or reports wrong result, please contact us.

### 175.23.6 GetEnv(name as string) as string

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries environment variable.
**Notes:** Returns empty string if variable is undefined.

### 175.23.7 GetVersion as String

MBS SQL Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The version string of the SQLAPI library.

### 175.23.8 GetVersionBuild as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The build number of the SQLAPI library.

### 175.23.9 GetVersionMajor as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The major version number of the SQLAPI library.

### 175.23.10 GetVersionMinor as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The minor version number of the SQLAPI library.

### 175.23.11 PutEnv(line as string) as boolean

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets environment variable.
**Notes:** Line format should be "key=value" and returns true on success and false on failure.

### 175.23.12 RaiseException(message as string)

MBS SQL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Raises an exception to test exception handling in SQL Plugin.
**Notes:** Raises directly a SQLErrorExceptionMBS with the given message.

### 175.23.13 RaiseSQLErrorException(UserCode as Integer, message as string)

MBS SQL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Raises an exception to test exception handling in SQL Plugin.
**Notes:** Raises a SAUserException which the plugin catches and translates to a SQLErrorExceptionMBS in Xojo.

### 175.23.14 SetCurrentWorkingDirectory(path as folderitem) as boolean

MBS SQL Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the current working directory.
**Notes:** This is often useful to make sure the DLLs in that folder are found.

See also:

- 175.23.15 SetCurrentWorkingDirectory(path as String) as boolean 25398

### 175.23.15 SetCurrentWorkingDirectory(path as String) as boolean

MBS SQL Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the current working directory.
**Notes:** This is often useful to make sure the DLLs in that folder are found.
See also:

- 175.23.14 SetCurrentWorkingDirectory(path as folderitem) as boolean 25397

### 175.23.16 SetEnv(name as string, value as string) as boolean

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets an environment variable.
**Notes:**

Existing variable with same name will be overwritten.
Returns true on success and false on failure.

### 175.23.17 SetLicenseCode(n as string, enddate as Integer, v1 as Integer, v2 as Integer)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Registeres the SQL plugin and library.
**Notes:** Once you ordered a license, you receive details on how to call this method.

### 175.23.18 Setlocale(category as Integer, locale as string)

MBS SQL Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the locale to use.
**Example:**

```
// ask for English for USA with 1252 codepage
SQLGlobalsMBS.Setlocale SQLGlobalsMBS.LocaleAll, "English_United States.1252"
```

**Notes:**

The Setlocale function sets the C library's notion of natural language formatting style for particular sets of routines. Each such style is called a 'locale' and is invoked using an appropriate name passed as a C string.

The setlocale() function recognizes several categories of routines. These are the categories and the sets of routines they select:

| | |
|---|---|
| LocaleAll | Set the entire locale generically. |
| LocaleCollate | Set a locale for string collation routines. This controls alphabetic ordering in strcoll() and strxfrm(). |
| LocaleCType | Set a locale for the ctype and multibyte functions. This controls recognition of upper and lower case, alphabetic or non-alphabetic characters, and so on. |
| LocaleMessages | Set a locale for message catalogs, see catopen function. |
| LocaleMonetary | Set a locale for formatting monetary values; this affects the localeconv() function. |
| LocaleNumeric | Set a locale for formatting numbers. This controls the formatting of decimal points in input and output of floating point numbers in functions such as printf() and scanf(), as well as values returned by localeconv(). |
| LocaleTime | Set a locale for formatting dates and times using the strftime() function. |

Only three locales are defined by default: the empty string "" (which denotes the native environment) and the "C" and "POSIX" locales (which denote the C-language environment). By default, C programs start in the "C" locale.

### 175.23.19 UnInitialize

MBS SQL Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Explicitly shutdown SQL engine.
**Notes:** You can call this in App Close or Destructor, but only after you destroyed all Connections, e.g. all SQLDatabaseMBS and SQLConnectionMBS objects.

### 175.23.20 UnSetEnv(name as string) as boolean

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Removes environment variable.
**Notes:** Returns true on success and false on failure.

### 175.23.21 Events

### 175.23.22 Trace(traceInfo as Integer, SQL as string, Connection as SQLConnectionMBS, Command as SQLCommandMBS)

MBS SQL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event to trace SQL commands.

### 175.23.23 Constants

### 175.23.24 LocaleAll=0

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the locale category constants for SetLocale.
**Notes:** Set the entire locale generically.

### 175.23.25 LocaleCollate=1

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the locale category constants for SetLocale.
**Notes:** Set a locale for string collation routines. This controls alphabetic ordering in strcoll() and strxfrm().

### 175.23.26 LocaleCType=2

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the locale category constants for SetLocale.
**Notes:** et a locale for the ctype(3) and multibyte(3) functions. This controls recognition of upper and lower case, alphabetic or non-alphabetic characters, and so on.

### 175.23.27 LocaleMessages=6

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the locale category constants for SetLocale.
**Notes:** Set a locale for message catalogs, see catopen(3) function.

### 175.23.28 LocaleMonetary=3

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the locale category constants for SetLocale.
**Notes:** Set a locale for formatting monetary values; this affects the localeconv() function.

### 175.23.29 LocaleNumeric=4

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the locale category constants for SetLocale.
**Notes:** Set a locale for formatting numbers. This controls the formatting of decimal points in input and output of floating point numbers in functions such as printf() and scanf(), as well as values returned by localeconv().

### 175.23.30 LocaleTime=5

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the locale category constants for SetLocale.
**Notes:** Set a locale for formatting dates and times using the strftime() function.

## 175.24 class SQLIntervalMBS

### 175.24.1 class SQLIntervalMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class in the SQL Plugin for an interval.

### 175.24.2 Methods

### 175.24.3 Constructor

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new zero interval.
See also:

- 175.24.4 Constructor(days as Integer, hours as Integer, minutes as Integer, seconds as Integer = 0, NanoSeconds as Integer = 0) 25402
- 175.24.5 Constructor(value as Double) 25402

### 175.24.4 Constructor(days as Integer, hours as Integer, minutes as Integer, seconds as Integer = 0, NanoSeconds as Integer = 0)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new interval with the given values.
See also:

- 175.24.3 Constructor 25402
- 175.24.5 Constructor(value as Double) 25402

### 175.24.5 Constructor(value as Double)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new interval with the given time delta.
**Example:**

```
dim n as new SQLIntervalMBS(5)

MsgBox n.StringValue // shows "120:00:00" for 120 hours
```

See also:

- 175.24.3 Constructor 25402
- 175.24.4 Constructor(days as Integer, hours as Integer, minutes as Integer, seconds as Integer = 0, NanoSeconds as Integer = 0) 25402

### 175.24.6 Dec(interval as SQLIntervalMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decrements the interval.

### 175.24.7 Inc(interval as SQLIntervalMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Increments the interval.

### 175.24.8 SetInterval(days as Integer, hours as Integer, minutes as Integer, seconds as Integer = 0, NanoSeconds as Integer = 0)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the interval values.

### 175.24.9 Properties

### 175.24.10 Days as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The days in this interval.
**Notes:** (Read only property)

### 175.24.11 DoubleValue as Double

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The value of this interval.
**Example:**

```
dim n as new SQLIntervalMBS(1,2,3,4)

MsgBox str(n.DoubleValue) // shows "1.085463" for 1 day, 2 hours, 3 minutes and 4 seconds
```

**Notes:** (Read only property)

### 175.24.12 Fraction as Integer

MBS SQL Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The fraction of a second in nano seconds.
**Notes:**

Range 0..999999999.
(Read only property)

### 175.24.13 Hours as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The hours value.
**Notes:** (Read only property)

### 175.24.14 Minutes as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The minutes value.
**Notes:** (Read only property)

### 175.24.15 Seconds as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The seconds value.
**Notes:** (Read only property)

### 175.24.16 StringValue as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The interval as a string.
**Example:**

```
dim n as new SQLIntervalMBS(5)

MsgBox n.StringValue // shows "120:00:00" for 120 hours
```

**Notes:** (Read only property)

### 175.24.17 TotalDays as Double

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The total days value.
**Example:**

```
dim n as new SQLIntervalMBS(1,2,3,4)

MsgBox str(n.TotalDays) // shows "1"
```

**Notes:** (Read only property)

### 175.24.18 TotalHours as Double

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The total hours value.
**Example:**

```
dim n as new SQLIntervalMBS(1,2,3,4)

MsgBox str(n.TotalHours) // shows "26"
```

**Notes:** (Read only property)

### 175.24.19 TotalMinutes as Double

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The total minutes value.
**Example:**

```
dim n as new SQLIntervalMBS(1,2,3,4)

MsgBox str(n.TotalMinutes) // shows "1563"
```

**Notes:** (Read only property)

### 175.24.20 TotalSeconds as Double

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The total seconds value.
**Notes:**

```
dim n as new SQLIntervalMBS(1,2,3,4)

MsgBox str(n.GetTotalSeconds) // shows "93784"
```

(Read only property)

# 175.25 class SQLite3BackupMBS

## 175.25.1 class SQLite3BackupMBS

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The object for a running backup.
**Notes:**

The backup object records state information about an ongoing online backup operation. The sqlite3_backup object is created by a call to BackupInit() and is destroyed by a call to BackupFinish().
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

# 175.26 class SQLite3MBS

## 175.26.1 class SQLite3MBS

MBS SQL Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for the native SQLite API.
**Example:**

```
dim con as new SQLConnectionMBS
dim path as string = "/tmp/test.db" // change path for Windows!

con.Connect(path,"","",SQLConnectionMBS.kSQLiteClient)

dim api as SQLAPIMBS = con.NativeAPI
if api isa SQLite3MBS then
dim s as SQLite3MBS = SQLite3MBS(api)
MsgBox s.Version
end if
```

**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

Deprecated in favor of direct methods on SQLConnectionMBS. Please let us know if you need more SQLite specific functions.
Subclass of the SQLAPIMBS class.

### 175.26.6 Methods

### 175.26.7 BackupFinish(Backup as SQLite3BackupMBS) as Integer

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Finishes a backup run.
**Notes:**

When BackupStep has returned kErrorDone, or when the application wishes to abandon the backup operation, the application should destroy the SQLite3BackupMBS by passing it to BackupFinish. The BackupFinish interfaces releases all resources associated with the SQLite3BackupMBS object. If BackupStep has not yet returned kErrorDone, then any active write-transaction on the destination database is rolled back. The SQLite3BackupMBS object is invalid and may not be used following a call to BackupFinish.
The value returned by BackupFinish is kErrorOK if no BackupStep errors occurred, regardless or whether or not BackupStep completed. If an out-of-memory condition or IO error occurred during any prior BackupStep call on the same SQLite3BackupMBS object, then BackupFinish returns the corresponding error code.
A return of kErrorBusy or kErrorLocked from BackupStep is not a permanent error and does not affect the return value of BackupFinish.

### 175.26.8 BackupInit(Dest as Variant, DestName as String, Source as Variant, SourceName as String) as SQLite3BackupMBS

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Initializes a backup.
**Notes:**

The backup API copies the content of one database into another. It is useful either for creating backups of databases or for copying in-memory databases to or from persistent files.

see also
http://www.sqlite.org/c3ref/backup_finish.html

Exclusive access is required to the destination database for the duration of the operation. However the source database is only read-locked while it is actually being read; it is not locked continuously for the entire backup operation. Thus, the backup may be performed on a live source database without preventing other users from reading or writing to the source database while the backup is underway.

To perform a backup operation:

- BackupInit is called once to initialize the backup,
- BackupStep is called one or more times to transfer the data between the two databases, and finally
- BackupFinish is called to release all resources associated with the backup operation.

There should be exactly one call to BackupFinish for each successful call to BackupInit.

The D and N arguments to BackupInit(D,N,S,M) are the database connection associated with the destination database and the database name, respectively. The database name is "main" for the main database, "temp" for the temporary database, or the name specified after the AS keyword in an ATTACH statement for an attached database. The S and M arguments passed to BackupInit(D,N,S,M) identify the database connection and database name of the source database, respectively. The source and destination database connections (parameters S and D) must be different or else BackupInit(D,N,S,M) will file with an error.
If an error occurs within BackupInit(D,N,S,M), then nil is returned and an error code and error message are store3d in the destination database connection D. The error code and message for the failed call to BackupInit can be retrieved using the ErrCode and ErrMessage functions. A successful call to BackupInit returns a SQLite3BackupMBS object. The SQLite3BackupMBS object may be used with the BackupStep and BackupFinish functions to perform the specified backup operation.

Concurrent Usage of Database Handles
The source database connection may be used by the application for other purposes while a backup operation is underway or being initialized. If SQLite is compiled and configured to support threadsafe database connections, then the source database connection may be used concurrently from within other threads.

However, the application must guarantee that the destination database connection is not passed to any other API (by any thread) after BackupInit is called and before the corresponding call to BackupFinish. SQLite does not currently check to see if the application incorrectly accesses the destination database connection and so no error code is reported, but the operations may malfunction nevertheless. Use of the destination database connection while a backup is in progress might also also cause a mutex deadlock.
If running in shared cache mode, the application must guarantee that the shared cache used by the destination database is not accessed while the backup is running. In practice this means that the application must guarantee that the disk file being backed up to is not accessed by any connection within the process, not just the specific connection that was passed to BackupInit.
The SQLite3BackupMBS object itself is partially threadsafe. Multiple threads may safely make multiple concurrent calls to BackupStep. However, the BackupRemaining and BackupPageCount APIs are not strictly speaking threadsafe. If they are invoked at the same time as another thread is invoking BackupStep it is possible that they return invalid values.

Source and Dest can be SQLConnectionMBS or SQLDatabaseMBS. You need to pass source and dest, even if one is self as we give you the option to decide where to pass the current database connection.

### 175.26.9 BackupPageCount(Backup as SQLite3BackupMBS) as Integer

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the number of pages in total.
**Notes:**

Each call to BackupStep sets two values inside the SQLite3BackupMBS object: the number of pages still to be backed up and the total number of pages in the source databae file. The BackupRemaining and BackupPageCount interfaces retrieve these two values, respectively.
The values returned by these functions are only updated by BackupStep. If the source database is modified during a backup operation, then the values are not updated to account for any extra pages that need to be updated or the size of the source database file changing.

### 175.26.10 BackupRemaining(Backup as SQLite3BackupMBS) as Integer

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the number of pages remaining.
**Notes:**

Each call to BackupStep sets two values inside the SQLite3BackupMBS object: the number of pages still to be backed up and the total number of pages in the source databae file. The BackupRemaining and BackupPageCount interfaces retrieve these two values, respectively.
The values returned by these functions are only updated by BackupStep. If the source database is modified during a backup operation, then the values are not updated to account for any extra pages that need to be updated or the size of the source database file changing.

### 175.26.11 BackupStep(Backup as SQLite3BackupMBS, Pages as Integer) as Integer

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Copies up to Pages pages between the source and destination databases specified by SQLite3BackupMBS object.
**Notes:**

If N is negative, all remaining source pages are copied. If BackupStep(B,N) successfully copies N pages and there are still more pages to be copied, then the function resturns kErrorOK. If BackupStep(B,N) successfully finishes copying all pages from source to destination, then it returns kErrorDone. If an error occurs while running BackupStep(B,N), then an error code is returned. As well as kErrorOK and kErrorDone, a call to BackupStep may return kErrorReadOnly, kErrorNoMem, kErrorBusy, kErrorLocked, or an kErrorIOACCESS | kErrorIOXXX extended error code.
The BackupStep might return kErrorReadOnly if the destination database was opened read-only or if the destination is an in-memory database with a different page size from the source database.
If BackupStep cannot obtain a required file-system lock, then the sqlite3_busy_handler | busy-handler function is invoked (if one is specified). If the busy-handler returns non-zero before the lock is available, then kErrorBusy is returned to the caller. In this case the call to BackupStep can be retried later. If the source database connection is being used to write to the source database when BackupStep is called, then kErrorLocked is returned immediately. Again, in this case the call to BackupStep can be retried later on. (If kErrorIOACCESS | kErrorIOXXX, kErrorNoMem, or kErrorReadOnly is returned, then there is no point in retrying the call to BackupStep. These errors are considered fatal.) The application must accept that the backup operation has failed and pass the backup operation handle to the BackupFinish to release associated resources.
The first call to BackupStep obtains an exclusive lock on the destination file. The exclusive lock is not released until either BackupFinish is called or the backup operation is complete and BackupStep returns kErrorDone. Every call to BackupStep obtains a shared lock on the source database that lasts for the duration of the BackupStep call. Because the source database is not locked between calls to BackupStep, the source database may be modified mid-way through the backup process. If the source database is modified by an external process or via a database connection other than the one being used by the backup operation, then the backup will be automatically restarted by the next call to BackupStep. If the source database is modified by the using the same database connection as is used by the backup operation, then the backup database is automatically updated at the same time.

### 175.26.12 EnableLoadExtension(OnOff as boolean)

MBS SQL Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enables/disables extension loading for the given connection.

### 175.26.13 ErrCode as Integer

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The ErrCode function returns the numeric result code or extended result code for the most recent failed sqlite3 API call associated with a database connection.
**Notes:** If a prior API call failed but the most recent API call succeeded, the return value from ErrCode is undefined.

### 175.26.14 ErrMessage as string

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the most recent error message in english for the given connection.

### 175.26.15 LastInsertRowID as Int64

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns Last Insert Rowid.
**Notes:**

Each entry in an SQLite table has a unique 64-bit signed integer key called the ROWID. The rowid is always available as an undeclared column named ROWID, OID, or _ROWID_ as long as those names are not also used by explicitly declared columns. If the table has a column of type INTEGER PRIMARY KEY then that column is another alias for the rowid.

This routine returns the rowid of the most recent successful INSERT into the database from the database connection in the first argument. If no successful INSERTs have ever occurred on that database connection, zero is returned.

(If an INSERT occurs within a trigger, then the rowid of the inserted row is returned by this routine as long as the trigger is running. But once the trigger terminates, the value returned by this routine reverts to the last value inserted before the trigger fired.)

An INSERT that fails due to a constraint violation is not a successful INSERT and does not change the value returned by this routine. ^Thus INSERT OR FAIL, INSERT OR IGNORE, INSERT OR ROLLBACK, and INSERT OR ABORT make no changes to the return value of this routine when their insertion fails. ^(When INSERT OR REPLACE encounters a constraint violation, it does not fail. The INSERT continues to completion after deleting rows that caused the constraint problem so INSERT OR REPLACE will always change the return value of this interface.)^

For the purposes of this routine, an INSERT is considered to be successful even if it is subsequently rolled back.

This function is accessible to SQL statements via the last_insert_rowid() SQL function.

If a separate thread performs a new INSERT on the same database connection while the LastInsertRowID function is running and thus changes the last insert rowid, then the value returned by LastInsertRowID is unpredictable and might not equal either the old or the new last insert rowid.

### 175.26.16 LoadExtension(file as FolderItem, ByRef ErrorMessage as String) as Integer

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Loads an SQLite extension library from the named file.
**Notes:**

The LoadExtension interface attempts to load an SQLite extension library contained in the file.

Returns kErrorOk on success and kErrorError if something goes wrong.
Extension loading must be enabled using EnableLoadExtension prior to calling this API, otherwise an error will be returned.
See also:

- 175.26.17 LoadExtension(path as String, ByRef ErrorMessage as String) as Integer 25415

### 175.26.17 LoadExtension(path as String, ByRef ErrorMessage as String) as Integer

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Loads an SQLite extension library from the named file.
**Notes:**

The LoadExtension interface attempts to load an SQLite extension library contained in the file.

Returns kErrorOk on success and kErrorError if something goes wrong.
Extension loading must be enabled using EnableLoadExtension prior to calling this API, otherwise an error will be returned.
See also:

- 175.26.16 LoadExtension(file as FolderItem, ByRef ErrorMessage as String) as Integer 25415

### 175.26.18 MemoryHighwater(reset as boolean) as Int64

MBS SQL Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries maximum memory usage so far.
**Notes:** Can be reset with reset parameter being true.
See also:

- 175.26.27 MemoryHighwater as Int64 25420

### 175.26.19 ReKey(Key as String) as Integer

MBS SQL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** You can change the key on a database using the Rekey Function.
**Notes:**

An empty key decrypts the database.

Rekeying requires that every page of the database file be read, decrypted, reencrypted with the new key, then written out again. Consequently, rekeying can take a long time on a larger database.

Most SEE variants allow you to encrypt an existing database that was created using the public domain version of SQLite. This is not possible when using the authenticating version of the encryption extension in see-aes128-ccm. If you do encrypt a database that was created with the public domain version of SQLite, no nonce will be used and the file will be vulnerable to a chosen-plaintext attach. If you call SetKey() immediately after Open when you are first creating the database, space will be reserved in the database for a nonce and the encryption will be much stronger. If you do not want to encrypt right away, call SetKey() anyway, with an empty key, and the space for the nonce will be reserved in the database even though no encryption is done initially.

A public domain version of the SQLite library can read and write an encrypted database with an empty key. You only need the encryption extension if the key is non-empty.

Returns a SQLite error code.

### 175.26.20 SetBusyHandler(MaxAttempts as Integer = 5)

MBS SQL Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Installs busy handler for this connection.
**Notes:**

This routine sets a callback function that might be invoked whenever an attempt is made to open a database table that another thread or process has locked.

The plugin has an busy handler which will wait up to MaxAttemps and yield to other Xojo threads while

waiting.
Passing 5 should wait up to 100ms.

There can only be a single busy handler defined for each [ database connection ] . Setting a new busy handler clears any previously set handler.) Note that calling SetBusyTimeout will also set or clear the busy handler.

The busy callback should not take any actions which modify the database connection that invoked the busy handler. Any such actions result in undefined behavior.

### 175.26.21 SetBusyTimeout(TimeOutMS as Integer = 20)

MBS SQL Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This routine sets a busy handler that sleeps for a specified amount of time when a table is locked.
**Notes:**

The handler will sleep multiple times until at least "ms" milliseconds of sleeping have accumulated. ^After at least "ms" milliseconds of sleeping, the handler returns 0 which causes SQLite query to return SQLite Busy or IO Blocked error.

Calling this routine with an argument less than or equal to zero turns off all busy handlers.

(There can only be a single busy handler for a particular database connection any any given moment. If another busy handler was defined (using SetBusyHandler prior to calling this routine, that other busy handler is cleared.)

### 175.26.22 SetKey(Key as String) as Integer

MBS SQL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Applies encryption to a database connection.
**Notes:**

Returns a SQLite error code.

The amount of key material actually used by the encryption extension depends on which variant of SEE you are using. With RC4, the first 256 byte of key are used. With the AES128, the first 16 bytes of the key are used. With AES256, the first 32 bytes of key are used.

If you specify a key that is shorter than the maximum key length, then the key material is repeated as many times as necessary to complete the key. If you specify a key that is larger than the maximum key length, then the excess key material is silently ignored.

The key must begin with an ASCII prefix to specify which algorithm to use. The prefix must be one of "rc4:", "aes128:", or "aes256:". The prefix is not used as part of the key sent into the encryption algorithm. So the real key should begin on the first byte after the prefix.

The string provided to the plugin is used with it's current encoding. So be sure you use right text encoding for what you want. e.g. using "M√ºller" as key in text encoding Windows ANSI will not open a database which used that key in UTF-8 encoding.

The Xojo database encryption in SQLiteDatabase class uses AES-128 OFB.

### 175.26.23 TableColumnMetaData(DBName as string, TableName as string, ColumnName as string, byref DataType as string, byref CollationSequence as string, byref NotNull as boolean, byref PrimaryKey as boolean, byref AutoIncrement as Boolean) as Integer

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Extract Metadata About A Column Of A Table
**Notes:**

Not available in all sqlite libraries!

This routine returns metadata about a specific column of a specific database table accessible using the database connection handle passed as the first function argument.
The column is identified by the second, third and fourth parameters to this function. The second parameter is either the name of the database (i.e. "main", "temp", or an attached database) containing the specified table or NULL. If it is NULL, then all attached databases are searched for the table using the same algorithm used by the database engine to resolve unqualified table references.
The third and fourth parameters to this function are the table and column name of the desired column, respectively. Neither of these parameters may be NULL.
Metadata is returned by writing to the memory locations passed as the 5th and subsequent parameters to this function. Any of these arguments may be NULL, in which case the corresponding element of metadata is omitted.

CollationSequence is assigned the Name of default collation sequence. NotNull is set to true if column has a NOT NULL constraint. PrimaryKey is set to true if column is part of the PRIMARY KEY and AutoIncrement is set to true if column is AUTOINCREMENT.

If the specified table is actually a view, an error code is returned.

If the specified column is "rowid", "oid" or "_rowid_" and an INTEGER PRIMARY KEY column has been

explicitly declared, then the output parameters are set for the explicitly declared column. (If there is no explicitly declared INTEGER PRIMARY KEY column, then the output parameters are set as follows:

data type: "INTEGER"
collation sequence: "BINARY"
not null: false
primary key: true
auto increment: false

(This function may load one or more schemas from database files. If an error occurs during this process, or if the requested table or column cannot be found, an error code is returned and an error message left in the database connection (to be retrieved using ErrMessage).)

This API is only available if the library was compiled with the SQLITE_ENABLE_COLUMN_METADATA C-preprocessor symbol defined.

### 175.26.24 Threadsafe as Integer

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Test To See If The Library Is Threadsafe.
**Notes:**

The threadsafe() function returns zero if and only if SQLite was compiled mutexing code omitted due to the SQLITE_THREADSAFE compile-time option being set to 0.

SQLite can be compiled with or without mutexes. When the SQLITE_THREADSAFE C preprocessor macro is 1 or 2, mutexes are enabled and SQLite is threadsafe. When the SQLITE_THREADSAFE macro is 0, the mutexes are omitted. Without the mutexes, it is not safe to use SQLite concurrently from more than one thread.

Enabling mutexes incurs a measurable performance penalty. So if speed is of utmost importance, it makes sense to disable the mutexes. But for maximum safety, mutexes should be enabled. The default behavior is for mutexes to be enabled.

This interface can be used by an application to make sure that the version of SQLite that it is linking against was compiled with the desired setting of the SQLITE_THREADSAFE macro.

This interface only reports on the compile-time mutex setting of the SQLITE_THREADSAFE flag. If SQLite is compiled with SQLITE_THREADSAFE=1 or =2 then mutexes are enabled by default but can be fully or partially disabled using a call to sqlite3_config() with the verbs SQLITE_CONFIG_SINGLETHREAD, SQLITE_CONFIG_MULTITHREAD, or SQLITE_CONFIG_MUTEX. ^(The return value of the sqlite3_thread-

safe() function shows only the compile-time setting of thread safety, not any run-time changes to that setting made by sqlite3_config(). In other words, the return value from sqlite3_threadsafe() is unchanged by calls to sqlite3_config().)^

See the threading mode documentation for additional information.

### 175.26.25 Properties

### 175.26.26 ConnectionHandle as Ptr

MBS SQL Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the current connection reference for the database.
**Notes:**

sqlite3 pointer for using in declares.
(Read only property)

### 175.26.27 MemoryHighwater as Int64

MBS SQL Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries maximum memory usage so far.
**Notes:**

Can be reset with reset parameter.
(Read only property)
See also:

- 175.26.18 MemoryHighwater(reset as boolean) as Int64 25415

### 175.26.28 MemoryUsed as Int64

MBS SQL Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries memory in use by SQLite.
**Notes:**

This is memory allocated, but not yet freed.
Value is zero until SQLite3 initialized.
(Read only property)

### 175.26.29 Version as string

MBS SQL Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The version string of the SQLite library.
**Notes:** (Read only property)

### 175.26.30 VersionNumber as Integer

MBS SQL Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The version number of the SQLite library.
**Notes:** (Read only property)

### 175.26.31 Constants

### 175.26.32 kErrorAbort = 4

MBS SQL Plugin, Plugin Version: 12.4.

**Function:** One of the error codes.
**Notes:** Callback routine requested an abort.

### 175.26.33 kErrorAuth = 23

MBS SQL Plugin, Plugin Version: 12.4.

**Function:** One of the error codes.
**Notes:** Authorization denied

### 175.26.34 kErrorBusy = 5

MBS SQL Plugin, Plugin Version: 12.4.

**Function:** One of the error codes.
**Notes:** The database file is locked.

### 175.26.35 kErrorCantopen = 14

MBS SQL Plugin, Plugin Version: 12.4.

**Function:** One of the error codes.
**Notes:** Unable to open the database file.

### 175.26.36 kErrorConstraint = 19

MBS SQL Plugin, Plugin Version: 12.4.

**Function:** One of the error codes.
**Notes:** Abort due to constraint violation.

### 175.26.37 kErrorCorrupt = 11

MBS SQL Plugin, Plugin Version: 12.4.

**Function:** One of the error codes.
**Notes:** The database disk image is malformed.

### 175.26.38 kErrorDone = 101

MBS SQL Plugin, Plugin Version: 12.4.

**Function:** One of the error codes.
**Notes:** sqlite3_step() has finished executing.

### 175.26.39 kErrorEmpty = 16

MBS SQL Plugin, Plugin Version: 12.4.

**Function:** One of the error codes.
**Notes:** Database is empty

### 175.26.40 kErrorError = 1

MBS SQL Plugin, Plugin Version: 12.4.

**Function:** One of the error codes.
**Notes:** SQL error or missing database.

### 175.26.41 kErrorFormat = 24

MBS SQL Plugin, Plugin Version: 12.4.

**Function:** One of the error codes.
**Notes:** Auxiliary database format error.

### 175.26.42 kErrorFull = 13

MBS SQL Plugin, Plugin Version: 12.4.

**Function:** One of the error codes.
**Notes:** Insertion failed because database is full.

### 175.26.43 kErrorInternal = 2

MBS SQL Plugin, Plugin Version: 12.4.

**Function:** One of the error codes.
**Notes:** Internal logic error in SQLite

### 175.26.44 kErrorInterrupt = 9

MBS SQL Plugin, Plugin Version: 12.4.

**Function:** One of the error codes.
**Notes:** Operation terminated by sqlite3_interrupt().

### 175.26.45 kErrorIoerr = 10

MBS SQL Plugin, Plugin Version: 12.4.

**Function:** One of the error codes.
**Notes:** Some kind of disk I/O error occurred.

### 175.26.46 kErrorLocked = 6

MBS SQL Plugin, Plugin Version: 12.4.

**Function:** One of the error codes.
**Notes:** A table in the database is locked.

### 175.26.47 kErrorMismatch = 20

MBS SQL Plugin, Plugin Version: 12.4.

**Function:** One of the error codes.
**Notes:** Data type mismatch.

### 175.26.48 kErrorMisuse = 21

MBS SQL Plugin, Plugin Version: 12.4.

**Function:** One of the error codes.
**Notes:** Library used incorrectly.

### 175.26.49 kErrorNolfs = 22

MBS SQL Plugin, Plugin Version: 12.4.

**Function:** One of the error codes.
**Notes:** Uses OS features not supported on host.

### 175.26.50 kErrorNoMem = 7

MBS SQL Plugin, Plugin Version: 12.4.

**Function:** One of the error codes.
**Notes:** Out of memory.

### 175.26.51 kErrorNotaDB = 26

MBS SQL Plugin, Plugin Version: 12.4.

**Function:** One of the error codes.
**Notes:** File opened that is not a database file.

### 175.26.52 kErrorNotFound = 12

MBS SQL Plugin, Plugin Version: 12.4.

**Function:** One of the error codes.
**Notes:** NOT USED. Table or record not found.

### 175.26.53 kErrorOk = 0

MBS SQL Plugin, Plugin Version: 12.4.

**Function:** One of the error codes.
**Notes:** Successful result

### 175.26.54 kErrorPerm = 3

MBS SQL Plugin, Plugin Version: 12.4.

**Function:** One of the error codes.
**Notes:** Access permission denied.

### 175.26.55 kErrorProtocol = 15

MBS SQL Plugin, Plugin Version: 12.4.

**Function:** One of the error codes.
**Notes:** NOT USED. Database lock protocol error.

### 175.26.56 kErrorRange = 25

MBS SQL Plugin, Plugin Version: 12.4.

**Function:** One of the error codes.
**Notes:** 2nd parameter to sqlite3_bind out of range.

### 175.26.57 kErrorReadonly = 8

MBS SQL Plugin, Plugin Version: 12.4.

**Function:** One of the error codes.
**Notes:** Attempt to write a readonly database.

### 175.26.58 kErrorRow = 100

MBS SQL Plugin, Plugin Version: 12.4.

**Function:** One of the error codes.
**Notes:** sqlite3_step() has another row ready.

### 175.26.59 kErrorSchema = 17

MBS SQL Plugin, Plugin Version: 12.4.

**Function:** One of the error codes.
**Notes:** The database schema changed.

### 175.26.60 kErrorToobig = 18

MBS SQL Plugin, Plugin Version: 12.4.

**Function:** One of the error codes.
**Notes:** String or BLOB exceeds size limit.

# 175.27 class SQLLongBinaryMBS

## 175.27.1 class SQLLongBinaryMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A class for a long binary object.
**Notes:**

Basicly this is a SQLStringMBS which is always marked to contain binary data. You only need this class to use the constructor with dataprovider to stream data to the database.
Subclass of the SQLLongOrLobMBS class.

## 175.27.2 Blog Entries

- MBS Real Studio Plugins, version 12.4pr1

## 175.27.3 Blog Entries

- MBS Real Studio Plugins, version 12.4pr1

## 175.27.4 Methods

## 175.27.5 Constructor

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.
See also:

- 175.27.6 Constructor(Data as MemoryBlock) 25427
- 175.27.7 Constructor(data as SQLStringMBS) 25428
- 175.27.8 Constructor(Data as string, isText as Boolean = True) 25428
- 175.27.9 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 25428

## 175.27.6 Constructor(Data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new string object with data, e.g. for blob.
See also:

- 175.27.5 Constructor 25427
- 175.27.7 Constructor(data as SQLStringMBS) 25428
- 175.27.8 Constructor(Data as string, isText as Boolean = True) 25428
- 175.27.9 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 25428

### 175.27.7 Constructor(data as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new long binary object from a string object.
See also:

- 175.27.5 Constructor 25427
- 175.27.6 Constructor(Data as MemoryBlock) 25427
- 175.27.8 Constructor(Data as string, isText as Boolean = True) 25428
- 175.27.9 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 25428

### 175.27.8 Constructor(Data as string, isText as Boolean = True)

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new string object with data or text copied from the data string.
**Notes:** If isText is true, the data is interpreted as text and string encoding conversion may modify it. If isText is false the bytes are copied raw.
See also:

- 175.27.5 Constructor 25427
- 175.27.6 Constructor(Data as MemoryBlock) 25427
- 175.27.7 Constructor(data as SQLStringMBS) 25428
- 175.27.9 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 25428

### 175.27.9 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new long binary object from a data provider.
**Notes:**

The blocksize specifies in which sizes data is requested from the provider.
You must make sure that the data provider and this new blob object life long enough. Because the actual

data is requested later when you do the update on the database.

If BlockSize is 0, the default block size is used.

## 175.32.6 Methods

## 175.32.7 Constructor

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates an empty numeric object.
See also:

- 175.32.8 Constructor(value as Double) 25436
- 175.32.9 Constructor(value as string) 25436

### 175.32.8 Constructor(value as Double)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new numeric object based on the given double value.
See also:

- 175.32.7 Constructor 25435
- 175.32.9 Constructor(value as string) 25436

### 175.32.9 Constructor(value as string)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new numeric object based on the given string.
See also:

- 175.32.7 Constructor 25435
- 175.32.8 Constructor(value as Double) 25436

### 175.32.10 NumericWithCurrency(value as Currency) as SQLNumericMBS

MBS SQL Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new numeric value object with given currency value.
**Example:**

```
// test code for currency
dim c1 as Currency = 12345678.
dim c2 as Currency = 1234567.8
dim c3 as Currency = 123456.78
dim c4 as Currency = 12345.678
dim c5 as Currency = 1234.5678
dim c6 as Currency = 123.45678

dim n1 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c1)
dim n2 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c2)
dim n3 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c3)
```

```
dim n4 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c4)
dim n5 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c5)
dim n6 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c6)

dim s1 as string = n1.StringValue
dim s2 as string = n2.StringValue
dim s3 as string = n3.StringValue
dim s4 as string = n4.StringValue
dim s5 as string = n5.StringValue
dim s6 as string = n6.StringValue

dim d1 as Double = n1.DoubleValue
dim d2 as Double = n2.DoubleValue
dim d3 as Double = n3.DoubleValue
dim d4 as Double = n4.DoubleValue
dim d5 as Double = n5.DoubleValue
dim d6 as Double = n6.DoubleValue

dim x1 as Currency = n1.CurrencyValue
dim x2 as Currency = n2.CurrencyValue
dim x3 as Currency = n3.CurrencyValue
dim x4 as Currency = n4.CurrencyValue
dim x5 as Currency = n5.CurrencyValue
dim x6 as Currency = n6.CurrencyValue

// check for errors
if x1<>c1 then break
if x2<>c2 then break
if x3<>c3 then break
if x4<>c4 then break
if x5<>c5 then break
if x6<>c6 then break

if x1*10000 <>round(d1 * 10000) then Break
if x2*10000 <>round(d2 * 10000) then Break
if x3*10000 <>round(d3 * 10000) then Break
if x4*10000 <>round(d4 * 10000) then Break
if x5*10000 <>round(d5 * 10000) then Break
if x6*10000 <>round(d6 * 10000) then Break

Break // if no break before, it's okay.
```

### 175.32.11 NumericWithDouble(value as Double) as SQLNumericMBS

MBS SQL Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new number with the given double value.

### 175.32.12 NumericWithInt64(value as Int64) as SQLNumericMBS

MBS SQL Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new number with the given Int64 value.

### 175.32.13 NumericWithString(value as string) as SQLNumericMBS

MBS SQL Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new number with the given string value.
**Notes:** If string is empty, we return a number with zero as value.

### 175.32.14 NumericWithUInt64(value as UInt64) as SQLNumericMBS

MBS SQL Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new number with the given unsigned integer value.

### 175.32.15 Properties

### 175.32.16 CurrencyValue as Currency

MBS SQL Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The currency value.
**Example:**

```
// test code for currency
dim c1 as Currency = 12345678.
dim c2 as Currency = 1234567.8
dim c3 as Currency = 123456.78
dim c4 as Currency = 12345.678
dim c5 as Currency = 1234.5678
dim c6 as Currency = 123.45678

dim n1 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c1)
dim n2 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c2)
dim n3 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c3)
```

```
dim n4 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c4)
dim n5 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c5)
dim n6 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c6)

dim s1 as string = n1.StringValue
dim s2 as string = n2.StringValue
dim s3 as string = n3.StringValue
dim s4 as string = n4.StringValue
dim s5 as string = n5.StringValue
dim s6 as string = n6.StringValue

dim d1 as Double = n1.DoubleValue
dim d2 as Double = n2.DoubleValue
dim d3 as Double = n3.DoubleValue
dim d4 as Double = n4.DoubleValue
dim d5 as Double = n5.DoubleValue
dim d6 as Double = n6.DoubleValue

dim x1 as Currency = n1.CurrencyValue
dim x2 as Currency = n2.CurrencyValue
dim x3 as Currency = n3.CurrencyValue
dim x4 as Currency = n4.CurrencyValue
dim x5 as Currency = n5.CurrencyValue
dim x6 as Currency = n6.CurrencyValue

// check for errors
if x1<>c1 then break
if x2<>c2 then break
if x3<>c3 then break
if x4<>c4 then break
if x5<>c5 then break
if x6<>c6 then break

if x1*10000 <>round(d1 * 10000) then Break
if x2*10000 <>round(d2 * 10000) then Break
if x3*10000 <>round(d3 * 10000) then Break
if x4*10000 <>round(d4 * 10000) then Break
if x5*10000 <>round(d5 * 10000) then Break
if x6*10000 <>round(d6 * 10000) then Break

Break // if no break before, it's okay.
```

**Notes:** (Read and Write property)

### 175.32.17 DoubleValue as Double

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The double value for this number.
**Notes:** (Read and Write property)

### 175.32.18 Int64Value as Int64

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number value as an int64.
**Notes:** (Read and Write property)

### 175.32.19 precision as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The maximum number of digits in base 10.
**Notes:** (Read only property)

### 175.32.20 scale as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of digits to the right of the decimal point.
**Notes:** (Read only property)

### 175.32.21 sign as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The sign: 1 for positive numbers, 0 for negative numbers.
**Notes:** (Read only property)

### 175.32.22 StringValue as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The string value of this number.
**Notes:** (Read and Write property)

### 175.32.23 UInt64Value as UInt64

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number value as an uint64.
**Notes:** (Read and Write property)

## 175.33 class SQLParamMBS

### 175.33.1 class SQLParamMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The SQL class for parameters.
**Notes:**

see also
https://www.sqlapi.com/ApiDoc/class_s_a_param.html
Subclass of the SQLValueMBS class.

### 175.33.4 Methods

### 175.33.5 ReadLongOrLob(toConsumer as SQLDataConsumerMBS, BlockSize as Integer)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The Long or Lob data reading mode.
**Notes:**

SQLAPI++ Library provides two ways to read Long or BLob(CLob) object's value (usually SQLField or SQLParam objects):

1. reading of Long or Lob data at once into an internal buffer (like ordinary string or binary values);
2. piecewise reading of Long or Lob data using user defined callback.

kLongOrLobReaderDefault reading mode used by default.

If you want to control piecewise reading of Long or BLob(CLob) data you should set LongOrLobReaderMode and use kLongOrLobReaderManual reading mode for Long or BLob(CLob) parameters or fields you want to process with your data consumer. After that each fetch will skip reading Long and BLob(CLob) parameters that you set to be read manually. To read field or parameter defined to be read manually you should call ReadLongOrLob method for each of them after the fetch. ReadLongOrLob method will repeatedly call the data consumer Write event.
See also:

- 175.33.6 ReadLongOrLob(toFile as FolderItem) 25443
- 175.33.7 ReadLongOrLob(toStream as Writeable) 25444

### 175.33.6 ReadLongOrLob(toFile as FolderItem)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Starts reading of Long or BLob(CLob) value to the given file.
**Example:**

```
dim cmd as SQLCommandMBS // your command
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim Param as SQLParamMBS = cmd.Param("image")
// read blob content to binarystream
Param.ReadLongOrLob(f)
```

**Notes:** May raise IOExceptions if things go wrong.
See also:

- 175.33.5 ReadLongOrLob(toConsumer as SQLDataConsumerMBS, BlockSize as Integer) 25443

• 175.33.7 ReadLongOrLob(toStream as Writeable) 25444

### 175.33.7 ReadLongOrLob(toStream as Writeable)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Starts reading of Long or BLob(CLob) value to the given writeable stream.
**Example:**

```
dim cmd as SQLCommandMBS // your command
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim b as BinaryStream = BinaryStream.Create(f, true)
dim param as SQLParamMBS = cmd.param("image")
// read blob content to binarystream
param.ReadLongOrLob(b)
```

**Notes:** This allows you to read in chunks the data to a stream, e.g. binarystream, textoutputstream or socket.
See also:

• 175.33.5 ReadLongOrLob(toConsumer as SQLDataConsumerMBS, BlockSize as Integer) 25443

• 175.33.6 ReadLongOrLob(toFile as FolderItem) 25443

### 175.33.8 Properties

### 175.33.9 DirType as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The direction type of parameter (input, output, etc.).
**Notes:**

Use the kParamDirType* constants.

Usually the Library automatically detects parameter's direction type and implicitly creates an appropriate SAParam object. But not all of DBMS clients/servers provide complete parameters information. In that situation programmer need to describe parameter's direction type explicitly. See Server specific notes for details.

https://www.sqlapi.com/ApiDoc/class_s_a_param.html
(Read and Write property)

### 175.33.10 IsInput as Boolean

MBS SQL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is an input paramater.
**Notes:**

Checks ParamType property internally.
(Read only property)

### 175.33.11 IsOutput as Boolean

MBS SQL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is an output paramater.
**Notes:**

Checks ParamType property internally.
(Read only property)

### 175.33.12 Name as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The name of the parameter.
**Notes:** (Read only property)

### 175.33.13 NativeType as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The native type code of the parameter.
**Notes:** (Read and Write property)

### 175.33.14 Options as Dictionary

MBS SQL Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a dictionary with all options.
**Notes:**

For debugging, it may be useful to inspect options in debugger.
(Read only property)

### 175.33.15 Precision as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The precision of the parameter value (the total number of allowable digits).
**Notes:** (Read and Write property)

### 175.33.16 Scale as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The scale of the parameter value (the number of digits to the right of the decimal point).
**Notes:** (Read and Write property)

### 175.33.17 Size as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The parameter's data size.
**Notes:** (Read and Write property)

### 175.33.18 Type as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The parameter's data type.
**Notes:**

See the kDataType constants.
(Read and Write property)

### 175.33.19 Option(name as string) as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The string value of a specific parameter option.
**Notes:**

see also:
https://www.sqlapi.com/ApiDoc/class_s_a_param.html

(Read and Write computed property)

### 175.33.20 Constants

### 175.33.21 kParamDirTypeInput=0

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the parameter direction type constants.
**Notes:** Input parameter.

### 175.33.22 kParamDirTypeInputOutput=1

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the parameter direction type constants.
**Notes:** Input/output parameter.

### 175.33.23 kParamDirTypeOutput=2

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the parameter direction type constants.
**Notes:** Output parameter.

### 175.33.24 kParamDirTypeReturn=3

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the parameter direction type constants.
**Notes:** Returning parameter.

## 175.34 class SQLPositionMBS

### 175.34.1 class SQLPositionMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a position value.

### 175.34.2 Methods

### 175.34.3 Constructor(withID as Integer)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new Position value with an ID.
See also:

- 175.34.4 Constructor(withName as string) 25448

### 175.34.4 Constructor(withName as string)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new Position value with a name.
See also:

- 175.34.3 Constructor(withID as Integer) 25448

# 175.35 class SQLPreparedStatementMBS

## 175.35.1 class SQLPreparedStatementMBS

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for prepared statements if you work with SQLDatabaseMBS class.
**Notes:**

If you work with SQLCommandMBS class, you can set parameters there directly.

For the SQL string you number parameters with colon and number. Like this: :1, :2, :3.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

Interfaces: PreparedSQLStatement

### 175.35.8 Methods

### 175.35.9 Bind(name As String, value as Variant)

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Defines the value for one parameter.
**Example:**

```
dim db as SQLDatabaseMBS // your db connection
dim sql as string = "Insert into test_tbl(fid, fvarchar20) values(:fid, :fvarchar20)"
dim v as Variant = db.Prepare(sql)
dim p as SQLPreparedStatementMBS = v

p.BindType("fid", SQLPreparedStatementMBS.kTypeLong)
```

```
p.BindType("fvarchar20", SQLPreparedStatementMBS.kTypeString)
p.Bind("fid", 2345)
p.Bind("fvarchar20", "Hello World by name")

p.SQLExecute
```

**Notes:**

Version 16.4 and newer allow you to bind BLOB fields using a Memoryblock or a String value.
Older versions only accepted string.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

- 175.35.13 Bind(zeroBasedIndex as Integer, value as Variant) 25454
- 175.35.14 Bind(zeroBasedIndex as Integer, value as Variant, type as Integer) 25454

### 175.35.10 Bind(name As String, value as Variant, type as Integer)

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Defines one paramater with value and type.
**Example:**

```
dim db as SQLDatabaseMBS // your db connection
dim sql as string = "Insert into test_tbl(fid, fvarchar20) values(:fid, :fvarchar20)"
dim v as Variant = db.Prepare(sql)
dim p as SQLPreparedStatementMBS = v

p.Bind("fid", 2345, SQLPreparedStatementMBS.kTypeLong)
p.Bind("fvarchar20", "Hello World by name", SQLPreparedStatementMBS.kTypeString)

p.SQLExecute
```

**Notes:**

Version 16.4 and newer allow you to bind BLOB fields using a Memoryblock or a String value.
Older versions only accepted string.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

With plugin version 16.4 and newer binding type is optional. In that case the type is determinated from the value type.
See also:

- 175.35.9 Bind(name As String, value as Variant) 25450
- 175.35.11 Bind(Values as Dictionary) 25452
- 175.35.12 Bind(values() as Variant) 25453
- 175.35.13 Bind(zeroBasedIndex as Integer, value as Variant) 25454
- 175.35.14 Bind(zeroBasedIndex as Integer, value as Variant, type as Integer) 25454

### 175.35.11 Bind(Values as Dictionary)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the parameters based on the keys and values in the dictionary.
**Example:**

```
dim db as SQLDatabaseMBS // your database
dim pic as Picture // some picture
dim jpegData as MemoryBlock = pic.GetData(Picture.FormatJPEG, 80)

// get an insert command
dim sql as string = "Insert into BlobTest(name, image) values (:name, :image)"
dim p as SQLPreparedStatementMBS = db.Prepare(sql)

// put parameter values in a dictionary
dim d as new Dictionary

// by param index
d.Value(0) = "logo.jpg"
// by param name
d.Value("image") = jpegData
```

```
// bind values and run it
p.Bind(d)
p.SQLExecute
```

**Notes:**

The dictionary is saved to fill parameters later.
Keys can be String, Text or numeric types. Text and String are used to pick parameters by name. Numeric values are used to pick parameter by index (zero based).
MemoryBlock and Strings without text encoding are converted to byte values (BLOB).
Texts and Strings with encoding are converted to text values.
Raises exceptions if you pass anything which is not recognized.
Other types are translated as good as possible.
See also:

- 175.35.9 Bind(name As String, value as Variant) 25450
- 175.35.10 Bind(name As String, value as Variant, type as Integer) 25451
- 175.35.12 Bind(values() as Variant) 25453
- 175.35.13 Bind(zeroBasedIndex as Integer, value as Variant) 25454
- 175.35.14 Bind(zeroBasedIndex as Integer, value as Variant, type as Integer) 25454

### 175.35.12 Bind(values() as Variant)

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the value list with the given values.
**Notes:**

You can either pass values to the SQLExecute/SQLSelect method or call Bind methods to set values. You have to define for each parameter both the type and the value.

Version 16.4 and newer allow you to bind BLOB fields using a Memoryblock or a String value.
Older versions only accepted string.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.
See also:

- 175.35.9 Bind(name As String, value as Variant) 25450
- 175.35.10 Bind(name As String, value as Variant, type as Integer) 25451
- 175.35.11 Bind(Values as Dictionary) 25452
- 175.35.13 Bind(zeroBasedIndex as Integer, value as Variant) 25454
- 175.35.14 Bind(zeroBasedIndex as Integer, value as Variant, type as Integer) 25454

### 175.35.13 Bind(zeroBasedIndex as Integer, value as Variant)

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Defines the value for one parameter.
**Notes:**

You can either pass values to the SQLExecute/SQLSelect method or call Bind methods to set values. You have to define for each parameter both the type and the value.

Version 16.4 and newer allow you to bind BLOB fields using a Memoryblock or a String value.
Older versions only accepted string.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

Raises OutOfBoundsException exception if index parameter is out of range.
See also:

- 175.35.9 Bind(name As String, value as Variant) 25450
- 175.35.10 Bind(name As String, value as Variant, type as Integer) 25451
- 175.35.11 Bind(Values as Dictionary) 25452
- 175.35.12 Bind(values() as Variant) 25453
- 175.35.14 Bind(zeroBasedIndex as Integer, value as Variant, type as Integer) 25454

### 175.35.14 Bind(zeroBasedIndex as Integer, value as Variant, type as Integer)

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Defines one paramater with value and type.
**Notes:**

You can either pass values to the SQLExecute/SQLSelect method or call Bind methods to set values. You have to define for each parameter both the type and the value.

Version 16.4 and newer allow you to bind BLOB fields using a Memoryblock or a String value.
Older versions only accepted string.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With plugin version 16.4 and newer binding type is optional. In that case the type is determinated from the value type.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

Raises OutOfBoundsException exception if index parameter is out of range.
See also:

- 175.35.9 Bind(name As String, value as Variant) 25450
- 175.35.10 Bind(name As String, value as Variant, type as Integer) 25451
- 175.35.11 Bind(Values as Dictionary) 25452
- 175.35.12 Bind(values() as Variant) 25453
- 175.35.13 Bind(zeroBasedIndex as Integer, value as Variant) 25454

### 175.35.15 BindType(name As String, type as Integer)

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Defines the type of one value.
**Example:**

```
dim db as SQLDatabaseMBS // your db connection
dim sql as string = "Insert into test_tbl(fid, fvarchar20) values(:fid, :fvarchar20)"
dim v as Variant = db.Prepare(sql)
dim p as SQLPreparedStatementMBS = v

p.BindType("fid", SQLPreparedStatementMBS.kTypeLong)
p.BindType("fvarchar20", SQLPreparedStatementMBS.kTypeString)
```

p.Bind("fid", 2345)
p.Bind("fvarchar20", "Hello World by name")

p.SQLExecute

**Notes:** With plugin version 16.4 and newer binding type is optional. In that case the type is determinated from the value type.
See also:

- 175.35.16 BindType(types() as Integer) 25456
- 175.35.17 BindType(zeroBasedIndex as Integer, type as Integer) 25456

### 175.35.16 BindType(types() as Integer)

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Defines the types for all values.
**Notes:**

You can either pass values to the SQLExecute/SQLSelect method or call Bind methods to set values. You have to define for each parameter both the type and the value.

With plugin version 16.4 and newer binding type is optional. In that case the type is determinated from the value type.
See also:

- 175.35.15 BindType(name As String, type as Integer) 25455
- 175.35.17 BindType(zeroBasedIndex as Integer, type as Integer) 25456

### 175.35.17 BindType(zeroBasedIndex as Integer, type as Integer)

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Defines the type of one value.
**Notes:**

You can either pass values to the SQLExecute/SQLSelect method or call Bind methods to set values. You have to define for each parameter both the type and the value.

With plugin version 16.4 and newer binding type is optional. In that case the type is determinated from the value type.
See also:

- 175.35.15 BindType(name As String, type as Integer) 25455
- 175.35.16 BindType(types() as Integer) 25456

### 175.35.18 Clear

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Clears all parameters for reusing the SQL Prepared statement.

### 175.35.19 Constructor

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.
**Notes:**

This constructor makes sure you don't create useless SQLPreparedStatementMBS objects by error. The only way to create an object is to use the prepare method in the database class.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

### 175.35.20 ExecuteSQL(ParamArray bindItems As Variant)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Runs the SQL command with the given parameters.
**Notes:**

You can decide whether you pass values here or call Bind methods.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

If bindItems is not nil, we bind parameters using it.
If you like to pass an array of variant for the values, please pass this to Bind() and no parameters here. Otherwise passing an array here would create a variant array with your array as content.

This version of the function raises always exceptions, while SQLExecute only if you set RaiseException property to true.

### 175.35.21 ExecuteSQLMT(ParamArray bindItems As Variant)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Runs the SQL command with the given parameters.
**Notes:**

You can decide whether you pass values here or call Bind methods.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

If bindItems is not nil, we bind parameters using it.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

This version of the function raises always exceptions, while SQLExecuteMT only if you set RaiseException property to true.

If you like to pass an array of variant for the values, please pass this to Bind() and no parameters here. Otherwise passing an array here would create a variant array with your array as content.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

### 175.35.22 SelectSQL(ParamArray bindItems As Variant) As RowSet

MBS SQL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Runs the query with the given parameters.
**Notes:**

Returns the RowSet object or nil on error.
You can decide whether you pass values here or call Bind methods.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RecordSet functionality.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

If bindItems is not nil, we bind parameters using it.
If you like to pass an array of variant for the values, please pass this to Bind() and no parameters here. Otherwise passing an array here would create a variant array with your array as content.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

This version of the function raises always exceptions, while SQLSelect only if you set RaiseException property to true.

### 175.35.23 SelectSQLMT(ParamArray bindItems As Variant) As Rowset

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:**

Returns the RowSet object or nil on error.
You can decide whether you pass values here or call Bind methods.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RecordSet functionality.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

If bindItems is not nil, we bind parameters using it.
If you like to pass an array of variant for the values, please pass this to Bind() and no parameters here. Otherwise passing an array here would create a variant array with your array as content.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

This version of the function raises always exceptions, while SQLSelectMT only if you set RaiseException

property to true.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

### 175.35.24 SQLExecute(ParamArray bindItems as Variant)

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Runs the SQL command with the given parameters.
**Notes:**

You can decide whether you pass values here or call Bind methods.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

If you like to pass an array of variant for the values, please pass this to Bind() and no parameters here. Otherwise passing an array here would create a variant array with your array as content.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

### 175.35.25 SQLExecuteMT(ParamArray bindItems as Variant)

MBS SQL Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Runs the SQL command with the given parameters.
**Notes:**

You can decide whether you pass values here or call Bind methods.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

If you like to pass an array of variant for the values, please pass this to Bind() and no parameters here. Otherwise passing an array here would create a variant array with your array as content.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

### 175.35.26 SQLSelect(ParamArray bindItems as Variant) As RecordSet

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Runs the query with the given parameters.
**Notes:**

Returns the recordset object or nil on error.
You can decide whether you pass values here or call Bind methods.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RecordSet functionality.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

If you like to pass an array of variant for the values, please pass this to Bind() and no parameters here. Otherwise passing an array here would create a variant array with your array as content.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

### 175.35.27 SQLSelectMT(ParamArray bindItems as Variant) As RecordSet

MBS SQL Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Runs the query with the given parameters.
**Notes:**

Returns the recordset object or nil on error.
You can decide whether you pass values here or call Bind methods.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RecordSet functionality.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

If you like to pass an array of variant for the values, please pass this to Bind() and no parameters here. Otherwise passing an array here would create a variant array with your array as content.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

### 175.35.28 Properties

### 175.35.29 BoundTypes as Dictionary

MBS SQL Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The binded types to inspect in debugger.
**Notes:**

When queried, the plugin creates a copy of the dictionary for you to inspect in debugger.
Changes to the dictionary do not bind types.

Renamed to BoundTypes in version 19.4. Was BindedTypes, but that was not proper english.
(Read only property)

### 175.35.30 BoundValues as Dictionary

MBS SQL Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The binded values to inspect in debugger.
**Notes:**

When queried, the plugin creates a copy of the dictionary for you to inspect in debugger.
Changes to the dictionary do not bind values.

Renamed to BoundValues in version 19.4. Was BindedValues, but that was not proper english.
(Read only property)

### 175.35.31 Scrollable as Boolean

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether the plugin will ask for a scrollable recordset when doing SQLSelect.
**Notes:**

Since plugin version 15.0, Scrollable is false by default.
(Read and Write property)

### 175.35.32 SQL as String

MBS SQL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The SQL command for this prepared statement.
**Notes:** (Read and Write property)

### 175.35.33 Constants

### 175.35.34 kTypeBlob = 16

MBS SQL Plugin, Plugin Version: 11.2.

**Function:** One of the data type constants.
**Notes:** Binary large Object. Pass a string or memoryblock.

### 175.35.35 kTypeBool = 1

MBS SQL Plugin, Plugin Version: 11.2.

**Function:** One of the data type constants.
**Notes:** Boolean

### 175.35.36 kTypeBytes = 13

MBS SQL Plugin, Plugin Version: 11.2.

**Function:** One of the data type constants.
**Notes:**

a binary string or MemoryBlock.
(which is a string without text encoding)

This is usually a varbinary field. kTypeLongBinary is used for bigger binary data and streamed. And kTypeBlob is used for huge streams of bytes and also transferred in chunks. In most data base systems the varchar field is stored within the record, while BLOB and CLOB are stored separately.

### 175.35.37 kTypeClob = 17

MBS SQL Plugin, Plugin Version: 11.2.

**Function:** One of the data type constants.
**Notes:** Character Large Object.

### 175.35.38 kTypeDateTime = 10

MBS SQL Plugin, Plugin Version: 11.2.

**Function:** One of the data type constants.
**Notes:** Date and/or Time.

### 175.35.39 kTypeDouble = 8

MBS SQL Plugin, Plugin Version: 11.2.

**Function:** One of the data type constants.
**Notes:** double float value.

### 175.35.40 kTypeInt32 = 4

MBS SQL Plugin, Plugin Version: 20.2.

**Function:** One of the data type constants.
**Notes:** signed 32 bit integer

### 175.35.41 kTypeInt64 = 6

MBS SQL Plugin, Plugin Version: 19.5.

**Function:** One of the data type constants.
**Notes:** Signed 64-bit integer.

### 175.35.42 kTypeInterval = 11

MBS SQL Plugin, Plugin Version: 13.5.

**Function:** One of the data type constants.
**Notes:**

An interval.
Please pass SQLIntervalMBS in the variant. If the variant contains anything else, the plugin will pass nil value.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

### 175.35.43 kTypeLong = 4

MBS SQL Plugin, Plugin Version: 11.2.

**Function:** One of the data type constants.
**Notes:** signed 32 bit integer

### 175.35.44 kTypeLongBinary = 14

MBS SQL Plugin, Plugin Version: 11.2.

**Function:** One of the data type constants.
**Notes:** Long binary.

### 175.35.45 kTypeLongChar = 15

MBS SQL Plugin, Plugin Version: 11.2.

**Function:** One of the data type constants.
**Notes:** Long string.

### 175.35.46 kTypeNull = 99

MBS SQL Plugin, Plugin Version: 14.3.

**Function:** One of the data type constants.
**Notes:** NULL value

### 175.35.47 kTypeNumeric = 9

MBS SQL Plugin, Plugin Version: 13.5.

**Function:** One of the data type constants.
**Notes:**

A number (Int64 or double).
This can be used for Int64 or Double values. Depending of the type of number in the variant, the plugin will either make an Int64 or a double internally.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

### 175.35.48 kTypeShort = 2

MBS SQL Plugin, Plugin Version: 11.2.

**Function:** One of the data type constants.
**Notes:** signed 16 bit integer

### 175.35.49 kTypeString = 12

MBS SQL Plugin, Plugin Version: 11.2.

**Function:** One of the data type constants.
**Notes:**

String.
This is usually a varchar field. kTypeLongChar is used for bigger varchars and streamed. And kTypeClob is used for huge streams of characters (BLOB for text) and also transferred in chunks. In most data base systems the varchar field is stored within the record, while BLOB and CLOB are stored separately.

### 175.35.50 kTypeUInt32 = 5

MBS SQL Plugin, Plugin Version: 20.2.

**Function:** One of the data type constants.
**Notes:** unsigned 32 bit integer

### 175.35.51 kTypeUInt64 = 7

MBS SQL Plugin, Plugin Version: 19.5.

**Function:** One of the data type constants.
**Notes:** Unsigned 64-bit integer.

### 175.35.52 kTypeULong = 5

MBS SQL Plugin, Plugin Version: 11.2.

**Function:** One of the data type constants.
**Notes:** unsigned 32 bit integer

### 175.35.53 kTypeUnknown = 0

MBS SQL Plugin, Plugin Version: 11.2.

**Function:** One of the data type constants.
**Notes:** unknown type

### 175.35.54 kTypeUShort = 3

MBS SQL Plugin, Plugin Version: 11.2.

**Function:** One of the data type constants.
**Notes:** unsigned 16 bit integer

# 175.36 class SQLStringMBS

## 175.36.1 class SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for strings in this plugin.
**Example:**

```
dim s as new SQLStringMBS("Hello √§√√º")

MsgBox "Characters: "+str(s.GetLength)+" Bytes: "+str(s.GetBinaryLength)

dim a as string= s.CopyBinaryData
dim b as string= s.CopyText

MsgBox a // RB shows garbage as it tries to display bytes as UTF8 which does not work
MsgBox b // displays correct
```

**Notes:**

A string can be text (with text encoding) or bytes (raw binary data).

## 175.36.2 Blog Entries

- MBS Real Studio Plugins, version 12.4pr9

## 175.36.3 Blog Entries

- MBS Real Studio Plugins, version 12.4pr9

## 175.36.4 Methods

## 175.36.5 Compare(text as SQLStringMBS) as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Compares this string object with another string.
**Notes:**

Function performs a case-sensitive comparison of the strings, and is not affected by locale.

Returns zero if the strings are identical, <0 if this string object is less than text, or >0 if this string object is greater than text.
See also:

- 175.36.6 Compare(text as string) as Integer 25470

### 175.36.6 Compare(text as string) as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Compares this string object with another string.
**Notes:**

Function performs a case-sensitive comparison of the strings, and is not affected by locale.

Returns zero if the strings are identical, <0 if this string object is less than text, or >0 if this string object is greater than text.
See also:

- 175.36.5 Compare(text as SQLStringMBS) as Integer 25469

### 175.36.7 CompareNoCase(text as SQLStringMBS) as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Compares this string object with another string.
**Notes:**

Function performs a case-insensitive comparison of the strings, and is not affected by locale.

Returns zero if the strings are identical (ignoring case), <0 if this string object is less than text (ignoring case), or >0 if this string object is greater than text (ignoring case).
See also:

- 175.36.8 CompareNoCase(text as string) as Integer 25470

### 175.36.8 CompareNoCase(text as string) as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Compares this string object with another string.
**Notes:**

Function performs a case-insensitive comparison of the strings, and is not affected by locale.

Returns zero if the strings are identical (ignoring case), <0 if this string object is less than text (ignoring case), or >0 if this string object is greater than text (ignoring case).
See also:

- 175.36.7 CompareNoCase(text as SQLStringMBS) as Integer 25470

### 175.36.9 Constructor

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new empty string object.
See also:

- 175.36.10 Constructor(Data as MemoryBlock) 25471
- 175.36.11 Constructor(Data as string, isText as Boolean = True) 25471
- 175.36.12 Constructor(other as SQLStringMBS) 25472

### 175.36.10 Constructor(Data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new string object with data, e.g. for blob.
See also:

- 175.36.9 Constructor 25471
- 175.36.11 Constructor(Data as string, isText as Boolean = True) 25471
- 175.36.12 Constructor(other as SQLStringMBS) 25472

### 175.36.11 Constructor(Data as string, isText as Boolean = True)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new string object with data or text copied from the data string.
**Notes:** If isText is true, the data is interpreted as text and string encoding conversion may modify it. If isText is false the bytes are copied raw.
See also:

- 175.36.9 Constructor 25471
- 175.36.10 Constructor(Data as MemoryBlock) 25471
- 175.36.12 Constructor(other as SQLStringMBS) 25472

### 175.36.12 Constructor(other as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new string object with data copied from the other string object.
See also:

- 175.36.9 Constructor 25471
- 175.36.10 Constructor(Data as MemoryBlock) 25471
- 175.36.11 Constructor(Data as string, isText as Boolean = True) 25471

### 175.36.13 CopyBinaryData as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Copies the bytes from the internal buffer ignoring any text encoding.

### 175.36.14 CopyText as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Copies the characters of this string as text.
**Notes:** Text encoding conversion may happen.

### 175.36.15 Empty

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Forces a string to have 0 length.

### 175.36.16 GetBinaryLength as UInt32

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a count of the bytes in the binary data buffer.
**Deprecated:** This item is deprecated and should no longer be used. You can use BinaryLength instead.
**Notes:** Deprecated. Please use BinaryLength property.

### 175.36.17 GetLength as UInt32

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the number of characters in a SAString object.
**Deprecated:** This item is deprecated and should no longer be used. You can use Length instead. **Notes:**

Deprecated. Please use Length property.
For multibyte character sets, GetLength counts each 8-bit character; that is, a lead and trail byte in one multibyte character are counted as two bytes.

### 175.36.18 Left(count as Integer) as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Extracts the left part of a string.

### 175.36.19 MakeLower

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Changes all characters in the string to lower case.

### 175.36.20 MakeUpper

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Changes all characters in the string to upper case.

### 175.36.21 Mid(first as Integer) as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Extracts the middle part of a string.
**Notes:** first: The zero-based index of the first character in this string object that is to be included in the extracted substring.
See also:

- 175.36.22 Mid(first as Integer, Count as Integer) as SQLStringMBS 25474

### 175.36.22 Mid(first as Integer, Count as Integer) as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Extracts the middle part of a string.
**Notes:**

first: The zero-based index of the first character in this string object that is to be included in the extracted substring.
count: The number of characters to extract from this string object. If this parameter is not supplied, then the remainder of the string is extracted.
See also:

- 175.36.21 Mid(first as Integer) as SQLStringMBS 25473

### 175.36.23 Operator_Convert as string

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Convert operation for assignment to string.
See also:

- 175.36.24 Operator_Convert(text as string) 25474

### 175.36.24 Operator_Convert(text as string)

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Convert operation for assigning text string.
See also:

- 175.36.23 Operator_Convert as string 25474

### 175.36.25 Right(count as Integer) as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Extracts the right part of a string.

### 175.36.26 TrimLeft

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Trim leading whitespace characters from the string.

### 175.36.27 TrimRight

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Trim trailing whitespace characters from the string.

### 175.36.28 Properties

### 175.36.29 BinaryLength as UInt32

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a count of the bytes in the binary data buffer.
**Notes:** (Read only property)

### 175.36.30 DebugText as String

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Text content for debugging.
**Notes:**

We show up to 1000 characters here for debugger.
(Read only property)

### 175.36.31 IsEmpty as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Tests whether a String object contains no characters.
**Notes:**

Returns true if length is zero.
(Read only property)

### 175.36.32 Length as UInt32

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the number of characters in a SAString object.
**Notes:**

For multibyte character sets, GetLength counts each 8-bit character; that is, a lead and trail byte in one multibyte character are counted as two bytes.
(Read only property)

# 175.37 class SQLUnsupportedExceptionMBS

## 175.37.1 class SQLUnsupportedExceptionMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for an exception to report that the function is not supported on this platform.
**Notes:**

This one raises only if the plugin is compiled for Mac OS Classic.
Subclass of the RuntimeException class.

## 175.38 class SQLValueMBS

### 175.38.1 class SQLValueMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The SQL class for mutable values.
**Notes:** Subclass of the SQLValueReadMBS class.

### 175.38.5 Videos

- Presentation from London conference about MBS Plugins.

### 175.38.6 Methods

### 175.38.7 Constructor(DataType as Integer)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new empty value object with the given data type.

### 175.38.8 setAsBlob(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets parameter's value as BLob data using a memoryblock.
See also:

- 175.38.9 setAsBlob(data as SQLDataProviderMBS, BlockSize as UInt32) 25479
- 175.38.10 setAsBlob(data as SQLStringMBS) 25480
- 175.38.11 setAsBlob(data as string) 25480
- 175.38.12 setAsBlob(file as folderItem) 25481
- 175.38.13 setAsBlob(stream as Readable) 25481

### 175.38.9 setAsBlob(data as SQLDataProviderMBS, BlockSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets parameter's value as BLob data (SQLString)
**Notes:**

When you call the SQLCommandMBS.Execute method all input parameters are bound with their values, including Long and BLob(CLob) parameters.
That is the time when the data provider Read event runs to get the values in the block size you specify.

The default value for the block size is 0. If you use the default value, SQLAPI++ Library will automatically use the most appropriate size for current DBMS.
See also:

- 175.38.8 setAsBlob(data as MemoryBlock) 25479

- 175.38.10 setAsBlob(data as SQLStringMBS) 25480
- 175.38.11 setAsBlob(data as string) 25480
- 175.38.12 setAsBlob(file as folderItem) 25481
- 175.38.13 setAsBlob(stream as Readable) 25481

### 175.38.10 setAsBlob(data as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets parameter's value as BLob data (SQLString)
See also:

- 175.38.8 setAsBlob(data as MemoryBlock) 25479
- 175.38.9 setAsBlob(data as SQLDataProviderMBS, BlockSize as UInt32) 25479
- 175.38.11 setAsBlob(data as string) 25480
- 175.38.12 setAsBlob(file as folderItem) 25481
- 175.38.13 setAsBlob(stream as Readable) 25481

### 175.38.11 setAsBlob(data as string)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets parameter's value as BLob data (SQLString)
**Example:**

```
dim c as SQLCommandMBS // your command object
dim JPEGData as string // some data

c.Param("imageData").setAsBlob JPEGData
```

See also:

- 175.38.8 setAsBlob(data as MemoryBlock) 25479
- 175.38.9 setAsBlob(data as SQLDataProviderMBS, BlockSize as UInt32) 25479
- 175.38.10 setAsBlob(data as SQLStringMBS) 25480
- 175.38.12 setAsBlob(file as folderItem) 25481
- 175.38.13 setAsBlob(stream as Readable) 25481

### 175.38.12 setAsBlob(file as folderItem)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets field with content of file.
**Example:**

```
dim cmd as SQLCommandMBS // your command object

// pass folderitem to BLOB field
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
cmd.Param("image").setAsBlob(f)
```

**Notes:**

The file will be read later when statement is executed.
May not work when using preemptive threads.
See also:

- 175.38.8 setAsBlob(data as MemoryBlock) 25479
- 175.38.9 setAsBlob(data as SQLDataProviderMBS, BlockSize as UInt32) 25479
- 175.38.10 setAsBlob(data as SQLStringMBS) 25480
- 175.38.11 setAsBlob(data as string) 25480
- 175.38.13 setAsBlob(stream as Readable) 25481

### 175.38.13 setAsBlob(stream as Readable)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets field with content of stream.
**Example:**

```
dim cmd as SQLCommandMBS // your command object

// pass BinaryStream to BLOB field
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim b as BinaryStream = BinaryStream.open(f)
cmd.Param("image").setAsBlob(b)
```

**Notes:**

The stream will be read later when statement is executed.
May not work when using preemptive threads.
See also:

- 175.38.8 setAsBlob(data as MemoryBlock) 25479
- 175.38.9 setAsBlob(data as SQLDataProviderMBS, BlockSize as UInt32) 25479
- 175.38.10 setAsBlob(data as SQLStringMBS) 25480
- 175.38.11 setAsBlob(data as string) 25480
- 175.38.12 setAsBlob(file as folderItem) 25481

### 175.38.14 setAsBool(value as boolean)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets parameter's value as bool data.

### 175.38.15 setAsBytes(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets parameter's value as binary data from memoryblock.
See also:

- 175.38.16 setAsBytes(data as string) 25482
- 175.38.17 setAsBytes(value as SQLBytesMBS) 25483
- 175.38.18 setAsBytes(value as SQLStringMBS) 25483

### 175.38.16 setAsBytes(data as string)

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Set the value to be bytes with content of given string.
**Notes:**

For BLOB fields or parameters.
Same as the other variant, but avoids creating extra SQLStringMBS object.
See also:

- 175.38.15 setAsBytes(data as MemoryBlock) 25482
- 175.38.17 setAsBytes(value as SQLBytesMBS) 25483
- 175.38.18 setAsBytes(value as SQLStringMBS) 25483

### 175.38.17 setAsBytes(value as SQLBytesMBS)

MBS SQL Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Set the value to be bytes with content of given Bytes object.
**Notes:**

For BLOB fields or parameters.
Same as the other variant, but avoids creating extra SQLStringMBS object.
See also:

- 175.38.15 setAsBytes(data as MemoryBlock) 25482
- 175.38.16 setAsBytes(data as string) 25482
- 175.38.18 setAsBytes(value as SQLStringMBS) 25483

### 175.38.18 setAsBytes(value as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets parameter's value as binary string data (SQLString).
See also:

- 175.38.15 setAsBytes(data as MemoryBlock) 25482
- 175.38.16 setAsBytes(data as string) 25482
- 175.38.17 setAsBytes(value as SQLBytesMBS) 25483

### 175.38.19 setAsClob(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Private method.
**Notes:** This method should make sure you don't accidentally a memoryblock instead of a text.
See also:

- 175.38.20 setAsClob(data as SQLDataProviderMBS, BlockSize as UInt32) 25484
- 175.38.21 setAsClob(file as folderItem) 25484
- 175.38.22 setAsClob(stream as Readable) 25484
- 175.38.23 setAsClob(text as SQLStringMBS) 25485
- 175.38.24 setAsClob(text as string) 25485

### 175.38.20 setAsClob(data as SQLDataProviderMBS, BlockSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets parameter's value as CLob data (SQLString)
**Notes:**

nWhen you call the SQLCommandMBS.Execute method all input parameters are bound with their values, including Long and BLob(CLob) parameters.
That is the time when the data provider Read event runs to get the values in the block size you specify.

The default value for the block size is 0. If you use the default value, SQLAPI++ Library will automatically use the most appropriate size for current DBMS.
See also:

- 175.38.19 setAsClob(data as MemoryBlock) 25483
- 175.38.21 setAsClob(file as folderItem) 25484
- 175.38.22 setAsClob(stream as Readable) 25484
- 175.38.23 setAsClob(text as SQLStringMBS) 25485
- 175.38.24 setAsClob(text as string) 25485

### 175.38.21 setAsClob(file as folderItem)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets field with content of file.
**Notes:**

The file will be read later when statement is executed.
May not work when using preemptive threads.
See also:

- 175.38.19 setAsClob(data as MemoryBlock) 25483
- 175.38.20 setAsClob(data as SQLDataProviderMBS, BlockSize as UInt32) 25484
- 175.38.22 setAsClob(stream as Readable) 25484
- 175.38.23 setAsClob(text as SQLStringMBS) 25485
- 175.38.24 setAsClob(text as string) 25485

### 175.38.22 setAsClob(stream as Readable)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets field with content of stream.
**Notes:**

The stream will be read later when statement is executed.
May not work when using preemptive threads.
See also:

- 175.38.19 setAsClob(data as MemoryBlock) 25483
- 175.38.20 setAsClob(data as SQLDataProviderMBS, BlockSize as UInt32) 25484
- 175.38.21 setAsClob(file as folderItem) 25484
- 175.38.23 setAsClob(text as SQLStringMBS) 25485
- 175.38.24 setAsClob(text as string) 25485

### 175.38.23 setAsClob(text as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets parameter's value as CLob data (SQLString)
See also:

- 175.38.19 setAsClob(data as MemoryBlock) 25483
- 175.38.20 setAsClob(data as SQLDataProviderMBS, BlockSize as UInt32) 25484
- 175.38.21 setAsClob(file as folderItem) 25484
- 175.38.22 setAsClob(stream as Readable) 25484
- 175.38.24 setAsClob(text as string) 25485

### 175.38.24 setAsClob(text as string)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets parameter's value as CLob data (SQLString)
See also:

- 175.38.19 setAsClob(data as MemoryBlock) 25483
- 175.38.20 setAsClob(data as SQLDataProviderMBS, BlockSize as UInt32) 25484
- 175.38.21 setAsClob(file as folderItem) 25484
- 175.38.22 setAsClob(stream as Readable) 25484
- 175.38.23 setAsClob(text as SQLStringMBS) 25485

### 175.38.25 setAsDate(value as date)

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets parameter's value with a date.
**Example:**

```
dim cmd as SQLCommandMBS // your command object
dim d as new date(2012,12,24,16,0,0) // some date
cmd.Param(3).setAsDate(d) // set third parameter
```

**Notes:** Same as setAsDateTime, but here we take a date object to make it more convenient.

### 175.38.26 setAsDateTime(value as dateTime)

MBS SQL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets parameter's value with a dateTime.
**Notes:** Same as setAsDate, but here we take a dateTime object to make it more convenient.
See also:

- 175.38.27 setAsDateTime(value as SQLDateTimeMBS) 25486

### 175.38.27 setAsDateTime(value as SQLDateTimeMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets parameter's value as SQLDateTime data.
See also:

- 175.38.26 setAsDateTime(value as dateTime) 25486

### 175.38.28 setAsDefault

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Forces to use the default parameter's value.
**Notes:**

Forces DBMS API to use the default parameter value as the input value for an input or input/output parameter in a procedure.

If DBMS API does not support the concept of "default parameter values" in stored procedures, this setting will be ignored.

If you set this flag for the parameter that doesn't have a default value, the effect is DBMS defined (e.g. an error can be returned or NULL can be bound).

To cancel using the default parameter value you should call any other SQLValue::setAs... method to bind a parameter value.

To check whether this flag is set or not use isDefault method.

### 175.38.29 setAsDouble(value as Double)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets parameter's value as Double data.

### 175.38.30 setAsInt32(value as Int32)

MBS SQL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets parameter's value as Int32 data.

### 175.38.31 setAsInt64(value as Int64)

MBS SQL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets parameter's value as Int64 data.

### 175.38.32 setAsInteger(value as Integer)

MBS SQL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets parameter's value as Integer data.
**Notes:** Int32 or Int64 depending whether app is 32 or 64 bit.

### 175.38.33 setAsInterval(value as SQLIntervalMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets an interval value.

### 175.38.34 setAsLong(value as Int32)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets parameter's value as Int32 data.

### 175.38.35 setAsLongBinary(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets parameter's value as long binary data from memoryblock.
See also:

- 175.38.36 setAsLongBinary(data as SQLDataProviderMBS, BlockSize as UInt32) 25488
- 175.38.37 setAsLongBinary(data as SQLStringMBS) 25489
- 175.38.38 setAsLongBinary(data as string) 25489
- 175.38.39 setAsLongBinary(file as folderItem) 25489
- 175.38.40 setAsLongBinary(stream as Readable) 25490

### 175.38.36 setAsLongBinary(data as SQLDataProviderMBS, BlockSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets parameter's value as long binary data (SQLString)
**Notes:**

When you call the SQLCommandMBS.Execute method all input parameters are bound with their values, including Long and BLob(CLob) parameters.
That is the time when the data provider Read event runs to get the values in the block size you specify.

The default value for the block size is 0. If you use the default value, SQLAPI++ Library will automatically use the most appropriate size for current DBMS.
See also:

- 175.38.35 setAsLongBinary(data as MemoryBlock) 25488

- 175.38.37 setAsLongBinary(data as SQLStringMBS) 25489
- 175.38.38 setAsLongBinary(data as string) 25489
- 175.38.39 setAsLongBinary(file as folderItem) 25489
- 175.38.40 setAsLongBinary(stream as Readable) 25490

### 175.38.37 setAsLongBinary(data as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets parameter's value as long binary data (SQLString)
See also:

- 175.38.35 setAsLongBinary(data as MemoryBlock) 25488
- 175.38.36 setAsLongBinary(data as SQLDataProviderMBS, BlockSize as UInt32) 25488
- 175.38.38 setAsLongBinary(data as string) 25489
- 175.38.39 setAsLongBinary(file as folderItem) 25489
- 175.38.40 setAsLongBinary(stream as Readable) 25490

### 175.38.38 setAsLongBinary(data as string)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets parameter's value as long binary data (SQLString)
See also:

- 175.38.35 setAsLongBinary(data as MemoryBlock) 25488
- 175.38.36 setAsLongBinary(data as SQLDataProviderMBS, BlockSize as UInt32) 25488
- 175.38.37 setAsLongBinary(data as SQLStringMBS) 25489
- 175.38.39 setAsLongBinary(file as folderItem) 25489
- 175.38.40 setAsLongBinary(stream as Readable) 25490

### 175.38.39 setAsLongBinary(file as folderItem)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets field with content of file.
**Notes:**

The file will be read later when statement is executed.
May not work when using preemptive threads.
See also:

- 175.38.35 setAsLongBinary(data as MemoryBlock) 25488
- 175.38.36 setAsLongBinary(data as SQLDataProviderMBS, BlockSize as UInt32) 25488
- 175.38.37 setAsLongBinary(data as SQLStringMBS) 25489
- 175.38.38 setAsLongBinary(data as string) 25489
- 175.38.40 setAsLongBinary(stream as Readable) 25490

### 175.38.40 setAsLongBinary(stream as Readable)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets field with content of stream.
**Notes:**

The stream will be read later when statement is executed.
May not work when using preemptive threads.
See also:

- 175.38.35 setAsLongBinary(data as MemoryBlock) 25488
- 175.38.36 setAsLongBinary(data as SQLDataProviderMBS, BlockSize as UInt32) 25488
- 175.38.37 setAsLongBinary(data as SQLStringMBS) 25489
- 175.38.38 setAsLongBinary(data as string) 25489
- 175.38.39 setAsLongBinary(file as folderItem) 25489

### 175.38.41 setAsLongChar(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Private method.
**Notes:** This method should make sure you don't accidentally a memoryblock instead of a text.
See also:

- 175.38.42 setAsLongChar(data as SQLDataProviderMBS, BlockSize as UInt32) 25491
- 175.38.43 setAsLongChar(file as folderItem) 25491
- 175.38.44 setAsLongChar(stream as Readable) 25491
- 175.38.45 setAsLongChar(text as SQLStringMBS) 25492
- 175.38.46 setAsLongChar(text as string) 25492

### 175.38.42 setAsLongChar(data as SQLDataProviderMBS, BlockSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets parameter's value as long character data (SQLString)
**Notes:**

When you call the SQLCommandMBS.Execute method all input parameters are bound with their values, including Long and BLob(CLob) parameters.
That is the time when the data provider Read event runs to get the values in the block size you specify.

The default value for the block size is 0. If you use the default value, SQLAPI++ Library will automatically use the most appropriate size for current DBMS.
See also:

- 175.38.41 setAsLongChar(data as MemoryBlock) 25490
- 175.38.43 setAsLongChar(file as folderItem) 25491
- 175.38.44 setAsLongChar(stream as Readable) 25491
- 175.38.45 setAsLongChar(text as SQLStringMBS) 25492
- 175.38.46 setAsLongChar(text as string) 25492

### 175.38.43 setAsLongChar(file as folderItem)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets field with content of file.
**Notes:**

The file will be read later when statement is executed.
May not work when using preemptive threads.
See also:

- 175.38.41 setAsLongChar(data as MemoryBlock) 25490
- 175.38.42 setAsLongChar(data as SQLDataProviderMBS, BlockSize as UInt32) 25491
- 175.38.44 setAsLongChar(stream as Readable) 25491
- 175.38.45 setAsLongChar(text as SQLStringMBS) 25492
- 175.38.46 setAsLongChar(text as string) 25492

### 175.38.44 setAsLongChar(stream as Readable)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets field with content of stream.
**Notes:**

The stream will be read later when statement is executed.
May not work when using preemptive threads.
See also:

- 175.38.41 setAsLongChar(data as MemoryBlock) 25490
- 175.38.42 setAsLongChar(data as SQLDataProviderMBS, BlockSize as UInt32) 25491
- 175.38.43 setAsLongChar(file as folderItem) 25491
- 175.38.45 setAsLongChar(text as SQLStringMBS) 25492
- 175.38.46 setAsLongChar(text as string) 25492

### 175.38.45 setAsLongChar(text as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets parameter's value as long character data (SQLString)
See also:

- 175.38.41 setAsLongChar(data as MemoryBlock) 25490
- 175.38.42 setAsLongChar(data as SQLDataProviderMBS, BlockSize as UInt32) 25491
- 175.38.43 setAsLongChar(file as folderItem) 25491
- 175.38.44 setAsLongChar(stream as Readable) 25491
- 175.38.46 setAsLongChar(text as string) 25492

### 175.38.46 setAsLongChar(text as string)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets parameter's value as long character data (SQLString)
See also:

- 175.38.41 setAsLongChar(data as MemoryBlock) 25490
- 175.38.42 setAsLongChar(data as SQLDataProviderMBS, BlockSize as UInt32) 25491
- 175.38.43 setAsLongChar(file as folderItem) 25491
- 175.38.44 setAsLongChar(stream as Readable) 25491
- 175.38.45 setAsLongChar(text as SQLStringMBS) 25492

### 175.38.47 setAsNull

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets value to null.

### 175.38.48 setAsNumeric(value as SQLNumericMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets parameter's value as SQLNumeric data.

### 175.38.49 setAsShort(value as Int16)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets parameter's value as short data.

### 175.38.50 setAsString(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Private method.
**Notes:** This method should make sure you don't accidentally a memoryblock instead of a text.
See also:

- 175.38.51 setAsString(value as SQLStringMBS) 25493
- 175.38.52 setAsString(value as string) 25494

### 175.38.51 setAsString(value as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets parameter's value as character string data (SQLString)
See also:

- 175.38.50 setAsString(data as MemoryBlock) 25493
- 175.38.52 setAsString(value as string) 25494

### 175.38.52 setAsString(value as string)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets parameter's value as character string data.
**Notes:** Same as setAsString, but for your convenience with a Xojo string instead of a SQLStringMBS object.
See also:

- 175.38.50 setAsString(data as MemoryBlock) 25493
- 175.38.51 setAsString(value as SQLStringMBS) 25493

### 175.38.53 setAsUInt32(value as UInt32)

MBS SQL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets parameter's value as UInt32 data.

### 175.38.54 setAsULong(value as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets parameter's value as unsigned long data.

### 175.38.55 setAsUnknown

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets parameter's type as unknown.

### 175.38.56 setAsUShort(value as UInt16)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets parameter's value as unsigned short data.
**Notes:** Sets value as unsigned short data.

### 175.38.57 setAsValueRead(value as SQLValueReadMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets parameter's value from SQLParam or SQLField objects.
**Notes:** This method allows using SQLField or SQLParam object received from one SQL statement as a parameter for another SQL statement.

### 175.38.58 setVariant(value as Variant)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the value based on a variant.
**Example:**

```
dim con as SQLConnectionMBS // your connection
dim pic as picture // some picture

// get picture data
dim jpegData as MemoryBlock = pic.GetData(Picture.FormatJPEG, 80)

// get a command for an Insert command
dim sql as string = "Insert into BlobTest(name, image) values (:name, :image)"
dim cmd as new SQLCommandMBS(con, sql)

// set values by variant
cmd.Param("name").setVariant "logo.jpg"
cmd.Param("image").setVariant jpegData

// do the insert
cmd.Execute
```

**Notes:**

MemoryBlock and Strings without text encoding are converted to byte values (BLOB).
Texts and Strings with encoding are converted to text values.
Raises exceptions if you pass anything which is not recognized.
Other types are translated as good as possible.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

### 175.38.59 Properties

### 175.38.60 isDefault as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns true if the plugin has been forced to use parameter's default value by calling setAsDefault method; false otherwise.
**Notes:** (Read only property)

# 175.39 class SQLValueReadMBS

## 175.39.1 class SQLValueReadMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class used in the SQL Plugin for value objects which can be read.

### 175.39.4 Methods

### 175.39.5 asBLob as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the value as BLob (SQLString) data.
**Notes:**

If the value of current object is NULL, asBLob method returns an empty string. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is string (kDataTypeString), bytes (kDataTypeBytes), long binary (kDataTypeLongBinary), long character (kDataTypeLongChar), BLob (kDataTypeBLob) or CLob (kDataTypeCLob), asBLob method returns the object's value as SQLString object.

If the value's type of current object is bool (kDataTypeBool), short (kDataTypeShort), long (kDataTypeLong), double (kDataTypeDouble), numeric (kDataTypeNumeric), date-time (kDataTypeDateTime) or cursor (kDataTypeCursor), the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.

### 175.39.6 asBLobMemory as MemoryBlock

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the value as BLob data in a memoryblock.

### 175.39.7 asBLobString as String

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the value as BLob data in a string.

### 175.39.8 asBytes as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the value as binary string data (SQLString).
**Notes:**

If the value of current object is NULL, asBytes method returns an empty string. Use isNull method to make

sure if the value is NULL or not.

If the value's type of current object is string (kDataTypeString), bytes (kDataTypeBytes), long binary (kDataTypeLongBinary), long character (kDataTypeLongChar), BLob (kDataTypeBLob) or CLob (kDataTypeCLob), asBytes method returns the object's value as SQLString object.

If the value's type of current object is bool (kDataTypeBool), short (kDataTypeShort), long (kDataTypeLong), double (kDataTypeDouble), numeric (kDataTypeNumeric) or date-time (kDataTypeDateTime), asBytes method returns a block of data with size sizeof(value's type) as SQLString object.

If the value's type of current object is cursor (kDataTypeCursor), the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.

### 175.39.9 asCLob as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the value as CLob (SQLString) data.
**Notes:**

If the value of current object is NULL, asCLob method returns an empty string. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is string (kDataTypeString), bytes (kDataTypeBytes), long binary (kDataTypeLongBinary), long character (kDataTypeLongChar), BLob (kDataTypeBLob) or CLob (kDataTypeCLob), asCLob method returns the object's value as SQLString object.

If the value's type of current object is bool (kDataTypeBool), short (kDataTypeShort), long (kDataTypeLong), double (kDataTypeDouble), numeric(kDataTypeNumeric), date-time (kDataTypeDateTime) or cursor (kDataTypeCursor), the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.

### 175.39.10 asDate as Date

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns the value as date.

**Example:**

```
dim cmd as SQLCommandMBS // your command object
dim d as date = cmd.Field("mydate").asDate // read date value
```

**Notes:**

If the value of current object is NULL, asDate method returns an empty date object. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is kDataTypeDateTime, asDate method returns date object.

If the value's type of current object is any data type except kDataTypeDateTime, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.

### 175.39.11 asDateTime as SQLDateTimeMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the value as SQLDateTimeMBS object.
**Notes:**

If the value of current object is NULL, asDateTime method returns an empty SQLDateTime object. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is kDataTypeDateTime, asDateTime method returns SQLDateTime object.

If the value's type of current object is any data type except kDataTypeDateTime, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.

### 175.39.12 asDateTimeValue as DateTime

MBS SQL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the value as date.
**Notes:**

If the value of current object is NULL, asDate method returns an empty date object. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is kDataTypeDateTime, asDate method returns date object.

If the value's type of current object is any data type except kDataTypeDateTime, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.

### 175.39.13 asInterval as SQLIntervalMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the value as interval (SQLIntervalMBS).

### 175.39.14 asLongBinary as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the value as long binary (SQLString) data.
**Notes:**

If the value of current object is NULL, asLongBinary method returns an empty string. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is string (kDataTypeString), bytes (kDataTypeBytes), long binary (kDataTypeLongBinary), long character (kDataTypeLongChar), BLob (kDataTypeBLob) or CLob (kDataTypeCLob), asLongBinary method returns the object's value as SQLString object.

If the value's type of current object is bool (kDataTypeBool), short (kDataTypeShort), long (kDataTypeLong), double (kDataTypeDouble), numeric (kDataTypeNumeric), date-time (kDataTypeDateTime) or cursor (kDataTypeCursor), the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.

### 175.39.15 asLongChar as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the value as long character (SQLString) data.
**Notes:**

If the value of current object is NULL, asLongChar method returns an empty string. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is string (kDataTypeString), bytes (kDataTypeBytes), long binary (kDataTypeLongBinary), long character (kDataTypeLongChar), BLob (kDataTypeBLob) or CLob (kDataTypeCLob), asLongChar method returns the object's value as SQLString object.

If the value's type of current object is bool (kDataTypeBool), short (kDataTypeShort), long (kDataTypeLong), double (kDataTypeDouble), numeric (kDataTypeNumeric), date-time (kDataTypeDateTime) or cursor (kDataTypeCursor), the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.

### 175.39.16 asNumeric as SQLNumericMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the value as SQLNumeric data.
**Notes:**

If the value of current object is NULL, asNumeric method returns 0. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is exact numeric value (kDataTypeNumeric), asNumeric method returns the original value with no conversion.

If the value's type of current object is bool (kDataTypeBool), short (kDataTypeShort), double (kDataTypeDouble) or long (kDataTypeLong), asNumeric method converts it to SQLNumeric .

If the value's type of current object is string (kDataTypeString), asNumeric method tries to convert it from SQLChar* value. If the conversion is possible and correct, asNumeric converts to SQLNumeric from SQLChar* value. If conversion is incorrect asNumeric method throws an exception.

If the value's type of current object is any data type except the described above, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.

### 175.39.17 asString as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** returns the value as string (SQLString) data.
**Notes:**

If the value of current object is NULL, asString method returns an empty string. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is bool (kDataTypeBool), asString method returns "true" or "false" string (SQLString object).

If the value's type of current object is short (kDataTypeShort), asString method converts it to decimal string (SQLString object) like function printf("% hd", ...) does.

If the value's type of current object is long (kDataTypeLong), asString method converts it to decimal string (SQLString object) like function printf("% ld", ...) does.

If the value's type of current object is double (kDataTypeDouble), asString method converts it to decimal string (SQLString object) like function printf("% g", ...) does.

If the value's type of current object is numeric (kDataTypeNumeric), asString method converts it to decimal string (SQLString object) without precision loss.

If the value's type of current object is date-time (kDataTypeDateTime), asString method converts it to string (SQLString object) like function asctime(...) does.

If the value's type of current object is string (kDataTypeString, kDataTypeLongChar, kDataTypeCLob), asString method returns the original object's value as SQLString object.

If the value's type of current object is binary (kDataTypeBytes, kDataTypeLongBinary, kDataTypeBLob), asString method converts it to hexadecimal string ( SQLString object).

If the value's type of current object is cursor (kDataTypeCursor), the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.
For numbers, this may give english decimal separator. For getting localized one, please use AsDoubleValue and use cstr() function.

### 175.39.18 Constructor(DataType as Integer)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new empty value object for the given data type.
See also:

- 175.39.19 Constructor(value as SQLValueReadMBS) 25504

### 175.39.19 Constructor(value as SQLValueReadMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new value object by copying the given one.
See also:

- 175.39.18 Constructor(DataType as Integer) 25504

### 175.39.20 Properties

### 175.39.21 asBool as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the value of current object as bool data.
**Notes:**

f the value of current object is NULL, asBool method returns false. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is bool (kDataTypeBool), asBool method returns the original value with no conversion.

If the value's type of current object is short (kDataTypeShort), long (kDataTypeLong) or double (kDataTypeDouble), asBool method converts it to bool data type. Conversion returns false if the value is 0; true otherwise.

If the value's type of current object is any data type except the described above, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.
(Read only property)

### 175.39.22 asDouble as Double

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** returns the value as Double data.
**Notes:**

If the value of current object is NULL, asDouble method returns 0. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is double (kDataTypeDouble), asDouble method returns the original value with no conversion.

If the value's type of current object is bool (kDataTypeBool), short (kDataTypeShort), long (kDataTypeLong) or numeric (kDataTypeNumeric), asDouble method converts it to double ( kDataTypeDouble) data type.

If the value's type of current object is string (kDataTypeString), asDouble method tries to convert it to double value. If the conversion is possible and correct, asDouble returns kDataTypeDouble value. If conversion is incorrect asDouble method throws an exception.

If the value's type of current object is kDataTypeDateTime, asDouble method converts it to standard double representation. Days are represented by whole number increments starting with 30 December 1899, midnight as time zero. Hour values are expressed as the absolute value of the fractional part of the number. See SQLDateTime::operator double() for more detailes.

If the value's type of current object is any data type except the described above, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.
(Read only property)

### 175.39.23 asInt32 as Int32

MBS SQL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the value as Int32 data.
**Notes:** (Read only property)

### 175.39.24 asInt64 as Int64

MBS SQL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the value as Int64 data.
**Notes:** (Read only property)

### 175.39.25 asInteger as Integer

MBS SQL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the value as Integer data.
**Notes:**

Either Int32 or Int64 depending on whether the application is 32 or 64 bit.
(Read only property)

### 175.39.26 asLong as Int32

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the value as Int32 data.
**Notes:**

If the value of current object is NULL, asLong method returns 0. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is long (kDataTypeLong), asLong method returns the original value with no conversion.

If the value's type of current object is bool (kDataTypeBool), short (kDataTypeShort), double (kDataTypeDouble) or numeric (kDataTypeNumeric), asLong method converts it to long data type. Note, that in this case the returned value can be truncated.

If the value's type of current object is string (kDataTypeString), asLong method tries to convert it to long (kDataTypeLong) value. If the conversion is possible and correct, asLong returns kDataTypeLong value. If conversion is incorrect asLong method throws an exception.

If the value's type of current object is any data type except the described above, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.
(Read only property)

### 175.39.27 asShort as Int16

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the value as short.
**Notes:**

If the value of current object is NULL, asShort method returns 0. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is short, asShort method returns the original value with no conversion.

If the value's type of current object is bool (kDataTypeBool), long (kDataTypeLong), unsigned long (SkDataTypeULong), double (kDataTypeDouble) or numeric (kDataTypeNumeric), asShort method converts it to short data type. Note, that in this case the returned value can be truncated.

If the value's type of current object is string (kDataTypeString), asShort method tries to convert it to short value. If the conversion is possible and correct, asShort returns the value. If conversion is incorrect asShort method throws an exception.

If the value's type of current object is any data type except the described above, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SAValueRead object.
(Read only property)

### 175.39.28 asStringValue as String

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the value string.
**Notes:**

Same as asString but returns a Xojo string.
Please use SQLStringMBS and CopyBinaryData if the string you want to read is a BLOB value, else text encoding will change your data!
For numbers, this may give english decimal separator. For getting localized one, please use AsDoubleValue and use cstr() function.
(Read only property)

### 175.39.29 asUInt32 as UInt32

MBS SQL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the value as UInt32 data.
**Notes:** (Read only property)

### 175.39.30 asULong as UInt32

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the value as an unsigned 32 bit integer value.
**Notes:**

If the value of current object is NULL, asULong method returns 0. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is long ( kDataTypeLong), asULong method returns the original value with no conversion.

If the value's type of current object is bool (kDataTypeBool), short (kDataTypeShort), double (kDataTypeDouble) or numeric (kDataTypeNumeric), asULong method converts it to long data type. Note, that in this case the returned value can be truncated.

If the value's type of current object is string (kDataTypeString), asULong method tries to convert it to long ( kDataTypeLong) value. If the conversion is possible and correct, asULong returns kDataTypeLong value. If conversion is incorrect asULong method throws an exception.

If the value's type of current object is any data type except the described above, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.
(Read only property)

### 175.39.31 asUShort as UInt16

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the value as unsigned short.
**Notes:**

If the value of current object is NULL, asUShort method returns 0. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is unsigned short, asUShort method returns the original value with no conversion.

If the value's type of current object is bool (kDataTypeBool), long (kDataTypeLong), unsigned long (SkDataTypeULong), double (kDataTypeDouble) or numeric (kDataTypeNumeric), asUShort method converts it to unsigned short data type. Note, that in this case the returned value can be truncated.

If the value's type of current object is string (kDataTypeString), asUShort method tries to convert it to unsigned short value. If the conversion is possible and correct, asUShort returns the value. If conversion is incorrect asUShort method throws an exception.

If the value's type of current object is any data type except the described above, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SAValueRead object.
(Read only property)

### 175.39.32 asVariant as Variant

MBS SQL Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the value as a variant.
**Notes:**

This is a convenience function.
May return nil, date, number or string.
BLOB strings without encoding and text strings as UTF-8.
(Read only property)

### 175.39.33 DataType as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns SAValueRead object's data type.
**Notes:**

One of the kDataType constants.
(Read only property)

### 175.39.34 isNull as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns true if the value of current object is NULL; otherwise false.
**Notes:** (Read only property)

### 175.39.35 LongOrLobReaderMode as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The Long or Lob data reading mode.
**Notes:**

SQLAPI++ Library provides two ways to read Long or BLob(CLob) object's value (usually SQLField or SQLParam objects):

1. reading of Long or Lob data at once into an internal buffer (like ordinary string or binary values);
2. piecewise reading of Long or Lob data using user defined callback.

kLongOrLobReaderDefault reading mode used by default.

If you want to control piecewise reading of Long or BLob(CLob) data you should set LongOrLobReaderMode and use kLongOrLobReaderManual reading mode for Long or BLob(CLob) parameters or fields you want to process with your data consumer. After that each fetch will skip reading Long and BLob(CLob) parameters that you set to be read manually. To read field or parameter defined to be read manually you should call ReadLongOrLob method for each of them after the fetch. ReadLongOrLob method will repeatedly call the data consumer Write event.
(Read and Write property)

### 175.39.36 Constants

### 175.39.37 kDataTypeBlob = 16

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the field type constants
**Notes:** Data type is BLob data (SQLStringMBS).

### 175.39.38 kDataTypeBool = 1

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the field type constants
**Notes:** Data type is a boolean.

### 175.39.39 kDataTypeBytes = 13

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the field type constants
**Notes:** Data type is binary string (SQLStringMBS).

### 175.39.40 kDataTypeClob = 17

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the field type constants
**Notes:** Data type is CLob data (SQLStringMBS).

### 175.39.41 kDataTypeCursor = 18

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the field type constants
**Notes:** Data type is Oracle REF CURSOR (SQLCommand).

### 175.39.42 kDataTypeDateTime = 10

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the field type constants
**Notes:** Data type is SQLDateTime.

### 175.39.43 kDataTypeDouble = 8

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the field type constants
**Notes:** This is a normal double variable.

### 175.39.44 kDataTypeInt64 = 6

MBS SQL Plugin, Plugin Version: 19.5.

**Function:** One of the field type constants
**Notes:** Signed 64-bit integer.

### 175.39.45 kDataTypeInterval = 11

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the field type constants
**Notes:** Data type is an interval (SQLIntervalMBS).

### 175.39.46 kDataTypeLong = 4

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the field type constants
**Notes:** A 32 bit integer.

### 175.39.47 kDataTypeLongBinary = 14

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the field type constants
**Notes:** Data type is long binary data (SQLStringMBS).

### 175.39.48 kDataTypeLongChar = 15

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the field type constants
**Notes:** Data type is long character data (SQLStringMBS).

### 175.39.49 kDataTypeNumeric = 9

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the field type constants
**Notes:** Data type is SQLNumeric (used internally).

### 175.39.50 kDataTypeShort = 2

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the field type constants
**Notes:** Data type is a 16 bit signed integer.

### 175.39.51 kDataTypeSpecificToDBMS = 19

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the field type constants
**Notes:** Data type is server-specific.

### 175.39.52 kDataTypeString = 12

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the field type constants
**Notes:** Data type is character string (SQLString).

### 175.39.53 kDataTypeUInt64 = 7

MBS SQL Plugin, Plugin Version: 19.5.

**Function:** One of the field type constants
**Notes:** Unsigned 64-bit integer.

### 175.39.54 kDataTypeULong = 5

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the field type constants
**Notes:** Data type is a 32 bit unsigned integer.

### 175.39.55 kDataTypeUnknown = 0

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the field type constants
**Notes:** Data type is unknown.

### 175.39.56 kDataTypeUShort = 3

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the field type constants
**Notes:** A 16 bit unsigned integer.

### 175.39.57 kLongOrLobReaderModeDefault = 0

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the read modes.
**Notes:** Long or Lob(CLob) data reading mode is default (automatic).

### 175.39.58 kLongOrLobReaderModeManual = 1

MBS SQL Plugin, Plugin Version: 9.3.

**Function:** One of the read modes.
**Notes:** Long or Lob(CLob) data reading mode is manual.

# Chapter 176

# Statusitem

## 176.1 class NSStatusBarButtonMBS

### 176.1.1 class NSStatusBarButtonMBS

MBS MacControls Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

**Function:** StatusBarButtons are the visual representation of NSStatusItems, and are primarily displayed on the right side of the menu bar.
**Notes:**

When a template image is set as the \c image property of the status bar button, it is rendered with the correct menu bar style. This guarantees that the button will look correct in various button states and appearances (such as dark menu bar).

Available on Mac OS X 10.10 and newer.
Subclass of the NSButtonMBS class.

### 176.1.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo / Real Studio plug-ins in version 15.0
- MBS Xojo / Real Studio Plugins, version 15.0pr11

### 176.1.3 Blog Entries

- MonkeyBread Software Releases the MBS Xojo / Real Studio plug-ins in version 15.0
- MBS Xojo / Real Studio Plugins, version 15.0pr11

### 176.1.4 Methods

### 176.1.5 Available as boolean

MBS MacControls Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

**Function:** Whether this class is available.
**Notes:** Returns true on OS X 10.10.

### 176.1.6 Properties

### 176.1.7 appearsDisabled as Boolean

MBS MacControls Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

**Function:** Whether icon appears disabled.
**Notes:**

When true the status bar icon has a disabled/off appearance while still being functional, such as allowing selection and actions. Defaults to false.
(Read and Write property)

## 176.2 class NSStatusItemMBS

### 176.2.1 class NSStatusItemMBS

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** A class to handle a NSStatusitem which is a tiny little item in the menubar.
**Notes:** All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

### 176.2.5 Xojo Developer Magazine

- 5.6, pages 31 to 33: Third Party Plugins: Statusitems, Getting an icon in the top right of the Mac OS X menubar by Christian Schmitz

### 176.2.6 Methods

### 176.2.7 Available as boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** Whether Statusitems are available.
**Notes:** True on MachO platforms.

### 176.2.8 Close

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** The destructor.
**Notes:** There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

### 176.2.9 CreateMenu as boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** Creates a new menu.
**Notes:**

Handle is not 0 after this call was successfull.

If the NSGrayBackground option is set in the system defaults, Mac OS X 10.5 will raise an NSImageCacheException, so please install an exception handle to catch NSExceptionMBS so your application can handle that.
See also:

• 176.2.10 CreateMenu(length as single) as boolean 25519

### 176.2.10 CreateMenu(length as single) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** Creates the StatusItem menu with the given width.
**Example:**

```
dim e as new NSStatusItemMBS
call e.CreateMenu(24) // best for a 16x16 picture
```

**Notes:**

Constants:

| | |
|---|---|
| NSVariableStatusItemLength | -1 |
| NSSquareStatusItemLength | -2 |

Other values between 0 and 10000 are used for the length.
Bad values like 20000 will crash the application.

Handle is not 0 after this call was successfull.

If the NSGrayBackground option is set in the system defaults, Mac OS X 10.5 will raise an NSImageCacheException, so please install an exception handle to catch NSExceptionMBS so your application can handle that.
See also:

• 176.2.9 CreateMenu as boolean 25518

### 176.2.11 CreateMenuMiddle(length as single) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** Same as CreateMenu but tries to place Statusitem on the right side.
**Deprecated:** This item is deprecated and should no longer be used. You can use CreateMenu instead.
**Notes:**

Uses private Apple API which may break on future Mac OS X versions. Returns false if Apple changes something in the future and the function we use will not be available. So if this function returns false, you can call CreateMenu to continue. Works on Mac OS X 10.4 to 10.6 and make the new statusitem being the

rightmost one (left to Apples MenuItems).

Constants:

| | |
|---|---|
| NSVariableStatusItemLength | -1 |
| NSSquareStatusItemLength | -2 |

Other values between 0 and 10000 are used for the length.
Bad values like 20000 will crash the application.

Handle is not 0 after this call was successfull.

If the NSGrayBackground option is set in the system defaults, Mac OS X 10.5 will raise an NSImageCacheException, so please install an exception handle to catch NSExceptionMBS so your application can handle that.

Deprecated.

### 176.2.12 CreateMenuRight(length as single) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** Same as CreateMenu but tries to place Statusitem on the right side.
**Deprecated:** This item is deprecated and should no longer be used. You can use CreateMenu instead.
**Notes:**

Uses private Apple API which may break on future Mac OS X versions. Returns false if Apple changes something in the future and the function we use will not be available. So if this function returns false, you can call CreateMenu to continue. Works on Mac OS X 10.4 to 10.6 and make the new statusitem being the rightmost one.

If you run this code after you used CreateMenuRight, the new menu will be right of all other statusitems:

```
dim sh as new Shell
sh.Execute "killall","SystemUIServer"
```

Constants:

| | |
|---|---|
| NSVariableStatusItemLength | -1 |
| NSSquareStatusItemLength | -2 |

Other values between 0 and 10000 are used for the length.
Bad values like 20000 will crash the application.

Handle is not 0 after this call was successfull.

If the NSGrayBackground option is set in the system defaults, Mac OS X 10.5 will raise an NSImageCacheException, so please install an exception handle to catch NSExceptionMBS so your application can handle that.

Deprecated.

### 176.2.13 DrawStatusBarBackground(x as Double, y as Double, width as Double, height as Double, highlight as boolean)

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

**Function:** Draws the menu background pattern for a custom status-bar item in regular or highlight pattern.
**Notes:**

x, y, width and height: A rectangle defining the area of a custom status-bar item.
highlight: true to draw the background pattern in the standard highlight pattern, false to not highlight the pattern.

You can use this method to help a custom status-bar item emulate the behavior of a standard item.

Available in Mac OS X v10.3 and later.

### 176.2.14 MenuIsVertical as boolean

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns true if the statusitem has a vertical orientation.
**Example:**

MsgBox str(NSStatusItemMBS.MenuIsVertical)

### 176.2.15 MenuThickness as Double

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** The thickness of the status bar.
**Example:**

MsgBox str(NSStatusItemMBS.MenuThickness)

**Notes:** The status bar returned by systemStatusBar has a thickness of 22 pixels, the thickness of the menu bar.

### 176.2.16 popUpStatusItemMenu(menu as NSMenuMBS)

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** Displays a menu under a custom status bar item.
**Notes:** You can use this method to cause a popup menu to appear under a custom status bar item when the user clicks the item. Note that view must exist (that is, it must not be nil).

### 176.2.17 SendActionOn(mode as Integer)

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** Sets the conditions on which action event is called.
**Notes:**

mask is set with one or more of the following bit masks described in NSEvent Constants: NSLeftMouseUpMask, NSLeftMouseDownMask, NSLeftMouseDraggedMask, and NSPeriodicMask.

mode is set with one or more of the following bit masks:

```
const NSLeftMouseDownMask      = & h00002
const NSLeftMouseUpMask        = & H00004
const NSLeftMouseDraggedMask   = & h00040
const NSPeriodicMask           = & h10000
```

### 176.2.18 Properties

### 176.2.19 alternateImage as NSImageMBS

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** An alternate image to be displayed when a status bar item is highlighted.

**Notes:** (Read and Write property)

### 176.2.20 attributedTitle as NSAttributedStringMBS

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** The attributed string that is displayed at the status item's position in the status bar.
**Notes:**

If an image is also set, the title appears to the right of the image.
(Read and Write property)

### 176.2.21 Button as Variant

MBS MacCocoa Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

**Function:** The button that is displayed in the status bar.
**Notes:**

Value is a NSStatusBarButtonMBS object. Returned as Variant to reduce plugin dependencies.

This is created automatically on the creation of the StatusItem. Behavior customization for the button, such as image, target/action, tooltip, can be set with this property.

Available on Mac OS X 10.10 and newer.
(Read only property)

### 176.2.22 Enabled as boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** Whether this status item is enabled.
**Notes:** (Read and Write property)

### 176.2.23 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** The handle of the NSStatusItem object used internally.
**Notes:** (Read and Write property)

### 176.2.24 Height as single

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** The height of the status item.
**Notes:**

Should be 22 pixels.
This is a function using undocumented features from the Apple NSStatusItem class, so there is not guarantee that it will work in future versions.
(Read only property)

### 176.2.25 HighlightMode as boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** Whether the receiver is highlighted when clicked.
**Notes:**

If you use HighlightMode and Menu, you need to first assign the menu and later set HighlightMode to true.
(Read and Write property)

### 176.2.26 image as NSImageMBS

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** The image that is displayed at the statusitem's position in the status bar.
**Notes:**

nil if an image has not been set.
(Read and Write property)

### 176.2.27 Left as single

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** The left position of the status item.
**Notes:**

Valid only after item was drawn the first time.
This is a function using undocumented features from the Apple NSStatusItem class, so there is not guarantee that it will work in future versions.
(Read only property)

### 176.2.28 Length as single

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** The length of the status item in pixels.
**Notes:**

Constants for special values:

| | |
|---|---|
| NSVariableStatusItemLength | -1 |
| NSSquareStatusItemLength | -2 |

(Read and Write property)

### 176.2.29 Menu as NSMenuMBS

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** The menu attached to this statusitem.
**Notes:**

Nil if no menu is attached.
(Read and Write property)

### 176.2.30 Title as String

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** The title of the status item.
**Notes:** (Read and Write property)

### 176.2.31 ToolTip as String

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** The help tag for a menu item.
**Notes:** (Read and Write property)

### 176.2.32 Top as single

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** The top position of the status item.
**Notes:**

Always 0.
This is a function using undocumented features from the Apple NSStatusItem class, so there is not guarantee that it will work in future versions.
(Read only property)

### 176.2.33 View as NSViewMBS

MBS MacCocoa Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

**Function:** Sets the view to be used for this status menuitem.
**Notes:**

Using a custom view you can draw whatever you like in the menu item.
You can set it to nil to remove the view.
(Read and Write property)

### 176.2.34 Width as single

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** The width of the status item.
**Notes:**

This is a function using undocumented features from the Apple NSStatusItem class, so there is not guarantee that it will work in future versions.
(Read only property)

### 176.2.35 Window as NSWindowMBS

MBS MacCocoa Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

**Function:** The window used for this NSStatusItem.
**Notes:**

This is a function using undocumented features from the Apple NSStatusItem class, so there is not guarantee that it will work in future versions.
Returns nil on 64 bit target.
(Read only property)

### 176.2.36 Events

### 176.2.37 Action

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: .

**Function:** The event called when the user clicks on the statusitem.
**Notes:**

Mouse position can be calculated based on System.MouseX/System.MouseY relative to Left/Top. Mouse status can be read using System.MouseDown.

This event is limited. You can't for example do everything like quit an application. For using quit, start a timer which will remove the menu 500ms later and than quit 500ms later.

This event is coming from the Cocoa event system. What you can do is a bit limited when using GUI functions from Xojo. To avoid some redraw errors, you may want to start a timer and let your Xojo code run a millisecond after the menu code has finished.
Depending on what you do, you can see the menu not redrawing properly (staying highlighted) and crashes if the Xojo code modifies some global Cocoa states.

### 176.2.38 DoubleAction

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: .

**Function:** The event called when the user double clicks on the statusitem.
**Notes:**

If two Action Events happen very fast, this one is called the second time so you can e.g. react on double clicks.
Mouse position can be calculated based on System.MouseX/System.MouseY relative to Left/Top. Mouse status can be read using System.MouseDown.

This event is coming from the Cocoa event system. What you can do is a bit limited when using GUI functions from Xojo. To avoid some redraw errors, you may want to start a timer and let your Xojo code run a millisecond after the menu code has finished.
Depending on what you do, you can see the menu not redrawing properly (staying highlighted) and crashes if the Xojo code modifies some global Cocoa states.

### 176.2.39 Screenshots

### 176.2.40 NSStatusItem.jpg

**Function:** The NSStatusItem running a menu on the top right of the menubar.

# Chapter 177

# StoreKit

## 177.1 class AppReceiptIAPMBS

### 177.1.1 class AppReceiptIAPMBS

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

**Function:** The class to represent an in-app purchase in the app receipt.
**Example:**

```
// open a receipt
dim f as FolderItem = SpecialFolder.Desktop.Child("receipt")
dim r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// show purchases
dim inAppPurchases() as AppReceiptIAPMBS = r.inAppPurchases
for each p as AppReceiptIAPMBS in inAppPurchases
MsgBox str(p.quantity)+"x "+p.productIdentifier+" "+p.purchaseDate.AbbreviatedDate
next
```

**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 177.1.4 Methods

### 177.1.5 Constructor

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

**Function:** The private constructor.

### 177.1.6 isActiveAutoRenewableSubscriptionForDate(d as Date) as boolean

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns whether the auto renewable subscription is active for the given date.
**Notes:**

date: The date in which the auto-renewable subscription should be active. If you are using the current date, you might not want to take it from the device in case the user has changed it.
Returns true if the auto-renewable subscription is active for the given date, false otherwise.

Auto-renewable subscription lapses are possible. If you are checking against the current date, you might want to deduct some time as tolerance.
If this method fails Apple recommends to refresh the receipt and try again once.
See also:

- 177.1.7 isActiveAutoRenewableSubscriptionForDate(d as DateTime) as boolean 25530

### 177.1.7 isActiveAutoRenewableSubscriptionForDate(d as DateTime) as boolean

MBS MacCloud Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

**Function:** Returns whether the auto renewable subscription is active for the given date.
**Notes:**

date: The date in which the auto-renewable subscription should be active. If you are using the current date, you might not want to take it from the device in case the user has changed it.
Returns true if the auto-renewable subscription is active for the given date, false otherwise.

Auto-renewable subscription lapses are possible. If you are checking against the current date, you might want to deduct some time as tolerance.

If this method fails Apple recommends to refresh the receipt and try again once.
See also:

- 177.1.6 isActiveAutoRenewableSubscriptionForDate(d as Date) as boolean 25530

### 177.1.8 Properties

### 177.1.9 cancellationDate as Date

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** For a transaction that was canceled by Apple customer support, the date of the cancellation.
**Notes:** (Read only property)

### 177.1.10 cancellationDateTime as DateTime

MBS MacCloud Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

**Function:** For a transaction that was canceled by Apple customer support, the date of the cancellation.
**Notes:** (Read only property)

### 177.1.11 originalPurchaseDate as Date

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** For a transaction that restores a previous transaction, the date of the original transaction.
**Notes:**

This value corresponds to the original transaction's transactionDate property.
In an auto-renewable subscription receipt, this indicates the beginning of the subscription period, even if the subscription has been renewed.
(Read only property)

### 177.1.12 originalPurchaseDateTime as DateTime

MBS MacCloud Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

**Function:** For a transaction that restores a previous transaction, the date of the original transaction.
**Notes:**

This value corresponds to the original transaction's transactionDate property.
In an auto-renewable subscription receipt, this indicates the beginning of the subscription period, even if the subscription has been renewed.

(Read only property)

### 177.1.13 originalTransactionIdentifier as String

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

**Function:** For a transaction that restores a previous transaction, the transaction identifier of the original transaction.
**Notes:**

Otherwise, identical to the transaction identifier.
This value corresponds to the original transaction's transactionIdentifier property.
All receipts in a chain of renewals for an auto-renewable subscription have the same value for this field.
(Read only property)

### 177.1.14 productIdentifier as String

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

**Function:** The product identifier of the item that was purchased.
**Example:**

```
// open a receipt
dim f as FolderItem = SpecialFolder.Desktop.Child("receipt")
dim r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// show purchases
dim inAppPurchases() as AppReceiptIAPMBS = r.inAppPurchases
for each p as AppReceiptIAPMBS in inAppPurchases
MsgBox str(p.quantity)+"x "+p.productIdentifier+" "+p.purchaseDate.AbbreviatedDate
next
```

**Notes:**

This value corresponds to the productIdentifier property of the SKPayment object stored in the transaction,Äôs payment property.
(Read only property)

### 177.1.15 purchaseDate as Date

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The date and time that the item was purchased.
**Notes:**

This value corresponds to the transaction,Äôs transactionDate property.

For a transaction that restores a previous transaction, the purchase date is the date of the restoration. Use originalPurchaseDate to get the date of the original transaction.

In an auto-renewable subscription receipt, this is always the date when the subscription was purchased or renewed, regardles of whether the transaction has been restored.
(Read only property)

### 177.1.16 purchaseDateTime as DateTime

MBS MacCloud Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

**Function:** The date and time that the item was purchased.
**Notes:** (Read only property)

### 177.1.17 quantity as Integer

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

**Function:** The number of items purchased.
**Example:**

```
// open a receipt
dim f as FolderItem = SpecialFolder.Desktop.Child("receipt")
dim r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// show purchases
dim inAppPurchases() as AppReceiptIAPMBS = r.inAppPurchases
for each p as AppReceiptIAPMBS in inAppPurchases
MsgBox str(p.quantity)+"x "+p.productIdentifier+" "+p.purchaseDate.AbbreviatedDate
next
```

**Notes:**

This value corresponds to the quantity property of the SKPayment object stored in the transaction,Äôs payment property.
(Read only property)

### 177.1.18 subscriptionExpirationDate as Date

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The expiration date for the subscription.
**Notes:**

Only present for auto-renewable subscription receipts.
(Read only property)

### 177.1.19 subscriptionExpirationDateTime as DateTime

MBS MacCloud Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

**Function:** The expiration date for the subscription.
**Notes:**

Only present for auto-renewable subscription receipts.
(Read only property)

### 177.1.20 transactionIdentifier as String

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

**Function:** The transaction identifier of the item that was purchased.
**Notes:**

This value corresponds to the transaction's transactionIdentifier property.
(Read only property)

### 177.1.21 webOrderLineItemID as Integer

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

**Function:** The primary key for identifying subscription purchases.
**Notes:** (Read only property)

## 177.2 class AppReceiptMBS

### 177.2.1 class AppReceiptMBS

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

**Function:** The class for an app receipt.
**Example:**

```
// open a receipt
dim f as FolderItem = SpecialFolder.Desktop.Child("receipt")
dim r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// show value
MsgBox r.bundleIdentifier
```

**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 177.2.2 Blog Entries

### 177.2.4 Methods

### 177.2.5 bundleReceipt as AppReceiptMBS

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

**Function:** Returns the app receipt contained in the bundle, if any and valid.
**Notes:**

Extracts the receipt in ASN1 from the PKCS # 7 container, and then parses the ASN1 data into a AppReceiptMBS instance. If an Apple Root certificate is available, it will also verify that the signature of the receipt is valid.
Returns the app receipt contained in the bundle, or nil if there is no receipt or if it is invalid.

### 177.2.6 Constructor

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

**Function:** The private constructor.

### 177.2.7 containsActiveAutoRenewableSubscriptionOfProductIdentifier(productIdentifier as string, d as date) as boolean

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns whether the receipt contains an active auto-renewable subscription for the given product identifier and for the given date.
**Notes:**

productIdentifier: The identifier of the auto-renewable subscription.
date: The date in which the latest auto-renewable subscription should be active. If you are using the current date, you might not want to take it from the device in case the user has changed it.
Returns true if the latest auto-renewable subscription is active for the given date, false otherwise.

Auto-renewable subscription lapses are possible. If you are checking against the current date, you might want to deduct some time as tolerance.
If this method fails Apple recommends to refresh the receipt and try again once.
See also:

- 177.2.8 containsActiveAutoRenewableSubscriptionOfProductIdentifier(productIdentifier as string, d as dateTime) as boolean 25536

### 177.2.8 containsActiveAutoRenewableSubscriptionOfProductIdentifier(productIdentifier as string, d as dateTime) as boolean

MBS MacCloud Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

**Function:** Returns whether the receipt contains an active auto-renewable subscription for the given product identifier and for the given date.
**Notes:**

productIdentifier: The identifier of the auto-renewable subscription.
date: The date in which the latest auto-renewable subscription should be active. If you are using the current

date, you might not want to take it from the device in case the user has changed it.
Returns true if the latest auto-renewable subscription is active for the given date, false otherwise.

Auto-renewable subscription lapses are possible. If you are checking against the current date, you might want to deduct some time as tolerance.
If this method fails Apple recommends to refresh the receipt and try again once.
See also:

- 177.2.7 containsActiveAutoRenewableSubscriptionOfProductIdentifier(productIdentifier as string, d as date) as boolean 25536

### 177.2.9 containsInAppPurchaseOfProductIdentifier(productIdentifier as string) as boolean

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

**Function:** Returns whether there is an in-app purchase in the receipt for the given product.
**Notes:**

productIdentifier: The identifier of the product.
True if there is an in-app purchase for the given product, false otherwise.

### 177.2.10 inAppPurchases as AppReceiptIAPMBS()

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

**Function:** Array of in-app purchases contained in the receipt.

### 177.2.11 receiptForFile(file as folderitem) as AppReceiptMBS

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

**Function:** Returns the app receipt contained in the given file, if any and valid.
**Example:**

```
dim a as new AppReceiptVerificatorMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("receipt")
dim r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// testing with receipt from current Dash app
a.bundleIdentifier = "com.kapeli.dash"
a.bundleVersion = "2.1.2"

if a.verifyReceipt(r) then
```

```
MsgBox "My receipt is valid"
else
MsgBox "My receipt is invalid."
end if
```

**Notes:**

Extracts the receipt in ASN1 from the PKCS # 7 container, and then parses the ASN1 data into a AppReceiptMBS instance. If an Apple Root certificate is available, it will also verify that the signature of the receipt is valid.
Returns the receipt contained in the given file, or nil if there is no receipt or if it is invalid.

### 177.2.12 setAppleRootCertificate(Data as Memoryblock)

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

**Function:** Sets the certificate data of the Apple Root certificate that will be used to verifiy the signature of the bundle receipt.
**Notes:**

If none is provided, the resource AppleIncRootCertificate.cer will be used. If no certificate is available, no signature verification will be performed.
data: The contents of the Apple Root certificate file to use.
See also:

- 177.2.13 setAppleRootCertificate(File as FolderItem) 25538

### 177.2.13 setAppleRootCertificate(File as FolderItem)

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

**Function:** Sets the file of the Apple Root certificate that will be used to verifiy the signature of the bundle receipt.
**Notes:**

If none is provided, the resource AppleIncRootCertificate.cer will be used. If no certificate is available, no signature verification will be performed.
file: The folderitem of the Apple Root certificate.
See also:

- 177.2.12 setAppleRootCertificate(Data as Memoryblock) 25538

### 177.2.14 verifyReceiptHash as boolean

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

**Function:** Returns wheter the receipt hash corresponds to the device's GUID by calcuting the expected hash using the GUID, bundleIdentifierData and opaqueValue.
**Notes:** Returns true if the hash contained in the receipt corresponds to the device's GUID, false otherwise.

### 177.2.15 Properties

### 177.2.16 appVersion as String

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

**Function:** The app,Äôs version number.
**Example:**

```
// open a receipt
dim f as FolderItem = SpecialFolder.Desktop.Child("receipt")
dim r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// show value
MsgBox r.appVersion
```

**Notes:**

This corresponds to the value of CFBundleVersion (in iOS) or CFBundleShortVersionString (in OS X) in the Info.plist.
(Read only property)

### 177.2.17 bundleIdentifier as String

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

**Function:** The bundle identifier.
**Example:**

```
// open a receipt
dim f as FolderItem = SpecialFolder.Desktop.Child("receipt")
dim r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// show value
MsgBox r.bundleIdentifier
```

**Notes:**

This corresponds to the value of CFBundleIdentifier in the Info.plist file.
(Read only property)

### 177.2.18 bundleIdentifierData as Memoryblock

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

**Function:** The bundle identifier as data.
**Notes:**

The bundle identifier as data, as contained in the receipt. Used to verifiy the receipt's hash.
(Read only property)

### 177.2.19 creationDate as Date

MBS MacCloud Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The creation date of the receipt.
**Notes:** (Read only property)

### 177.2.20 creationDateTime as DateTime

MBS MacCloud Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

**Function:** The creation date of the receipt.
**Notes:** (Read only property)

### 177.2.21 expirationDate as Date

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The date that the app receipt expires.
**Notes:**

Only for apps purchased through the Volume Purchase Program. If nil, the receipt does not expire. When validating a receipt, compare this date to the current date to determine whether the receipt is expired. Do not try to use this date to calculate any other information, such as the time remaining before expiration.
(Read only property)

### 177.2.22 expirationDateTime as DateTime

MBS MacCloud Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

**Function:** The date that the app receipt expires.
**Notes:**

Only for apps purchased through the Volume Purchase Program. If nil, the receipt does not expire. When validating a receipt, compare this date to the current date to determine whether the receipt is expired. Do not try to use this date to calculate any other information, such as the time remaining before expiration.
(Read only property)

### 177.2.23 opaqueValue as Memoryblock

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

**Function:** An opaque value used as part of the SHA-1 hash.
**Notes:** (Read only property)

### 177.2.24 originalAppVersion as String

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

**Function:** The version of the app that was originally purchased.
**Example:**

```
// open a receipt
dim f as FolderItem = SpecialFolder.Desktop.Child("receipt")
dim r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// show value
MsgBox r.originalAppVersion
```

**Notes:**

This corresponds to the value of CFBundleVersion (in iOS) or CFBundleShortVersionString (in OS X) in the Info.plist file when the purchase was originally made. In the sandbox environment, the value of this field is always "1.0".
(Read only property)

### 177.2.25 purchaseDate as Date

MBS MacCloud Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Another date.
**Notes:**

Digging in a receipt we found this field and assume it is the original purchase date.
(Read only property)

### 177.2.26 purchaseDateTime as DateTime

MBS MacCloud Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

**Function:** Another date.
**Notes:**

Digging in a receipt we found this field and assume it is the original purchase date.
(Read only property)

### 177.2.27 receiptHash as Memoryblock

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

**Function:** A SHA-1 hash, used to validate the receipt.
**Notes:** (Read only property)

### 177.2.28 transactionDate as Date

MBS MacCloud Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Another date.
**Notes:**

Digging in a receipt we found this field and assume it is the transaction date.
(Read only property)

### 177.2.29 transactionDateTime as DateTime

MBS MacCloud Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

**Function:** Another date.
**Notes:**

Digging in a receipt we found this field and assume it is the transaction date.
(Read only property)

## 177.3 class AppReceiptVerificatorMBS

### 177.3.1 class AppReceiptVerificatorMBS

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

**Function:** Reference implementation of an app receipt verificator.
**Example:**

```
dim a as new AppReceiptVerificatorMBS

if a.verifyAppReceipt then
MsgBox "My receipt is valid"
else
MsgBox "My receipt is invalid."
end if
```

**Notes:** If security is a concern you might want to avoid using a verificator whose code is open source.

### 177.3.3 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 18.0
- MBS Xojo Plugins, version 17.6pr4
- MBS Xojo / Real Studio Plugins, version 16.0pr7
- MBS Xojo / Real Studio Plugins, version 14.3pr8
- Validating Receipts of Mac App Store Purchases including In-App Purchases

### 177.3.4 Methods

### 177.3.5 Constructor

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

**Function:** The constructor.

### 177.3.6 ExitApp(code as Integer = 173)

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

**Function:** Quits the application directly.
**Example:**

AppReceiptVerificatorMBS.ExitApp 173

**Notes:**

This does not call the destructors and CancelClose events. The app is quit right away.
If you use code 173 the Finder will show error message that app needs to be downloaded again from Mac App Store.

### 177.3.7 GUID as string

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Reads the GUID of the Mac.
**Example:**

```
dim g as String = AppReceiptVerificatorMBS.GUID
MsgBox EncodeHex(g)
```

**Notes:** This is normally build from the MAC ID of the ethernet card.

### 177.3.8 verifyAppReceipt as boolean

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

**Function:** Verifies the app's receipt file.
**Example:**

```
dim a as new AppReceiptVerificatorMBS

if a.verifyAppReceipt then
MsgBox "My receipt is valid"
else
MsgBox "My receipt is invalid."
end if
```

**Notes:**

Verifies the receipt by checking the integrity of the receipt, comparing its bundle identifier and bundle version to the values returned by the corresponding properties and verifying the receipt hash.

Returns true if the receipt is verified, false otherwise.
If validation fails, Apple recommends to refresh the receipt and try again.

If you set bundleVersion and/or bundleIdentifier properties, we use those values.
Else we pick them from the info.plist of the app.

### 177.3.9 verifyReceipt(Receipt as AppReceiptMBS) as boolean

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

**Function:** Verifies the given receipt file.
**Example:**

```
dim a as new AppReceiptVerificatorMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("receipt")
dim r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// testing with receipt from current Dash app
a.bundleIdentifier = "com.kapeli.dash"
a.bundleVersion = "2.1.2"

if a.verifyReceipt(r) then
MsgBox "My receipt is valid"
else
MsgBox "My receipt is invalid."
end if
```

**Notes:**

Verifies the receipt by checking the integrity of the receipt, comparing its bundle identifier and bundle version

to the values returned by the corresponding properties and verifying the receipt hash.

Returns true if the receipt is verified, false otherwise.
If validation fails, Apple recommends to refresh the receipt and try again.

### 177.3.10 Properties

### 177.3.11 bundleIdentifier as String

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

**Function:** The value that will be used to validate the bundle identifier included in the app receipt.
**Notes:**

Given that it is possible to modify the app bundle in jailbroken devices, setting this value from a hardcoded string might provide better protection.
Returns the given value, or the app's bundle identifier by default.
(Read and Write property)

### 177.3.12 bundleVersion as String

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

**Function:** The value that will be used to validate the bundle version included in the app receipt.
**Notes:**

Given that it is possible to modify the app bundle in jailbroken devices, setting this value from a hardcoded string might provide better protection.
Returns the given value, or the app's bundle version by default.
(Read and Write property)

### 177.3.13 FailReason as String

MBS MacCloud Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

**Function:** The reason for a failure.
**Notes:**

This is for debugging and to help you to find the reason for why a verification fails.
(Read only property)

### 177.3.14 MACAddress as MemoryBlock

MBS MacCloud Plugin, Plugin Version: 18.0, Platform: macOS, Targets: All.

**Function:** The MAC Address to use.
**Example:**

```
// get the one of this Mac
dim m as MemoryBlock = AppReceiptVerificatorMBS.MACAddress

// now set a fake one
dim x as MemoryBlock = DecodeHex("12347890ABCD")
AppReceiptVerificatorMBS.MACAddress = x

// and display
MsgBox EncodeHex(m)+EndOfLine+EncodeHex(AppReceiptVerificatorMBS.MACAddress)
```

**Notes:**

Can be queried to automatically get the one we detect.
Or set to use a custom one for testing.
(Read and Write property)

## 177.4 class SKDownloadMBS

### 177.4.1 class SKDownloadMBS

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** This storeKit class gives you information about the download status of a content file.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

Available in Mac OS X 10.8 and newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 177.4.2 Blog Entries

- MBS Xojo Plugins, version 22.5pr1

### 177.4.3 Blog Entries

- MBS Xojo Plugins, version 22.5pr1

### 177.4.4 Methods

### 177.4.5 Constructor

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The private constructor.

### 177.4.6 contentURLForProductID(productID as string) as string

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Queries content URL for a product.

### 177.4.7 deleteContentForProductID(productID as string)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Deletes the content for that identifier from disk.

### 177.4.8 Properties

### 177.4.9 contentIdentifier as string

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Product identifier entered in iTunesConnect.
**Notes:** (Read only property)

### 177.4.10 contentLength as Int64

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Filesize of the asset.
**Notes:** (Read only property)

### 177.4.11 contentURL as string

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Content URL.
**Notes:** (Read only property)

### 177.4.12 contentVersion as string

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Version string of the product.
**Notes:** (Read only property)

### 177.4.13 error as NSErrorMBS

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Last error, can be nil.
**Notes:** (Read only property)

### 177.4.14 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 177.4.15 progress as Double

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Download progress.
**Notes:** (Read only property)

### 177.4.16 state as Integer

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Download state.
**Notes:** (Read only property)

### 177.4.17 timeRemaining as Double

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Estimated number of seconds remaining in the download.
**Notes:** (Read only property)

### 177.4.18 Transaction as SKPaymentTransactionMBS

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The transaction associated with the downloadable file
**Notes:**

Available in MacOS 10.11 or newer.
(Read only property)

### 177.4.19 Constants

### 177.4.20 kStateActive = 1

MBS MacCloud Plugin, Plugin Version: 12.3.

**Function:** One of the download state constants.
**Notes:** Active

### 177.4.21 kStateCancelled = 5

MBS MacCloud Plugin, Plugin Version: 12.3.

**Function:** One of the download state constants.
**Notes:** Cancelled

### 177.4.22 kStateFailed = 4

MBS MacCloud Plugin, Plugin Version: 12.3.

**Function:** One of the download state constants.
**Notes:** Failed

### 177.4.23 kStateFinished = 3

MBS MacCloud Plugin, Plugin Version: 12.3.

**Function:** One of the download state constants.
**Notes:** Finished

### 177.4.24 kStatePaused = 2

MBS MacCloud Plugin, Plugin Version: 12.3.

**Function:** One of the download state constants.
**Notes:** Paused

### 177.4.25 kStateWaiting = 0

MBS MacCloud Plugin, Plugin Version: 12.3.

**Function:** One of the download state constants.
**Notes:** Waiting

## 177.5 class SKMutablePaymentMBS

### 177.5.1 class SKMutablePaymentMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The mutable class for SKPaymentMBS.
**Notes:**

The SKMutablePayment class defines a request to the Apple App Store to process payment for additional functionality offered by your application. A payment encapsulates a string that identifies a particular product and the quantity of that item the user would like to purchase.

When a mutable payment is added to the payment queue, the payment queue copies the contents into an immutable request before queueing the request. Your application can safely change the contents of the mutable payment object.

Please also check the documentation from Apple for the SKMutablePayment class.
Subclass of the SKPaymentMBS class.

### 177.5.2 Blog Entries

- MBS Real Studio Plugins, version 11.3pr1

### 177.5.3 Blog Entries

- MBS Real Studio Plugins, version 11.3pr1

### 177.5.4 Methods

### 177.5.5 Constructor(payment as SKPaymentMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a mutable copy of the given payment.
See also:

- 177.5.6 Constructor(product as SKProductMBS) 25554

### 177.5.6 Constructor(product as SKProductMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a new payment for the specified product.
**Example:**

```
dim product as SKProductMBS // your product
dim queue as SKPaymentQueueMBS // your queue

dim payment as new SKMutablePaymentMBS(product)
payment.quantity = 5

MsgBox str(payment.quantity)+" units of "+product.localizedTitle

queue.addPayment payment
```

See also:

- 177.5.5 Constructor(payment as SKPaymentMBS) 25554

### 177.5.7 paymentWithProduct(product as SKProductMBS) as SKMutablePaymentMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns a new payment for the specified product with the given quantity.
**Example:**

```
dim product as SKProductMBS // your product
dim payment as SKMutablePaymentMBS = SKMutablePaymentMBS.paymentWithProduct(product)

MsgBox str(payment.quantity)+" units of "+product.localizedTitle
```

**Notes:**

product: The product the user wishes to purchase.
quantity: Optional quantity. If you don't pass it, we default to 1.

This factory Method in Cocoa Core Competencies uses the productIdentifier property obtained from the product parameter to create and return a new payment with that identifier.

Available in Mac OS X v10.7 and later.
See also:

- 177.5.8 paymentWithProduct(product as SKProductMBS, quantity as Integer) as SKMutablePaymentMBS 25556

### 177.5.8 paymentWithProduct(product as SKProductMBS, quantity as Integer) as SKMutablePaymentMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns a new payment for the specified product with the given quantity.
**Example:**

```
dim product as SKProductMBS // your product
dim payment as SKMutablePaymentMBS = SKMutablePaymentMBS.paymentWithProduct(product, 5)

MsgBox str(payment.quantity)+" units of "+product.localizedTitle
```

**Notes:**

product: The product the user wishes to purchase.
quantity: Optional quantity. If you don't pass it, we default to 1.

This factory Method in Cocoa Core Competencies uses the productIdentifier property obtained from the product parameter to create and return a new payment with that identifier.

Available in Mac OS X v10.7 and later.
See also:

- 177.5.7 paymentWithProduct(product as SKProductMBS) as SKMutablePaymentMBS 25555

### 177.5.9 Properties

### 177.5.10 applicationUsername as String

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Application-specific user identifier. Optional.
**Notes:** (Read and Write property)

### 177.5.11 productIdentifier as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A string that identifies a product that can be purchased from within your application.
**Notes:**

The product identifier is a string previously agreed on between your application and the Apple App Store.

Available in Mac OS X v10.7 and later.
(Read and Write property)

### 177.5.12 quantity as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The number of items the user wants to purchase.
**Notes:**

The quantity property must be greater than 0.
Available in Mac OS X v10.7 and later.
(Read and Write property)

### 177.5.13 requestData as Memoryblock

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Reserved for future use.
**Notes:**

The default value is nil. If requestData is not nil, your payment will be rejected by the Apple App Store.

Available in Mac OS X v10.7 and later.
(Read and Write property)

### 177.5.14 simulatesAskToBuyInSandbox as Boolean

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that produces an ‚Äúask to buy‚Äù flow for this payment in the sandbox.
**Notes:**

Available on MacOS 10.14 or newer.
(Read and Write property)

## 177.6 class SKPaymentMBS

### 177.6.1 class SKPaymentMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The class for a payment in the App Store.
**Notes:**

The SKPayment class defines a request to the Apple App Store to process payment for additional functionality offered by your application. A payment encapsulates a string that identifies a particular product and the quantity of those items the user would like to purchase.

Please also check the documentation from Apple for the SKPayment class.
Available in Mac OS X v10.7 and later.

### 177.6.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr6
- MBS Real Studio Plugins, version 11.3pr1

### 177.6.3 Blog Entries

- MBS Xojo Plugins, version 19.1pr6
- MBS Real Studio Plugins, version 11.3pr1

### 177.6.4 Methods

### 177.6.5 Constructor(product as SKProductMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a new payment for the specified product.
**Example:**

```
dim product as SKProductMBS // your product
dim queue as SKPaymentQueueMBS // your queue

dim payment as new SKPaymentMBS(product)
MsgBox str(payment.quantity)+" units of "+product.localizedTitle

queue.addPayment payment
```

### 177.6.6 copy as SKPaymentMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a copy of the object.

### 177.6.7 mutableCopy as SKMutablePaymentMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a mutable copy of the object.

### 177.6.8 paymentWithProduct(product as SKProductMBS) as SKPaymentMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns a new payment for the specified product.
**Example:**

```
dim product as SKProductMBS // your product
dim queue as SKPaymentQueueMBS // your queue

dim payment as SKPaymentMBS = SKPaymentMBS.paymentWithProduct(product)
MsgBox str(payment.quantity)+" units of "+product.localizedTitle

queue.addPayment payment
```

**Notes:**

product: The product the user wishes to purchase.

This factory Method in Cocoa Core Competencies uses the productIdentifier property obtained from the product parameter to create and return a new payment with that identifier. The quantity property defaults to 1.

To create a SKPaymentMBS object with a quantity greater than 1, create a SKMutablePaymentMBS object, adjust its quantity property and then add it to the payment queue.

Available in Mac OS X v10.7 and later.

### 177.6.9 Properties

### 177.6.10 applicationUsername as String

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Application-specific user identifier. Optional.
**Notes:** (Read only property)

### 177.6.11 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal reference to the SKPayment object.
**Notes:** (Read and Write property)

### 177.6.12 productIdentifier as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A string used to identify a product that can be purchased from within your application. (read-only)
**Notes:**

The product identifier is a string previously agreed on between your application and the Apple App Store.

Available in Mac OS X v10.7 and later.
(Read only property)

### 177.6.13 quantity as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The number of items the user wants to purchase. (read-only)
**Notes:**

Default value is 1.
Available in Mac OS X v10.7 and later.

(Read only property)

### 177.6.14 requestData as Memoryblock

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Reserved for future use. (read-only)
**Notes:**

The default value is nil. If requestData is not nil, your payment will be rejected by the Apple App Store.

Available in Mac OS X v10.7 and later.
(Read only property)

### 177.6.15 simulatesAskToBuyInSandbox as Boolean

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that produces an ‚Äúask to buy‚Äù flow for this payment in the sandbox.
**Notes:**

Available on MacOS 10.14 or newer.
(Read only property)

## 177.7 class SKPaymentQueueMBS

### 177.7.1 class SKPaymentQueueMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The SKPaymentQueue class defines a queue of payment transactions to send to the Apple App Store.
**Notes:**

To use the payment queue, you add one or more payments. When payments are added to the queue, Store Kit connects to the Apple App Store and presents a user interface so that the user can authorize payment. As payments are fulfilled, the payment queue updates transactions and delivers them through events.

Available in Mac OS X v10.7 and later.
Please also check the documentation from Apple for the SKPaymentQueue class.
The plugin installs a transaction observer for you.

### 177.7.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr6
- MBS Xojo Plugins, version 18.1pr3

### 177.7.3 Blog Entries

- MBS Xojo Plugins, version 19.1pr6
- MBS Xojo Plugins, version 18.1pr3

### 177.7.4 Methods

### 177.7.5 addPayment(payment as SKPaymentMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Adds a payment request to the queue.
**Notes:**

payment: A payment request.

The payment request must have a product identifier registered with the Apple App Store and a quantity greater than 0. If either property is invalid, addPayment throws an exception.

When a payment request is added to the queue, the payment queue processes that request with the Apple App Store and arranges for payment from the user. When that transaction is complete or if a failure occurs, the payment queue sends the SKPaymentTransaction object that encapsulates the request to all transaction observers.

### 177.7.6 cancelDownload(download as SKDownloadMBS)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Cancel one download.
**Notes:** Available in Mac OS X 10.8 and newer.

### 177.7.7 cancelDownloads(downloads() as SKDownloadMBS)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Cancel a few downloads.
**Notes:** Available in Mac OS X 10.8 and newer.

### 177.7.8 canMakePayments as boolean

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns whether the user is allowed to make payments.
**Example:**

```
if SKPaymentQueueMBS.canMakePayments then
MsgBox "can make payments"
else
MsgBox "not available"
end if
```

**Notes:** A Mac can be restricted from accessing the Apple App Store. For example, parents can restrict their children's ability to purchase additional content. Your application should confirm that the user is allowed to authorize payments before adding a payment to the queue. Your application may also want to alter its behavior or appearance when the user is not allowed to authorize payments.

### 177.7.9 Constructor

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a new SKPaymentQueueMBS object.
**Notes:**

Please make a subclass of this class to fill code into the events.
And please only have one instance of this class.

### 177.7.10 Destructor

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The destructor.

### 177.7.11 finishTransaction(transaction as SKPaymentTransactionMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Completes a pending transaction.
**Notes:**

transaction: The transaction to finish.

Your application should call this method from a transaction observer that received a notification from the payment queue. Calling finishTransaction on a transaction removes it from the queue. Your application should call finishTransaction only after it has successfully processed the transaction and unlocked the functionality purchased by the user.

Calling finishTransaction on a transaction that is in the SKPaymentTransactionMBS.StatePurchasing state throws an exception.

### 177.7.12 pauseDownload(download as SKDownloadMBS)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Pauses one download.
**Notes:** Available in Mac OS X 10.8 and newer.

### 177.7.13 pauseDownloads(downloads() as SKDownloadMBS)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Pauses a few downloads.
**Notes:** Available in Mac OS X 10.8 and newer.

### 177.7.14 restoreCompletedTransactions

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Asks the payment queue to restore previously completed purchases.
**Notes:**

Your application calls this method to restore transactions that were previously finished so that you can process them again. For example, your application would use this to allow a user to unlock previously purchased content onto a new device.

When you create a new product to be sold in your store, you choose whether that product can be restored or not. See the In App Purchase Programming Guide for more information.

The payment queue will deliver a new transaction for each previously completed transaction that can be restored. Each transaction includes a copy of the original transaction.

After the transactions are delivered, the payment queue calls the observer's paymentQueueRestoreCompletedTransactionsFinished event. If an error occurred while restoring transactions, the observer will be notified through its paymentQueue:restoreCompletedTransactionsFailedWithError event.

### 177.7.15 restoreCompletedTransactionsWithApplicationUsername(username as String)

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Asks the payment queue to restore previously completed purchases, providing an opaque identifier for the user,Äôs account.
**Notes:** username: An opaque identifier for the user,Äôs account on your system.

### 177.7.16 resumeDownload(download as SKDownloadMBS)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Resumes one download.
**Notes:** Available in Mac OS X 10.8 and newer.

### 177.7.17 resumeDownloads(downloads() as SKDownloadMBS)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Resumes a few downloads.
**Notes:** Available in Mac OS X 10.8 and newer.

### 177.7.18 startDownload(download as SKDownloadMBS)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Start one download.
**Notes:** Available in Mac OS X 10.8 and newer.

### 177.7.19 startDownloads(downloads() as SKDownloadMBS)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Starts a few downloads.
**Notes:** Available in Mac OS X 10.8 and newer.

### 177.7.20 transactions as SKPaymentTransactionMBS()

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns an array of pending transactions.
**Notes:** The value of this property is undefined when there are no observers attached to the payment queue.

### 177.7.21 Properties

### 177.7.22 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal reference.
**Notes:** (Read and Write property)

### 177.7.23 Events

### 177.7.24 paymentQueueRestoreCompletedTransactionsFinished

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

**Function:** Tells the observer that the payment queue has finished sending restored transactions.
**Notes:** This method is called after all restorable transactions have been processed by the payment queue. Your application is not required to do anything in this method.

### 177.7.25 removedTransactions(transactions() as SKPaymentTransactionMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

**Function:** Tells an observer that one or more transactions have been removed from the queue.
**Notes:**

transactions: An array of the transactions that were removed.

Your application does not typically need to implement this event but might implement it to update its own user interface to reflect that a transaction has been completed.

### 177.7.26 restoreCompletedTransactionsFailedWithError(Error as NSErrorMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

**Function:** Tells the observer that an error occurred while restoring transactions.

### 177.7.27 updatedDownloads(downloads() as SKDownloadMBS)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

**Function:** Sent when the download state has changed.
**Notes:** Available in Mac OS X 10.8 and newer.

### 177.7.28 updatedTransactions(transactions() as SKPaymentTransactionMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

**Function:** Tells an observer that one or more transactions have been updated.
**Notes:**

transactions: An array of the transactions that were updated.

The application should process each transaction by examining the transaction's transactionState property. If transactionState is SKPaymentTransactionStatePurchased, payment was successfully received for the desired functionality. The application should make the functionality available to the user. If transactionState is SKPaymentTransactionStateFailed, the application can read the transaction's error property to return a meaningful error to the user.

Once a transaction is processed, it should be removed from the payment queue by calling the payment queue's finishTransaction: method, passing the transaction as a parameter.

Important: Once the transaction is finished, Store Kit can not tell you that this item is already purchased. It is important that applications process the transaction completely before calling finishTransaction:.

## 177.8 class SKPaymentTransactionMBS

### 177.8.1 class SKPaymentTransactionMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The SKPaymentTransactionMBS class defines objects residing in the payment queue.
**Notes:**

A payment transaction is created whenever a payment is added to the payment queue. Transactions are delivered to your application when the App Store has finished processing the payment. Completed transactions provide a receipt and transaction identifier that your application can use to save a permanent record of the processed payment.

Please also check the documentation from Apple for the SKPaymentTransaction class.
Available in Mac OS X v10.7 and later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 177.8.2 Methods

### 177.8.3 Constructor

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The private constructor.

### 177.8.4 downloads as SKDownloadMBS()

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns the downloads for this transaction.
**Notes:** Available in Mac OS X 10.8 and newer.

### 177.8.5 Properties

### 177.8.6 error as NSErrorMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** An object describing the error that occurred while processing the transaction.
**Notes:**

The error property is undefined except when transactionState is set to StateFailed. Your application can read the error property to determine why the transaction failed.
(Read only property)

### 177.8.7 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal reference to the SKPaymentTransaction object.
**Notes:** (Read and Write property)

### 177.8.8 originalTransaction as SKPaymentTransactionMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The transaction that was restored by the App Store.
**Notes:**

The contents of this property are undefined except when transactionState is set to StateRestored. When a transaction is restored, the current transaction holds a new transaction identifier, receipt, and so on. Your application will read this property to retrieve the restored transaction.
(Read only property)

### 177.8.9 payment as SKPaymentMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The payment for the transaction.
**Notes:**

Each payment transaction is created in response to a payment that your application added to the payment queue.
(Read only property)

### 177.8.10 transactionDate as date

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** The date the transaction was added to the App Store's payment queue.
**Notes:**

The contents of this property are undefined except when transactionState is set to StatePurchased or StateRestored.

(Read only property)

### 177.8.11 transactionDateTime as DateTime

MBS MacCloud Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The date the transaction was added to the App Store's payment queue.
**Notes:**

The contents of this property are undefined except when transactionState is set to StatePurchased or StateRestored.
(Read only property)

### 177.8.12 transactionIdentifier as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A string that uniquely identifies a successful payment transaction.
**Notes:**

The contents of this property are undefined except when transactionState is set to StatePurchased or StateRestored. The transactionIdentifier is a string that uniquely identifies the processed payment. Your application may wish to record this string as part of an audit trail for App Store purchases. See In App Purchase Programming Guide for more information.
(Read only property)

### 177.8.13 transactionState as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The current state of the transaction.
**Notes:**

see State* constants.
(Read only property)

### 177.8.14 Constants

### 177.8.15 StateDeferred = 4

MBS MacCloud Plugin, Plugin Version: 18.1.

**Function:** One of the tansaction state constants.
**Notes:** Transaction is neither purchased nor failed, yet.

### 177.8.16 StateFailed = 2

MBS MacCloud Plugin, Plugin Version: 11.2.

**Function:** One of the tansaction state constants.
**Notes:** The transaction failed. Check the error property to determine what happened.

### 177.8.17 StatePurchased = 1

MBS MacCloud Plugin, Plugin Version: 11.2.

**Function:** One of the tansaction state constants.
**Notes:** The App Store successfully processed payment. Your application should provide the content the user purchased.

### 177.8.18 StatePurchasing = 0

MBS MacCloud Plugin, Plugin Version: 11.2.

**Function:** One of the tansaction state constants.
**Notes:** The transaction is being processed by the App Store.

### 177.8.19 StateRestored = 3

MBS MacCloud Plugin, Plugin Version: 11.2.

**Function:** One of the tansaction state constants.
**Notes:** This transaction restores content previously purchased by the user. Read the originalTransaction property to obtain information about the original purchase.

## 177.9 class SKProductDiscountMBS

### 177.9.1 class SKProductDiscountMBS

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The class for product discounts.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 177.9.2 Methods

### 177.9.3 Constructor

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The private constructor.

### 177.9.4 Properties

### 177.9.5 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 177.9.6 NumberOfPeriods as Integer

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The number of periods this price is valid.
**Notes:** (Read only property)

### 177.9.7 PaymentMode as Integer

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The payment mode.
**Notes:** (Read only property)

### 177.9.8 Price as Double

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The price of the product.
**Notes:** (Read only property)

### 177.9.9 priceLocale as NSLocaleMBS

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The price locale.
**Notes:** (Read only property)

### 177.9.10 PriceString as String

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The price as formatted string.
**Notes:** (Read only property)

### 177.9.11 subscriptionPeriod as SKProductSubscriptionPeriodMBS

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The subscription period.
**Notes:** (Read only property)

### 177.9.12 Constants

### 177.9.13 kPaymentModeFreeTrial = 2

MBS MacCloud Plugin, Plugin Version: 18.1.

**Function:** One of the payment modes.
**Notes:** Free trial

### 177.9.14 kPaymentModePayAsYouGo = 0

MBS MacCloud Plugin, Plugin Version: 18.1.

**Function:** One of the payment modes.
**Notes:** Pay ss you go

### 177.9.15 kPaymentModePayUpFront = 1

MBS MacCloud Plugin, Plugin Version: 18.1.

**Function:** One of the payment modes.
**Notes:** Pay Upfront

## 177.10 class SKProductMBS

### 177.10.1 class SKProductMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The App Store class for a product.
**Notes:**

SKProductMBS objects are returned as part of an didReceiveResponse event in SKProductsRequestMBS class and are used to provide information about a product previously registered with the Apple App Store.

Please also check the documentation from Apple for the SKProduct class.
Available in Mac OS X v10.7 and later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 177.10.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr6

### 177.10.3 Blog Entries

- MBS Xojo Plugins, version 19.1pr6

### 177.10.4 Methods

### 177.10.5 Constructor

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The private constructor.

### 177.10.6 contentLengths as Int64()

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Array with filesizes of the assets.
**Notes:** Available in Mac OS X 10.8 and newer.

### 177.10.7 downloadContentLengths as Int64()

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop only.

**Function:** The lengths of the downloadable files available for this product.
**Notes:**

The array holds Int64 values that is the size of one of the downloadable files (in bytes).

For MacOS 10.14 or newer.
Falls back to downloadLengths for older OS versions.

### 177.10.8 Properties

### 177.10.9 contentLength as Int64

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Total filesize of the assets.
**Notes:**

Available in Mac OS X 10.8 and newer.
(Read only property)

### 177.10.10 contentVersion as string

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

**Function:** Version string of the product.
**Notes:**

Available in Mac OS X 10.8 and newer.
(Read only property)

### 177.10.11 downloadable as boolean

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Whether this is a download item.
**Notes:**

Available in Mac OS X 10.8 and newer.
(Read only property)

### 177.10.12 downloadContentLength as Int64

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop only.

**Function:** The length of the downloadable files available for this product.
**Notes:**

For MacOS 10.14 or newer.
Falls back to downloadLength for older OS versions.
(Read only property)

### 177.10.13 downloadContentVersion as String

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** A string that identifies which version of the content is available for download.
**Notes:**

The version string is formatted as a series of integers separated by periods.

For MacOS 10.14 or newer.
Falls back to ContentVersion for older OS versions.
(Read only property)

### 177.10.14 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal reference to the SKProduct object.
**Notes:** (Read and Write property)

### 177.10.15 introductoryPrice as SKProductDiscountMBS

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Introductory Price.
**Notes:**

Available on MacOS 10.13.2 or later.
Value is nil on older systems.
(Read only property)

### 177.10.16 localizedDescription as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A description of the product.
**Notes:**

The description is localized based on the currentLocale property.
(Read only property)

### 177.10.17 localizedTitle as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The name of the product.
**Notes:**

The description is localized based on the currentLocale property.
(Read only property)

### 177.10.18 price as Double

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The cost of the product in the local currency.
**Notes:**

Use PriceString to get a localized formatted price.
(Read only property)

### 177.10.19 priceLocale as NSLocaleMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The locale used to format the price of the product.
**Notes:** (Read only property)

### 177.10.20 priceString as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The cost of the product in the local currency.
**Notes:**

We format the price in the locale currency format.
(Read only property)

### 177.10.21 productIdentifier as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The string that identifies the product to the Apple App Store.
**Notes:** (Read only property)

### 177.10.22 subscriptionGroupIdentifier as String

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The identifier of the subscription group to which the subscription belongs.
**Notes:**

All auto-renewable subscriptions must be a part of a group. You create the group identifiers in App Store Connect.
Available on MacOS 10.14 or newer.
(Read only property)

### 177.10.23 subscriptionPeriod as SKProductSubscriptionPeriodMBS

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Subscription period.
**Notes:**

Available on MacOS 10.13.2 or later.
Value is nil on older systems.
(Read only property)

# 177.11 class SKProductsRequestMBS

## 177.11.1 class SKProductsRequestMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** An SKProductsRequestMBS object is used to retrieve localized information about a list of products from the Apple App Store.
**Notes:**

Your application uses this request to present localized prices and other information to the user without having to maintain that list itself.

To use an SKProductsRequest object, you initialize it with a list of product identifier strings, attach a delegate, and then call the request's start method. When the request completes, you receive the didReceiveResponse event.

Please also check the documentation from Apple for the SKProductsRequest class.
Available in Mac OS X v10.7 and later.

## 177.11.4 Methods

## 177.11.5 cancel

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Cancels a previously started request.
**Notes:** When you cancel a request, the events are not called with an error.

### 177.11.6 Constructor(productIdentifiers() as string)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Initializes the request with the set of product identifiers.
**Notes:** productIdentifiers: The list of product identifiers for the products you wish to retrieve descriptions of.

### 177.11.7 Destructor

MBS MacCloud Plugin, Plugin Version: 17.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** The destructor.

### 177.11.8 start

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Sends the request to the Apple App Store.
**Notes:** The results for a request are sent to the events.

### 177.11.9 Properties

### 177.11.10 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal reference to the SKProductsRequest object.
**Notes:** (Read and Write property)

### 177.11.11 Events

### 177.11.12 didFailWithError(error as NSErrorMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

**Function:** Called if the request failed to execute.
**Notes:**

error: The error that caused the request to fail.

When the request fails, your application should release the request. The requestDidFinish event is not called after this method is called.

### 177.11.13 didFinish

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

**Function:** Called when the request has completed.
**Notes:** This method is called after all processing of the request has been completed.

### 177.11.14 didReceiveResponse(products() as SKProductMBS, invalidProductIdentifiers() as string)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

**Function:** Called when the Apple App Store responds to the product request.
**Notes:**

products: A list of products, one product for each valid product identifier provided in the original request.
invalidProductIdentifiers: An array of product identifier strings that were not recognized by the Apple App Store. This array should typically be empty.

## 177.12 class SKProductSubscriptionPeriodMBS

### 177.12.1 class SKProductSubscriptionPeriodMBS

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The class for a subscription period.
**Notes:**

Available on MacOS 10.13.2.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 177.12.2 Methods

### 177.12.3 Constructor

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The private constructor.

### 177.12.4 Properties

### 177.12.5 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 177.12.6 numberOfUnits as Integer

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The number of units.
**Notes:** (Read only property)

### 177.12.7 unit as Integer

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** The unit of the period from day to year.
**Notes:** (Read only property)

### 177.12.8 Constants

### 177.12.9 PeriodUnitDay = 0

MBS MacCloud Plugin, Plugin Version: 18.1.

**Function:** One of the period units.
**Notes:** Day

### 177.12.10 PeriodUnitMonth = 2

MBS MacCloud Plugin, Plugin Version: 18.1.

**Function:** One of the period units.
**Notes:** Month

### 177.12.11 PeriodUnitWeek = 1

MBS MacCloud Plugin, Plugin Version: 18.1.

**Function:** One of the period units.
**Notes:** Week

### 177.12.12 PeriodUnitYear = 3

MBS MacCloud Plugin, Plugin Version: 18.1.

**Function:** One of the period units.
**Notes:** Year

## 177.13 class SKReceiptRefreshRequestMBS

### 177.13.1 class SKReceiptRefreshRequestMBS

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The SKReceiptRefreshRequest class allows an app to refresh its receipt.
**Notes:**

With this API, the app can request a new receipt if the receipt is invalid or missing. In the sandbox environment, you can request a receipt with any combination of properties to test the state transitions related to Volume Purchase Plan receipts.
Requires Mac OS X 10.9.

### 177.13.6 Methods

### 177.13.7 cancel

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** Cancels a previously started request.
**Notes:** When you cancel a request, the events are not called with an error.

### 177.13.8 Constructor(properties as dictionary = nil)

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** Initialized a receipt refresh request with optional properties.
**Notes:**

In the test enviroment, the properties that the new receipt should have. For keys, see SKReceiptProperty* methods.
In the production environment, set this parameter to nil.

### 177.13.9 Destructor

MBS MacCloud Plugin, Plugin Version: 17.4, Platform: macOS, Targets: Desktop & iOS.

**Function:** The destructor.

### 177.13.10 SKReceiptPropertyIsExpired as string

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** One of the keys for properties in initialization.
**Notes:** A key whose value is a Boolean value, indicating whether the receipt is expired.

### 177.13.11 SKReceiptPropertyIsRevoked as string

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** One of the keys for properties in initialization.
**Notes:** A key whose value is a Boolean value, indicating whether the receipt has been revoked.

### 177.13.12 SKReceiptPropertyIsVolumePurchase as string

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** One of the keys for properties in initialization.
**Notes:** A key whose value is a Boolean value, indicating whether the receipt is is a Volume Purchase Plan receipt.

### 177.13.13 start

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** Sends the request to the Apple App Store.
**Notes:** The results for a request are sent to the events.

### 177.13.14 TerminateForInvalidReceipt

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Terminates an app if the license to use the app has expired.
**Notes:** Falls back to exit(173) for MacOS before 10.14.

### 177.13.15 Properties

### 177.13.16 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 177.13.17 receiptProperties as Dictionary

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The properties of the receipt. (read-only)
**Notes:** (Read only property)

### 177.13.18 Events

### 177.13.19 didFailWithError(error as NSErrorMBS)

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: .

**Function:** Called if the request failed to execute.
**Notes:**

error: The error that caused the request to fail.

When the request fails, your application should release the request. The requestDidFinish event is not called after this method is called.

### 177.13.20 didFinish

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: .

**Function:** Called when the request has completed.
**Notes:** This method is called after all processing of the request has been completed.

## 177.14 module StoreKitMBS

### 177.14.1 module StoreKitMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Globals for the StoreKit plugin.
**Notes:** Be aware that StoreKit requires your app to be signed.

### 177.14.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr6

### 177.14.3 Blog Entries

- MBS Xojo Plugins, version 19.1pr6

### 177.14.4 Methods

### 177.14.5 appStoreReceiptURL as string

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Queries URL for the app store receipt file.

### 177.14.6 available as Boolean

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Whether the StoreKit framework is available.
**Example:**

```
msgbox "StoreKit available: "+str(StoreKitMBS.available)
```

**Notes:** Should always be true on Mac OS X 10.7 and newer.

### 177.14.7 requestReview

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Tells StoreKit to ask the user to rate or review your app, if appropriate.
**Example:**

```
If StoreKitMBS.StoreReviewAvailable Then
StoreKitMBS.requestReview
End If
```

**Notes:**

Although you should call this method when it makes sense in the user experience flow of your app, the actual display of a rating/review request view is governed by App Store policy. Because this method may or may not present an alert, it's not appropriate to call it in response to a button tap or other user action.

When you call this method while your app is still in development mode, a rating/review request view is always displayed so that you can test the user interface and experience. However, this method has no effect when you call it in an app that you distribute using TestFlight.

When you call this method in your shipping app and a rating/review request view is displayed, the system handles the entire process for you. In addition, you can continue to include a persistent link in the settings or configuration screens of your app that deep-links to your App Store product page. To automatically open a page on which users can write a review in the App Store, append the query parameter action=write-review to your product URL.

Available on MacOS 10.14 or newer.
requestReview method will only work, if StoreReviewAvailable returns true.
Does nothing if called on older OS versions.

### 177.14.8 SKErrorDomain as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The domain for StoreKit errors.

### 177.14.9 StoreReviewAvailable as Boolean

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

**Function:** Checks whether SKStoreReviewController class is available.
**Example:**

```
If StoreKitMBS.StoreReviewAvailable Then
StoreKitMBS.requestReview
```

End If

**Notes:** requestReview method will only work, if StoreReviewAvailable returns true.

### 177.14.10 Constants

### 177.14.11 SKErrorClientInvalid = 1

MBS MacCloud Plugin, Plugin Version: 11.2.

**Function:** One of the StoreKit error codes.
**Notes:** client is not allowed to issue the request, etc.

### 177.14.12 SKErrorPaymentCancelled = 2

MBS MacCloud Plugin, Plugin Version: 11.2.

**Function:** One of the StoreKit error codes.
**Notes:** user cancelled the request, etc.

### 177.14.13 SKErrorPaymentInvalid = 3

MBS MacCloud Plugin.

**Function:** One of the StoreKit error codes.
**Notes:** purchase identifier was invalid, etc.

### 177.14.14 SKErrorPaymentNotAllowed = 4

MBS MacCloud Plugin, Plugin Version: 11.2.

**Function:** One of the StoreKit error codes.
**Notes:** this machine is not allowed to make the payment

### 177.14.15 SKErrorUnknown = 0

MBS MacCloud Plugin, Plugin Version: 11.2.

**Function:** One of the StoreKit error codes.
**Notes:** unknown error

# Chapter 178

# String

## 178.1 Globals

### 178.1.1 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer) as Integer

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Finds bytes or byte ranges in a string.
**Example:**

```
// search for question mark or uppercase letters A to Z
MsgBox str(InStrByteRangeMBS("Hello?", "?", 65, 90)) // shows 1 as H is found.

MsgBox str(InStrByteRangeMBS("hello?", "?", 65, 90)) // shows 6 as ? is found.
```

**Notes:**

You may want to make sure target and find are both in the same 8bit encoding (UTF-8, MacRoman, Windows ANSI, Latin 1, ASCII, etc. but not UTF16/UTF32).

The optional find string defines the bytes to search. This gives you a way to see whether one of those bytes is inside or to find the first byte matching a certain value.

The StartValue/EndValue parameters define ranges of values which you consider to match.

Returns 0 if nothing is found or the position of the found character.
See also:

- 178.1.2 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer) as Integer 25596
- 178.1.3 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer 25597
- 178.1.4 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer) as Integer 25598
- 178.1.5 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer) as Integer 25599
- 178.1.6 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer 25600

### 178.1.2 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer) as Integer

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Finds bytes or byte ranges in a string.
**Example:**

```
// search for question mark or uppercase letters A to Z or numbers from 0 to 9
MsgBox str(InStrByteRangeMBS("Hello?", "?", 65, 90, 48, 57)) // shows 1 as H is found.
MsgBox str(InStrByteRangeMBS("hello?", "?", 65, 90, 48, 57)) // shows 6 as ? is found
MsgBox str(InStrByteRangeMBS("Hello 123", "?", 65, 90, 48, 57)) // shows 1 as H is found.
MsgBox str(InStrByteRangeMBS("hello 123", "?", 65, 90, 48, 57)) // shows 7 as 1 is found.
```

**Notes:**

You may want to make sure target and find are both in the same 8bit encoding (UTF-8, MacRoman, Windows ANSI, Latin 1, ASCII, etc. but not UTF16/UTF32).

The optional find string defines the bytes to search. This gives you a way to see whether one of those bytes is inside or to find the first byte matching a certain value.

The StartValue/EndValue parameters define ranges of values which you consider to match.

Returns 0 if nothing is found or the position of the found character.

- 178.1.6 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer 25600

### 178.1.3 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Finds bytes or byte ranges in a string.
**Example:**

```
// search for question mark, low byte values, high byte values or numbers from 0 to 9
MsgBox str(InStrByteRangeMBS("Hello?", "?", 0, 31, 127, 255, 48, 57 )) // shows 6 as ? is found.
MsgBox str(InStrByteRangeMBS("123", "?", 0, 31, 127, 255, 48, 57 )) // shows 1 as 1 is found.
MsgBox str(InStrByteRangeMBS(EndOfLine.Windows, "?", 0, 31, 127, 255, 48, 57 )) // shows 1 as chr(13) is found.
MsgBox str(InStrByteRangeMBS("Hello", "?", 0, 31, 127, 255, 48, 57 )) // shows 0 as nothing is found.
```

**Notes:**

You may want to make sure target and find are both in the same 8bit encoding (UTF-8, MacRoman, Windows ANSI, Latin 1, ASCII, etc. but not UTF16/UTF32).

The optional find string defines the bytes to search. This gives you a way to see whether one of those bytes is inside or to find the first byte matching a certain value.

The StartValue/EndValue parameters define ranges of values which you consider to match.

Returns 0 if nothing is found or the position of the found character.

- 178.1.6 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer 25600

### 178.1.4 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer) as Integer

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Finds bytes or byte ranges in a string.
**Example:**

```
// search for uppercase letters A to Z
MsgBox str(InStrByteRangeMBS("Hello?", 65, 90)) // shows 1 as H is found.

MsgBox str(InStrByteRangeMBS("hello?", 65, 90)) // shows 0 as nothing is found.
```

**Notes:**

You may want to make sure target and find are both in the same 8bit encoding (UTF-8, MacRoman, Windows ANSI, Latin 1, ASCII, etc. but not UTF16/UTF32).

The optional find string defines the bytes to search. This gives you a way to see whether one of those bytes is inside or to find the first byte matching a certain value.

The StartValue/EndValue parameters define ranges of values which you consider to match.

Returns 0 if nothing is found or the position of the found character.

- 178.1.6 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer 25600

### 178.1.5 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer) as Integer

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Finds bytes or byte ranges in a string.
**Example:**

```
// search for uppercase letters A to Z or numbers from 0 to 9
MsgBox str(InStrByteRangeMBS("Hello?", 65, 90, 48, 57)) // shows 1 as H is found.
MsgBox str(InStrByteRangeMBS("hello?", 65, 90, 48, 57)) // shows 0 as nothing is found.
MsgBox str(InStrByteRangeMBS("Hello 123", 65, 90, 48, 57)) // shows 1 as H is found.
MsgBox str(InStrByteRangeMBS("hello 123", 65, 90, 48, 57)) // shows 7 as 1 is found.
```

**Notes:**

You may want to make sure target and find are both in the same 8bit encoding (UTF-8, MacRoman, Windows ANSI, Latin 1, ASCII, etc. but not UTF16/UTF32).

The optional find string defines the bytes to search. This gives you a way to see whether one of those bytes is inside or to find the first byte matching a certain value.

The StartValue/EndValue parameters define ranges of values which you consider to match.

Returns 0 if nothing is found or the position of the found character.

- 178.1.3 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer 25597
- 178.1.4 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer) as Integer 25598

- 178.1.6 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer 25600

### 178.1.6 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Finds bytes or byte ranges in a string.
**Example:**

```
// search for low byte values, high byte values or numbers from 0 to 9
MsgBox str(InStrByteRangeMBS("Hello?", 0, 31, 127, 255, 48, 57 )) // shows 0 as nothing is found.
MsgBox str(InStrByteRangeMBS("123", 0, 31, 127, 255, 48, 57 )) // shows 1 as 1 is found.
MsgBox str(InStrByteRangeMBS(EndOfLine.Windows, 0, 31, 127, 255, 48, 57 )) // shows 1 as chr(13) is found.
MsgBox str(InStrByteRangeMBS("Hello", 0, 31, 127, 255, 48, 57 )) // shows 0 as nothing is found.
```

**Notes:**

You may want to make sure target and find are both in the same 8bit encoding (UTF-8, MacRoman, Windows ANSI, Latin 1, ASCII, etc. but not UTF16/UTF32).

The optional find string defines the bytes to search. This gives you a way to see whether one of those bytes is inside or to find the first byte matching a certain value.

The StartValue/EndValue parameters define ranges of values which you consider to match.

Returns 0 if nothing is found or the position of the found character.

- 178.1.5 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer) as Integer 25599

### 178.1.8 InStrBytesMBS(target as string, find as string) as Integer

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the first position of one of the bytes given in the find string in the target string.
**Example:**

```
MsgBox str(InStrBytesMBS("Hello", "e")) // shows 2, as e is found
MsgBox str(InStrBytesMBS("Hello", "abcd")) // shows 0, as nothing is found
MsgBox str(InStrBytesMBS("Hello World", "abcd")) // shows 11, as d is found
```

**Notes:**

You may want to make sure target and find are both in the same 8bit encoding (UTF-8, MacRoman, Windows ANSI, Latin 1, ASCII, etc. but not UTF16/UTF32).
The find string defines the bytes to search. This gives you a way to see whether one of those bytes is inside or to find the first byte matching a certain value.

Returns 0 if nothing is found or the position of the found character.

### 178.1.10 EncodingNameMBS(extends Text as string) as string

MBS Util Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the text encoding name for this string.
**Example:**

```
dim t as string = "Hello World"
```

```
MsgBox "InternetName: "+t.Encoding.InternetName
MsgBox "InternetNameMBS: "+t.Encoding.InternetNameMBS
MsgBox "EncodingNameMBS: "+t.EncodingNameMBS
```

### 178.1.11 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.5pr6

### 178.1.12 RemoveAccentsMBS(text as string, IgnoreCase as boolean = false) as string

MBS Util Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Removes accents from text.
**Example:**

```
dim s as string = "L'√©l√®ve pr√©f√©r√©"
dim a as string = RemoveAccentsMBS(s)
dim b as string = RemoveAccentsMBS(s, true)
// check values in debugger
Dim x As String = RemoveAccentsMBS("‘ ‚Äò ‚Äô ‚Äú \¶¬® √Ä √Å √Ç √É √Ñ √Ö √á √É √Ö √á √É √Ñ √Ö √á √É √Ñ √Ö √á √É √Ñ
```

### 178.1.15 SplitCommaSeparatedValuesMBS(text as string, delimiter as string = ””, quote as string = ””) as string()

MBS Util Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Splits a string with CSV values.
**Example:**

```
// 1. read a CSV file:

dim file as FolderItem = SpecialFolder.Desktop.Child("test.csv")
dim t as TextInputStream = TextInputStream.open(file)

// use right encoding for your file!
t.Encoding = encodings.MacRoman

while not t.EOF
dim line as string = t.ReadLine
dim items() as string = SplitCommaSeparatedValuesMBS(line)

// process items array
wend

// 2. compare with split:

dim test as string = "Hello,""World,test"",end"

dim a() as string = split(test, ",")
dim b() as string = SplitCommaSeparatedValuesMBS(test, ",")

MsgBox Join(a,EndOfLine)+EndOfLine+EndOfLine+Join(b,EndOfLine)
```

**Notes:**

This function is better for CSV data than the Split function as it handles quoted text right.
For 17.5 we rewrote this function. Now auto detects the delimiter (comma or semicolon) if none passed. Default quote character is " if nothing is passed. Please only one character for delimiter.

Version 18.0 can detect tab character, too.

### 178.1.19 CheckUTF8MBS(data as ptr, size as Integer, Placeholder as string) as string

MBS Util Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns string as UTF-8 and replacing invalid UTF-8 sequences with placeholder.
**Notes:**

This function is more save than simply DefineEncoding as it makes sure the returned text actually is valid UTF-8.
You can replace missing characters with empty text, question mark or any other symbol.

This function is overloaded, so you can directly pass in string, memoryblock or ptr+size.
Checks byte sequence with up to 4 byte long sequences. Does not verify whether code points are valid.
See also:

- 178.1.20 CheckUTF8MBS(data as string, Placeholder as string) as string 25605
- 178.1.21 CheckUTF8MBS(mem as MemoryBlock, Placeholder as string) as string 25605

### 178.1.20 CheckUTF8MBS(data as string, Placeholder as string) as string

MBS Util Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns string as UTF-8 and replacing invalid UTF-8 sequences with placeholder.
**Example:**

```
// some random bytes
dim t as string = RandomBytesStringMBS(20, false)

// and some text
t = t + " √§√√º üòÄ"

// checked
dim s as string = CheckUTF8MBS(t, "üòÇ")

MsgBox s
```

**Notes:**

This function is more save than simply DefineEncoding as it makes sure the returned text actually is valid UTF-8.
You can replace missing characters with empty text, question mark or any other symbol.

This function is overloaded, so you can directly pass in string, memoryblock or ptr+size.
Checks byte sequence with up to 4 byte long sequences. Does not verify whether code points are valid.
See also:

- 178.1.19 CheckUTF8MBS(data as ptr, size as Integer, Placeholder as string) as string 25604
- 178.1.21 CheckUTF8MBS(mem as MemoryBlock, Placeholder as string) as string 25605

### 178.1.21 CheckUTF8MBS(mem as MemoryBlock, Placeholder as string) as string

MBS Util Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns string as UTF-8 and replacing invalid UTF-8 sequences with placeholder.
**Example:**

```
// some random bytes
dim t as string = RandomBytesStringMBS(20, false)
```

```
// and some text
t = t + " √§√√º üòÄ"

// checked in memoryblock
dim m as MemoryBlock = t
dim s as string = CheckUTF8MBS(m, "üòÇ")

MsgBox s
```

**Notes:**

This function is more save than simply DefineEncoding as it makes sure the returned text actually is valid UTF-8.
You can replace missing characters with empty text, question mark or any other symbol.

This function is overloaded, so you can directly pass in string, memoryblock or ptr+size.
Checks byte sequence with up to 4 byte long sequences. Does not verify whether code points are valid.

### 178.1.24 ClearStringContentMBS(s as String) as Boolean

MBS Util Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Clears string content.
**Example:**

```
// this is a constant string
Dim c As String = "Hello"

// this is an allocated string
Dim a As String = c + "World"

// try to clear both
Call ClearStringContentMBS c
Call ClearStringContentMBS a

MsgBox "const: "+c+" "+Str(Len(c))+EndOfLine+"allocated: "+a+" "+Str(Len(a))
```

**Notes:**

Overwrites content of string with zeros.
We check if this is a constant string and for those do nothing.
Returns true if we zeroed content, otherwise false.

This function can help to clear memory for passwords stored in strings.

### 178.1.26 ConcatBinaryStringsMBS(a as string, b as string) as string

MBS Util Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Concats the given strings with binary encoding.
**Example:**

```
dim a as string = "Hello"
dim b as string = "World"
dim c as string = ConcatBinaryStringsMBS(a,b)
dim d as string = ConvertEncoding(b, encodings.UTF16)
dim e as string = ConcatBinaryStringsMBS(a,d)
```

MsgBox "ConcatBinaryStringsMBS"+EndOfLine+EndOfLine+c+EndOfLine+EncodingToHexMBS(c)+EndOfLine+EndOfLine+e+EndOfLine+EncodingToHexMBS(e)

**Notes:** If RB concats strings the encoding is changed before concating to match the other strings.

### 178.1.32 ContainsWholeWordMBS(Text as String, Word as String) as boolean

MBS Util Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Checks whether text contains whole word.
**Example:**

```
// let's try a few test cases

If ContainsWholeWordMBS("Hello World", "Hello") Then
// okay
Else
Break
End If

If ContainsWholeWordMBS("Hello World", "World") Then
// okay
Else
Break
End If

If ContainsWholeWordMBS("Hello World", "ello") Then
Break
Else
// okay
End If

If ContainsWholeWordMBS("Hello World", "Worl") Then
Break
Else
// okay
End If

If ContainsWholeWordMBS("Hello World", "orld") Then
Break
Else
// okay
End If

If ContainsWholeWordMBS("Hello World!", "orld") Then
Break
Else
// okay
End If
```

**Notes:**

This function is optimized for speed and should only be used with ASCII as it handles all unicode characters as word characters.
Returns true if whole word is found inside text.
Returns false if the word was either not found or is contained, but has other letters before/after.

This function should be faster than doing a RegEx with "\b" + word "\b", but the RegEx may handle unicode word delimiters better.

### 178.1.33 Blog Entries

- MBS Xojo Plugins, version 22.1pr2

### 178.1.34 Xojo Developer Magazine

- 20.3, page 10: News

### 178.1.35 CountOccurancesMBS(s as string, find as string) as Integer

MBS Util Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Counts the occurances of a string.
**Example:**

```
dim s as string

s="111110001110101010111"

MsgBox str(CountOccurancesMBS(s,"1")) // 14
MsgBox str(CountOccurancesMBS(s,"0")) // 7
MsgBox str(len(s)) // 21
```

**Notes:** Returns the number of occurances of a substring in a string.

### 178.1.36 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr5
- MonkeyBread Software Releases the MBS Plugins 8.2

### 178.1.37 CreateStringMBS(Length as Integer, Content as String) as string

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a string based on a pattern.
**Example:**

```
dim c as string = CreateStringMBS(20, "Hello")
dim t as string = CreateStringMBS(10, chrb(255))

Break
```

**Notes:**

The content string is repeated until size is matched and returned.
The string returned has the same encoding set as the content string.

### 178.1.38 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.4pr5

### 178.1.39 DecodingFromHTMLMBS(s as string) as string

MBS Util Plugin, Plugin Version: 2.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decodes a string with HTML escaped characters.
**Example:**

```
dim html as string = "<p><B>Gr& uuml;& szlig;e</B></P>"
dim htmltext as string = RemoveHTMLTagsMBS(html)
dim text as string = DecodingFromHTMLMBS(htmltext)

MsgBox text // shows: Gr√º√üe
```

**Notes:**

The source string is converted to a native string if it is not allready in ASCII. Than for every character the functions looks for the unescaped character code and returns a normal unicode string.

e.g. "M& uuml;nchen" ->"M√ºnchen"

This functions uses Xojo unicode strings, so you may need to convert back to a NativeString before saveing the string to a file. (using e.g. ConvertEncoding(string, encodings.UTF8))

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.

Speed optimized in version 2.8 to be a hundret times faster.
Added Linux support in v5.1.

The result of this function is unpredictable on bad input strings.
(e.g. no encoding, or encoding does not match the content of the string)

### 178.1.40 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr7

### 178.1.41 DecodingFromMySQLMBS(s as string) as string

MBS Util Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decodes a string from MySQL.
**Example:**

MsgBox DecodingFromMySQLMBS("test\\test\% 2.doc")

**Notes:** Replaces all the escapes in a mysql string like (\0, \t or \\) to their binary replacement.

### 178.1.42 DecodingFromQuotedPrintableMBS(s as string) as string

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decodes a string with quoted printable encoding.
**Example:**

msgbox DecodingFromQuotedPrintableMBS("Hi, =A1=92")

**Notes:**

The decoded string is marked to have an ASCII encoding, but you may need to set the encoding to something like ISO. Than you need a text converter to make something printable from it.

May return "" on low memory conditions.

### 178.1.43 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.3pr9

### 178.1.44 DecodingFromURLMBS(s as string) as string

MBS Util Plugin, Plugin Version: 2.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decodes a string with URL escaped characters.
**Example:**

```
dim s as string
dim t as string
dim u as string

t="Hello World √§√√º"

s= EncodingToURLMBS(t,0)

u=DecodingFromURLMBS(s,0)

SetEncodingOfStringMBS u,GetEncodingOfStringMBS(t) // restore encoding

// Hello World √§√√º
MsgBox t
// Hello% 20World% 20% C3% A4% C3% B6% C3% BC
MsgBox s
// Hello World √§√√º
MsgBox u
```

**Notes:**

Decodes an URL encoded ASCII string. The string returned is marked as a binary string (without encoding). You need to set the encoding to whatever the original was (ISO-9660 or UTF8 for example).

e.g. "Wie% 20geht's% 3F" ->"Wie geht's?"

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.
Added Linux support in v5.1.
See also:

• 178.1.45 DecodingFromURLMBS(s as string, options as Integer) as string 25615

### 178.1.45 DecodingFromURLMBS(s as string, options as Integer) as string

MBS Util Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decodes a string with URL escaped characters.
**Example:**

```
dim s as string
dim t as string
dim u as string

t="Hello World √§√√º"

s= EncodingToURLMBS(t,1)

u=DecodingFromURLMBS(s,1)

SetEncodingOfStringMBS u,GetEncodingOfStringMBS(t) // restore encoding

// Hello World √§√√º
MsgBox t
// Hello+World+% C3% A4% C3% B6% C3% BC
MsgBox s
// Hello World √§√√º
MsgBox u
```

**Notes:**

Decodes an URL encoded ASCII string. The string returned is marked as a binary string (without encoding). You need to set the encoding to whatever the original was (ISO-9660 or UTF8 for example).

e.g. "Wie% 20geht's% 3F" ->"Wie geht's?"

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.

Pass 1 for the options parameter to get PHP/Perl compatible output (+ instead of spaces and % 20 for spaces).
Added Linux support in v5.1.
See also:

• 178.1.44 DecodingFromURLMBS(s as string) as string 25614

### 178.1.46 DecodingFromXMLMBS(s as string) as string

MBS Util Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decodes a string with XML escaped characters.
**Notes:** see DecodingFromHTMLMBS.

### 178.1.47 DetectUnicodeMarkersMBS(s as string) as Integer

MBS Util Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Tries to get the unicode marker from the string.
**Example:**

```
const EncodingUnknown=0
const EncodingUTF8=1
const EncodingUTF16be=3
const EncodingUTF16le=4
const EncodingUTF32be=6
const EncodingUTF32le=7

dim text as string = "Hello World" // this text does not have a marker..

msgbox str(DetectUnicodeMarkersMBS(text))
```

**Notes:** For some UTF16 LittleEndian strings this function may return UTF32.

### 178.1.48 EncodeEmailSubjectMBS(s as string) as string

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:**

Encodes an email subject.
Text is encoded with UTF-8 Quoted Printable encoding.
If text does not need to be encoded (pure ASCII), we return the input text.
**Example:**

```
MsgBox EncodeEmailSubjectMBS("Hello World")+EndOfLine+EncodeEmailSubjectMBS("Test √§√√º")
```

### 178.1.49 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.3pr3

### 178.1.50 EncodingToHTMLMBS(s as string, options as Integer = 0) as string

MBS Util Plugin, Plugin Version: 2.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a string with HTML escaped characters.
**Example:**

```
dim f as folderItem
dim b as binaryStream

f=getsaveFolderItem("text/html","new.html")
if f<>nil then
b=f.createBinaryFile("text/html")
if b<>nil then
b.write nativeStringMBS(EncodingToHTMLMBS(editfield1.text))
b.close
end if
end if
```

**Notes:**

The source string is converted to unicode if it is not allready in unicode. Than for every character the functions looks for the escaped character code and returns a HTML encoded string.

e.g. "M√ºnchen" ->"M& uuml;nchen"

This functions uses Xojo unicode strings, so you may need to convert back to a NativeString before saveing the string to a file.

Return characters (chr(10) and chr(13)) are not converted to <BR>codes.

May return "" on low memory conditions.

The result of this function is unpredictable on bad input strings.
(e.g. no encoding, or encoding does not match the content of the string)

Options can be 1 to not encode ASCII values <128, so quotes, <, >and & are not encoded.

### 178.1.51 Blog Entries

- Smileys and UTF32
- MBS Xojo / Real Studio Plugins, version 15.0pr9
- MBS Xojo / Real Studio Plugins, version 15.0pr7
- MBS Xojo / Real Studio Plugins, version 13.4pr7
- MBS Real Studio Plugins, version 11.2pr2

### 178.1.52 EncodingToQuotedPrintableMBS(s as string, LineLen as Integer = 72) as string

MBS Util Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a string with quoted printable characters.
**Example:**

```
dim a as string = "Hello √§√√º!"
dim b as string = EncodingToQuotedPrintableMBS(a)
dim c as string = ConvertEncoding(a, encodings.ISOLatin1)
dim d as string = EncodingToQuotedPrintableMBS(c)
dim e as string = EncodeQuotedPrintable(a)
dim f as string = EncodeQuotedPrintable(c)

MsgBox b+EndOfLine+d+EndOfLine+e+EndOfLine+f
```

**Notes:**

Line wrap is per default at 72 characters but you can pass some other positive value here.
Quoted printable encoded strings have some ISO encoding as base, you need to pass a valid ISO string to this function to get the correct result.
May return "" on low memory conditions.

### 178.1.53 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.3pr9

### 178.1.54 EncodingToURLMBS(s as string) as string

MBS Util Plugin, Plugin Version: 2.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a string with URL escaped characters.
**Example:**

msgbox EncodingToURLMBS("Wie geht's?")

**Notes:**

Encodings a string for an URL. Use with UTF8 or ISO-9660 encoded strings. This function does not work correctly with UTF16 strings.

e.g. "Wie geht's?" ->"Wie% 20geht's% 3F"

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.
Added Linux support in v5.1.
See also:

- 178.1.55 EncodingToURLMBS(s as string, options as Integer) as string 25619

### 178.1.55 EncodingToURLMBS(s as string, options as Integer) as string

MBS Util Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a string with URL escaped characters.
**Example:**

```
dim s as string = "20101210 1244 - Sky Cinema +24 - Wen die Geister lieben"

MsgBox EncodingToURLMBS(s)

// gives: 20101210% 201244% 20-% 20Sky% 20Cinema% 20+24% 20-% 20Wen% 20die% 20Geister% 20lieben

MsgBox EncodingToURLMBS(s,1)

// gives: 20101210+1244+-+Sky+Cinema+% 2B24+-+Wen+die+Geister+lieben

MsgBox EncodingToURLMBS(s,2)

// gives: 20101210% 201244% 20-% 20Sky% 20Cinema% 20% 2b24% 20-% 20Wen% 20die% 20Geister% 20lieben
```

**Notes:**

Encodings a string for an URL. Use with UTF8 or ISO-9660 encoded strings. This function does not work correctly with UTF16 strings.

e.g. "Wie geht's?" ->"Wie% 20geht's% 3F"

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.

Pass 1 for the options parameter to get PHP/Perl compatible output (+ instead of spaces and % 20 for spaces).
Pass 2 for the options parameter to get plus to % 2B and space to % 20. Added in plugin version 10.6.

### 178.1.56 Blog Entries

See also:

- 178.1.54 EncodingToURLMBS(s as string) as string 25618

### 178.1.57 EncodingToXMLMBS(s as string, options as Integer = 0) as string

MBS Util Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a string with XML escaped characters.
**Notes:** see EncodingToHTMLMBS.

### 178.1.58 GetStringsFromDataMBS(data as MemoryBlock, MinLength as Integer = 0) as string()

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks for strings within a data block.
**Notes:**

Looks over the bytes in the data block to see if there are useful byte sequences which could be text.
Returns an array with all text fragments found.

This function is UTF8 aware and will work well for UTF-8 encoded text fragments.
See also:

- 178.1.59 GetStringsFromDataMBS(data as ptr, size as Integer, MinLength as Integer = 0) as string() 25621
- 178.1.60 GetStringsFromDataMBS(data as String, MinLength as Integer = 0) as string() 25621

### 178.1.59 GetStringsFromDataMBS(data as ptr, size as Integer, MinLength as Integer = 0) as string()

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks for strings within a data block.
**Notes:**

Looks over the bytes in the data block to see if there are useful byte sequences which could be text.
Returns an array with all text fragments found.

This function is UTF8 aware and will work well for UTF-8 encoded text fragments.
See also:

- 178.1.58 GetStringsFromDataMBS(data as MemoryBlock, MinLength as Integer = 0) as string() 25620

### 178.1.60 GetStringsFromDataMBS(data as String, MinLength as Integer = 0) as string()

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks for strings within a data block.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.txt")
dim b as BinaryStream = BinaryStream.Open(f)
dim s as string = b.Read(b.Length)
dim texts() as string = GetStringsFromDataMBS(s, 3)

Break
```

**Notes:**

Looks over the bytes in the data block to see if there are useful byte sequences which could be text.
Returns an array with all text fragments found.

This function is UTF8 aware and will work well for UTF-8 encoded text fragments.

### 178.1.61 Blog Entries

- 178.1.59 GetStringsFromDataMBS(data as ptr, size as Integer, MinLength as Integer = 0) as string() 25621

### 178.1.62 GetUnicodeMarkersMBS(kind as Integer) as string

MBS Util Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the unicode marker with the given code.
**Example:**

```
const EncodingUnknown=0
const EncodingUTF8=1
const EncodingUTF16=2 // native
const EncodingUTF16be=3
const EncodingUTF16le=4
const EncodingUTF32=5 // native
const EncodingUTF32be=6
const EncodingUTF32le=7

msgbox EncodingToHexMBS(GetUnicodeMarkersMBS(EncodingUTF8))
```

**Notes:** If you concat strings, RB may convert the string to UTF8.

### 178.1.63 HasPostfixMBS(Text as String, Prefix as String) as boolean

MBS Util Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Checks whether text has given postfix.
**Example:**

```
dim t as string = "Hello World"
dim p as string = "Hello"
dim w as string = "World"

if HasPrefixMBS(t, p) then
// ok
else
break
MsgBox "failed?"
end if
```

```
if HasPostfixMBS(t, w) then
// ok
else
break
MsgBox "failed?"
end if

if HasPrefixMBS(t, w) then
break
MsgBox "failed?"
else
// ok
end if

if HasPostfixMBS(t, p) then
break
MsgBox "failed?"
else
// ok
end if

Break
```

**Notes:**

Returns true if yes, or false if not.
We may convert text to UTF-8 to compare.

### 178.1.64 Blog Entries

- MBS Xojo Plugins, version 18.5pr6

### 178.1.65 HasPrefixMBS(Text as String, Prefix as String) as boolean

MBS Util Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Checks whether text has given prefix.
**Example:**

```
dim t as string = "Hello World"
dim p as string = "Hello"
dim w as string = "World"

if HasPrefixMBS(t, p) then
// ok
```

```
else
break
MsgBox "failed?"
end if

if HasPostfixMBS(t, w) then
// ok
else
break
MsgBox "failed?"
end if

if HasPrefixMBS(t, w) then
break
MsgBox "failed?"
else
// ok
end if

if HasPostfixMBS(t, p) then
break
MsgBox "failed?"
else
// ok
end if

Break
```

**Notes:**

Returns true if yes, or false if not.
We may convert text to UTF-8 to compare.

### 178.1.66 Blog Entries

- MBS Xojo Plugins, version 18.5pr6

### 178.1.67 HexstringMBS(input as string, hexlen as Integer, linelen as Integer, linestart as string, lineend as string, spacer as string,filler as string) as string

MBS Util Plugin, Plugin Version: 2.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a hexadecimal string.

**Example:**

```
dim s as string
s=HexstringMBS("Hello World",2,10,"<",">"+endofline,"","0")
```

**Notes:**

Fails if input="" or hexlen<1 or linelen<1 or on low memory conditions.
If filler is "", filler is set to "0".

Memory requirement is around 5 times the memory for input.
or exactly:
mem=20+linelen*hexlen*(1+len(filler))+2*((linelen*hexlen*len(filler)+len(lineend)+len(linestart))*(len(input)*2/hexlen))

All strings must be in the encoding you want to have.
Can raise OutOfMemoryException on low memory.

### 178.1.68 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.2pr6
- MBS Xojo / Real Studio Plugins, version 15.2pr4

### 178.1.69 IsASCIIStringMBS(s as string) as boolean

MBS Util Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Checks if this string is an ASCII string.
**Notes:**

False if one of the characters of the string has a numeric value of 128 or higher. (->string is not a 7 bit ASCII string)
True if all bytes are in the valid ASCII range.
See also:

- 178.1.70 IsASCIIStringMBS(s as string, mode as Integer) as boolean 25625

### 178.1.70 IsASCIIStringMBS(s as string, mode as Integer) as boolean

MBS Util Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Checks if this string is an ASCII string.
**Notes:**

Does not work for 16bit unicode strings.
But it works fine with UTF8.

Mode values:

0 False if one of the characters of the string has a numeric value of 128 or higher. (->string is not a 7 bit ASCII string)
1 False if one of the characters of the string has a numeric value >128 or <32. (->string may not be printable in ASCII, which may require some kind of Base64 encoding to transfer it.)
2 False if one of the characters of the string has a numeric value below 32. (->string may contain line breaks or other control characters)

Added Linux support in v5.1.
See also:

- 178.1.69 IsASCIIStringMBS(s as string) as boolean 25625

### 178.1.71 JaroWinklerDistanceMBS(a as string, b as string) as Double

MBS Util Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the string distance.
**Example:**

```
dim s1 as string = "Hello"
dim s2 as string = "Hallo"
dim s3 as string = "Helo"
dim s4 as string = "Helllo"

// 0 for equal, the more it goes to 1.0

dim d1 as Double = levenshteinDistanceMBS(s1,s1)
dim d2 as Double = levenshteinDistanceMBS(s1,s2)
dim d3 as Double = levenshteinDistanceMBS(s1,s3)
dim d4 as Double = levenshteinDistanceMBS(s1,s4)

dim d5 as Double = jaroWinklerDistanceMBS(s1,s1)
dim d6 as Double = jaroWinklerDistanceMBS(s1,s2)
dim d7 as Double = jaroWinklerDistanceMBS(s1,s3)
dim d8 as Double = jaroWinklerDistanceMBS(s1,s4)

break // check values in debugger
```

**Notes:**

Value is normalized, so 0.0 is equal text and 1.0 is totally unequal.

### 178.1.73 LevenshteinDistanceMBS(a as string, b as string) as Double

MBS Util Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the string distance.
**Example:**

```
dim s1 as string = "Hello"
dim s2 as string = "Hallo"
dim s3 as string = "Helo"
dim s4 as string = "Helllo"

// 0 for equal, the more it goes to 1.0

dim d1 as Double = levenshteinDistanceMBS(s1,s1)
dim d2 as Double = levenshteinDistanceMBS(s1,s2)
dim d3 as Double = levenshteinDistanceMBS(s1,s3)
dim d4 as Double = levenshteinDistanceMBS(s1,s4)

dim d5 as Double = jaroWinklerDistanceMBS(s1,s1)
dim d6 as Double = jaroWinklerDistanceMBS(s1,s2)
dim d7 as Double = jaroWinklerDistanceMBS(s1,s3)
dim d8 as Double = jaroWinklerDistanceMBS(s1,s4)

break // check values in debugger
```

**Notes:**

Value is normalized, so 0.0 is equal text and 1.0 is totally unequal.

http://en.wikipedia.org/wiki/Levenshtein_distance

### 178.1.74 Blog Entries

- MBS SQLite Extension in version 1.4
- MBS Real Studio Plugins, version 12.4pr10

### 178.1.75 NativeStringMBS(s as string) as string

MBS Util Plugin, Plugin Version: 2.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a native string with the given string as content.
**Notes:**

If the string in the parameter s is allready native it is returned unchanged and without allocating additional memory. Else the string is copied into a new string with native characters.
On Mac OS Classic native means MacRoman encoding, on Mac OS X it's UTF8 and on Windows the ANSI Codepage.
May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.
Added Linux support in v5.1.

### 178.1.76 RandomBytesStringMBS(Length as Integer, ASCII as boolean=false) as string

MBS Util Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a string with random content.
**Example:**

```
dim s as string

s = RandomBytesStringMBS(10, true)

MsgBox s

s = RandomBytesStringMBS(10, false)

MsgBox s
```

**Notes:**

Length is the number of bytes in the string.
If ASCII is true the string returned in an ASCII string.

### 178.1.79 RemoveHTMLTagsMBS(AsciiTextWithTags as string) as string

MBS Util Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Removes all html tags from the string.
**Example:**

```
Dim s As String = "<div><P param=""value""">Hello</P></div>"
Dim t As String = RemoveHTMLTagsMBS(s)

MsgBox t // returns "Hello"
```

**Notes:**

Returns "" on low memory.
Written to be used with UTF8 strings.
Added Linux support in v5.1.

### 178.1.80 Blog Entries

- MBS Xojo Plugins, version 19.4pr8

### 178.1.81 RemoveHTMLTagsWithMBS(AsciiTextWithTags as string, Replacement as string) as string

MBS Util Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Removes all html tags from the string and replaces them with the replacement string.
**Example:**

msgbox RemoveHTMLTagsWithMBS("<P>Hello</P>"," ") // returns " Hello "

**Notes:**

Returns "" on low memory.
Written to be used with UTF8 strings.

### 178.1.82 ReplaceLineEndingsMBS(Text as String, NewLine as String, yield as boolean = false) as String

MBS Util Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Replaces line endings.
**Example:**

```
dim s as string = "Some text"
dim t as string = ReplaceLineEndingsMBS(s, endofline.Unix)
```

**Notes:**

Whether we got CR, LF, CRLF or even LFCR, we'll replace it with the given replacement text.
If yield is true, we yield to other Xojo threads every 16 MB of input text to keep other threads responsive.

Handles UTF16/UTF32 by converting first to UTF-8.
Other 8 bit encodings (or no encoding set) are passed through.

Returns new text. May raise OutOfMemoryException in case of no memory available.

### 178.1.83 Blog Entries

- MBS Xojo Plugins, version 19.0pr7
- New ReplaceLineEndingsMBS function

### 178.1.84 ReplaceNonPrintableCharactersMBS(s as string, replacevalue as Integer=46) as string

MBS Util Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Replaces bytes in the string which are not printable with the given byte value.
**Example:**

MsgBox ReplaceNonPrintableCharactersMBS("Hello World")
MsgBox ReplaceNonPrintableCharactersMBS("Hello √§√√º World")
MsgBox ReplaceNonPrintableCharactersMBS("Hello √§√√º World",32)

**Notes:**

All bytes in range 32 to 127 are copied and all others replaces with the given byte value. Default is 46 which is a dot.
Returns always an ASCII string.
On low memory this function returns an empty string.

### 178.1.85 Blog Entries

- New ReplaceLineEndingsMBS function

### 178.1.86 ScientificStrMBS(d as Double, digits as Integer) as string

MBS Util Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the given value formatted as scientific number with the given number of digits.
**Example:**

```
dim d as Double = 3.1415926535897

MsgBox ScientificStrMBS(d,6)+EndOfLine+ScientificStrMBS(d,9)
```

### 178.1.87 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr5

### 178.1.88 SplitMBS(value as String, delimiter as String = " ") as String()

MBS DataTypes Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Splits string.
**Example:**

```
dim a() as string = SplitMBS("Hello World Test", " ")
dim b() as string = SplitMBS("Gr√º√üe", "")
dim c() as string = SplitMBS("Just$ test$ a$ test$ test", "$ test$ ")
```

break

**Notes:**

Similar to the Split() function, but without the problems we see with Split function. See feedback cases for Split.

If delimiter is "", we return an array with all characters in string.
Else we split given string with delimiter.

### 178.1.89 Blog Entries

- MBS Releases the MBS Xojo / Real Studio plug-ins in version 16.4
- Split and Join strings
- MBS Xojo / Real Studio Plugins, version 16.4pr8
- MBS Xojo / Real Studio Plugins, version 16.4pr7
- MBS Real Studio Plugins, version 13.0pr10

### 178.1.90 Xojo Developer Magazine

- 14.6, page 10: News

### 178.1.91 SQLReplaceBooleanMBS(SQL as string) as string

MBS Util Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Replaces all false/true strings with 0/1 and handles quotes correctly.
**Example:**

MsgBox SQLReplaceBooleanMBS("INSERT INTO criteria VALUES ('1','9999','0001','000001557',false);")

**Notes:**

SQLite used in REALSQLDatabase does not like false and true literals for boolean values. You need to use 0 and 1. So this function helps you converting old queries using false/true.
false and true inside a quoted string are not changed.

### 178.1.92 Blog Entries

- MBS Plugins 10.3 Release Notes

### 178.1.93 StrCompBytesMBS(a as string, b as string) as Integer

MBS Util Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Compares two strings.
**Example:**

msgbox str(StrCompBytesMBS("Hello","hello"))

**Notes:**

Returns zero if the two strings are identical.
Returns 1 or -1 if the strings are different.
Empty strings are equal.

Compares the bytes of both strings independend of the text encoding.

So if a="A" in UTF-8 and b="A" in UTF-16 they will not be equal!

### 178.1.94 StrCompCharactersMBS(a as string, b as string) as Integer

MBS Util Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Compares two strings.
**Example:**

msgbox str(StrCompCharactersMBS("Hello","hello"))

**Notes:**

Returns zero if the two strings are identical.
Returns 1 or -1 if the strings are different.
Empty strings are equal.

Compares the characters of both strings. If the text encodings are not equal, they are both converted to UTF-8 before comparing them.

So if a="A" in UTF-8 and b="A" in UTF-16 they will be equal!

### 178.1.95 StringANDMBS(a as string,b as string) as string

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Applies a binary AND on the bytes from the both strings.
**Notes:**

If a is "" or memory is low, the result is "".
If b is shorter as a the b string is used several times.
The function is optimized for several cases, e.g. the case where b is only one, two or four bytes long.
Returns a string with binary encoding. Before using this function, make sure both strings have the same encoding.
Added Linux support in v5.1.

### 178.1.96 StringIsHTMLreadyMBS(s as string) as boolean

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Test whether a string is html safe.
**Example:**

```
Function html(t as string) As string
# pragma disablebackgroundtasks
# pragma disableautowaitcursor

if StringIsHTMLreadyMBS(t) then
Return t
else
t=EncodingToHTMLMBS(t)
Return ConvertEncoding(t,encodings.UTF8)
end if
End Function
```

**Notes:**

String which are not html safe, need to go through EncodingToHTMLMBS.
Using this function saves a lot of time!

Returns true for strings which are html safe.

### 178.1.97 StringIsXMLreadyMBS(s as string) as boolean

MBS Util Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Test whether a string is xml safe.
**Notes:**

String which are not html safe, need to go through EncodingToXMLMBS.
Using this function saves a lot of time!

Returns true for strings which are xml safe.

### 178.1.98 StringORMBS(a as string,b as string) as string

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Applies a binary OR on the bytes from the both strings.
**Notes:**

If a is "" or memory is low, the result is "".
If b is shorter as a the b string is used several times.
The function is optimized for several cases, e.g. the case where b is only one, two or four bytes long.
Returns a string with binary encoding. Before using this function, make sure both strings have the same encoding.
Added Linux support in v5.1.

### 178.1.99 StringXOR2MBS(data as string, XorMask as string, MaskOffset as Integer = 0) as string

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Applies a binary XOR on the bytes from the both strings.
**Example:**

```
dim s as string = StringXORMBS("Hello", "World")
dim t as string = StringXOR2MBS("Hello", "World")

MsgBox EncodeHex(S)+" "+EncodeHex(t)

dim ss as string = StringXORMBS(s, "World")
dim tt as string = StringXOR2MBS(t, "World")

MsgBox ss+" "+tt
```

**Notes:**

If data is "" or memory is low, the result is "".
If XorMask is shorter as data the XorMask string is used several times.
Returns a string with binary encoding. Before using this function, make sure both strings have the same encoding.

The difference between StringXORMBS and StringXOR2MBS is that the second version xors also with position of byte in string, so your text looks a little bit more random.
MaskOffset specifies where in the XorMask string to start. This is useful for partial blocks.

### 178.1.100 Blog Entries

- MBS Real Studio Plugins, version 12.3pr8

### 178.1.101 StringXORMBS(data as string, XorMask as string, MaskOffset as Integer = 0) as string

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Applies a binary XOR on the bytes from the both strings.
**Notes:**

If data is "" or memory is low, the result is "".
If XorMask is shorter as data the XorMask string is used several times.
The function is optimized for several cases, e.g. the case where b is only one, two or four bytes long.
Returns a string with binary encoding. Before using this function, make sure both strings have the same encoding.
MaskOffset specifies where in the XorMask string to start. This is useful for partial blocks.

### 178.1.102 StrMBS(d as Double) as string

MBS Util Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Formats numbers more human readable
**Example:**

```
// shows: 0.000000012339 1.234560e-8
MsgBox StrMBS(0.00000001234)+" "+str(0.00000001234)

// shows 123456789.0 1.234568e+8
MsgBox StrMBS(123456789.0)+" "+str(123456789.0)
```

**Notes:** The idea is to have a dynamically changing number of digits. We have no scientific notation and up to 15 digits visible (not counting zeros).

### 178.1.103 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr4

### 178.1.104 UnicodeStringMBS(s as string) as string

MBS Util Plugin, Plugin Version: 2.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a unicode string with the given string as content.
**Notes:**

If the string in the parameter s is allready unicode it is returned unchanged and without allocating additional memory. Else the string is copied into a new string with unicode (16bit) characters.
May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.
Added Linux support in v5.1.

The result of this function is unpredictable on bad input strings.
(e.g. no encoding, or encoding does not match the content of the string)

### 178.1.105 ConvertUnicodeToCharacterCompositionMBS(text as string) as string

MBS Util Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts unicode characters to composed normalization form.
**Example:**

```
dim s1 as string = ConvertUnicodeToCharacterDecompositionMBS("√§")

MsgBox s1+": "+EncodeHex(s1)
// shows √§: 61CC88

dim s2 as string = ConvertUnicodeToCharacterCompositionMBS("√§")

MsgBox s2+": "+EncodeHex(s2)
// shows √§: C3A4
```

**Notes:**

This function replaces character represented by decomposed representation with the composed representation.

see also
https://en.wikipedia.org/wiki/Unicode_equivalence

### 178.1.106 Blog Entries

- MBS Xojo Plugins, version 22.1pr1

### 178.1.107 ConvertUnicodeToCharacterDecompositionMBS(text as string) as string

MBS Util Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts unicode characters to decomposed normalization form.
**Example:**

```
dim s1 as string = ConvertUnicodeToCharacterDecompositionMBS("√§")

MsgBox s1+": "+EncodeHex(s1)
// shows √§: 61CC88

dim s2 as string = ConvertUnicodeToCharacterCompositionMBS("√§")

MsgBox s2+": "+EncodeHex(s2)
// shows √§: C3A4
```

**Notes:**

This function replaces character represented by one unicode character by the decomposed variant.

see also
https://en.wikipedia.org/wiki/Unicode_equivalence

### 178.1.108 Blog Entries

- MBS Xojo Plugins, version 22.1pr1
- MBS Xojo Plugins, version 20.1pr4

### 178.1.109 DecodingFromCP1252MBS(s as string) as string

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decodes a string with ISO 8859 encoding.
**Notes:**

The source string must be really an CP1252 string!
The string returned is Unicode and you may try NativeString to make a string you can display better.

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.
Added Linux support in v5.1.

### 178.1.110 DecodingFromHexMBS(s as string) as string

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decodes a Hex string to a binary string.
**Example:**

```
dim s as String

s=EncodingToHexMBS("Hallo")

MsgBox DecodingFromHexMBS(s)
```

**Notes:**

May return "" on low memory conditions.
Added Linux support in v5.1.
The string returned has no defined string encoding, so use DefineEncoding on the result if needed.

### 178.1.111 DecodingFromISO8859MBS(s as string) as string

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decodes a string with ISO 8859 encoding.
**Example:**

```
dim s as String

s=EncodingToISO8859MBS("hallo √§√√º")
```

MsgBox s

s=DecodingFromISO8859MBS(s)

MsgBox s

s=NativeStringMBS(s)

MsgBox s

**Notes:**

The source string must be really an ISO 8859-1 string!
The string returned is Unicode and you may try NativeString to make a string you can display better.

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.
Added Linux support in v5.1.

### 178.1.112 EncodingToCP1252MBS(s as string) as string

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a string encoded with Codepage 1252.
**Notes:**

The string is converted to Unicode (if it's not allready Unicode) and than encoded to a CP 1252 string which is returned with encoding set to binary.
(other encodings are available, but currently not in the plugin)

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.
Added Linux support in v5.1.

### 178.1.113 EncodingToHexMBS(s as string) as string

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Encodes a binary string to a hex string.
**Example:**

```
dim s1 as string = "Hello World"
dim s2 as string = EncodingToHexMBS(s1)
```

```
dim t1 as string = "Umlauts √§√√º"
dim t2 as string = EncodingToHexMBS(t1)

dim u as new UUIDMBS
dim u1 as string = u.ValueString
dim u2 as string = EncodingToHexMBS(u1)

break // see variables in debugger
```

**Notes:**

May return "" on low memory conditions.
Added Linux support in v5.1.

### 178.1.114 EncodingToISO8859MBS(s as string) as string

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a string encoded with ISO 8859-1.
**Example:**

```
dim s as String

s=EncodingToISO8859MBS("hallo √§√√º")

MsgBox s

s=DecodingFromISO8859MBS(s)

MsgBox s

s=NativeStringMBS(s)

MsgBox s
```

**Notes:**

The string is converted to Unicode (if it's not allready Unicode) and than encoded to a ISO 8859-1 string which is returned with encoding set to binary.
(other encodings are available, but currently not in the plugin)

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.

Added Linux support in v5.1.

### 178.1.115 JoinDataMBS(blocks() as memoryblock) as string

MBS DataTypes Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Joins an array of memoryblocks in new string.
**Example:**

```
dim s() as MemoryBlock

// make memoryblock with a space character
dim m as MemoryBlock = "Hello"

s.Append m
s.Append m
s.Append m

// now join
dim r as string = JoinDataMBS(s)

// define to be ASCII:
r = DefineEncoding(r, encodings.ASCII)

// and show
MsgBox r
```

**Notes:**

Returned string has no encoding defined.
Raises OutOfMemoryException in case of low memory.
See also:

- 178.1.116 JoinDataMBS(strings() as string) as string 25642
- 178.1.117 JoinDataMBS(values() as Variant) as string 25643

### 178.1.116 JoinDataMBS(strings() as string) as string

MBS DataTypes Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Joins an array of strings in new string.
**Example:**

```
dim s() as string
```

```
s.Append "Hello"
s.Append " "
s.Append "World"

// now join
dim r as string = JoinDataMBS(s)

// define to be ASCII:
r = DefineEncoding(r, encodings.ASCII)

// and show
MsgBox r
```

**Notes:**

Returned string has no encoding defined.
Raises OutOfMemoryException in case of low memory.
See also:

- 178.1.115 JoinDataMBS(blocks() as memoryblock) as string 25642
- 178.1.117 JoinDataMBS(values() as Variant) as string 25643

### 178.1.117 JoinDataMBS(values() as Variant) as string

MBS DataTypes Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Joins an array of variants in new string.
**Example:**

```
dim s() as Variant

// make memoryblock with a space character
dim m as new MemoryBlock(1)
m.Int8Value(0) = 32

s.Append "Hello"
s.Append m
s.Append "World"

// now join
dim r as string = JoinDataMBS(s)

// define to be ASCII:
r = DefineEncoding(r, encodings.ASCII)

// and show
```

MsgBox r

**Notes:**

Variants can be memoryblocks or strings or normal objects which can give stringValue.
Returned string has no encoding defined.
Raises OutOfMemoryException in case of low memory.

### 178.1.118 Blog Entries

- Split and Join strings
- MBS Xojo / Real Studio Plugins, version 14.2pr3

See also:

- 178.1.115 JoinDataMBS(blocks() as memoryblock) as string 25642
- 178.1.116 JoinDataMBS(strings() as string) as string 25642

### 178.1.119 JoinStringMBS(strings() as string) as string

MBS DataTypes Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Joins an array of strings in new string.
**Example:**

```
dim s() as string

s.Append "Hello"
s.Append " "
s.Append "World"

dim r as string = JoinStringMBS(s)

MsgBox r
```

**Notes:**

Converts all strings if necessary into UTF-8. If you want to join them as they are, please use JoinDataMBS.
Raises OutOfMemoryException in case of low memory.
See also:

- 178.1.120 JoinStringMBS(values() as Variant) as string 25645

### 178.1.120 JoinStringMBS(values() as Variant) as string

MBS DataTypes Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Joins an array of strings in new string.
**Example:**

```
dim s() as Variant

s.Append "Hello"
s.Append " "
s.Append "World"

dim r as string = JoinStringMBS(s)

MsgBox r
```

**Notes:**

Converts all strings if necessary into UTF-8.
Raises OutOfMemoryException in case of low memory.

### 178.1.121 Blog Entries

- Split and Join strings
- MBS Xojo / Real Studio Plugins, version 14.2pr3

See also:

- 178.1.119 JoinStringMBS(strings() as string) as string 25644

### 178.1.122 StringCodePointsMBS(text as string) as UInt32()

MBS DataTypes Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Query unicode code points for a text.
**Example:**

```
// take Hello World in Japanese
Dim Text As String = "„Åì„Çì„Å´„Å°„ÅØ‰ñÁïå"

// get code points
Dim v() As UInt32 = StringCodePointsMBS(Text)
```

```
// check in debugger
Break
```

**Notes:**

We get text as UTF32 and return you the characters as an array of numbers.

Can be faster than Xojo's character iterator as we don't construct temporary strings and an iterator object here.

## 178.2 class StringHandleMBS

### 178.2.1 class StringHandleMBS

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A class for attaching strings together very fast.
**Example:**

```
dim s as StringHandleMBS

s=new StringHandleMBS

// Add some text
s.Add "Hello"
s.Add " "
s.Add "World"

// Insert a string
s.Insert " great",6

// check it
MsgBox s.Copy

// Delete the great from above
s.Delete 6,7
```

```
// check
MsgBox s.Copy

// Insert again
s.Insert " great ",6

// check
MsgBox s.Copy

// Now we extract the middle, so it's deleted
MsgBox s.Extract(6,7)

// check again
MsgBox s.copy
```

**Notes:** The class initalized itself on the first use.

### 178.2.6 Methods

### 178.2.7 Add(data as MemoryBlock)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds data from memoryblock to the string handle.
See also:

- 178.2.8 Add(data as Ptr, size as Integer) 25648
- 178.2.9 Add(data as string) 25649
- 178.2.10 Add(data as StringHandleMBS) 25649

### 178.2.8 Add(data as Ptr, size as Integer)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds data from ptr to the string handle with given size.
**Notes:** Using invalid Ptr or size combination can cause a crash.
See also:

- 178.2.7 Add(data as MemoryBlock) 25648
- 178.2.9 Add(data as string) 25649
- 178.2.10 Add(data as StringHandleMBS) 25649

### 178.2.9 Add(data as string)

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds the string at the end of the current data.
**Notes:** Note that all strings added must have the same encoding.
See also:

- 178.2.7 Add(data as MemoryBlock) 25648
- 178.2.8 Add(data as Ptr, size as Integer) 25648
- 178.2.10 Add(data as StringHandleMBS) 25649

### 178.2.10 Add(data as StringHandleMBS)

MBS DataTypes Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds content of other string handle to this one.
**Example:**

```
Dim s1 As New StringHandleMBS

s1.add "Hello World"

Dim s2 As New StringHandleMBS

s2.add "Got: "
s2.add s1

MessageBox s2.Copy
```

**Notes:** Just like asking first StringHandle for content as string or Memoryblock and then adding that to the target one. But without the intermediate copying.
See also:

- 178.2.7 Add(data as MemoryBlock) 25648
- 178.2.8 Add(data as Ptr, size as Integer) 25648
- 178.2.9 Add(data as string) 25649

### 178.2.11 AddByte(value as UInt8)

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds a byte to the string handle.

### 178.2.12 AddInteger(value as Int64)

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds a integer value to the string handle.
**Notes:** This is like AddString(str(value)).

### 178.2.13 Clear

MBS DataTypes Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Clears the string handle.
**Notes:** Resets size to zero, but does not release memory, so it can be reused.

### 178.2.14 clone as StringHandleMBS

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new StringHandleMBS object with the same content.

### 178.2.15 Constructor

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor of this class.
See also:

- 178.2.16 Constructor(initvalue as string) 25650

### 178.2.16 Constructor(initvalue as string)

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The second constructor of this class which sets the value directly to the given Xojo string.
**Example:**

```
// An utility function you can define in a module:

Function BinaryReplaceAll(s as string, a as string,b as string) As string
dim h as StringHandleMBS

h=new StringHandleMBS(s)
h.ReplaceAll(a,b)

Return h.Copy
End Function
```

See also:

- 178.2.15 Constructor 25650

### 178.2.17 Copy as string

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the content as a Xojo string.
**Notes:** This string will have the encoding set in the encoding property.

### 178.2.18 CopyMemory as MemoryBlock

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Copies content of handle in new memoryblock.

### 178.2.19 Delete(start as Integer, lengthBytes as Integer)

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Deletes the bytes within the range.
**Notes:**

One based like RB's string functions.
The start and length parameters use bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.

### 178.2.20 Extract(start as Integer, lengthBytes as Integer) as string

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a part of the string.
**Notes:**

One based and the returned part is removed form the string data.
The start and length parameters use bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.

### 178.2.21 FindByte(value as UInt8, StartByteOffset as Integer = 1) as Integer

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Finds position of a given value.
**Example:**

```
Dim s As New StringHandleMBS("Hello")

// 64 = big letters
// +32 = small letters
// + 5 = for 5th letter in alphabet

Dim c As Integer = 64+32+5
Dim p As Integer = s.FindByte(c)

MsgBox "position "+Str(p)+" for letter e"
```

**Notes:**

Returns one based byte offset.
Result is 0 if not found.

StartPosition added in v21.3.
See also:

- 178.2.22 FindByte(values() as UInt8, StartByteOffset as Integer = 1) as Integer 25652

### 178.2.22 FindByte(values() as UInt8, StartByteOffset as Integer = 1) as Integer

MBS DataTypes Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Finds position of a given value.
**Example:**

```
Dim s As New StringHandleMBS("Hello Welt")

Dim values() As UInt8
values.append Asc("e")
values.append Asc("o")
Dim p As Integer = s.FindByte(values, 3)

MsgBox "position "+Str(p)+" for letter "+s.Mid(p, 1)
```

**Notes:**

Values is an array of possible values to find.
For best performance avoid duplicates in that array.

Returns one based byte offset.
Result is 0 if not found.
See also:

- 178.2.21 FindByte(value as UInt8, StartByteOffset as Integer = 1) as Integer 25652

### 178.2.23 FirstNonWhiteSpace(StartByteOffset as Integer = 1) as Integer

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Finds first non-whitespace byte in the data starting at given offset.
**Example:**

```
Dim s As New StringHandleMBS("Hello World")
Dim p As Integer = s.FirstWhiteSpace(1)
Dim x As Integer = s.FirstNonWhiteSpace(p+1)

MsgBox "position "+Str(p)+" for white space and "+Str(x)+" for following text"
```

**Notes:**

StartByteOffset is one based.
White space are space, tab and new line characters.
Returns 0 if not found.

### 178.2.24 FirstWhiteSpace(StartByteOffset as Integer = 1) as Integer

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Finds first whitespace byte in the data starting at given offset.
**Example:**

```
Dim s As New StringHandleMBS("Hello World")
Dim p As Integer = s.FirstWhiteSpace(1)
Dim x As Integer = s.FirstNonWhiteSpace(p+1)

MsgBox "position "+Str(p)+" for white space and "+Str(x)+" for following text"
```

**Notes:**

StartByteOffset is one based.
White space are space, tab and new line characters.
Returns 0 if not found.

### 178.2.25 Insert(data as string, position as Integer)

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Inserts the string data at the given byte position.
**Notes:**

One based.
Note that on Unicode the character position and the byte position are not equal!
(On 16bit Unicode charpos=2*bytepos and on US ASCII charpos=bytepos)

The position parameter uses bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.

### 178.2.26 InStr(OffsetBytes as Integer = 1, target as String, EndOffsetBytes as Integer = -1) as Integer

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Searches for a binary string inside the StringHandle.
**Example:**

```
// We test if RB returns the same values as the plugin

dim s as String
dim h as StringHandleMBS

s="Christian"
h=new StringHandleMBS
```

```
h.Add s

MsgBox "MBS: "+str(h.InStr("is"))+", RB: "+str(InStr(s,"is"))
MsgBox "MBS: "+str(h.InStr(5,"ia"))+", RB: "+str(InStr(5,s,"ia"))
MsgBox "MBS: "+str(h.InStr("xy"))+", RB: "+str(InStr(s,"xy"))
```

**Notes:**

The same as InStr but with a second parameter to specify the start of the search inside the string handled.

The srcOfs parameter uses bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.

Returns positive value if something is found and zero in case nothing is found.
Returns negative value in case of error.
Casesensitive search!

### 178.2.27 InStrUTF8(OffsetCharacters as Integer = 1, target as String, EndOffsetCharacters as Integer = -1) as Integer

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Searches for a binary string inside the StringHandle.
**Example:**

```
Dim sh As New StringHandleMBS
sh.Encoding = sh.encodingUTF8 // so copy gives right encoding

sh.Add "√Ñ test Hello Word √§√√º test string."

Dim s As String = sh.Copy

MsgBox "position of text: "+Str(sh.InStr(5,"test"))+"/"+Str(s.InStrB(5,"test"))+"th byte "+_
"or "+Str(sh.InStrUTF8(5,"test"))+"/"+Str(s.InStr(5,"test"))+"th character"
```

**Notes:**

This function uses UTF8 characters instead of bytes as unit.
Returns positive value if something is found and zero in case nothing is found.
Returns negative value in case of error.
The same as InStrUTF8 but with a second parameter to specify the start of the search inside the string handle.

Casesensitive search!

### 178.2.28 IsValidASCII(data as ptr, TotalByteLength as integer) as Boolean

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Checks whether given data is valid ASCII text.

### 178.2.29 IsValidUTF8(data as ptr, TotalByteLength as integer) as Boolean

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Checks whether given data is valid UTF-8 text.

### 178.2.30 Left(lengthBytes as Integer) as string

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a copy of the first left bytes of the string.
**Notes:**

May return less strings if the stored string is not long enough.

The length parameter uses bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.

### 178.2.31 LeftUTF8(lengthCharacter as integer) as string

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries given number of characters from string from the left side.
**Example:**

```
Dim s As String = "Hello √√§√º!"
Dim d As New StringHandleMBS(s)

d.Encoding = d.encodingUTF8

// √ is two bytes
MsgBox d.LeftUTF8(8)+" in UTF8 and "+d.Left(8)+" in bytes"
```

### 178.2.32 Mid(startByte as Integer, lengthBytes as Integer) as string

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a part of the string.
**Notes:**

One based.
The length parameter uses bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.

### 178.2.33 MidInteger(startByte As Integer, lengthBytes As Integer = -1) as Int64

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts some bytes read as ASCII text to number.
**Example:**

```
Dim s As New StringHandleMBS("123456789")

Dim v As Integer = s.MidInteger(3,3)
MsgBox str(v)
```

**Notes:** startByte is one based.

### 178.2.34 MidUTF8(startCharacter as integer, lengthCharacter as integer) as string

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries characters from UTF-8 string with given characters.
**Example:**

```
Dim s As String = "Hello √√§√º!"
Dim d As New StringHandleMBS(s)

d.Encoding = d.encodingUTF8

// √ is two bytes
MsgBox d.MidUTF8(7,4)+" in UTF8 and "+d.Mid(7,4)+" in bytes"
```

**Notes:** startCharacter starts with 1 as in Xojo's mid function.

### 178.2.35 Replace(a as String, b as string)

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Replaces the first string found with content of a with the content of b.
**Example:**

```
dim s as StringHandleMBS

s=new StringHandleMBS

s.Add "Hallo Leutle, Hellau"

s.Replace("H","h")
s.Replace("l","i")

MsgBox s.Copy+" "+str(s.Len)
```

**Notes:**

Note that all strings are compared binary and must have the same encoding.
Basicly this is just a call to instr, one to delete and one to insert.
See also:

- 178.2.36 Replace(startpos as Integer, a as String, b as string) 25658

### 178.2.36 Replace(startpos as Integer, a as String, b as string)

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Replaces the first string found with content of a with the content of b.
**Notes:**

If you don't give a startpos parameter the call uses one and is equal to Replace(a,b).
Startpos is one based like all indexes in this class.
The startpos parameter uses bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.
See also:

- 178.2.35 Replace(a as String, b as string) 25658

### 178.2.37 ReplaceAll(a as String, b as string)

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Replaces all strings with content of a with the content of b.
**Example:**

```
dim s as StringHandleMBS

s=new StringHandleMBS

s.Add "Hallo Leutle, Hellau"

s.Replaceall("H","h")
s.Replaceall("l","i")

MsgBox s.Copy+" "+str(s.Len)
```

**Notes:**

Note that all strings are compared binary and must have the same encoding.
Basicly this is just a loop with calls to instr, to delete and to insert.
See also:

- 178.2.38 ReplaceAll(startpos as Integer, a as String, b as string) 25659

### 178.2.38 ReplaceAll(startpos as Integer, a as String, b as string)

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Replaces all strings with content of a with the content of b.
**Notes:**

If you don't give a startpos parameter the call uses one and is equal to ReplaceAll(a,b).
Startpos is one based like all indexes in this class.

The startpos parameter uses bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.
See also:

- 178.2.37 ReplaceAll(a as String, b as string) 25659

### 178.2.39 Reverse as StringHandleMBS

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reverses bytes in string.
**Example:**

```
Dim s As New StringHandleMBS("Hello")
Dim r As StringHandleMBS = s.Reverse

MsgBox r.Copy
```

**Notes:** Returns copy of the string with reversed order.

### 178.2.40 Right(lengthBytes as Integer) as string

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a copy of the first right bytes of the string.
**Example:**

```
// There was a small bug in the Right and the Mid function for the version 3.1 of this plugin.
// This test failed in 3.1, but works in 3.2:

dim Text as StringhandleMBS
dim Part as String

Text = New StringHandleMBS
Text.Add "." + chr(13) + chr(10)

Part = Text.Copy
' Now Part is ".<CR><LF" which is correct

if lenb(Part)<>3 then
MsgBox "Failed on Copy "+str(lenb(Part))
end if

Part = Text.Right(1)
' Now Part is "<LF>" which is correct

if lenb(Part)<>1 then
MsgBox "Failed on Right(1) "+str(lenb(Part))
end if

Part = Text.Right(2)
' Now Part is "<CR><LF>" which is correct

if lenb(Part)<>2 then
MsgBox "Failed on Right(2) "+str(lenb(Part))
```

```
end if

Part = Text.Right(3)
' Now Part is "" which is wrong!

if lenb(Part)<>3 then
MsgBox "Failed on Right(3) "+str(lenb(Part))
end if
```

**Notes:**

May return less strings if the stored string is not long enough.
The length parameter uses bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.

### 178.2.41 RightUTF8(lengthCharacter as integer) as string

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries given number of characters from string from the right side.
**Example:**

```
Dim s As String = "Hello √√§√º!"
Dim d As New StringHandleMBS(s)

d.Encoding = d.encodingUTF8

// √ is two bytes
MsgBox d.RightUTF8(8)+" in UTF8 and "+d.Right(8)+" in bytes"
```

### 178.2.42 Truncate(lengthBytes as Integer)

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Truncates the string handle content.
**Notes:**

Sets the length of the string back to the given value if it's greater.

The length parameter uses bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.

### 178.2.43 TruncateUTF8(lengthCharacters as integer)

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Truncates data to given number of UTF-8 characters.
**Example:**

```
Dim s As New StringHandleMBS("√§√√º")

// limit to 2 characters, here 4 bytes
s.TruncateUTF8 2

MsgBox s.Copy
```

### 178.2.44 UTF8Length(data as ptr, TotalByteLength as integer) as Integer

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries how many UTF-8 characters are in one memory area.
**Example:**

```
Dim s As String = "Hello √§√√º"
Dim m As MemoryBlock = s

Dim c As Integer = StringHandleMBS.UTF8Length(m, m.size)

MsgBox str(c)+" characters, "+str(m.size)+" bytes"
```

**Notes:**

Please make sure ptr is a valid ptr.
This is the internal function we use ourselves for the UTF-8 related functions.

### 178.2.45 UTF8LengthToBytes(data as ptr, TotalByteLength as integer, Characters as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries how many bytes are needed for UTF-8 characters.
**Example:**

```
Dim s As String = "Hello √§√√º"
Dim m As MemoryBlock = s
```

```
Dim c As Integer = StringHandleMBS.UTF8Length(m, m.size)
Dim b As Integer = StringHandleMBS.UTF8LengthToBytes(m, m.size, c)

MsgBox Str(c)+" characters, "+Str(b)+" bytes"
```

**Notes:**

Please make sure ptr is a valid ptr.
This is the internal function we use ourselves for the UTF-8 related functions.

### 178.2.46 Properties

### 178.2.47 BlockLen as Int64

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The size of the memory currently used for this class.
**Notes:**

This value increases by BlockSize if more memory is needed.
(Read only property)

### 178.2.48 BlockSize as Int64

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The size of the blocks to allocate for storing the data.
**Notes:** (Read and Write property)

### 178.2.49 Encoding as Int64

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The encoding to use for returned strings.
**Notes:**

Only useful on Xojo 4.5 and newer.

Some example values for encoding:

(Read and Write property)

| | | |
|---|---|---|
| MacRoman | 0 | Also for ASCII or binary data used. |
| WindowsLatin1 | & h0500 | ANSI codepage 1252 |
| ISOLatin1 | & h0201 | ISO 8859-1 |
| NextStepLatin | & h0B01 | NextStep encoding |
| Unicode | & h0100 | 16 bit Unicode |
| UTF8 | & h08000100 | 8 bit Unicode |
| Invalid | & hFFFFFFFF | (Binary) |
| Invalid | & hFFFF | (Binary) |

### 178.2.50 Len as Int64

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the len in bytes of the stored string.
**Notes:** (Read only property)

### 178.2.51 LenUTF8 as Int64

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries length of text in UTF-8 encoded characters.
**Example:**

```
Dim s As String = "Hello √√§√º!"
Dim d As New StringHandleMBS(s)

MsgBox Str(d.Len)+" bytes, "+Str(d.LenUTF8)+" characters"
```

**Notes:**

Returns incorrect values if string is not UTF-8!
(Read only property)

### 178.2.52 ReplaceCount as Int64

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** After a call to one of the Replace functions the number of items replaced.
**Notes:** (Read and Write property)

### 178.2.53 ValidASCII as Boolean

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this string handle contains valid ASCII text.
**Notes:** (Read only property)

### 178.2.54 ValidUTF8 as Boolean

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this string handle contains valid UTF-8 text.
**Example:**

```
Dim s As New StringHandleMBS

s.Add "Hello World"

Dim validUTF8a As Boolean = s.ValidUTF8

// now make invalid
s.AddByte 222

Dim validUTF8b As Boolean = s.ValidUTF8

Break
```

**Notes:** (Read only property)

### 178.2.55 UInt16Value(offset as Integer) as UInt16

MBS DataTypes Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get or set an UInt16 value.
**Example:**

```
Dim t As String = ConvertEncoding("Hello Welt", encodings.UTF16)
Dim s As New StringHandleMBS(t)

// offset 1 is first character, so second character is offset 3
Dim n As Integer = s.UInt16Value(3)
s.UInt16Value(3) = Asc("a")

MsgBox s.Copy
```

```
// append

s.UInt16Value(s.Len+1) = Asc("!")
MsgBox s.Copy
```

**Notes:**

Offset is range checked and may raise an OutOfBoundsException.

When you assign a value and the offset is exactly size of the string handle plus one, we append the new byte. (Read and Write computed property)

### 178.2.56 UInt32Value(offset as Integer) as UInt32

MBS DataTypes Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get or set an UInt32 value.
**Notes:**

Offset is range checked and may raise an OutOfBoundsException.

When you assign a value and the offset is exactly size of the string handle plus one, we append the new byte. (Read and Write computed property)

### 178.2.57 UInt8Value(offset as Integer) as UInt8

MBS DataTypes Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get or set a byte value.
**Example:**

```
Dim s As New StringHandleMBS("Hello Welt")

dim n as integer = s.UInt8Value(2)
s.UInt8Value(2) = Asc("a")

MsgBox s.Copy

// append

s.UInt8Value(s.Len+1) = Asc("!")
MsgBox s.Copy
```

**Notes:**

Offset is range checked and may raise an OutOfBoundsException.

When you assign a value and the offset is exactly size of the string handle plus one, we append the new byte. (Read and Write computed property)

### 178.2.58 Constants

### 178.2.59 encodingASCII = & h0600

MBS DataTypes Plugin, Plugin Version: 19.1.

**Function:** One of the encoding constants.
**Notes:** ASCII encoding.

### 178.2.60 encodingBinary = & hFFFF

MBS DataTypes Plugin, Plugin Version: 19.1.

**Function:** One of the encoding constants.
**Notes:** No encoding.

### 178.2.61 encodingLatin1 = & h0201

MBS DataTypes Plugin, Plugin Version: 19.1.

**Function:** One of the encoding constants.
**Notes:** ISO Latin 1 encoding.

### 178.2.62 encodingMacRoman = 0

MBS DataTypes Plugin, Plugin Version: 19.1.

**Function:** One of the encoding constants.
**Notes:** Mac Roman encoding.

### 178.2.63 encodingUnicode = & h0100

MBS DataTypes Plugin, Plugin Version: 19.1.

**Function:** One of the encoding constants.
**Notes:** Unicode UTF16 encoding.

### 178.2.64 encodingUTF8 = & h08000100

MBS DataTypes Plugin, Plugin Version: 19.1.

**Function:** One of the encoding constants.
**Notes:** UTF-8 encoding.

### 178.2.65 encodingWindows = & h0500

MBS DataTypes Plugin, Plugin Version: 19.1.

**Function:** One of the encoding constants.
**Notes:** Windows encoding.

## 178.3 class StyledText

### 178.3.1 class StyledText

Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The built-in class for styled text.

### 178.3.2 Properties

### 178.3.3 RTFDataMBS(SkipParagraphs as Boolean = false) as string

MBS Util Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Get or set RTF data for this StyledText.
**Example:**

```
Dim s As New StyledText

s.Text = "Hello World"

s.Bold(0,5) = True
s.size(0,6) = 12
s.size(6,5) = 14

# if TargetDesktop
Dim m As String = s.RTFData
# EndIf

Dim r As String = s.RTFDataMBS

Break
```

**Notes:**

This is a replacement for the built-in RTFData property.
We tried to make the results exactly like the original.
Speed should be a little bit faster than the official method.

Added SkipParagraphs parameter in version 21.2.
If SkipParagraphs is true, we skip to look on paragraphs, so left/center/right alignment won't be included in the output, but that is much faster.

See also RTFDataMBS and WinRTFDataMBS in TextArea and DesktopTextArea controls and RTFData in NSTextViewMBS class.
(Read and Write computed property)

## 178.4 class TextConverterMBS

### 178.4.1 class TextConverterMBS

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for converting text from one text encoding to other one.
**Example:**

```
dim s as string = "Hello √§√√º"
dim c as new TextConverterMBS

c.Input = s
c.InputEncoding = "UTF-8"
c.OutputEncoding = "WINDOWS-1252"

c.Convert

dim output as string = c.Output

Break // see in debugger
```

**Notes:**

Wraps iconv library. Please use LoadIconvLibrary function to load it. Without the library, we use fallback code, which just passes through data.

Encoding list with alternative names:

- ANSI_X3.4-1968,ANSI_X3.4-1986,ASCII,CP367,IBM367,ISO-IR-6,ISO646-US,ISO_646.IRV:1991,US,US-ASCII,CSASCII
- UTF-8

- 17.5, page 37: What's New in the MBS Plugins, With the Plugins growing every year, here are new capabilities you may have missed by Stefanie Juchmes
- 17.3, page 11: News

### 178.4.7 Videos

- Presentation from Xojo Developer Conference 2019 in Miami.

### 178.4.8 Methods

### 178.4.9 Canonicalize(name as String) as String

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Canonicalize an encoding name.
**Example:**

```
MsgBox TextConverterMBS.Canonicalize("utf-8")
MsgBox TextConverterMBS.Canonicalize("Latin1")
```

**Notes:** The result is either a canonical encoding name, or name itself.

### 178.4.10 Constructor

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor.
**Notes:** Currently enables translit and ignore by default.

### 178.4.11 Convert

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts text.
**Example:**

```
dim s as string = "Hello √§√√º"
dim c as new TextConverterMBS

c.Input = s
c.InputEncoding = "UTF-8"
c.OutputEncoding = "WINDOWS-1252"

c.Convert

dim output as string = c.Output

Break // see in debugger
```

**Notes:**

Input is read from either Input or InputData properties.
ErrorCode and ErrorMessage are set.
Output is set with output data.

### 178.4.12 EncodingNames(Mode as Integer = 0) as String()

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries names of text encodings.
**Example:**

```
MsgBox Join(TextConverterMBS.EncodingNames(1),EndOfLine)
```

**Notes:**

Mode 0 returns list of text encoding names.
Mode 1 returns list of text encoding names and alternative names separated by comma.
Mode 2 returns list of text encoding names and alternative names.

e.g. "CP1252,MS-ANSI,WINDOWS-1252" in the list for mode 1.

### 178.4.13 LoadIconvLibrary(path as String, byref Error as String) as boolean

MBS Tools Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Loads the iconv library.
**Notes:**

The TextConverterMBS class uses libiconv for text encoding conversion.
If you explicitly need, you can load the library on start of solution.

MBS Plugin may try to load iconv.dll/dylib/so automatically when first iconv function is called.

### 178.4.14 Properties

### 178.4.15 ErrorCode as Integer

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Last error code from Convert method.
**Notes:** (Read and Write property)

### 178.4.16 ErrorMessage as String

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Text message for error.
**Notes:** (Read and Write property)

### 178.4.17 Ignore as Boolean

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether to ignore errors.
**Notes:**

Characters that cannot be represented in the target character set will be silently discarded.
(Read and Write property)

### 178.4.18 Input as String

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Input text string.
**Notes:** (Read and Write property)

### 178.4.19 InputData as MemoryBlock

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Input as memoryblock.
**Notes:** (Read and Write property)

### 178.4.20 InputEncoding as String

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Name of input encoding.
**Notes:**

e.g. "UTF-8"
(Read and Write property)

### 178.4.21 InputPosition as Integer

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The input position on the end of convert.
**Notes:**

If errors are not ignored, this shows error position.
(Read and Write property)

### 178.4.22 LibVersion as Integer

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The library version for iconv.
**Notes:**

Returns major * 256 + minor, e.g. & h10B for 1.11.
(Read only property)

### 178.4.23 Output as String

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The output text.
**Notes:**

String may not have an encoding set, if the plugin does not recognize the encoding.
But for e.g. UTF-8, we set the text encoding.
(Read and Write property)

### 178.4.24 OutputEncoding as String

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Name of output encoding.
**Notes:**

e.g. "UTF-8"
(Read and Write property)

### 178.4.25 OutputLength as Integer

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The length of the output in bytes.
**Notes:** (Read and Write property)

### 178.4.26 Translit as Boolean

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether to activate transliteration.
**Notes:**

This means that when a character cannot be represented in the target character set, it can be approximated through one or several characters that look similar to the original character.

(Read and Write property)

## 178.5 class TextEncoding

### 178.5.1 class TextEncoding

Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Built in class from Xojo for text encodings.

### 178.5.2 Methods

### 178.5.3 InternetNameMBS as string

MBS Util Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the name of this text encoding.
**Notes:**

We have this method in MBS Plugin as InternetName function does not work on Linux/Windows.
(See feedback case 30712)

### 178.5.4 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.5pr6

# Chapter 179

# Sudden Motion Sensor

## 179.1 module UniMotionMBS

### 179.1.1 module UniMotionMBS

MBS MacOSX Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

**Function:** This module handles communication with the UniMotion library.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

UniMotion - Unified Motion detection for Apple portables.

Copyright (c) 2006 Lincoln Ramsay. All rights reserved.

### 179.1.4 Methods

### 179.1.5 DetectSMS as Integer

MBS MacOSX Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

**Function:** Returns the value of SMS hardware present or unknown if no hardware is detected.
**Example:**

```
dim type as Integer = UniMotionMBS.DetectSMS

if type=0 then
MsgBox "Unknown motion hardware or none found."
quit
end if
```

**Notes:**

Use the constants powerbook, ibook, highrespb and macbookpro.

Use the value returned from DetectSMS as the type for the other functions.
Don't call readsms(detectsms...) as this will do extra work.
If you can't save the type between calls pass 0 as type to avoid extra work.

### 179.1.6 LoadLibrary(file as folderitem) as boolean

MBS MacOSX Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

**Function:** Loads the library from the folderitem.
**Example:**

```
dim f as FolderItem
```

```
f=GetFolderItem("libUniMotion.dylib")
if UniMotionMBS.LoadLibrary(f) then
'ok
MainWindow.Show
else
MsgBox "Failed to load the UniMotion library."
quit
end if
```

**Notes:** Returns true on success and false on failure.

### 179.1.7 ReadSMS(type as Integer, byref x as Integer, byref y as Integer, byref z as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

**Function:** Reads the "calibrated" values (same as raw if no calibration data exists)
**Notes:** Returns true on success and false on failure.

### 179.1.8 ReadSMSraw(type as Integer, byref x as Integer, byref y as Integer, byref z as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

**Function:** Reads the raw, unmodified values.
**Notes:** Returns true on success and false on failure.

### 179.1.9 ReadSMSrawBytes(type as Integer) as memoryblock

MBS MacOSX Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

**Function:** Reads the raw data bytes.
**Notes:**

The raw SMS data (useful for debugging)
Note that endian issues make reading the raw bytes non-trivial.
Returns nil or a memoryblock with the data.

### 179.1.10 ReadSMSreal(type as Integer, byref x as Double, byref y as Double, byref z as Double) as boolean

MBS MacOSX Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

**Function:** Reads the real (1.0 = 1G) values (requires calibration data).
**Notes:**

Note that this is the preferred API as it need not change with new machines.
If no "scale" calibration data exists defaults will be used based on the machine type.

Returns true on success and false on failure.

### 179.1.11 ReadSMSscaled(type as Integer, byref x as Integer, byref y as Integer, byref z as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

**Function:** Returns the scaled values, like real but easier to handle.
**Notes:**

This reverses the backwards polarity of x and increases the range of the older machines to match the MacBook [ Pro ] sensor.

Returns true on success and false on failure.

### 179.1.12 Constants

### 179.1.13 highrespb=3

MBS MacOSX Plugin, Plugin Version: 9.1.

**Function:** One of the constants used by DetectSMS.

### 179.1.14 ibook=2

MBS MacOSX Plugin, Plugin Version: 9.1.

**Function:** One of the constants used by DetectSMS.

### 179.1.15 macbookpro=4

MBS MacOSX Plugin, Plugin Version: 9.1.

**Function:** One of the constants used by DetectSMS.

### 179.1.16 powerbook=1

MBS MacOSX Plugin, Plugin Version: 9.1.

**Function:** One of the constants used by DetectSMS.

### 179.1.17 unknown=0

MBS MacOSX Plugin, Plugin Version: 9.1.

**Function:** One of the constants used by DetectSMS.

# Chapter 180

# SVG

## 180.1 class ReSVGMBS

### 180.1.1 class ReSVGMBS

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** A class to render SVG data to a picture.
**Example:**

```
// we load this file
Dim file As FolderItem = SpecialFolder.Desktop.Child("test.svg")

Dim p As New ReSVGMBS(file)

// and render them in their normal size:
Dim pic As picture = p.RenderToPicture(p.Width, p.Height)

// show in the window
Window1.Backdrop = pic
```

**Notes:**

This uses the ReSVG library written in Rust.
ReSVG is a fast, small, portable SVG library with the goal to support the whole SVG spec.

see
https://github.com/RazrFalcon/resvg

### 180.1.2 Blog Entries

- News from the MBS Xojo Plugins in Version 23.0
- MonkeyBread Software Releases the MBS Xojo Plugins in version 23.0
- MBS Xojo Plugins, version 22.6pr2

### 180.1.3 Blog Entries

- News from the MBS Xojo Plugins in Version 23.0
- MonkeyBread Software Releases the MBS Xojo Plugins in version 23.0
- MBS Xojo Plugins, version 22.6pr2

### 180.1.4 Methods

### 180.1.5 Constructor(data as MemoryBlock)

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Creates SVG from data.
**Notes:**

data: SVG data. Can contain SVG string or gzip compressed data. Must not be nil.

Raises exceptions in case of errors.
See also:

- 180.1.6 Constructor(data as String) 25692
- 180.1.7 Constructor(file as FolderItem) 25693

### 180.1.6 Constructor(data as String)

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Creates SVG from data.
**Notes:**

data: SVG data. Can contain SVG string or gzip compressed data. Must not be empty.

Raises exceptions in case of errors.
See also:

- 180.1.5 Constructor(data as MemoryBlock) 25692
- 180.1.7 Constructor(file as FolderItem) 25693

### 180.1.7 Constructor(file as FolderItem)

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Creates SVG from file.
**Example:**

```
// we load this file
Dim file As FolderItem = SpecialFolder.Desktop.Child("test.svg")

Dim p As New ReSVGMBS(file)

// and render them in their normal size:
Dim pic As picture = p.RenderToPicture(p.Width, p.Height)

// show in the window
Window1.Backdrop = pic
```

**Notes:**

For the files, .svg and .svgz files are supported.

Raises exceptions in case of errors.
See also:

- 180.1.5 Constructor(data as MemoryBlock) 25692
- 180.1.6 Constructor(data as String) 25692

### 180.1.8 ImageBox(byref x as double, byref y as double, byref width as double, byref height as double) as Boolean

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Queries the image bounding box.
**Notes:**

Can be smaller or bigger than a view box.

Returns true on success and sets passed variables.

Return false if an image has no elements.

### 180.1.9 InitLog

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Initializes the library log.
**Notes:**

Use it if you want to see any warnings.
Must be called only once.
All warnings will be printed to the ‘stderr‘.

### 180.1.10 LoadSystemFonts

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Loads system fonts into the internal fonts database.
**Notes:**

This method is very IO intensive.

This method should be executed only once.

The system scanning is not perfect, so some fonts may be omitted. Please send a bug report in this case.
Prints warnings into the log.

Has no effect when the ‘text‘ feature is not enabled.

### 180.1.11 NodeBox(id as string, byref x as double, byref y as double, byref width as double, byref height as double) as Boolean

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns node’s bounding box by ID.
**Notes:**

tree Render tree.

id: Node's ID.

Returns false if a node with such an ID does not exist.
returns false if ID is an empty string.

Returns true on success and sets passed variables.

### 180.1.12 NodeExists(id as string) as Boolean

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns true if a renderable node with such an ID exists.
**Notes:**

Return false if a node doesn't exist or ID isn't a UTF-8 string.
Return false if a node exists, but not renderable.

### 180.1.13 Render(width as Integer, Height as Integer, pixmap as Ptr, FitToType as Integer = 0, FitToValue as single = 0.0, transform as Ptr = nil)

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Renders the SVG onto the pixmap.
**Notes:**

FitToType: Specifies into which region SVG should be fit.
transform: A root SVG transform. Can be used to position SVG inside the pixmap. If nil, we use identity transform.
width: Pixmap width.
height: Pixmap height.
pixmap: Pixmap data. Should have width * height * 4 bytes in size and contain premultiplied RGBA8888 pixels.

### 180.1.14 RenderNode(ID as string, width as Integer, Height as Integer, pixmap as Ptr, FitToType as Integer = 0, FitToValue as single = 0.0, transform as Ptr = nil)

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Renders the SVG onto the pixmap.
**Notes:**

id: Node's ID. Must not be "".
FitToType: Specifies into which region SVG should be fit.
transform: A root SVG transform. Can be used to position SVG inside the pixmap. If nil, we use identity transform.
width: Pixmap width.
height: Pixmap height.
pixmap: Pixmap data. Should have width * height * 4 bytes in size and contain premultiplied RGBA8888 pixels.

### 180.1.15 RenderNodeToPicture(ID as string, width as Integer, Height as Integer, FitToType as Integer = 0, FitToValue as single = 0.0, transform as Ptr = nil) as Picture

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Renders the SVG as picture.
**Notes:**

id: Node's ID. Must not be "".
FitToType: Specifies into which region SVG should be fit.
transform: A root SVG transform. Can be used to position SVG inside the picture. If nil, we use identity transform.
width: picture width.
height: picture height.

On success, we return the picture with the pixels.
Not supported for macOS 32-bit.

### 180.1.16 RenderToFile(file as FolderItem, FitToType as Integer = 0, FitToValue as single = 0.0)

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Renders SVG to file.
**Notes:** Only for macOS 32-bit.

### 180.1.17 RenderToPicture(width as Integer, Height as Integer, FitToType as Integer = 0, FitToValue as single = 0.0, transform as Ptr = nil) as Picture

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Renders the SVG as picture.
**Notes:**

FitToType: Specifies into which region SVG should be fit.
transform: A root SVG transform. Can be used to position SVG inside the picture. If nil, we use identity transform.
width: picture width.
height: picture height.

On success, we return the picture with the pixels.
Not supported for macOS 32-bit.

### 180.1.18 ViewBox(byref x as double, byref y as double, byref width as double, byref height as double) as Boolean

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Queries the image viewbox.
**Notes:** Returns true on success and sets passed variables.

### 180.1.19 Properties

### 180.1.20 Available as Boolean

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Whether the class is available.
**Example:**

```
MessageBox "Available: "+ReSVGMBS.Available.ToString
```

**Notes:**

Should return true for all targets except iOS.
(Read only property)

### 180.1.21 DPI as Double

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The target DPI.
**Notes:**

Impact units conversion.
Default: 96
(Read and Write property)

### 180.1.22 FontFamily as String

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The default font family.
**Notes:**

Will be used when no ‘font-family‘ attribute is set in the SVG.

Default: Times New Roman
(Read and Write property)

### 180.1.23 FontSize as Double

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The default font size.
**Notes:**

Will be used when no ‘font-size‘ attribute is set in the SVG.
Default: 12
(Read and Write property)

### 180.1.24 Handle as Integer

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The internal object reference.
**Notes:** (Read only property)

### 180.1.25 Height as Double

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns an image height.
**Example:**

```
Dim file As FolderItem = SpecialFolder.Desktop.Child("test.svg")
Dim p As New ReSVGMBS(file)

MessageBox "width "+p.Width.ToString+" x height "+p.Height.ToString
```

**Notes:**

The size of a canvas that required to render this SVG.
(Read only property)

### 180.1.26 ImageRendering as Integer

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The default image rendering method.
**Example:**

```
ReSVGMBS.ImageRendering = ReSVGMBS.kImageRenderingOptimizeQuality
```

**Notes:**

Will be used when an SVG element's 'image-rendering' property is set to 'auto'.
Default: kImageRenderingOptimizeQuality
(Read and Write property)

### 180.1.27 IsEmpty as Boolean

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Checks that tree has any nodes.

**Notes:**

Returns true if tree has no nodes.
(Read only property)

### 180.1.28 KeepNamedGroups as Boolean

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Keep named groups.
**Notes:**

If set to ‘true‘, all non-empty groups with ‘id‘ attribute will not be removed.
Default: false
(Read and Write property)

### 180.1.29 Languages as String

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** A comma-separated list of languages.
**Example:**

```
ReSVGMBS.Languages = "en,en-US"
MessageBox ReSVGMBS.Languages
```

**Notes:**

Will be used to resolve a ‘systemLanguage‘ conditional attribute.
Example: en,en-US.
Default: en
(Read and Write property)

### 180.1.30 ShapeRendering as Integer

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The default shape rendering method.
**Example:**

```
ReSVGMBS.ShapeRendering = ReSVGMBS.kShapeRenderingGeometricPrecision
```

**Notes:**

Will be used when an SVG element's 'shape-rendering' property is set to 'auto'.

Default: kShapeRenderingGeometricPrecision
(Read and Write property)

### 180.1.31 TextRendering as Integer

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The default text rendering method.
**Example:**

```
ReSVGMBS.TextRendering = ReSVGMBS.kTextRenderingOptimizeLegibility
```

**Notes:**

Will be used when an SVG element's 'text-rendering' property is set to 'auto'.
Default: kTextRenderingOptimizeLegibility
(Read and Write property)

### 180.1.32 Width as Double

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns an image width.
**Example:**

```
Dim file As FolderItem = SpecialFolder.Desktop.Child("test.svg")
Dim p As New ReSVGMBS(file)

MessageBox "width "+p.Width.ToString+" x height "+p.Height.ToString
```

**Notes:**

The size of a canvas that required to render this SVG.
(Read only property)

### 180.1.33 Constants

### 180.1.34 kErrorElementsLimitReached = 4

MBS Images Plugin, Plugin Version: 23.0.

**Function:** One of the error constants.
**Notes:** We do not allow SVG with more than 1_000_000 elements for security reasons.

### 180.1.35 kErrorFileOpenFailed = 2

MBS Images Plugin, Plugin Version: 23.0.

**Function:** One of the error constants.
**Notes:** Failed to open the provided file.

### 180.1.36 kErrorInvalidSize = 5

MBS Images Plugin, Plugin Version: 23.0.

**Function:** One of the error constants.
**Notes:**

SVG doesn't have a valid size.
Occurs when width and/or height are <= 0.
Also occurs if width, height and viewBox are not set.

### 180.1.37 kErrorMalformedGZip = 3

MBS Images Plugin, Plugin Version: 23.0.

**Function:** One of the error constants.
**Notes:** Compressed SVG must use the GZip algorithm.

### 180.1.38 kErrorNotAnUTF8String = 1

MBS Images Plugin, Plugin Version: 23.0.

**Function:** One of the error constants.
**Notes:** Only UTF-8 content are supported.

### 180.1.39 kErrorOK = 0

MBS Images Plugin, Plugin Version: 23.0.

**Function:** One of the error constants.
**Notes:** Everything is ok.

### 180.1.40 kErrorParsingFailed = 6

MBS Images Plugin, Plugin Version: 23.0.

**Function:** One of the error constants.
**Notes:** Failed to parse an SVG data.

### 180.1.41 kFitToTypeHeight = 2

MBS Images Plugin, Plugin Version: 23.0.

**Function:** One of the fit constants.
**Notes:** Fit an image to a specified height.

### 180.1.42 kFitToTypeOriginal = 0

MBS Images Plugin, Plugin Version: 23.0.

**Function:** One of the fit constants.
**Notes:** Use an original image size.

### 180.1.43 kFitToTypeWidth = 1

MBS Images Plugin, Plugin Version: 23.0.

**Function:** One of the fit constants.
**Notes:** Fit an image to a specified width.

### 180.1.44 kFitToTypeZoom = 3

MBS Images Plugin, Plugin Version: 23.0.

**Function:** One of the fit constants.
**Notes:** Zoom an image using scaling factor.

### 180.1.45 kImageRenderingOptimizeQuality = 0

MBS Images Plugin, Plugin Version: 23.0.

**Function:** One of the image rendering constants.
**Notes:** Optimize for quality

### 180.1.46 kImageRenderingOptimizeSpeed = 1

MBS Images Plugin, Plugin Version: 23.0.

**Function:** One of the image rendering constants.
**Notes:** Optimize for speed

### 180.1.47 kShapeRenderingCrispEdges = 1

MBS Images Plugin, Plugin Version: 23.0.

**Function:** One of the shape rendering constants.
**Notes:** Crisp Edges

### 180.1.48 kShapeRenderingGeometricPrecision = 2

MBS Images Plugin, Plugin Version: 23.0.

**Function:** One of the shape rendering constants.
**Notes:** Geometric precision

### 180.1.49 kShapeRenderingOptimizeSpeed = 0

MBS Images Plugin, Plugin Version: 23.0.

**Function:** One of the shape rendering constants.
**Notes:** Optimize speed

### 180.1.50 kTextRenderingGeometricPrecision = 2

MBS Images Plugin, Plugin Version: 23.0.

**Function:** One of the text renderings constants.
**Notes:** Geometric precision

### 180.1.51 kTextRenderingOptimizeLegibility = 1

MBS Images Plugin, Plugin Version: 23.0.

**Function:** One of the text renderings constants.
**Notes:** Optimize legibility

### 180.1.52 kTextRenderingOptimizeSpeed = 0

MBS Images Plugin, Plugin Version: 23.0.

**Function:** One of the text renderings constants.
**Notes:** Optimize for speed

# Chapter 181

# System

## 181.1 Globals

### 181.1.1 GetHelpTagDelayMBS as Integer

MBS MacOSX Plugin, Platform: macOS, Targets: Desktop only.

**Function:** Returns the delay time for the help tags.
**Example:**

msgbox str(GetHelpTagDelayMBS)

**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

A positive value is for milliseconds and a negative value for microseconds.
It looks like the setting of this property is not recognized always.
This setting is also per application and not saved between sessions.

### 181.1.2 Blog Entries

- MBS Xojo Plugins, version 20.6pr4

### 181.1.3 GetHelpTagDisplayedMBS as boolean

MBS MacOSX Plugin, Platform: macOS, Targets: Desktop only.

**Function:** whether the help tags are displayed.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:** This setting is per application

and not saved between sessions.

### 181.1.4 Blog Entries

- MBS Xojo Plugins, version 20.6pr4

### 181.1.5 SetHelpTagDelayMBS(value as Integer)

MBS MacOSX Plugin, Platform: macOS, Targets: Desktop only.

**Function:** Sets the delay time for the help tags.
**Example:**

```
if GetHelpTagDelayMBS<>5000 then // change to 5 seconds
SetHelpTagDelayMBS 5000
end if
```

**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

A positive value is for milliseconds and a negative value for microseconds.
It looks like the setting of this property is not recognized always.
This setting is also per application and not saved between sessions.

Xojo 2006r3 does set this value whenever a window comes to front, so if you want to set it really, use some code like in the example above in a timer to change it to your need.

### 181.1.6 Blog Entries

- MBS Xojo Plugins, version 20.6pr4

### 181.1.7 SetHelpTagDisplayedMBS(value as boolean)

MBS MacOSX Plugin, Platform: macOS, Targets: Desktop only.

**Function:** Sets whether the help tags are displayed.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:** This setting is per application and not saved between sessions.

### 181.1.8 Blog Entries

- MBS Xojo Plugins, version 20.6pr4

### 181.1.9 GetWindowsColorProfileMBS as folderitem

MBS Win Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Returns the path to the color profile for the main screen on Windows.
**Example:**

```
dim f as folderitem

f=getwindowsColorProfileMBS

msgBox f.NativePath
```

**Notes:** Returns nil on any error.

### 181.1.10 Blog Entries

- MBS Xojo Plugins, version 21.6pr1

### 181.1.11 GetWindowsDisplayColorProfileMBS(DisplayIndex as Integer) as folderitem

MBS Win Plugin, Plugin Version: 8.6, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Returns the path to the color profile for the given screen on Windows.
**Example:**

```
dim f as folderitem

f=GetWindowsDisplayColorProfileMBS(1)

msgBox f.NativePath
```

**Notes:**

Index is zero based.
Returns nil on any error.
See also:

- 181.1.12 GetWindowsDisplayColorProfileMBS(DisplayName as String) as folderitem 25710

### 181.1.12 GetWindowsDisplayColorProfileMBS(DisplayName as String) as folderitem

MBS Win Plugin, Plugin Version: 15.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Returns the path to the color profile for the given screen on Windows.
**Notes:** Same as GetWindowsDisplayColorProfileMBS, but without index and taking a name.
See also:

- 181.1.11 GetWindowsDisplayColorProfileMBS(DisplayIndex as Integer) as folderitem 25709

### 181.1.13 CrashNiceMBS

MBS Util Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Crashes the application.
**Notes:** Does a nil object dereference which leads to a crash.

### 181.1.14 CrashUglyMBS

MBS Util Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Crashes the application.
**Notes:**

This function should hide the stack list so it should be impossible to know what function crashed.

It may take a second to finish it, but CrashReporter (on Mac OS X) and other tools will not be able to show you which function crashed.

### 181.1.15 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr1

### 181.1.16 DelayMBS(time as Double)

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Stopps the application for the given time.
**Example:**

```
DelayMBS 1.5 // wait one and a half seconds
```

**Notes:**

The application should take nearly 0% CPU Power till time has gone.
If you need more options like blocking other RB threads, check the DelayMBS method with mode parameter.

Another example from Kirk Clendinning:

Property: lastupdate as Integer

Sub YieldProcessorTime(periodticks as Integer, widthmilliseconds as Integer)
// use the Monkeybread Software delay to yeild time for a screen update
// every period*ticks for a pulse width of width milliseconds

if ticks>lastupdate+periodTicks then
delayMBS widthmilliseconds/1000
lastupdate=ticks
end if

exception err
ExceptionReport(err, "Utils:Methods:YieldProcessorTime")
end sub

YieldProcessorTime(15, 20) gives me a delay of 20ms every 250ms. But,
since the delayMBS yields time more efficiently than using a RB thread, this turns out to be a much more effective way to update progress bars etc.
I don't need the delay per se, but since RB still hasn't written a good yield function (that I know of) your delayMSB works instead.

Please use optional mode flags with DelayDontWaitNextEvent when using on thread.

Using DelayMBS on Web Applications can cause problems as the server is paused than for all clients, a really bad thing.
See also:

- 181.1.17 DelayMBS(time as Double, mode as Integer) 25711

### 181.1.17 DelayMBS(time as Double, mode as Integer)

MBS Util Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Stopps the application for the given time.
**Example:**

```
DelayMBS 1.5, 0 // wait one and a half seconds
```

**Notes:**

Like DelayMBS with one parameter but additional mode parameter:

combine the following constants:

```
const DelayDontMPYield = 1              // Don't give additional time for other OS threads
const DelayDontRBYield = 2              // Don't give Xojo time for other Xojo threads
const DelayDontThreadYield = 4          // Don't give addition time for other OS threads
const DelayDontQuickTimeYield = 8       // Don't give time for QuickTime Movieplayer
const DelayDontWait = 16                // Don't give CPU time for other OS threads
const DelayDontWaitNextEvent = 32       // Don't give CPU time to handle events on Mac OS X to avoid beachball
                                        cursor
const DelayDontSleep = 64               // Don't give CPU time for other OS threads (Windows)
```

Using DelayDontWaitNextEvent may show the beach ball cursor, but will have the OpenDocument event working as other AppleEvents. Please use DelayDontWaitNextEvent option for running on threads.

Using DelayMBS on Web Applications can cause problems as the server is paused than for all clients, a really bad thing.

### 181.1.18 Blog Entries

### 181.1.19 Xojo Developer Magazine

- 19.2, page 33: Shake It!, Shake any window to show an incorrect entry... on any platform, without plugins or declares! by Markus Winter

See also:

- 181.1.16 DelayMBS(time as Double) 25710

### 181.1.20 SleepMBS(time as Double)

MBS Util Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sleeps the current thread for the given time in seconds.
**Example:**

```
dim sock as TCPSocket // some socket
dim done as Boolean // some global property

do

SleepMBS(0.1) // 100 ms
sock.poll

loop until done
```

**Notes:**

Sleep does not yield CPU time to other functions, so you really sleep the whole process.
Useful for console projects which sleep for a few milliseconds in a loop polling a socket.

If you need to give CPU time to socket, other threads or for quicktime movie playback, please use DelayMBS.

### 181.1.21 Blog Entries

- MBS Real Studio Plugins, version 11.3pr9

### 181.1.22 InstallSystemExceptionHandlerMBS(Message as string = "")

MBS Main Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Targets: All.

**Function:** Installs an exception handler to show a message dialog with custom message before the app crashes.
**Example:**

```
InstallSystemExceptionHandlerMBS "My message"
```

**Notes:**

If message is empty, the default message is "An unhandled C++ exception occurred. The application will now quit. A common reason for this is simply running out of memory.".

The plugin allocates some memory which we release later to make sure there is free memory for the message box.

On Windows this method does not work as currently we use static runtime on Windows which does not allow the plugin to access the runtime inside the RB framework.

### 181.1.23 Blog Entries

- About InstallSystemExceptionHandlerMBS

### 181.1.24 AbortMBS

MBS Util Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The abort function causes abnormal program termination to occur.
**Notes:**

Any open streams are flushed and closed.
The abort function never returns.

### 181.1.25 ExitMBS(code as Integer)

MBS Util Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Perform normal program termination.
**Notes:**

See "man 3 exit" on the terminal on Mac OS X or Linux for details.
You define your own error codes. Zero is no error by convention.

### 181.1.26 Blog Entries

- Console and GUI in one project
- Tipp of the day: Shell SSH Trouble and Workaround

### 181.1.27 GlobalIdleTimeMBS as Double

MBS MacOSX Plugin, Plugin Version: 13.2, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** Queries the current global idle time on a Mac.
**Example:**

MsgBox Format(GlobalIdleTimeMBS,"0.0")+" seconds idle"

**Notes:**

The return value is the number of seconds the user did not use mouse or keyboard.
Returns 0 on any error.

### 181.1.28 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr5

### 181.1.29 MacGlobalIdleTimeMBS as UInt64

MBS MacOSX Plugin, Plugin Version: 10.0, Platform: macOS, Targets: Desktop only.

**Function:** Queries the current global idle time on a Mac.
**Example:**

MsgBox Format(MacGlobalIdleTimeMBS/1000000000.0,"0.0")+" seconds idle"

**Notes:**

The return value is the number of nanoseconds the user did not use mouse or keyboard.
Returns 0 on any error.

Deprecated in 13.2 plugins in favor of GlobalIdleTimeMBS.

### 181.1.30 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr5
- MBS REALbasic plug-ins version 10.0

### 181.1.31 MacMountServerVolumeMBS(URL as string, MountDir as String, User as String, Password as String, byref Disk as FolderItem, flags as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

**Function:** This routine will mount the server specified by url at mountDir (or the default location if mountDir is empty).
**Example:**

```
dim flags as Integer = 0
dim disk as FolderItem
dim URL as string = "smb://Test.local"
dim user as string = "root"
dim pass as string = "xxx"

dim e as Integer = MacMountServerVolumeMBS(URL, "", user, pass, disk, flags)

if e = 0 then
MsgBox "OK"
else
MsgBox disk.NativePath
end if
```

**Notes:**

An optional user and password can be passed in for authentication. If no user or password is provided then the underlying file system will handle authentication if required. This routine returns after the mount is complete.

url: The server to mount.
mountDir: The directory to mount the server to (default if empty).
user: String to pass as user for authentication.
password: String to pass as password for authenticated log in.
Disk: The folderItem of the newly mounted volume.
Flags: Options (such as kFSMountServerMarkDoNotDisplay and kFSMountServerMountOnMountDir).

| Constant | Value | Description |
|---|---|---|
| kFSMountServerMarkDoNotDisplay | 1 | Specify this option if you do want the volume displayed as a stand |

along volume in the UI.

| | | |
|---|---|---|
| kFSMountServerMountOnMountDir | 4 | Specify this option if you want the volume mounted on the mountdir passed in instead of in it. |
| kFSMountServerSuppressConnectionUI | & h40 | Specify this option if you want to suppress connection-time UI when mounting the server volume. |

Returns Mac OS X error code. Zero for success.

### 181.1.32 Blog Entries

- MBS Plugins updated for Xojo 2019r2
- MBS Xojo / Real Studio Plugins, version 16.1pr5

### 181.1.33 MacUnmountVolumeMBS(volume as folderItem, Force as Boolean, byref dissenter as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

**Function:** This routine unmounts the volume specified by FolderItem.
**Example:**

```
dim u as Integer = VolumeCount-1
for i as Integer = 0 to u
dim v as FolderItem = volume(i)

if v.Name = "TestServer" then
dim dissenter as Integer = 0
dim e as Integer = MacUnmountVolumeMBS(v, false, dissenter)

if e = 0 then
MsgBox "Unmounted"
else
MsgBox "Failed to unmount with error "+str(e)+". The app with PID "+str(dissenter)+" blocks it."
end if
end if
next
```

**Notes:**

If the volume cannot be unmounted the pid of the process which denied the unmount will be returned in the dissenter parameter. This routine returns after the unmount is complete.

Force: Specify true if you want the volume forcibly unmounted. Force unmounting a volume will very likely result in data loss since the volume will be ejected even if there are open files on it. This option should be reserved for situations such as the backing store for a volume is gone (so the data is lost regardless).

dissenter: pid of the process which denied the unmount if the unmount is denied.

Returns Mac OS X error code. Zero for success.

### 181.1.34 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.1pr5

### 181.1.35 StartDictationMBS

MBS MacOSX Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** Starts dictation.
**Notes:** This is for Carbon application. For Cocoa use methods on NSApplicationMBS.

### 181.1.36 Blog Entries

- MBS Real Studio Plugins, version 13.1pr1

### 181.1.37 BacktraceMBS(MaxFrames as Integer = 0, skip as Integer = 2) as string()

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

**Function:** Queries the stack trace of the current function.
**Example:**

MsgBox Join(BacktraceMBS, EndOfLine)

**Notes:**

MaxFrames: How many steps to show at maximum. Default is 128 currently.
skip: How many entries to skip. Default is 2 to not show this function.
Requires Mac OS X 10.5 or Linux.
Skip is 2 to hide this plugin function in the list.

### 181.1.38 Blog Entries

- MBS Xojo Plugins, version 20.1pr1
- Updater Kit 1.5 and BugReporter Kit 1.1
- MBS Real Studio Plugins, version 13.0pr1

### 181.1.39 MillisecondsMBS as Double

MBS Util Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries current milliseconds time.
**Notes:** Like Microseconds in Xojo, but queries system functions for milliseconds counter.

### 181.1.40 ExitWindowsMBS(mode as Integer) as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Shutdown a Windows PC.
**Example:**

```
dim b as boolean
b=ExitWindowsMBS(0)
```

**Notes:**

Mode constants:

| | | |
|---|---|---|
| LOGOFF | 0 | Shuts down all processes running in the security context of the process that called the ExitWindows function. Then it logs the user off. |
| SHUTDOWN | 1 | Shuts down the system to a point at which it is safe to turn off the power. All file buffers have been flushed to disk, and all running processes have stopped. |
| REBOOT | 2 | Shuts down the system and then restarts the system. |
| FORCE | 4 | Forces processes to terminate. When this flag is set, the system does not send the WM_QUERYENDSESSION and WM_ENDSESSION messages. This can cause the applications to lose data. Therefore, you should only use this flag in an emergency. |
| POWEROFF | 8 | Shuts down the system and turns off the power. The system must support the power-off feature. |
| FORCEIFHUNG | 16 | (Windows 2000) Forces processes to terminate if they do not respond to the WM_QUERYENDSESSION or WM_ENDSESSION message. This flag is ignored if FORCE is used. |

Returns true if successfull.

The ExitWindows function returns as soon as it has initiated the shutdown. The shutdown or logoff then proceeds asynchronously.

During a shutdown or log-off operation, applications that are shut down are allowed a specific amount of time to respond to the shutdown request. If the time expires, the system displays a dialog box that allows

the user to forcibly shut down the application, to retry the shutdown, or to cancel the shutdown request. If the FORCE value is specified, the system always forces applications to close and does not display the dialog box. If the FORCEIFHUNG value is specified, the system forces hung applications to close and does not display the dialog box.

Windows NT: To shut down or restart the system, the calling process must use the AdjustTokenPrivileges function to enable the SE_SHUTDOWN_NAME privilege.

### 181.1.41 Blog Entries

- MBS Real Studio Plugins, version 12.0pr7

### 181.1.42 GetDoubleClickIntervalMBS as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns the time in ticks which makes two clicks to one double click.
**Example:**

```
sub MouseUp(X as Integer, Y as Integer)
dim currentClickTicks as Integer
currentClickTicks = ticks

if (currentClickTicks - lastClickTicks) <= GetDoubleClickIntervalMBS then
if abs(x - lastClickX) <= 5 and abs (y - lastClickY) <= 5 then
DoubleClick //Fire new Doubleclick event
return
end
end

lastClickTicks = currentClickTicks
lastClickX = x
lastClickY = y
MouseUp
End sub
```

**Notes:** Time returned in ticks. One tick is 1/60 of a second.

### 181.1.43 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.0pr1

### 181.1.44 GetMaximumOpenFileCountMacOSXMBS as Integer

MBS MacCF Plugin, Platforms: macOS, Linux, Targets: All.

**Function:** The number of simultan open files
**Example:**

msgbox str(GetMaximumOpenFileCountMacOSXMBS)

**Notes:**

On Mac OS X per default a process can have 256 files open at the same time.
This function allows you to increase the number of open files. It seems that you can't have more than 10240 files open on Mac OS X.
Returns -2 if the function is not available and -1 if the current number of open files is unknown.

### 181.1.45 GetSystemUIModeMBS as Integer

MBS MacOSX Plugin, Plugin Version: 2.8, Platform: macOS, Targets: Desktop only.

**Function:** Returns the current Mac OS X System UI Mode for your application.
**Notes:**

Returns -1 on any error.
See SetSystemUIModeMBS for more details.
Please use presentationOptions in NSApplicationMBS for Cocoa applications.

### 181.1.46 GetSystemUIModeOptionsMBS as Integer

MBS MacOSX Plugin, Plugin Version: 2.8, Platform: macOS, Targets: Desktop only.

**Function:** Returns the current Mac OS X System UI Mode options for your application.
**Notes:**

Returns -1 on any error.
See SetSystemUIModeMBS for more details.
Please use presentationOptions in NSApplicationMBS for Cocoa applications.

### 181.1.47 MacCountryCodeMBS as string

MBS MacClassic Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns the country code for

**Example:**

msgbox MacCountryCodeMBS // Shows DE in Germany.

**Notes:**

On any error returns "".
Requires Mac OS 8.6 or newer (or Mac OS X).
Fix in Plugin version 4.0 to no longer return random strings, but now you must accept that this function may fail on Mac if it has nothing to report. (unkown reason)

### 181.1.48 OpenMacOSXPreferencesPaneMBS(name as string) as Integer

MBS MacOSX Plugin, Plugin Version: 2.8, Platform: macOS, Targets: Desktop only.

**Function:** Opens a named preference pane on Mac OS X.
**Example:**

dim e as Integer
e=OpenMacOSXPreferencesPaneMBS("Network")

**Notes:**

Returns a Mac OS X error code. For example -43 if file not found, -1 if function is not available or 0 if successfull.

Possible values for Mac OS X:
UniversalAccessPref
StartupDisk
Speech
Sound
Network
MyAccount
Mouse
LoginItems
Localization
Keyboard
Internet
Ink
General
EnergySaver
DigiHubDiscs
DesktopPictures
Dock

ColorSync
QuickTime
Classic
Bluetooth
ARDPref
DateAndTime
Accounts
Displays
SoftwareUpdate
SharingPref
ScreenSaver

See content of /System/Library/PreferencePanes/ folder.

In MacOS 10.10 or newer, better use URL schemes:

### 181.1.49 Blog Entries

- MacOS System Preference Links
- MBS REALbasic plug-in 9.6

### 181.1.50 RunningOnCarbonXMBS as boolean

MBS MacOSX Plugin, Platform: macOS, Targets: Desktop only.

**Function:** Returns true if we are running Carbon on Mac OS X.
**Example:**

```
if RunningOnCarbonXMBS then
' do Stuff for Mac OS X only
end if
```

**Notes:** Does always return false on Windows and Mac OS Classic.

### 181.1.51 SetMaximumOpenFileCountMacOSXMBS(Value as Integer)

MBS MacCF Plugin, Platforms: macOS, Linux, Targets: All.

**Function:** The number of simultan open files
**Example:**

SetMaximumOpenFileCountMacOSXMBS 500

**Notes:**

On Mac OS X per default a process can have 256 files open at the same time.
This function allows you to increase the number of open files. It seems that you can't have more than 10240 files open on Mac OS X.

### 181.1.52 SetSystemUIModeMBS(mode as Integer, Options as Integer)

MBS MacOSX Plugin, Plugin Version: 2.8, Platform: macOS, Targets: Desktop only.

**Function:** Sets the current System UI mode for your application.
**Notes:**

Details from Apple's documentation:

Sets the presentation mode for system-provided user interface elements.

The presentation mode of an application determines which system-provided user interface elements are visible on thes screen. When the frontmost application changes its presentation mode, a kEventAppSystemUIModeChanged Carbon event is sent to all applications that have registered for the event. This event is also sent when an application is activated; it contains the newly active application's presentation mode.

Note that the system UI mode is a per-process state. Switching from a process that is suppressing system UI to another processthat is not will cause system UI elements to become visible automatically. Switching back to the first process will suppress system UI elements again.

The modes available:

The options which you can combine:

Please use presentationOptions in NSApplicationMBS for Cocoa applications.

### 181.1.53 ShowCharacterPaletteMBS

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: Desktop only.

**Function:** Shows the character palette.
**Example:**

| | | |
|---|---|---|
| kUIModeNormal | 0 | In this mode, all standard system UI elements are visible. |
| kUIModeContentSuppressed | 1 | In this mode, system UI elements which cover the "content area" of the screen (the area other than the menubar) are hidden. However, these elements may automatically show themselves in response to mouse movements or other user activity; specifically, the Dock will still show itself automatically when the mouse moves into the Dock's auto-show region. |
| kUIModeContentHidden | 2 | In this mode, system UI elements which cover the "content area" of the screen (the area other than the menubar) are hidden. Unlike kUIModeContentSuppressed, most UI elements will not automatically show themselves in this mode. |
| kUIModeAllHidden | 3 | In this mode, all system UI elements, including the menubar, are hidden. Most system UI elements will not automatically show themselves in this mode. The application may request that the menubar automatically show itself while in this mode by passing the kUIOptionAutoShowMenuBar flag to SetSystemUIMode. |

ShowCharacterPaletteMBS

**Notes:**

Works on Mac OS X 10.3 and newer.
We have no way to close this window.

### 181.1.54 SystemControlByNameMBS(name as string) as memoryblock

MBS MacCF Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Targets: All.

**Function:** The SystemControlByNameMBS function retrieves system information and allows processes with appropriate privileges to set system information.
**Example:**

```
dim m1 as MemoryBlock = SystemControlByNameMBS("hw.physicalcpu")
dim m2 as MemoryBlock = SystemControlByNameMBS("hw.logicalcpu")

MsgBox "physicalcpu: "+str(m1.Long(0))+EndOfLine+"logicalcpu: "+str(m2.Long(0))
```

**Notes:**

The name is given as an ASCII string.
Returns nil on any error.
See also:

- 181.1.55 SystemControlByNameMBS(name as string, input as memoryblock) as memoryblock 25726

| | | |
|---|---|---|
| kUIOptionAutoShowMenuBar | 1 | Requests that the menubar automatically show itself when the user moves the mouse into the screen area that would ordinarily be occupied by the menubar. Only valid with kUIModeAllHidden. |
| kUIOptionAnimateMenuBar | 2 | Requests that the menubar animate on or offscreen, if the UIMode is also being changed such that the menubar will change visibility. Unlike other UI options, this option is not stored and only affects the behavior of this call to SetSystemUIMode. Valid for all modes. Available in Mac OS X 10.7 and later. |
| kUIOptionDisableAppleMenu | 4 | Disables all items in the Apple menu. Valid for all modes. |
| kUIOptionDisableProcessSwitch | 8 | The active application may not be changed while this process is active. Currently disables the Command-Tab and Command-Shift-Tab key sequences to switch the active process, and the global window rotation key sequence selected by the user in the Keyboard preference pane. SetFrontProcess may still be used to explicitly switch the active process. Only valid with modes other than kUIModeNormal. |
| kUIOptionDisableForceQuit | 16 | The Force Quit window may not be displayed while this process is active. Currently disables the Command-Option-Escape key sequence to open the Force Quit window and the Force Quit menu item in the Apple menu. Only valid with modes other than kUIModeNormal. |
| kUIOptionDisableSessionTerminate | 32 | The current login session may not be terminated while this process is active. Currently disables the Power key and the Restart, Shut Down, and Log Out menu items in the Apple menu. Only valid with modes other than kUIMode-Normal. |

### 181.1.55 SystemControlByNameMBS(name as string, input as memoryblock) as memoryblock

MBS MacCF Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Targets: All.

**Function:** The SystemControlByNameMBS function retrieves system information and allows processes with appropriate privileges to set system information.
**Notes:**

The name is given as an ASCII string.
Returns nil on any error.
See also:

- 181.1.54 SystemControlByNameMBS(name as string) as memoryblock 25725

### 181.1.56 SystemControlMBS(name as memoryblock) as memoryblock

MBS MacCF Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Targets: All.

**Function:** The SystemControlMBS function retrieves system information and allows processes with appropriate privileges to set system information.
**Example:**

```
Function IsRosetta() As boolean
Const CTL_HW = 6
Const HW_MODEL = 2
```

```
dim mib,m as MemoryBlock

mib=newMemoryBlock(8)
mib.Long(0) = CTL_HW
mib.Long(4) = HW_MODEL

m=SystemControlMBS(mib)
if m<>nil then
if m.CString(0)="PowerMac" then
Return true
end if
end if
End Function
```

**Notes:**

name is a MIB which can be constructed or queried with SystemControlNameToMIBMBS.
Returns nil on any error.
See also:

- 181.1.57 SystemControlMBS(name as memoryblock, input as memoryblock) as memoryblock 25727

### 181.1.57 SystemControlMBS(name as memoryblock, input as memoryblock) as memoryblock

MBS MacCF Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Targets: All.

**Function:** The SystemControlMBS function retrieves system information and allows processes with appropriate privileges to set system information.
**Notes:**

Returns nil on any error.
name is a MIB which can be constructed or queried with SystemControlNameToMIBMBS.

See also:

- 181.1.56 SystemControlMBS(name as memoryblock) as memoryblock 25726

### 181.1.59 SystemControlNameToMIBMBS(name as string) as memoryblock

MBS MacCF Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Targets: All.

**Function:** Searches the given MIB for the given name.
**Notes:**

Name is an ASCII string.
Returns nil on any error.

### 181.1.60 Blog Entries

- MBS Real Studio Plugins, version 13.1pr12

### 181.1.61 WindowsSystemMetricsMBS(what as Integer) as Integer

MBS Win Plugin, Plugin Version: 3.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The WindowsSystemMetrics function retrieves various system metrics (widths and heights of display elements) and system configuration settings.
**Example:**

```
const SM_CYSMICON = 50

MsgBox str(WindowsSystemMetricsMBS(SM_CYSMICON))
```

**Notes:**

All dimensions retrieved by GetSystemMetrics are in pixels.
If the function fails, the return value is zero.

Values for the what parameter:

The SM_ARRANGE setting specifies how the system arranges minimized windows, and consists of a starting position and a direction. The starting position can be one of the following values:

The direction in which to arrange can be one of the following values:

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/ms724385(v=vs.85).aspx

### 181.1.62 IsWindows95MBS as boolean

MBS Win Plugin, Plugin Version: 5.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Checks whether operation system is Windows 95/98/ME.
**Example:**

```
if IsWindows95MBS then
MsgBox "Windows 95/98/ME"
else
MsgBox "no Windows 95/98/ME"
end if
```

**Deprecated:** This item is deprecated and should no longer be used. **Notes:** Returns true or false on Windows and alway false on other platforms.

### 181.1.63 Blog Entries

- MBS Xojo Plugins, version 20.6pr4

### 181.1.64 IsWindowsAdminUserMBS as boolean

MBS Win Plugin, Plugin Version: 5.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Checkes whether the current user is an Admin User on Windows.
**Example:**

```
if IsWindowsAdminUserMBS then
MsgBox "Is admin user."
else
MsgBox "no admin user."
end if
```

**Notes:** Returns true or false on Windows and alway false on other platforms.

### 181.1.65 IsWindowsNTMBS as boolean

MBS Win Plugin, Plugin Version: 5.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Checks whether operation system is Windows NT/2000/XP.
**Example:**

```
if IsWindowsNTMBS then
MsgBox "Windows NT/2000/XP"
else
MsgBox "no Windows NT/2000/XP"
end if
```

**Deprecated:** This item is deprecated and should no longer be used. **Notes:** Returns true or false on Windows and alway false on other platforms.

### 181.1.66 Blog Entries

- MBS Xojo Plugins, version 20.6pr4

### 181.1.67 WindowsGetProcessIntegrityLevelMBS as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The function gets the integrity level of the current process.
**Example:**

msgbox str(WindowsGetProcessIntegrityLevelMBS)

**Notes:**

Integrity level is only available on Windows Vista and newer operating systems, thus GetProcessIntegrityLevel throws a C++ exception if it is called on systems prior to Windows Vista.

Returns the integrity level of the current process. It is usually one of these values:

- MBS REALbasic Plugins, version 10.4pr3

### 181.1.69 WindowsIsApplicationRunAsAdminMBS as boolean

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The function checks whether the current process is run as administrator.
**Example:**

msgbox str(WindowsIsApplicationRunAsAdminMBS)

**Notes:**

In other words, it dictates whether the primary access token of the process belongs to user account that is a member of the local Administrators group and it is elevated.

Returns true if the primary access token of the process belongs to user account that is a member of the local Administrators group and it is elevated. Returns false if the token does not.

### 181.1.70 Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes
- Windows Admin functions
- MBS REALbasic Plugins, version 10.4pr3

### 181.1.71 WindowsIsProcessElevatedMBS as boolean

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The function gets the elevation information of the current process.
**Example:**

msgbox str(WindowsIsProcessElevatedMBS)

**Notes:**

It dictates whether the process is elevated or not. Token elevation is only available on Windows Vista and newer operating systems, thus IsProcessElevated returns always false if it is called on systems prior to Windows Vista. It is not appropriate to use this function to determine whether a process is run as administartor.

Returns true if the process is elevated. Returns false if it is not.

### 181.1.72 Blog Entries

- Windows Admin functions
- MBS REALbasic Plugins, version 10.4pr3

### 181.1.73 WindowsIsUserInAdminGroupMBS as boolean

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The function checks whether the primary access token of the process belongs to user account that is a member of the local Administrators group, even if it currently is not elevated.
**Example:**

msgbox str(WindowsIsUserInAdminGroupMBS)

**Notes:** Returns true if the primary access token of the process belongs to user account that is a member of the local Administrators group. Returns false if the token does not.

## 181.2 module BuildConstantsMBS

### 181.2.1 module BuildConstantsMBS

MBS Main Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A module with build constants for you.
**Example:**

MsgBox BuildConstantsMBS.DateTime

**Notes:**

This module provides the date and time when the plugin was loaded to the Xojo IDE.
You can use this constant to know in your application when it was built. Not exactly, but within a few hours exact.
The examples above show when this page was rendered with our documentation tool.

### 181.2.2 Blog Entries

- Build Time Constants

### 181.2.4 Constants

### 181.2.5 Date = " 6. 3.2023"

MBS Main Plugin, Plugin Version: 11.0.

**Function:** The constant for the date.
**Example:**

MsgBox BuildConstantsMBS.Date

**Notes:**

Format is dd.mm.yyyy like 24.12.2010.
This is the date when the plugin was loaded to the Xojo IDE. You can use this constant to know in your application when it was built. Not exactly, but within a few hours exact.

### 181.2.6 DateTime = "Mon Mar 6 10:32:59 2023"

MBS Main Plugin, Plugin Version: 11.0.

**Function:** The constant for the date and time.
**Example:**

MsgBox BuildConstantsMBS.DateTime

**Notes:** This is the time when the plugin was loaded to the Xojo IDE. You can use this constant to know in your application when it was built. Not exactly, but within a few hours exact.

### 181.2.7 Day = 6

MBS Main Plugin, Plugin Version: 11.0.

**Function:** The day.

### 181.2.8 Hour = 10

MBS Main Plugin, Plugin Version: 11.0.

**Function:** The hour.

### 181.2.9 Minute = 32

MBS Main Plugin, Plugin Version: 11.0.

**Function:** The minute.

### 181.2.10 Month = 3

MBS Main Plugin, Plugin Version: 11.0.

**Function:** The month.

### 181.2.11 Second = 59

MBS Main Plugin, Plugin Version: 11.0.

**Function:** The second.

### 181.2.12 Time = "10:32:59"

MBS Main Plugin, Plugin Version: 11.0.

**Function:** The constant for the time.
**Example:**

MsgBox BuildConstantsMBS.Time

**Notes:**

Format is like hh:mm:ss like 11:22:33.
This is the time when the plugin was loaded to the Xojo IDE. You can use this constant to know in your application when it was built. Not exactly, but within a few hours exact.

### 181.2.13 Year = 2023

MBS Main Plugin, Plugin Version: 11.0.

**Function:** The year.

| | | |
|---|---|---|
| SM_ARRANGE | 56 | Flags specifying how the system arranged minimized windows. For more information about minimized windows, see the following Remarks section. |
| SM_CLEANBOOT | 67 | Value that specifies how the system was started: 0 Normal boot; 1 Fail-safe boot; 2 Fail-safe with network boot; Fail-safe boot (also called SafeBoot) bypasses the user's startup files. |
| SM_CMETRICS | 83 | (Windows 2000 or newer) |
| SM_CMONITORS | 80 | Number of display monitors on the desktop. (Windows 2000 or newer) |
| SM_CMOUSEBUTTONS | 43 | Number of buttons on mouse, or zero if no mouse is installed. |
| SM_CXBORDER | 5 | Width, in pixels, of a window border. |
| SM_CXCURSOR | 13 | Width, in pixels, of a cursor. The system cannot create cursors of other sizes. |
| SM_CXDLGFRAME | 7 | Thickness, in pixels, of the sizing border around the perimeter of a window that can be resized. (or SM_CXFIXEDFRAME) |
| SM_CXDOUBLECLK | 36 | Width, in pixels, of the rectangle around the location of a first click in a double-click sequence. The second click must occur within this rectangle for the system to consider the two clicks a double-click. (The two clicks must also occur within a specified time.) |
| SM_CXDRAG | 68 | Width, in pixels, of a rectangle centered on a drag point to allow for limited movement of the mouse pointer before a drag operation begins. This allows the user to click and release the mouse button easily without unintentionally starting a drag operation. |
| SM_CXEDGE | 45 | Width, in pixels, of a 3-D border. |
| SM_CXFRAME | 32 | Thickness, in pixels, of the sizing border around the perimeter of a window that can be resized. (or SM_CXSIZEFRAME) |
| SM_CXFULLSCREEN | 16 | Width of the client area for a full-screen window on the primary display monitor. |
| SM_CXHSCROLL | 21 | Width, in pixels, of the arrow bitmap on a horizontal scroll bar. |
| SM_CXHTHUMB | 10 | Width, in pixels, of the thumb box in a horizontal scroll bar. |
| SM_CXICON | 11 | The default width, in pixels, of an icon. TheLoadIcon function can load only icons of these dimensions. |
| SM_CXICONSPACING | 38 | Width, in pixels, of a grid cell for items in large icon view. Each item fits into a rectangle of this size when arranged. These values are always greater than or equal to SM_CXICON and SM_CYICON. |
| SM_CXMAXIMIZED | 61 | Default width, in pixels, of a maximized top-level window on the primary display monitor. |
| SM_CXMAXTRACK | 59 | Default maximum width, in pixels, of a window that has a caption and sizing borders. This metric refers to the entire desktop. The user cannot drag the window frame to a size larger than these dimensions. |
| SM_CXMENUCHECK | 71 | Width, in pixels, of the default menu check-mark bitmap. |
| SM_CXMENUSIZE | 54 | Width, in pixels, of menu bar buttons, such as the child window close button used in the multiple document interface. |
| SM_CXMIN | 28 | Minimum width, in pixels, of a window. |
| SM_CXMINIMIZED | 57 | Width, in pixels, of a normal minimized window. |
| SM_CXMINSPACING | 47 | Width, in pixels, of a grid cell for minimized windows. Each minimized window fits into a rectangle this size when arranged. These values are always greater than or equal to SM_CXMINIMIZED and SM_CYMINIMIZED. |
| SM_CXMINTRACK | 34 | Minimum tracking width, in pixels, of a window. The user cannot drag the window frame to a size smaller than these dimensions. A window can override these values by processing the WM_GETMINMAXINFO message. |
| SM_CXSCREEN | 0 | Width, in pixels, of the screen of the primary display monitor. |
| SM_CXSIZE | 30 | Width, in pixels, of a button in a window's caption or title bar. |
| SM_CXSMICON | 49 | Recommended width, in pixels, of a small icon. Small icons typically appear in window captions and in small icon view. |
| SM_CXSMSIZE | 52 | Width, in pixels, of small caption buttons. |
| SM_CXVIRTUALSCREEN | 78 | Width, in pixels, of the virtual screen. The virtual screen is the bounding rectangle of all display monitors. (Windows 98/ME and 2000 or newer) |
| SM_CXVSCROLL | 2 | Width, in pixels, of a vertical scroll bar; and height, in pixels, of the arrow bitmap on a vertical scroll bar. |
| SM_CYBORDER | 6 | Height, in pixels, of a window border. |
| SM_CYCAPTION | 4 | Height, in pixels, of a normal caption area. |
| SM_CYCURSOR | 14 | Height, in pixels, of a cursor. The system cannot create cursors of other sizes. |
| SM_CYDLGFRAME | 8 | Thickness, in pixels, of the frame around the perimeter of a window that has a caption but is not sizable. (or SM_CYFIXEDFRAME) |
| SM_CYDOUBLECLK | 37 | Height, in pixels, of the rectangle around the location of a first click in a double-click sequence. The second click must occur within this rectangle for the system to consider the two clicks a double-click. (The two clicks must also occur within a specified time.) |
| SM_CYDRAG | 69 | Height, in pixels, of a rectangle centered on a drag point to allow for limited movement of the mouse pointer before a drag operation begins. This allows the user to click and release the mouse button easily without unintentionally starting a drag operation. |
| SM_CYEDGE | 46 | Height, in pixels, of a 3-D border. |

| | | |
|---|---|---|
| ARW_BOTTOMLEFT | 0x0000L | Start at the lower-left corner of the screen (default position). |
| ARW_BOTTOMRIGHT | 0x0001L | Start at the lower-right corner of the screen. Equivalent to ARW_STARTRIGHT. |
| ARW_HIDE | 0x0008L | Hide minimized windows by moving them off the visible area of the screen. |
| ARW_TOPLEFT | 0x0002L | Start at the upper-left corner of the screen. Equivalent to ARV_STARTTOP. |
| ARW_TOPRIGHT | 0x0003L | Start at the upper-right corner of the screen. Equivalent to ARW_STARTTOP \| SRW_STARTRIGHT. |

| | | |
|---|---|---|
| ARW_DOWN | 0x0004L | Arrange vertically, top to bottom. |
| ARW_LEFT | 0x0000L | Arrange horizontally, left to right. |
| ARW_RIGHT | 0x0000L | Arrange horizontally, right to left. |
| ARW_UP | 0x0004L | Arrange vertically, bottom to top. |

| | | |
|---|---|---|
| SECURITY_MANDATORY_UNTRUSTED_RID | = & h0 | Means untrusted level. It is used by processes started by the Anonymous group. Blocks most write access. |
| SECURITY_MANDATORY_LOW_RID | = & h1000 | Means low integrity level. It is used by Protected Mode Internet Explorer. Blocks write acess to most objects (such as files and registry keys) on the system. |
| SECURITY_MANDATORY_MEDIUM_RID | = & h2000 | Means medium integrity level. It is used by normal applications being launched while UAC is enabled. |
| SECURITY_MANDATORY_HIGH_RID | = & h3000 | Means high integrity level. It is used by administrative applications launched through elevation when UAC is enabled, or normal applications if UAC is disabled and the user is an administrator. |
| SECURITY_MANDATORY_SYSTEM_RID | = & h4000 | Means system integrity level. It is used by services and other system-level applications (such as Wininit, Winlogon, Smss, etc.) |

## 181.3 class DCDeviceMBS

### 181.3.1 class DCDeviceMBS

MBS iOS Plugin, Plugin Version: 23.0, Platforms: macOS, iOS, Targets: All.

**Function:** A representation of a device that provides a unique, authenticated token.
**Notes:**

Use the shared instance of the DCDevice class to generate a token that identifies a device. Call the generateToken method to get the token, and then send it to your server.

On your server, combine the token with an authentication key that you obtain from Apple, and use the result to request access to two per-device binary digits (bits). After authenticating the device, Apple passes the current values of the bits, along with the date they were last modified, to your server. Your server applies its business logic to this information and communicates the results to your app. For more information about server-side procedures, see Accessing and Modifying Per-Device Data.

To use the DCDevice class, your app must have an app ID that you register on the Apple Developer website.

Apple records the bits for you, and reports the bits back to you, but you,Äôre responsible for keeping track of what the bits mean. You,Äôre also responsible for determining when to reset the bits for a given device; for example, when a user sells the device to someone else.

### 181.3.4 Methods

### 181.3.5 available as boolean

MBS iOS Plugin, Plugin Version: 23.0, Platforms: macOS, iOS, Targets: All.

**Function:** Whether the class is available.
**Example:**

MessageBox "available: "+DCDeviceMBS.available.ToString

**Notes:** Returns true on macOS 10.15 and newer and iOS 11.0 or newer.

### 181.3.6 Constructor

MBS iOS Plugin, Plugin Version: 23.0, Platforms: macOS, iOS, Targets: All.

**Function:** The constructor.
**Notes:** Initializes the object pointing to the current device one internally.

### 181.3.7 currentDevice as DCDeviceMBS

MBS iOS Plugin, Plugin Version: 23.0, Platforms: macOS, iOS, Targets: All.

**Function:** A representation of the device for which you want to query the two bits of data.

### 181.3.8 generateToken(CompleteHandler as GenerateTokenCompletedMBS, tag as variant = nil)

MBS iOS Plugin, Plugin Version: 23.0, Platforms: macOS, iOS, Targets: All.

**Function:** Generates a token that identifies the current device.
**Notes:**

Calls GenerateTokenCompletedMBS event later when done.

Your server uses the generated token in its requests to get or set the persistent bits for the current device. You should treat the token you receive in the completion block as single-use. Although the token remains valid long enough for your server to retry a specific request if necessary, you should not use a token multiple times. Instead, use this method to generate a new token.

The app you use to generate the token must be associated with your developer account; otherwise, the

generation request fails.

### 181.3.9 Properties

### 181.3.10 Handle as Integer

MBS iOS Plugin, Plugin Version: 23.0, Platforms: macOS, iOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 181.3.11 Supported as Boolean

MBS iOS Plugin, Plugin Version: 23.0, Platforms: macOS, iOS, Targets: All.

**Function:** A Boolean value that indicates whether the device supports the DeviceCheck API.
**Example:**

MessageBox "Supported: "+DCDeviceMBS.currentDevice.Supported.ToString

**Notes:**

For iOS 11.0 or newer and macOS 10.15 or newer.
(Read only property)

### 181.3.12 Constants

### 181.3.13 ErrorFeatureUnsupported = 1

MBS iOS Plugin, Plugin Version: 23.0.

**Function:** One of the error constants.
**Notes:** The feature is not supported on this device.

### 181.3.14 ErrorInvalidInput = 2

MBS iOS Plugin, Plugin Version: 23.0.

**Function:** One of the error constants.
**Notes:** Input to the server process was invalid.

### 181.3.15 ErrorInvalidKey = 3

MBS iOS Plugin, Plugin Version: 23.0.

**Function:** One of the error constants.
**Notes:** The key used is invalid.

### 181.3.16 ErrorServerUnavailable = 4

MBS iOS Plugin, Plugin Version: 23.0.

**Function:** One of the error constants.
**Notes:** The server application to talk to is not available.

### 181.3.17 ErrorUnknownSystemFailure = 0

MBS iOS Plugin, Plugin Version: 23.0.

**Function:** One of the error constants.
**Notes:** Unknown error in system.

### 181.3.18 Delegates

### 181.3.19 GenerateTokenCompletedMBS(token as MemoryBlock, Error as NSErrorMBS, Tag as Variant)

MBS iOS Plugin, Plugin Version: 23.0, Platforms: macOS, iOS, Targets: Desktop only.

**Function:** The event called asynchronously from generateToken when work is done.
**Notes:**

token: An ephemeral token that identifies the current device.
error: The error that occurred, if any.

Your server uses the generated token in its requests to get or set the persistent bits for the current device. You should treat the token you receive in the completion block as single-use. Although the token remains valid long enough for your server to retry a specific request if necessary, you should not use a token multiple times. Instead, use this method to generate a new token.

The app you use to generate the token must be associated with your developer account; otherwise, the generation request fails.

## 181.4 class GlobalExceptionHandlerMBS

### 181.4.1 class GlobalExceptionHandlerMBS

MBS Main Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Installs an exception handler to show a message dialog with custom message before the app crashes.
**Notes:**

The plugin allocates some memory which we release later to make sure there is free memory for the message box.

On Windows this method does not work as currently we use static runtime on Windows which does not allow the plugin to access the runtime inside the RB framework.

### 181.4.2 Blog Entries

- MBS REALbasic Plugins, version 10.6pr2

### 181.4.3 Blog Entries

- MBS REALbasic Plugins, version 10.6pr2

### 181.4.4 Events

### 181.4.5 GotException

MBS Main Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Called when an unhandled C++ exception was raised.
**Notes:** Your application is in a very instable state when this event is called. Don't do much here and quit soon with ExitMBS/AbortMBS.

## 181.5 class LinuxSysInfoMBS

### 181.5.1 class LinuxSysInfoMBS

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The class to query memory and processor statistics.
**Example:**

```
dim l as new LinuxSysInfoMBS

MsgBox str(l.FreeRam)+" bytes free."
```

- 10.4, page 9: News

### 181.5.6 Methods

### 181.5.7 Constructor

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Queries values and fills properties.

### 181.5.8 loads(index as Integer) as Double

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** 1, 5, and 15 minute load averages.

### 181.5.9 Properties

### 181.5.10 availablePhysicalPages as Integer

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Return number of available physical pages of memory in the system.
**Notes:** (Read only property)

### 181.5.11 BufferRam as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Memory used by buffers.
**Notes:** (Read only property)

### 181.5.12 FreeHigh as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Available high memory size.
**Notes:** (Read only property)

### 181.5.13 FreeRam as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Available memory size.
**Example:**

```
dim l as new LinuxSysInfoMBS

MsgBox str(l.FreeRam)+" bytes free."
```

**Notes:** (Read only property)

### 181.5.14 FreeSwap as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Swap space still available.
**Notes:** (Read only property)

### 181.5.15 MemoryUnit as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Memory unit size in bytes.
**Notes:** (Read only property)

### 181.5.16 NumberOfProcesses as Integer

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Number of current processes.
**Example:**

```
dim l as new LinuxSysInfoMBS

MsgBox str(l.NumberOfProcesses)+" processes"
```

**Notes:** (Read only property)

### 181.5.17 NumberOfProcessors as Integer

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Return number of available processors.
**Example:**

```
dim l as new LinuxSysInfoMBS

MsgBox str(l.NumberOfProcessors)+" processors"
```

**Notes:** (Read only property)

### 181.5.18 NumberOfProcessorsConfigured as Integer

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Return number of configured processors.
**Notes:** (Read only property)

### 181.5.19 PhysicalPages as Integer

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Return number of physical pages of memory in the system.
**Notes:** (Read only property)

### 181.5.20 SharedRam as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Amount of shared memory.
**Notes:** (Read only property)

### 181.5.21 TotalHigh as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Total high memory size.
**Notes:** (Read only property)

### 181.5.22 TotalRam as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Total usable main memory size.
**Notes:** (Read only property)

### 181.5.23 TotalSwap as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Total swap space size.
**Notes:** (Read only property)

### 181.5.24 upTime as Integer

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Seconds since boot.
**Notes:** (Read only property)

### 181.5.25 Valid as Boolean

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Whether constructor got values.
**Notes:**

Should be true on Linux and false on other platforms.
(Read only property)

## 181.6 class SignalHandlerMBS

### 181.6.1 class SignalHandlerMBS

MBS Util Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A signal handler for an unix signal.
**Notes:**

You can use this class to catch signals like SIGALRM oder SIGQUIT.

See
http://en.wikipedia.org/wiki/Signal_(computing)

### 181.6.2 Blog Entries

### 181.6.5 Xojo Developer Magazine

- 12.2, page 10: News

### 181.6.6 Methods

### 181.6.7 alarm(seconds as Integer)

MBS Util Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Targets: All.

**Function:** Set signal timer alarm.
**Example:**

SignalHandlerMBS.alarm 1

**Notes:**

The alarm() function sets a timer to deliver the signal SIGALRM to the calling process after the specified number of seconds. If an alarm has already been set with alarm() but has not been delivered, another call to alarm() will supersede the prior call. The request alarm(0) voids the current alarm and the signal SIGALRM will not be delivered.

Due to setitimer restriction the maximum number of seconds allowed is 100000000.

alarm sends signal 14 after the time out.

### 181.6.8 ClearFlag(signalIndex as Integer)

MBS Util Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Clears the flag with given index.
**Notes:** Please call this after you got IsFlagSet.

### 181.6.9 ClearFlags

MBS Util Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Clears all flags.

### 181.6.10 ClearStacktrace(signalIndex as Integer)

MBS Util Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Targets: All.

**Function:** Clears stored stack trace for the signal with given index.

### 181.6.11 Close

MBS Util Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Targets: All.

**Function:** Releases this object's resources.

### 181.6.12 IsFlagSet(signalIndex as Integer) as boolean

MBS Util Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Checks if a given flag was set.

### 181.6.13 QueryStacktrace(signalIndex as Integer, skip as Integer = 2) as string()

MBS Util Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Targets: All.

**Function:** Queries stack at the time the signal handler was triggered.
**Notes:**

Useful to know later which code got the signal.
Works for flag handlers and for the event handlers if enabled.

### 181.6.14 SendSignal(PID as Integer, Signal as Integer) as boolean

MBS Util Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Targets: All.

**Function:** Sends a signal.
**Example:**

```
// send signal to a process
// PID is 17779 here
// 9 means kill on Mac OS X
call SignalHandlerMBS.SendSignal(17779, 9)
```

**Notes:**

Returns true on success and false on failure.
Without a signal handler the target app could quit.

Lookup signal.h for the list of signals. They can be different on Mac and Linux.

### 181.6.15 SendSignalToSelf(Signal as Integer) as boolean

MBS Util Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Targets: All.

**Function:** Send a signal to the current process
**Notes:**

Returns true on success and false on failure.
Without a signal handler the target app could quit.

### 181.6.16 SetDefaultHandler(signalIndex as Integer) as boolean

MBS Util Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Targets: All.

**Function:** Defines to use the default handler for the given signal number.
**Example:**

```
Const SIGALRM = 14
if SignalHandlerMBS.SetDefaultHandler(SIGALRM) then
MsgBox "Done"
else
MsgBox "Failed"
end if
```

**Notes:** Returns true on success and false on failure.

### 181.6.17 SetEventHandler(signalIndex as Integer, CollectStackTrace as boolean = false) as boolean

MBS Util Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Targets: All.

**Function:** Defines to call the Signal Event whenever a signal with the given number is received.
**Notes:**

Returns true on success and false on failure.
If CollectStackTrace is true, you can later use QueryStacktrace to get the stack trace from the time the signal was captured.

### 181.6.18 SetFlagHandler(signalIndex as Integer, CollectStackTrace as boolean = false) as boolean

MBS Util Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Targets: All.

**Function:** Defines to set the flag whenever a signal with the given number is received.
**Notes:**

Returns true on success and false on failure.
Please use IsFlagSet in your app regularly to check if the flag was set.

If CollectStackTrace is true, you can later use QueryStacktrace to get the stack trace from the time the signal was captured.

### 181.6.19 SetIgnore(signalIndex as Integer) as boolean

MBS Util Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Targets: All.

**Function:** Defines to ignore the event with the given number.
**Example:**

```
Const SIGALRM = 14
if SignalHandlerMBS.SetIgnore(SIGALRM) then
MsgBox "Done"
else
MsgBox "Failed"
end if
```

**Notes:** Returns true on success and false on failure.

### 181.6.20 SignalStatus(signalIndex as Integer) as Integer

MBS Util Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Targets: All.

**Function:** Queries the signal state.
**Notes:** Returns 0 (unknown), kSignalDefault, kSignalEvent, kSignalFlag or kSignalIgnored.

### 181.6.21 Events

### 181.6.22 Signal(n as Integer)

MBS Util Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Targets: .

**Function:** A signal was called and you set an event handler.
**Example:**

```
Sub Signal(n as Integer)
```

```
// restore system handler in case we get that crash again!

MySignalHandlerMBS.SetDefaultHandler n

// Mac and Linux can have different signal numbers:

# if TargetMacOS then
dim c as string = "Signal "+str(n)+" on Mac OS X"
# elseif TargetLinux then
dim c as string = "Signal "+str(n)+" on Linux"
# else
dim c as string = "Signal "+str(n)+" on ?"
# endif

dim BackTraceLines() as string
# if mbs.BuildNumber>17662 and not TargetWin32 then // new in 13.0 plugins
BackTraceLines = BacktraceMBS
# endif

// show your bug reporter (or the MBS one)
'dim b as new Bugreporter
'b.ShowExceptionReporter c, BackTraceLines

// quit now without cleaning up the RB runtime which may crash again
ExitMBS 1
End Sub
```

**Notes:** This function may be called at any time, so you need to use code which is thread safe. (see ThreadMBS class)

### 181.6.23 Constants

### 181.6.24 kSignalDefault = 1

MBS Util Plugin, Plugin Version: 8.5.

**Function:** One of the signal state values.
**Notes:** The signal calls default handler.

### 181.6.25 kSignalEvent = 3

MBS Util Plugin, Plugin Version: 8.5.

**Function:** One of the signal state values.
**Notes:** The signal raises an event and sets the flag.

### 181.6.26 kSignalFlag = 4

MBS Util Plugin, Plugin Version: 14.0.

**Function:** One of the signal state values.
**Notes:** The signal sets a flag.

### 181.6.27 kSignalIgnored = 2

MBS Util Plugin, Plugin Version: 8.5.

**Function:** One of the signal state values.
**Notes:** The signal is ignored.

## 181.7 module SystemInformationMBS

### 181.7.1 module SystemInformationMBS

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A module to collect all the system information functions.
**Example:**

msgbox "Welcome "+SystemInformationMBS.Username+"!"

### 181.7.6 Methods

### 181.7.7 AvailableRAM as Double

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the size of the available memory.
**Example:**

```
msgBox format(SystemInformationMBS.AvailableRAM/1024/1024,"0")+" MB of RAM free."
```

**Notes:**

This function is useful if you want to know how much memory you can allocate without the system swapping.

On Windows, Mac OS X and Linux you can normally allocate up to 2 or 3 GB of memory in your address-room. A swap file on disc is used to cache memory which does not fit into physical memory.

So if you need to allocate a buffer to store temporary data, you can use this function to calculate a good size.
For example a file copy function could use something like this:

```
// a quarter of free memory is good to leave room for some OS buffers:
buffersize=SystemInformationMBS.AvailableRAM/4

// minimum 4 MB
if buffersize<1024*1024*4 then
buffersize<1024*1024*4
end if

// maximum 128 MB to make chunks not too big and application too unresponsible
if buffersize<1024*1024*128 then
buffersize<1024*1024*128
end if
```

In older plugins this function was named AvailableRAMMBS.

### 181.7.8 BusSpeed as Double

MBS Util Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the speed of the System bus in Hz.
**Example:**

```
msgbox "Your main CPU has "+format(SystemInformationMBS.BusSpeed/1000000.0,"0")+" MHz"
```

### 181.7.9 Computername as string

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns the name of the computer.
**Example:**

```
msgbox "Hi, I'm "+SystemInformationMBS.Computername+"."
```

**Notes:**

On Mac OS, the name is queried in this order:

1. Try to ask the Mac OS X Corefoundation for the name.
2. Try to ask via AppleEvents the Finder or FileSharing.
3. Read it from the system resources.

On Linux or Windows the system name.

In older plugins this function was named ComputerNameMBS.

### 181.7.10 CPUBrandString as string

MBS Util Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the CPU brand string.
**Example:**

MsgBox SystemInformationMBS.CPUBrandString

**Notes:**

If it is an Intel x86 Chip or something compatible, you get strings like this: "Intel(R) Core(TM) i7 CPU M 620 @ 2.67GHz" (Same as CPUIDMBS.BrandString). But on PowerPC chips we return strings like "PowerPC G5 (970MP)" (same as CPUInfoMBS.CPUName).

May return "" if the processor is unknown.

### 181.7.11 CPUSpeed as Double

MBS Util Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Returns the Speed of the main CPU in Hz.
**Example:**

msgbox "Your main CPU has "+format(SystemInformationMBS.CPUSpeed/1000000.0,"0")+" MHz"

### 181.7.12 DomainName as string

MBS Util Plugin, Plugin Version: 10.1, Platform: Windows, Targets: All.

**Function:** Returns the domain name of a Windows PC.
**Example:**

msgbox SystemInformationMBS.DomainName

**Notes:** Returns an empty string on any error.

### 181.7.13 HardDiscSerial as string

MBS Util Plugin, Plugin Version: 10.3, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** Returns the hard disc serial number of the first hard disc which has a serial number.
**Example:**

MsgBox SystemInformationMBS.HardDiscSerial

**Notes:**

This function can return "" if nothing is found.
Seems to return always empty string on Mac OS X 10.4 as the system properties dictionary does not contain the serial number there.

On Windows this function sometimes returns empty string, but later works again on the same machine. Reason unknown.

In Windows 8.1 it looks like WindowsWMIMBS.InitSecurity(false) must be called at app.open time as Xojo will do some things in background when opening first window which block our queries.

### 181.7.14 HostName as string

MBS Util Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the hostname for this computer.
**Example:**

MsgBox SystemInformationMBS.HostName

### 181.7.15 Is64bitWindows as boolean

MBS Util Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Whether the Windows you are using is a 64-bit Windows.
**Example:**

```
msgbox str(SystemInformationMBS.Is64bitWindows)
```

**Notes:**

Returns true for x64 Windows editions for 32-bit applications.
This function could also be named isWoW64 for "is Windows on Windows 64 bit."
Only for Intel CPU.
Will return false if used on ARM CPU.

Returns always true on 64bit target.

### 181.7.16 isARM as Boolean

MBS Util Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Checks whether CPU is ARM.
**Example:**

```
If TargetMacOS Then
If SystemInformationMBS.isARM Then
MsgBox "Running ARM version on ARM CPU."
Elseif SystemInformationMBS.IsTranslated Then
MsgBox "Running Intel version on ARM CPU."
Else
MsgBox "Running Intel version on Intel CPU."
End If
End If
```

**Notes:**

Returns true for:

- Raspberry Pi for Linux ARM
- iOS or Android on device.
- Apple Silicon Mac

Returns false for x86 CPUs, e.g. MacOS as well as iOS/Android in simulator.

### 181.7.17 isBigSur(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Whether the operation system is macOS 11 Big Sur or newer.
**Notes:** Returns 1 if this is Big Sur or newer, otherwise 0.

### 181.7.18 isCatalina(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Whether the operation system is MacOS 10.15 Catalina or newer.
**Example:**

MsgBox str(SystemInformationMBS.isMojave)

**Notes:** Returns true on MacOS 10.15 or newer.

### 181.7.19 isElCapitan(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Whether the operation system is Mac OS X 10.11 El Capitan or newer.
**Example:**

MsgBox str(SystemInformationMBS.isElCapitan)

**Notes:**

Returns true on Mac OS X 10.11.
If orHigher is set, it will also return true on 10.12.

### 181.7.20 isHighSierra(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Whether the operation system is macOS 10.13 High Sierra or newer.

**Example:**

MsgBox str(SystemInformationMBS.isHighSierra)

**Notes:**

Returns true on Mac OS X 10.13.
If orHigher is set, it will also return true on 10.14.

### 181.7.21 isLeopard(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Whether the operation system is Mac OS X 10.5 Leopard or newer.
**Example:**

MsgBox str(SystemInformationMBS.isLeopard)

**Deprecated:** This item is deprecated and should no longer be used. **Notes:** Returns true on Mac OS X 10.5 or newer.

### 181.7.22 isLion(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Whether the operation system is Mac OS X 10.7 Lion or newer.
**Example:**

MsgBox str(SystemInformationMBS.isLion)

**Deprecated:** This item is deprecated and should no longer be used. **Notes:** Returns true on Mac OS X 10.7 or newer.

### 181.7.23 isMacOSX as Boolean

MBS Util Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns true if being called on Mac OS X.
**Example:**

msgbox str(SystemInformationMBS.isMacOSX)

### 181.7.24 isMavericks(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Whether the operation system is Mac OS X 10.9 Mavericks or newer.
**Example:**

MsgBox str(SystemInformationMBS.isMavericks)

**Notes:** Returns true on Mac OS X 10.9 or newer.

### 181.7.25 isMojave(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Whether the operation system is MacOS 10.14 Mojave or newer.
**Example:**

MsgBox str(SystemInformationMBS.isMojave)

**Notes:** Returns true on MacOS 10.14 or newer.

### 181.7.26 isMonterey(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Whether the operation system is macOS 12 Monterey or newer.
**Notes:** Returns 1 if this is Monterey or newer, otherwise 0.

### 181.7.27 isMountainLion(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Whether the operation system is Mac OS X 10.8 Mountain Lion or newer.
**Example:**

MsgBox str(SystemInformationMBS.isMountainLion)

**Deprecated:** This item is deprecated and should no longer be used. **Notes:** Returns true on Mac OS X 10.8 or newer.

### 181.7.28 isSierra(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Whether the operation system is macOS 10.12 Sierra or newer.
**Example:**

MsgBox str(SystemInformationMBS.isSierra)

**Notes:**

Returns true on Mac OS X 10.12.
If orHigher is set, it will also return true on 10.13.

### 181.7.29 isSnowLeopard(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Whether the operation system is Mac OS X 10.6 Snow Leopard or newer.
**Example:**

MsgBox str(SystemInformationMBS.isSnowLeopard)

**Deprecated:** This item is deprecated and should no longer be used. **Notes:** Returns true on Mac OS X 10.6 or newer.

### 181.7.30 IsTranslated as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries whether application is translated on Apple Silicon Macs.
**Example:**

```
If TargetMacOS Then
If SystemInformationMBS.isARM Then
MsgBox "Running ARM version on ARM CPU."
Elseif SystemInformationMBS.IsTranslated Then
MsgBox "Running Intel version on ARM CPU."
Else
MsgBox "Running Intel version on Intel CPU."
End If
End If
```

**Notes:**

Returns 1 if Intel code gots translated to ARM code.
Returns 0 for a native ARM application.
Returns -1 if unknown.

### 181.7.31 isVentura(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Whether the operation system is macOS 13 Ventura or newer.
**Notes:** Returns 1 if this is Ventura or newer, otherwise 0.

### 181.7.32 isWindows10(orHigher as boolean = false) as Boolean

MBS Util Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns true if called on Windows 10.
**Example:**

```
msgbox str(SystemInformationMBS.isWindows10)
```

**Notes:**

And False on Mac OS, Linux, Windows 7/Vista/XP/2000/ME/98/95/8/8.1.
If orHigher, than it returns true if OS Version is newer.

### 181.7.33 isWindows11(orHigher as boolean = false) as Boolean

MBS Util Plugin, Plugin Version: 21.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns true if called on Windows 11.
**Example:**

msgbox str(SystemInformationMBS.isWindows11)

**Notes:**

And False on Mac OS, Linux, Windows 7/Vista/XP/2000/ME/98/95/8/8.1/10.
If orHigher, than it returns true if OS Version is newer.

### 181.7.34 isWindows2000(orHigher as boolean = false) as Boolean

MBS Util Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns true if called on Windows 2000.
**Example:**

msgbox str(SystemInformationMBS.isWindows2000)

**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

And False on Mac OS X, Linux, Windows 7/XP/Vista/ME/98/95.
If orHigher, than it returns true if OS Version is newer.

### 181.7.35 isWindows7(orHigher as boolean = false) as Boolean

MBS Util Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns true if called on Windows 7.
**Example:**

msgbox str(SystemInformationMBS.isWindows7)

**Notes:**

And False on Mac OS X, Linux, Windows Vista/XP/2000/ME/98/95.
If orHigher, than it returns true if OS Version is newer.

### 181.7.36 isWindows8(orHigher as boolean = false) as Boolean

MBS Util Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns true if called on Windows 8.
**Example:**

msgbox str(SystemInformationMBS.isWindows8)

**Notes:**

And False on Mac OS X, Linux, Windows 7/Vista/XP/2000/ME/98/95.
If orHigher, than it returns true if OS Version is newer.

### 181.7.37 isWindows81(orHigher as boolean = false) as Boolean

MBS Util Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns true if called on Windows 8.1
**Example:**

msgbox str(SystemInformationMBS.isWindows81)

**Notes:**

And False on Mac OS X, Linux, Windows 7/Vista/XP/2000/ME/98/95/8/10.
If orHigher, than it returns true if OS Version is newer.

### 181.7.38 isWindowsVista(orHigher as boolean = false) as Boolean

MBS Util Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns true if called on Windows Vista.
**Example:**

msgbox str(SystemInformationMBS.isWindowsVista)

**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

And False on Mac OS X, Linux, Windows 7/XP/2000/ME/98/95.
If orHigher, than it returns true if OS Version is newer.

### 181.7.39 isWindowsXP(orHigher as boolean = false) as Boolean

MBS Util Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns true if called on Windows XP.
**Example:**

msgbox str(SystemInformationMBS.isWindowsXP)

**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

And False on Mac OS X, Linux, Windows 7/Vista/2000/ME/98/95.
If orHigher, than it returns true if OS Version is newer.

### 181.7.40 isYosemite(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Whether the operation system is Mac OS X 10.10 Yosemite or newer.
**Example:**

MsgBox str(SystemInformationMBS.isYosemite)

**Notes:** Returns true on Mac OS X 10.10 or newer.

### 181.7.41 LogicalRAM as Double

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns the size of the logical installed memory.
**Example:**

msgBox format(SystemInformationMBS.LogicalRAM/1024/1024,"0")+" MB of RAM built in."

**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

On Windows the total virtual memory size.
On Linux always 4 GB.

In older plugins this function was named LogicalRAMMBS.

### 181.7.42 MACAddress as string

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the hardware ethernet address of the first ethernet card.
**Example:**

msgBox SystemInformationMBS.MACAddress

**Notes:**

It returns a string with 6 bytes.
Works now with MBS Plugin 2.6 for Mac OS Classic, Carbon inside Classic and Mac OS X, but may not work for a Classic application running on Mac OS X. And may fail on some machines if no OpenTransport is running.

On Windows and Mac OS X you can have multiple ethernet cards and you should use a command line tool with the shell class to find what you need.

For example on Windows:

ipconfig /all

or on Mac OS X:

ifconfig -a

You can replace this function with usage of the NetworkInterface class in newer RB versions.

Added Linux support in version 16.4.

### 181.7.43 MACAddressString as string

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the hardware ethernet address of the first ethernet card.
**Example:**

msgBox SystemInformationMBS.MACAddressString

**Notes:**

Same as MACAddress, but with different format of output.

You can replace this function with usage of the NetworkInterface class in newer RB versions.

The plugin asks on Mac OS X the IOKit framework for the primary ethernet interface. We are not sure what Apple really defines for being the primary one, so let's test it:

- Ethernet on and Airport off ->Ethernet MAC Address
- Ethernet off and Airport on ->Ethernet MAC Address

Added Linux support in version 16.4.

### 181.7.44 MacBoardID as string

MBS Util Plugin, Plugin Version: 19.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Queries board-id for Mac.
**Example:**

MsgBox SystemInformationMBS.MacBoardID

**Notes:** e.g. "Mac-1234567890123456"

### 181.7.45 MacBugFixVersion as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

**Function:** The BugFix part of the Mac OS version number.
**Example:**

```
MsgBox str(SystemInformationMBS.MacBugFixVersion)
```

**Notes:**

The bug fix system version number; in 10.4.17 this would be the decimal value 17.

Intel apps running in Rosetta on Apple M1 will report 10.16 instead of 11.x.

### 181.7.46 MacHasHardwareAcceleratedCoreImage as boolean

MBS Util Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Queries whether hardware accerlation is used for CoreImage.
**Example:**

```
if SystemInformationMBS.MacHasHardwareAcceleratedCoreImage then
msgbox "CoreImage should be very fast."
else
msgbox "CoreImage may be slow."
end if
```

**Notes:** Queries OpenGL whether programmable fragments are supported.

### 181.7.47 MachineID(flags as Integer = 15) as string

MBS Util Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a Machine ID for the current computer.
**Example:**

```
// this is how we build it.
dim t as string = "MachineID"+SystemInformationMBS.HardDiscSerial+SystemInformationMBS.MacSeri-
```

```
alNumber+SystemInformationMBS.MacModel+SystemInformationMBS.CPUBrandString

// you could extend it with SystemInformationMBS.WinProductKey

dim m as string = MD5StringMBS(t)

MsgBox "Machine ID: "+SystemInformationMBS.MachineID+EndOfLine+"My Machine ID: "+m
```

**Notes:**

Returns a 32 byte long hex string with a Machine ID.
Example value: "EE537483656B25996B51B7F4C99F9083".

This ID is based on the results of the MacSerialNumber, MacModel, CPUBrandString and HardDiscSerial functions. If all 4 functions have no value, the result is always "A2254DEF74A74608D76D1BA49BD2E82A". Also the result could change in future if we fix a bug in one of the functions so that the result values differ.

It is not based on the MACAddressString function as your MAC Address can change when switching between wired and wireless networks. Also we do not check the PhysicalRAM as RAM is a typical thing which changes over time.

You can store this value in some prerences/license file and later compare it agains the current value to see if the machine may have changed. In that case ask user to revalidate license, for example by asking for the serial number.

It can happen that 2 PCs have the same MachineID, typical two virtual machines. So this ID is not unique. But it is very likely that two different computers produce different MachineIDs.

Added flags parameter in 14.1:

| | | |
|---|---|---|
| flagHardDiscSerial | 1 | Use hard disk serial. |
| flagMacSerialNumber | 2 | Use Mac Serial number (on Mac) |
| flagMacModel | 4 | Use Mac Model (on Mac) |
| flagCPUBrandString | 8 | Use CPU Brand String. |
| flagWinProductKey | 16 | Use Product Key (on Windows only) |

The Machine ID may be different if one of the components returns a different result. Result may be different in whether app runs as admin or not on Windows.

In Windows 8.1 it looks like WindowsWMIMBS.InitSecurity(false) must be called at app.open time as Xojo will do some things in background when opening first window which block our queries.

### 181.7.48 MacMajorVersion as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

**Function:** The major Mac OS version number.
**Example:**

```
// show major version number
MsgBox str(SystemInformationMBS.MacMajorVersion)

// and show all three version numbers together:
MsgBox str(SystemInformationMBS.MacMajorVersion)+"."+str(SystemInformationMBS.MacMinorVersion)+"."+str(SystemInformationMBS.MacBugFixVersion)
```

**Notes:**

The major system version number; in 10.4.17 this would be the decimal value 10.

On macOS Big Sur, this returns 11 in Apple Silicon application and 10 in Intel application.
On macOS Monterey this returns 12.
If your Intel application is build with older SDK (e.g. Xojo 2019), the result reported version will still be macOS 10.16.

### 181.7.49 MacMinorVersion as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

**Function:** The minor Mac OS version number.
**Example:**

```
MsgBox str(SystemInformationMBS.MacMinorVersion)
```

**Notes:** The minor system version number; in 10.4.17 this would be the decimal value 4.

### 181.7.50 MacModel as string

MBS Util Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the Mac model string.
**Example:**

```
msgbox SystemInformationMBS.MacModel
```

**Notes:** for example "<powermac7,3>".

### 181.7.51 MacROMBootVersion as string

MBS Util Plugin, Plugin Version: 19.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns boot ROM version string.
**Example:**

MsgBox SystemInformationMBS.MacROMBootVersion

**Notes:** e.g. "220.270.99.0.0 (iBridge: 16.16.6571.0.0,0)"

### 181.7.52 MacSerialNumber as string

MBS Util Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the serial number of your local Mac.
**Example:**

msgbox SystemInformationMBS.MacSerialNumber

**Notes:**

May return an empty string in case of an error.
(e.g. when being user on Windows or if the Mac does not know its serialnumber)

### 181.7.53 MacUUID as string

MBS Util Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the unique identifier for the given Mac.
**Example:**

msgbox SystemInformationMBS.MacUUID

**Notes:** Returns "" on any error.

### 181.7.54 MacVRAMSize as Int64

MBS Util Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Queries the size of the main video graphics memory size.
**Example:**

msgbox format(SystemInformationMBS.MacVRAMSize,"0")+" Bytes VRAM."

**Notes:**

Walks over the list of displays, asks on each display for its VRAM size and returns the first value found.

For some reason this seems not to return more than 256 MB of memory.

### 181.7.55 OSName as string

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a string to display which OS Version you have.
**Example:**

msgBox SystemInformationMBS.OSName
' may show: Mac OS X

**Notes:**

Return values possible:
Windows NT
Windows 2000
Windows XP
Windows Vista
Mac OS
Mac OS X
Linux

and a few other Windows versions like 6.2 alias 8.

In older plugins this function was named OSNameMBS.

### 181.7.56 OSVersionString as string

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a string to display which OS Version you have.
**Example:**

```
msgBox SystemInformationMBS.OSVersionString
' may show: Mac OS X 10.1.2
```

**Notes:**

GetOSVersionStr returns the version string of the OS.
Some Possible values:
"System 7.5.3",
"MacOS 8",
"MacOS 9.1",
"MacOS X 10.4.1",
"Windows NT 3.5",
"Windows 2000 (Service Pack 3)".

In older plugins this function was named OSVersionStrMBS.

On macOS Big Sur, this returns 11.x in Apple Silicon application and 10.6 in Intel application.
On macOS Monterey this returns 12.x.
If your Intel application is build with older SDK (e.g. Xojo 2019), the result reported version will still be macOS 10.16.

### 181.7.57 PhysicalRAM as Double

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the size of the physical installed memory.
**Example:**

```
msgBox format(SystemInformationMBS.PhysicalRAM/1024/1024,"0")+" MB of RAM built in."
```

**Notes:**

On old Windows versions some hundred KBs less for DOS.

Result changed from integer to double in plugin version 3.4 to return correct results on 2 GB RAM. In v5.2 changed to return correct values on Macs with more than 4 GB of RAM.

On Windows the total physical memory size.

In older plugins this function was named PhysicalRAMMBS.

### 181.7.58 ProcessorCount(Mode as Integer = 0) as Integer

MBS Util Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the number of processors on the target system.
**Example:**

```
MsgBox _
str(SystemInformationMBS.ProcessorCount(SystemInformationMBS.kProcessorCountDefault ))+" default"
+ EndOfLine + _
str(SystemInformationMBS.ProcessorCount(SystemInformationMBS.kProcessorCountLogical ))+" logical"
+ EndOfLine + _
str(SystemInformationMBS.ProcessorCount(SystemInformationMBS.kProcessorCountPhysical))+" physical"
```

**Notes:**

With plugin version 18.0, we added mode parameter. Pass 2 for physical CPU (kProcessorCountPhysical) and 1 for logical CPU count (kProcessorCountLogical) on Mac/Win.

On Windows or Mac OS the number of cores.
On Linux the number of configured CPUs.

Returns 1 on any error.

### 181.7.59 ShortUsername as string

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns the short name of the current user.
**Example:**

```
msgbox "Welcome "+SystemInformationMBS.ShortUsername+"!"
```

**Notes:**

On Linux and Mac OS X the short user name.

On all other cases the same as UserName function.

### 181.7.60 SystemFont as string

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the name of the used system font.
**Example:**

msgbox "You are using the system font "+SystemInformationMBS.SystemFont+"."

**Notes:**

On Windows the system function returns "System" for our tests. Please tell us if this function is not working for you correct on Windows.

On Linux something like "Sans 10" is returned.

In older plugins this function was named SystemFontMBS.

### 181.7.61 Username as string

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns the name of the current user.
**Example:**

msgbox "Welcome "+SystemInformationMBS.Username+"!"

**Notes:**

Code for Multiple User on Mac OS 9 is build in, but I can't test it.

This is tried on Mac OS:
1. Mac OS X Username function.
2. AppleEvent to FileSharing.
3. Mulitple User Username (Mac OS 9)

4. System username from system resource.

In older plugins this function was named UserNameMBS.

### 181.7.62 WinBuildNumber as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The build number of the operating system.
**Example:**

MsgBox str(SystemInformationMBS.WinBuildNumber)

**Notes:** For example returns 2600 on Windows XP Build 2600.

### 181.7.63 WinCSDVersion as string

MBS Util Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** A string, such as "Service Pack 3", that indicates the latest Service Pack installed on the system.
**Example:**

MsgBox SystemInformationMBS.WinCSDVersion

**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

Shows here "Service Pack 3" on a Windows XP installation.
If no Service Pack has been installed, the string is empty.

### 181.7.64 WindowsAero as boolean

MBS Util Plugin, Plugin Version: 10.1, Platform: Windows, Targets: All.

**Function:** Whether Windows is using the Aero Interface?
**Example:**

msgbox str(SystemInformationMBS.WindowsAero)

**Deprecated:** This item is deprecated and should no longer be used. **Notes:** True if aero is used. False if

the status is unknown (e.g. on Windows XP) or Aero is not used.

### 181.7.65 WindowsNativeMachine as Integer

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the native machine type.
**Notes:** This may return ARM64 on a Windows with ARM CPU.

### 181.7.66 WindowsProcessMachine as Integer

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the machine type of the current process.
**Notes:** This may return AMD64, while running in emulation on ARM64.

### 181.7.67 WinMajorVersion as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The major version number of the operating system.
**Example:**

```
MsgBox str(SystemInformationMBS.WinMajorVersion)
```

**Notes:** Returns 5 on Windows 2000/XP and 6 on Windows Vista/7/8.

### 181.7.68 WinMinorVersion as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The minor version number of the operating system.
**Example:**

```
MsgBox str(SystemInformationMBS.WinMinorVersion)
```

**Notes:** Returns 0 on Windows 2000/Vista and 1 on Windows XP/7 and 2 on Windows 8.

### 181.7.69 WinPlatformId as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The operating system platform.
**Example:**

MsgBox str(SystemInformationMBS.WinPlatformId)

**Notes:**

This member can be VER_PLATFORM_WIN32_NT (2).
e.g. 2 on Windows XP.

### 181.7.70 WinProductKey as string

MBS Util Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Returns the product key of the Windows installation.
**Notes:** Returns "" on any error.
See also:

- 181.7.71 WinProductKey(path as string, name as string, keyStartIndex as Integer = 52) as string 25781

### 181.7.71 WinProductKey(path as string, name as string, keyStartIndex as Integer = 52) as string

MBS Util Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Returns the product key of the Windows installation.
**Notes:**

Returns "" on any error.
With the right path and name you can read also the office versions.

For Office 10, it looks like you need to use 808 as offset.
See also:

- 181.7.70 WinProductKey as string 25781

### 181.7.72 WinProductType as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Any additional information about the system.
**Example:**

MsgBox str(SystemInformationMBS.WinProductType)

**Notes:**

e.g. 1 on Windows XP.

This member can be one of the following values:

| | | |
|---|---|---|
| VER_NT_DOMAIN_CONTROLLER | 2 | The system is a domain controller and the operating system is Windows Server 2008, Windows Server 2003, or Windows 2000 Server. |
| VER_NT_SERVER | 3 | The operating system is Windows Server 2008, Windows Server 2003, or Windows 2000 Server. Note that a server that is also a domain controller is reported as VER_NT_DOMAIN_CONTROLLER, not VER_NT_SERVER. |
| VER_NT_WORKSTATION | 1 | The operating system is Windows Vista, Windows XP Professional, Windows XP Home Edition, or Windows 2000 Professional. |

### 181.7.73 WinServicePackMajor as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The major version number of the latest Service Pack installed on the system.
**Example:**

MsgBox str(SystemInformationMBS.WinServicePackMajor)

**Deprecated:** This item is deprecated and should no longer be used. **Notes:** For example, for Service Pack 3, the major version number is 3. If no Service Pack has been installed, the value is zero.

### 181.7.74 WinServicePackMinor as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The minor version number of the latest Service Pack installed on the system.
**Example:**

MsgBox str(SystemInformationMBS.WinServicePackMinor)

**Deprecated:** This item is deprecated and should no longer be used. **Notes:** For example, for Service Pack

3, the minor version number is 0.

### 181.7.75 WinSuiteMask as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** A bit mask that identifies the product suites available on the system.
**Example:**

MsgBox str(SystemInformationMBS.WinSuiteMask)

**Notes:**

e.g. 256 on Windows XP.

This member can be a combination of the following values.

| | | |
|---|---|---|
| VER_SUITE_BACKOFFICE | 4 | Microsoft BackOffice components are installed. |
| VER_SUITE_BLADE | & h0400 | Windows Server 2003, Web Edition is installed. |
| VER_SUITE_COMPUTE_SERVER | & h4000 | Windows Server 2003, Compute Cluster Edition is installed. |
| VER_SUITE_DATACENTER | & h0080 | Windows Server 2008 Datacenter, Windows Server 2003, Datacenter Edition, or Windows 2000 Datacenter Server is installed. |
| VER_SUITE_ENTERPRISE | 2 | Windows Server 2008 Enterprise, Windows Server 2003, Enterprise Edition, or Windows 2000 Advanced Server is installed. Refer to the Remarks section for more information about this bit flag. |
| VER_SUITE_EMBEDDEDNT | & h0040 | Windows XP Embedded is installed. |
| VER_SUITE_PERSONAL | & h0200 | Windows Vista Home Premium, Windows Vista Home Basic, or Windows XP Home Edition is installed. |
| VER_SUITE_SINGLEUSERTS | & h0100 | Remote Desktop is supported, but only one interactive session is supported. This value is set unless the system is running in application server mode. |
| VER_SUITE_SMALLBUSINESS | 1 | Microsoft Small Business Server was once installed on the system, but may have been upgraded to another version of Windows. Refer to the Remarks section for more information about this bit flag. |
| VER_SUITE_SMALLBUSINESS_RESTRICTED | & h0020 | Microsoft Small Business Server is installed with the restrictive client license in force. Refer to the Remarks section for more information about this bit flag. |
| VER_SUITE_STORAGE_SERVER | & h2000 | Windows Storage Server 2003 R2 or Windows Storage Server 2003is installed. |
| VER_SUITE_TERMINAL | & h0010 | Terminal Services is installed. This value is always set. If VER_SUITE_TERMINAL is set but VER_SUITE_SINGLEUSERTS is not set, the system is running in application server mode. |
| VER_SUITE_WH_SERVER | & h8000 | Windows Home Server is installed. |

### 181.7.76 Constants

### 181.7.77 kProcessorCountDefault = 0

MBS Util Plugin, Plugin Version: 13.0.

**Function:** One of the mode values for ProcessorCount function.

**Notes:** Default behavior.

### 181.7.78 kProcessorCountLogical = 1

MBS Util Plugin, Plugin Version: 13.0.

**Function:** One of the mode values for ProcessorCount function.
**Notes:** Logical Processors

### 181.7.79 kProcessorCountPhysical = 2

MBS Util Plugin, Plugin Version: 13.0.

**Function:** One of the mode values for ProcessorCount function.
**Notes:** Physical Processors

### 181.7.80 kWindowsMachineAMD64 = & h8664

MBS Util Plugin, Plugin Version: 22.3.

**Function:** One of the Windows machine type constants.
**Notes:** ARM in 64-bit.

### 181.7.81 kWindowsMachineARM32 = & h01c0

MBS Util Plugin, Plugin Version: 22.3.

**Function:** One of the Windows machine type constants.
**Notes:** ARM in 32-bit.

### 181.7.82 kWindowsMachineARM64 = & hAA64

MBS Util Plugin, Plugin Version: 22.3.

**Function:** One of the Windows machine type constants.
**Notes:** AMD 64-bit x86.

### 181.7.83 kWindowsMachineI386 = & h014c

MBS Util Plugin, Plugin Version: 22.3.

**Function:** One of the Windows machine type constants.
**Notes:** Intel 32-bit x86.

### 181.7.84 kWindowsMachineUnknown = 0

MBS Util Plugin, Plugin Version: 22.3.

**Function:** One of the Windows machine type constants.
**Notes:** Unknown.

# Chapter 182

# SystemConfiguration

## 182.1 class SCNetworkReachabilityMBS

### 182.1.1 class SCNetworkReachabilityMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** A class to check network reachability.
**Notes:**

The SCNetworkReachability class allow an application to determine the status of a system's current network configuration and the reachability of a target host. In addition, the reachability can be monitored with a notification being provided when/if the status has changed.

The term "reachable" reflects whether a data packet, sent by an application into the network stack, can be sent to the the target host/address. Please note that there is no guarantee that the data packet will actually be received by the host.

Requires Mac OS X 10.3 or newer.
Subclass of the CFObjectMBS class.

### 182.1.2 Methods

### 182.1.3 CreateWithAddress(ip as string) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Creates a reference to the specified network address.
**Notes:** Returns true on success.

### 182.1.4 CreateWithAddressPair(LocalIP as string, RemoteIP as string) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Creates a reference to the specified network address.
**Notes:**

Returns true on success.
LocalIP: The local address associated with a network connection.
RemoteIP: The remote address associated with a network connection.
One of the IP addresses can be empty.

### 182.1.5 CreateWithName(name as string) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Creates a reference to the specified network host/node name.
**Notes:** Returns true on success.

### 182.1.6 ErrorString(errorcode as Integer) as string

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Returns an error string for a given SC Error Code.
**Notes:** A utility function which works at any time.

### 182.1.7 Properties

### 182.1.8 Error as Integer

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Returns the last error code.
**Notes:**

A utility function which works with all SystemConfiguration methods.

(Read only property)

| | | |
|---|---|---|
| kSCStatusOK | = 0 | Success |
| kSCStatusFailed | = 1001 | Non-specific failure |
| kSCStatusInvalidArgument | = 1002 | Invalid argument |
| kSCStatusAccessError | = 1003 | Permission denied - must be root to obtain lock - could not create access/create preferences |
| kSCStatusNoKey | = 1004 | No such key |
| kSCStatusKeyExists | = 1005 | Key already defined |
| kSCStatusLocked | = 1006 | Lock already held |
| kSCStatusNeedLock | = 1007 | Lock required for this operation |
| kSCStatusNoStoreSession | = 2001 | Configuration daemon session not active |
| kSCStatusNoStoreServer | = 2002 | Configuration daemon not (no longer) available |
| kSCStatusNotifierActive | = 2003 | Notifier is currently active |
| kSCStatusNoPrefsSession | = 3001 | Preference session not active |
| kSCStatusPrefsBusy | = 3002 | Preferences update currently in progress |
| kSCStatusNoConfigFile | = 3003 | Configuration file not found |
| kSCStatusNoLink | = 3004 | No such link |
| kSCStatusStale | = 3005 | Write attempted on stale version of object |
| kSCStatusMaxLink | = 3006 | Maximum link count exceeded |
| kSCStatusReachabilityUnknown | = 4001 | Network reachability cannot be determined |

### 182.1.9 Flags as Integer

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Determines if the given target is reachable using the current network configuration.
**Notes:**

Returns 0 on any error.
See the event for the flag constants.
(Read only property)

### 182.1.10 Events

### 182.1.11 Changed(flags as Integer)

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: .

**Function:** The reachability changed.
**Notes:**

useful constants:

Flags that indicate whether the specified network
nodename/address is reachable, requires a connection,
requires some user intervention in establishing the
connection, and whether the calling application must
initiate the connection using the (TBD???) API.

| | |
|---|---|
| kSCNetworkFlagsTransientConnection | = 1 |
| kSCNetworkFlagsReachable | = 2 |
| kSCNetworkFlagsConnectionRequired | = 4 |
| kSCNetworkFlagsConnectionAutomatic | = 8 |
| kSCNetworkFlagsInterventionRequired | = 5 |
| kSCNetworkFlagsIsLocalAddress | = 65536 |
| kSCNetworkFlagsIsDirect | = 131072 |

kSCNetworkFlagsTransientConnection
This flag indicates that the specified nodename/address can be reached via a transient (e.g. PPP) connection.

kSCNetworkFlagsReachable
This flag indicates that the specified nodename/address can be reached using the current network configuration.

kSCNetworkFlagsConnectionRequired
This flag indicates that the specified nodename/address can be reached using the current network configuration but a connection must first be established.

As an example, this status would be returned for a dialup connection that was not currently active but could handle network traffic for the target system.

kSCNetworkFlagsConnectionAutomatic
This flag indicates that the specified nodename/address can be reached using the current network configuration but a connection must first be established. Any traffic directed to the specified name/address will initiate the connection.

kSCNetworkFlagsInterventionRequired
This flag indicates that the specified nodename/address can be reached using the current network configuration but a connection must first be established. In addition, some form of user intervention will be required to establish this connection (e.g. providing a password, authentication token, etc.).

kSCNetworkFlagsIsLocalAddress
This flag indicates that the specified nodename/address is one associated with a network interface on the current system.

kSCNetworkFlagsIsDirect
This flag indicates that network traffic to the specified nodename/address will not go through a gateway but is routed directly to one of the interfaces in the system.

## 182.2 class SCPreferencesMBS

### 182.2.1 class SCPreferencesMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** A class for System Configuration Preferences.
**Notes:**

Please remember that you may need root access to change something.

The SCPreferences classes allow an application to load and store XML configuration data in a controlled manner and provide the necessary notifications to other applications that need to be aware of configuration changes.

The stored XML configuration data is accessed using a prefsID. A
nil value indicates that the default system preferences are to be accessed.
A string which starts with a leading "/" character specifies the path to the file containing te preferences to be accessed. A string which does not start with a leading "/" character specifies a file relative to the default system preferences directory.

The Path APIs make certain assumptions about the layout of the preferences data. These APIs view the data as a collection of dictionaries of key/value pairs and an associated path name. The root path ("/") identifies the top-level dictionary. Additional path components specify the keys for sub-dictionaries.

For example, the following dictionary can be accessed via two paths. The root ("/") path would return a dictionary with all keys and values. The path "/path1" would only return the dictionary with the "key3" and "key4" properties.

```
<dict>
<key>key1</key>
<string>val1</string>
<key>key2</key>
<string>val2</string>
<key>path1</key>
<dict>
<key>key3</key>
<string>val3</string>
<key>key4</key>
<string>val4</string>
</dict>
</dict>
```

Each dictionary can also include the kSCResvLink key. The value associated with this key is interpreted as

a "link" to another path. If this key is present, a call to the GetPathValue() API will return the dictionary specified by the link.
Subclass of the CFObjectMBS class.

### 182.2.2 Blog Entries

- MBS Xojo Plugins, version 20.5pr4
- MBS Real Studio Plugins, version 12.5pr7

### 182.2.3 Blog Entries

- MBS Xojo Plugins, version 20.5pr4
- MBS Real Studio Plugins, version 12.5pr7

### 182.2.4 Methods

### 182.2.5 AddValue(key as CFStringMBS, value as CFObjectMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Adds data for a preference key.
**Notes:**

This function associates new data with the specified key. In order to commit these changes to permanent storage a call must be made to CommitChanges.

Returns true if the value was added; false if the key already exists or if an error occurred.

### 182.2.6 ApplyChanges as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Requests that the currently stored configuration preferences be applied to the active configuration.
**Notes:** Returns true if the lock was obtained; false if an error occurred.

### 182.2.7 CommitChanges as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Commits changes made to the configuration preferences to persitent storage.
**Notes:**

This function commits any changes to permanent storage. An implicit call to Lock/Unlock will be made if exclusive access has not already been established.

Note: This routine commits changes to persistent storage. Call ApplyChanges to apply the changes to the running system.

Returns true if the lock was obtained; false if an error occurred.

### 182.2.8 Create(name as CFStringMBS, prefid as CFStringMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Initiates access to the per-system set of configuration preferences.
**Notes:**

name: A string that describes the name of the calling process.
prefsID: A string that identifies the name of the group of preferences to be accessed/updated.

### 182.2.9 CreateUniquePathChild(prefix as CFStringMBS) as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Creates a new path component within the dictionary hierarchy.
**Notes:**

prefix: A string that represents the parent path.
Returns a string representing the new (unique) child path; nil if the specified path does not exist.

### 182.2.10 CreateWithAuthorization(name as CFStringMBS, prefid as CFStringMBS, AuthorizationHandle as Integer) as boolean

MBS MacCF Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

**Function:** Initiates access to the per-system set of configuration preferences.
**Notes:**

name: A string that describes the name of the calling process.
prefsID: A string that identifies the name of the group of preferences to be accessed/updated.
AuthorizationHandle: Handle to authorization object for root access.

### 182.2.11 ErrorString(errorcode as Integer) as string

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Returns an error string for a given SC Error Code.
**Notes:** A utility function which works at any time.

### 182.2.12 GetPathLink(path as CFStringMBS) as CFObjectMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Returns the link (if one exists) associated with the specified path.
**Notes:**

path: A string that represents the path to be returned.
The dictionary associated with the specified path; nil if the path is not a link or does not exist.

### 182.2.13 GetPathValue(path as CFStringMBS) as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Returns the dictionary associated with the specified path.
**Notes:**

path: A string that represents the path to be returned.
Returns the dictionary associated with the specified path; nil if the path does not exist.

### 182.2.14 GetValue(key as CFStringMBS) as CFObjectMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Returns the data associated with a preference key.
**Notes:**

This function retrieves data associated with a key for the prefsID.

You could read stale data and not know it, unless you first call Lock.

Returns the value associated with the specified preference key; If no value was located, nil is returned.

### 182.2.15 KeyList as CFArrayMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Returns an array of currently defined preference keys.
**Notes:** Returns nil on any error.

### 182.2.16 Lock(wait as boolean) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Locks access to the configuration preferences.
**Notes:**

This function obtains exclusive access to the configuration preferences associated with this prefsID. Clients attempting to obtain exclusive access to the preferences will either receive an kSCStatusPrefsBusy error or block waiting for the lock to be released.

wait: A boolean flag indicating whether the calling process should block waiting for another process to complete its update operation and release its lock.

Returns true if the lock was obtained; false if an error occurred.

### 182.2.17 RemovePathValue(path as CFStringMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Removes the data associated with the specified path.
**Notes:**

path: A string that represents the path to be returned.
Returns a boolean indicating the success (or failure) of the call.

### 182.2.18 RemoveValue(key as CFStringMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Removes the data associated with a preference key.
**Notes:**

This function removes the data associated with the specified key. In order to commit these changes to permanent storage a call must be made to CommitChanges.

Returns true if the value was removed; false if the key did not exist or if an error occurred.

### 182.2.19 SetComputerName(name as CFStringMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Updates the computer/host name in the system preferences.
**Notes:**

In order to commit these changes to permanent storage a call must be made to CommitChanges.
A call to ApplyChanges is also required for the new name to become active.
A boolean indicating the success (or failure) of the call.

### 182.2.20 SetLocalHostName(name as CFStringMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Updates the local host name in the system preferences.
**Notes:**

In order to commit these changes to permanent storage a call must be made to CommitChanges.

A call to ApplyChanges is also required for the new name to become active.

### 182.2.21 SetPathLink(path as CFStringMBS, link as CFObjectMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Associates a link to a second dictionary at the specified path.
**Notes:**

path: A string that represents the path to be updated.
link: A string that represents the link to be stored at the specified path.
Returns a boolean indicating the success (or failure) of the call.

### 182.2.22 SetPathValue(path as CFStringMBS, value as CFDictionaryMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Associates a dictionary with the specified path.
**Notes:**

path: A string that represents the path to be updated.
value: A dictionary that represents the data to be stored at the specified path.
Returns a boolean indicating the success (or failure) of the call.

### 182.2.23 SetValue(key as CFStringMBS, value as CFObjectMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Updates the data associated with a preference key.
**Notes:**

This function adds or replaces the value associated with the specified key. In order to commit these changes to permanent storage a call must be made to CommitChanges.

Returns true if the value was set; false if an error occurred.

### 182.2.24 Signature as CFBinaryDataMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Returns a sequence of bytes that can be used to determine if the saved configuration preferences have changed.
**Notes:** A CFBinaryDataMBS that reflects the signature of the configuration preferences at the time of the call to Create.

### 182.2.25 Unlock as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Releases exclusive access to the configuration preferences.
**Notes:**

This function releases the exclusive access "lock" for this prefsID. Other clients will be now be able to establish exclusive access to the preferences.

Returns true if the lock was obtained; false if an error occurred.

### 182.2.26 Properties

### 182.2.27 Available as Boolean

MBS MacCF Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

**Function:** Whether this class is available.
**Notes:**

Returns true on macOS.
(Read only property)

### 182.2.28 Error as Integer

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Returns the last error code.
**Notes:**

A utility function which works with all SystemConfiguration methods.

| | | |
|---|---|---|
| kSCStatusOK | = 0 | Success |
| kSCStatusFailed | = 1001 | Non-specific failure |
| kSCStatusInvalidArgument | = 1002 | Invalid argument |
| kSCStatusAccessError | = 1003 | Permission denied - must be root to obtain lock - could not create access/create preferences |
| kSCStatusNoKey | = 1004 | No such key |
| kSCStatusKeyExists | = 1005 | Key already defined |
| kSCStatusLocked | = 1006 | Lock already held |
| kSCStatusNeedLock | = 1007 | Lock required for this operation |
| kSCStatusNoStoreSession | = 2001 | Configuration daemon session not active |
| kSCStatusNoStoreServer | = 2002 | Configuration daemon not (no longer) available |
| kSCStatusNotifierActive | = 2003 | Notifier is currently active |
| kSCStatusNoPrefsSession | = 3001 | Preference session not active |
| kSCStatusPrefsBusy | = 3002 | Preferences update currently in progress |
| kSCStatusNoConfigFile | = 3003 | Configuration file not found |
| kSCStatusNoLink | = 3004 | No such link |
| kSCStatusStale | = 3005 | Write attempted on stale version of object |
| kSCStatusMaxLink | = 3006 | Maximum link count exceeded |
| kSCStatusReachabilityUnknown | = 4001 | Network reachability cannot be determined |

(Read only property)

## 182.3 Globals

### 182.3.1 kSCNetworkReachabilityMBSTypeID as Integer

MBS MacCF Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

**Function:** Returns the CoreFoundation TypeID for SCNetworkReachability.

### 182.3.2 kSCPreferencesMBSTypeID as Integer

MBS MacCF Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

**Function:** Returns the CoreFoundation TypeID for SCPreferences.

## 182.4 class SystemConfigurationMBS

### 182.4.1 class SystemConfigurationMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** A class for the global System Configuration framework functions.
**Notes:** See the file "SCSchemaDefinitions.h" for details on the constants.

### 182.4.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 17.1pr1
- Need Proxy Settings?

### 182.4.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 17.1pr1
- Need Proxy Settings?

### 182.4.4 Methods

### 182.4.5 ComputerName as string

MBS MacCF Plugin, Plugin Version: 7.8, Platform: macOS, Targets: All.

**Function:** Gets the current computer name.
**Example:**

```
dim s as new SystemConfigurationMBS
msgbox s.ComputerName
```

**Notes:** Returns "" on an error.

### 182.4.6 ComputerNameEncoding as Integer

MBS MacCF Plugin, Plugin Version: 7.8, Platform: macOS, Targets: All.

**Function:** The encoding of the computer name.

### 182.4.7 ConsoleUser as string

MBS MacCF Plugin, Plugin Version: 7.8, Platform: macOS, Targets: All.

**Function:** Gets the name of the currently logged-in user.
**Example:**

```
dim s as new SystemConfigurationMBS
msgbox s.ConsoleUser
```

**Notes:** Returns the user currently logged into the system; "" if no user is logged in or if an error was encountered.

### 182.4.8 ConsoleUserGID as Integer

MBS MacCF Plugin, Plugin Version: 7.8, Platform: macOS, Targets: All.

**Function:** Gets the group ID of the currently logged-in user.
**Notes:** The group ID of the current console user.

### 182.4.9 ConsoleUserUID as Integer

MBS MacCF Plugin, Plugin Version: 7.8, Platform: macOS, Targets: All.

**Function:** Gets the user ID of the currently logged-in user.
**Notes:** The user ID of the current console user.

### 182.4.10 kSCCompAnyRegex as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.11 kSCCompGlobal as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.12 kSCCompHostNames as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.13 kSCCompInterface as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.14 kSCCompNetwork as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.15 kSCCompService as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.16 kSCCompSystem as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.17 kSCCompUsers as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.18 kSCDynamicStoreDomainFile as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.19 kSCDynamicStoreDomainPlugin as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.20 kSCDynamicStoreDomainPrefs as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.21 kSCDynamicStoreDomainSetup as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.22 kSCDynamicStoreDomainState as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.23 kSCDynamicStorePropNetInterfaces as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.24 kSCDynamicStorePropNetPrimaryInterface as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.25 kSCDynamicStorePropNetPrimaryService as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.26 kSCDynamicStorePropNetServiceIDs as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.27 kSCDynamicStorePropSetupCurrentSet as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.28 kSCDynamicStorePropSetupLastUpdated as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.29 kSCEntNet6to4 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.30 kSCEntNetAirPort as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.31 kSCEntNetDHCP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.32 kSCEntNetDNS as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.33 kSCEntNetEthernet as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.34 kSCEntNetFireWire as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.35 kSCEntNetInterface as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.36 kSCEntNetIPv4 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.37 kSCEntNetIPv6 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.38 kSCEntNetL2TP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.39 kSCEntNetLink as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.40 kSCEntNetModem as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.41 kSCEntNetPPP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.42 kSCEntNetPPPoE as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.43 kSCEntNetPPPSerial as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.44 kSCEntNetPPTP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.45 kSCEntNetProxies as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.46 kSCEntUsersConsoleUser as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.47 kSCPrefCurrentSet as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.48 kSCPrefNetworkServices as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.49 kSCPrefSets as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.50 kSCPrefSystem as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.51 kSCPropInterfaceName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.52 kSCPropMACAddress as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.53 kSCPropNet6to4Relay as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.54 kSCPropNetAirPortAllowNetCreation as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.55 kSCPropNetAirPortAuthPassword as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.56 kSCPropNetAirPortAuthPasswordEncryption as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.57 kSCPropNetAirPortJoinMode as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.58 kSCPropNetAirPortPowerEnabled as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.59 kSCPropNetAirPortPreferredNetwork as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.60 kSCPropNetAirPortSavePasswords as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.61 kSCPropNetDNSDomainName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.62 kSCPropNetDNSSearchDomains as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.63 kSCPropNetDNSServerAddresses as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.64 kSCPropNetDNSSortList as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.65 kSCPropNetEthernetMediaOptions as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.66 kSCPropNetEthernetMediaSubType as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.67 kSCPropNetEthernetMTU as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.68 kSCPropNetInterfaceDeviceName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.69 kSCPropNetInterfaceHardware as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.70 kSCPropNetInterfaces as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.71 kSCPropNetInterfaceSubType as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.72 kSCPropNetInterfaceSupportsModemOnHold as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.73 kSCPropNetInterfaceType as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.74 kSCPropNetIPv4Addresses as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.75 kSCPropNetIPv4BroadcastAddresses as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.76 kSCPropNetIPv4ConfigMethod as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.77 kSCPropNetIPv4DestAddresses as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.78 kSCPropNetIPv4DHCPClientID as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.79 kSCPropNetIPv4Router as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.80 kSCPropNetIPv4SubnetMasks as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.81 kSCPropNetIPv6Addresses as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.82 kSCPropNetIPv6ConfigMethod as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.83 kSCPropNetIPv6DestAddresses as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.84 kSCPropNetIPv6Flags as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.85 kSCPropNetIPv6PrefixLength as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.86 kSCPropNetIPv6Router as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.87 kSCPropNetL2TPIPSecSharedSecret as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.88 kSCPropNetL2TPIPSecSharedSecretEncryption as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.89 kSCPropNetL2TPTransport as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.90 kSCPropNetLinkActive as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.91 kSCPropNetLinkDetaching as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.92 kSCPropNetLocalHostName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.93 kSCPropNetModemConnectionScript as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.94 kSCPropNetModemConnectSpeed as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.95 kSCPropNetModemDataCompression as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.96 kSCPropNetModemDialMode as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.97 kSCPropNetModemErrorCorrection as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.98 kSCPropNetModemHoldCallWaitingAudibleAlert as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.99 kSCPropNetModemHoldDisconnectOnAnswer as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.100 kSCPropNetModemHoldEnabled as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.101 kSCPropNetModemHoldReminder as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.102 kSCPropNetModemHoldReminderTime as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.103 kSCPropNetModemNote as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.104 kSCPropNetModemPulseDial as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.105 kSCPropNetModemSpeaker as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.106 kSCPropNetModemSpeed as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.107 kSCPropNetOverridePrimary as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.108 kSCPropNetPPPACSPEnabled as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.109 kSCPropNetPPPAuthEAPPlugins as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.110 kSCPropNetPPPAuthName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.111 kSCPropNetPPPAuthPassword as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.112 kSCPropNetPPPAuthPasswordEncryption as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.113 kSCPropNetPPPAuthPrompt as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.114 kSCPropNetPPPAuthProtocol as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.115 kSCPropNetPPPCCPEnabled as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.116 kSCPropNetPPPCommAlternateRemoteAddress as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.117 kSCPropNetPPPCommConnectDelay as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.118 kSCPropNetPPPCommDisplayTerminalWindow as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.119 kSCPropNetPPPCommRedialCount as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.120 kSCPropNetPPPCommRedialEnabled as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.121 kSCPropNetPPPCommRedialInterval as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.122 kSCPropNetPPPCommRemoteAddress as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.123 kSCPropNetPPPCommTerminalScript as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.124 kSCPropNetPPPCommUseTerminalScript as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.125 kSCPropNetPPPConnectTime as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.126 kSCPropNetPPPDeviceLastCause as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.127 kSCPropNetPPPDialOnDemand as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.128 kSCPropNetPPPDisconnectOnIdle as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.129 kSCPropNetPPPDisconnectOnIdleTimer as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.130 kSCPropNetPPPDisconnectOnLogout as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.131 kSCPropNetPPPDisconnectOnSleep as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.132 kSCPropNetPPPDisconnectTime as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.133 kSCPropNetPPPIdleReminder as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.134 kSCPropNetPPPIdleReminderTimer as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.135 kSCPropNetPPPIPCPCompressionVJ as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.136 kSCPropNetPPPLastCause as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.137 kSCPropNetPPPLCPCompressionACField as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.138 kSCPropNetPPPLCPCompressionPField as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.139 kSCPropNetPPPLCPEchoEnabled as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.140 kSCPropNetPPPLCPEchoFailure as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.141 kSCPropNetPPPLCPEchoInterval as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.142 kSCPropNetPPPLCPMRU as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.143 kSCPropNetPPPLCPMTU as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.144 kSCPropNetPPPLCPReceiveACCM as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.145 kSCPropNetPPPLCPTransmitACCM as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.146 kSCPropNetPPPLogfile as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.147 kSCPropNetPPPOverridePrimary as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.148 kSCPropNetPPPPlugins as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.149 kSCPropNetPPPRetryConnectTime as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.150 kSCPropNetPPPSessionTimer as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.151 kSCPropNetPPPStatus as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.152 kSCPropNetPPPUseSessionTimer as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.153 kSCPropNetPPPVerboseLogging as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.154 kSCPropNetProxiesExceptionsList as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.155 kSCPropNetProxiesFTPEnable as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.156 kSCPropNetProxiesFTPPassive as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.157 kSCPropNetProxiesFTPPort as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.158 kSCPropNetProxiesFTPProxy as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.159 kSCPropNetProxiesGopherEnable as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.160 kSCPropNetProxiesGopherPort as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.161 kSCPropNetProxiesGopherProxy as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.162 kSCPropNetProxiesHTTPEnable as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.163 kSCPropNetProxiesHTTPPort as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.164 kSCPropNetProxiesHTTPProxy as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.165 kSCPropNetProxiesHTTPSEnable as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.166 kSCPropNetProxiesHTTPSPort as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.167 kSCPropNetProxiesHTTPSProxy as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.168 kSCPropNetProxiesRTSPEnable as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.169 kSCPropNetProxiesRTSPPort as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.170 kSCPropNetProxiesRTSPProxy as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.171 kSCPropNetProxiesSOCKSEnable as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.172 kSCPropNetProxiesSOCKSPort as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.173 kSCPropNetProxiesSOCKSProxy as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.174 kSCPropNetServiceOrder as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.175 kSCPropSystemComputerName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.176 kSCPropSystemComputerNameEncoding as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.177 kSCPropUserDefinedName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.178 kSCPropVersion as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.179 kSCResvInactive as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.
**Notes:** Value should be "___INACTIVE___"

### 182.4.180 kSCResvLink as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.
**Notes:** Value should be "___LINK___"

### 182.4.181 kSCValNetAirPortAuthPasswordEncryptionKeychain as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.182 kSCValNetAirPortJoinModeAutomatic as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.183 kSCValNetAirPortJoinModePreferred as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.184 kSCValNetAirPortJoinModeRecent as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.185 kSCValNetAirPortJoinModeStrongest as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.186 kSCValNetInterfaceSubTypeL2TP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.187 kSCValNetInterfaceSubTypePPPoE as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.188 kSCValNetInterfaceSubTypePPPSerial as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.189 kSCValNetInterfaceSubTypePPTP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.190 kSCValNetInterfaceType6to4 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.191 kSCValNetInterfaceTypeEthernet as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.192 kSCValNetInterfaceTypeFireWire as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.193 kSCValNetInterfaceTypePPP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.194 kSCValNetIPv4ConfigMethodBOOTP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.195 kSCValNetIPv4ConfigMethodDHCP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.196 kSCValNetIPv4ConfigMethodINFORM as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.197 kSCValNetIPv4ConfigMethodLinkLocal as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.198 kSCValNetIPv4ConfigMethodManual as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.199 kSCValNetIPv4ConfigMethodPPP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.200 kSCValNetIPv6ConfigMethod6to4 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.201 kSCValNetIPv6ConfigMethodAutomatic as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.202 kSCValNetIPv6ConfigMethodManual as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.203 kSCValNetIPv6ConfigMethodRouterAdvertisement as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.204 kSCValNetL2TPIPSecSharedSecretEncryptionKeychain as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.205 kSCValNetL2TPTransportIP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.206 kSCValNetL2TPTransportIPSec as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.207 kSCValNetModemDialModeIgnoreDialTone as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.208 kSCValNetModemDialModeManual as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.209 kSCValNetModemDialModeWaitForDialTone as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.210 kSCValNetPPPAuthPasswordEncryptionKeychain as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.211 kSCValNetPPPAuthPromptAfter as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.212 kSCValNetPPPAuthPromptBefore as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.213 kSCValNetPPPAuthProtocolCHAP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.214 kSCValNetPPPAuthProtocolEAP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.215 kSCValNetPPPAuthProtocolMSCHAP1 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.216 kSCValNetPPPAuthProtocolMSCHAP2 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.217 kSCValNetPPPAuthProtocolPAP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Just a constant for the System Configuation API functions.

### 182.4.218 LocalHostName as string

MBS MacCF Plugin, Plugin Version: 7.8, Platform: macOS, Targets: All.

**Function:** Gets the current local host name.
**Example:**

```
dim s as new SystemConfigurationMBS
msgbox s.LocalHostName
```

**Notes:** Returns the current local host name; "" if the name has not been set or if an error was encountered.

### 182.4.219 Location as string

MBS MacCF Plugin, Plugin Version: 7.8, Platform: macOS, Targets: All.

**Function:** Gets the current location identifier.
**Example:**

```
dim s as new SystemConfigurationMBS
msgbox s.Location
```

**Notes:** Returns a string representing the current location identifier; "" if no location identifier has been defined or if an error was encountered.

### 182.4.220 MachineName as string

MBS MacCF Plugin, Plugin Version: 7.8, Platform: macOS, Targets: All.

**Function:** The local machine name.

### 182.4.221 NetworkCheckReachabilityByAddress(ip as string, byref flags as Integer) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Determines if the given network address is reachable using the current network configuration.
**Notes:**

address: The network address of the desired host.
flags: An integer that will be filled with a set of SCNetworkConnectionFlags detailing the reachability of the specified address.
Returns true if the network connection flags are valid; false if the status could not be determined.
(see the SCNetworkReachabilityMBS class for more details)

### 182.4.222 NetworkCheckReachabilityByName(nodename as string, byref flags as Integer) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Determines if the given network host/node name is reachable using the current network configuration.
**Notes:**

nodename: The node name of the desired host.
flags: An integer that will be filled with a set of SCNetworkConnectionFlags detailing the reachability of the specified node name.
Returns true if the network connection flags are valid; false if the status could not be determined.
(see the SCNetworkReachabilityMBS class for more details)

### 182.4.223 NetworkInterfaceRefreshConfiguration(ifname as CFStringMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Sends a notification to interested configuration agents to have them immediately retry their configuration over a particular network interface.
**Notes:**

This API must be invoked by root (uid == 0).
ifName: The BSD name of the network interface e.g. NewCFStringMBS("en0").
Returns true if the notification was sent; false otherwise.

### 182.4.224 ShortUserName as string

MBS MacCF Plugin, Plugin Version: 7.8, Platform: macOS, Targets: All.

**Function:** The short user name.

### 182.4.225 UserName as string

MBS MacCF Plugin, Plugin Version: 7.8, Platform: macOS, Targets: All.

**Function:** The user name.
**Notes:** The function UserName returns a string based on the read UID (RUID, as returned by getuid) of the calling process. This can result in unexpected behavior (that is, Name returning different results than ConsoleUser) for processes that manipulate their UID.

# Chapter 183

# Tapi

## 183.1 class ITAddressMBS

### 183.1.1 class ITAddressMBS

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The class for an address.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 183.1.2 Methods

### 183.1.3 Calls as ITCallInfoMBS()

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Creates an array of calls currently active on the address.
**Notes:** Sets lasterror property.

### 183.1.4 Constructor

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The private constructor.

### 183.1.5 CreateCall(DestAddress as string = """, AddressType as Integer = 1, MediaTypes as Integer = 0) as TAPICallControlMBS

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Creates a new call.
**Notes:**

Creates a new Call object that can be used to make an outgoing call and returns a TAPICallControlMBS object. The newly created call is in the StateIdle state and has no media or terminals selected.

See also MediaTypes and LineAddressType constants.

### 183.1.6 Properties

### 183.1.7 AddressName as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Gets the displayable name of the address.
**Notes:**

Returns the containing a displayable address name.
Sets lasterror property.
(Read only property)

### 183.1.8 DialableAddress as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Gets the text which can be used to connect to this address.
**Notes:**

The text corresponds to the destination address string that another application would use to connect to this address, such as a phone number or an e-mail name.
You can use this address with the CreateCall method.
Sets lasterror property.
(Read only property)

### 183.1.9 DoNotDisturb as Boolean

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Gets the current status of the do not disturb feature on the address.
**Notes:**

The do not disturb feature may not be available on all addresses.
If true, the do not disturb feature has been activated. If false, the do not disturb feature is not active.
Sets lasterror property.
(Read and Write property)

### 183.1.10 Handle as Integer

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The internal object reference.
**Notes:**

This is an ITAddress* pointer.
(Read and Write property)

### 183.1.11 Lasterror as Integer

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The last error code.
**Notes:**

Set by all the methods to indicate the last error.
Value is 0 if no error.
(Read and Write property)

### 183.1.12 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The error message for the last error.
**Notes:** (Read and Write property)

### 183.1.13 MessageWaiting as Boolean

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Determines if the address has a message waiting.
**Notes:**

Returns true if a message is waiting; false, if no message is waiting.
Sets lasterror property.
(Read and Write property)

### 183.1.14 ServiceProviderName as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Gets the name of the Telephony Service Provider (TSP) that supports this address.
**Notes:**

For example, Unimdm.tsp for the Unimodem service provider or H323.tsp for the H323 service provider.
Sets lasterror property.
(Read only property)

### 183.1.15 State as Integer

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Gets the current state of the address.
**Notes:**

Sets lasterror property.
Can be StateInService or StateOutOfService.
(Read only property)

### 183.1.16 Constants

### 183.1.17 LineAddressTypeDomainName = 8

MBS Win Plugin, Plugin Version: 14.4.

**Function:** One of the line address types.
**Notes:** Address type is a domain name.

### 183.1.18 LineAddressTypeEmailName = 4

MBS Win Plugin, Plugin Version: 14.4.

**Function:** One of the line address types.
**Notes:** Address type is an e-mail name.

### 183.1.19 LineAddressTypeIPAddress = 16

MBS Win Plugin, Plugin Version: 14.4.

**Function:** One of the line address types.
**Notes:** Address type is an IP address.

### 183.1.20 LineAddressTypePhoneNumber = 1

MBS Win Plugin, Plugin Version: 14.4.

**Function:** One of the line address types.
**Notes:** Address type is a standard phone number.

### 183.1.21 LineAddressTypeSDP = 2

MBS Win Plugin, Plugin Version: 14.4.

**Function:** One of the line address types.
**Notes:** Address type is Session Description Protocol (SDP) conference.

### 183.1.22 MediaTypeAudio = 8

MBS Win Plugin, Plugin Version: 14.4.

**Function:** One of the media types.
**Notes:** An audio media stream that is entering or leaving the computer. An entering media stream would typically be played on speakers, or sent to a handset device and a leaving stream would typically be captured through a microphone or handset device.

### 183.1.23 MediaTypeDataModem = 16

MBS Win Plugin, Plugin Version: 14.4.

**Function:** One of the media types.
**Notes:** A data media stream that is associated with a data modem.

### 183.1.24 MediaTypeG3Fax = 32

MBS Win Plugin, Plugin Version: 14.4.

**Function:** One of the media types.
**Notes:** A data media stream that is associated with a G3 protocol fax.

### 183.1.25 MediaTypeMultiTrack = & h10000

MBS Win Plugin, Plugin Version: 14.4.

**Function:** One of the media types.
**Notes:** A stream is on a multitrack terminal.

### 183.1.26 MediaTypeVideo = & h8000

MBS Win Plugin, Plugin Version: 14.4.

**Function:** One of the media types.
**Notes:** A video media stream that is entering or leaving the computer. An entering media stream would typically be rendered in a video window and a leaving media stream would typically be captured with a video camera.

### 183.1.27 StateInService = 0

MBS Win Plugin, Plugin Version: 14.4.

**Function:** One of the address state constants.
**Notes:** Normal state; the address can be used.

### 183.1.28 StateOutOfService = 1

MBS Win Plugin, Plugin Version: 14.4.

**Function:** One of the address state constants.
**Notes:** The address is temporarily out of service, but may go back into service at some time.

## 183.2 class ITCallInfoMBS

### 183.2.1 class ITCallInfoMBS

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The class for information about a call.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 183.2.2 Methods

### 183.2.3 Constructor

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The private constructor.
**Notes:**

Lasterror is set.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

### 183.2.4 Properties

### 183.2.5 Address as ITAddressMBS

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Queries the address of the call.
**Notes:**

Lasterror is set.
(Read only property)

### 183.2.6 CalledIDName as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The name of the called location.
**Notes:**

Lasterror is set.

(Read only property)

### 183.2.7 CalledIDNumber as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The number of the called location.
**Notes:**

Lasterror is set.
(Read only property)

### 183.2.8 CalledPartyFriendlyName as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The called party friendly name.
**Notes:**

Lasterror is set.
(Read only property)

### 183.2.9 CallerIDName as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The name of the caller.
**Notes:**

Lasterror is set.
(Read only property)

### 183.2.10 CallerIDNumber as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The number of the caller.
**Notes:**

Lasterror is set.
(Read only property)

### 183.2.11 CallingPartyID as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The identifier of the calling party.
**Notes:**

Lasterror is set.
(Read only property)

### 183.2.12 Comment as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** A comment about the call provided by the application that originated the call. The call state must be StateIdle when setting the comment.
**Notes:**

Lasterror is set.
(Read only property)

### 183.2.13 ConnectedIDName as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The name of the connected location.
**Notes:**

Lasterror is set.
(Read only property)

### 183.2.14 ConnectedIDNumber as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The number of the connected location.
**Notes:**

Lasterror is set.
(Read only property)

### 183.2.15 DisplayableAddress as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** A displayable version of the called or calling address.
**Notes:**

Lasterror is set.
(Read only property)

### 183.2.16 Handle as Integer

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The internal object reference.
**Notes:**

This is an ITCallInfo* pointer.
(Read and Write property)

### 183.2.17 Lasterror as Integer

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The last error code.
**Notes:**

Set by all the methods to indicate the last error.
Value is 0 if no error.
(Read and Write property)

### 183.2.18 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The error message for the last error.
**Notes:** (Read and Write property)

### 183.2.19 RedirectingIDName as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The name of the location that redirected the call.
**Notes:**

Lasterror is set.
(Read only property)

### 183.2.20 RedirectingIDNumber as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The number of the location that redirected the call.
**Notes:**

Lasterror is set.
(Read only property)

### 183.2.21 RedirectionIDName as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The name of the location to which a call has been redirected.
**Notes:**

Lasterror is set.
(Read only property)

### 183.2.22 RedirectionIDNumber as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The number of the location to which a call has been redirected.
**Notes:**

Lasterror is set.
(Read only property)

### 183.2.23 State as Integer

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The current state call.
**Notes:**

Can be StateConnected, StateDisconnected, StateHold, StateIdle, StateInProgress, StateOffering or StateQueued.
Lasterror is set.
(Read only property)

### 183.2.24 Constants

### 183.2.25 StateConnected = 2

MBS Win Plugin, Plugin Version: 14.4.

**Function:** One of the state constants.
**Notes:** Call has been connected to the remote end and communication can take place.

### 183.2.26 StateDisconnected = 3

MBS Win Plugin, Plugin Version: 14.4.

**Function:** One of the state constants.
**Notes:** Call has been disconnected. There are several causes for disconnection. See the table of valid call state transitions below.

### 183.2.27 StateHold = 5

MBS Win Plugin, Plugin Version: 14.4.

**Function:** One of the state constants.
**Notes:** The call is in the hold state.

### 183.2.28 StateIdle = 0

MBS Win Plugin, Plugin Version: 14.4.

**Function:** One of the state constants.
**Notes:** The call has been created, but Connect has not been called yet. A call can never transition into the idle state. This is the initial state for both incoming and outgoing calls.

### 183.2.29 StateInProgress = 1

MBS Win Plugin, Plugin Version: 14.4.

**Function:** One of the state constants.
**Notes:** Connect has been called, and the service provider is working on making a connection. This state is valid only on outgoing calls. This message is optional, because a service provider may have a call transition directly to the connected state.

### 183.2.30 StateOffering = 4

MBS Win Plugin, Plugin Version: 14.4.

**Function:** One of the state constants.
**Notes:** A new call has appeared, and is being offered to an application. If the application has owner privileges on the call, it can either call Answer or Disconnect while the call is in the offering state. Current call privilege can be determined by calling Privilege.

### 183.2.31 StateQueued = 6

MBS Win Plugin, Plugin Version: 14.4.

**Function:** One of the state constants.
**Notes:** The call is queued.

## 183.3 class TAPICallControlMBS

### 183.3.1 class TAPICallControlMBS

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The interface used by the application to connect, answer, and perform basic telephony operations on a call object.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 183.3.2 Methods

### 183.3.3 Answer

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** answers an incoming call.
**Notes:**

This method can succeed only if the call state is StateOffering.
Lasterror is set.

### 183.3.4 BlindTransfer(DestAddress as String)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** performs a blind or single-step transfer of the specified call to the specified destination address.
**Notes:**

The application must be the owner of the call. After a successful transfer, the call state transitions to StateDisconnected.

DestAddress: Text containing destination address for the transfer.
Lasterror is set.

### 183.3.5 Conference(otherCall as TAPICallControlMBS, sync as boolean)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Adds a consultation call to the conference in which the current call is a participant.
**Notes:**

If an associated ITCallHub object does not exist, it is created.

otherCall: The consultation call.
Sync: Indicates whether the call should be conferenced synchronously (true) or asynchronously (false). See Connect method for additional explanation.
Lasterror is set.

### 183.3.6 Connect(sync as boolean)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Attempts to complete the connection of an outgoing call.
**Notes:**

Sync: Boolean indicating whether connection is to be performed synchronously (true) or asynchronously (false).

If the call is asynchronous, the application will receive information about the call's progress through the TAPIMBS CallStateChanged event. Connect may return no error, but the actual connection may fail (and the application will be notified through the event).
If the call is synchronous, this method will not return until the call is in the connected state or fails.
Lasterror is set.

To make a call, please find the ITAddressMBS for the line, use CreateCall there. Than use TAPICallControlMBS.Connect here.

### 183.3.7 Constructor

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The private constructor.

### 183.3.8 Dial(DestAddress as String)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Dials the specified address.
**Notes:**

DestAddress: Representation of address to be dialed. The format must conform to a standard dialable address.

Lasterror is set.

### 183.3.9 Disconnect(Mode as Integer)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Disconnects the call.
**Notes:**

The call state will transition to StateDisconnected after the method completes successfully.
Pass DisconnectModeNoAnswer, DisconnectModeNormal or DisconnectModeReject.
Lasterror is set.

### 183.3.10 Finish(Mode as Integer)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Called on a consultation call to finish a conference or a transfer.
**Notes:**

Pass FinishModeAsConference or FinishModeAsTransfer.
Lasterror is set.

### 183.3.11 HandoffDirect(ApplicationName as String)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Hands off the call to another application.
**Notes:**

This indicates that the application no longer requires ownership of the call.

ApplicationName: Text containing the specific application name to hand off call to. Can be full path name or executable name.
Lasterror is set.

### 183.3.12 HandoffIndirect(MediaType as Integer)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Hands off the call to another application based on the media type of the call.
**Notes:**

If multiple applications have registered as able to handle the types involved, TAPI will hand off to the highest-priority application, which is usually the one that registered first.
This indicates that the application no longer requires ownership of the call.

for media types, please check constants in ITAddressMBS class and this website:
http://msdn.microsoft.com/en-us/library/windows/desktop/ms734210(v=vs.85).aspx
Lasterror is set.

### 183.3.13 Hold(hold as boolean)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Places or removes the call from the hold.
**Notes:**

If Hold is true and the method succeeds, the call state transitions to the StateHold state. If Hold is false, the call state transitions to StateConnected.
Lasterror is set.

### 183.3.14 ParkDirect(ParkAddress as String)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Parks the call at a specified address.
**Notes:**

ParkAddress: Text containing the address where the call is to be parked.
Lasterror is set.

### 183.3.15 ParkIndirect as string

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Parks the call and returns the parked address.
**Notes:**

Returns representation of the address where the call was parked.
Lasterror is set.

### 183.3.16 Pickup(GroupID as String)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Picks up a call alerting at the specified group identification.
**Notes:**

GroupID: The group identifier to which the alerting station belongs.
Lasterror is set.

### 183.3.17 RemoveFromConference

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Removes the call from a conference if it is involved in one.
**Notes:** Lasterror is set.

### 183.3.18 SetQOS(MediaType as Integer, ServiceLevel as Integer)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Sets the quality of service level for the call.
**Notes:**

for media types, please check constants in ITAddressMBS class and this website:
http://msdn.microsoft.com/en-us/library/windows/desktop/ms734210(v=vs.85).aspx

Lasterror is set.

### 183.3.19 SwapHold(otherCall as TAPICallControlMBS)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Swaps the call (which is active) with the specified call on hold.
**Notes:**

Swapping the active call with the call on consultation hold allows the application to toggle between these two calls. This is typical in call waiting.
OtherCall: Call, currently on hold, that is to be made active.
Lasterror is set.

### 183.3.20 Transfer(otherCall as TAPICallControlMBS, sync as boolean)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Transfers the current call to the destination address.
**Notes:**

otherCall: Other interface of consultation call created for the transfer.
Sync: Indicates whether the method should be completed synchronously (true) or asynchronously (false).
Lasterror is set.

### 183.3.21 Unpark

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Gets the call from park.
**Notes:**

To unpark a call, CreateCall must be called using as the destination address the current parked location of the call.
Lasterror is set.

### 183.3.22 Properties

### 183.3.23 Handle as Integer

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The internal object reference.
**Notes:**

This is an ITBasicCallControl* pointer.
(Read and Write property)

### 183.3.24 Lasterror as Integer

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The last error code.
**Notes:**

Set by all the methods to indicate the last error.
Value is 0 if no error.
(Read and Write property)

### 183.3.25 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The error message for the last error.
**Notes:** (Read and Write property)

### 183.3.26 Constants

### 183.3.27 DisconnectModeNoAnswer = 1

MBS Win Plugin, Plugin Version: 14.4.

**Function:** One of the disconnect modes.
**Notes:**

The call is being disconnected because it has not been answered.
(For example, an application may set a certain amount of time for the user to answer the call. If the user does not answer, the application can call Disconnect with the NOANSWER code.)
Lasterror is set.

### 183.3.28 DisconnectModeNormal = 0

MBS Win Plugin, Plugin Version: 14.4.

**Function:** One of the disconnect modes.
**Notes:**

The call is being disconnected as part of the normal cycle of the call.
Lasterror is set.

### 183.3.29 DisconnectModeReject = 2

MBS Win Plugin, Plugin Version: 14.4.

**Function:** One of the disconnect modes.
**Notes:**

The user rejected the offered call.
Lasterror is set.

### 183.3.30 FinishModeAsConference = 1

MBS Win Plugin, Plugin Version: 14.4.

**Function:** One of the finish mode constants.
**Notes:**

A call is being added to a conference call.
Lasterror is set.

### 183.3.31 FinishModeAsTransfer = 0

MBS Win Plugin, Plugin Version: 14.4.

**Function:** One of the finish mode constants.
**Notes:**

A call transfer is being finished.
Lasterror is set.

### 183.3.32 QualityOfServerLevelBestEffort = 2

MBS Win Plugin, Plugin Version: 14.4.

**Function:** One of the QOS level constants.
**Notes:** Quality of service level desired is "best effort".

### 183.3.33 QualityOfServerLevelIfAvailable = 1

MBS Win Plugin, Plugin Version: 14.4.

**Function:** One of the QOS level constants.
**Notes:** Quality of service level desired if available.

### 183.3.34 QualityOfServerLevelNeeded = 0

MBS Win Plugin, Plugin Version: 14.4.

**Function:** One of the QOS level constants.
**Notes:** Quality of service level required.

## 183.4 class TAPIMBS

### 183.4.1 class TAPIMBS

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The central class for TAPI.
**Notes:** MBS Plugin implements TAPI (telephone API) on Windows to catch incoming calls, so you can display e.g. customer data for the phone number when customer calls. Also you can create new call objects to dial or query information on calls or addresses.

### 183.4.2 Methods

### 183.4.3 Addresses as ITAddressMBS()

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Returns an array with all addresses.
**Notes:** Lasterror is set.

### 183.4.4 Available as boolean

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Whether TAPI is available.
**Notes:** Returns true on Windows and false elsewhere.

### 183.4.5 Constructor

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.

### 183.4.6 Destructor

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The destructor.

### 183.4.7 ListenOnAllAddresses

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Queries list of addresses and registers event handlers to receive events.
**Notes:**

Please call this method to get the IncomingCall event working.
Lasterror is set.

### 183.4.8 Properties

### 183.4.9 EventFilter as Integer

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The event filter.
**Notes:**

The plugin sets this to EventCallNotification + EventCallState automatically.

See constants:
http://msdn.microsoft.com/en-us/library/windows/desktop/ms734238(v=vs.85).aspx
(Read and Write property)

### 183.4.10 Handle as Integer

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The internal object reference.
**Notes:**

This is an ITTAPI* pointer.
(Read and Write property)

### 183.4.11 Lasterror as Integer

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The last error code.
**Notes:**

Set by all the methods to indicate the last error.
Value is 0 if no error.

(Read and Write property)

### 183.4.12 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The error message for the last error.
**Notes:** (Read and Write property)

### 183.4.13 Events

### 183.4.14 CallStateChanged(CallInfo as ITCallInfoMBS)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: .

**Function:** The call state changed.
**Notes:** The Call state has changed.

### 183.4.15 IncomingCall(CallInfo as ITCallInfoMBS, BasicCallControl as TAPI-CallControlMBS)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: .

**Function:** A new call is incoming.

### 183.4.16 Constants

### 183.4.17 EventCallNotification = & h4

MBS Win Plugin, Plugin Version: 14.4.

**Function:** One of the event types.
**Notes:** A new communications session has appeared on the address and the TAPI DLL has created a new call object. This could be a result from an incoming session, a session handed off by another application, or a session being parked on the address.

### 183.4.18 EventCallState = & h8

MBS Win Plugin, Plugin Version: 14.4.

**Function:** One of the event types.
**Notes:** The Call state has changed.

# Chapter 184

# Tidy

## 184.1 class TidyAttributeMBS

### 184.1.1 class TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** An attribute of a node.

### 184.1.2 Blog Entries

- MBS Xojo Plugins, version 17.4pr3
- MBS REALbasic Plugins, version 10.5pr4

### 184.1.3 Blog Entries

- MBS Xojo Plugins, version 17.4pr3
- MBS REALbasic Plugins, version 10.5pr4

### 184.1.4 Properties

### 184.1.5 Document as TidyDocumentMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The document of this attribute.
**Notes:** (Read only property)

### 184.1.6 ID as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The attribute ID.
**Notes:** (Read only property)

### 184.1.7 IsABBR as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the ABBR attribute.
**Notes:** (Read only property)

### 184.1.8 IsALINK as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the ALINK attribute.
**Notes:** (Read only property)

### 184.1.9 IsALT as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the ALT attribute.
**Notes:** (Read only property)

### 184.1.10 IsBGCOLOR as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the BGCOLOR attribute.
**Notes:** (Read only property)

### 184.1.11 IsCHECKED as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the CHECKED attribute.
**Notes:** (Read only property)

### 184.1.12 IsCOLSPAN as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the COLSPAN attribute.
**Notes:** (Read only property)

### 184.1.13 IsCONTENT as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the CONTENT attribute.
**Notes:** (Read only property)

### 184.1.14 IsDATAFLD as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the DATAFLD attribute.
**Notes:** (Read only property)

### 184.1.15 IsEvent as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the Event attribute.
**Notes:** (Read only property)

### 184.1.16 IsFOR as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the FOR attribute.
**Notes:** (Read only property)

### 184.1.17 IsHEIGHT as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the HEIGHT attribute.
**Notes:** (Read only property)

### 184.1.18 IsHREF as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the HREF attribute.
**Notes:** (Read only property)

### 184.1.19 IsHTTP_EQUIV as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the HTTP_EQUIV attribute.
**Notes:** (Read only property)

### 184.1.20 IsID as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the ID attribute.
**Notes:** (Read only property)

### 184.1.21 IsISMAP as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the ISMAP attribute.
**Notes:** (Read only property)

### 184.1.22 IsLANG as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the LANG attribute.
**Notes:** (Read only property)

### 184.1.23 IsLANGUAGE as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the LANGUAGE attribute.
**Notes:** (Read only property)

### 184.1.24 IsLINK as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the LINK attribute.
**Notes:** (Read only property)

### 184.1.25 IsLONGDESC as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the LONGDESC attribute.
**Notes:** (Read only property)

### 184.1.26 IsNAME as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the NAME attribute.
**Notes:** (Read only property)

### 184.1.27 IsOnBLUR as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the OnBLUR attribute.
**Notes:** (Read only property)

### 184.1.28 IsOnCLICK as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the OnCLICK attribute.
**Notes:** (Read only property)

### 184.1.29 IsOnFOCUS as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the OnFOCUS attribute.
**Notes:** (Read only property)

### 184.1.30 IsOnKEYDOWN as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the OnKEYDOWN attribute.
**Notes:** (Read only property)

### 184.1.31 IsOnKEYPRESS as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the OnKEYPRESS attribute.
**Notes:** (Read only property)

### 184.1.32 IsOnKEYUP as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the OnKEYUP attribute.
**Notes:** (Read only property)

### 184.1.33 IsOnMOUSEDOWN as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the OnMOUSEDOWN attribute.
**Notes:** (Read only property)

### 184.1.34 IsOnMOUSEMOVE as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the OnMOUSEMOVE attribute.
**Notes:** (Read only property)

### 184.1.35 IsOnMOUSEOUT as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the OnMOUSEOUT attribute.
**Notes:** (Read only property)

### 184.1.36 IsOnMOUSEOVER as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the OnMOUSEOVER attribute.
**Notes:** (Read only property)

### 184.1.37 IsOnMOUSEUP as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the OnMOUSEUP attribute.
**Notes:** (Read only property)

### 184.1.38 IsProp as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the Prop attribute.
**Notes:** (Read only property)

### 184.1.39 IsREL as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the REL attribute.
**Notes:** (Read only property)

### 184.1.40 IsROWSPAN as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the ROWSPAN attribute.
**Notes:** (Read only property)

### 184.1.41 IsSELECTED as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the SELECTED attribute.
**Notes:** (Read only property)

### 184.1.42 IsSRC as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the SRC attribute.
**Notes:** (Read only property)

### 184.1.43 IsSTYLE as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the STYLE attribute.
**Notes:** (Read only property)

### 184.1.44 IsSUMMARY as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the SUMMARY attribute.
**Notes:** (Read only property)

### 184.1.45 IsTARGET as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the TARGET attribute.
**Notes:** (Read only property)

### 184.1.46 IsTEXT as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the TEXT attribute.
**Notes:** (Read only property)

### 184.1.47 IsTITLE as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the TITLE attribute.
**Notes:** (Read only property)

### 184.1.48 IsTYPE as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the TYPE attribute.
**Notes:** (Read only property)

### 184.1.49 IsUSEMAP as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the USEMAP attribute.
**Notes:** (Read only property)

### 184.1.50 IsVALUE as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the VALUE attribute.
**Notes:** (Read only property)

### 184.1.51 IsVLINK as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the VLINK attribute.
**Notes:** (Read only property)

### 184.1.52 IsWIDTH as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the WIDTH attribute.
**Notes:** (Read only property)

### 184.1.53 IsXMLNS as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this attribute is the XMLNS attribute.
**Notes:** (Read only property)

### 184.1.54 Name as string

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The name of the attribute.
**Notes:** (Read only property)

### 184.1.55 NextAttribute as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The next attribute in the attribute list of the node.
**Notes:** (Read only property)

### 184.1.56 Value as string

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The value of the attribute.
**Notes:** (Read only property)

## 184.2 module TidyAttrIdMBS

### 184.2.1 module TidyAttrIdMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A module with constants for use with the Tidy classes.

### 184.2.2 Constants

### 184.2.3 TidyAttrABBR=1

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.2.4 TidyAttrABOUT=315

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.5 TidyAttrACCEPT=2

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.2.6 TidyAttrACCEPT_CHARSET=3

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.2.7 TidyAttrACCESSKEY=4

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.2.8 TidyAttrACTION=5

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.2.9 TidyAttrADD_DATE=6

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.2.10 TidyAttrALIGN=7

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.2.11 TidyAttrALINK=8

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.2.12 TidyAttrALLOWFULLSCREEN=9

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.13 TidyAttrALT=10

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.14 TidyAttrARCHIVE=11

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.15 TidyAttrARIA_ACTIVEDESCENDANT=271

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.16 TidyAttrARIA_ATOMIC=272

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.17 TidyAttrARIA_AUTOCOMPLETE=273

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.18 TidyAttrARIA_BUSY=274

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.19 TidyAttrARIA_CHECKED=275

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.20 TidyAttrARIA_CONTROLS=276

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.21 TidyAttrARIA_DESCRIBEDBY=277

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.22 TidyAttrARIA_DISABLED=278

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.23 TidyAttrARIA_DROPEFFECT=279

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.24 TidyAttrARIA_EXPANDED=280

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.25 TidyAttrARIA_FLOWTO=281

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.26 TidyAttrARIA_GRABBED=282

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.27 TidyAttrARIA_HASPOPUP=283

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.28 TidyAttrARIA_HIDDEN=284

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.29 TidyAttrARIA_INVALID=285

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.30 TidyAttrARIA_LABEL=286

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.31 TidyAttrARIA_LABELLEDBY=287

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.32 TidyAttrARIA_LEVEL=288

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.33 TidyAttrARIA_LIVE=289

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.34 TidyAttrARIA_MULTILINE=290

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.35 TidyAttrARIA_MULTISELECTABLE=291

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.36 TidyAttrARIA_ORIENTATION=292

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.37 TidyAttrARIA_OWNS=293

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.38 TidyAttrARIA_POSINSET=294

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.39 TidyAttrARIA_PRESSED=295

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.40 TidyAttrARIA_READONLY=296

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.41 TidyAttrARIA_RELEVANT=297

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.42 TidyAttrARIA_REQUIRED=298

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.43 TidyAttrARIA_SELECTED=299

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.44 TidyAttrARIA_SETSIZE=300

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.45 TidyAttrARIA_SORT=301

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.46 TidyAttrARIA_VALUEMAX=302

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.47 TidyAttrARIA_VALUEMIN=303

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.48 TidyAttrARIA_VALUENOW=304

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.49 TidyAttrARIA_VALUETEXT=305

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.50 TidyAttrAS=324

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.51 TidyAttrASYNC=171

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.52 TidyAttrAUTOCOMPLETE=172

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.53 TidyAttrAUTOFOCUS=173

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.54 TidyAttrAUTOPLAY=174

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.55 TidyAttrAXIS=12

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.56 TidyAttrBACKGROUND=13

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.57 TidyAttrBASEPROFILE=311

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.58 TidyAttrBGCOLOR=14

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.59 TidyAttrBGPROPERTIES=15

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.60 TidyAttrBORDER=16

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.61 TidyAttrBORDERCOLOR=17

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.62 TidyAttrBOTTOMMARGIN=18

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.63 TidyAttrCELLPADDING=19

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.64 TidyAttrCELLSPACING=20

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.65 TidyAttrCHALLENGE=175

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.66 TidyAttrCHAR=21

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.67 TidyAttrCHAROFF=22

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.68 TidyAttrCHARSET=23

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.69 TidyAttrCHECKED=24

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.70 TidyAttrCITE=25

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.71 TidyAttrCLASS=26

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.72 TidyAttrCLASSID=27

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.73 TidyAttrCLEAR=28

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.74 TidyAttrCODE=29

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.75 TidyAttrCODEBASE=30

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.76 TidyAttrCODETYPE=31

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.77 TidyAttrCOLOR=32

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.78 TidyAttrCOLS=33

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.79 TidyAttrCOLSPAN=34

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.80 TidyAttrCOMPACT=35

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.81 TidyAttrCONTENT=36

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.82 TidyAttrCONTENTEDITABLE=176

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.83 TidyAttrCONTENTSCRIPTTYPE=312

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.84 TidyAttrCONTENTSTYLETYPE=313

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.85 TidyAttrCONTEXTMENU=177

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.86 TidyAttrCONTROLS=178

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.87 TidyAttrCOORDS=37

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.88 TidyAttrCROSSORIGIN=179

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.89 TidyAttrDATA=38

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.90 TidyAttrDATAFLD=39

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.91 TidyAttrDATAFORMATAS=40

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.92 TidyAttrDATAPAGESIZE=41

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.93 TidyAttrDATASRC=42

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.94 TidyAttrDATATYPE=316

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.95 TidyAttrDATETIME=43

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.96 TidyAttrDECLARE=44

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.97 TidyAttrDEFAULT=180

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.98 TidyAttrDEFER=45

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.99 TidyAttrDIR=46

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.100 TidyAttrDIRNAME=181

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.101 TidyAttrDISABLED=47

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.102 TidyAttrDISPLAY=314

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.103 TidyAttrDRAGGABLE=182

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.104 TidyAttrDROPZONE=183

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.105 TidyAttrENCODING=48

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.106 TidyAttrENCTYPE=49

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.107 TidyAttrEVENT=164

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.108 TidyAttrFACE=50

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.109 TidyAttrFOR=51

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.110 TidyAttrFORM=184

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.111 TidyAttrFORMACTION=185

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.112 TidyAttrFORMENCTYPE=186

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.113 TidyAttrFORMMETHOD=187

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.114 TidyAttrFORMNOVALIDATE=188

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.115 TidyAttrFORMTARGET=189

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.116 TidyAttrFRAME=52

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.117 TidyAttrFRAMEBORDER=53

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.118 TidyAttrFRAMESPACING=54

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.119 TidyAttrGRIDX=55

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.120 TidyAttrGRIDY=56

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.121 TidyAttrHEADERS=57

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.122 TidyAttrHEIGHT=58

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.123 TidyAttrHIDDEN=190

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.124 TidyAttrHIGH=191

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.125 TidyAttrHREF=59

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.126 TidyAttrHREFLANG=60

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.127 TidyAttrHSPACE=61

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.128 TidyAttrHTTP_EQUIV=62

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.129 TidyAttrICON=192

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.130 TidyAttrID=63

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.131 TidyAttrINLIST=317

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.132 TidyAttrINTEGRITY=323

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.133 TidyAttrISMAP=64

MBS Tools Plugin, Plugin Version: 17.1.

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.291 TidyAttrSPELLCHECK=267

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.292 TidyAttrSRC=139

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.293 TidyAttrSRCDOC=268

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.294 TidyAttrSRCLANG=269

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.295 TidyAttrSRCSET=140

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.296 TidyAttrSTANDBY=141

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.297 TidyAttrSTART=142

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.298 TidyAttrSTEP=270

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.299 TidyAttrSTYLE=143

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.300 TidyAttrSUMMARY=144

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.301 TidyAttrTABINDEX=145

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.302 TidyAttrTARGET=146

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.303 TidyAttrTEXT=147

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.304 TidyAttrTITLE=148

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.305 TidyAttrTOPMARGIN=149

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.306 TidyAttrTRANSLATE=150

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.307 TidyAttrTYPE=151

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.308 TidyAttrTYPEOF=321

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.309 TidyAttrUNKNOWN=0

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.2.310 TidyAttrURN=170

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.311 TidyAttrUSEMAP=152

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.312 TidyAttrVALIGN=153

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.313 TidyAttrVALUE=154

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.314 TidyAttrVALUETYPE=155

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.315 TidyAttrVERSION=156

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.316 TidyAttrVIEWBOX=308

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.317 TidyAttrVLINK=157

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.318 TidyAttrVOCAB=322

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.319 TidyAttrVSPACE=158

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.320 TidyAttrWIDTH=159

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.321 TidyAttrWRAP=160

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.322 TidyAttrX=306

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.323 TidyAttrXMLNS=163

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.324 TidyAttrXMLNSXLINK=325

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.325 TidyAttrXML_LANG=161

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.326 TidyAttrXML_SPACE=162

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.327 TidyAttrY=307

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.2.328 TidyAttrZOOMANDPAN=310

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

## 184.3 module TidyConfigCategoryMBS

### 184.3.1 module TidyConfigCategoryMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A module with constants for use with the Tidy classes.

### 184.3.2 Constants

### 184.3.3 TidyDiagnostics=1

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.3.4 TidyEncoding=3

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.3.5 TidyMarkup=0

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.3.6 TidyMiscellaneous=4

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.3.7 TidyPrettyPrint=2

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

## 184.4 module TidyDoctypeModesMBS

### 184.4.1 module TidyDoctypeModesMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A module with constants for use with the Tidy classes.

### 184.4.2 Constants

### 184.4.3 TidyDoctypeAuto=2

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.4.4 TidyDoctypeHtml5=0

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.4.5 TidyDoctypeLoose=4

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.4.6 TidyDoctypeOmit=1

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.4.7 TidyDoctypeStrict=3

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.4.8 TidyDoctypeUser=5

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

## 184.5 class TidyDocumentMBS

### 184.5.1 class TidyDocumentMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A document in the tidy library.
**Example:**

```
dim t as new TidyDocumentMBS

call t.ParseString("<p>Hello World</p>") // pass here bad html
call t.CleanAndRepair

dim s As String=t.SaveString
MsgBox s // show fixed html
```

**Notes:** The main class for using the tidy library in Xojo.

### 184.5.2 Blog Entries

- MBS Xojo Plugins, version 22.5pr1
- MBS Xojo Plugins, version 19.4pr2
- MBS Xojo Plugins, version 17.2pr2

### 184.5.3 Blog Entries

- MBS Xojo Plugins, version 22.5pr1
- MBS Xojo Plugins, version 19.4pr2
- MBS Xojo Plugins, version 17.2pr2

### 184.5.4 Methods

### 184.5.5 AccessWarningCount as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of Tidy accessibility warnings encountered.

### 184.5.6 Body as TidyNodeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The body node in the html tree.

### 184.5.7 CleanAndRepair as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Execute configured cleanup and repair operations on parsed markup.
**Example:**

```
dim t as new TidyDocumentMBS

call t.ParseString("<p>Hello World</p>") // pass here bad html
call t.CleanAndRepair

dim s As String=t.SaveString
MsgBox s // show fixed html
```

### 184.5.8 ConfigErrorCount as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of Tidy configuration errors encountered.

### 184.5.9 CopyConfig(otherDocument as TidyDocumentMBS) as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Copy current configuration settings from one document to another.

### 184.5.10 DetectedGenericXml as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Input is generic XML (not HTML or XHTML)?

### 184.5.11 DetectedHtmlVersion as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Detected HTML version: 0, 2, 3 or 4.

### 184.5.12 DetectedXhtml as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Input is XHTML?

### 184.5.13 ErrorBuffer as string

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Copies the error text save in the error buffer.
**Notes:** You need to use InstallErrorBuffer before using this function.

### 184.5.14 ErrorCount as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of Tidy errors encountered.
**Notes:** If >0, output is suppressed unless ForceOutput is set.

### 184.5.15 ErrorSummary

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Write more complete information about errors to current error sink.

### 184.5.16 FileExists(filename as string) as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether the file with that name exists.

### 184.5.17 GeneralInfo

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Write more general information about markup to current error sink.

### 184.5.18 GetBooleanOption(OptionID as Integer) as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the value of a boolean option.

### 184.5.19 GetIntegerOption(OptionID as Integer) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the value of an integer option.

### 184.5.20 GetStringOption(OptionID as Integer) as string

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the value of a string option.

### 184.5.21 Head as TidyNodeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The head node in the html tree.

### 184.5.22 Html as TidyNodeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The html node in the html tree.

### 184.5.23 InstallErrorBuffer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Installs an error buffer.
**Notes:** Use ErrorBuffer to get the text later.

### 184.5.24 LibraryVersion as string

MBS Tools Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The version number of the library.

### 184.5.25 LoadConfigFile(filename as string) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Load an ASCII Tidy configuration file.

### 184.5.26 LoadConfigFileWithEncoding(Filename as string, CharacterEncoding as string) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Load a Tidy configuration file with the specified character encoding.

### 184.5.27 NextOption(Iterator as TidyIteratorMBS) as TidyOptionMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Finds the next option in the list.

### 184.5.28 NextRelatedOption(Iterator as TidyIteratorMBS) as TidyOptionMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get next related option.

### 184.5.29 NextUserDeclaredTag(OptionID as Integer, Iterator as TidyIteratorMBS) as string

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get next declared tag of specified type: TidyInlineTags, TidyBlockTags, TidyEmptyTags or TidyPreTags.
**Notes:** See TidyOptionIdMBS for constants.

### 184.5.30 OptionCharcterEncodingName(OptionID as Integer) as String

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get character encoding name.
**Notes:** Used with TidyCharEncoding, TidyOutCharEncoding, TidyInCharEncoding options.

### 184.5.31 OptionCurrentPick(OptionID as Integer) as String

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get current pick list value for option by ID.
**Notes:** Useful for enum types.

### 184.5.32 OptionForID(OptionID as Integer) as TidyOptionMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Finds option based on given ID.
**Notes:** Returns nil on failure.

### 184.5.33 OptionForName(OptionName as string) as TidyOptionMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Finds option by name.

### 184.5.34 OptionIDForName(OptionName as string) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Finds Option by name.
**Notes:** Returns nil on failure.

### 184.5.35 OptionList as TidyIteratorMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** An iterator running through all the options available.

### 184.5.36 OptionResetToDefault(OptionID as Integer) as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Resets the option to default value.

### 184.5.37 OptionsDifferentThanDefault as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Any settings different than default?

### 184.5.38 OptionsDifferentThanSnapshot as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Any settings different than snapshot?

### 184.5.39 OptionsResetAllToDefault as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reset all options to their default values.

### 184.5.40 OptionsResetToSnapshot as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reset config settings to snapshot (after document processing).

### 184.5.41 OptionsSnapshot as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Take a snapshot of current config settings.

### 184.5.42 ParseFile(filename as string) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parse markup in named file.

### 184.5.43 ParseSource(theInput as TidyInputMBS) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parse markup in given generic input source.

### 184.5.44 ParseString(data as string) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parse markup in given string.
**Example:**

```
dim t as new TidyDocumentMBS

call t.ParseString("<p>Hello World</p>") // pass here bad html
call t.CleanAndRepair

dim s As String=t.SaveString
MsgBox s // show fixed html
```

### 184.5.45 ParseStringOption(OptionName as string, value as string) as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parses a string to set an option.
**Example:**

```
dim t as new TidyDocumentMBS

MsgBox str(t.OptionQuiet)
dim b1 as boolean = t.ParseStringOption("Quiet","true")
MsgBox str(t.OptionQuiet)

dim b2 as boolean = t.ParseStringOption("Quiet","false")
MsgBox str(t.OptionQuiet)
```

**Notes:**

Useful if you don't know the type of the option.
Returns true on success and false on failure.

### 184.5.46 RelatedOptionsList(Option as TidyOptionMBS) as TidyIteratorMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Iterate over a list of related options.

### 184.5.47 ReleaseDate as string

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get release date (version) for current library.

### 184.5.48 ReportDoctype as Integer

MBS Tools Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The report document type.

### 184.5.49 Root as TidyNodeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The root node in the html tree.

### 184.5.50 RunDiagnostics as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Run configured diagnostics on parsed and repaired markup.
**Notes:** Must call CleanAndRepair first.

### 184.5.51 SaveConfig(theOutput as TidyOutputMBS) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Save current settings to given output sink.
**Notes:** Only non-default values are written.

### 184.5.52 SaveConfigFile(filename as string) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Save current settings to named file.
**Notes:** Only non-default values are written.

### 184.5.53 SaveFile(filename as string) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Save to named file.

### 184.5.54 SaveOutput(theOutput as TidyOutputMBS) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Save to given generic output.

### 184.5.55 SaveString as string

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Save to a string.
**Example:**

```
dim t as new TidyDocumentMBS

call t.ParseString("<p>Hello World</p>") // pass here bad html
call t.CleanAndRepair

dim s As String=t.SaveString
MsgBox s // show fixed html
```

**Notes:**

Returns "" on failure.

The returned string has no encoding set. You need to use DefineEncoding.

### 184.5.56 SetBooleanOption(OptionID as Integer, value as boolean) as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets an option with a given boolean value.
**Notes:** Returns true on success and false on failure.

### 184.5.57 SetCharacterEncoding(encodingName as string) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Set the input/output character encoding for parsing markup.
**Notes:** Values include: ascii, latin1, raw, utf8, iso2022, mac, win1252, utf16le, utf16be, utf16, big5 and shiftjis. Case in-sensitive.

### 184.5.58 SetErrorFile(filename as string) as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Redirects error output to named file.
**Notes:** Returns true on success.

### 184.5.59 SetInputCharacterEncoding(encodingName as string) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Set the input character encoding for parsing markup.
**Example:**

```
dim t as new TidyDocumentMBS

MsgBox str(t.OptionInCharEncoding)
call t.SetInputCharacterEncoding "utf8"
MsgBox str(t.OptionInCharEncoding)
```

**Notes:** Values include: ascii, latin1, raw, utf8, iso2022, mac, win1252, utf16le, utf16be, utf16, big5 and shiftjis. Case in-sensitive.

### 184.5.60 SetIntegerOption(OptionID as Integer, value as Integer) as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets an option with a given integer value.
**Notes:** Returns true on success and false on failure.

### 184.5.61 SetOutputCharacterEncoding(encodingName as string) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Set the output character encoding for parsing markup.
**Notes:** Values include: ascii, latin1, raw, utf8, iso2022, mac, win1252, utf16le, utf16be, utf16, big5 and shiftjis. Case in-sensitive.

### 184.5.62 SetStringOption(OptionID as Integer, value as string) as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets an option with a given string value.
**Notes:** Returns true on success and false on failure.

### 184.5.63 Status as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get status of current document.

### 184.5.64 UserDeclaredTagList as TidyIteratorMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Iterate over user declared tags.

### 184.5.65 WarningCount as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of warnings encountered.

### 184.5.66 Properties

### 184.5.67 ErrorOutput as TidyOutputMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The output where the error report is written to.
**Notes:** (Read and Write property)

### 184.5.68 Handle as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The internal reference to the tidy document object.
**Notes:** (Read only property)

### 184.5.69 OptionAccessibilityCheck as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option accessibility-check.
**Notes:**

This option specifies what level of accessibility checking, if any, that Tidy should perform.
Level 0 (Tidy Classic) is equivalent to Tidy Classic's accessibility checking.
For more information on Tidy's accessibility checking, visit Tidy's Accessibility Page (http://www.html-tidy.org/accessibility/).
(Read and Write property)

### 184.5.70 OptionAccessibilityCheckLevel as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option specifies what level of accessibility checking, if any, that Tidy should do.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

Level 0 is equivalent to Tidy Classic's accessibility checking. For more information on Tidy's accessibility checking, visit the Adaptive Technology Resource Centre at the University of Toronto. :

http://www.aprompt.ca/Tidy/accessibilitychecks.html
(Read and Write property)

### 184.5.71 OptionAddXmlDecl as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option add-xml-decl.
**Notes:**

This option specifies if Tidy should add the XML declaration when outputting XML or XHTML.
Note that if the input already includes an & lt;?xml ... ?& gt; declaration then this option will be ignored.
If the encoding for the output is different from ascii, one of the utf* encodings, or raw, then the declaration is always added as required by the XML standard.
(Read and Write property)

### 184.5.72 OptionAddXmlSpace as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option add-xml-space.
**Notes:**

This option specifies if Tidy should add xml:space="preserve" to elements such as & lt;pre& gt;, & lt;style& gt; and & lt;script& gt; when generating XML.
This is needed if the whitespace in such elements is to be parsed appropriately without having access to the DTD.
(Read and Write property)

### 184.5.73 OptionAltText as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option alt-text.
**Notes:**

This option specifies the default alt= text Tidy uses for & lt;img& gt; attributes when the alt= attribute is missing.
Use with care, as it is your responsibility to make your documents accessible to people who cannot see the images.
(Read and Write property)

### 184.5.74 OptionAnchorAsName as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option anchor-as-name.
**Notes:**

This option controls the deletion or addition of the name attribute in elements where it can serve as anchor.
If set to yes a name attribute, if not already existing, is added along an existing id attribute if the DTD allows it.
If set to no any existing name attribute is removed if an id attribute exists or has been added.
(Read and Write property)

### 184.5.75 OptionAsciiChars as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option ascii-chars.
**Notes:**

Can be used to modify behavior of the clean option when set to yes.
If set to yes when using clean, & amp;emdash;, & amp;rdquo;, and other named character entities are downgraded to their closest ASCII equivalents.
(Read and Write property)

### 184.5.76 OptionAssumeXmlProcins as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option assume-xml-procins.
**Notes:**

This option specifies if Tidy should change the parsing of processing instructions to require ?& gt; as the terminator rather than & gt;.
This option is automatically set if the input is in XML.

(Read and Write property)

### 184.5.77 OptionBare as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option bare.
**Notes:**

This option specifies if Tidy should strip Microsoft specific HTML from Word 2000 documents, and output spaces rather than non-breaking spaces where they exist in the input.
(Read and Write property)

### 184.5.78 OptionBlockTags as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option specifies new block-level tags.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

This option takes a space or comma separated list of tag names. Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags. Note you can't change the content model for elements such as <TABLE>, <UL>, <OL>and <DL>. This option is ignored in XML mode.
(Read and Write property)

### 184.5.79 OptionBodyOnly as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option specifies if Tidy should print only the contents of the body tag as an HTML fragment.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

If set to "auto", this is performed only if the body tag has been inferred. Useful for incorporating existing whole pages as a portion of another page. This option has no effect if XML output is requested.

Value is 0 for no, 1 for yes and 2 for auto.
(Read and Write property)

### 184.5.80 OptionBreakBeforeBr as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option break-before-br.
**Notes:**

This option specifies if Tidy should output a line break before each & lt;br& gt; element.
(Read and Write property)

### 184.5.81 OptionCharEncoding as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option char-encoding.
**Notes:**

This option specifies the character encoding Tidy uses for both the input and output.
For ascii Tidy will accept Latin-1 (ISO-8859-1) character values, but will use entities for all characters whose value & gt;127.
For raw, Tidy will output values above 127 without translating them into entities.
For latin1, characters above 255 will be written as entities.
For utf8, Tidy assumes that both input and output are encoded as UTF-8.
You can use iso2022 for files encoded using the ISO-2022 family of encodings e.g. ISO-2022-JP.
For mac and win1252, Tidy will accept vendor specific character values, but will use entities for all characters whose value & gt;127.
For unsupported encodings, use an external utility to convert to and from UTF-8.
(Read and Write property)

### 184.5.82 OptionClean as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option clean.
**Notes:**

This option specifies if Tidy should perform cleaning of some legacy presentational tags (currently & lt;i& gt;, & lt;b& gt;, & lt;center& gt; when enclosed within appropriate inline tags, and & lt;font& gt;). If set to yes then legacy tags will be replaced with CSS & lt;style& gt; tags and structural markup as appropriate.
(Read and Write property)

### 184.5.83 OptionCoerceEndtags as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option coerce-endtags.
**Notes:**

This option specifies if Tidy should coerce a start tag into an end tag in cases where it looks like an end tag was probably intended; for example, given
& lt;span& gt;foo & lt;b& gt;bar& lt;b& gt; baz& lt;/span& gt;
Tidy will output
& lt;span& gt;foo & lt;b& gt;bar& lt;/b& gt; baz& lt;/span& gt;
(Read and Write property)

### 184.5.84 OptionCssPrefix as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option css-prefix.
**Notes:**

This option specifies the prefix that Tidy uses for styles rules.
By default, c will be used.
(Read and Write property)

### 184.5.85 OptionDecorateInferredUl as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option decorate-inferred-ul.
**Notes:**

This option specifies if Tidy should decorate inferred & lt;ul& gt; elements with some CSS markup to avoid indentation to the right.
(Read and Write property)

### 184.5.86 OptionDoctype as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option doctype.
**Notes:**

This option specifies the DOCTYPE declaration generated by Tidy.
If set to omit the output won't contain a DOCTYPE declaration. Note this this also implies numeric-entities is set to yes.
If set to html5 the DOCTYPE is set to & lt;!DOCTYPE html& gt;.
If set to auto (the default) Tidy will use an educated guess based upon the contents of the document.
If set to strict, Tidy will set the DOCTYPE to the HTML4 or XHTML1 strict DTD.
If set to loose, the DOCTYPE is set to the HTML4 or XHTML1 loose (transitional) DTD.
Alternatively, you can supply a string for the formal public identifier (FPI).

For example:
doctype: "-//ACME//DTD HTML 3.14159//EN"
If you specify the FPI for an XHTML document, Tidy will set the system identifier to an empty string. For an HTML document, Tidy adds a system identifier only if one was already present in order to preserve the processing mode of some browsers. Tidy leaves the DOCTYPE for generic XML documents unchanged.
This option does not offer a validation of document conformance.
(Read and Write property)

### 184.5.87 OptionDoctypeMode as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option doctype-mode.
**Notes:**

(Read only property)

### 184.5.88 OptionDropEmptyElements as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option drop-empty-elements.
**Notes:**

This option specifies if Tidy should discard empty elements.
(Read and Write property)

### 184.5.89 OptionDropEmptyParas as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option drop-empty-paras.
**Notes:**

This option specifies if Tidy should discard empty paragraphs.
(Read and Write property)

### 184.5.90 OptionDropFontTags as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option drop-font-tags.
**Notes:**

Deprecated; do not use. This option is destructive to & lt;font& gt; tags, and it will be removed from future versions of Tidy. Use the clean option instead.
If you do set this option despite the warning it will perform as clean except styles will be inline instead of put into a CSS class. & lt;font& gt; tags will be dropped completely and their styles will not be preserved.
If both clean and this option are enabled, & lt;font& gt; tags will still be dropped completely, and other styles will be preserved in a CSS class instead of inline.
See clean for more information.
(Read and Write property)

### 184.5.91 OptionDropPropAttrs as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option specifies if Tidy should strip out proprietary attributes, such as MS data binding attributes.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

### 184.5.92 OptionDropProprietaryAttributes as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option drop-proprietary-attributes.
**Notes:**

This option specifies if Tidy should strip out proprietary attributes, such as Microsoft data binding attributes. Additionally attributes that aren't permitted in the output version of HTML will be dropped if used with strict-tags-attributes.
(Read and Write property)

### 184.5.93 OptionDuplicateAttrs as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** One of the options.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

### 184.5.94 OptionEmacs as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option specifies if Tidy should change the format for reporting errors and warnings to a format that is more easily parsed by GNU Emacs.

**Deprecated:** This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

### 184.5.95 OptionEmacsFile as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Used internally.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

### 184.5.96 OptionEmptyTags as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option specifies new empty inline tags.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

This option takes a space or comma separated list of tag names. Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags. Remember to also declare empty tags as either inline or blocklevel. This option is ignored in XML mode.
(Read and Write property)

### 184.5.97 OptionEncloseBlockText as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option enclose-block-text.
**Notes:**

This option specifies if Tidy should insert a & lt;p& gt; element to enclose any text it finds in any element that allows mixed content for HTML transitional but not HTML strict.
(Read and Write property)

### 184.5.98 OptionEncloseBodyText as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option specifies if Tidy should enclose any text it finds in the body element within a <P>element.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

This is useful when you want to take existing HTML and use it with a style sheet.
(Read and Write property)

### 184.5.99 OptionEncloseText as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option enclose-text.
**Notes:**

This option specifies if Tidy should enclose any text it finds in the body element within a & lt;p& gt; element. This is useful when you want to take existing HTML and use it with a style sheet.
(Read and Write property)

### 184.5.100 OptionErrFile as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option specifies the error file Tidy uses for errors and warnings.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

Normally errors and warnings are output to "stderr".
(Read and Write property)

### 184.5.101 OptionErrorFile as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option error-file.
**Notes:**

This option specifies the error file Tidy uses for errors and warnings. Normally errors and warnings are output to stderr.
(Read and Write property)

### 184.5.102 OptionEscapeCdata as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option escape-cdata.
**Notes:**

This option specifies if Tidy should convert & lt;! [ CDATA [ ] ] & gt; sections to normal text.
(Read and Write property)

### 184.5.103 OptionEscapeScripts as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option escape-scripts.
**Notes:**

This option causes items that look like closing tags, like & lt;/g to be escaped to & lt;\/g. Set this option to 'no' if you do not want this.
(Read and Write property)

### 184.5.104 OptionFixBackslash as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option fix-backslash.
**Notes:**

This option specifies if Tidy should replace backslash characters \in URLs with forward slashes /.
(Read and Write property)

### 184.5.105 OptionFixBadComments as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option fix-bad-comments.
**Notes:**

This option specifies if Tidy should replace unexpected hyphens with = characters when it comes across adjacent hyphens.
The default is yes.
This option is provided for users of Cold Fusion which uses the comment syntax: & lt;!— —& gt;.
(Read and Write property)

### 184.5.106 OptionFixComments as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option specifies if Tidy should replace unexpected hyphens with "=" characters when it comes across adjacent hyphens.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

The default is yes. This option is provided for users of Cold Fusion which uses the comment syntax: <!——>
(Read and Write property)

### 184.5.107 OptionFixUri as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option fix-uri.
**Notes:**

This option specifies if Tidy should check attribute values that carry URIs for illegal characters and if such are found, escape them as HTML4 recommends.
(Read and Write property)

### 184.5.108 OptionForceOutput as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option force-output.
**Notes:**

This option specifies if Tidy should produce output even if errors are encountered.
Use this option with care; if Tidy reports an error, this means Tidy was not able to (or is not sure how to) fix the error, so the resulting output may not reflect your intention.
(Read and Write property)

### 184.5.109 OptionGdoc as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option gdoc.
**Notes:**

This option specifies if Tidy should enable specific behavior for cleaning up HTML exported from Google Docs.

(Read and Write property)

### 184.5.110 OptionGnuEmacs as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option gnu-emacs.
**Notes:**

This option specifies if Tidy should change the format for reporting errors and warnings to a format that is more easily parsed by GNU Emacs.
(Read and Write property)

### 184.5.111 OptionGnuEmacsFile as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option gnu-emacs-file.
**Notes:**

Used internally.
(Read and Write property)

### 184.5.112 OptionHideComments as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option hide-comments.
**Notes:**

This option specifies if Tidy should print out comments.
(Read and Write property)

### 184.5.113 OptionHideEndtags as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option hide-endtags.
**Notes:**

This option is an alias for omit-optional-tags.
(Read and Write property)

### 184.5.114 OptionHtmlOut as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option specifies if Tidy should generate pretty printed output, writing it as HTML.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

### 184.5.115 OptionInCharEncoding as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option specifies the character encoding Tidy uses for the input.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

See char-encoding for more info.
(Read and Write property)

### 184.5.116 OptionIndent as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option indent.
**Notes:**

This option specifies if Tidy should indent block-level tags.
If set to auto Tidy will decide whether or not to indent the content of tags such as & lt;title& gt;, & lt;h1& gt;-& lt;h6& gt;, & lt;li& gt;, & lt;td& gt;, or & lt;p& gt; based on the content including a block-level element.
Setting indent to yes can expose layout bugs in some browsers.
Use the option indent-spaces to control the number of spaces or tabs output per level of indent, and indent-with-tabs to specify whether spaces or tabs are used.
(Read and Write property)

### 184.5.117 OptionIndentAttributes as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option indent-attributes.
**Notes:**

This option specifies if Tidy should begin each attribute on a new line.
(Read and Write property)

### 184.5.118 OptionIndentCdata as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option indent-cdata.
**Notes:**

This option specifies if Tidy should indent & lt;! [ CDATA [ ] ] & gt; sections.
(Read and Write property)

### 184.5.119 OptionIndentContent as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** One of the options.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

### 184.5.120 OptionIndentSpaces as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option indent-spaces.
**Notes:**

This option specifies the number of spaces or tabs that Tidy uses to indent content when indent is enabled. Note that the default value for this option is dependent upon the value of indent-with-tabs (see also).
(Read and Write property)

### 184.5.121 OptionIndentWithTabs as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option indent-with-tabs.
**Notes:**

This option specifies if Tidy should indent with tabs instead of spaces, assuming indent is yes.
Set it to yes to indent using tabs instead of the default spaces.
Use the option indent-spaces to control the number of tabs output per level of indent. Note that when indent-with-tabs is enabled the default value of indent-spaces is reset to 1.
Note tab-size controls converting input tabs to spaces. Set it to zero to retain input tabs.
(Read and Write property)

### 184.5.122 OptionInlineTags as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option specifies new non-empty inline tags. This option takes a space or comma separated list of tag names.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags. This option is ignored in XML mode.
(Read and Write property)

### 184.5.123 OptionInputEncoding as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option input-encoding.
**Notes:**

This option specifies the character encoding Tidy uses for the input. See char-encoding for more info.
(Read and Write property)

### 184.5.124 OptionInputXml as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option input-xml.
**Notes:**

This option specifies if Tidy should use the XML parser rather than the error correcting HTML parser.
(Read and Write property)

### 184.5.125 OptionJoinClasses as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option join-classes.
**Notes:**

This option specifies if Tidy should combine class names to generate a single, new class name if multiple class assignments are detected on an element.
(Read and Write property)

### 184.5.126 OptionJoinStyles as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option join-styles.
**Notes:**

This option specifies if Tidy should combine styles to generate a single, new style if multiple style values are detected on an element.
(Read and Write property)

### 184.5.127 OptionKeepFileTimes as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option specifies if Tidy should keep the original modification time of files that Tidy modifies in place.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

The default is no. Setting the option to yes allows you to tidy files without causing these files to be uploaded to a web server when using a tool such as SiteCopy. Note this feature is not supported on some platforms.
(Read and Write property)

### 184.5.128 OptionKeepTime as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option keep-time.
**Notes:**

This option specifies if Tidy should keep the original modification time of files that Tidy modifies in place. Setting the option to yes allows you to tidy files without changing the file modification date, which may be useful with certain tools that use the modification date for things such as automatic server deployment. Note this feature is not supported on some platforms.
(Read and Write property)

### 184.5.129 OptionLanguage as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option language.
**Notes:**

Currently not used, but this option specifies the language Tidy would use if it were properly localized. For example: en.

(Read and Write property)

### 184.5.130 OptionLiteralAttribs as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option specifies if Tidy should ensure that whitespace characters within attribute values are passed through unchanged.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

### 184.5.131 OptionLiteralAttributes as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option literal-attributes.
**Notes:**

This option specifies how Tidy deals with whitespace characters within attribute values.
If the value is no Tidy normalizes attribute values by replacing any newline or tab with a single space, and further by replacing any contiguous whitespace with a single space.
To force Tidy to preserve the original, literal values of all attributes and ensure that whitespace within attribute values is passed through unchanged, set this option to yes.
(Read and Write property)

### 184.5.132 OptionLogicalEmphasis as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option logical-emphasis.
**Notes:**

This option specifies if Tidy should replace any occurrence of & lt;i& gt; with & lt;em& gt; and any occurrence of & lt;b& gt; with & lt;strong& gt;. Any attributes are preserved unchanged.
This option can be set independently of the clean option.
(Read and Write property)

### 184.5.133 OptionLowerLiterals as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option lower-literals.
**Notes:**

This option specifies if Tidy should convert the value of an attribute that takes a list of predefined values to lower case.
This is required for XHTML documents.
(Read and Write property)

### 184.5.134 OptionMakeBare as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option specifies if Tidy should strip Microsoft specific HTML from Word 2000 documents, and output spaces rather than non-breaking spaces where they exist in the input.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

### 184.5.135 OptionMakeClean as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option specifies if Tidy should strip out surplus presentational tags and attributes replacing them by style rules and structural markup as appropriate.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

It works well on the HTML saved by Microsoft Office products.
(Read and Write property)

### 184.5.136 OptionMark as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option specifies if Tidy should add a meta element to the document head to indicate that the document has been tidied.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

Tidy won't add a meta element if one is already present.
(Read and Write property)

### 184.5.137 OptionMarkup as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option markup.
**Notes:**

This option specifies if Tidy should generate a pretty printed version of the markup. Note that Tidy won't generate a pretty printed version if it finds significant errors (see force-output).
(Read and Write property)

### 184.5.138 OptionMergeDivs as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option merge-divs.
**Notes:**

This option can be used to modify the behavior of clean when set to yes.
This option specifies if Tidy should merge nested & lt;div& gt; such as & lt;div& gt;& lt;div& gt;...& lt;/div& gt;& lt;/div& gt;.
If set to auto the attributes of the inner & lt;div& gt; are moved to the outer one. Nested & lt;div& gt; with id attributes are not merged.
If set to yes the attributes of the inner & lt;div& gt; are discarded with the exception of class and style.
(Read and Write property)

### 184.5.139 OptionMergeEmphasis as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option merge-emphasis.
**Notes:**

This option specifies if Tidy should merge nested & lt;b& gt; and & lt;i& gt; elements; for example, for the case
& lt;b class="rtop-2"& gt;foo & lt;b class="r2-2"& gt;bar& lt;/b& gt; baz& lt;/b& gt;,
Tidy will output & lt;b class="rtop-2"& gt;foo bar baz& lt;/b& gt;.
(Read and Write property)

### 184.5.140 OptionMergeSpans as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option merge-spans.
**Notes:**

This option can be used to modify the behavior of clean when set to yes.
This option specifies if Tidy should merge nested & lt;span& gt; such as & lt;span& gt;& lt;span& gt;...& lt;/span& gt;& lt;/span& gt;.
The algorithm is identical to the one used by merge-divs.

(Read and Write property)

### 184.5.141 OptionNcr as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option ncr.
**Notes:**

This option specifies if Tidy should allow numeric character references.
(Read and Write property)

### 184.5.142 OptionNewBlocklevelTags as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option new-blocklevel-tags.
**Notes:**

This option specifies new block-level tags. This option takes a space or comma separated list of tag names. Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags.
Note you can't change the content model for elements such as & lt;table& gt;, & lt;ul& gt;, & lt;ol& gt; and & lt;dl& gt;.
This option is ignored in XML mode.
(Read and Write property)

### 184.5.143 OptionNewEmptyTags as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option new-empty-tags.
**Notes:**

This option specifies new empty inline tags. This option takes a space or comma separated list of tag names. Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags.
Remember to also declare empty tags as either inline or blocklevel.
This option is ignored in XML mode.
(Read and Write property)

### 184.5.144 OptionNewInlineTags as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option new-inline-tags.
**Notes:**

This option specifies new non-empty inline tags. This option takes a space or comma separated list of tag names.
Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags.
This option is ignored in XML mode.
(Read and Write property)

### 184.5.145 OptionNewline as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option newline.
**Notes:**

The default is appropriate to the current platform.
Genrally CRLF on PC-DOS, Windows and OS/2; CR on Classic Mac OS; and LF everywhere else (Linux, Mac OS X, and Unix).
(Read and Write property)

### 184.5.146 OptionNewPreTags as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option new-pre-tags.
**Notes:**

This option specifies new tags that are to be processed in exactly the same way as HTML's & lt;pre& gt; element. This option takes a space or comma separated list of tag names.
Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags.
Note you cannot as yet add new CDATA elements.
This option is ignored in XML mode.
(Read and Write property)

### 184.5.147 OptionNumEntities as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option specifies if Tidy should output entities other than the built-in HTML entities (& amp;, & lt;, & gt; and & quot;) in the numeric rather than the named entity form.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

Only entities compatible with the DOCTYPE declaration generated are used. Entities that can be represented in the output encoding are translated correspondingly.
(Read and Write property)

### 184.5.148 OptionNumericEntities as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option numeric-entities.
**Notes:**

This option specifies if Tidy should output entities other than the built-in HTML entities (& amp;amp;, & amp;lt;, & amp;gt;, and & amp;quot;) in the numeric rather than the named entity form.
Only entities compatible with the DOCTYPE declaration generated are used.
Entities that can be represented in the output encoding are translated correspondingly.
(Read and Write property)

### 184.5.149 OptionOmitOptionalTags as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option omit-optional-tags.
**Notes:**

This option specifies if Tidy should omit optional start tags and end tags when generating output.
Setting this option causes all tags for the & lt;html& gt;, & lt;head& gt;, and & lt;body& gt; elements to be omitted from output, as well as such end tags as & lt;/p& gt;, & lt;/li& gt;, & lt;/dt& gt;, & lt;/dd& gt;, & lt;/option& gt;, & lt;/tr& gt;, & lt;/td& gt;, and & lt;/th& gt;.
This option is ignored for XML output.
(Read and Write property)

### 184.5.150 OptionOutCharEncoding as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option specifies the character encoding Tidy uses for the output.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

See char-encoding for more info. May only be different from input-encoding for Latin encodings (ascii, latin0, latin1, mac, win1252, ibm858).

(Read and Write property)

### 184.5.151 OptionOutFile as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option specifies the output file Tidy uses for markup.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

Normally markup is written to "stdout".
(Read and Write property)

### 184.5.152 OptionOutputBom as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option output-bom.
**Notes:**

This option specifies if Tidy should write a Unicode Byte Order Mark character (BOM; also known as Zero Width No-Break Space; has value of U+FEFF) to the beginning of the output, and only applies to UTF-8 and UTF-16 output encodings.
If set to auto this option causes Tidy to write a BOM to the output only if a BOM was present at the beginning of the input.
A BOM is always written for XML/XHTML output using UTF-16 output encodings.
(Read and Write property)

### 184.5.153 OptionOutputEncoding as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option output-encoding.
**Notes:**

This option specifies the character encoding Tidy uses for the output.
Note that this may only be different from input-encoding for Latin encodings (ascii, latin0, latin1, mac, win1252, ibm858).
See char-encoding for more information
(Read and Write property)

### 184.5.154 OptionOutputFile as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option output-file.
**Notes:**

This option specifies the output file Tidy uses for markup. Normally markup is written to stdout.
(Read and Write property)

### 184.5.155 OptionOutputHtml as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option output-html.
**Notes:**

This option specifies if Tidy should generate pretty printed output, writing it as HTML.
(Read and Write property)

### 184.5.156 OptionOutputXhtml as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option output-xhtml.
**Notes:**

This option specifies if Tidy should generate pretty printed output, writing it as extensible HTML.
This option causes Tidy to set the DOCTYPE and default namespace as appropriate to XHTML, and will use the corrected value in output regardless of other sources.
For XHTML, entities can be written as named or numeric entities according to the setting of numeric-entities.
The original case of tags and attributes will be preserved, regardless of other options.
(Read and Write property)

### 184.5.157 OptionOutputXml as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option output-xml.
**Notes:**

This option specifies if Tidy should pretty print output, writing it as well-formed XML.
Any entities not defined in XML 1.0 will be written as numeric entities to allow them to be parsed by an XML parser.
The original case of tags and attributes will be preserved, regardless of other options.

(Read and Write property)

### 184.5.158 OptionPreserveEntities as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option preserve-entities.
**Notes:**

This option specifies if Tidy should preserve well-formed entities as found in the input.
(Read and Write property)

### 184.5.159 OptionPreTags as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option specifies new tags that are to be processed in exactly the same way as HTML's <PRE>element.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

This option takes a space or comma separated list of tag names. Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags. Note you can not as yet add new CDATA elements (similar to <SCRIPT>). This option is ignored in XML mode.
(Read and Write property)

### 184.5.160 OptionPunctuationWrap as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option punctuation-wrap.
**Notes:**

This option specifies if Tidy should line wrap after some Unicode or Chinese punctuation characters.
(Read and Write property)

### 184.5.161 OptionPunctWrap as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option specifies if Tidy should line wrap after some Unicode or Chinese punctuation characters.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

### 184.5.162 OptionQuiet as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option quiet.
**Notes:**

This option specifies if Tidy should output the summary of the numbers of errors and warnings, or the welcome or informational messages.
(Read and Write property)

### 184.5.163 OptionQuoteAmpersand as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option quote-ampersand.
**Notes:**

This option specifies if Tidy should output unadorned & amp; characters as & amp;amp;.
(Read and Write property)

### 184.5.164 OptionQuoteMarks as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option quote-marks.
**Notes:**

This option specifies if Tidy should output & quot; characters as & amp;quot; as is preferred by some editing environments.
The apostrophe character ' is written out as & amp;# 39; since many web browsers don't yet support & amp;apos;.
(Read and Write property)

### 184.5.165 OptionQuoteNbsp as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option quote-nbsp.
**Notes:**

This option specifies if Tidy should output non-breaking space characters as entities, rather than as the Unicode character value 160 (decimal).
(Read and Write property)

### 184.5.166 OptionRepeatedAttributes as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option repeated-attributes.
**Notes:**

This option specifies if Tidy should keep the first or last attribute, if an attribute is repeated, e.g. has two align attributes.
(Read and Write property)

### 184.5.167 OptionReplaceColor as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option replace-color.
**Notes:**

This option specifies if Tidy should replace numeric values in color attributes with HTML/XHTML color names where defined, e.g. replace # ffffff with white.
(Read and Write property)

### 184.5.168 OptionShowBodyOnly as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option show-body-only.
**Notes:**

This option specifies if Tidy should print only the contents of the body tag as an HTML fragment.
If set to auto, this is performed only if the body tag has been inferred.
Useful for incorporating existing whole pages as a portion of another page.
This option has no effect if XML output is requested.
(Read and Write property)

### 184.5.169 OptionShowErrors as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option show-errors.
**Notes:**

This option specifies the number Tidy uses to determine if further errors should be shown. If set to 0, then no errors are shown.

(Read and Write property)

### 184.5.170 OptionShowInfo as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option show-info.
**Notes:**

This option specifies if Tidy should display info-level messages.
(Read and Write property)

### 184.5.171 OptionShowMarkup as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option specifies if Tidy should generate a pretty printed version of the markup.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

Note that Tidy won't generate a pretty printed version if it finds significant errors (see force-output).
(Read and Write property)

### 184.5.172 OptionShowWarnings as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option show-warnings.
**Notes:**

This option specifies if Tidy should suppress warnings. This can be useful when a few errors are hidden in a flurry of warnings.
(Read and Write property)

### 184.5.173 OptionSkipNested as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option skip-nested.
**Notes:**

This option specifies that Tidy should skip nested tags when parsing script and style data.
(Read and Write property)

### 184.5.174 OptionSlideStyle as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option slide-style.
**Notes:**

This option has no function and is deprecated.
(Read and Write property)

### 184.5.175 OptionSortAttributes as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option sort-attributes.
**Notes:**

This option specifies that Tidy should sort attributes within an element using the specified sort algorithm. If set to alpha, the algorithm is an ascending alphabetic sort.
(Read and Write property)

### 184.5.176 OptionSplit as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option split.
**Notes:**

This option has no function and is deprecated.
(Read and Write property)

### 184.5.177 OptionStrictTagsAttributes as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option strict-tags-attributes.
**Notes:**

This options ensures that tags and attributes are applicable for the version of HTML that Tidy outputs. When set to yes (the default) and the output document type is a strict doctype, then Tidy will report errors. If the output document type is a loose or transitional doctype, then Tidy will report warnings.
Additionally if drop-proprietary-attributes is enabled, then not applicable attributes will be dropped, too.
When set to no, these checks are not performed.
(Read and Write property)

### 184.5.178 OptionTabSize as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option tab-size.
**Notes:**

This option specifies the number of columns that Tidy uses between successive tab stops. It is used to map tabs to spaces when reading the input.
(Read and Write property)

### 184.5.179 OptionTidyMark as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option tidy-mark.
**Notes:**

This option specifies if Tidy should add a meta element to the document head to indicate that the document has been tidied.
Tidy won't add a meta element if one is already present.
(Read and Write property)

### 184.5.180 OptionUppercaseAttributes as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option uppercase-attributes.
**Notes:**

This option specifies if Tidy should output attribute names in upper case.
The default is no, which results in lower case attribute names, except for XML input, where the original case is preserved.
(Read and Write property)

### 184.5.181 OptionUpperCaseAttrs as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option specifies if Tidy should output attribute names in upper case.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

The default is no, which results in lower case attribute names, except for XML input, where the original case is preserved.

(Read and Write property)

### 184.5.182 OptionUppercaseTags as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option uppercase-tags.
**Notes:**

This option specifies if Tidy should output tag names in upper case.
The default is no which results in lower case tag names, except for XML input where the original case is preserved.
(Read and Write property)

### 184.5.183 OptionVerticalSpace as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option vertical-space.
**Notes:**

This option specifies if Tidy should add some extra empty lines for readability.
The default is no.
If set to auto Tidy will eliminate nearly all newline characters.
(Read and Write property)

### 184.5.184 OptionVertSpace as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option specifies if Tidy should add some empty lines for readability.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

### 184.5.185 OptionWord2000 as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option word-2000.
**Notes:**

This option specifies if Tidy should go to great pains to strip out all the surplus stuff Microsoft Word 2000 inserts when you save Word documents as ”Web pages”. It doesn’t handle embedded images or VML.

You should consider using Word's "Save As: Web Page, Filtered".
(Read and Write property)

### 184.5.186 OptionWrap as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option wrap.
**Notes:**

This option specifies the right margin Tidy uses for line wrapping.
Tidy tries to wrap lines so that they do not exceed this length.
Set wrap to 0(zero) if you want to disable line wrapping.
(Read and Write property)

### 184.5.187 OptionWrapAsp as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option wrap-asp.
**Notes:**

This option specifies if Tidy should line wrap text contained within ASP pseudo elements, which look like: & lt;% ... % & gt;.
(Read and Write property)

### 184.5.188 OptionWrapAttributes as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option wrap-attributes.
**Notes:**

This option specifies if Tidy should line-wrap attribute values, meaning that if the value of an attribute causes a line to exceed the width specified by wrap, Tidy will add one or more line breaks to the value, causing it to be wrapped into multiple lines.
Note that this option can be set independently of wrap-script-literals. By default Tidy replaces any newline or tab with a single space and replaces any sequences of whitespace with a single space.
To force Tidy to preserve the original, literal values of all attributes, and ensure that whitespace characters within attribute values are passed through unchanged, set literal-attributes to yes.
(Read and Write property)

### 184.5.189 OptionWrapAttVals as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option specifies if Tidy should line wrap attribute values, for easier editing.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

This option can be set independently of wrap-script-literals.
(Read and Write property)

### 184.5.190 OptionWrapJste as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option wrap-jste.
**Notes:**

This option specifies if Tidy should line wrap text contained within JSTE pseudo elements, which look like: & lt;# ... # & gt;.
(Read and Write property)

### 184.5.191 OptionWrapLen as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option specifies the right margin Tidy uses for line wrapping.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

Tidy tries to wrap lines so that they do not exceed this length. Set wrap to zero if you want to disable line wrapping.
(Read and Write property)

### 184.5.192 OptionWrapPhp as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option wrap-php.
**Notes:**

This option specifies if Tidy should line wrap text contained within PHP pseudo elements, which look like: & lt;?php ... ?& gt;.
(Read and Write property)

### 184.5.193 OptionWrapScriptlets as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option specifies if Tidy should line wrap string literals that appear in script attributes.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

Tidy wraps long script string literals by inserting a backslash character before the line break.
(Read and Write property)

### 184.5.194 OptionWrapScriptLiterals as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option wrap-script-literals.
**Notes:**

This option specifies if Tidy should line wrap string literals that appear in script attributes.
Tidy wraps long script string literals by inserting a backslash character before the line break.
(Read and Write property)

### 184.5.195 OptionWrapSection as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option specifies if Tidy should line wrap text contained within <! [ ... ] >section tags.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

### 184.5.196 OptionWrapSections as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option wrap-sections.
**Notes:**

This option specifies if Tidy should line wrap text contained within & lt;! [ ... ] & gt; section tags.
(Read and Write property)

### 184.5.197 OptionWriteBack as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tidy option write-back.
**Notes:**

This option specifies if Tidy should write back the tidied markup to the same file it read from.
You are advised to keep copies of important files before tidying them, as on rare occasions the result may not be what you expect.
(Read and Write property)

### 184.5.198 OptionXhtmlOut as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option specifies if Tidy should generate pretty printed output, writing it as extensible HTML.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

This option causes Tidy to set the DOCTYPE and default namespace as appropriate to XHTML. If a DOCTYPE or namespace is given they will checked for consistency with the content of the document. In the case of an inconsistency, the corrected values will appear in the output. For XHTML, entities can be written as named or numeric entities according to the setting of the "numeric-entities" option. The original case of tags and attributes will be preserved, regardless of other options.
(Read and Write property)

### 184.5.199 OptionXmlDecl as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option specifies if Tidy should add the XML declaration when outputting XML or XHTML.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

Note that if the input already includes an <?xml ... ?>declaration then this option will be ignored. If the encoding for the output is different from "ascii", one of the utf encodings or "raw", the declaration is always added as required by the XML standard.
(Read and Write property)

### 184.5.200 OptionXmlOut as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option specifies if Tidy should pretty print output, writing it as well-formed XML.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

Any entities not defined in XML 1.0 will be written as numeric entities to allow them to be parsed by a XML parser. The original case of tags and attributes will be preserved, regardless of other options.

(Read and Write property)

### 184.5.201 OptionXmlPIs as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** One of the options.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

### 184.5.202 OptionXmlSpace as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option specifies if Tidy should add xml:space="preserve" to elements such as <PRE>, <STYLE>and <SCRIPT>when generating XML.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

This is needed if the whitespace in such elements is to be parsed appropriately without having access to the DTD.
(Read and Write property)

### 184.5.203 OptionXmlTags as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Set this option if the input is xml.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

### 184.5.204 Events

### 184.5.205 Filter(level as Integer, line as Integer, column as Integer, message as string) as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The filter called for every error and warning.
**Notes:**

Callback to filter messages by diagnostic level: info, warning, etc. Just set diagnostic output handler to redirect all diagnostics output.

Return false to proceed with output, true to cancel.

### 184.5.206 PrettyPrintProgress(line as Integer, column as Integer, destLine as Integer)

MBS Tools Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Reports progress on the print process.

## 184.6 module TidyDupAttrModesMBS

### 184.6.1 module TidyDupAttrModesMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A module with constants for use with the Tidy classes.

### 184.6.2 Constants

### 184.6.3 TidyKeepFirst=0

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.6.4 TidyKeepLast=1

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

## 184.7 class TidyInputMBS

### 184.7.1 class TidyInputMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Delivers raw bytes of input.

### 184.7.2 Events

### 184.7.3 EndOfFile as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Return true if all your data is processed.
**Notes:** Return false if more data is available for the GetByte call.

### 184.7.4 GetByte as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Read one byte and returns it to the tidy library.

### 184.7.5 UngetByte(value as Integer)

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Returns a byte to the buffer for later processing.

## 184.8 class TidyIteratorMBS

### 184.8.1 class TidyIteratorMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** An iterator for various uses.

### 184.8.2 Properties

### 184.8.3 Handle as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The internal reference to the tidy iterator object.
**Notes:** (Read only property)

## 184.9 module TidyLineEndingMBS

### 184.9.1 module TidyLineEndingMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A module with constants for use with the Tidy classes.

### 184.9.2 Constants

### 184.9.3 TidyCR=2

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.9.4 TidyCRLF=1

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.9.5 TidyLF=0

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

# 184.10 class TidyNodeMBS

## 184.10.1 class TidyNodeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A node in the document parse tree.

## 184.10.2 Blog Entries

- MBS REALbasic Plugins, version 10.5pr4

## 184.10.3 Blog Entries

- MBS REALbasic Plugins, version 10.5pr4

## 184.10.4 Properties

## 184.10.5 Child as TidyNodeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The child node of this node.
**Example:**

```
dim t as TidyDocumentMBS // the tidy document
dim n as TidyNodeMBS
dim c as TidyNodeMBS

// iterating over root and its children (for more children you need recursion)
n=t.Root
while n<>nil
MsgBox n.Text

c=n.Child
while c<>nil
MsgBox c.Text
c=c.NextNode
wend

n=n.NextNode
wend
```

**Notes:** (Read only property)

### 184.10.6 Column as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The position of this node.
**Notes:** (Read only property)

### 184.10.7 Document as TidyDocumentMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The document of this node.
**Notes:** (Read only property)

### 184.10.8 FirstAttribute as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first attribute for this node.
**Notes:** (Read only property)

### 184.10.9 GetABBR as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first ABBR attribute for this node.
**Notes:** (Read only property)

### 184.10.10 GetALINK as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first ALINK attribute for this node.
**Notes:** (Read only property)

### 184.10.11 GetALT as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first ALT attribute for this node.
**Notes:** (Read only property)

### 184.10.12 GetBGCOLOR as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first BGCOLOR attribute for this node.
**Notes:** (Read only property)

### 184.10.13 GetCHECKED as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first CHECKED attribute for this node.
**Notes:** (Read only property)

### 184.10.14 GetCOLSPAN as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first COLSPAN attribute for this node.
**Notes:** (Read only property)

### 184.10.15 GetCONTENT as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first CONTENT attribute for this node.
**Notes:** (Read only property)

### 184.10.16 GetDATAFLD as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first DATAFLD attribute for this node.
**Notes:** (Read only property)

### 184.10.17 GetFOR as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first FOR attribute for this node.
**Notes:** (Read only property)

### 184.10.18 GetHEIGHT as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first HEIGHT attribute for this node.
**Notes:** (Read only property)

### 184.10.19 GetHREF as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first HREF attribute for this node.
**Notes:** (Read only property)

### 184.10.20 GetHTTP_EQUIV as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first HTTP_EQUIV attribute for this node.
**Notes:** (Read only property)

### 184.10.21 GetID as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first ID attribute for this node.
**Notes:** (Read only property)

### 184.10.22 GetISMAP as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first ISMAP attribute for this node.
**Notes:** (Read only property)

### 184.10.23 GetLANG as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first LANG attribute for this node.
**Notes:** (Read only property)

### 184.10.24 GetLANGUAGE as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first LANGUAGE attribute for this node.
**Notes:** (Read only property)

### 184.10.25 GetLINK as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first LINK attribute for this node.
**Notes:** (Read only property)

### 184.10.26 GetLONGDESC as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first LONGDESC attribute for this node.
**Notes:** (Read only property)

### 184.10.27 GetNAME as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first NAME attribute for this node.
**Notes:** (Read only property)

### 184.10.28 GetOnBLUR as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first OnBLUR attribute for this node.
**Notes:** (Read only property)

### 184.10.29 GetOnCLICK as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first OnCLICK attribute for this node.
**Notes:** (Read only property)

### 184.10.30 GetOnFOCUS as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first OnFOCUS attribute for this node.
**Notes:** (Read only property)

### 184.10.31 GetOnKEYDOWN as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first OnKEYDOWN attribute for this node.
**Notes:** (Read only property)

### 184.10.32 GetOnKEYPRESS as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first OnKEYPRESS attribute for this node.
**Notes:** (Read only property)

### 184.10.33 GetOnKEYUP as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first OnKEYUP attribute for this node.
**Notes:** (Read only property)

### 184.10.34 GetOnMOUSEDOWN as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first OnMOUSEDOWN attribute for this node.
**Notes:** (Read only property)

### 184.10.35 GetOnMOUSEMOVE as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first OnMOUSEMOVE attribute for this node.
**Notes:** (Read only property)

### 184.10.36 GetOnMOUSEOUT as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first OnMOUSEOUT attribute for this node.
**Notes:** (Read only property)

### 184.10.37 GetOnMOUSEOVER as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first OnMOUSEOVER attribute for this node.
**Notes:** (Read only property)

### 184.10.38 GetOnMOUSEUP as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first OnMOUSEUP attribute for this node.
**Notes:** (Read only property)

### 184.10.39 GetREL as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first REL attribute for this node.
**Notes:** (Read only property)

### 184.10.40 GetROWSPAN as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first ROWSPAN attribute for this node.
**Notes:** (Read only property)

### 184.10.41 GetSELECTED as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first SELECTED attribute for this node.
**Notes:** (Read only property)

### 184.10.42 GetSRC as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first SRC attribute for this node.
**Notes:** (Read only property)

### 184.10.43 GetSTYLE as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first STYLE attribute for this node.
**Notes:** (Read only property)

### 184.10.44 GetSUMMARY as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first SUMMARY attribute for this node.
**Notes:** (Read only property)

### 184.10.45 GetTARGET as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first TARGET attribute for this node.
**Notes:** (Read only property)

### 184.10.46 GetTEXT as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first TEXT attribute for this node.
**Notes:** (Read only property)

### 184.10.47 GetTITLE as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first TITLE attribute for this node.
**Notes:** (Read only property)

### 184.10.48 GetTYPE as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first TYPE attribute for this node.
**Notes:** (Read only property)

### 184.10.49 GetUSEMAP as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first USEMAP attribute for this node.
**Notes:** (Read only property)

### 184.10.50 GetVALUE as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first VALUE attribute for this node.
**Notes:** (Read only property)

### 184.10.51 GetVLINK as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first VLINK attribute for this node.
**Notes:** (Read only property)

### 184.10.52 GetWIDTH as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first WIDTH attribute for this node.
**Notes:** (Read only property)

### 184.10.53 GetXMLNS as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first XMLNS attribute for this node.
**Notes:** (Read only property)

### 184.10.54 Handle as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The internal reference to the tidy node object.
**Notes:** (Read only property)

### 184.10.55 HasText as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether there is text attached to this node.
**Notes:**

Returns true if yes.
(Read only property)

### 184.10.56 ID as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The node ID.
**Notes:** (Read only property)

### 184.10.57 IsDATALIST as Boolean

MBS Tools Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this node is a data list.
**Notes:** (Read only property)

### 184.10.58 IsProperty as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether the node is a property.
**Notes:** (Read only property)

### 184.10.59 Line as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The position of this node.
**Notes:** (Read only property)

### 184.10.60 Name as string

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The name of this node.
**Notes:** (Read only property)

### 184.10.61 NextNode as TidyNodeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The next node in the node list of the parent node.
**Notes:** (Read only property)

### 184.10.62 NodeIsA as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a A node.
**Notes:** (Read only property)

### 184.10.63 NodeIsADDRESS as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a ADDRESS node.
**Notes:** (Read only property)

### 184.10.64 NodeIsAPPLET as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a APPLET node.
**Notes:** (Read only property)

### 184.10.65 NodeIsAREA as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a AREA node.
**Notes:** (Read only property)

### 184.10.66 NodeIsB as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a B node.
**Notes:** (Read only property)

### 184.10.67 NodeIsBASE as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a BASE node.
**Notes:** (Read only property)

### 184.10.68 NodeIsBASEFONT as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a BASEFONT node.
**Notes:** (Read only property)

### 184.10.69 NodeIsBIG as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a BIG node.
**Notes:** (Read only property)

### 184.10.70 NodeIsBLINK as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a BLINK node.
**Notes:** (Read only property)

### 184.10.71 NodeIsBLOCKQUOTE as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a BLOCKQUOTE node.
**Notes:** (Read only property)

### 184.10.72 NodeIsBODY as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a BODY node.
**Notes:** (Read only property)

### 184.10.73 NodeIsBR as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a BR node.
**Notes:** (Read only property)

### 184.10.74 NodeIsCAPTION as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a CAPTION node.
**Notes:** (Read only property)

### 184.10.75 NodeIsCENTER as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a CENTER node.
**Notes:** (Read only property)

### 184.10.76 NodeIsCOL as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a COL node.
**Notes:** (Read only property)

### 184.10.77 NodeIsCOLGROUP as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a COLGROUP node.
**Notes:** (Read only property)

### 184.10.78 NodeIsDD as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a DD node.
**Notes:** (Read only property)

### 184.10.79 NodeIsDIR as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a DIR node.
**Notes:** (Read only property)

### 184.10.80 NodeIsDIV as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a DIV node.
**Notes:** (Read only property)

### 184.10.81 NodeIsDL as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a DL node.
**Notes:** (Read only property)

### 184.10.82 NodeIsDT as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a DT node.
**Notes:** (Read only property)

### 184.10.83 NodeIsEM as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a EM node.
**Notes:** (Read only property)

### 184.10.84 NodeIsEMBED as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a EMBED node.
**Notes:** (Read only property)

### 184.10.85 NodeIsFONT as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a FONT node.
**Notes:** (Read only property)

### 184.10.86 NodeIsFORM as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a FORM node.
**Notes:** (Read only property)

### 184.10.87 NodeIsFRAME as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a FRAME node.
**Notes:** (Read only property)

### 184.10.88 NodeIsFRAMESET as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a FRAMESET node.
**Notes:** (Read only property)

### 184.10.89 NodeIsH1 as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a H1 node.
**Notes:** (Read only property)

### 184.10.90 NodeIsH2 as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a H2 node.
**Notes:** (Read only property)

### 184.10.91 NodeIsH3 as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a H3 node.
**Notes:** (Read only property)

### 184.10.92 NodeIsH4 as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a H4 node.
**Notes:** (Read only property)

### 184.10.93 NodeIsH5 as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a H5 node.
**Notes:** (Read only property)

### 184.10.94 NodeIsH6 as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a H6 node.
**Notes:** (Read only property)

### 184.10.95 NodeIsHEAD as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a HEAD node.
**Notes:** (Read only property)

### 184.10.96 NodeIsHeader as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a Header node.
**Notes:** (Read only property)

### 184.10.97 NodeIsHR as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a HR node.
**Notes:** (Read only property)

### 184.10.98 NodeIsHTML as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a HTML node.
**Notes:** (Read only property)

### 184.10.99 NodeIsI as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a I node.
**Notes:** (Read only property)

### 184.10.100 NodeIsIFRAME as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a IFRAME node.
**Notes:** (Read only property)

### 184.10.101 NodeIsIMG as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a IMG node.
**Notes:** (Read only property)

### 184.10.102 NodeIsINPUT as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a INPUT node.
**Notes:** (Read only property)

### 184.10.103 NodeIsISINDEX as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a ISINDEX node.
**Notes:** (Read only property)

### 184.10.104 NodeIsLABEL as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a LABEL node.
**Notes:** (Read only property)

### 184.10.105 NodeIsLAYER as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a LAYER node.
**Notes:** (Read only property)

### 184.10.106 NodeIsLI as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a LI node.
**Notes:** (Read only property)

### 184.10.107 NodeIsLINK as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a LINK node.
**Notes:** (Read only property)

### 184.10.108 NodeIsLISTING as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a LISTING node.
**Notes:** (Read only property)

### 184.10.109 NodeIsMAP as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a MAP node.
**Notes:** (Read only property)

### 184.10.110 NodeIsMARQUEE as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a MARQUEE node.
**Notes:** (Read only property)

### 184.10.111 NodeIsMENU as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a MENU node.
**Notes:** (Read only property)

### 184.10.112 NodeIsMETA as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a META node.
**Notes:** (Read only property)

### 184.10.113 NodeIsNOBR as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a NOBR node.
**Notes:** (Read only property)

### 184.10.114 NodeIsNOFRAMES as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a NOFRAMES node.
**Notes:** (Read only property)

### 184.10.115 NodeIsNOSCRIPT as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a NOSCRIPT node.
**Notes:** (Read only property)

### 184.10.116 NodeIsOBJECT as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a OBJECT node.
**Notes:** (Read only property)

### 184.10.117 NodeIsOL as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a OL node.
**Notes:** (Read only property)

### 184.10.118 NodeIsOPTGROUP as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a OPTGROUP node.
**Notes:** (Read only property)

### 184.10.119 NodeIsOPTION as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a OPTION node.
**Notes:** (Read only property)

### 184.10.120 NodeIsP as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a P node.
**Notes:** (Read only property)

### 184.10.121 NodeIsPARAM as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a PARAM node.
**Notes:** (Read only property)

### 184.10.122 NodeIsPRE as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a PRE node.
**Notes:** (Read only property)

### 184.10.123 NodeIsQ as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a Q node.
**Notes:** (Read only property)

### 184.10.124 NodeIsS as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a S node.
**Notes:** (Read only property)

### 184.10.125 NodeIsSCRIPT as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a SCRIPT node.
**Notes:** (Read only property)

### 184.10.126 NodeIsSELECT as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a SELECT node.
**Notes:** (Read only property)

### 184.10.127 NodeIsSMALL as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a SMALL node.
**Notes:** (Read only property)

### 184.10.128 NodeIsSPACER as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a SPACER node.
**Notes:** (Read only property)

### 184.10.129 NodeIsSPAN as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a SPAN node.
**Notes:** (Read only property)

### 184.10.130 NodeIsSTRIKE as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a STRIKE node.
**Notes:** (Read only property)

### 184.10.131 NodeIsSTRONG as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a STRONG node.
**Notes:** (Read only property)

### 184.10.132 NodeIsSTYLE as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a STYLE node.
**Notes:** (Read only property)

### 184.10.133 NodeIsTABLE as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a TABLE node.
**Notes:** (Read only property)

### 184.10.134 NodeIsTD as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a TD node.
**Notes:** (Read only property)

### 184.10.135 NodeIsText as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a Text node.
**Notes:** (Read only property)

### 184.10.136 NodeIsTEXTAREA as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a TEXTAREA node.
**Notes:** (Read only property)

### 184.10.137 NodeIsTH as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a TH node.
**Notes:** (Read only property)

### 184.10.138 NodeIsTITLE as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a TITLE node.
**Notes:** (Read only property)

### 184.10.139 NodeIsTR as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a TR node.
**Notes:** (Read only property)

### 184.10.140 NodeIsU as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a U node.
**Notes:** (Read only property)

### 184.10.141 NodeIsUL as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a UL node.
**Notes:** (Read only property)

### 184.10.142 NodeIsWBR as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a WBR node.
**Notes:** (Read only property)

### 184.10.143 NodeIsXMP as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this is a XMP node.
**Notes:** (Read only property)

### 184.10.144 Parent as TidyNodeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The parent node of this node.
**Notes:** (Read only property)

### 184.10.145 PrevNode as TidyNodeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The previous node in the node list of the parent node.
**Notes:** (Read only property)

### 184.10.146 Text as string

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The text of this node.
**Example:**

```
dim t as new TidyDocumentMBS

call t.ParseString("<p>Hello World</p>") // pass here bad html
call t.CleanAndRepair

dim s As TidyNodeMBS=t.Root

MsgBox s.Text
```

**Notes:**

This text has no encoding defined.
(Read only property)

### 184.10.147 Type as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The type of this node.
**Notes:** (Read only property)

### 184.10.148 Value as string

MBS Tools Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The decoded value of the node as UTF-8 String.
**Example:**

```
dim t as new TidyDocumentMBS

call t.ParseString("<p>Hello World</p>") // pass here bad html
call t.CleanAndRepair

dim nodes(-1) as TidyNodeMBS
dim root as TidyNodeMBS = t.Root

// we iterate over all child nodes

nodes.Append root.Child
nodes.Append root.NextNode

while UBound(nodes)>=0
dim n as TidyNodeMBS = nodes.Pop

if n<>Nil then

nodes.Append n.Child // maybe a child?
nodes.Append n.NextNode // maybe a sibiling?

if n.HasText then
MsgBox n.Value // Shows "Hello World"
end if
end if
wend
```

**Notes:** (Read only property)

## 184.11 module TidyNodeTypeMBS

### 184.11.1 module TidyNodeTypeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A module with constants for use with the Tidy classes.

### 184.11.2 Constants

### 184.11.3 TidyNodeAsp=10

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.11.4 TidyNodeCDATA=8

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.11.5 TidyNodeComment=2

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.11.6 TidyNodeDocType=1

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.11.7 TidyNodeEnd=6

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.11.8 TidyNodeJste=11

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.11.9 TidyNodePhp=12

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.11.10 TidyNodeProcIns=3

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.11.11 TidyNodeRoot=0

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.11.12 TidyNodeSection=9

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.11.13 TidyNodeStart=5

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.11.14 TidyNodeStartEnd=7

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.11.15 TidyNodeText=4

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.11.16 TidyNodeXmlDecl=13

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

## 184.12 module TidyOptionIdMBS

### 184.12.1 module TidyOptionIdMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A module with constants for use with the Tidy classes.

### 184.12.2 Constants

### 184.12.3 TidyAccessibilityCheckLevel=84

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.4 TidyAltText=11

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.12.5 TidyAnchorAsName=93

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.6 TidyAsciiChars=71

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.7 TidyBlockTags=81

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.8 TidyBodyOnly=64

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.9 TidyBreakBeforeBR=40

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.10 TidyBurstSlides=41

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.11 TidyCharEncoding=4

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.12.12 TidyCoerceEndTags=21

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.13 TidyCSSPrefix=79

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.14 TidyDecorateInferredUL=89

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.15 TidyDoctype=9

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.12.16 TidyDoctypeMode=8

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.12.17 TidyDropEmptyElems=37

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.18 TidyDropEmptyParas=38

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.19 TidyDropFontTags=36

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.20 TidyDropPropAttrs=35

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.21 TidyDuplicateAttrs=10

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.12.22 TidyEmacs=61

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.23 TidyEmacsFile=62

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.24 TidyEmptyTags=82

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.25 TidyEncloseBlockText=57

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.26 TidyEncloseBodyText=56

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.27 TidyErrFile=13

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.12.28 TidyEscapeCdata=74

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.29 TidyEscapeScripts=97

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.30 TidyFixBackslash=52

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.31 TidyFixComments=39

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.32 TidyFixUri=65

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.33 TidyForceOutput=69

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.34 TidyGDocClean=33

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.35 TidyHideComments=67

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.36 TidyHideEndTags=23

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.37 TidyHtmlOut=27

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.38 TidyInCharEncoding=5

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.12.39 TidyIndentAttributes=53

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.40 TidyIndentCdata=68

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.41 TidyIndentContent=20

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.42 TidyIndentSpaces=1

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.12.43 TidyInlineTags=80

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.44 TidyJoinClasses=72

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.45 TidyJoinStyles=73

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.46 TidyKeepFileTimes=58

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.47 TidyLanguage=75

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.48 TidyLiteralAttribs=63

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.49 TidyLogicalEmphasis=34

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.50 TidyLowerLiterals=66

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.51 TidyMakeBare=31

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.52 TidyMakeClean=32

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.53 TidyMark=60

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.54 TidyMergeDivs=88

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.55 TidyMergeEmphasis=87

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.56 TidyMergeSpans=92

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.57 TidyNCR=76

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.58 TidyNewline=7

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.12.59 TidyNumEntities=42

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.60 TidyOmitOptionalTags=22

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.61 TidyOutCharEncoding=6

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.12.62 TidyOutFile=14

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.12.63 TidyOutputBOM=77

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.64 TidyPPrintTabs=94

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.65 TidyPreserveEntities=90

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.66 TidyPreTags=83

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.67 TidyPunctWrap=86

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.68 TidyQuiet=19

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.69 TidyQuoteAmpersand=45

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.70 TidyQuoteMarks=43

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.71 TidyQuoteNbsp=44

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.72 TidyReplaceColor=78

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.73 TidyShowErrors=70

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.74 TidyShowInfo=17

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.75 TidyShowMarkup=16

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.12.76 TidyShowWarnings=18

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.77 TidySkipNested=95

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.78 TidySlideStyle=12

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.12.79 TidySortAttributes=91

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.80 TidyStrictTagsAttr=96

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.90 TidyWrapLen=2

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.12.91 TidyWrapPhp=51

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.92 TidyWrapScriptlets=47

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.93 TidyWrapSection=48

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.94 TidyWriteBack=15

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.12.95 TidyXhtmlOut=26

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.96 TidyXmlDecl=28

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.97 TidyXmlOut=25

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.98 TidyXmlPIs=54

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.99 TidyXmlSpace=55

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.12.100 TidyXmlTags=24

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

## 184.13 class TidyOptionMBS

### 184.13.1 class TidyOptionMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** An option in the tidy preferences.

### 184.13.2 Methods

### 184.13.3 Category as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Category of the option.

### 184.13.4 DefaultBoolean as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The default value for a boolean property.

### 184.13.5 DefaultInteger as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The default value for an integer property.

### 184.13.6 DefaultString as String

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The default value for a string property.

### 184.13.7 Description as string

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Description of the option.

### 184.13.8 ID as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get ID of given Option.

### 184.13.9 IsReadOnly as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Is Option read-only?

### 184.13.10 Name as string

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get name of given Option.

### 184.13.11 Type as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get datatype of given Option.

### 184.13.12 Properties

### 184.13.13 Document as TidyDocumentMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The document of this option.
**Notes:** (Read only property)

### 184.13.14 Handle as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The internal reference to the tidy option object.
**Notes:** (Read only property)

## 184.14 module TidyOptionTypeMBS

### 184.14.1 module TidyOptionTypeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A module with constants for use with the Tidy classes.

### 184.14.2 Constants

### 184.14.3 TidyBoolean=2

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.14.4 TidyInteger=1

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.14.5 TidyString=0

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

## 184.15 class TidyOutputMBS

### 184.15.1 class TidyOutputMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Accepts raw bytes of output from the tidy library.

### 184.15.2 Events

### 184.15.3 WriteByte(value as Integer)

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Adds one byte to the output buffer.

## 184.16 module TidyReportLevelKeysMBS

### 184.16.1 module TidyReportLevelKeysMBS

MBS Tools Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The module for report level keys.

### 184.16.2 Constants

### 184.16.3 TidyAccessString=603

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.16.4 TidyBadDocumentString=605

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.16.5 TidyConfigString=602

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.16.6 TidyErrorString=604

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.16.7 TidyFatalString=606

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.16.8 TidyInfoString=600

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.16.9 TidyWarningString=601

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

## 184.17 module TidyReportLevelMBS

### 184.17.1 module TidyReportLevelMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A module with constants for use with the Tidy classes.

### 184.17.2 Constants

### 184.17.3 TidyAccess=3

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.17.4 TidyBadDocument=5

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.17.5 TidyConfig=2

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.17.6 TidyError=4

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.17.7 TidyFatal=6

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.17.8 TidyInfo=0

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.17.9 TidyWarning=1

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

## 184.18 module TidyTagIdMBS

### 184.18.1 module TidyTagIdMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A module with constants for use with the Tidy classes.

### 184.18.2 Constants

### 184.18.3 TidyTagA=1

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.4 TidyTagABBR=2

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.5 TidyTagACRONYM=3

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.6 TidyTagADDRESS=4

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.7 TidyTagALIGN=5

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.8 TidyTagAPPLET=6

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.9 TidyTagAREA=7

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.10 TidyTagARTICLE=123

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.18.11 TidyTagASIDE=124

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.18.12 TidyTagAUDIO=125

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.18.13 TidyTagB=8

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.14 TidyTagBASE=9

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.15 TidyTagBASEFONT=10

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.16 TidyTagBDI=126

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.18.17 TidyTagBDO=11

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.18 TidyTagBGSOUND=12

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.19 TidyTagBIG=13

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.20 TidyTagBLINK=14

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.21 TidyTagBLOCKQUOTE=15

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.22 TidyTagBODY=16

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.23 TidyTagBR=17

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.24 TidyTagBUTTON=18

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.25 TidyTagCANVAS=127

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.18.26 TidyTagCAPTION=19

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.27 TidyTagCENTER=20

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.28 TidyTagCITE=21

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.29 TidyTagCODE=22

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.30 TidyTagCOL=23

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.31 TidyTagCOLGROUP=24

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.32 TidyTagCOMMAND=128

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.18.33 TidyTagCOMMENT=25

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.34 TidyTagDATALIST=129

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.18.35 TidyTagDD=26

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.36 TidyTagDEL=27

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.37 TidyTagDETAILS=130

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.18.38 TidyTagDFN=28

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.39 TidyTagDIALOG=131

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.18.40 TidyTagDIR=29

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.41 TidyTagDIV=30

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.42 TidyTagDL=31

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.43 TidyTagDT=32

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.44 TidyTagEM=33

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.45 TidyTagEMBED=34

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.46 TidyTagFIELDSET=35

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.47 TidyTagFIGCAPTION=132

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.18.48 TidyTagFIGURE=133

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.18.49 TidyTagFONT=36

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.50 TidyTagFOOTER=134

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.18.51 TidyTagFORM=37

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.52 TidyTagFRAME=38

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.53 TidyTagFRAMESET=39

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.54 TidyTagH1=40

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.55 TidyTagH2=41

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.56 TidyTagH3=42

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.57 TidyTagH4=43

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.58 TidyTagH5=44

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.59 TidyTagH6=45

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.60 TidyTagHEAD=46

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.61 TidyTagHEADER=135

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.18.62 TidyTagHGROUP=136

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.18.63 TidyTagHR=47

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.64 TidyTagHTML=48

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.65 TidyTagI=49

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.66 TidyTagIFRAME=50

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.67 TidyTagILAYER=51

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.68 TidyTagIMG=52

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.69 TidyTagINPUT=53

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.70 TidyTagINS=54

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.71 TidyTagISINDEX=55

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.72 TidyTagKBD=56

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.73 TidyTagKEYGEN=57

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.74 TidyTagLABEL=58

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.75 TidyTagLAYER=59

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.76 TidyTagLEGEND=60

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.77 TidyTagLI=61

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.78 TidyTagLINK=62

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.79 TidyTagLISTING=63

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.80 TidyTagMAIN=137

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.18.81 TidyTagMAP=64

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.82 TidyTagMARK=138

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.18.83 TidyTagMARQUEE=66

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.18.134 TidyTagTABLE=107

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.18.135 TidyTagTBODY=108

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.18.136 TidyTagTD=109

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.18.137 TidyTagTEMPLATE=147

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.18.138 TidyTagTEXTAREA=110

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.18.139 TidyTagTFOOT=111

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.18.140 TidyTagTH=112

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.18.141 TidyTagTHEAD=113

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.18.142 TidyTagTIME=148

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.18.143 TidyTagTITLE=114

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.18.144 TidyTagTR=115

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.18.145 TidyTagTRACK=149

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.18.146 TidyTagTT=116

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.18.147 TidyTagU=117

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.18.148 TidyTagUL=118

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.18.149 TidyTagUNKNOWN=0

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.18.150 TidyTagVAR=119

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.18.151 TidyTagVIDEO=150

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.18.152 TidyTagWBR=120

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

### 184.18.153 TidyTagXMP=121

MBS Tools Plugin, Plugin Version: 17.1.

**Function:** A constant for use with the Tidy classes.

## 184.19 module TidyTriStateMBS

### 184.19.1 module TidyTriStateMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A module with constants for use with the Tidy classes.

### 184.19.2 Constants

### 184.19.3 TidyAutoState=2

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.19.4 TidyNoState=0

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

### 184.19.5 TidyYesState=1

MBS Tools Plugin, Plugin Version: 5.4.

**Function:** A constant for use with the Tidy classes.

# Chapter 185

# TIFF

## 185.1 Globals

### 185.1.1 CombineBitCMYKtoRGBMBS(CyanChannel() as Integer, MagentaChannel() as Integer, YellowChannel() as Integer, BlackChannel() as Integer, Files() as FolderItem, scale as Double, width as Integer, height as Integer, X1 as Integer, Y1 as Integer, X2 as Integer, Y2 as Integer, byref output as picture, CacheSizeRead as Integer) as Integer

MBS Images Plugin, Plugin Version: 6.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Combines 1bit raw image files to one 8bit RGB tiff.
**Example:**

```
dim t(4) as FolderItem
dim dC(4), dM(4), dY(4), dK(4) as Double
dim nC(4), nM(4), nY(4), nK(4) as Integer
dim i as Integer
dim p as Picture

//Cyan
dK(0)=0.0
dC(0)=1.0
dM(0)=0.0
dY(0)=0.0
//Magenta
dK(1)=0.00
dC(1)=0.0
dM(1)=1.0
dY(1)=0.0
//Yellow
```

```
dK(2)=0.00
dC(2)=0.0
dM(2)=0.0
dY(2)=1.0
//Black
dK(3)=1.00
dC(3)=0.0
dM(3)=0.0
dY(3)=0.0
//Pantone, Sonderfarbe, S0
dK(4)=0.00
dC(4)=0.60
dM(4)=0.35
dY(4)=0.15

//Bilder
t(0)=GetFolderItem("test.Cyan.bit")
t(1)=GetFolderItem("test.Magenta.bit")
t(2)=GetFolderItem("test.Yellow.bit")
t(3)=GetFolderItem("test.Black.bit")
t(4)=GetFolderItem("test.S0.bit")

for i=0 to 4
nC(i)=dC(i)*1000.0
nM(i)=dM(i)*1000.0
nY(i)=dY(i)*1000.0
nK(i)=dK(i)*1000.0
next

// Scale 1/n, 1/3, 1/2, 1, 2, 3, n

Title=str(CombineBitCMYKtoRGBMBS(nC,nM,nY,nK, t, 1, 545,567,0,0,545,567,p,0))
Backdrop=p
Width=p.Width
Height=p.Height
```

**Notes:**

All arrays have the same size specifying for each 1bit grayscale source image the colors to be used in the final image.
Result image is written to the output picture which is created. Error code is returned which is 0 for no error. CacheSize can be set to a value greater than 0. And it may make the process faster or slower depending on what you do.

### 185.1.2 TIFFStringToPictureMBS(data as string) as picture

MBS Images Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens a tiff string and returns the RGB image for this tiff file.
**Notes:**

Returns nil on any error.

This function works with most Tiff formats, but has problems with some like 16 bit CMYK.

### 185.1.3 Blog Entries

- Tip of the day: Corrupt pictures

### 185.1.4 TIFFStringToTiffPictureMBS(data as string) as TiffPictureMBS

MBS Images Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens a tiff string and returns a TiffPictureMBS object.
**Notes:**

if you want to read the picture after this line you need to call ReadBW, ReadRGB or use the Scanline methods.
Returns nil on any error.

### 185.1.5 CombineTiff1BitCMYKtoTiffMBS(dest as TiffPictureMBS, CyanChannel() as Integer, MagentaChannel() as Integer, YellowChannel() as Integer, BlackChannel() as Integer, TiffData() as TiffPictureMBS, scale as Double, width as Integer, height as Integer, X1 as Integer, Y1 as Integer, X2 as Integer, Y2 as Integer, ditherMode as Integer = 0) as Integer

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Combines 1bit tiff image files to one CMYK tiff.
**Notes:**

All arrays have the same size specifying for each 1bit grayscale source image the colors to be used in the final image.
Result image is written to the output picture which is created. Error code is returned which is 0 for no error.
Compression can be set before data is written to current tiff which is for output. The tiff object for output must be perfectly setup before using this function.

### 185.1.6 CombineBitCMYKtoCMYKMBS(dest as TiffPictureMBS, CyanChannel() as Integer, MagentaChannel() as Integer, YellowChannel() as Integer, BlackChannel() as Integer, Files() as FolderItem, scale as Double, width as Integer, height as Integer, X1 as Integer, Y1 as Integer, X2 as Integer, Y2 as Integer, CacheSizeRead as Integer) as Integer

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Combines 1bit raw image files to one CMYK tiff.
**Notes:**

All arrays have the same size specifying for each 1bit grayscal esource image the colors to be used in the final image.
Result image is written to the output picture which is created. Error code is returned which is 0 for no error.
CacheSize can be set to a value greater than 0. And it may make the process faster or slower depending on what you do.

### 185.1.7 CombineTiffCMYKtoCMYKMBS(dest as TiffPictureMBS, CyanChannel() as Integer, MagentaChannel() as Integer, YellowChannel() as Integer, BlackChannel() as Integer, TiffData() as TiffPictureMBS) as Integer

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Combines Grayscale tiff images to one CMYK tiff.
**Example:**

```
const PLANARCONFIG_CONTIG=1
const PHOTOMETRIC_RGB=2
const FILLORDER_MSB2LSB=1
const PHOTOMETRIC_SEPARATED=5

dim u,v,ot,t(4) as TiffPictureMBS
dim f as FolderItem
dim pnach as Picture
dim dC(4), dM(4), dY(4), dK(4) as Double
dim nC(4), nM(4), nY(4), nK(4) as Integer
dim i as Integer

//Cyan
dK(0)=0.0
dC(0)=1.0
dM(0)=0.0
dY(0)=0.0
//Magenta
dK(1)=0.00
```

```
dC(1)=0.0
dM(1)=1.0
dY(1)=0.0
//Yellow
dK(2)=0.00
dC(2)=0.0
dM(2)=0.0
dY(2)=1.0
//Black
dK(3)=1.00
dC(3)=0.0
dM(3)=0.0
dY(3)=0.0
//Pantone, S0
dK(4)=0.00
dC(4)=0.60
dM(4)=0.35
dY(4)=0.15

//Bilder
f=GetFolderItem("test.Cyan.tif")
t(0)=f.OpenAsTiffMBS

f=GetFolderItem("test.Magenta.tif")
t(1)=f.OpenAsTiffMBS

f=GetFolderItem("test.Yellow.tif")
t(2)=f.OpenAsTiffMBS

f=GetFolderItem("test.Black.tif")
t(3)=f.OpenAsTiffMBS

f=GetFolderItem("test.S0.tif")
t(4)=f.OpenAsTiffMBS

for i=0 to 4
nC(i)=dC(i)*1000.0
nM(i)=dM(i)*1000.0
nY(i)=dY(i)*1000.0
nK(i)=dK(i)*1000.0
next

f=GetFolderItem("resultCMYK.tif")
ot=new TiffPictureMBS
if ot.Create(f) then
v=t(0)
u=ot
u.Width=v.Width
```

```
u.Height=v.Height
u.RowsPerStrip=v.Height
u.BitsPerSample=8
u.SamplesPerPixel=4
u.ResolutionUnit=v.ResolutionUnit
u.HorizontalPosition=v.HorizontalPosition
u.HorizontalResolution=v.HorizontalResolution
u.VerticalPosition=v.VerticalPosition
u.VerticalResolution=v.VerticalResolution
u.Orientation=v.Orientation
u.PlanarConfig=PLANARCONFIG_CONTIG
u.Photometric=PHOTOMETRIC_SEPARATED
u.FillOrder=FILLORDER_MSB2LSB
Title=str(CombineTiffCMYKtoCMYKMBS(ot, nC,nM,nY,nK,t))
ot.Close
end if

//Neues Bild anzeigen
pnach=f.OpenAsPicture
if pnach<>Nil then
Window1.Width=pNach.Width
Window1.Height=pNach.Height
Window1.Backdrop=pNach
end if
```

**Notes:**

All arrays have the same size specifying for each 8bit grayscal esource image the colors to be used in the final image.
Result image is written to the current tiffpicture. Error code is returned which is 0 for no error.
You need to set yourself all needed tiffpicture parameters for the output image and you must create it before.
The plugin sets width and height for the output tiff.

### 185.1.8 CombineTiffCMYKtoRGBMBS(dest as TiffPictureMBS, CyanChannel() as Integer, MagentaChannel() as Integer, YellowChannel() as Integer, BlackChannel() as Integer, TiffData() as TiffPictureMBS) as Integer

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Combines Grayscale tiff images to one RGB tiff.
**Example:**

```
const PLANARCONFIG_CONTIG=1
const PHOTOMETRIC_RGB=2
const FILLORDER_MSB2LSB=1
```

```
dim u,v,ot,t(4) as TiffPictureMBS
dim f as FolderItem
dim pnach as Picture
dim dC(4), dM(4), dY(4), dK(4) as Double
dim nC(4), nM(4), nY(4), nK(4) as Integer
dim i as Integer

//Cyan
dK(0)=0.0
dC(0)=1.0
dM(0)=0.0
dY(0)=0.0
//Magenta
dK(1)=0.00
dC(1)=0.0
dM(1)=1.0
dY(1)=0.0
//Yellow
dK(2)=0.00
dC(2)=0.0
dM(2)=0.0
dY(2)=1.0
//Black
dK(3)=1.00
dC(3)=0.0
dM(3)=0.0
dY(3)=0.0
//Pantone, S0
dK(4)=0.00
dC(4)=0.60
dM(4)=0.35
dY(4)=0.15

//Bilder
f=GetFolderItem("test.Cyan.tif")
t(0)=f.OpenAsTiffMBS

f=GetFolderItem("test.Magenta.tif")
t(1)=f.OpenAsTiffMBS

f=GetFolderItem("test.Yellow.tif")
t(2)=f.OpenAsTiffMBS

f=GetFolderItem("test.Black.tif")
t(3)=f.OpenAsTiffMBS

f=GetFolderItem("test.S0.tif")
```

```
t(4)=f.OpenAsTiffMBS

for i=0 to 4
nC(i)=dC(i)*1000.0
nM(i)=dM(i)*1000.0
nY(i)=dY(i)*1000.0
nK(i)=dK(i)*1000.0
next

f=GetFolderItem("resultRGB.tif")
ot=new TiffPictureMBS
if ot.Create(f) then
v=t(0)
u=ot
u.Width=v.Width
u.Height=v.Height
u.RowsPerStrip=v.Height
u.BitsPerSample=8
u.SamplesPerPixel=3
u.ResolutionUnit=v.ResolutionUnit
u.HorizontalPosition=v.HorizontalPosition
u.HorizontalResolution=v.HorizontalResolution
u.VerticalPosition=v.VerticalPosition
u.VerticalResolution=v.VerticalResolution
u.Orientation=v.Orientation
u.PlanarConfig=PLANARCONFIG_CONTIG
u.Photometric=PHOTOMETRIC_RGB
u.FillOrder=FILLORDER_MSB2LSB
Title=str(CombineTiffCMYKtoRGBMBS(ot, nC,nM,nY,nK,t))
ot.Close
end if

//Neues Bild anzeigen
pnach=f.OpenAsPicture
if pnach<>Nil then
Window1.Width=pNach.Width
Window1.Height=pNach.Height
Window1.Backdrop=pNach
end if
```

**Notes:**

All arrays have the same size specifying for each 8bit grayscal esource image the colors to be used in the final image.
Result image is written to the current tiffpicture. Error code is returned which is 0 for no error.
You need to set yourself all needed tiffpicture parameters for the output image and you must create it before.

### 185.1.9 CombineTiff1BitCMYKtoTiffMBS(dest as TiffPictureMBS, TiffData as TiffPictureMBS, scalex as Double, scaley as Double, width as Integer, height as Integer, X1 as Integer, Y1 as Integer, X2 as Integer, Y2 as Integer, ditherMode as Integer = 0) as Integer

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Combines a one bit gray tiff image to one 1 bit gray tiff.
**Notes:**

Basicly only scales the data.
Result image is written to the current tiffpicture. Error code is returned which is 0 for no error.
You need to set yourself all needed tiffpicture parameters for the output image and you must create it before.
The plugin sets width and height for the output tiff.

### 185.1.10 CombineTiff8BitCMYKtoTiffMBS(dest as TiffPictureMBS, CyanChannel() as Integer, MagentaChannel() as Integer, YellowChannel() as Integer, BlackChannel() as Integer, TiffData() as TiffPictureMBS, scale as Double, width as Integer, height as Integer, X1 as Integer, Y1 as Integer, X2 as Integer, Y2 as Integer, ditherMode as Integer = 0) as Integer

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Combines 8bit tiff image files to one CMYK tiff.
**Notes:**

All arrays have the same size specifying for each 8bit grayscale source image the colors to be used in the final image.
Result image is written to the output picture which is created. Error code is returned which is 0 for no error.
Compression can be set before data is written to current tiff which is for output. The tiff object for output must be perfectly setup before using this function.

### 185.1.11 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.3pr11

## 185.2 class TiffPictureMBS

### 185.2.1 class TiffPictureMBS

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A class for a Tiff picture.
**Example:**

```
Dim p As Picture = LogoMBS(500)

// save tiff file

Dim t As New TiffPictureMBS
Dim file4 As FolderItem = SpecialFolder.Desktop.Child("test4.tif")

t.Pict = p

If t.Create(file4) Then
If t.WriteRGB Then
t.Close
// ok
Else
Break
End If
Else
Break
End If
```

**Notes:** Bases on libtiff.

### 185.2.6 Methods

### 185.2.7 AddCustomTag(Tag as Integer, FieldReadCount as Integer, FieldWriteCount as Integer, FieldType as Integer, FieldBit as Integer, OkToChange as Integer, PassCount as Integer, FieldName as string) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds a custom tag.
**Example:**

```
const TIFFTAG_ASCIITAG = 40666
const TIFFTAG_LONGTAG = 40667
const TIFFTAG_SHORTTAG = 40668
const TIFFTAG_RATIONALTAG = 40669
const TIFFTAG_FLOATTAG = 40670
const TIFFTAG_DOUBLETAG = 40671
const TIFFTAG_BYTE = 40672
```

```
const TIFFTAG_SOFTWARE=305

const TIFF_BYTE=1
const TIFF_ASCII=2
const TIFF_SHORT=3 // integer 16 bit signed
const TIFF_LONG=4 // integer 32 bit
const TIFF_FLOAT=11
const TIFF_DOUBLE=12

const FIELD_CUSTOM = 65

dim t as new TiffPictureMBS

// open tiff

if not t.AddCustomTag(TIFFTAG_ASCIITAG, -1, -1, TIFF_ASCII, FIELD_CUSTOM, 1, 0, "MyString")
then
MsgBox "AddCustomTag failed1."
end if
```

**Notes:** See tiff documentation for details.

### 185.2.8 AddImage as boolean

MBS Images Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writes existing picture and header information to file and starts a new one.
**Example:**

```
dim t as TiffPictureMBS
dim f as FolderItem
dim p as Picture

f=SpecialFolder.Desktop.Child("test.tif")
t=new TiffPictureMBS
if t.Create(f) then

p=New Picture(100,100,32)
p.Graphics.ForeColor=rgb(255,0,0)
p.Graphics.FillOval 0,0,100,100
t.Pict=p
if t.WriteRGB then
if t.AddImage then
p=New Picture(100,100,32)
```

```
p.Graphics.ForeColor=rgb(0,0,255)
p.Graphics.FillOval 0,0,100,100
t.Pict=p
if t.WriteRGB then
MsgBox "Written multi picture tiff."
end if
end if
end if
end if
```

**Notes:**

Returns true on success and false on any error.

Calls TIFFWriteDirectory internally.

### 185.2.9 close

MBS Images Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Closes the Tiff handle.
**Notes:**

In 5.1 and older the destructor.
In 5.2 and later only closes the tiff handle so you can still read the pictures, the output or input buffer.

### 185.2.10 CombinePictureWithMask as picture

MBS Images Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a new picture which is created using the picture and it's mask.
**Example:**

```
dim t as TiffPictureMBS
' ...
canvas1.backdrop=t.CombinePictureWithMask
```

### 185.2.11 Create(file as folderitem) as boolean

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new empty tiff file.
**Example:**

```
dim p as Picture
dim f as FolderItem
dim t as TiffPictureMBS

p=New Picture(100,100,32)

f=SpecialFolder.Desktop.Child("test.tif")

t=new TiffPictureMBS
t.Pict=p

if t.Create(f) then
if t.WriteRGB then
t.Close
MsgBox "Ok"
f.Launch
end if
end if
```

**Notes:** Returns true on success.
See also:

- 185.2.12 Create(file as folderitem, endian as Integer) as boolean 26088
- 185.2.13 Create(Path as String, endian as integer = 0) as boolean 26089

### 185.2.12 Create(file as folderitem, endian as Integer) as boolean

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new empty tiff file.
**Example:**

```
Dim t As New TiffPictureMBS
t.Pict = LogoMBS(500)

// try with path
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.tif")

If t.Create(f, 0) Then
If t.WriteRGB Then
t.Close

// open in viewer
```

```
f.Launch
End If
End If
```

**Notes:**

Returns true on success.

Endian settings:

| | |
|---|---|
| 0 | Default (System) |
| 1 | BigEndian (Mac) |
| 2 | LittleEndian (Win) |

See also:

- 185.2.11 Create(file as folderitem) as boolean 26087
- 185.2.13 Create(Path as String, endian as integer = 0) as boolean 26089

### 185.2.13 Create(Path as String, endian as integer = 0) as boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new empty tiff file.
**Example:**

```
Dim t As New TiffPictureMBS
t.Pict = LogoMBS(500)

// try with path
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.tif")
dim p as string = f.NativePath

If t.Create(p) Then
If t.WriteRGB Then
t.Close

// open in viewer
f.Launch
End If
End If
```

**Notes:**

Returns true on success.

Endian settings:

| | |
|---|---|
| 0 | Default (System) |
| 1 | BigEndian (Mac) |
| 2 | LittleEndian (Win) |

See also:

- 185.2.11 Create(file as folderitem) as boolean 26087
- 185.2.12 Create(file as folderitem, endian as Integer) as boolean 26088

### 185.2.14 CreateString(Size as Integer) as boolean

MBS Images Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new string based tiff writer.
**Example:**

```
Function PictureToTiffStringMBS(pic as picture) As string
dim t as TiffPictureMBS

t=new TiffPictureMBS
if t.CreateString(& h100000) then
t.Pict=pic
if t.WriteRGB then
t.Close
Return t.OutputBuffer
end if
end if
End Function
```

**Notes:**

Same as the Create() function, but memory based. You can now use functions like Scanline(), WriteSW() or WriteRGB() to put the picture data.

Returns true on success.
The Warning and Error events may show you reasons why it does not work.

The size parameter you pass in is a guess for the initial size of the memory block used. If more data is written, the memory block is resized, but it is quite slow to resize a memoryblock, so make a good guess!

You can and should use this function to write yourself a PictureToTiffString function. The plugin can not well make such a function as there are thousands of possible parameters combination you may want to use. (compared to the JPEG library where you only have the compression level parameter.)
See also:

- 185.2.15 CreateString(Size as Integer, Mode as string) as boolean 26091

### 185.2.15 CreateString(Size as Integer, Mode as string) as boolean

MBS Images Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new string based tiff writer.
**Notes:**

Same as the other CreateString method, but you can pass a mode string to the library.

mode="wb" for big endian and mode="wl" for little endian.
See also:

- 185.2.14 CreateString(Size as Integer) as boolean 26090

### 185.2.16 Flush as boolean

MBS Images Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Flush causes any pending writes for the specified file (including writes for the current directory) to be done.
**Notes:** In normal operation this call is never needed - the library automatically does any flushing required.

### 185.2.17 FlushData as boolean

MBS Images Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** FlushData flushes any pending image data for the specified file to be written out; directory-related data are not flushed.
**Notes:** In normal operation this call is never needed √Ö | the library automatically does any flushing required.

### 185.2.18 GetColorMap(byref red as memoryblock, byref green as memoryblock, byref blue as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the color map for a paletten image.
**Notes:**

The memoryblock must be 2^bitspersample * 2 bytes big.
Returns true on success and false on failure.

### 185.2.19 GetColorProfile as string

MBS Images Plugin, Plugin Version: 7.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the color profile data stored in the tiff file.
**Example:**

```
dim f as FolderItem
dim t as TiffPictureMBS
dim s as string
dim p as LCMS2ProfileMBS

f=SpecialFolder.Desktop.Child("horsehead_steinberg_big.tif")

t=f.OpenAsTiffMBS

s=t.GetColorProfile

p = LCMS2ProfileMBS.OpenProfileFromString(s)

MsgBox p.Name
```

**Notes:** Returns "" on any error.

### 185.2.20 GetData(Tag as Integer) as string

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads the string stored for this tag.

### 185.2.21 GetField(Tag as Integer, mem as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads the value associated with the given tag id.
**Notes:**

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.
The memoryblock you pass in must be big enough to hold whatever data the library stores there.

### 185.2.22 GetFieldByte(Tag as Integer, byref value as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads the value associated with the given tag id.
**Notes:**

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

### 185.2.23 GetFieldCount(Tag as Integer, byref count as Integer, mem as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads the value associated with the given tag id.
**Example:**

```
'TIFF Tag ImageID
'

'IFD Image
'Code 32781 (hex 0x800D)
'Name ImageID
'Type ASCII
'Count N
'Default None
'Description
'

'OPI-related.
'

'ImageID is the full pathname of the original, high-resolution image, or any other identifying string that uniquely identifies the original image.
'
```

```
'The high-resolution image is not required to be in TIFF format. It can be in any format that an OPI Consumer wishes to support.

DIm tiffImport As TiffPictureMBS
Dim xx as string

tiffImport = New TiffPictureMBS
Call tiffImport.Open(SpecialFolder.Desktop.Child("test.tif"))

// the memoryblock is a storage for the data. In this case a pointer to the CString
dim m as MemoryBlock=NewMemoryBlock(4)
dim count as Integer

if tiffImport.GetFieldCount(32781, count, m) then
MsgBox str(count)
MsgBox m.Ptr(0).CString(0)
end if

tiffImport.close
```

**Notes:**

This is the special version using memoryblock so you can use it for reading values with a count value.

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

### 185.2.24 GetFieldDefaultedByte(Tag as Integer, byref value as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads the value associated with the given tag id.
**Notes:**

Please look for Tag values in the tiff specification.
Returns true on success. May return a default value.
Please make sure to use the correct setter depending on data type associated with the tag.

GetFieldDefaulted* is identical to GetField*, except that if a tag is not defined in the current directory and it has a default value, then the default value is returned.

### 185.2.25 GetFieldDefaultedDouble(Tag as Integer, byref value as Double) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads the value associated with the given tag id.
**Notes:**

Please look for Tag values in the tiff specification.
Returns true on success. May return a default value.
Please make sure to use the correct setter depending on data type associated with the tag.

GetFieldDefaulted* is identical to GetField*, except that if a tag is not defined in the current directory and it has a default value, then the default value is returned.

### 185.2.26 GetFieldDefaultedInteger(Tag as Integer, byref value as Integer) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads the value associated with the given tag id.
**Notes:**

Please look for Tag values in the tiff specification.
Returns true on success. May return a default value.
Please make sure to use the correct setter depending on data type associated with the tag.

GetFieldDefaulted* is identical to GetField*, except that if a tag is not defined in the current directory and it has a default value, then the default value is returned.

### 185.2.27 GetFieldDefaultedShort(Tag as Integer, byref value as Integer) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads the value associated with the given tag id.
**Notes:**

Please look for Tag values in the tiff specification.
Returns true on success. May return a default value.
Please make sure to use the correct setter depending on data type associated with the tag.

GetFieldDefaulted* is identical to GetField*, except that if a tag is not defined in the current directory and it has a default value, then the default value is returned.

### 185.2.28 GetFieldDefaultedSingle(Tag as Integer, byref value as Single) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads the value associated with the given tag id.
**Notes:**

Please look for Tag values in the tiff specification.
Returns true on success. May return a default value.
Please make sure to use the correct setter depending on data type associated with the tag.

GetFieldDefaulted* is identical to GetField*, except that if a tag is not defined in the current directory and it has a default value, then the default value is returned.

### 185.2.29 GetFieldDefaultedString(Tag as Integer, byref value as String) as boolean

MBS Images Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads the value associated with the given tag id.
**Example:**

```
dim t as TiffPictureMBS
dim f as FolderItem
dim s as string

f=SpecialFolder.Desktop.Child("ChristianSchmitz.tif")
t=f.OpenAsTiffMBS

const TIFFTAG_SOFTWARE=305

if t.GetFieldDefaultedString(TIFFTAG_SOFTWARE, s) then
MsgBox "TIFFTAG_SOFTWARE"+EndOfLine+s
end if
```

**Notes:**

Please look for Tag values in the tiff specification.
Returns true on success. May return a default value.
Please make sure to use the correct setter depending on data type associated with the tag.
The string is returned with ascii encoding. You may need to define a different encoding is this is not correct.

GetFieldDefaulted* is identical to GetField*, except that if a tag is not defined in the current directory and it has a default value, then the default value is returned.

### 185.2.30 GetFieldDouble(Tag as Integer, byref value as Double) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads the value associated with the given tag id.
**Notes:**

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

### 185.2.31 GetFieldInteger(Tag as Integer, byref value as Integer) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads the value associated with the given tag id.
**Notes:**

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

### 185.2.32 GetFieldMemory(Tag as Integer, byref ItemCount as Integer) as memoryblock

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads the value associated with the given tag id.
**Notes:**

This is the special version using memoryblock so you can use it for reading values with a count value.

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

### 185.2.33 GetFieldShort(Tag as Integer, byref value as Integer) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads the value associated with the given tag id.
**Notes:**

Please look for Tag values in the tiff specification.

Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

### 185.2.34 GetFieldSingle(Tag as Integer, byref value as Single) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads the value associated with the given tag id.
**Notes:**

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

### 185.2.35 GetFieldString(Tag as Integer, byref value as string) as boolean

MBS Images Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads the value associated with the given tag id.
**Example:**

```
dim t as TiffPictureMBS
dim f as FolderItem
dim s as string

f=SpecialFolder.Desktop.Child("test.tif")
t=f.OpenAsTiffMBS

const TIFFTAG_SOFTWARE=305

if t.GetFieldString(TIFFTAG_SOFTWARE, s) then
MsgBox "TIFFTAG_SOFTWARE"+EndOfLine+s
end if

const TIFFTAG_HOSTCOMPUTER=316

if t.GetFieldString(TIFFTAG_HOSTCOMPUTER, s) then
MsgBox "TIFFTAG_SOFTWARE"+EndOfLine+s
end if

const TIFFTAG_IMAGEDESCRIPTION=270

if t.GetFieldString(TIFFTAG_IMAGEDESCRIPTION, s) then
MsgBox "TIFFTAG_IMAGEDESCRIPTION"+EndOfLine+s
end if
```

```
const TIFFTAG_MAKE=271

if t.GetFieldString(TIFFTAG_MAKE, s) then
MsgBox "TIFFTAG_MAKE"+EndOfLine+s
end if

const TIFFTAG_ARTIST=315

if t.GetFieldString(TIFFTAG_ARTIST, s) then
MsgBox "TIFFTAG_ARTIST"+EndOfLine+s
end if
```

**Notes:**

Please look for Tag values in the tiff specification.
Returns true on success. May return a default value.
Please make sure to use the correct setter depending on data type associated with the tag.
The string is returned with ascii encoding. You may need to define a different encoding is this is not correct.

### 185.2.36 GetXMP as string

MBS Images Plugin, Plugin Version: 7.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the xmp metadata package stored in the tiff file.
**Example:**

```
dim f as FolderItem
dim t as TiffPictureMBS
dim s as string

f=SpecialFolder.Desktop.Child("test.tif")

t=f.OpenAsTiffMBS

s=t.GetXMP

MsgBox left(s,500)
```

**Notes:** Returns "" on any error.

### 185.2.37 ImageCount as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the number of images in the TIFF file.
**Notes:** Returns 0 on any error.

### 185.2.38 ImageIndex as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The current image index.
**Notes:** 0 based.

### 185.2.39 IsLastImage as boolean

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether the current picture is the last picture.
**Notes:** Useful if you walk through all pictures using NextImage.

### 185.2.40 MirrorVertical(output as TiffPictureMBS) as boolean

MBS Images Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Mirrors the current picture to another tiff object.
**Notes:**

You may be able to pass the current tiff file as the output one if you have it open for read and write.
Returns true on success and false on failure.
Works for any color depth or color mode.

### 185.2.41 NextImage as boolean

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Loads the next image in the TIFF file.
**Notes:** Returns true on success and false on any error.
See also:

- 185.2.42 NextImage(HeaderOnly as boolean) as boolean

### 185.2.42 NextImage(HeaderOnly as boolean) as boolean

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads the next image.
**Notes:** If HeaderOnly is false the current picture is read into the pict& mask properties.
See also:

- 185.2.41 NextImage as boolean 26100

### 185.2.43 Open(file as folderitem) as boolean

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens a tiff file for readonly access.
**Notes:**

You need to use the ReadRGB method or the Scanline property to get data from this file.
Returns true on success.
See also:

- 185.2.44 Open(file as folderitem, Mode as string) as boolean 26101
- 185.2.45 Open(Path as String, Mode as string) as boolean 26102

### 185.2.44 Open(file as folderitem, Mode as string) as boolean

MBS Images Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens a tiff file for read/write access.
**Example:**

```
dim file as folderitem = SpecialFolder.desktop.child("test.tif")
dim st as new MyTiff

// open for appending
if not st.Open(file,"r+") then
MsgBox "Open Tiff failed!"
else
// change one setting
st.Copyright = "Hello World"

// and save
call st.SaveImage
st.Close
end if
```

**Notes:**

Same as the other Open method, but you can pass a mode string to the library.

The open mode parameter can include the following flags in addition to the "r" (Read), "w" (Write), and "a" (Append) flags. Note however that option flags must follow the read-write-append specification.

See also:

- 185.2.43 Open(file as folderitem) as boolean 26101
- 185.2.45 Open(Path as String, Mode as string) as boolean 26102

### 185.2.45 Open(Path as String, Mode as string) as boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens a tiff file for read/write access.
**Example:**

```
Dim t As New TiffPictureMBS

// try with path
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.tif")
Dim p As String = f.NativePath

If t.Open(p, "r") Then

If t.ReadRGB Then

window1.Backdrop = t.Pict

End If
End If
```

**Notes:**

Same as the other Open method, but you can pass a mode and path as string to the library.

The open mode parameter can include the following flags in addition to the "r" (Read), "w" (Write), and "a" (Append) flags. Note however that option flags must follow the read-write-append specification.

See also:

- 185.2.43 Open(file as folderitem) as boolean 26101

• 185.2.44 Open(file as folderitem, Mode as string) as boolean 26101

### 185.2.46 OpenString(data as string) as boolean

MBS Images Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens a tiff image located in a binary string.
**Example:**

```
Function TiffStringToPicture(data as string) As picture
dim t as MyTiffPictureMBS

t=new MyTiffPictureMBS

if t.OpenString(data) then
if t.ReadRGB then
return t.Pict
// you could add the mask here.
end if
end if

Return nil // failed
End Function
```

**Notes:**

Same as the Open() function, but memory based. You can now use functions like Scanline(), ReadSW() or ReadRGB() to get the picture data.

Returns true on success.
The Warning and Error events may show you reasons why it does not work.
The string you pass is saved in the data property of the class for later use.

You can and should use this function to write yourself a TiffStringToPicture function.
See also:

• 185.2.47 OpenString(data as string, Mode as string) as boolean 26103

### 185.2.47 OpenString(data as string, Mode as string) as boolean

MBS Images Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens a tiff image located in a binary string.
**Notes:** Same as the other OpenString method, but you can pass a mode string to the library.
See also:

- 185.2.46 OpenString(data as string) as boolean 26103

### 185.2.48 RawStripSize(strip as UInt32) as UInt64

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the number of bytes in a raw strip (i.e. not decoded).

### 185.2.49 ReadBW as boolean

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads the current picture in BW mode.
**Example:**

```
dim f as FolderItem
dim p as Picture
dim t as TiffPictureMBS

f=SpecialFolder.Desktop.Child("Multipage fax.tif")
t=f.OpenAsTiffMBS(true)

if t.ReadBW then
title=str(t.ImageCount)

p=t.pict
Title=str(p.Depth)
Canvas1.Backdrop=p
end if
```

**Notes:**

Returns true on success and false on any error.
Only if the current picture is a 1bit black& white picture, a new picture is created in the pict property and the data is copied inside.

Data in the TIFF file must be in 1 bit BW mode. Else use ReadRGB which does a lot of converting.

This method uses the YieldTicks property and may yield time to other threads.
See also:

- 185.2.50 ReadBW(left as Integer, top as Integer, width as Integer, height as Integer) as boolean 26105

### 185.2.50 ReadBW(left as Integer, top as Integer, width as Integer, height as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads the current picture in BW mode.
**Example:**

```
dim f as FolderItem
dim p as Picture
dim t as TiffPictureMBS

f=SpecialFolder.Desktop.Child("Multipage fax.tif")
t=f.OpenAsTiffMBS(true)

if t.ReadBW(0,0,t.width/2,t.height/2) then
title=str(t.ImageCount)

p=t.pict
Title=str(p.Depth)
Canvas1.Backdrop=p
end if
```

**Notes:**

Returns true on success and false on any error.
Only if the current picture is a 1bit black& white picture, a new picture is created in the pict property and the data is copied inside.

Data in the TIFF file must be in 1 bit BW mode. Else use ReadRGB which does a lot of converting.

This method uses the YieldTicks property and may yield time to other threads.
See also:

- 185.2.49 ReadBW as boolean 26104

### 185.2.51 ReadEncodedStrip(strip as UInt32, byref data as Memoryblock) as UInt32

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Read and decode a strip of data from an open TIFF file.
**Notes:**

Read the specified strip of data and place up to size bytes of decompressed information in the (user supplied) data buffer.

The value of strip is a ”raw strip number”. That is, the caller must take into account whether or not the data are organized in separate planes (PlanarConfiguration=2). To read a full strip of data the data buffer should typically be at least as large as the number returned by StripSize.
The library attempts to hide bit- and byte-ordering differences between the image and the native machine by converting data to the native machine order. Bit reversal is done if the FillOrder tag is opposite to the native machine bit order. 16- and 32-bit samples are automatically byte-swapped if the file was written with a byte order opposite to the native machine byte order,

Returns the actual number of bytes of data that were placed in buf is returned; ReadEncodedStrip returns -1 if an error was encountered.

### 185.2.52 ReadEncodedTile(tile as UInt32, byref data as Memoryblock) as Integer

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Read and decode a tile of data from an open TIFF file.
**Notes:**

Read the specified tile of data and place up to size bytes of decompressed information in the (user supplied) data buffer.

The value of tile is a ”raw tile number”. That is, the caller must take into account whether or not the data are organized in separate planes (PlanarConfiguration=2). ComputeTile automatically does this when converting an (x,y,z,sample) coordinate quadruple to a tile number. To read a full tile of data the data buffer should be at least as large as the value returned by TileSize.

The library attempts to hide bit- and byte-ordering differences between the image and the native machine by converting data to the native machine order. Bit reversal is done if the FillOrder tag is opposite to the native machine bit order. 16- and 32-bit samples are automatically byte-swapped if the file was written with a byte order opposite to the native machine byte order,

Returns the actual number of bytes of data that were placed in buf is returned; ReadEncodedTile returns ,àí1 if an error was encountered.

### 185.2.53 ReadPreviewBW as boolean

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads the current picture in BW mode as a preview.
**Notes:**

This method is faster than ReadBW, because it reads only every 8th line and every 8th pixel in each row. So the picture you get is much smaller, but may be enough for a preview.

Returns true on success and false on any error.
Only if the current picture is a 1bit black& white picture, a new picture is created in the pict property and the data is copied inside.

Data in the TIFF file must be in 1 bit BW mode. Else use ReadRGB which does a lot of converting.

This method uses the YieldTicks property and may yield time to other threads.
See also:

- 185.2.54 ReadPreviewBW(left as Integer, top as Integer, width as Integer, height as Integer) as boolean 26107

### 185.2.54 ReadPreviewBW(left as Integer, top as Integer, width as Integer, height as Integer) as boolean

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads the current picture in BW mode as a preview.
**Notes:**

This method is faster than ReadBW, because it reads only every 8th line and every 8th pixel in each row. So the picture you get is much smaller, but may be enough for a preview.

Returns true on success and false on any error.
Only if the current picture is a 1bit black& white picture, a new picture is created in the pict property and the data is copied inside.

Data in the TIFF file must be in 1 bit BW mode. Else use ReadRGB which does a lot of converting.

This method uses the YieldTicks property and may yield time to other threads.
See also:

- 185.2.53 ReadPreviewBW as boolean 26106

### 185.2.55 ReadPreviewRGB(ReduceFactor as Integer) as boolean

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads a CMYK or RGB picture and stores it in the pict and name properties.
**Notes:**

This method is faster than ReadRGB, because it reads only every ReduceFactorth line and every ReduceFactorth pixel in each row. So the picture you get is much smaller, but may be enough for a preview.

Returns true on success.
ReadRGB does converting on the picture data if needed so you can read CMYK, RGB, BW and other image data using this function.

This function works with most Tiff formats, but has problems with some like 16 bit CMYK.

### 185.2.56 ReadRawStrip(strip as UInt32, byref data as Memoryblock) as UInt32

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Return the undecoded contents of a strip of data from an open TIFF file.
**Notes:**

Read the contents of the specified strip into the (user supplied) data buffer. Note that the value of strip is a "raw strip number". That is, the caller must take into account whether or not the data is organized in separate planes (PlanarConfiguration=2). To read a full strip of data the data buffer should typically be at least as large as the number returned by StripSize.

Returns the actual number of bytes of data that were placed in buf is returned; ReadEncodedStrip returns -1 if an error was encountered.

### 185.2.57 ReadRawTile(tile as UInt32, byref data as Memoryblock) as Integer

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Return an undecoded tile of data from an open TIFF file.
**Notes:**

Read the contents of the specified tile into the (user supplied) data buffer. Note that the value of tile is a "raw tile number". That is, the caller must take into account whether or not the data is organized in separate planes (PlanarConfiguration=2). ComputeTile automatically does this when converting an (x,y,z,sample) coordinate quadruple to a tile number. To read a full tile of data the data buffer should typically be at least as large as the value returned by TileSize.

Returns the actual number of bytes of data that were placed in buf is returned; ReadEncodedTile returns ,àí1 if an error was encountered.

### 185.2.58 ReadRGB as boolean

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads a CMYK or RGB picture and stores it in the pict and name properties.
**Notes:**

Returns true on success.
ReadRGB does converting on the picture data if needed so you can read CMYK, RGB, BW and other image data using this function.

This function works with most Tiff formats, but has problems with some like 16 bit CMYK.
See also:

- 185.2.59 ReadRGB(byref ErrorMessage as string, Dest as MemoryBlock = nil) as memoryblock 26109

### 185.2.59 ReadRGB(byref ErrorMessage as string, Dest as MemoryBlock = nil) as memoryblock

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads the image into a memoryblock as RGB.
**Notes:**

The Scanline() array gives you the raw uncompressed data. But this method decodes the data into a RGBA image.

The Memoryblock has the size of 4*width*height. Each pixel has one byte for red, one byte for green, one byte for blue and one byte for alpha. If no alpha is in the file, all pixels have the same alpha of 255.

If the decompression fails the function returns nil. (e.g. out of memory).
If the decoding fails, you also get an error message.

This function works with most Tiff formats, but has problems with some like 16 bit CMYK.

If dest is not nil and big enough, the plugin will use it and return it on success. This can avoid additional memory allocations which can cost CPU time (especially to clear the bytes).
See also:

- 185.2.58 ReadRGB as boolean 26109

### 185.2.60 ReadRGBMemoryBegin(byref ErrorMessage as string) as boolean

MBS Images Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Starts a RGBA reader for the given TIFF picture.
**Notes:**

Like ReadRGB, but with ReadRGBMemoryBegin, ReadRGBMemoryEnd and ReadRGBMemoryStep you can read the RGBA data in portions.

The Memoryblock returned by ReadRGBMemoryStep has the size of 4*width*height. Each pixel has one byte for red, one byte for green, one byte for blue and one byte for alpha. If no alpha is in the file, all pixels have the same alpha of 255.

If the decompression fails the function returns false. (e.g. out of memory).
If the decoding fails, you also get an error message.

This function works with most Tiff formats, but has problems with some like 16 bit CMYK.

### 185.2.61 ReadRGBMemoryEnd

MBS Images Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Cleans up the internal data structures created by ReadRGBMemoryBegin.

### 185.2.62 ReadRGBMemoryStep(x as Integer, y as Integer, width as Integer, height as Integer, Dest as MemoryBlock = nil) as memoryblock

MBS Images Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads the image into a memoryblock as RGBA.
**Example:**

```
dim t as new TiffPictureMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("test.tif")
dim e as string

if t.Open(f) then
if t.ReadRGBMemoryBegin(e) then

dim w as Integer = t.Width
dim h as Integer = t.Height

dim p as new PictureMBS(w, h, PictureMBS.ImageFormatRGB)

for y as Integer = 0 to h-1 step 100
```

```
dim m as MemoryBlock = t.ReadRGBMemoryStep(0, y, w, 100)

for i as Integer = 0 to 99
p.RowInFormat(i+y, PictureMBS.ImageFormatRGBA)=m
next

next

t.ReadRGBMemoryEnd
Backdrop = p.copypicture(0,0,1000,1000) // display a portion
end if

end if
```

**Notes:**

As you see in the example, you can use this method to easily read huge TIFF files into a PictureMBS object.

If the decompression fails the function returns nil. (e.g. out of memory).
Please make sure that the range in x and y, width and height is right.

If dest is not nil and big enough, the plugin will use it and return it on success. This can avoid additional memory allocations which can cost CPU time (especially to clear the bytes).

### 185.2.63 ReadWithLUT(ColorLookupTable() as color) as boolean

MBS Images Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads the current picture with a Color Lookup Table.
**Notes:**

Returns true on success and false on any error.
Works with 8, 16 amd 32 bits per sample. And with 1 or 3 samples per pixels (Gray or RGB). The lookup table has 256 entries for 8 bit and 65536 entries for 16/32 bit.
This method uses the YieldTicks property and may yield time to other threads.
See also:

- 185.2.64 ReadWithLUT(ColorLookupTable() as color, left as Integer, top as Integer, width as Integer, height as Integer) as boolean 

### 185.2.64 ReadWithLUT(ColorLookupTable() as color, left as Integer, top as Integer, width as Integer, height as Integer) as boolean

MBS Images Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads the current picture with a Color Lookup Table.
**Notes:**

Returns true on success and false on any error.
Works with 8, 16 amd 32 bits per sample. And with 1 or 3 samples per pixels (Gray or RGB). The lookup table has 256 entries for 8 bit and 65536 entries for 16/32 bit.
This method uses the YieldTicks property and may yield time to other threads.
See also:

- 185.2.63 ReadWithLUT(ColorLookupTable() as color) as boolean 26111

### 185.2.65 RewriteDirectory as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writes existing picture and header information to file replacing the old data.
**Notes:**

Returns true on success and false on any error.
As the data is added to the file and just the reference to the old data is deleted, the filesize will grow.

Calls TIFFReWriteDirectory internally. Same as SaveImage.

### 185.2.66 SaveImage as boolean

MBS Images Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writes existing picture and header information to file replacing the old data.
**Notes:**

Returns true on success and false on any error.
As the data is added to the file and just the reference to the old data is deleted, the filesize will grow.

Calls TIFFReWriteDirectory internally. Same as RewriteDirectory.

### 185.2.67 Scanline(mem as Ptr, index as Integer, sample as Integer = 0) as boolean

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads an image scanline in a memoryblock.
**Notes:**

Returns false on any error.
Thee Memoryblock must be big enough. The BytesPerRow functions returns the number of bytes needed.
The first scanline has the index of 0.
This is the fastest way to read scanlines. You provide the memoryblock and you can reuse it for all calls to this method for one tiff.
See also:

- 185.2.142 Scanline(index as Integer, sample as Integer = 0) as memoryblock 26145

### 185.2.68 ScanlinesScaled(index as integer, count as integer, sample as integer = 0, scaleFactor as Integer = 1) as memoryblock

MBS Images Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get image scanlines scaled down as one memoryblock.
**Notes:**

Returns nil on any error.

The data for this property is stored in the Tiff file.
The first scanline has the index of 0. Count is the number of scanlines you want to read/write.

If scaleFactor is >1, we scale down and return scaleFactor rows reduced to one row.

This scaling down is to quicker get preview pictures.

### 185.2.69 SetColorMap(red as memoryblock, green as memoryblock, blue as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the color map for a paletten image.
**Notes:**

The memoryblock must be 2^bitspersample * 2 bytes big.
Returns true on success and false on failure.

### 185.2.70 SetColorProfile(ProfileData as String) as boolean

MBS Images Plugin, Plugin Version: 7.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the color profile for this tiff file.
**Example:**

```
Dim p As New Picture(100,100,32)

Dim ImageFile As FolderItem = SpecialFolder.Desktop.Child("test.tif")
Dim ProfileFile As FolderItem = SpecialFolder.Desktop.Child("Generic RGB Profile.icc")

Dim t As New TiffPictureMBS
t.Pict = p

Dim ProfileStream As BinaryStream = BinaryStream.Open(ProfileFile)
Dim ProfileData As String = ProfileStream.Read(ProfileStream.Length)

If t.Create(ImageFile) Then
// set profile before writing
If t.SetColorProfile(ProfileData) Then
// now write picture
If t.WriteRGB Then
t.Close

ImageFile.Launch
Else
Break
End If
Else
Break
End If
Else
Break
End If
```

**Notes:** Returns true on success and false on failure.

### 185.2.71 SetData(Tag as Integer, data as string) as boolean

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writes the string for this tag.

### 185.2.72 SetFieldByte(Tag as Integer, value as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the tiff data field with the given tag to the given value.
**Notes:**

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

### 185.2.73 SetFieldDouble(Tag as Integer, value as Double) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the tiff data field with the given tag to the given value.
**Notes:**

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

### 185.2.74 SetFieldInteger(Tag as Integer, value as Integer) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the tiff data field with the given tag to the given value.
**Example:**

```
dim t as TiffPictureMBS
dim f as FolderItem

const TIFFTAG_IMAGELENGTH=257 // integer
const TIFFTAG_IMAGEWIDTH=256 // integer

f=GetTemporaryFolderItem
t=new TiffPictureMBS

if t.Create(f) then

if t.SetFieldInteger(TIFFTAG_IMAGELENGTH,100) then
if t.Height=100 then
MsgBox "ok"
end if
end if

end if
```

**Notes:**

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

### 185.2.75 SetFieldMemory(Tag as Integer, ItemCount as Integer, data as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the tiff data field with the given tag to the given value.
**Notes:**

This is the special version of the setter which passes a memoryblock and a count value so you can set an array using this method.

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

### 185.2.76 SetFieldShort(Tag as Integer, value as Integer) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the tiff data field with the given tag to the given value.
**Notes:**

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

### 185.2.77 SetFieldSingle(Tag as Integer, value as Single) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the tiff data field with the given tag to the given value.
**Notes:**

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

### 185.2.78 SetFieldString(Tag as Integer, value as string) as boolean

MBS Images Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets one of the fields to the value of the string.
**Example:**

```
dim m,p as Picture
dim f as FolderItem
dim t as TiffPictureMBS
dim g as Graphics
dim s as string

// make pictures
p=New Picture(100,100,32)
m=New Picture(100,100,32)

p.Graphics.ForeColor=Rgb(0,255,0) // fill green
p.Graphics.Fillrect 0,0,100,100

p.Graphics.ForeColor=Rgb(255,0,0) // fill red
p.Graphics.FillOval 0,0,100,100

m.Graphics.ForeColor=Rgb(0,0,0) // fill black (invisible so green not seen)
m.Graphics.Fillrect 0,0,100,100

m.Graphics.ForeColor=Rgb(255,255,255) // fill white (Visible)
m.Graphics.FillOval 0,0,100,100

// save
f=SpecialFolder.Desktop.Child("test.tif")

t=new TiffPictureMBS
t.Pict=p
t.Mask=m

if t.Create(f) then
if t.WriteRGB then

const TIFFTAG_SOFTWARE=305

s="Example Software"
call t.SetFieldString TIFFTAG_SOFTWARE,s

const TIFFTAG_HOSTCOMPUTER=316

s="Example HostComputer"
call t.SetFieldString TIFFTAG_HOSTCOMPUTER,s
```

```
const TIFFTAG_IMAGEDESCRIPTION=270

s="Example ImageDescription"
call t.SetFieldString TIFFTAG_IMAGEDESCRIPTION,s

const TIFFTAG_MAKE=271

s="Example Make"
call t.SetFieldString TIFFTAG_MAKE,s

const TIFFTAG_ARTIST=315

s="Example Artist"
call t.SetFieldString TIFFTAG_ARTIST,s

t.Close
MsgBox "Ok"
f.Launch
end if
end if
```

**Notes:**

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.
You have to pass in the string with the correct encoding.

### 185.2.79 SetImageIndex(index as Integer) as boolean

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the current image index and reads the new image.
**Example:**

```
dim t as TiffPictureMBS // your tiff picture

if t.SetImageIndex(1) then
Canvas1.Backdrop=t.pict
end if
```

**Notes:**

Reads automatically a RGB picture for you, so the pict property is filled on success.
Returns true on success.
Index is zero based.
See also:

- 185.2.80 SetImageIndex(index as Integer, HeaderOnly as boolean) as boolean 26119

### 185.2.80 SetImageIndex(index as Integer, HeaderOnly as boolean) as boolean

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the current image index.
**Notes:**

If HeaderOnly is false the current picture is read into the pict& mask properties.
Returns true on success.
See also:

- 185.2.79 SetImageIndex(index as Integer) as boolean 26118

### 185.2.81 SetXMP(ProfileData as String) as boolean

MBS Images Plugin, Plugin Version: 7.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the xmp metadata package for this tiff file.
**Notes:** Returns true on success and false on failure.

### 185.2.82 VStripSize(nrows as UInt32) as UInt64

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the number of bytes in a strip with nrows rows of data.

### 185.2.83 VTileSize(nrows as UInt32) as UInt64

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the number of bytes in a row-aligned tile with nrows of data.

### 185.2.84 WriteBW as boolean

MBS Images Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Write a black & white image.
**Example:**

```
dim p as Picture
dim f as FolderItem
dim t as TiffPictureMBS

p=New Picture(100,100,32)
p.Graphics.ForeColor=rgb(0,0,0)
p.Graphics.FillOval 0,0,100,100

f=SpecialFolder.Desktop.Child("test.tif")

t=new TiffPictureMBS

if t.Create(f) then
t.Pict=p
if t.WriteBW then
MsgBox "ok"
end if
end if

Backdrop=p
```

**Notes:**

Uses the pictures in the pict property to write a picture.
Currently masks are not supported.

The following settings are made before the image data is written:
PlanarConfig = PLANARCONFIG_CONTIG
Photometric = PHOTOMETRIC_MINISBLACK
BitsPerSample = 1
SamplesPerPixel = 1
FillOrder = FILLORDER_MSB2LSB
VerticalResolution = 72
HorizontalResolution = 72
Orientation = ORIENTATION_TOPLEFT
ResolutionUnit = RESUNIT_INCH
Compression = COMPRESSION_NONE

You may change settings before or later. For example if you set Compression before it should be used for writing image data to the file.
Returns true on success.

This method uses the YieldTicks property and may yield time to other threads.

### 185.2.85 WriteEncodedStrip(strip as UInt32, data as Memoryblock, size as Integer = 0) as Integer

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Compress and write a strip of data to an open TIFF file.
**Notes:**

Compress size bytes of raw data from buf and write the result to the specified strip; replacing any previously written data. Note that the value of strip is a ,Äò,Äòraw strip number." That is, the caller must take into account whether or not the data are organized in separate planes (PlanarConfiguration=2).

The library writes encoded data using the native machine byte order. Correctly implemented TIFF readers are expected to do any necessary byte-swapping to correctly process image data with BitsPerSample greater than 8.

The strip number must be valid according to the current settings of the ImageLength and RowsPerStrip tags. An image may be dynamically grown by increasing the value of ImageLength prior to each call to WriteEncodedStrip.

Returns ,àí1 is returned if an error was encountered. Otherwise, the value of size is returned.
If size is zero, we use the size of memoryblock.

### 185.2.86 WriteEncodedTile(tile as UInt32, data as Memoryblock, size as Integer = 0) as Integer

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Compress and write a tile of data to an open TIFF file.
**Notes:**

Compress size bytes of raw data from buf and append the result to the end of the specified tile. Note that the value of tile is a "raw tile number". That is, the caller must take into account whether or not the data are organized in separate places (PlanarConfiguration=2). ComputeTile automatically does this when converting an (x,y,z,sample) coordinate quadruple to a tile number.

The library writes encoded data using the native machine byte order. Correctly implemented TIFF readers are expected to do any necessary byte-swapping to correctly process image data with BitsPerSample greater than 8.

Returns ,àí1 is returned if an error was encountered. Otherwise, the value of size is returned.

If size is zero, we use the size of memoryblock.

### 185.2.87 WriteGray as boolean

MBS Images Plugin, Plugin Version: 7.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Write a grayscale image with 256 colors.
**Example:**

```
dim t as TiffPictureMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test.tif")

t=new TiffPictureMBS
if t.Create(f) then
t.Pict=LogoMBS(500)
call t.WriteGray
t.Close
end if
```

**Notes:**

Uses the pictures in the pict property to write a picture.
Currently masks are not supported.

The following settings are made before the image data is written:
PlanarConfig = PLANARCONFIG_CONTIG
Photometric = PHOTOMETRIC_MINISBLACK
BitsPerSample = 8
SamplesPerPixel = 1
FillOrder = FILLORDER_MSB2LSB
VerticalResolution = 72
HorizontalResolution = 72
Orientation = ORIENTATION_TOPLEFT
ResolutionUnit = RESUNIT_INCH
Compression = COMPRESSION_NONE

You may change settings before or later. For example if you set Compression before it should be used for writing image data to the file.
Returns true on success.

This method uses the YieldTicks property and may yield time to other threads.
Version 13.1 of our plugins writes a 16 bit Gray image if you set BitsPerSample to 16 before calling this method.

### 185.2.88 WriteRawStrip(strip as UInt32, data as Memoryblock, size as Integer = 0) as Integer

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Write a strip of raw data to an open TIFF file.
**Notes:**

Append size bytes of raw data to the specified strip.

The strip number must be valid according to the current settings of the ImageLength and RowsPerStrip tags. An image may be dynamically grown by increasing the value of ImageLength prior to each call to WriteRawStrip.

Returns -1 is returned if an error occurred. Otherwise, the value of size is returned.

If size is zero, we use the size of memoryblock.

### 185.2.89 WriteRawTile(tile as UInt32, data as Memoryblock, size as Integer = 0) as Integer

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Write a tile of raw data to an open TIFF file
**Notes:**

Append size bytes of raw data to the specified tile.
Returns ,àí1 is returned if an error occurred. Otherwise, the value of size is returned.
If size is zero, we use the size of memoryblock.

### 185.2.90 WriteRGB as boolean

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writes a RGB image.
**Example:**

```
dim m,p as Picture
```

```
dim f as FolderItem
dim t as TiffPictureMBS
dim g as Graphics

p=New Picture(100,100,32)
m=New Picture(100,100,32)

p.Graphics.ForeColor=Rgb(0,255,0) // fill green
p.Graphics.Fillrect 0,0,100,100

p.Graphics.ForeColor=Rgb(255,0,0) // fill red
p.Graphics.FillOval 0,0,100,100

m.Graphics.ForeColor=Rgb(0,0,0) // fill black (invisible so green not seen)
m.Graphics.Fillrect 0,0,100,100

m.Graphics.ForeColor=Rgb(255,255,255) // fill white (Visible)
m.Graphics.FillOval 0,0,100,100

f=SpecialFolder.Desktop.Child("test.tif")

t=new TiffPictureMBS
t.Pict=p
t.Mask=m

if t.Create(f) then
if t.WriteRGB then
t.Close
MsgBox "Ok"
f.Launch
end if
end if
```

**Notes:**

Uses the pictures in the mask and pict properties to write a picture.
If mask is set, the picture is saved with an alpha channel.

The following settings are made before the image data is written:
PlanarConfig = PLANARCONFIG_CONTIG
Photometric = PHOTOMETRIC_RGB
BitsPerSample = 8
SamplesPerPixel = 3
FillOrder = FILLORDER_MSB2LSB
VerticalResolution = 72
HorizontalResolution = 72

Orientation = ORIENTATION_TOPLEFT
ResolutionUnit = RESUNIT_INCH
Compression = COMPRESSION_NONE

You may change settings before or later. For example if you set Compression before it should be used for writing image data to the file.
Returns true on success.

This method uses the YieldTicks property and may yield time to other threads.

### 185.2.91 Properties

### 185.2.92 BitsPerSample as Integer

MBS Images Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The count of bits for each pixel component.
**Notes:**

Should normally by 8 for RGB images.
(Read and Write property)

### 185.2.93 BytesPerRow as Int64

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of bytes needed for each row in a scan line.
**Notes:**

0 on any error.
(Read only property)

### 185.2.94 Compression as Integer

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The compression used.
**Notes:**

some constants:

The data for this property is stored in the Tiff file.

(Read and Write property)

### 185.2.95 Copyright as String

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The copyright notice of this image.
**Example:**

```
dim file as folderitem = SpecialFolder.desktop.child("test.tif")
dim st as new MyTiff

// open for appending
if not st.Open(file,"r+") then
MsgBox "Open Tiff failed!"
else
// change one setting
st.Copyright = "Hello World"

// and save
call st.SaveImage
st.Close
end if
```

**Notes:**

The data for this property is stored in the Tiff file.
(Read and Write property)

### 185.2.96 CurrentDirOffset as Integer

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries current directory offset.
**Notes:** (Read only property)

### 185.2.97 CurrentRow as Integer

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Return the current row, respectively, that is being read or written.
**Notes:**

These values are updated each time a read or write is done.
(Read only property)

### 185.2.98 CurrentStrip as Integer

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Return the current strip, respectively, that is being read or written.
**Notes:**

These values are updated each time a read or write is done.
(Read only property)

### 185.2.99 CurrentTile as Integer

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Return the current tile, respectively, that is being read or written.
**Notes:**

These values are updated each time a read or write is done.
(Read only property)

### 185.2.100 DateTime as String

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Date and time of the TIFF file.
**Notes:**

Check some TIFF files for the format used.

The data for this property is stored in the Tiff file.
(Read and Write property)

### 185.2.101 DocumentName as String

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The name of the document.
**Notes:**

The data for this property is stored in the Tiff file.
(Read and Write property)

### 185.2.102 ExtraSamples as MemoryBlock

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The settings for the extra samples.
**Notes:**

A memoryblock filled with an array of shorts (16bit integers).

constants:

The data for this property is stored in the Tiff file.
(Read and Write property)

### 185.2.103 FillOrder as Integer

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The fill order of the bits in a byte.
**Notes:**

constants:

(MSB = Most significant bit, LSB = Least significant bit)

The data for this property is stored in the Tiff file.
(Read and Write property)

### 185.2.104 height as Integer

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The height of the picture.
**Notes:** (Read and Write property)

### 185.2.105 HorizontalPosition as Single

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The x Offset of this image in the drawing area.
**Notes:**

The data for this property is stored in the Tiff file.
(Read and Write property)

### 185.2.106 HorizontalResolution as Single

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The horizontal resolution used.
**Notes:**

Value depends on ResolutionUnit value.

The data for this property is stored in the Tiff file.
(Read and Write property)

### 185.2.107 HostComputer as String

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Name of the machine where the tiff file was created.
**Notes:**

The data for this property is stored in the Tiff file.
(Read and Write property)

l When creating a new file force information be written with Little-Endian byte order (but see below). By default the library will create new files using the native CPU byte order.

b When creating a new file force information be written with Big-Endian byte order (but see below). By default the library will create new files using the native CPU byte order.

L Force image data that is read or written to be treated with bits filled from Least Significant Bit (LSB) to Most Significant Bit (MSB). Note that this is the opposite to the way the library has worked from its inception.

B Force image data that is read or written to be treated with bits filled from Most Significant Bit (MSB) to Least Significant Bit (LSB); this is the default.

H Force image data that is read or written to be treated with bits filled in the same order as the native CPU.

M Enable the use of memory-mapped files for images opened read-only. If the underlying system does not support memory-mapped files or if the specific image being opened cannot be memory-mapped then the library will fallback to using the normal system interface for reading information. By default the library will attempt to use memory-mapped files.

m Disable the use of memory-mapped files.

C Enable the use of ”strip chopping” when reading images that are comprised of a single strip or tile of uncompressed data. Strip chopping is a mechanism by which the library will automatically convert the single-strip image to multiple strips, each of which has about 8 Kilobytes of data. This facility can be useful in reducing the amount of memory used to read an image because the library normally reads each strip in its entirety. Strip chopping does however alter the apparent contents of the image because when an image is divided into multiple strips it looks as though the underlying file contains multiple separate strips. Finally, note that default handling of strip chopping is a compile-time configuration parameter. The default behaviour, for backwards compatibility, is to enable strip chopping.

c Disable the use of strip chopping when reading images.

### 185.2.108 ImageDescription as String

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Information about the image.
**Notes:**

The data for this property is stored in the Tiff file.
(Read and Write property)

### 185.2.109 InputBuffer as String

MBS Images Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The string passed for OpenString.
**Notes:**

Used for the read requests from the Tiff library.
(Read only property)

### 185.2.110 IsBigEndian as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether file is big endian.
**Notes:** (Read only property)

### 185.2.111 IsByteSwapped as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether bytes are swapped.
**Notes:**

Returns true if the image data was in a different byte-order than the host machine. Zero is returned if the TIFF file and local host byte-orders are the same.
Note that ReadTile(), ReadStrip() and ReadScanline() functions already normally perform byte swapping to local host order if needed.
(Read only property)

### 185.2.112 IsMSB2LSB as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns true if the image data is being returned with bit 0 as the most significant bit.
**Notes:** (Read only property)

### 185.2.113 IsTiled as Boolean

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a non-zero value if the image data has a tiled organization.
**Notes:**

Zero is returned if the image data is organized in strips.
(Read only property)

### 185.2.114 IsUpSampled as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether data is upsampled.
**Notes:**

Returns a non-zero value if image data returned through the read interface routines is being up-sampled. This can be useful to applications that want to calculate I/O buffer sizes to reflect this usage (though the usual strip and tile size routines already do this).
(Read only property)

### 185.2.115 JPEGQuality as Integer

MBS Images Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The JPEG quality.
**Example:**

```
dim logo as Picture = LogoMBS(500)
dim pic as new PictureMBS(logo)

// save tiff with jpeg compression
dim f as FolderItem = SpecialFolder.Desktop.Child("test.tif")
dim t as TiffPictureMBS

if pic <>nil then
```

```
t = new TiffPictureMBS

if t.Create(F) then

t.Height = pic.Height
t.Width = pic.Width

t.RowsPerStrip = 1
t.PlanarConfig = t.kPlanarConfigContig
t.Photometric = t.kPhotometricRGB
t.BitsPerSample = 8
t.SamplesPerPixel = 3
t.FillOrder = t.kFillOrderMSB2LSB
t.Orientation = t.kOrientationTopLeft
t.ResolutionUnit = t.kResUnitInch
t.VerticalResolution = 72.0
t.HorizontalResolution = 72.0
t.Compression = t.kCompressionJPEG
t.RowsPerStrip = 32
t.JPEGQuality = 75

// copy lines
for i as Integer = 0 to t.Height - 1
t.Scanline(i) = pic.RowInFormat(i, PictureMBS.ImageFormatRGB)
next

t.Close
end if
end if
```

**Notes:**

Default is 75.
(Read and Write property)

### 185.2.116 Make as String

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Scanner manufacturer name.
**Notes:**

The data for this property is stored in the Tiff file.
(Read and Write property)

### 185.2.117 mask as picture

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The mask of the picture.
**Notes:**

May be nil.
(Read and Write property)

### 185.2.118 Model as String

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Scanner model name/number.
**Notes:**

The data for this property is stored in the Tiff file.
(Read and Write property)

### 185.2.119 NumberOfStrips as UInt32

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the number of strips in the image.
**Notes:** (Read only property)

### 185.2.120 NumberOfTiles as UInt32

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the number of tiles in the image.
**Notes:** (Read only property)

### 185.2.121 Orientation as Integer

MBS Images Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The orientation of this image.
**Example:**

```
// creates a tif file with a horizontal flipped image
// red rectangle is on the left in the image data, but with orientation tag it should be displayed on the right
```

```
side.
// Mac OS X Preview.app shows it correctly.

dim p as Picture
dim t as TiffPictureMBS
dim f as FolderItem

const ORIENTATION_TOPLEFT = 1 //* row 0 top, col 0 lhs */
const ORIENTATION_TOPRIGHT = 2 //* row 0 top, col 0 rhs */
const ORIENTATION_BOTRIGHT = 3 //* row 0 bottom, col 0 rhs */
const ORIENTATION_BOTLEFT = 4 //* row 0 bottom, col 0 lhs */
const ORIENTATION_LEFTTOP = 5 //* row 0 lhs, col 0 top */
const ORIENTATION_RIGHTTOP = 6 //* row 0 rhs, col 0 top */
const ORIENTATION_RIGHTBOT = 7 //* row 0 rhs, col 0 bottom */
const ORIENTATION_LEFTBOT = 8 //* row 0 lhs, col 0 bottom */

p=New Picture(150,100,32)

p.Graphics.ForeColor=rgb(255,0,0)
p.Graphics.FillRect 0,0,10,10

t=new TiffPictureMBS
f=SpecialFolder.Desktop.Child("test.tif")

if t.Create(f) then
t.Pict=p

t.Orientation=ORIENTATION_TOPRIGHT
if t.WriteRGB then
end if
t.Orientation=ORIENTATION_TOPRIGHT

t.Close
end if
```

**Notes:**

Orientation:

The orientation of the image with respect to the rows and columns.
Tag = 274 (112.H)
Type = SHORT
N = 1
1 = The 0th row represents the visual top of the image, and the 0th column represents the visual left-hand side.
2 = The 0th row represents the visual top of the image, and the 0th column represents the visual right-hand

side.
3 = The 0th row represents the visual bottom of the image, and the 0th column represents the visual right-hand side.
4 = The 0th row represents the visual bottom of the image, and the 0th column represents the visual left-hand side.
5 = The 0th row represents the visual left-hand side of the image, and the 0th column represents the visual top.
6 = The 0th row represents the visual right-hand side of the image, and the 0th column represents the visual top.
7 = The 0th row represents the visual right-hand side of the image, and the 0th column represents the visual bottom.
8 = The 0th row represents the visual left-hand side of the image, and the 0th column represents the visual bottom.

Default is 1.
Support for orientations other than 1 is not a Baseline TIFF requirement.
(This text was sent in by David Austin)
(Read and Write property)

### 185.2.122 OutputBuffer as String

MBS Images Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The current output data from the CreateString function.
**Notes:**

Between CreateString and Close the plugin will record all the output data and you can get a copy using this property.
(Read only property)

### 185.2.123 PageName as String

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The name of the current page.
**Notes:**

The data for this property is stored in the Tiff file.
(Read and Write property)

### 185.2.124 Photometric as Integer

MBS Images Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A property of the TIFF image.
**Example:**

```
// read and write a BW fax tiff with compression

dim d as new OpenDialog()
dim f as FolderItem = GetFolderItem("myfax.tiff")
if f = nil then
return
end if

dim tiff as new TiffPictureMBS()
if not tiff.Open(f) then
MsgBox("Error while opening.")
return
end if

if not tiff.ReadBW() then
MsgBox("Error reading.")
end if

dim tiff2 as TiffPictureMBS = new TiffPictureMBS()

dim f2 as FolderItem = SpecialFolder.Desktop.Child("Copy.tiff")
if not tiff2.Create(f2) then
MsgBox("Error creating file.")
end if

const COMPRESSION_CCITTFAX3=3
const WhiteIsZero=0
const BlackIsZero=1

tiff2.Pict = tiff.pict
tiff2.Photometric=WhiteIsZero
tiff2.Compression=COMPRESSION_CCITTFAX3
if not tiff2.WriteBW() then
MsgBox("Error writing.") // Error
end if

tiff2.Close()
```

**Notes:**

PhotometricInterpretation:
The color space of the image data.
Tag = 262 (106.H)
Type = SHORT

N = 1

0 = WhiteIsZero. For bilevel and grayscale images: 0 is imaged as white. 2**BitsPerSample-1 is imaged as black. This is the normal value for Compression=2.

1 = BlackIsZero. For bilevel and grayscale images: 0 is imaged as black. 2**BitsPerSample-1 is imaged as white. If this value is specified for Compression=2, the image should display and print reversed.

2 = RGB. In the RGB model, a color is described as a combination of the three primary colors of light (red, green, and blue) in particular concentrations. For each of the three components, 0 represents minimum intensity, and 2**BitsPerSample - 1 represents maximum intensity. Thus an RGB value of (0,0,0) represents black, and (255,255,255) represents white, assuming 8-bit components. For PlanarConfiguration = 1, the components are stored in the indicated order: first Red, then Green, then Blue. For PlanarConfiguration = 2, the StripOffsets for the component planes are stored in the indicated order: first the Red component plane StripOffsets, then the Green plane StripOffsets, then the Blue plane StripOffsets.

3= Palette color. In this model, a color is described with a single component. The value of the component is used as an index into the red, green and blue curves in the ColorMap field to retrieve an RGB triplet that defines the color. When PhotometricInterpretation=3 is used, ColorMap must be present and SamplesPerPixel must be 1.

4 = Transparency Mask. This means that the image is used to define an irregularly shaped region of another image in the same TIFF file. SamplesPerPixel and BitsPerSample must be 1. PackBits compression is recommended. The 1-bits define the interior of the region; the 0-bits define the exterior of the region. A reader application can use the mask to determine which parts of the image to display. Main image pixels that correspond to 1-bits in the transparency mask are imaged to the screen or printer, but main image pixels that correspond to 0-bits in the mask are not displayed or printed. The image mask is typically at a higher resolution than the main image, if the main image is grayscale or color so that the edges can be sharp.

There is no default for PhotometricInterpretation, and it is required. Do not rely on applications defaulting to what you want.
(This text was sent in by David Austin)

For more details see:
http://partners.adobe.com/asn/developer/pdfs/tn/TIFF6.pdf
(Read and Write property)

### 185.2.125 pict as picture

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The picture data of the picture.

**Notes:** (Read and Write property)

### 185.2.126 PlanarConfig as Integer

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The storage organization used.
**Notes:**

Value is 1 for a single image plane and 2 for separated planes.

The data for this property is stored in the Tiff file.
(Read and Write property)

### 185.2.127 RasterScanlineSize as UInt64

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the raster scanline size.
**Notes:**

Returns the size in bytes of a complete decoded and packed raster scanline.
Note that this value may be different from the value returned by ScanlineSize if data is stored as separate planes.
(Read only property)

### 185.2.128 ResolutionUnit as Integer

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Which unit is used for the Resolution values.
**Notes:**

constants:

| | | |
|---|---|---|
| RESUNIT_NONE | 1 | no meaningful units |
| RESUNIT_INCH | 2 | english |
| RESUNIT_CENTIMETER | 3 | metric |

The data for this property is stored in the Tiff file.
(Read and Write property)

### 185.2.129 RowsPerStrip as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A property of the TIFF image.
**Notes:**

Should be same as the height for our uses. (with one strip)
(Read and Write property)

### 185.2.130 SampleFormat as Integer

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The data sample format.
**Notes:**

Value is 1 for unsigned integer, 2 for signed integer, 3 for IEEE floating point, 4 for untyped data (e.g. JPEG compressed), 5 for complex signed int and 6 for complex IEEE floating point.
(Read and Write property)

### 185.2.131 SamplesPerPixel as Integer

MBS Images Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The count of components used for each pixel.
**Notes:**

SamplesPerPixel= 1=Grayscale, 3=RGB, 4=CMYK, ...
Photometric= 0 or 1=Grayscale depending on white point, 2=RGB, 5=CMYK, ...

For other formats see:
http://partners.adobe.com/asn/developer/pdfs/tn/TIFF6.pdf
(Read and Write property)

### 185.2.132 Software as String

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The software name used to make this image.
**Notes:**

The data for this property is stored in the Tiff file.
(Read and Write property)

### 185.2.133 StripSize as UInt64

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the equivalent size for a strip of data as it would be returned in a call to ReadEncodedStrip or as it would be expected in a call to WriteEncodedStrip.
**Notes:** (Read only property)

### 185.2.134 TileRowSize as UInt64

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the number of bytes of a row of data in a tile.
**Notes:** (Read only property)

### 185.2.135 TileSize as UInt64

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the equivalent size for a tile of data as it would be returned in a call to ReadTile or as it would be expected in a call to WriteTile.
**Notes:** (Read only property)

### 185.2.136 Version as Integer

MBS Images Plugin, Plugin Version: 5.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The version of the Tiff library used.
**Notes:**

Updated to 3.7.1 in plugin version 5.0.
(Read only property)

### 185.2.137 VersionString as String

MBS Images Plugin, Plugin Version: 5.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The version of the Tiff library used.
**Example:**

```
dim z as new TiffPictureMBS

MsgBox z.VersionString

// shows for example:
// LIBTIFF, Version 3.9.4
// Copyright (c) 1988-1996 Sam Leffler
// Copyright (c) 1991-1996 Silicon Graphics, Inc.
```

**Notes:** (Read only property)

### 185.2.138 VerticalPosition as Single

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The y Offset of this image in the drawing area.
**Notes:**

The data for this property is stored in the Tiff file.
(Read and Write property)

### 185.2.139 VerticalResolution as Single

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The vertical resolution used.
**Notes:**

Value depends on ResolutionUnit value.

The data for this property is stored in the Tiff file.
(Read and Write property)

### 185.2.140 width as Integer

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The width of the picture.
**Notes:** (Read and Write property)

### 185.2.141 YieldTicks as Integer

MBS Images Plugin, Plugin Version: 7.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** How much time is given back to Xojo for other ticks.
**Example:**

```
dim t as new TiffPictureMBS
t.YieldTicks=6 // only use 1/10th of a second
```

**Notes:**

If value is greater than zero, the application will yield to another RB thread after the given number of ticks have passed. 60 ticks are one second. Using a small value can slow down processing a lot while a big value keeps your application not responding to mouse clicks.
If you use this property with e.g. 6 as the value, you may also want to use this method in a thread so you can handle mouse events or let Xojo redraw a progressbar.
(Read and Write property)

### 185.2.142 Scanline(index as Integer, sample as Integer = 0) as memoryblock

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** An image scanline.
**Notes:**

Returns nil on any error.
If you set the value, make sure the Memoryblock is big enough. The BytesPerRow functions returns the number of bytes needed.

The data for this property is stored in the Tiff file.
The first scanline has the index of 0.
(Read and Write computed property)
See also:

- 185.2.67 Scanline(mem as Ptr, index as Integer, sample as Integer = 0) as boolean 26112

### 185.2.143 Scanlines(index as Integer, count as Integer, sample as Integer = 0, lineStepScanlines as Integer = 1, lineStepReturn as Integer = 1) as memoryblock

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get or set image scanlines as one memoryblock.
**Notes:**

Returns nil on any error.
If you set the value, make sure the Memoryblock is big enough. The BytesPerRow functions returns the number of bytes needed.

The data for this property is stored in the Tiff file.
The first scanline has the index of 0. Count is the number of scanlines you want to read/write.

If lineStepScanlines is >1, we skip scan lines so we read less data.
If lineStepReturn is >1, we return only every nth row.

If rows can be read with skipping, you should try lineStepScanlines = 2 or more for skipping lines.
If that doesn't work due to tiled data, you can use lineStepReturn = 2 or more.
This skipping is to quicker get preview pictures.
(Read and Write computed property)

### 185.2.144 Events

### 185.2.145 Error(libModule as string, message as string)

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: .

**Function:** An event called whenever an error is to be reported.

### 185.2.146 Progress(line as Integer, total as Integer)

MBS Images Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Reports changes in progress.
**Notes:** Used in CombineBitCMYKtoCMYK, CombineTiffCMYKtoRGB and CombineTiffCMYKtoCMYK methods.

### 185.2.147 Warning(libModule as string, message as string)

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: .

**Function:** An event called whenever a warning is to be reported.

### 185.2.148 Constants

### 185.2.149 kCompressionAdobeDeflate = 8

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the compression constants.
**Notes:** Deflate compression, as recognized by Adobe

### 185.2.150 kCompressionCCITTFAX3 = 3

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the compression constants.
**Notes:** CCITT Group 3 fax encoding

### 185.2.151 kCompressionCCITTFAX4 = 4

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the compression constants.
**Notes:** CCITT Group 4 fax encoding

### 185.2.152 kCompressionCCITTRLE = 2

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the compression constants.
**Notes:** CCITT modified Huffman RLE

### 185.2.153 kCompressionCCITTRLEW = 32771

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the compression constants.

### 185.2.154 kCompressionCCITT_T4 = 3

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the compression constants.
**Notes:** CCITT T.4 (TIFF 6 name)

### 185.2.155 kCompressionCCITT_T6 = 4

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the compression constants.
**Notes:** CCITT T.6 (TIFF 6 name)

### 185.2.156 kCompressionDCS = 32947

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the compression constants.
**Notes:** Kodak DCS encoding

### 185.2.157 kCompressionDeflate = 32946

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the compression constants.
**Notes:** Deflate compression

### 185.2.158 kCompressionIT8BL = 32898

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the compression constants.
**Notes:** IT8 Binary line art

### 185.2.159 kCompressionIT8CTPAD = 32895

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the compression constants.
**Notes:** IT8 CT w/padding

### 185.2.160 kCompressionIT8LW = 32896

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the compression constants.
**Notes:** IT8 Linework RLE

### 185.2.161 kCompressionIT8MP = 32897

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the compression constants.
**Notes:** IT8 Monochrome picture

### 185.2.162 kCompressionJBIG = 34661

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the compression constants.
**Notes:** ISO JBIG

### 185.2.163 kCompressionJP2000 = 34712

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the compression constants.
**Notes:** Leadtools JPEG2000

### 185.2.164 kCompressionJPEG = 7

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the compression constants.
**Example:**

```
dim logo as Picture = LogoMBS(500)
dim pic as new PictureMBS(logo)

// save tiff with jpeg compression
dim f as FolderItem = SpecialFolder.Desktop.Child("test.tif")
dim t as TiffPictureMBS
```

```
if pic <>nil then
t = new TiffPictureMBS

if t.Create(F) then

t.Height = pic.Height
t.Width = pic.Width

t.PlanarConfig = t.kPlanarConfigContig
t.Photometric = t.kPhotometricRGB
t.BitsPerSample = 8
t.SamplesPerPixel = 3
t.FillOrder = t.kFillOrderMSB2LSB
t.Orientation = t.kOrientationTopLeft
t.ResolutionUnit = t.kResUnitInch
t.VerticalResolution = 72.0
t.HorizontalResolution = 72.0
t.Compression = t.kCompressionJPEG
t.RowsPerStrip = 32 // 8 works also, but not 1
t.JPEGQuality = 75

// copy lines
for i as Integer = 0 to t.Height - 1
t.Scanline(i) = pic.RowInFormat(i, PictureMBS.ImageFormatRGB)
next

t.Close
end if
end if
```

**Notes:** JPEG DCT compression

### 185.2.165 kCompressionLZMA = 34925

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the compression constants.
**Notes:** LZMA2

### 185.2.166 kCompressionLZW = 5

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the compression constants.
**Notes:** Lempel-Ziv & Welch

### 185.2.167 kCompressionNeXT = 32766

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the compression constants.
**Notes:** NeXT 2-bit RLE

### 185.2.168 kCompressionNone = 1

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the compression constants.
**Notes:** No compression.

### 185.2.169 kCompressionOJPEG = 6

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the compression constants.
**Notes:** !6.0 JPEG

### 185.2.170 kCompressionPackBits = 32773

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the compression constants.
**Notes:** Macintosh RLE

### 185.2.171 kCompressionPixarFilm = 32908

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the compression constants.
**Notes:** Pixar companded 10bit LZW

### 185.2.172 kCompressionPixarLog = 32909

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the compression constants.
**Notes:** Pixar companded 11bit ZIP

### 185.2.173 kCompressionSGILOG = 34676

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the compression constants.
**Notes:** SGI Log Luminance RLE

### 185.2.174 kCompressionSGILOG24 = 34677

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the compression constants.
**Notes:** SGI Log 24-bit packed

### 185.2.175 kCompressionThunderScan = 32809

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the compression constants.
**Notes:** ThunderScan RLE

### 185.2.176 kFillOrderLSB2MSB = 2

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the fill order constants.
**Notes:** Least significant ->most

### 185.2.177 kFillOrderMSB2LSB = 1

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the fill order constants.
**Notes:** Most significant ->least

### 185.2.178 kOrientationBottomLeft = 4

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the orientation constants.
**Notes:** row 0 bottom, col 0 lhs

### 185.2.179 kOrientationBottomRight = 3

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the orientation constants.
**Notes:** row 0 bottom, col 0 rhs

### 185.2.180 kOrientationLeftBottom = 8

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the orientation constants.
**Notes:** row 0 lhs, col 0 bottom

### 185.2.181 kOrientationLeftTop = 5

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the orientation constants.
**Notes:** row 0 lhs, col 0 top

### 185.2.182 kOrientationRightBottom = 7

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the orientation constants.
**Notes:** row 0 rhs, col 0 bottom

### 185.2.183 kOrientationRightTop = 6

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the orientation constants.
**Notes:** row 0 rhs, col 0 top

### 185.2.184 kOrientationTopLeft = 1

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the orientation constants.
**Notes:** row 0 top, col 0 lhs

### 185.2.185 kOrientationTopRight = 2

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the orientation constants.
**Notes:** row 0 top, col 0 rhs

### 185.2.186 kPhotometricCIELab = 8

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the Photometric Constants.
**Notes:** !1976 CIE L*a*b*

### 185.2.187 kPhotometricICCLab = 9

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the Photometric Constants.
**Notes:** ICC L*a*b* [ Adobe TIFF Technote 4 ]

### 185.2.188 kPhotometricITULab = 10

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the Photometric Constants.
**Notes:** ITU L*a*b*

### 185.2.189 kPhotometricLogL = 32844

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the Photometric Constants.
**Notes:** CIE Log2(L)

### 185.2.190 kPhotometricLogLUV = 32845

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the Photometric Constants.
**Notes:** CIE Log2(L) (u',v')

### 185.2.191 kPhotometricMask = 4

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the Photometric Constants.
**Notes:** $ holdout mask

### 185.2.192 kPhotometricMinIsBlack = 1

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the Photometric Constants.
**Notes:** Min value is black.

### 185.2.193 kPhotometricMinIsWhite = 0

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the Photometric Constants.
**Notes:** Min value is white.

### 185.2.194 kPhotometricPalette = 3

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the Photometric Constants.
**Notes:** color map indexed

### 185.2.195 kPhotometricRGB = 2

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the Photometric Constants.
**Notes:** RGB color model

### 185.2.196 kPhotometricSeparated = 5

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the Photometric Constants.
**Notes:** !color separations

### 185.2.197 kPhotometricYCBCR = 6

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the Photometric Constants.
**Notes:** !CCIR 601

### 185.2.198 kPlanarConfigContig = 1

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the planar config constants.
**Notes:** Single image plane.

### 185.2.199 kPlanarConfigSeparate = 2

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the planar config constants.
**Notes:** Separate planes of data.

### 185.2.200 kPredictorFloatingPoint = 3

MBS Images Plugin, Plugin Version: 15.1.

**Function:** One of the possible predictor settings.
**Notes:** Floating point predictor

### 185.2.201 kPredictorHorizontal = 2

MBS Images Plugin, Plugin Version: 15.1.

**Function:** One of the possible predictor settings.
**Notes:** Horizontal differencing

### 185.2.202 kPredictorNone = 1

MBS Images Plugin, Plugin Version: 15.1.

**Function:** One of the possible predictor settings.
**Notes:** no prediction scheme used

### 185.2.203 kResUnitCentimeter = 3

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the Resolution Unit constants.
**Notes:** Metric

### 185.2.204 kResUnitInch = 2

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the Resolution Unit constants.
**Notes:** English

### 185.2.205 kResUnitNone = 1

MBS Images Plugin, Plugin Version: 13.0.

**Function:** One of the Resolution Unit constants.
**Notes:** no meaningful units

# Chapter 186

# Timecode

## 186.1 class LTCDecoderMBS

### 186.1.1 class LTCDecoderMBS

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for the timecode decoder.

### 186.1.2 Methods

### 186.1.3 Constructor(apv as Integer, queueSize as Integer)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Create a new LTC decoder.
**Notes:**

apv: audio-frames per video frame. This is just used for initial settings, the speed is tracked dynamically. setting this in the right ballpark is needed to properly decode the first LTC frame in a sequence.
queueSize: length of the internal queue to store decoded frames to SMPTEDecoderWrite.

Raises an out of memory exception if initialization fails.

### 186.1.4 Destructor

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destructor.

### 186.1.5 FlushQueue

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Remove all LTC frames from the internal queue.

### 186.1.6 Read as LTCFrameMBS

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decoded LTC frames are placed in a queue.
**Notes:** This function retrieves a frame from the queue, and stores it a new LTCFrameMBS object.
See also:

- 186.1.7 Read(frame as LTCFrameMBS) as Boolean 26160

### 186.1.7 Read(frame as LTCFrameMBS) as Boolean

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decoded LTC frames are placed in a queue.
**Notes:**

This function retrieves a frame from the queue, and stores it the given LTCFrameMBS object.
You should prefer this method and reuse frame objects.
See also:

- 186.1.6 Read as LTCFrameMBS 26160

### 186.1.8 WriteSingle(data as MemoryBlock, posinfo as UInt64 = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Feed the LTC decoder with new audio samples.
**Notes:**

Wrapper around WriteUInt8 that accepts floating point audio samples.
Note: internally libltc uses 8 bit only.

Data: Buffer with data
size: number of samples to parse. Calculated from data.size by dividing by 4.

posinfo: (optional, recommended) sample-offset in the audio-stream.
See also:

- 186.1.9 WriteSingle(data as Ptr, Count as Integer, posinfo as UInt64 = 0) 26161
- 186.1.10 WriteSingle(data as String, posinfo as UInt64 = 0) 26161

### 186.1.9 WriteSingle(data as Ptr, Count as Integer, posinfo as UInt64 = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Feed the LTC decoder with new audio samples.
**Notes:**

Wrapper around WriteUInt8 that accepts floating point audio samples.
Note: internally libltc uses 8 bit only.

Data: Buffer with data
size: number of samples to parse.
posinfo: (optional, recommended) sample-offset in the audio-stream.
See also:

- 186.1.8 WriteSingle(data as MemoryBlock, posinfo as UInt64 = 0) 26160
- 186.1.10 WriteSingle(data as String, posinfo as UInt64 = 0) 26161

### 186.1.10 WriteSingle(data as String, posinfo as UInt64 = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Feed the LTC decoder with new audio samples.
**Notes:**

Wrapper around WriteUInt8 that accepts floating point audio samples.
Note: internally libltc uses 8 bit only.

Data: Buffer with data
size: number of samples to parse. Calculated from data.lenb by dividing by 4.
posinfo: (optional, recommended) sample-offset in the audio-stream.
See also:

- 186.1.8 WriteSingle(data as MemoryBlock, posinfo as UInt64 = 0) 26160
- 186.1.9 WriteSingle(data as Ptr, Count as Integer, posinfo as UInt64 = 0) 26161

### 186.1.11 WriteSInt16(data as MemoryBlock, posinfo as UInt64 = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Feed the LTC decoder with new audio samples.
**Notes:**

Wrapper around WriteUInt8 that accepts SInt16 audio samples.
Note: internally libltc uses 8 bit only.

Data: Buffer with data
size: number of samples to parse. Calculated from data.size by dividing by 2.
posinfo: (optional, recommended) sample-offset in the audio-stream.
See also:

- 186.1.12 WriteSInt16(data as Ptr, Count as Integer, posinfo as UInt64 = 0) 26162
- 186.1.13 WriteSInt16(data as String, posinfo as UInt64 = 0) 26162

### 186.1.12 WriteSInt16(data as Ptr, Count as Integer, posinfo as UInt64 = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Feed the LTC decoder with new audio samples.
**Notes:**

Wrapper around WriteUInt8 that accepts SInt16 audio samples.
Note: internally libltc uses 8 bit only.

Data: Buffer with data
size: number of samples to parse.
posinfo: (optional, recommended) sample-offset in the audio-stream.
See also:

- 186.1.11 WriteSInt16(data as MemoryBlock, posinfo as UInt64 = 0) 26162
- 186.1.13 WriteSInt16(data as String, posinfo as UInt64 = 0) 26162

### 186.1.13 WriteSInt16(data as String, posinfo as UInt64 = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Feed the LTC decoder with new audio samples.
**Notes:**

Wrapper around WriteUInt8 that accepts SInt16 audio samples.
Note: internally libltc uses 8 bit only.

Data: Buffer with data
size: number of samples to parse. Calculated from data.lenb by dividing by 2.
posinfo: (optional, recommended) sample-offset in the audio-stream.
See also:

- 186.1.11 WriteSInt16(data as MemoryBlock, posinfo as UInt64 = 0) 26162
- 186.1.12 WriteSInt16(data as Ptr, Count as Integer, posinfo as UInt64 = 0) 26162

### 186.1.14 WriteUInt16(data as MemoryBlock, posinfo as UInt64 = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Feed the LTC decoder with new audio samples.
**Notes:**

Wrapper around WriteUInt8 that accepts UInt16 audio samples.
Note: internally libltc uses 8 bit only.

Data: Buffer with data
size: number of samples to parse. Calculated from data.size by dividing by 2.
posinfo: (optional, recommended) sample-offset in the audio-stream.
See also:

- 186.1.15 WriteUInt16(data as Ptr, Count as Integer, posinfo as UInt64 = 0) 26163
- 186.1.16 WriteUInt16(data as String, posinfo as UInt64 = 0) 26164

### 186.1.15 WriteUInt16(data as Ptr, Count as Integer, posinfo as UInt64 = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Feed the LTC decoder with new audio samples.
**Notes:**

Wrapper around WriteUInt8 that accepts UInt16 audio samples.
Note: internally libltc uses 8 bit only.

Data: Buffer with data
size: number of samples to parse.
posinfo: (optional, recommended) sample-offset in the audio-stream.
See also:

- 186.1.14 WriteUInt16(data as MemoryBlock, posinfo as UInt64 = 0) 26163
- 186.1.16 WriteUInt16(data as String, posinfo as UInt64 = 0) 26164

### 186.1.16 WriteUInt16(data as String, posinfo as UInt64 = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Feed the LTC decoder with new audio samples.
**Notes:**

Wrapper around WriteUInt8 that accepts UInt16 audio samples.
Note: internally libltc uses 8 bit only.

Data: Buffer with data
size: number of samples to parse. Calculated from data.lenb by dividing by 2.
posinfo: (optional, recommended) sample-offset in the audio-stream.
See also:

- 186.1.14 WriteUInt16(data as MemoryBlock, posinfo as UInt64 = 0) 26163
- 186.1.15 WriteUInt16(data as Ptr, Count as Integer, posinfo as UInt64 = 0) 26163

### 186.1.17 WriteUInt8(data as MemoryBlock, posinfo as UInt64 = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Feed the LTC decoder with new audio samples.
**Notes:**

Parse raw audio for LTC timestamps. Once a complete LTC frame has been decoded it is pushed into a queue (see Read function).

Data: Buffer with data
Count: number of samples to parse. Taken from data.size.
posinfo: (optional, recommended) sample-offset in the audio-stream.
See also:

- 186.1.18 WriteUInt8(data as Ptr, Count as Integer, posinfo as UInt64 = 0) 26164
- 186.1.19 WriteUInt8(data as String, posinfo as UInt64 = 0) 26165

### 186.1.18 WriteUInt8(data as Ptr, Count as Integer, posinfo as UInt64 = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Feed the LTC decoder with new audio samples.
**Notes:**

Parse raw audio for LTC timestamps. Once a complete LTC frame has been decoded it is pushed into a queue (see Read function).

Data: Buffer with data
Count: number of samples to parse.
posinfo: (optional, recommended) sample-offset in the audio-stream.
See also:

- 186.1.17 WriteUInt8(data as MemoryBlock, posinfo as UInt64 = 0) 26164
- 186.1.19 WriteUInt8(data as String, posinfo as UInt64 = 0) 26165

### 186.1.19 WriteUInt8(data as String, posinfo as UInt64 = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Feed the LTC decoder with new audio samples.
**Notes:**

Parse raw audio for LTC timestamps. Once a complete LTC frame has been decoded it is pushed into a queue (see Read function).

Data: Buffer with data
Count: number of samples to parse. Taken from data.lenb.
posinfo: (optional, recommended) sample-offset in the audio-stream.
See also:

- 186.1.17 WriteUInt8(data as MemoryBlock, posinfo as UInt64 = 0) 26164
- 186.1.18 WriteUInt8(data as Ptr, Count as Integer, posinfo as UInt64 = 0) 26164

### 186.1.20 Properties

### 186.1.21 Handle as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 186.1.22 QueueLength as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Count number of LTC frames currently in the queue.
**Notes:**

Returns number of queued frames.
(Read only property)

## 186.2 class LTCEncoderMBS

### 186.2.1 class LTCEncoderMBS

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The timecode encoder.

### 186.2.2 Methods

### 186.2.3 Constructor(SampleRate as Double, FPS as Double, TVStandard as Integer, Flags as Integer)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Allocate and initialize LTC audio encoder.
**Notes:**

EncoderReinit internally see, see notes there.

SampleRate: audio sample rate (eg. 48000)
FPS: video-frames per second (e.g. 25.0)
TVStandard: the TV standard to use for Binary Group Flag bit position
flags: binary combination of flags like LTC_NO_PARITY and LTC_BGF_DONT_TOUCH.

### 186.2.4 CopyBuffer as MemoryBlock

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Copy the accumulated encoded audio to the given sample-buffer and flush the internal buffer.
**Notes:**

Allocates new MemoryBlock and puts bytes inside.
Returns nil if there is no data.

### 186.2.5 CopyBufferString as String

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Copy the accumulated encoded audio to the given sample-buffer and flush the internal buffer.
**Notes:** Allocates new memory for string and puts bytes inside.

### 186.2.6 DecrementTimecode as Boolean

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Move the encoder to the previous timecode frame.
**Notes:** This is useful for encoding reverse LTC.

### 186.2.7 Destructor

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destructor.

### 186.2.8 EncodeByte(byte as UInt8, speed as Double) as boolean

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Generate LTC audio for given byte of the LTC-frame and place it into the internal buffer.
**Notes:**

see also GetBuffer and BufferPtr

LTC has 10 bytes per frame: 0 <= bytecnt <10 use TimeCode property to set the current frame before Encoding.

The default output signal is @ -3dBFS (38..218 at 8 bit unsigned). see also SetVolume

if speed is <0, the bits are encoded in reverse.
slowdown >10.0 requires custom buffer sizes; see \ref SetBufferSize.

byte: byte of the LTC-frame to encode 0..9
speed: vari-speed, <1.0 faster, >1.0 slower ; must be != 0

Returns true on success, -1 if byte is invalid or buffer overflow (speed >10.0)

### 186.2.9 EncodeFrame

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Encode a full LTC frame at fixed speed.
**Notes:**

This is equivalent to calling EncodeByte 10 times for bytes 0..9 with speed 1.0.

Note: The internal buffer must be empty before calling this function.
Otherwise it may overflow. This is usually the case if it is read with GetBuffer after calling this function.

The default internal buffersize is exactly one full LTC frame at speed 1.0.
See also:

- 186.2.10 EncodeFrame(Speed as Double) 26169

### 186.2.10 EncodeFrame(Speed as Double)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Encode a full LTC frame at fixed speed.
**Notes:**

This is equivalent to calling EncodeByte 10 times for bytes 0..9 with given speed.
Speed should be around 1.0 for normal speed.

Note: The internal buffer must be empty before calling this function.
Otherwise it may overflow. This is usually the case if it is read with GetBuffer after calling this function.

The default internal buffersize is exactly one full LTC frame at speed 1.0.
See also:

- 186.2.9 EncodeFrame 26168

### 186.2.11 EncoderReinit(SampleRate as Double, FPS as Double, TVStandard as Integer, Flags as Integer) as Boolean

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Change the encoder settings without re-allocating any library internal data structure (realtime safe).
**Notes:**

Changing the fps and or sample-rate implies a buffer flush, and biphase state reset.

This call will fail if the internal buffer is too small to hold one full LTC frame. Use SetBufferSize to prepare an internal buffer large enough to accommodate all SampleRate, fps combinations that you would like to re-init to.

The LTC frame payload data is not modified by this call, however, the flag-bits of the LTC-Frame are updated:
If fps equals to 29.97 or 30000.0/1001.0, the LTCFrame's 'dfbit' bit is set to 1 to indicate drop-frame timecode.

Unless the LTC_BGF_DONT_TOUCH flag is set the BGF1 is set or cleared depending on LTC_TC_CLOCK and BGF0,2 according to LTC_USE_DATE and the given standard.
ColFrame is cleared and the parity recomputed (unless LTC_NO_PARITY is given).

SampleRate: audio sample rate (eg. 48000)
FPS: video-frames per second (e.g. 25.0)
TVStandard: the TV standard to use for Binary Group Flag bit position
Flags: binary combination of flags.

Returns 0 on success.

### 186.2.12 FlushBuffer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reset the write-pointer of the encoder-buffer.

### 186.2.13 GetBuffer(byref size as Integer, flush as boolean) as Ptr

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Retrieve a pointer to the accumulated encoded audio-data.
**Notes:**

size: if set, the number of valid bytes in the buffer is stored in the buffer.
Flush: call FlushBuffer - reset the buffer write-pointer.

Returns pointer to encoder-buffer.

### 186.2.14 IncrementTimecode as Boolean

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Move the encoder to the next timecode frame.

### 186.2.15 Reset

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Resets ecoder state.
**Notes:** Flushes buffer, reset biphase state.

### 186.2.16 SetBufferSize(SampleRate as Double, FPS as Double) as boolean

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Configure a custom size for the internal buffer.
**Notes:**

This is needed if you are planning to call EncoderReinit or if you want to keep more than one LTC frame's worth of data in the library's internal buffer.

The buffer-size is (1 + sample_rate / fps) bytes. resizing the internal buffer will flush all existing data in it - alike \ref FlushBuffer.

SampleRate: audio sample rate (eg. 48000)
FPS: video-frames per second (e.g. 25.0)

Returns 0 on success, -1 if allocation fails (which makes the encoder unusable, call discard the object or realloc the buffer)

### 186.2.17 SetFilter(RiseTime as Double)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Set encoder signal rise-time / signal filtering.
**Notes:**

LTC signal should have a rise time of 40us +/- 10 us. by default the encoder honors this and low-pass filters the output depending on the sample-rate.

If you want a perfect square wave, set 'rise_time' to 0.

Note EncoderReinit resets the filter-time-constant to use the default 40us for the given sample-rate, overriding any value previously set with SetFilter.

RiseTime the signal rise-time in us (10^(-6) sec), set to 0 for perfect square wave, default 40.0

### 186.2.18 SetVolume(dBFS as double) as boolean

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Set the volume of the generated LTC signal.
**Notes:**

Typically LTC is sent at 0dBu ; in EBU callibrated systems that corresponds to -18dBFS. - by default libltc creates -3dBFS

since libltc generated 8bit audio-data, the minimum dBFS is about -42dB which corresponds to 1 bit.

0dB corresponds to a signal range of 127
1..255 with 128 at the center.

dBFS: the volume in dB full-scale (<= 0.0)

Returns true on success, false if the value was out of range

### 186.2.19 Properties

### 186.2.20 BufferPtr as Ptr

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Retrieve a pointer to the accumulated encoded audio-data.
**Notes:** (Read only property)

### 186.2.21 BufferSize as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Query the length of the internal buffer.
**Notes:**

It is allocated to hold audio-frames for exactly one LTC frame for the given sample-rate and frame-rate. ie. (1 + sample-rate / fps) bytes

Note this returns the total size of the buffer, not the used/free part. See also BufferPtr.

Returns size of the allocated internal buffer.
(Read only property)

### 186.2.22 Filter as Double

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The current filter setting.
**Notes:** (Read and Write property)

### 186.2.23 Flags as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The flags used to create the encoder.
**Notes:** (Read only property)

### 186.2.24 FPS as Double

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The FPS setting.
**Notes:** (Read only property)

### 186.2.25 Frame as LTCFrameMBS

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Low-level access to the internal LTCFrame data.
**Notes:**

Note: be careful to about dfbit flag in LTCFrameMBS object, the encoder sets this [ only ] upon initialization.
(Read and Write property)

### 186.2.26 Handle as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 186.2.27 SampleRate as Double

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The current sample rate.
**Notes:** (Read only property)

### 186.2.28 Standard as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The TV Standard.
**Notes:** (Read only property)

### 186.2.29 TimeCode as LTCSMPTETimecodeMBS

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get or set the SMPTETimecode for the encoder LTC-frame.
**Notes:**

The next call to EncodeByte or EncodeFrame will encode this time to LTC audio-samples.
Internally this call uses TimeToFrame because the LTCEncoder operates on LTCframes only.
(Read and Write property)

### 186.2.30 UserBits as UInt32

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get or set a 32-bits unsigned integer from the user-data bits.
**Notes:**

It is written LSB first continiously int the eight user fields.
(Read and Write property)

## 186.3 class LTCFrameExtMBS

### 186.3.1 class LTCFrameExtMBS

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Extended LTC frame - includes audio-sample position offsets, volume, etc.
**Notes:**

Note: For TV systems, the sample in the LTC audio data stream where the LTC Frame starts is not necessarily at the same time as the video-frame which is described by the LTC Frame.

offStart denotes the time of the first transition of bit 0 in the LTC frame.

For 525/60 Television systems, the first transition shall occur at the beginning of line 5 of the frame with which it is associated. The tolerance is ¬± 1.5 lines.

For 625/50 systems, the first transition shall occur at the beginning of line 2 ¬± 1.5 lines of the frame with which it is associated.

Only for 1125/60 systems, the first transition occurs exactly at the vertical sync timing reference of the frame. ¬± 1 line.
Subclass of the LTCFrameMBS class.

### 186.3.2 Properties

### 186.3.3 OffEnd as Int64

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** OffEnd the sample in the stream corresponding to the end of the LTC frame.
**Notes:** (Read and Write property)

### 186.3.4 OffStart as Int64

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** OffStart the approximate sample in the stream corresponding to the start of the LTC frame.
**Notes:** (Read and Write property)

### 186.3.5 Reverse as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If non-zero, a reverse played LTC frame was detected.
**Notes:**

Since the frame was reversed, it started at offEnd and finishes as offStart (offEnd >offStart). (Note: in reverse playback the (reversed) sync-word of the next/previous frame is detected, this offset is corrected).
(Read and Write property)

### 186.3.6 SampleMax as UInt8

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The maximum input sample signal for this frame (0..255).
**Notes:** (Read and Write property)

### 186.3.7 SampleMin as UInt8

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The minimum input sample signal for this frame (0..255).
**Notes:** (Read and Write property)

### 186.3.8 Volume as Double

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The volume of the input signal in dbFS.
**Notes:** (Read and Write property)

### 186.3.9 biphaseTics(index as Integer) as Single

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Detailed timing info.
**Notes:**

Phase of the LTC signal; the time between each bit in the LTC-frame in audio-frames. Summing all 80 values in the array will yield audio-frames/LTC-frame = (offEnd - offStart + 1).
Range of index is 0 to 79.

(Read and Write computed property)

## 186.4 class LTCFrameMBS

### 186.4.1 class LTCFrameMBS

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor for a new empty frame.

### 186.4.2 Methods

### 186.4.3 Clone as LTCFrameExtMBS

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Clones the frame.
**Notes:**

Returns always LTCFrameExtMBS object.
Extended fields may not be set if LTCFrameMBS is cloned.

### 186.4.4 Constructor

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor to create a new frame.
**Notes:** Internally calls Reset to set soem default values.
See also:

- 186.4.5 Constructor(InputTimecode as LTCSMPTETimecodeMBS, TVStandard as Integer, Flags as Integer = 0) 26178
- 186.4.6 Constructor(other as LTCFrameMBS) 26179

### 186.4.5 Constructor(InputTimecode as LTCSMPTETimecodeMBS, TVStandard as Integer, Flags as Integer = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Translate SMPTETimecode into its binary LTC representation and set the LTC frame's parity bit accordingly.
**Notes:**

InputTimecode: timecode input
TVStandard: the TV standard to use for parity bit assignment

Flags: flags binary combination of flag values - here only LTC_USE_DATE and LTC_NO_PARITY are relevant.
If LTC_USE_DATE is given, user-fields in LTCFrame will be set from the date in SMPTETimecode, otherwise the user-bits are not modified. All non-timecode fields remain untouched - except for the parity bit unless LTC_NO_PARITY is given.
See also:

- 186.4.4 Constructor 26178
- 186.4.6 Constructor(other as LTCFrameMBS) 26179

### 186.4.6 Constructor(other as LTCFrameMBS)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Initializes a frame with copying data from existing frame.
See also:

- 186.4.4 Constructor 26178
- 186.4.5 Constructor(InputTimecode as LTCSMPTETimecodeMBS, TVStandard as Integer, Flags as Integer = 0) 26178

### 186.4.7 FrameAlignment(samples_per_frame as Double, TVStandard as Integer) as UInt64

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** LTCFrame sample alignment offset.
**Notes:**

There is a relative offset of the LTC-Frame start and the TV-frame.
The first bit of a LTC frame corresponds to a specific line in the actual video frame. When decoding this offset needs to be subtracted from the LTC-frame's audio-sample-time to match the TV-frame's start position.

For film frames or HDV the offset is zero.

samples_per_frame: audio-samples per timecode-frame (eg. 1920 = 48000/25)
TVStandard: the TV standard

Returns the offset in samples.

### 186.4.8 FrameDecrement(fps as integer, TVStandard as integer, Flags as integer = 0) as Boolean

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decrement the timecode by one Frame (1/framerate seconds) and set the Frame's parity bit accordingly (see SetParity)
**Notes:**

fps: integer framerate (for drop-frame-timecode set frame->dfbit and round-up the fps).
TVStandard: the TV standard to use for parity bit assignment. If set to 1 the 25fps standard is enabled and LTC Frame bit 59 instead of 27 is used for the parity. It only has only has effect flag bit 4 (LTC_NO_PARITY) is cleared.
Flags: binary combination of flags - here only LTC_USE_DATE and LTC_NO_PARITY are relevant.

If the bit 0 is set (1) interpret user-data as date and decrement date if timecode wraps at 24h.
(Note: leap-years are taken into account, but since the year is two-digit only, the 100,400yr rules are ignored. "00" is assumed to be year 2000 which was a leap year.) bit 3 (8) indicates that the parity bit should not be touched.

Returns true if timecode was wrapped around at 23:59:59:ff, false otherwise.

### 186.4.9 FrameIncrement(fps as integer, TVStandard as integer, Flags as integer = 0) as Boolean

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Increment the timecode by one Frame (1/framerate seconds) and set the Frame's parity bit accordingly (see SetParity)
**Notes:**

fps integer framerate (for drop-frame-timecode set frame->dfbit and round-up the fps).
TVStandard: the TV standard to use for parity bit assignment. If set to 1 the 25fps standard is enabled and LTC Frame bit 59 instead of 27 is used for the parity. It only has only has effect flag bit 4 (LTC_NO_PARITY) is cleared.
flags: binary combination of LTC_BG_FLAGS - here only LTC_USE_DATE and LTC_NO_PARITY are relevant.

If the bit 0 (1) is set (1) interpret user-data as date and increment date if timecode wraps after 24h.
(Note: leap-years are taken into account, but since the year is two-digit only, the 100,400yr rules are ignored. "00" is assumed to be year 2000 which was a leap year.)

Returns true if timecode was wrapped around after 23:59:59:ff, false otherwise

### 186.4.10 ParseBCGFlags(TVStandard as Integer) as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parse Binary Group Flags into standard independent format.
**Notes:**

bit 0 (1) - BGF 0,
bit 1 (2) - BGF 1,
bit 2 (4) - BGF 2

TVStandard: the TV standard to use – see LTCFrameMBS class for BGF assignment.
Returns LTC Binary Group Flags.

### 186.4.11 Reset

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reset all values of a LTC FRAME to zero, except for the sync-word (0x3FFD) at the end.
**Notes:**

The sync word is set according to architecture (big/little endian).
Also set the Frame's parity bit accordingly (see SetParity)

### 186.4.12 SetParity(TVStandard as Integer)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Set the parity of the LTC frame.
**Notes:**

Bi-Phase Mark Phase Correction bit (bit 27 - or 59) may be set or cleared so that that every 80-bit word contains an even number of zeroes. This means that the phase in every Sync Word will be the same.

This is merely cosmetic; the motivation to keep the polarity of the waveform constant is to make finding the Sync Word visibly (on a scope) easier.

There is usually no need to call this function directly. The encoder utility functions TimeToFrame, FrameIncrement and FrameDecrement include a call to it.

Standard: If 1 (aka LTC_TV_625_50) , the 25fps mode (bit 59 - aka binary_group_flag_bit2) is used, otherwise the 30fps, 24fps mode (bit 27 – biphase_mark_phase_correction) is set or cleared.

### 186.4.13 Properties

### 186.4.14 BinaryGroupFlagBit0 as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** indicate user-data char encoding, see table above - bit 43.
**Notes:**

1 bit value, so only 0 or 1.
(Read and Write property)

### 186.4.15 BinaryGroupFlagBit1 as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** indicate timecode is local time wall-clock, see table above - bit 58.
**Notes:**

1 bit value, so only 0 or 1.
(Read and Write property)

### 186.4.16 BinaryGroupFlagBit2 as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** indicate user-data char encoding (or parity with 25fps), see table above - bit 59.
**Notes:**

1 bit value, so only 0 or 1.
(Read and Write property)

### 186.4.17 BiphaseMarkPhaseCorrection as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The Bi-Phase Mark Phase Correction Bit.
**Notes:**

The Bi-Phase Mark Phase Correction Bit (Bit 27 or 59) may be set or cleared so that that every 80-bit word contains an even number of zeroes. This means that the phase of the pulse train in every Sync Word will be the same.
(Read and Write property)

### 186.4.18 ColFrame as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Colour-frame: timecode intentionally synchronized to a colour TV field sequence
**Notes:**

1 bit value, so only 0 or 1.
(Read and Write property)

### 186.4.19 Data as MemoryBlock

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The raw frame data as memoryblock.
**Notes:**

When setting you can either pass 368 or 364 bytes (LTCFrameExt) or 10 bytes (LTCFrame)
(Read and Write property)

### 186.4.20 DFBit as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** indicated drop-frame timecode.
**Notes:**

1 bit value, so only 0 or 1.
(Read and Write property)

### 186.4.21 Frames as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get or set frames field.
**Notes:**

Computed by the MBS Plugin for you as a convenience from both frames_tens and frames_unit.
(Read and Write property)

### 186.4.22 FrameTens as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** SMPTE framenumber BCD tens 0..3.
**Notes:** (Read and Write property)

### 186.4.23 FrameUnits as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** SMPTE framenumber BCD unit 0..9.
**Notes:** (Read and Write property)

### 186.4.24 Hours as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get or set hours field.
**Notes:**

Computed by the MBS Plugin for you as a convenience from both hours_tens and hours_unit.
(Read and Write property)

### 186.4.25 HoursTens as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** SMPTE hours BCD tens 0..2.
**Notes:** (Read and Write property)

### 186.4.26 HoursUnits as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** SMPTE hours BCD unit 0..9.
**Notes:** (Read and Write property)

### 186.4.27 Mins as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get or set minutes field.
**Notes:**

Computed by the MBS Plugin for you as a convenience from both minutes_tens and minutes_unit.
(Read and Write property)

### 186.4.28 MinsTens as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** SMPTE minutes BCD tens 0..6.
**Notes:** (Read and Write property)

### 186.4.29 MinsUnits as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** SMPTE minutes BCD unit 0..9.
**Notes:** (Read and Write property)

### 186.4.30 Secs as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get or set seconds field.
**Notes:**

Computed by the MBS Plugin for you as a convenience from both seconds_tens and seconds_unit.
(Read and Write property)

### 186.4.31 SecsTens as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** SMPTE seconds BCD tens 0..6
**Notes:** (Read and Write property)

### 186.4.32 SecsUnits as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** SMPTE seconds BCD unit 0..9
**Notes:** (Read and Write property)

### 186.4.33 SyncWord as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The sync word file.
**Notes:** (Read and Write property)

### 186.4.34 TimeCode as LTCSMPTETimecodeMBS

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Convert binary LTCFrame into a SMPTETimecode.
**Notes:** (Read only property)

### 186.4.35 User1 as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** User defined bits.
**Notes:**

You can set them as you like, but be aware you only have 4 bits here (value 0 to 15).
Usually set as a block of 32-bit using UserBits property in encoder.
(Read and Write property)

### 186.4.36 User2 as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** User defined bits.
**Notes:**

You can set them as you like, but be aware you only have 4 bits here (value 0 to 15).
Usually set as a block of 32-bit using UserBits property in encoder.
(Read and Write property)

### 186.4.37 User3 as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** User defined bits.
**Notes:**

You can set them as you like, but be aware you only have 4 bits here (value 0 to 15).
Usually set as a block of 32-bit using UserBits property in encoder.
(Read and Write property)

### 186.4.38 User4 as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** User defined bits.
**Notes:**

You can set them as you like, but be aware you only have 4 bits here (value 0 to 15).
Usually set as a block of 32-bit using UserBits property in encoder.
(Read and Write property)

### 186.4.39 User5 as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** User defined bits.
**Notes:**

You can set them as you like, but be aware you only have 4 bits here (value 0 to 15).
Usually set as a block of 32-bit using UserBits property in encoder.
(Read and Write property)

### 186.4.40 User6 as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** User defined bits.
**Notes:**

You can set them as you like, but be aware you only have 4 bits here (value 0 to 15).
Usually set as a block of 32-bit using UserBits property in encoder.
(Read and Write property)

### 186.4.41 User7 as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** User defined bits.
**Notes:**

You can set them as you like, but be aware you only have 4 bits here (value 0 to 15).
Usually set as a block of 32-bit using UserBits property in encoder.
(Read and Write property)

### 186.4.42 User8 as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** User defined bits.
**Notes:**

You can set them as you like, but be aware you only have 4 bits here (value 0 to 15).
Usually set as a block of 32-bit using UserBits property in encoder.
(Read and Write property)

### 186.4.43 UserBits as UInt32

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries all user bits as one 32-bit value.
**Notes:** (Read only property)

## 186.5 module LTCMBS

### 186.5.1 module LTCMBS

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The central module for global LTC methods.
**Notes:**

This plugin part can load libltc, a library to encode and decode linear timecode.

Linear (or Longitudinal) Timecode (LTC) is an encoding of timecode data as a Manchester-Biphase encoded audio signal.
The audio signal is commonly recorded on a VTR track or other storage media.

libltc facilitates decoding and encoding of LTC from/to timecode, including SMPTE date support.

see
https://github.com/x42/libltc

### 186.5.2 Blog Entries

- MBS Xojo Plugins, version 20.1pr1

### 186.5.5 Xojo Developer Magazine

- 18.3, page 10: News

### 186.5.6 Methods

### 186.5.7 FrameToTime(OutputTimecode as LTCSMPTETimecodeMBS, InputFrame as LTCFrameMBS, Flags as Integer = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Convert binary LTCFrame into a SMPTETimecode.
**Notes:**

Binary combination of flags - here only LTC_USE_DATE is relevant.
if LTC_USE_DATE is set, the user-fields in LTCFrame will be parsed into the date variable of SMPTETimecode. otherwise the date information in the SMPTETimecode is set to zero.

### 186.5.8 LoadLibrary(file as folderitem) as boolean

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Loads LTC library from a file.
**Notes:**

Please get a libltc.dll/so/dylib for your platform and tell the plugin where to load it here.

Returns true on success and false on failure.
See LibraryLoadErrorMessage and LibraryLoadError in case of error.
See also:

- 186.5.9 LoadLibrary(path as string) as boolean 26190

### 186.5.9 LoadLibrary(path as string) as boolean

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Loads LTC library from a file path.
**Notes:**

Please get a libltc.dll/so/dylib for your platform and tell the plugin where to load it here.

Returns true on success and false on failure.
See LibraryLoadErrorMessage and LibraryLoadError in case of error.
See also:

- 186.5.8 LoadLibrary(file as folderitem) as boolean 26190

### 186.5.10 TimeToFrame(OutputFrame as LTCFrameMBS, InputTimecode as LTCSMPTETimecodeMBS, TVStandard as Integer, Flags as Integer = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Translate SMPTETimecode into its binary LTC representation and set the LTC frame's parity bit accordingly.
**Notes:**

OutputFrame: the frame to be set
InputTimecode: timecode input
TVStandard: the TV standard to use for parity bit assignment
Flags: flags binary combination of flag values - here only LTC_USE_DATE and LTC_NO_PARITY are relevant.
If LTC_USE_DATE is given, user-fields in LTCFrame will be set from the date in SMPTETimecode, otherwise the user-bits are not modified. All non-timecode fields remain untouched - except for the parity bit unless LTC_NO_PARITY is given.

### 186.5.11 Properties

### 186.5.12 LibraryLoaded as Boolean

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether the library is loaded.
**Notes:** (Read only property)

### 186.5.13 LibraryLoadError as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The load error code.
**Notes:** (Read only property)

### 186.5.14 LibraryLoadErrorMessage as String

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The load error message.
**Notes:** (Read only property)

### 186.5.15 Constants

### 186.5.16 LTC_BGF_DONT_TOUCH = 4

MBS Tools Plugin, Plugin Version: 20.1.

**Function:** One of the encoder flags.
**Notes:** Encoder init or re-init does not touch the BGF bits (initial values after initialization is zero)

### 186.5.17 LTC_FRAME_BIT_COUNT = 80

MBS Tools Plugin, Plugin Version: 20.1.

**Function:** The bit count for a raw 80 bit LTC frame

### 186.5.18 LTC_NO_PARITY = 8

MBS Tools Plugin, Plugin Version: 20.1.

**Function:** One of the encoder flags.
**Notes:** Parity bit is left untouched when setting or in/decrementing the encoder frame-number

### 186.5.19 LTC_TC_CLOCK = 2

MBS Tools Plugin, Plugin Version: 20.1.

**Function:** One of the frame <>timecode conversion flags.
**Notes:** The Timecode is wall-clock aka freerun. This also sets BGF1 (unless LTC_BGF_DONT_TOUCH is given)

### 186.5.20 LTC_TV_1125_60 = 2

MBS Tools Plugin, Plugin Version: 20.1.

**Function:** One of the TV standards, which defines the assignment of the binary-group-flag bits.
**Notes:** 30fps

### 186.5.21 LTC_TV_525_60 = 0

MBS Tools Plugin, Plugin Version: 20.1.

**Function:** One of the TV standards, which defines the assignment of the binary-group-flag bits.
**Notes:** 30fps

### 186.5.22 LTC_TV_625_50 = 1

MBS Tools Plugin, Plugin Version: 20.1.

**Function:** One of the TV standards, which defines the assignment of the binary-group-flag bits.
**Notes:** 25fps

### 186.5.23 LTC_TV_FILM_24 = 3

MBS Tools Plugin, Plugin Version: 20.1.

**Function:** One of the TV standards, which defines the assignment of the binary-group-flag bits.
**Notes:** 24fps

### 186.5.24 LTC_USE_DATE = 1

MBS Tools Plugin, Plugin Version: 20.1.

**Function:** One of the frame <>timecode conversion flags.
**Notes:** LTCFrame <>SMPTETimecode converter and LTCFrame increment/decrement use date, also set BGF2 to '1' when encoder is initialized or re-initialized (unless LTC_BGF_DONT_TOUCH is given)

## 186.6 class LTCSMPTETimecodeMBS

### 186.6.1 class LTCSMPTETimecodeMBS

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a human readable time representation, decimal values.

### 186.6.2 Methods

### 186.6.3 Constructor

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor to create a new empty timecode.
See also:

- 186.6.4 Constructor(other as LTCSMPTETimecodeMBS) 26194

### 186.6.4 Constructor(other as LTCSMPTETimecodeMBS)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Constructors a new time object with copying given values.
See also:

- 186.6.3 Constructor 26194

### 186.6.5 Properties

### 186.6.6 Data as MemoryBlock

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Gets or sets data of this smtp timecode with a memoryblock.
**Notes:** (Read and Write property)

### 186.6.7 Date as Date

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Get or set time stamp via date.
**Notes:**

When setting we take the year mod 100 to fill years field and frame field is set to zero.

When querying we return year + 2000 if year <67 and otherwise year + 1900, so we can have a year range of 1967 to 2066.
(Read and Write property)

### 186.6.8 DateTime as DateTime

MBS Tools Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get or set time stamp via date.
**Notes:**

When setting we take the year mod 100 to fill years field and frame field is set to zero.

When querying we return year + 2000 if year <67 and otherwise year + 1900, so we can have a year range of 1967 to 2066.
(Read and Write property)

### 186.6.9 Days as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The days field.
**Notes:**

day of month 1..31
(Read and Write property)

### 186.6.10 Frame as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The frame field.
**Notes:**

sub-second frame 0..(FPS - 1)
(Read and Write property)

### 186.6.11 Hours as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The hours field.
**Notes:**

hour 0..23
(Read and Write property)

### 186.6.12 Mins as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The minutes field.
**Notes:**

minute 0..60
(Read and Write property)

### 186.6.13 Months as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The month field.
**Notes:**

valid months are 1..12
(Read and Write property)

### 186.6.14 Secs as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The seconds field.
**Notes:**

second 0..60
(Read and Write property)

### 186.6.15 TimeZone as String

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The time zone field.
**Notes:**

the timezone is maximum 5 characters: "+HHMM" textual representation
(Read and Write property)

### 186.6.16 Years as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The years field.
**Notes:**

LTC-date uses 2-digit year 00.99.
(Read and Write property)

# Chapter 187

# TimeZone

## 187.1 class TimeZoneMBS

### 187.1.1 class TimeZoneMBS

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** Allows you to access information about the current time zone.
**Example:**

```
dim t as new TimeZoneMBS
MsgBox str(t.GmtDeltaTotalseconds)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use TimeZone instead. **Notes:** on Mac OS Cocoa applications, better use newer NSTimezoneMBS class.

### 187.1.2 Blog Entries

- Cleanup Xojo Plugins
- MBS Xojo Plugins, version 20.2pr7

### 187.1.3 Blog Entries

- Cleanup Xojo Plugins
- MBS Xojo Plugins, version 20.2pr7

- MBS Xojo / Real Studio Plugins, version 14.2pr5

### 187.1.4 Properties

### 187.1.5 DaylightName as String

MBS Util Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** A description for daylight saving time.
**Example:**

```
dim t as new TimeZoneMBS
MsgBox t.DaylightName
```

**Notes:**

For example, "PDT" could indicate Pacific Daylight Time. This string can be empty.
e.g. "Mitteleurop√§ische Sommerzeit"
On Mac, please use NSTimeZoneMBS class.
(Read only property)

### 187.1.6 GmtDeltaHours as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** Returns the GMT offset in hours.
**Example:**

```
dim t as TimeZoneMBS

t=new TimeZoneMBS

msgbox format(t.GmtDeltaHours,"+00")+ ":" +format(t.GmtDeltaminutes,"00")+ ":" +format(t.GmtDeltaseconds,"00")
```

**Notes:**

On Windows this information is not available.
(Read only property)

### 187.1.7 GmtDeltaMinutes as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** Returns the GMT offset in minutes.
**Example:**

```
dim t as TimeZoneMBS

t=new TimeZoneMBS

msgbox format(t.GmtDeltaHours,"+00")+ ":" +format(t.GmtDeltaminutes,"00")+ ":" +format(t.GmtDeltaseconds,"00")
```

**Notes:**

On Windows this information is not available.
(Read only property)

### 187.1.8 GmtDeltaSeconds as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** Returns the GMT offset in seconds.
**Example:**

```
dim t as TimeZoneMBS

t=new TimeZoneMBS

msgbox format(t.GmtDeltaHours,"+00")+ ":" +format(t.GmtDeltaminutes,"00")+ ":" +format(t.GmtDeltaseconds,"00")
```

**Notes:** (Read only property)

### 187.1.9 GmtDeltaTotalseconds as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** Returns the GMT offset in seconds.
**Example:**

```
dim t as new TimeZoneMBS
```

MsgBox str(t.GmtDeltaTotalseconds)

**Notes:** (Read only property)

### 187.1.10 Latitude as Double

MBS Util Plugin, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the latitude of the current position on earth.
**Example:**

```
dim longdeg,longmin as Integer
dim t as TimeZoneMBS

t=new TimeZoneMBS

longdeg=floor(t.longitude*90)
longmin=floor((t.longitude*90-longdeg)*60)

statictext1.text=format(longdeg,"0")+"¬∞"
statictext2.text=format(longmin,"0")+"'"
```

**Notes:**

On Windows this information is not available.
(Read only property)

### 187.1.11 Longitude as Double

MBS Util Plugin, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the longitude of the current position on earth.
**Example:**

```
dim latdeg,latmin as Integer
dim t as TimeZoneMBS

t=new TimeZoneMBS

latdeg=floor(t.latitude*90)
latmin=floor((t.latitude*90-latdeg)*60)
```

```
statictext1.text=format(latdeg,"0")+"¬∞"
statictext2.text=format(latmin,"0")+"'"
```

**Notes:**

On Windows this information is not available.
(Read only property)

### 187.1.12 StandardName as String

MBS Util Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** A description for standard time.
**Example:**

```
dim t as new TimeZoneMBS
MsgBox t.StandardName
```

**Notes:**

For example, "EST" could indicate Eastern Standard Time. This string can be empty.
e.g. "Mitteleurop√§ische Zeit"
On Mac, please use NSTimeZoneMBS class.
(Read only property)

# Chapter 188

# TouchBar

## 188.1 class LAContextMBS

### 188.1.1 class LAContextMBS

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: All.

**Function:** The class for local authentication via password or TouchID.

### 188.1.2 Blog Entries

### 188.1.7 Videos

- Presentation from London conference about MBS Plugins.

### 188.1.8 Methods

### 188.1.9 Available as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: All.

**Function:** Whether the class is available.
**Notes:** Returns true on OS X 10.10 and newer in 64-bit application.

### 188.1.10 canEvaluatePolicy(Policy as Integer, byref Error as NSErrorMBS) as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: All.

**Function:** Determines if a particular policy can be evaluated.
**Example:**

```
try
dim e as NSErrorMBS

if lc.canEvaluatePolicy(lc.PolicyDeviceOwnerAuthenticationWithBiometrics, e) then
List.AddRow "Can authenticate with biometrics."
else
List.AddRow "Can't authenticate with biometrics."
```

```
end if
if e <>nil then
List.AddRow "Error: "+e.LocalizedDescription
end if

catch ex as NSExceptionMBS

List.AddRow "Exception: "+ex.Message

end try
```

**Notes:**

Policies can have certain requirements which, when not satisfied, would always cause the policy evaluation to fail. Examples can be a passcode set or a fingerprint enrolled with Touch ID. This method allows easy checking for such conditions.

Applications should consume the returned value immediately and avoid relying on it for an extensive period of time. At least, it is guaranteed to stay valid until the application enters background.

policy: Policy for which the preflight check should be run.

error: contains error information if policy evaluation is not possible.

Returns true if the policy can be evaluated, false otherwise.

### 188.1.11 Constructor

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: All.

**Function:** The constructor.

### 188.1.12 evaluatePolicy(Policy as Integer, localizedReason as String, Tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: All.

**Function:** Evaluates the specified policy.
**Example:**

```
dim lc as LAContextMBS // your context
```

```
try

lc.evaluatePolicy(lc.PolicyDeviceOwnerAuthenticationWithBiometrics, "We need to test.")

catch ex as NSExceptionMBS

List.AddRow "Exception: "+ex.Message

end try
```

**Notes:**

Policy evaluation may involve prompting user for various kinds of interaction or authentication. Actual behavior is dependent on evaluated policy, device type, and can be affected by installed configuration profiles.

Be sure to keep a strong reference to the context while the evaluation is in progress. Otherwise, an evaluation would be canceled when the context is being deallocated.

The method does not block. Instead the event is called asynchronously when evaluation finishes.

Implications of successful policy evaluation are policy specific. In general, this operation is not idempotent. Policy evaluation may fail for various reasons, including user cancel, system cancel and others, see error codes.

policy: Policy to be evaluated.
localizedReason: Application reason for authentication. This string must be provided in correct localization and should be short and clear. It will be eventually displayed in the authentication dialog subtitle. A name of the calling application will be already displayed in title, so it should not be duplicated here.

### 188.1.13 invalidate

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: All.

**Function:** Invalidates the context.
**Notes:**

The context is invalidated automatically when it is (auto)released. This method allows invalidating it manually while it is still in scope.

Invalidation terminates any existing policy evaluation and the respective call will fail with LAErrorAppCancel. After the context has been invalidated, it can not be used for policy evaluation and an attempt to do

so will fail with LAErrorInvalidContext.

Invalidating a context that has been already invalidated has no effect.

### 188.1.14 isCredentialSet(CredentialType as Integer) as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: macOS, Targets: All.

**Function:** Reveals if credential was set with this context.
**Notes:**

type: Type of credential we are asking for.

Return true on success, false otherwise.

### 188.1.15 setCredential(credential as MemoryBlock, Type as Integer) as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: macOS, Targets: All.

**Function:** Sets a credential to this context.
**Notes:**

Some policies allow to bind application-provided credential with them.
This method allows credential to be passed to the right context.

credential: Credential to be used with subsequent calls. Setting this parameter to nil will remove any existing credential of the specified type.

Type: Type of the provided credential.

Return true if the credential was set successfully, false otherwise.

### 188.1.16 TouchIDAuthenticationMaximumAllowableReuseDuration as Double

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: macOS, Targets: All.

**Function:** The maximum value for LAContext touchIDAuthenticationAllowableReuseDuration property.
**Notes:** Returns -1 if value is not available.

### 188.1.17 Properties

### 188.1.18 biometryType as Integer

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: macOS, Targets: All.

**Function:** Indicates the type of the biometry supported by the device.
**Notes:**

This property is set when canEvaluatePolicy has been called for a biometric policy.
The default value is BiometryTypeNone.
(Read only property)

### 188.1.19 evaluatedPolicyDomainState as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: All.

**Function:** Contains policy domain state.
**Notes:**

This property is set only when evaluatePolicy is called and succesful Touch ID authentication was performed, or when canEvaluatePolicy succeeds for a biometric policy. It stays nil for all other cases. If finger database was modified (fingers were removed or added), evaluatedPolicyDomainState data will change. Nature of such database changes cannot be determined but comparing data of evaluatedPolicyDomainState after different evaluatePolicy will reveal the fact database was changed between calls.
(Read only property)

### 188.1.20 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: All.

**Function:** The internal object handle.
**Notes:** (Read and Write property)

### 188.1.21 interactionNotAllowed as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

**Function:** Allows running authentication in non-interactive mode.
**Notes:**

If the context is used in a keychain query by the means of kSecUseAuthenticationContext, then setting this property to YES has the same effect as passing kSecUseNoAuthenticationUI in the query, i.e. the keychain

call will eventually fail with errSecInteractionNotAllowed instead of displaying the authentication UI.

If this property is used with a LocalAuthentication evaluation, it will eventually fail with kErrorNotInteractive instead of displaying the authentication UI.
(Read and Write property)

### 188.1.22 localizedCancelTitle as String

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

**Function:** Cancel button title.
**Notes:**

Allows cancel button title customization. A default title "Cancel" is used when this property is set to empty string.
Requires MacOS 10.13 or newer.
(Read and Write property)

### 188.1.23 localizedFallbackTitle as String

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: All.

**Function:** Fallback button title.
**Example:**

```
dim lc as new MyLAContextMBS
lc.localizedFallbackTitle = "Just a test"
```

**Notes:**

Allows fallback button title customization. A default title "Enter Password" is used when this property is left nil. If set to empty string, the button will be hidden.
(Read and Write property)

### 188.1.24 localizedReason as String

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

**Function:** Allows setting the default localized authentication reason on context.
**Notes:**

A localized string from this property is displayed in the authentication UI if the caller didn't specify its

own authentication reason (e.g. a keychain operation with kSecUseAuthenticationContext). This property is ignored if the authentication reason was provided by caller.
Requires MacOS 10.13 or newer.
(Read and Write property)

### 188.1.25 touchIDAuthenticationAllowableReuseDuration as Double

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: All.

**Function:** Time interval for accepting a successful Touch ID unlock from the past.
**Notes:**

This property can be set with a time interval in seconds. If the device was successfully unlocked by Touch ID within this time interval, then Touch ID authentication on this context will succeed automatically and the reply block will be called without prompting user for Touch ID.

The default value is 0, meaning that no previous TouchID authentication can be reused.

The maximum supported interval is 5 minutes and setting the value beyond 5 minutes does not increase the accepted interval.
(Read and Write property)

### 188.1.26 Events

### 188.1.27 evaluatePolicyResult(Success as Boolean, error as NSErrorMBS, Policy as Integer, localizedReason as String, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: .

**Function:** The event called for the result of evaluatePolicy method.
**Notes:**

success: Reply parameter that is true if the policy has been evaluated successfully or false if the evaluation failed.

error: Reply parameter that is nil if the policy has been evaluated successfully, or it contains error information about the evaluation failure.

Typical error codes returned by this call are:
ErrorUserFallback if user tapped the fallback button
ErrorUserCancel if user has tapped the Cancel button
ErrorSystemCancel if some system event interrupted the evaluation (e.g. Home button pressed).

### 188.1.28 Constants

### 188.1.29 BiometryTypeFaceID = 2

MBS Mac64bit Plugin, Plugin Version: 21.0.

**Function:** One of the biometry type constants.
**Notes:** The device supports Face ID.

### 188.1.30 BiometryTypeNone = 0

MBS Mac64bit Plugin, Plugin Version: 21.0.

**Function:** One of the biometry type constants.
**Notes:** The device does not support biometry.

### 188.1.31 BiometryTypeTouchID = 1

MBS Mac64bit Plugin, Plugin Version: 21.0.

**Function:** One of the biometry type constants.
**Notes:** The device supports Touch ID.

### 188.1.32 CredentialTypeApplicationPassword = 0

MBS Mac64bit Plugin, Plugin Version: 17.0.

**Function:** One oft he credential types.
**Notes:** The credential type for an application password.

### 188.1.33 CredentialTypeSmartCardPIN = 1

MBS Mac64bit Plugin, Plugin Version: 21.0.

**Function:** One oft he credential types.
**Notes:**

Smart card PIN provided by application.

If not set, LocalAuthentication will ask users for the smart card PIN when necessary. Applications can provide the PIN using setCredential method. In such case, LocalAuthentication will not show the smart

card PIN user interface.
When entered from the LocalAuthentication user interface, the PIN is stored as UTF-8 encoded string.

### 188.1.34 kErrorAppCancel = -9

MBS Mac64bit Plugin, Plugin Version: 17.0.

**Function:** One of the error codes.
**Notes:** Authentication was canceled by application (e.g. invalidate was called while authentication was in progress).

### 188.1.35 kErrorAuthenticationFailed = -1

MBS Mac64bit Plugin, Plugin Version: 17.0.

**Function:** One of the error codes.
**Notes:** Authentication was not successful, because user failed to provide valid credentials.

### 188.1.36 kErrorBiometryLockout = -8

MBS Mac64bit Plugin, Plugin Version: 18.4.

**Function:** One of the error codes.
**Notes:** Authentication was not successful, because there were too many failed Biometry attempts and Biometry is now locked. Passcode is required to unlock Biometry, e.g. evaluating PolicyDeviceOwner-AuthenticationWithBiometrics will ask for passcode as a prerequisite.

### 188.1.37 kErrorBiometryNotAvailable = -6

MBS Mac64bit Plugin, Plugin Version: 18.4.

**Function:** One of the error codes.
**Notes:** Authentication could not start, because Biometry is not available on the device.

### 188.1.38 kErrorBiometryNotEnrolled = -7

MBS Mac64bit Plugin, Plugin Version: 18.4.

**Function:** One of the error codes.
**Notes:** Authentication could not start, because Biometry has no enrolled fingers.

### 188.1.39 kErrorInvalidContext = -10

MBS Mac64bit Plugin, Plugin Version: 17.0.

**Function:** One of the error codes.
**Notes:** LAContext passed to this call has been previously invalidated.

### 188.1.40 kErrorPasscodeNotSet = -5

MBS Mac64bit Plugin, Plugin Version: 17.0.

**Function:** One of the error codes.
**Notes:** Authentication could not start, because passcode is not set on the device.

### 188.1.41 kErrorSystemCancel = -4

MBS Mac64bit Plugin, Plugin Version: 17.0.

**Function:** One of the error codes.
**Notes:** Authentication was canceled by system (e.g. another application went to foreground).

### 188.1.42 kErrorTouchIDLockout = -8

MBS Mac64bit Plugin, Plugin Version: 17.0.

**Function:** One of the error codes.
**Notes:** Authentication was not successful, because there were too many failed Touch ID attempts and Touch ID is now locked. Passcode is required to unlock Touch ID, e.g. evaluating PolicyDeviceOwnerAuthenticationWithBiometrics will ask for passcode as a prerequisite.

### 188.1.43 kErrorTouchIDNotAvailable = -6

MBS Mac64bit Plugin, Plugin Version: 17.0.

**Function:** One of the error codes.
**Notes:** Authentication could not start, because Touch ID is not available on the device.

### 188.1.44 kErrorTouchIDNotEnrolled = -7

MBS Mac64bit Plugin, Plugin Version: 17.0.

**Function:** One of the error codes.
**Notes:** Authentication could not start, because Touch ID has no enrolled fingers.

### 188.1.45 kErrorUserCancel = -2

MBS Mac64bit Plugin, Plugin Version: 17.0.

**Function:** One of the error codes.
**Notes:** Authentication was canceled by user (e.g. tapped Cancel button).

### 188.1.46 kErrorUserFallback = -3

MBS Mac64bit Plugin, Plugin Version: 17.0.

**Function:** One of the error codes.
**Notes:** Authentication was canceled, because the user tapped the fallback button (Enter Password).

### 188.1.47 kLAErrorDomain = "com.apple.LocalAuthentication"

MBS Mac64bit Plugin, Plugin Version: 17.0.

**Function:** The error domain for Local Authentication.

### 188.1.48 PolicyDeviceOwnerAuthentication = 2

MBS Mac64bit Plugin, Plugin Version: 17.0.

**Function:** One of the policy constants.
**Notes:**

Device owner is going to be authenticated by biometry or user password.

Touch ID or user password authentication is required. If Touch ID is not available, not enrolled or locked out, then the user is asked for password right away.

Touch ID authentication dialog behaves similarly as the one used by PolicyDeviceOwnerAuthenticationWithBiometrics. However, the "Use Password.." button does not end the authentication. Instead, it switches the

authentication mechanism to user password.

### 188.1.49 PolicyDeviceOwnerAuthenticationWithBiometrics = 1

MBS Mac64bit Plugin, Plugin Version: 17.0.

**Function:** One of the policy constants.
**Notes:** The policy for owner authentication with biometrics.

### 188.1.50 PolicyDeviceOwnerAuthenticationWithBiometricsOrWatch = 4

MBS Mac64bit Plugin, Plugin Version: 21.0.

**Function:** One of the policy constants.
**Notes:**

Device owner is going to be authenticated by biometry or Ô£øWatch.

Watch or biometric authentication is required. If no nearby paired watch device can be found, it behaves as PolicyDeviceOwnerAuthenticationWithBiometrics. Similarly, if biometry is unavailable it behaves as PolicyDeviceOwnerAuthenticationWithWatch.

Watch authentication dialog looks and behaves similarly to biometric variant. When both mechanisms are available, user is asked to use biometry and watch authentication will run in parallel.

### 188.1.51 PolicyDeviceOwnerAuthenticationWithWatch = 3

MBS Mac64bit Plugin, Plugin Version: 21.0.

**Function:** Device owner is going to be authenticated by Ô£øWatch.
**Notes:**

Watch authentication is required. If no nearby paired watch device can be found, kErrorWatchNotAvailable is returned.

Watch authentication dialog looks and behaves similarly to the biometric variant. Users can confirm authentication by double-clicking the side button on their watch.

## 188.2 class NSColorPickerTouchBarItemMBS

### 188.2.1 class NSColorPickerTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The class for a TouchBar item showing a color picker.
**Notes:** Subclass of the NSTouchBarItemMBS class.

### 188.2.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.5pr5

### 188.2.3 Xojo Developer Magazine

- 15.5, page 35: Touch√©, Using Apple's Touch Bar with Xojo by Marc Zeedar

- 15.5, page 35: Touch√©, Using Apple's Touch Bar with Xojo by Marc Zeedar

### 188.2.6 Methods

### 188.2.7 colorPicker(identifier as string) as NSColorPickerTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** Creates a bar item containing a button with the standard color picker icon that invokes the color picker.
**Example:**

```
dim t as NSColorPickerTouchBarItemMBS = NSColorPickerTouchBarItemMBS.colorPicker("test")
t.customizationLabel = "Drawing Color"
```

**Notes:** You may want to use AddHandler method to add an event handler to this object.
See also:

- 188.2.8 colorPicker(identifier as string, buttonImage as NSImageMBS) as NSColorPickerTouchBarItemMBS 26219

### 188.2.8 colorPicker(identifier as string, buttonImage as NSImageMBS) as NSColorPickerTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** Creates a bar item containing a button with the provided image that invokes the color picker.
**Notes:** You may want to use AddHandler method to add an event handler to this object.
See also:

- 188.2.7 colorPicker(identifier as string) as NSColorPickerTouchBarItemMBS 26218

### 188.2.9 Constructor(identifier as string)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The designated initializer.
**Example:**

```
dim t as new NSColorPickerTouchBarItemMBS("test")
t.customizationLabel = "Drawing Color"
```

**Notes:** This instantiates a new touch bar item with the specified initializer.

### 188.2.10 strokeColorPicker(identifier as string) as NSColorPickerTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** Creates a bar item containing a button with the standard stroke color picker icon that invokes the color picker.
**Notes:**

You may want to use AddHandler method to add an event handler to this object.
Should be used when the item is used for picking stroke colors.

### 188.2.11 textColorPicker(identifier as string) as NSColorPickerTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** Creates a bar item containing a button with the standard text color picker icon that invokes the color picker.
**Notes:**

You may want to use AddHandler method to add an event handler to this object.
Should be used when the item is used for picking text colors.

### 188.2.12 Properties

### 188.2.13 color as NSColorMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The selected color of the picker.
**Notes:** (Read and Write property)

### 188.2.14 colorList as NSColorListMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The color list displayed in the list color picker.
**Notes:**

Defaults to the standard system color list. Setting a custom color list will disable the additional tints/shades that appear on long-press.
(Read and Write property)

### 188.2.15 customizationLabel as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The localized string labelling this item during user customization.
**Example:**

```
dim t as new NSColorPickerTouchBarItemMBS("test")
t.customizationLabel = "Drawing Color"
```

**Notes:**

The default value is empty string.
(Read and Write property)

### 188.2.16 enabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** Enables or disabled the color picker.
**Notes:**

If it is currently being shown in a popover, it will be dismissed.
(Read and Write property)

### 188.2.17 showsAlpha as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** Whether or not the picker should allow picking a color with non-1.0 alpha.
**Notes:**

Defaults to "not NSColor.ignoresAlpha".
(Read and Write property)

### 188.2.18 Events

### 188.2.19 Action

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

**Function:** The color picker changed color.

## 188.3 class NSCustomTouchBarItemMBS

### 188.3.1 class NSCustomTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The class for a TouchBar item showing a custom view.
**Notes:** Subclass of the NSTouchBarItemMBS class.

### 188.3.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.5pr5

### 188.3.3 Xojo Developer Magazine

- 15.5, page 35: Touch√©, Using Apple's Touch Bar with Xojo by Marc Zeedar

- 15.5, page 35: Touch√©, Using Apple's Touch Bar with Xojo by Marc Zeedar

### 188.3.6 Methods

### 188.3.7 Constructor(identifier as string)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The designated initializer.
**Example:**

```
dim t as new NSCustomTouchBarItemMBS("test")
t.customizationLabel = "My Test"
```

**Notes:** This instantiates a new touch bar item with the specified initializer.

### 188.3.8 Properties

### 188.3.9 customizationLabel as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The localized string labelling this item during user customization.
**Example:**

```
dim t as new NSCustomTouchBarItemMBS("test")
t.customizationLabel = "Drawing Color"
```

**Notes:**

The default value is empty string.
(Read and Write property)

### 188.3.10 view as NSViewMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** A view to be displayed in the touch bar in the location corresponding to this item.
**Notes:**

By default, the getter for this property will return this item's view controller's view. If this property is set explicitly, the view controller will be set to nil.
(Read and Write property)

### 188.3.11 viewController as NSViewControllerMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** A view controller whose view is to be displayed in the touch bar in the location corresponding to this item.
**Notes:**

By default, this property is nil.
When set, this item's view property will automatically return the view associated with this view controller.
(Read and Write property)

## 188.4 class NSGroupTouchBarItemMBS

### 188.4.1 class NSGroupTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The class for a TouchBar item showing a group.
**Notes:** Subclass of the NSTouchBarItemMBS class.

### 188.4.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.5pr5

### 188.4.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.5pr5

### 188.4.4 Methods

### 188.4.5 Constructor(identifier as string)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The designated initializer.
**Example:**

```
dim t as new NSGroupTouchBarItemMBS("test")
t.customizationLabel = "My Group"
```

**Notes:** This instantiates a new touch bar item with the specified initializer.

### 188.4.6 groupItemWithIdentifier(identifier as string, items() as NSTouchBarItemMBS) as NSGroupTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** Returns an autoreleased NSGroupTouchBarItem with a groupTouchBar built from the given items array.
**Example:**

```
dim t as NSGroupTouchBarItemMBS = NSGroupTouchBarItemMBS.groupItemWithIdentifier("test")
t.customizationLabel = "My Group"
```

**Notes:** Customization is not enabled by default when creating a NSGroupTouchBarItem this way.

### 188.4.7 Properties

### 188.4.8 customizationLabel as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The localized string labelling this item during user customization.
**Notes:**

The default value is empty string.
(Read and Write property)

### 188.4.9 groupTouchBar as NSViewControllerMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** A touch bar, presented seamlessly as part of the touch bar this item is hosted in.
**Notes:**

This touch bar may have its own principal item, and can be customized (or not) per the normal touch bar customization rules.
By default this is an empty touch bar that cannot be customized.
(Read and Write property)

## 188.5 class NSPopoverTouchBarItemMBS

### 188.5.1 class NSPopoverTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The class for a TouchBar item showing a popover.
**Notes:** Subclass of the NSTouchBarItemMBS class.

### 188.5.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.5pr5

### 188.5.3 Xojo Developer Magazine

- 15.5, page 35: Touch√©, Using Apple's Touch Bar with Xojo by Marc Zeedar

### 188.5.4 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.5pr5

### 188.5.5 Xojo Developer Magazine

- 15.5, page 35: Touch√©, Using Apple's Touch Bar with Xojo by Marc Zeedar

### 188.5.6 Methods

### 188.5.7 Constructor(identifier as string)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The designated initializer.
**Notes:** This instantiates a new touch bar item with the specified initializer.

### 188.5.8 dismissPopover

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** This method will restore the previously visible main touch bar.
**Notes:** This method can be invoked explicitly to order out a popover if interacting with an item inside it

should close it.

### 188.5.9 showPopover

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** Replaces the main touch bar with this item's popover touch bar.
**Notes:** If this item is not visible, this method will have no effect. If this item ceases to be visible, the popover touch bar will automatically be ordered out.

### 188.5.10 Properties

### 188.5.11 collapsedRepresentation as NSViewMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The view displayed when the item is in its hosted touch bar.
**Notes:**

By default, this is an NSButton whose target is this popover item, whose action is showPopover, and whose image and title are bound to this item's collapsedRepresentationImage and collapsedRepresentationLabel respectively.
(Read and Write property)

### 188.5.12 collapsedRepresentationImage as NSImageMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The image displayed by the button used by default for the default collapsed representation.
**Notes:**

If the collapsedRepresentation button has been replaced by a different view, this property may not have any effect.
(Read and Write property)

### 188.5.13 collapsedRepresentationLabel as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The localized string displayed by the button used by default for the default collapsed representation.
**Notes:**

If the collapsedRepresentation button has been replaced by a different view, this property may not have any effect. This property is archived.
(Read and Write property)

### 188.5.14 customizationLabel as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The localized string labelling this item during user customization.
**Notes:**

The default value is empty string.
(Read and Write property)

### 188.5.15 popoverTouchBar as NSTouchBarMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The touch bar displayed when this item is "popped."
**Notes:**

By default this is an empty touch bar that cannot be customized. This property is archived.
(Read and Write property)

### 188.5.16 pressAndHoldTouchBar as NSTouchBarMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** A touchbar to be used exclusively for press-and-hold popovers.
**Notes:**

This touch bar can be the same as the one used for "popoverTouchBar" property, but does not have to be. When non-nil this touch bar will be displayed while the user holds their finger down on the collapsed representation and released when the user raises their finger. This tracking behavior is automatic, but popovers with custom collapsed representations will still need to send showPopover to start tracking.
(Read and Write property)

### 188.5.17 showsCloseButton as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** When true, automatically displays a close button in the popover.
**Notes:**

When false it is the responsibility of the client to dismiss the popover.
(Read and Write property)

## 188.6 class NSSliderTouchBarItemMBS

### 188.6.1 class NSSliderTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The class for a TouchBar item showing a slider.
**Notes:** Subclass of the NSTouchBarItemMBS class.

### 188.6.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.5pr5

### 188.6.3 Xojo Developer Magazine

- 15.5, page 35: Touch√©, Using Apple's Touch Bar with Xojo by Marc Zeedar

### 188.6.4 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.5pr5

### 188.6.5 Xojo Developer Magazine

- 15.5, page 35: Touch√©, Using Apple's Touch Bar with Xojo by Marc Zeedar

### 188.6.6 Methods

### 188.6.7 Constructor(identifier as string)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The designated initializer.
**Example:**

```
dim t as NSSliderTouchBarItemMBS = new NSSliderTouchBarItemMBS("test")
t.customizationLabel = "My Slider"
```

**Notes:** This instantiates a new touch bar item with the specified initializer.

### 188.6.8 Properties

### 188.6.9 customizationLabel as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The localized string labelling this item during user customization.
**Notes:**

The default value is empty string.
(Read and Write property)

### 188.6.10 label as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The text label displayed along with the slider.
**Example:**

```
dim t as NSSliderTouchBarItemMBS = new NSSliderTouchBarItemMBS("test")
t.label = "Pen Size"
```

**Notes:**

If set to nil, the label will not have space reserved in the item.
(Read and Write property)

### 188.6.11 maxValue as Double

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The maximum value of the slider.
**Example:**

```
dim t as NSSliderTouchBarItemMBS = new NSSliderTouchBarItemMBS("test")
t.minValue = 0.0
t.maxValue = 1.0
t.value = 0.5
```

**Notes:** (Read and Write property)

### 188.6.12 minValue as Double

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The minimum value of the slider.
**Example:**

```
dim t as NSSliderTouchBarItemMBS = new NSSliderTouchBarItemMBS("test")
t.minValue = 0.0
t.maxValue = 1.0
t.value = 0.5
```

**Notes:** (Read and Write property)

### 188.6.13 slider as NSSliderMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The slider displayed by the bar item.
**Example:**

```
dim t as NSSliderTouchBarItemMBS = new NSSliderTouchBarItemMBS("test")
t.minValue = 0.0
t.maxValue = 1.0
t.value = 0.5
```

**Notes:**

It is automatically created, but can be set to a custom subclass.
Value, minValue, maxValue, etc can all be read and set through the slider.
(Read and Write property)

### 188.6.14 value as Double

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The current value of the slider.
**Notes:** (Read and Write property)

### 188.6.15 Events

### 188.6.16 Action

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

**Function:** The slider changed.

## 188.7 class NSTouchBarItemMBS

### 188.7.1 class NSTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The class for a touch bar item.

### 188.7.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.5pr5

### 188.7.7 Videos

- TouchBar with MBS Xojo Plugin

### 188.7.8 Methods

### 188.7.9 Available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** Whether this class is available.
**Example:**

```
if NSTouchBarItemMBS.Available then
MsgBox "This Mac may have a TouchBar or not."
else
MsgBox "This Mac is too old for a TouchBar."
end if
```

**Notes:** Returns true on macOS 10.12.1 and newer, if the version with TouchBar support is installed.

### 188.7.10 Constructor(identifier as string)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The designated initializer.
**Notes:** This instantiates a new touch bar item with the specified initializer.

### 188.7.11 NSTouchBarItemIdentifierFixedSpaceLarge as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The identifier of an item appropriate for use as a large space in the touch bar.
**Example:**

```
// create flexible space item
dim t as new NSTouchBarItemMBS(NSTouchBarItemMBS.NSTouchBarItemIdentifierFixedSpaceLarge)
```

**Notes:** Generally, you can use this identifier in a touch bar's itemIdentifiers array, and it will instantiate that space for you.

### 188.7.12 NSTouchBarItemIdentifierFixedSpaceSmall as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The identifier of an item appropriate for use as a small space in the touch bar.
**Example:**

```
// create fixed space item
dim t as new NSTouchBarItemMBS(NSTouchBarItemMBS.NSTouchBarItemIdentifierFixedSpaceSmall)
```

**Notes:** Generally, you can use this identifier in a touch bar's itemIdentifiers array, and it will instantiate that space for you.

### 188.7.13 NSTouchBarItemIdentifierFlexibleSpace as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The identifier of an item appropriate for use as a flexible space in the touch bar.
**Example:**

```
// create flexible space item
dim t as new NSTouchBarItemMBS(NSTouchBarItemMBS.NSTouchBarItemIdentifierFlexibleSpace)
```

**Notes:** Generally, you can use this identifier in a touch bar's itemIdentifiers array, and it will instantiate that space for you.

### 188.7.14 NSTouchBarItemIdentifierOtherItemsProxy as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The identifier of the special "other items proxy."
**Example:**

```
// create proxy item
dim t as new NSTouchBarItemMBS(NSTouchBarItemMBS.NSTouchBarItemIdentifierOtherItemsProxy)
```

**Notes:**

Generally, you can use this identifier in a touch bar's itemIdentifiers array, and a special proxy item will be instantiated for you. When the touch bar containing this item is visible, touch bars provided by items closer to the first responder will be nested inside the space denoted for this item. Space items on either side of this item will be automatically massaged to handle cases where the touch bar containing this identifier is itself the bar closest to the first responder (or closer bars are empty.)
Note that a touch bar lacking this item identifier will be replaced in its entirety by touch bars closer to the first responder.

### 188.7.15 Properties

### 188.7.16 customizationLabel as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The localized string labelling this item during user customization.
**Notes:**

The default value is empty string.
(Read only property)

### 188.7.17 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 188.7.18 identifier as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The identifier of this item.
**Notes:**

Apart from spaces, item identifiers should be globally unique.
(Read only property)

### 188.7.19 view as NSViewMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** Intended for subclassing.
**Notes:**

By default, this method returns this item's view controller's view.
(Read only property)

### 188.7.20 viewController as NSViewControllerMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** Intended for subclassing.
**Notes:**

By default, this method returns nil.
(Read only property)

### 188.7.21 visibilityPriority as Single

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** If there are more items in the touch bar than can be displayed, some will be hidden.
**Example:**

```
dim t as NSSliderTouchBarItemMBS = new NSSliderTouchBarItemMBS("test")
t.visibilityPriority = t.PriorityLow
```

**Notes:**

Items with high visibility priority will be hidden after items with low visibility priority.
(Read and Write property)

### 188.7.22 visible as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** When true, this item is attached to a visible touch bar, and is being displayed.
**Notes:**

Note that some types of items are never considered visible, for example spaces, other items proxys, and groups.
This property is key value observable.
(Read only property)

### 188.7.23 Events

### 188.7.24 Hidden

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

**Function:** The event called when the item is hidden.

### 188.7.25 Shown

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

**Function:** The event called when the item is shown.

### 188.7.26 Constants

### 188.7.27 PriorityHigh = 1000

MBS Mac64bit Plugin, Plugin Version: 16.5.

**Function:** One of the values for visibilityPriority property.
**Notes:** nItems with high visibility priority will be hidden after items with low visibility priority.one

### 188.7.28 PriorityLow = -1000

MBS Mac64bit Plugin, Plugin Version: 16.5.

**Function:** One of the values for visibilityPriority property.
**Notes:** nItems with high visibility priority will be hidden after items with low visibility priority.one

### 188.7.29 PriorityNormal = 0

MBS Mac64bit Plugin, Plugin Version: 16.5.

**Function:** One of the values for visibilityPriority property.
**Notes:** nItems with high visibility priority will be hidden after items with low visibility priority.one

## 188.8 class NSTouchBarMBS

### 188.8.1 class NSTouchBarMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The class for a TouchBar on a new MacBook Pro.

### 188.8.2 Blog Entries

### 188.8.8 Methods

### 188.8.9 AssignToApp

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** Assigns the TouchBar to be the main TouchBar for the whole app.

### 188.8.10 AssignToWindow(window as DesktopWindow)

MBS Mac64bit Plugin, Plugin Version: 22.0, Platform: macOS, Targets: Desktop only.

**Function:** Assigns the TouchBar to be the given window.
**Notes:** The TouchBar on MacBook Pro will show this entries, if the given window is the front window.
See also:

- 188.8.11 AssignToWindow(window as NSWindowMBS) 26241
- 188.8.12 AssignToWindow(window as window) 26241

### 188.8.11 AssignToWindow(window as NSWindowMBS)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** Assigns the TouchBar to be the given window.
**Notes:** The TouchBar on MacBook Pro will show this entries, if the given window is the front window.
See also:

- 188.8.10 AssignToWindow(window as DesktopWindow) 26241
- 188.8.12 AssignToWindow(window as window) 26241

### 188.8.12 AssignToWindow(window as window)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** Assigns the TouchBar to be the given window.
**Notes:** The TouchBar on MacBook Pro will show this entries, if the given window is the front window.
See also:

- 188.8.10 AssignToWindow(window as DesktopWindow) 26241
- 188.8.11 AssignToWindow(window as NSWindowMBS) 26241

### 188.8.13 Available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** Whether this class is available.
**Example:**

```
if NSTouchBarMBS.Available then
MsgBox "This Mac may have a TouchBar or not."
else
MsgBox "This Mac is too old for a TouchBar."
end if
```

**Notes:** Returns true on macOS 10.12.1 and newer, if the version with TouchBar support is installed.

### 188.8.14 Constructor

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The constructor.

### 188.8.15 customizationAllowedItemIdentifiers as String()

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The items that are presented in the customization palette for the user to add to the touch bar.
**Notes:** These items will be presented to the user in the order specified in this array.

### 188.8.16 customizationRequiredItemIdentifiers as String()

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** Some items are too important to be removed.
**Notes:** The corresponding item identifiers should be listed here. During customization the user will be prevented from removing these items from the touch bar.

### 188.8.17 defaultItemIdentifiers as String()

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** An array of identifiers specifying the items in this touch bar.
**Notes:**

When constructing the instantiated items array, the identifiers in this array will be fed through the itemForIdentifier method.
Item identifiers should be globally unique, excepting NSTouchBarItemIdentifierFixedSpaceSmall, NSTouchBarItemIdentifierFixedSpaceLarge, NSTouchBarItemIdentifierFlexibleSpace, and NSTouchBarItemIdentifierOtherItemsProxy.

This array also corresponds to the item ordering for the receiver in the ,Äúdefault set,Äù in the customization palette.

### 188.8.18 itemForIdentifier(identifier as string) as NSTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** Returns an instantiated NSTouchBarItem for the given identifier.
**Notes:**

Items are resolved from the following locations, in order:

- items already in the instantiated items array
- items in the defaultTouchBarItems set
- items returned from the delegate's -touchBar:makeItemForIdentifier: method
- some special identifiers are handled automatically

NSTouchBarItemIdentifierFixedSpaceSmall ->NSTouchBar will automatically create a standard small space
NSTouchBarItemIdentifierFixedSpaceLarge ->NSTouchBar will automatically create a standard large space
NSTouchBarItemIdentifierFlexibleSpace ->NSTouchBar will automatically create a standard flexible space
NSTouchBarItemIdentifierOtherItemsProxy ->NSTouchBar will automatically create a special item that acts as a proxy for the items of touch bars closer to the first responder.

### 188.8.19 itemIdentifiers as String()

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The resolved array of item identifiers. If the bar has not been customized this will match the defaultItemIdentifiers.

### 188.8.20 RemoveTouchBarFromApp

MBS Mac64bit Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop only.

**Function:** Removes TouchBar for app.

### 188.8.21 RemoveTouchBarFromWindow(window as NSWindowMBS)

MBS Mac64bit Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop only.

**Function:** Removes TouchBar for window.
See also:

- 188.8.22 RemoveTouchBarFromWindow(window as window) 26244

### 188.8.22 RemoveTouchBarFromWindow(window as window)

MBS Mac64bit Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop only.

**Function:** Removes TouchBar for window.
See also:

- 188.8.21 RemoveTouchBarFromWindow(window as NSWindowMBS) 26244

### 188.8.23 setCustomizationAllowedItemIdentifiers(Identifiers() as String)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** Sets the items that are presented in the customization palette for the user to add to the touch bar.
**Notes:** These items will be presented to the user in the order specified in this array.

### 188.8.24 setCustomizationRequiredItemIdentifiers(Identifiers() as String)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** Sets the items are too important to be removed.
**Notes:** The corresponding item identifiers should be listed here. During customization the user will be prevented from removing these items from the touch bar.

### 188.8.25 setDefaultItemIdentifiers(Identifiers() as String)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** Sets the array of identifiers specifying the items in this touch bar.

### 188.8.26 setTemplateItems(Identifiers() as NSTouchBarItemMBS)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** Sets the template item identifiers.
**Notes:**

Items in this set are the first step in resolving instantiated items from their identifiers.
If an item identifier is specified in the itemIdentifiers array, and an item with that identifier is in this set, it will be added to the items array in the corresponding location.

### 188.8.27 templateItems as NSTouchBarItemMBS()

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** Items in this set are the first step in resolving instantiated items from their identifiers.
**Notes:** If an item identifier is specified in the itemIdentifiers array, and an item with that identifier is in this set, it will be added to the items array in the corresponding location.

### 188.8.28 toggleTouchBarCustomizationPalette

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** Show or dismiss the customization palette for the currently displayed touch bars.
**Notes:** NSApplication validates this selector against whether the current touch bars are customizable and, if configured on a menu item, will standardize and localize the title. If the current system does not have touch bar support, the menu item will be automatically hidden.

### 188.8.29 Properties

### 188.8.30 automaticCustomizeTouchBarMenuItemEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** Whether or not a menu item to customize the touch bar can be automatically added to the main menu.

**Notes:**

It will only actually be added when a touch bar hardware or simulator is present. Defaults to false. Setting this property to True is the recommended way to add the customization menu item. But if non-standard placement of the menu item is needed, creating a menu item with an action of toggleTouchBarCustomizationPalette can be used instead.
(Read and Write property)

### 188.8.31 customizationIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** A string uniquely identifying this bar for customization purposes.
**Notes:**

All bars with this identifier will have their items coordinated automatically during customization or instantiation.
Touch bars lacking a customizationIdentifier are not customizable.
(Read and Write property)

### 188.8.32 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 188.8.33 principalItemIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** Specifying a principal item identifier communicates that the item with that identifier has special significance to this touch bar.
**Notes:**

Currently, that item will be placed in the center of the resolved touch row. Note that multiple visible bars may each specify a principal item identifier - but only one of them can have the request honored.
(Read and Write property)

### 188.8.34 visible as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

**Function:** When true, the touch bar is attached to an eligible touch bar provider, and its items are displayable, assuming adequate space.
**Notes:** (Read only property)

### 188.8.35 Events

### 188.8.36 DidEnterCustomization

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The customization did start.

### 188.8.37 DidExitCustomization

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The customization did exit.

### 188.8.38 Hidden

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

**Function:** The event called when the bar is hidden.

### 188.8.39 makeItemForIdentifier(identifier as string) as NSTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

**Function:** When constructing the items array, this event will be invoked to construct a touch bar item if that item cannot be found in the defaultItems set.

### 188.8.40 Shown

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

**Function:** The event called when the bar is shown.

### 188.8.41 WillEnterCustomization

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The customization will start soon.

### 188.8.42 WillExitCustomization

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The customization will exit soon.

# Chapter 189

# Twain

## 189.1 class TwainIdentityMBS

### 189.1.1 class TwainIdentityMBS

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

**Function:** Provides identification information about a TWAIN entity.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 189.1.2 Methods

### 189.1.3 Constructor

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

**Function:** The private constructor.

### 189.1.4 Properties

### 189.1.5 Id as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

**Function:** A unique, internal identifier for the TWAIN entity.
**Notes:**

This field is only filled by the Source Manager. Neither an application nor a Source should fill this field. The Source uses the contents of this field to "identify" which application is invoking the operation sent to the Source.
(Read and Write property)

### 189.1.6 Manufacturer as String

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

**Function:** String identifying the manufacturer of the application or Source. e.g. "Aldus".
**Notes:** (Read and Write property)

### 189.1.7 ProductFamily as String

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

**Function:** Tells an application that performs device-specific operations which product family the Source supports.
**Notes:**

This is useful when a new Source has been released and the application doesn't know about the particular Source but still wants to perform Custom operations with it. e.g. "ScanMan".
(Read and Write property)

### 189.1.8 ProductName as String

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

**Function:** A string uniquely identifying the Source.
**Notes:**

This is the string that will be displayed to the user at Source select-time. This string must uniquely identify your Source for the user, and should identify the application unambiguously for Sources that care. e.g. "ScanJet IIc".
(Read and Write property)

### 189.1.9 ProtocolMajor as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

**Function:** Major number of latest TWAIN version that this element supports.
**Notes:** (Read and Write property)

### 189.1.10 ProtocolMinor as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

**Function:** Minor number of latest TWAIN version that this element supports.
**Notes:** (Read and Write property)

### 189.1.11 SupportedGroups as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

**Function:** Supported grosups.
**Notes:**

The application will normally set this field to specify which Data Group(s) it wants the Source Manager to sort Sources by when presenting the Select Source dialog, or returning a list of available Sources. The application sets this prior to invoking a SelectDS operation.

- The application may also set this field to specify which Data Group(s) it wants the Source to be able to acquire and transfer. The application must do this prior to sending the Source its EnableDS operation.
- The Source must set this field to specify which Data Group(s) it can acquire. It will do this in response to a OpenDS.
- Beginning with TWAIN 2.0 the Source Manager reserves the most significant two byes in the SupportedGroups for the Data Flags (& h0001000 to & hFFFF0000).

DF_DSM2,Äì identifies the Source Manager as TWAIN 2.0 compliant DF_APP2 ,Äì is set by an Application that is TWAIN 2.0 compliant DF_DS2,Äì is set by a Source that is TWAIN 2.0 compliant
(Read and Write property)

### 189.1.12 Version as TwainVersionMBS

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

**Function:** The version information.
**Notes:** (Read and Write property)

## 189.2 class TwainImageInfoMBS

### 189.2.1 class TwainImageInfoMBS

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

**Function:** Describes the "real" image data, that is, the complete image being transferred between the Source and application.
**Notes:**

The Source may transfer the data in a different format–the information may be transferred in "strips" or "tiles" in either compressed or uncompressed form. See the TW_IMAGEMEMXFER structure for more information.
The term "sample" is referred to a number of times in this structure. It holds the same meaning as in the TIFF specification. A sample is a contiguous body of image data that can be categorized by the channel or "ink color" it was captured to describe. In an R-G-B (Red-Green-Blue) image, such as on your TV or computer's CRT, each color channel is composed of a specific color. There are 3 samples in an R-G-B; Red, Green, and Blue. A C-Y-M-K image has 4 samples. A Grayscale or Black and White image has a single sample.
Note: The value -1 in ImageWidth and ImageLength are special cases. It is possible for a Sourcetonot-knoweitheritsWidthorLength. Applicationsneedtoconsiderthiswhen allocating memory or otherwise dealing with the size of the Image.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 189.2.2 Methods

### 189.2.3 BitsPerSample(index as Integer) as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

**Function:** For each sample, the number of bits of information.
**Notes:**

24-bit R-G-B will typically have 8 bits of information in each sample (8+8+8). Some 8-bit color is sampled at 3 bits Red, 3 bits Green, and 2 bits Blue. Such a scheme would put 3, 3, and 2 into the first 3 elements of this array. The supplied array allows up to 8 samples. Samples are not limited to 8 bits. However, both the application and Source must simultaneously support sample sizes greater than 8 bits per color.

Index from 0 to 7.

### 189.2.4 Constructor

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

**Function:** The private constructor.

### 189.2.5 Properties

### 189.2.6 BitsPerPixel as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

**Function:** The number of bits in each image pixel (or bit depth).
**Notes:**

This value is invariant across the image. 24-bit R-G-B has BitsPerPixel = 24. 40-bit C-M-Y-K has BitsPerPixel=40. 8-bit Grayscale has BitsPerPixel = 8. Black and White has BitsPerPixel = 1.
(Read and Write property)

### 189.2.7 Compression as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

**Function:** The compression method used to process the data being transferred.
**Notes:**

Default is no compression.
(plugin currently only supports no compression)
(Read and Write property)

### 189.2.8 ImageLength as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

**Function:** How tall/long, in pixels, the image to be transferred is.
**Notes:**

If the Source doesn't know, set this field to -1 (hand scanners may do this).
-1 can only be used if the application has set ICAP_UNDEFINEDIMAGESIZE to TRUE.
(the plugin doesn't support undefined image size)
(Read and Write property)

### 189.2.9 ImageWidth as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

**Function:** How wide, in pixels, the entire image to be transferred is.
**Notes:**

If the Source doesn't know, set this field to -1 (hand scanners may do this).
-1 can only be used if the application has set ICAP_UNDEFINEDIMAGESIZE to TRUE.
(the plugin doesn't support undefined image size)
(Read and Write property)

### 189.2.10 PixelType as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

**Function:** This is the highest categorization for how the data being transferred should be interpreted by the application.
**Notes:**

This is how the application can tell if the data is Black and White, Grayscale, or Color. Currently, the only color type defined is "tri-stimulus", or color described by three characteristics. Most popular color description methods use tri- stimulus descriptors. For simplicity, the constant used to identify tri-stimulus color is called TWPT_RBG, for R-G-B color. There is no default for this value. Fill this field with the appropriate TWPT_xxxx constant.

The plugin does currently only support RGB, GRAY, BW and PALETTE.
(Read and Write property)

### 189.2.11 Planar as Boolean

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

**Function:** Whether image is planar.
**Notes:**

If SamplesPerPixel >1, indicates whether the samples follow one another on a pixel-by-pixel basis (R-G-B-R-G-B-R-G-B...) as is common with a one-pass scanner or all the pixels for each sample are grouped together (complete group of R, complete group of G, complete group of B) as is common with a three-pass scanner. If the pixel-by-pixel method (also known as "chunky") is used, the Source should set Planar = false. If the grouped method (also called "planar") is used, the Source should set Planar = true.
(Read and Write property)

### 189.2.12 RowBytes as Integer

MBS Picture Plugin, Plugin Version: 12.5, Platforms: macOS, Windows, Targets: All.

**Function:** The number of bytes in a row.
**Notes:**

This is not exactly the value as you may expect as Twain needs some rounding.
(Read and Write property)

### 189.2.13 SamplesPerPixel as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

**Function:** The number of samples being returned.
**Notes:**

For R-G-B, this field would be set to 3. For C-M-Y-K, 4. For Grayscale or Black and White, 1.
(Read and Write property)

### 189.2.14 XResolution as Double

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

**Function:** Horizontal resolution.
**Notes:**

In pixels per inch.
(Read and Write property)

### 189.2.15 YResolution as Double

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

**Function:** Vertical resolution.
**Notes:**

In pixels per inch.
(Read and Write property)

## 189.3 class TwainImageLayoutMBS

### 189.3.1 class TwainImageLayoutMBS

MBS Picture Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: All.

**Function:** The class for an image layout.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 189.3.2 Blog Entries

- MBS Real Studio Plugins, version 13.1pr4

### 189.3.3 Blog Entries

- MBS Real Studio Plugins, version 13.1pr4

### 189.3.4 Methods

### 189.3.5 Constructor

MBS Picture Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: All.

**Function:** The private constructor.

### 189.3.6 Properties

### 189.3.7 Bottom as Double

MBS Picture Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: All.

**Function:** The bottom coordinate of the item.
**Notes:** (Read and Write property)

### 189.3.8 DocumentNumber as Integer

MBS Picture Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: All.

**Function:** The document number.
**Notes:** (Read and Write property)

### 189.3.9 FrameNumber as Integer

MBS Picture Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: All.

**Function:** The frame number.
**Notes:** (Read and Write property)

### 189.3.10 Height as Double

MBS Picture Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: All.

**Function:** The height of the item.
**Notes:** (Read only property)

### 189.3.11 Left as Double

MBS Picture Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: All.

**Function:** The left coordinate of the item.
**Notes:** (Read and Write property)

### 189.3.12 PageNumber as Integer

MBS Picture Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: All.

**Function:** The page number.
**Notes:** (Read and Write property)

### 189.3.13 Right as Double

MBS Picture Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: All.

**Function:** The right coordinate of the item.
**Notes:** (Read and Write property)

### 189.3.14 Top as Double

MBS Picture Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: All.

**Function:** The top coordinate of the item.
**Notes:** (Read and Write property)

### 189.3.15 Width as Double

MBS Picture Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: All.

**Function:** The width of the item.
**Notes:** (Read only property)

## 189.4 class TwainMBS

### 189.4.1 class TwainMBS

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The plugin class for scanning with TWAIN compatible scanners.
**Notes:**

Use is like this:

- Declare subclass of TwainMBS so you can get events.
- Create new instance of your subclass and store object in some window/app/module property.
- For Windows call InstallEvent.
- To scan, call Acquire method.
- If driver runs synchronously, a modal window shows and you get back a picture object right away when scanning is done.
- If driver runs asynchronously, it shows a non modal window and you receive events.
- In TransferReady event you can call TransferImage method. In example a timer is triggered so this runs in the window.
- To cleanup, use DisableDS and CloseDS methods.
- We recommend only to have one instance of the TwainMBS object.

When Xojo or Xojo is used (32 bit), we can of course only see and use devices with 32 bit drivers.
Once Xojo will be ported to 64bit, we can only talk to 64bit drivers.

For 64-bit on Windows you can find 64-bit TwainDSM.dll here:
https://github.com/twain/twain-dsm

### 189.4.2 Blog Entries

### 189.4.4 Methods

### 189.4.5 Acquire(modal as boolean = false, showUI as boolean = true) as picture

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Acquires a new picture.
**Notes:**

Lasterror is set.
Plugin asks for asynchronously operation, so this function returns nil and success in lasterror.
If data source must be used with modal UI, this function returns with picture.

Modal can be true to ask for modal dialog. Seems to be only supported on Mac.

### 189.4.6 AllDevices as TwainIdentityMBS()

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Returns array with all devices.
**Example:**

```
dim twain as TwainMBS // your twain object
dim devices() as TwainIdentityMBS = twain.AllDevices
dim found as Boolean
dim NameToFind as string = "MyScanner123"

for each device as TwainIdentityMBS in devices

if device.ProductName = NameToFind then
found = true

// lets use this one
twain.SelectDS(device)

if twain.Lasterror <>0 then
MsgBox "Failed to select "+device.ProductName
else
'MsgBox "OK"
exit
end if
end if
next

if not found then
MsgBox "No scanner found named: "+NameToFind
end if
```

### 189.4.7 AppIdentity as TwainIdentityMBS

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Queries app identity.
**Notes:** That's the identity the plugin used to register with twain library.

### 189.4.8 CanBW as boolean

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Whether device supports black and white pixel type.
**Notes:** Lasterror is set.

### 189.4.9 CanGray as boolean

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Whether device supports gray pixel type.
**Notes:** Lasterror is set.

### 189.4.10 CanPalette as boolean

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Whether current device supports palette pixel type.
**Notes:** Lasterror is set.

### 189.4.11 CanRGB as boolean

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Whether current device supports RGB pixel type.
**Notes:** Lasterror is set.

### 189.4.12 CloseDS

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Close data source.
**Notes:** Lasterror is set.

### 189.4.13 CloseDSM

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Closes the data source manager.
**Notes:** Lasterror is set.

### 189.4.14 Constructor(Country as Integer, Language as Integer)

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Initializes Twain engine with given localization.
**Notes:** Lasterror is set.

### 189.4.15 DisableDS

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Diables data source.
**Notes:** Lasterror is set.

### 189.4.16 DontUnload

MBS Picture Plugin, Plugin Version: 12.5, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Informs the plugin to not unload the twain library.
**Notes:** This avoids a crash for some people.

### 189.4.17 DSIdentity as TwainIdentityMBS

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Queries the details on the data source.
**Notes:** Lasterror is set.

### 189.4.18 GetEnumerationCapability(ID as Integer, byref ItemType as Integer, byref Count as Integer, byref CurrentIndex as Integer, byref DefaultIndex as Integer) as Integer()

MBS Picture Plugin, Plugin Version: 15.0, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Queries an enum capability.
**Example:**

```
dim t as TwainMBS // your twain object

// check supported sizes

const ICAP_SUPPORTEDSIZES = &h1122
```

```
dim type5 as Integer
dim EnumCount as Integer = 0
dim EnumItemType as Integer = 0
dim EnumCurrentIndex as Integer = 0
dim EnumDefaultIndex as Integer = 0
dim EnumValues() as Integer = t.GetEnumerationCapability(ICAP_SUPPORTEDSIZES, EnumItemType,
EnumCount, EnumCurrentIndex, EnumDefaultIndex)
dim e5 as Integer = t.Lasterror
dim c5 as Integer = t.ConditionCode
```

**Notes:**

Please review Twain Documentation for details.
Please open data source before via OpenDS method.
This should work fine for all integer enum types like boolean, 8, 16 or 32 bit integers.
Sets lasterror and condition code.
(if lasterror is 1 and condition code is 13, the capability is not supported)

### 189.4.19 GetIntegerCapability(ID as Integer, byref Type as Integer) as Integer

MBS Picture Plugin, Plugin Version: 15.0, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Queries an integer capability.
**Example:**

```
dim t as TwainMBS // your twain object

t.OpenDS

if t.Lasterror <>0 then
MsgBox "Failed to open device: "+str(t.Lasterror)
Return
end if

const CAP_FEEDERENABLED = & h1002
const CAP_FEEDERLOADED = & h1003
const TWRC_FAILURE = 1
const TWCC_CAPUNSUPPORTED = 13

// query before
dim type1 as Integer
dim n1 as Integer = t.GetIntegerCapability(CAP_FEEDERENABLED, type1)
dim e1 as Integer = t.Lasterror
dim c1 as Integer = t.ConditionCode
```

```
// set on
t.SetBoolCapability CAP_FEEDERENABLED, true
dim e2 as Integer = t.Lasterror
dim c2 as Integer = t.ConditionCode

// query after
dim type3 as Integer
dim n3 as Integer = t.GetIntegerCapability(CAP_FEEDERENABLED, type3)
dim e3 as Integer = t.Lasterror
dim c3 as Integer = t.ConditionCode

// now query loaded?
dim type4 as Integer
dim n4 as Integer = t.GetIntegerCapability(CAP_FEEDERLOADED, type4)
dim e4 as Integer = t.Lasterror
dim c4 as Integer = t.ConditionCode

if e4 = TWRC_FAILURE AND c4 = TWCC_CAPUNSUPPORTED then
// not supported!
Break
end if
```

**Notes:**

Please review Twain Documentation for details.
Please open data source before via OpenDS method.
This should work fine for all integer types like boolean, 8, 16 or 32 bit integers.
Sets lasterror and condition code.
(if lasterror is 1 and condition code is 13, the capability is not supported)

### 189.4.20 ImageInfo as TwainImageInfoMBS

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Queries information about current image.
**Notes:** Lasterror is set.

### 189.4.21 IsDSEnabled as boolean

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Whether data source is enabled.

### 189.4.22 OpenDS

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Opens the data source.

### 189.4.23 OpenDSM

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Opens Data source Manager.
**Notes:** Lasterror is set.

### 189.4.24 ProcessEvents

MBS Picture Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop only.

**Function:** Process events in plugin.
**Notes:**

Only for Windows needed for some Twain drivers. You call it after you run Acquire to let the plugin wait for the events to start the transfer.
When transfer is ready or dialog is cancelled, this method ends.
On Mac OS X or Linux this method does nothing so it's no problem calling it.

### 189.4.25 SelectDS

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Queries dialog to ask the user to select a data source.
**Notes:** Lasterror is set.
See also:

- 189.4.26 SelectDS(device as TwainIdentityMBS) 26266

### 189.4.26 SelectDS(device as TwainIdentityMBS)

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Selects the given device without dialog.
**Example:**

```
dim twain as TwainMBS // your twain object
dim devices() as TwainIdentityMBS = twain.AllDevices
```

```
dim found as Boolean
dim NameToFind as string = "MyScanner123"

for each device as TwainIdentityMBS in devices

if device.ProductName = NameToFind then
found = true

// lets use this one
twain.SelectDS(device)

if twain.Lasterror <>0 then
MsgBox "Failed to select "+device.ProductName
else
'MsgBox "OK"
exit
end if
end if
next

if not found then
MsgBox "No scanner found named: "+NameToFind
end if
```

**Notes:** Lasterror is set.
See also:

- 189.4.25 SelectDS 26266

### 189.4.27 SetBoolCapability(ID as Integer, Value as Boolean)

MBS Picture Plugin, Plugin Version: 15.0, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Sets a capability with boolean.
**Example:**

```
dim t as TwainMBS // your twain object

t.OpenDS

if t.Lasterror <>0 then
MsgBox "Failed to open device: "+str(t.Lasterror)
Return
end if

const CAP_FEEDERENABLED = & h1002
```

```
const CAP_FEEDERLOADED = & h1003
const TWRC_FAILURE = 1
const TWCC_CAPUNSUPPORTED = 13

// query before
dim type1 as Integer
dim n1 as Integer = t.GetIntegerCapability(CAP_FEEDERENABLED, type1)
dim e1 as Integer = t.Lasterror
dim c1 as Integer = t.ConditionCode

// set on
t.SetBoolCapability CAP_FEEDERENABLED, true
dim e2 as Integer = t.Lasterror
dim c2 as Integer = t.ConditionCode

// query after
dim type3 as Integer
dim n3 as Integer = t.GetIntegerCapability(CAP_FEEDERENABLED, type3)
dim e3 as Integer = t.Lasterror
dim c3 as Integer = t.ConditionCode

// now query loaded?
dim type4 as Integer
dim n4 as Integer = t.GetIntegerCapability(CAP_FEEDERLOADED, type4)
dim e4 as Integer = t.Lasterror
dim c4 as Integer = t.ConditionCode

if e4 = TWRC_FAILURE AND c4 = TWCC_CAPUNSUPPORTED then
// not supported!
Break
end if
```

**Notes:**

Please review Twain Documentation for details.
Please open data source before via OpenDS method.
You may see problems if you use this method on a capability which is not a boolean.
Sets lasterror and condition code.
(if lasterror is 1 and condition code is 13, the capability is not supported)

### 189.4.28 SetFloatCapability(ID as Integer, Value as Double)

MBS Picture Plugin, Plugin Version: 15.0, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Sets a capability with floating point value.

**Notes:**

Please review Twain Documentation for details.
Please open data source before via OpenDS method.
You may see problems if you use this method on a capability which is not a floating point value (FIX32).
Sets lasterror and condition code.
(if lasterror is 1 and condition code is 13, the capability is not supported)

### 189.4.29 SetInt32Capability(ID as Integer, Value as Int32)

MBS Picture Plugin, Plugin Version: 15.0, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Sets a capability with 32 bit integer.
**Notes:**

Please review Twain Documentation for details.
Please open data source before via OpenDS method.
You may see problems if you use this method on a capability which is not a 32 bit integer.
Sets lasterror and condition code.
(if lasterror is 1 and condition code is 13, the capability is not supported)

### 189.4.30 SetUInt16Capability(ID as Integer, Value as UInt16)

MBS Picture Plugin, Plugin Version: 15.0, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Sets a capability with 16 bit integer.
**Notes:**

Please review Twain Documentation for details.
Please open data source before via OpenDS method.
You may see problems if you use this method on a capability which is not a 16 bit integer.
Sets lasterror and condition code.
(if lasterror is 1 and condition code is 13, the capability is not supported)

### 189.4.31 SupportsMemoryTransfer as boolean

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Whether the twain data source supports memory transfers.
**Notes:** As our plugin uses only memory transfers, the source must support this in order to work with our plugin.

### 189.4.32 TransferImage as picture

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Transfers an image.
**Notes:**

Lasterror is set.
Image data is converted to a normal RGB picture.
Can return nil on any error.
The events TransferStarted, TransferEnded and TransferProgress are called when a transfer is running.

### 189.4.33 Properties

### 189.4.34 AutoFeed as Integer

MBS Picture Plugin, Plugin Version: 13.0, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Whether plugin should auto feed (if feeder is enabled).
**Notes:**

Value is -1 if you didn't set it before.
This value is stored and next time you call Acquire the plugin will ask the scanner to enable/disable auto feed. If the scanner does not support auto feeding, the scanner will ignore this setting.
(Read and Write property)

### 189.4.35 AutomaticBorderDetection as Integer

MBS Picture Plugin, Plugin Version: 13.5, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Whether plugin should enable automatic border detection.
**Notes:**

Value is -1 if you didn't set it before.
This value is stored and next time you call Acquire the plugin will ask the scanner to enable/disable auto border detection. If the scanner does not support this feature, the scanner will ignore this setting.
0 = off, 1 = on, -1 = default/undefined.
(Read and Write property)

### 189.4.36 AutomaticBrightness as Integer

MBS Picture Plugin, Plugin Version: 13.5, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Enables or disables the Source's Auto-brightness function (if any).
**Notes:**

The plugin will apply this setting on the next scan.
Value is 0 to disable, 1 to enable or -1 if undefined/default.
(Read and Write property)

### 189.4.37 AutomaticRotate as Integer

MBS Picture Plugin, Plugin Version: 13.5, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Whether to enable automatic rotation when next scan starts.
**Notes:**

Value is -1 if you didn't set it before.
This value is stored and next time you call Acquire the plugin will ask the scanner to enable/disable automatic rotation. If the scanner does not support this feature, the scanner will ignore this setting.
(Read and Write property)

### 189.4.38 Brightness as Double

MBS Picture Plugin, Plugin Version: 13.5, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The brightness setting to use.
**Notes:**

The plugin will apply this setting on the next scan.
Source should normalize the values into the range. Make sure that a '0' value is available as the Current Value when the Source starts up. If the Source's ¬± range is asymmetric about the '0' value, set range maxima to ¬±1000 and scale homogeneously from the '0' value in each direction. This will yield a positive range whose step size differs from the negative range's step size.
Plugin uses value -10000 for undefined/default.
(Read and Write property)

### 189.4.39 ConditionCode as Integer

MBS Picture Plugin, Plugin Version: 14.2, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The condition code.
**Notes:**

If error code in Lasterror is 1, this Condition value is set.
(-1 if unknown)

Possible codes:

| | | |
|---|---|---|
| TWCC_SUCCESS | 0 | Success |
| TWCC_BUMMER | 1 | Failure due to unknown causes |
| TWCC_LOWMEMORY | 2 | Not enough memory to perform operation |
| TWCC_NODS | 3 | No Data Source |
| TWCC_MAXCONNECTIONS | 4 | DS is connected to max possible applications |
| TWCC_OPERATIONERROR | 5 | DS or DSM reported error, application shouldn't |
| TWCC_BADCAP | 6 | Unknown capability |
| TWCC_BADPROTOCOL | 9 | Unrecognized MSG DG DAT combination |
| TWCC_BADVALUE | 10 | Data parameter out of range |
| TWCC_SEQERROR | 11 | DG DAT MSG out of expected sequence |
| TWCC_BADDEST | 12 | Unknown destination Application/Source in DSM_Entry |
| TWCC_CAPUNSUPPORTED | 13 | Capability not supported by source |
| TWCC_CAPBADOPERATION | 14 | Operation not supported by capability |
| TWCC_CAPSEQERROR | 15 | Capability has dependancy on other capability |
| TWCC_DENIED | 16 | File System operation is denied (file is protected) |
| TWCC_FILEEXISTS | 17 | Operation failed because file already exists. |
| TWCC_FILENOTFOUND | 18 | File not found |
| TWCC_NOTEMPTY | 19 | Operation failed because directory is not empty |
| TWCC_PAPERJAM | 20 | The feeder is jammed |
| TWCC_PAPERDOUBLEFEED | 21 | The feeder detected multiple pages |
| TWCC_FILEWRITEERROR | 22 | Error writing the file (meant for things like disk full conditions) |
| TWCC_CHECKDEVICEONLINE | 23 | The device went offline prior to or during this operation |

(Read and Write property)

### 189.4.40 Contrast as Double

MBS Picture Plugin, Plugin Version: 13.5, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The contrast setting to use.
**Notes:**

The plugin will apply this setting on the next scan.
Scale the values available internally into a homogeneous range between -1000 and 1000. Make sure that a '0' value is available as the Current value when the Source starts up. If the Source's ¬± range is asymmetric about the '0' value, set range maxima to ¬±1000 and scale homogeneously from the '0' value in each direction. This will yield a positive range whose step size differs from the negative range's step size.
(Read and Write property)

### 189.4.41 DiscardBlankPages as Integer

MBS Picture Plugin, Plugin Version: 13.5, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Whether to have the scanner ask to discard blank pages.
**Notes:**

Value is -1 if you didn't set it before.
This value is stored and next time you call Acquire the plugin will ask the scanner to enable/disable blank pages discarding. If the scanner does not support this feature, the scanner will ignore this setting.
(Read and Write property)

### 189.4.42 Duplex as Integer

MBS Picture Plugin, Plugin Version: 13.3, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Whether to enable duplex when next scan starts.
**Notes:**

This value is stored and next time you call Acquire the plugin will ask the scanner to enable/disable duplex.
If the scanner does not support duplex, the scanner will ignore this setting.
Value is -1 if not set, 0 to disable and 1 to enable.
(Read and Write property)

### 189.4.43 FeederEnabled as Integer

MBS Picture Plugin, Plugin Version: 13.0, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Whether to enable feeder when next scan starts.
**Notes:**

This value is stored and next time you call Acquire the plugin will ask the scanner to enable/disable feeder.
If the scanner does not support the feeder, the scanner will ignore this setting.
Value is -1 if not set, 0 to disable and 1 to enable.
(Read and Write property)

### 189.4.44 Gamma as Double

MBS Picture Plugin, Plugin Version: 13.5, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Gamma correction value for the image data.
**Notes:**

The plugin will apply this setting on the next scan.
Default value 2.2. The setting is -10000 if not set.
(Read and Write property)

### 189.4.45 Highlight as Double

MBS Picture Plugin, Plugin Version: 13.5, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Specifies which value in an image should be interpreted as the lightest highlight.
**Notes:**

The plugin will apply this setting on the next scan.
All values lighter than this value will be clipped to this value. Whether lighter values are smaller or larger can be determined by examining the Current value of PixelFlavor.
If more or less than 8 bits are used to describe the image, the actual data values should be normalized to fit within the 0-255 range. The normalization need not result in a homogeneous distribution if the original distribution was not homogeneous.
Value can be between 0 and 255.

Value can be between 0 and 255.
Plugin uses value -10000 for undefined/default.
(Read and Write property)

### 189.4.46 Lasterror as Integer

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The last error code.
**Notes:** (Read and Write property)

### 189.4.47 Orientation as Integer

MBS Picture Plugin, Plugin Version: 13.0, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The orientation for the scanner.
**Notes:**

This value is stored and next time you call Acquire the plugin will ask the scanner to enable/disable feeder.
If the scanner does not support the feeder, the scanner will ignore this setting.

Value can be:

(Read and Write property)

| | |
|---|---|
| 0 | 0 degree |
| 1 | 90 degree |
| 2 | 180 degree |
| 3 | 270 degree |
| 0 | Portrait |
| 3 | Landscape |

### 189.4.48 Parent as Variant

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The parent window.
**Notes:**

Can reference a Window or DesktopWindow object.
(Read and Write property)

### 189.4.49 PendingTransferCount as Integer

MBS Picture Plugin, Plugin Version: 13.3, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** How many pages are pending.
**Notes:**

So when you transfer you can make a loop and run until PendingTransferCount is zero.
PendingTransferCount may be -1 or 65535 for unknown number of pages.
(Read and Write property)

### 189.4.50 PixelType as Integer

MBS Picture Plugin, Plugin Version: 13.5, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The pixel type requested.
**Notes:**

Value can be 0 for BW, 1 for Gray, 2 for RGB, 3 for Palette.
The plugin can request als CMY (4), CMYK (5), YUV (6), YUVK (7) and CIEXYZ (8), but can't currently decode those.

Value is -1 if you didn't set it before.
This value is stored and next time you call Acquire the plugin will ask the scanner to use the given pixel type. If the scanner does not support this feature, the scanner will ignore this setting.

(Read and Write property)

### 189.4.51 ProvideSliceData as Boolean

MBS Picture Plugin, Plugin Version: 12.5, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Whether to pass Memoryblock with data with Progress event for new rows arrived.
**Notes:** (Read and Write property)

### 189.4.52 ProvideSlicePicture as Boolean

MBS Picture Plugin, Plugin Version: 12.5, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Whether to pass picture with Progress event for new rows arrived.
**Notes:** (Read and Write property)

### 189.4.53 ResX as Double

MBS Picture Plugin, Plugin Version: 13.0, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The horizontal resolution for scanning.
**Notes:**

This value is stored and next time you call Acquire the plugin will ask the scanner to use this resolution. If the scanner does not support the resolution, the scanner will use the last valid setting.
Use -1 to use the default setting.
(Read and Write property)

### 189.4.54 ResY as Double

MBS Picture Plugin, Plugin Version: 13.0, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The vertical resolution for scanning.
**Notes:**

This value is stored and next time you call Acquire the plugin will ask the scanner to use this resolution. If the scanner does not support the resolution, the scanner will use the last valid setting.
Use -1 to use the default setting.
(Read and Write property)

### 189.4.55 Shadow as Double

MBS Picture Plugin, Plugin Version: 13.5, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Specifies which value in an image should be interpreted as the darkest shadow.
**Notes:**

The plugin will apply this setting on the next scan.
All values darker than this value will be clipped to this value.

Whether darker values are smaller or larger can be determined by examining the Current value of PixelFlavor.
Source

If more or less than 8 bits are used to describe the image, the actual data values should be normalized to fit within the 0-255 range. The normalization need not result in a homogeneous distribution if the original distribution was not homogeneous.
(Read and Write property)

### 189.4.56 DefaultDevice as TwainIdentityMBS

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The default device.
**Notes:** (Read and Write computed property)

### 189.4.57 Imagelayout as TwainImageLayoutMBS

MBS Picture Plugin, Plugin Version: 15.0, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Get/Set the image layout.
**Notes:**

Lasterror is set. DataSource must be open.
(Read and Write computed property)

### 189.4.58 Events

### 189.4.59 CloseRequest

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: .

**Function:** Closes a request.
**Notes:** Lasterror is set.

### 189.4.60 TransferEnded(pic as picture, ImageInfo as TwainImageInfoMBS, sliced as boolean, layout as TwainImageLayoutMBS)

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: .

**Function:** The transfer finished.
**Notes:**

Pic: The final picture. Nil if sliced is true.
ImageInfo: Details about the image format.
Sliced: Whether the image was transferred in slices.

### 189.4.61 TransferProgress(percent as Double, dataRead as Int64, DataSize as Int64, ImageInfo as TwainImageInfoMBS, NewDataSize as Integer, NewData as Memoryblock, NewPicture as Picture, layout as TwainImageLayoutMBS, Columns as Integer, Rows as Integer, XOffset as Integer, YOffset as Integer)

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: .

**Function:** The progress event.
**Notes:**

Percent: The percent value (0 to 100) of the progress.
dataRead: Number of bytes read.
DataSize: Total size of image in bytes.
ImageInfo: Details about the image format.
NewDataSize: The number of bytes received.
NewData: The memoryblock for the new data. Use NewDataSize to copy right amount of data as this memoryblock has no size value set.
NewPicture: The picture for the new data.
Layout: The image layout.
Columns: Number of columns got in this slice.
Rows: Number of rows got in this slice.
XOffset: Column start for this slice.
YOffset: Row start for this slice.

NewData is only valid if you set ProvideSliceData to true.
NewPicture is only valid if you set ProvideSlicePicture to true.

### 189.4.62 TransferReady

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: .

**Function:** Called to tell you that a transfer is waiting.
**Notes:**

The user pressed button to start scan.
Please call TransferImage method when you are ready.

### 189.4.63 TransferStarted(DataSize as Int64, ImageInfo as TwainImageInfoMBS, layout as TwainImageLayoutMBS) as boolean

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: .

**Function:** A transfer started.
**Notes:**

DataSize total numnber of bytes expected.
ImageInfo: details on the image we receive.

You can return true to have the plugin not created one big picture.
A 42 inch scanner normally creates huge images, so you only can process them in slices.

### 189.4.64 Constants

### 189.4.65 TWCY_AFGHANISTAN = 1001

MBS Picture Plugin, Plugin Version: 12.2.

**Function:** One of the country codes.

**Function:** One of the language codes.

### 189.4.429 TWLG_URDU = 112

MBS Picture Plugin, Plugin Version: 12.2.

**Function:** One of the language codes.

### 189.4.430 TWLG_USA = 13

MBS Picture Plugin, Plugin Version: 12.2.

**Function:** One of the language codes.

### 189.4.431 TWLG_USERLOCALE = -1

MBS Picture Plugin, Plugin Version: 12.2.

**Function:** One of the language codes.

### 189.4.432 TWLG_VIETNAMESE = 113

MBS Picture Plugin, Plugin Version: 12.2.

**Function:** One of the language codes.

### 189.4.433 TWPT_BW = 0

MBS Picture Plugin, Plugin Version: 12.2.

**Function:** One of the pixel format constants.
**Notes:** Black & White

### 189.4.434 TWPT_CIEXYZ = 8

MBS Picture Plugin, Plugin Version: 12.2.

**Function:** One of the pixel format constants.
**Notes:** CIEXYZ

### 189.4.435 TWPT_CMY = 4

MBS Picture Plugin, Plugin Version: 12.2.

**Function:** One of the pixel format constants.
**Notes:** CMY

### 189.4.436 TWPT_CMYK = 5

MBS Picture Plugin, Plugin Version: 12.2.

**Function:** One of the pixel format constants.
**Notes:** CMYK

### 189.4.437 TWPT_GRAY = 1

MBS Picture Plugin, Plugin Version: 12.2.

**Function:** One of the pixel format constants.
**Notes:** Grayscale

### 189.4.438 TWPT_PALETTE = 3

MBS Picture Plugin, Plugin Version: 12.2.

**Function:** One of the pixel format constants.
**Notes:** Indexed color Palette

### 189.4.439 TWPT_RGB = 2

MBS Picture Plugin, Plugin Version: 12.2.

**Function:** One of the pixel format constants.
**Notes:** RGB

### 189.4.440 TWPT_YUV = 6

MBS Picture Plugin, Plugin Version: 12.2.

**Function:** One of the pixel format constants.
**Notes:** YUV

### 189.4.441 TWPT_YUVK = 7

MBS Picture Plugin, Plugin Version: 12.2.

**Function:** One of the pixel format constants.
**Notes:** YUVK

### 189.4.442 TWRC_CANCEL = 3

MBS Picture Plugin, Plugin Version: 12.2.

**Function:** One of the error codes.
**Notes:** Operation has been canceled.

### 189.4.443 TWRC_CHECKSTATUS = 2

MBS Picture Plugin, Plugin Version: 12.2.

**Function:** One of the error codes.
**Notes:**

Intended for use with Capability and ImageLayout. Operation failed to completely perform the desired operation. For example, setting Brightness to 3 when its range is -1000 to 1000 with a step of 200. The data source may opt to set the value to 0 and return this status.
The application should confirm its last setting, if it depends on getting the exact value it requested.

### 189.4.444 TWRC_DATANOTAVAILABLE = 9

MBS Picture Plugin, Plugin Version: 12.2.

**Function:** One of the error codes.
**Notes:**

Intended for use with extended ImageInfo. There is no data available for the requested item.
Scanning may continue. The decision to continue with scanning is at the discretion of the application, depending on which field reported this status.

### 189.4.445 TWRC_DSEVENT = 4

MBS Picture Plugin, Plugin Version: 12.2.

**Function:** One of the error codes.
**Notes:**

Intended for use with DAT_EVENT. The data source processed the event.
The application must not take any further action on this message.

### 189.4.446 TWRC_ENDOFLIST = 7

MBS Picture Plugin, Plugin Version: 12.2.

**Function:** One of the error codes.
**Notes:**

Intended for use with DAT_IDENTITY and DAT_FILESYSTEM.
There are no more items to enumerate in this list. If a call is needed to close the list, it must be called next.

### 189.4.447 TWRC_FAILURE = 1

MBS Picture Plugin, Plugin Version: 12.2.

**Function:** One of the error codes.
**Notes:**

May be returned by any operation. An error has occurred.
The application must call status functions, and refer to the condition code for more information.

### 189.4.448 TWRC_INFONOTSUPPORTED = 8

MBS Picture Plugin, Plugin Version: 12.2.

**Function:** One of the error codes.
**Notes:**

Intended for use with DAT_EXTIMAGEINFO. The requested TWEI_ data is either not supported by this data source, or is not supported for this particular image.
Scanning may continue. The decision to continue with scanning is at the discretion of the application, depending on which field reported this status.

### 189.4.449 TWRC_NOTDSEVENT = 5

MBS Picture Plugin, Plugin Version: 12.2.

**Function:** One of the error codes.
**Notes:**

Intended for use with DAT_EVENT. The data source did not process the event.
The application passes the message to its own dialogs.

### 189.4.450 TWRC_SUCCESS = 0

MBS Picture Plugin, Plugin Version: 12.2.

**Function:** One of the error codes.
**Notes:**

Operation was successful.
The application continues as normal.

### 189.4.451 TWRC_XFERDONE = 6

MBS Picture Plugin, Plugin Version: 12.2.

**Function:** One of the error codes.
**Notes:**

Intended for use with the Image Transfer operations. The image has been fully transferred.
The application must be in state 7. It should call GetImageInfo, if it needs to collect metadata for this image.

## 189.5 class TwainVersionMBS

### 189.5.1 class TwainVersionMBS

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

**Function:** The class for version details.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 189.5.2 Methods

### 189.5.3 Constructor

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

**Function:** The private constructor.

### 189.5.4 Properties

### 189.5.5 Country as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

**Function:** The primary country where your Source or application is intended to be distributed.
**Notes:**

e.g. Germany.
(Read and Write property)

### 189.5.6 Info as String

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

**Function:** General information string - fill in as needed.
**Notes:**

e.g. "1.0b3 Beta release".
(Read and Write property)

### 189.5.7 Language as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

**Function:** The primary language for your Source or application.
**Notes:**

e.g. TWLG_GER.
(Read and Write property)

### 189.5.8 MajorNum as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

**Function:** This refers to your application or Source's major revision number.
**Notes:**

e.g. The 2 in "version 2.1".
(Read and Write property)

### 189.5.9 MinorNum as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

**Function:** The incremental revision number of your application or Source.
**Notes:**

e.g. The 1 in "version 2.1".
(Read and Write property)

# Chapter 190

# USB

## 190.1 class HIDAPIDeviceInfoMBS

### 190.1.1 class HIDAPIDeviceInfoMBS

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The class for device information.

### 190.1.2 Properties

### 190.1.3 InterfaceNumber as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The USB interface which this logical device represents.
**Notes:**

Valid on both Linux implementations in all cases, and valid on the Windows implementation only if the device contains more than one interface.
(Read only property)

### 190.1.4 ManufacturerString as String

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Manufacturer String.
**Notes:** (Read only property)

### 190.1.5 NextDevice as HIDAPIDeviceInfoMBS

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Next device.
**Notes:** (Read only property)

### 190.1.6 Path as String

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Platform-specific device path.
**Notes:** (Read only property)

### 190.1.7 ProductID as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Device Product ID.
**Notes:** (Read only property)

### 190.1.8 ProductString as String

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Product string.
**Notes:** (Read only property)

### 190.1.9 ReleaseNumber as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Device Release Number in binary-coded decimal, also known as Device Version Number.
**Notes:** (Read only property)

### 190.1.10 SerialNumber as String

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Serial Number.
**Notes:** (Read only property)

### 190.1.11 Usage as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Usage for this Device/Interface.
**Notes:** (Read only property)

### 190.1.12 UsagePage as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Usage Page for this Device/Interface.
**Notes:** (Read only property)

### 190.1.13 VendorID as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Device Vendor ID.
**Notes:** (Read only property)

## 190.2 class HIDAPIDeviceMBS

### 190.2.1 class HIDAPIDeviceMBS

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The class for a HIDAPI device.
**Notes:**

For HIDAPI see website:
https://github.com/signal11/hidapi

The MBS Plugin includes a copy of hidapi for Mac, Windows and Linux.
The linux version needs libudev installed.

You can optionally load a different version of hidapi with LoadLibrary methods.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 190.2.2 Blog Entries

- MBS Xojo Plugins, version 21.2pr3
- MBS Xojo Plugins, version 19.1pr2
- MBS Xojo / Real Studio Plugins, version 16.1pr3

### 190.2.3 Blog Entries

- MBS Xojo Plugins, version 21.2pr3
- MBS Xojo Plugins, version 19.1pr2
- MBS Xojo / Real Studio Plugins, version 16.1pr3

### 190.2.4 Methods

### 190.2.5 Close

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Close a HID device.

### 190.2.6 Constructor

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The private constructor.

### 190.2.7 Enumerate(VendorID as Integer = 0, ProduceID as Integer = 0) as HIDAPIDeviceInfoMBS

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Enumerate the HID Devices.
**Notes:** This function returns a linked list of all the HID devices attached to the system which match VendorID and ProduceID. If VendorID is set to 0 then any vendor matches. If ProduceID is set to 0 then any product matches. If VendorID and ProduceID are both set to 0, then all HID devices will be returned.

### 190.2.8 GetFeatureReport(ReportID as Integer, MaxLength as Integer) as MemoryBlock

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Get a feature report from a HID device.
**Notes:**

Set the first byte of Data to the Report ID of the report to be read. Make sure to allow space for this extra byte in data. Upon return, the first byte will still contain the Report ID, and the report data will start in data.UInt8(1).

ReportID: The report ID to read.

This function returns the number of bytes read plus one for the report ID (which is still in the first byte), or -1 on error.

### 190.2.9 GetInputReport(ReportID as Integer, MaxLength as Integer) as MemoryBlock

MBS USB Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Get a input report from a HID device.
**Notes:**

MaxLength is how many bytes we allocate for receiving buffer.

Returns the data read, which has the report ID as first byte.

### 190.2.10 IndexedString(Index as Integer, MaxLen as Integer = 1024) as String

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Get a string from a HID device, based on its string index.
**Notes:**

Index: The index of the string to get.
maxlen: The maximum length for read buffer.
Returns text read.

### 190.2.11 Init as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Initialize the HIDAPI library.
**Notes:**

This function initializes the HIDAPI library. Calling it is not strictly necessary, as it will be called automatically by Enumerate() and any of the Open*() functions if it is needed. This function should be called at the beginning of execution however, if there is a chance of HIDAPI handles being opened by different threads simultaneously.
This function returns 0 on success and -1 on error.

### 190.2.12 LoadError as String

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The load error message.

### 190.2.13 LoadLibrary(File as FolderItem) as boolean

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Loads the library.
**Notes:**

Returns true on success.
You can load a custom libhidapi.dylib (Mac), libhidapi.so (Linux) or libhidapi.dll (Windows).

But since MBS Plugin contains the code, you may not need to load a custom library.
See also:

- 190.2.14 LoadLibrary(Path as string) as boolean 26355

### 190.2.14 LoadLibrary(Path as string) as boolean

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Loads the library.
**Notes:**

Returns true on success.
You can load a custom libhidapi.dylib (Mac), libhidapi.so (Linux) or libhidapi.dll (Windows).

But since MBS Plugin contains the code, you may not need to load a custom library.
See also:

- 190.2.13 LoadLibrary(File as FolderItem) as boolean 26355

### 190.2.15 Open(VendorID as Integer, ProduceID as Integer, SerialNumber as String = "") as HIDAPIDeviceMBS

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Open a HID device using a Vendor ID (VID), Product ID (PID) and optionally a serial number.
**Notes:**

If SerialNumber is "", the first device with the specified VID and PID is opened.
VendorID: The Vendor ID (VID) of the device to open.
ProduceID: The Product ID (PID) of the device to open.
SerialNumber: The Serial Number of the device to open (Optionally "").

This function returns a pointer to a HIDAPIDeviceMBS object on success or nil on failure.

### 190.2.16 OpenPath(path as string) as HIDAPIDeviceMBS

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Open a HID device by its path name.
**Notes:**

The path name be determined by calling Enumerate(), or a platform-specific path name can be used (eg: /dev/hidraw0 on Linux).
Path: The path name of the device to open
This function returns a pointer to a HIDAPIDeviceMBS object on success or nil on failure.

### 190.2.17 Read(MaxLength as Integer) as MemoryBlock

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Read an Input report from a HID device.
**Notes:**

Input reports are returned to the host through the INTERRUPT IN endpoint. The first byte will contain the Report number if the device uses numbered reports.

MaxLength: The number of bytes to read. For devices with multiple reports, make sure to read an extra byte for the report number.

This function returns the actual number of bytes read and -1 on error. If no packet was available to be read and the handle is in non-blocking mode, this function returns 0.

### 190.2.18 ReadTimeOut(MaxLength as Integer, TimeoutMS as Integer) as MemoryBlock

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Read an Input report from a HID device with timeout.
**Notes:**

Input reports are returned to the host through the INTERRUPT IN endpoint. The first byte will contain the Report number if the device uses numbered reports.

MaxLength: The number of bytes to read. For devices with multiple reports, make sure to read an extra byte for the report number.

TimeoutMS: timeout in milliseconds or -1 for blocking wait.

This function returns the actual number of bytes read and -1 on error. If no packet was available to be read within the timeout period, this function returns 0.

### 190.2.19 SendFeatureReport(data as MemoryBlock) as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Send a Feature report to the device.
**Notes:**

Feature reports are sent over the Control endpoint as a Set_Report transfer. The first byte of Data must contain the Report ID. For devices which only support a single report, this must be set to 0. The remaining bytes contain the report data. Since the Report ID is mandatory, calls to SendFeatureReport() will always contain one more byte than the report contains. For example, if a hid report is 16 bytes long, 17 bytes must be passed to SendFeatureReport(): the Report ID (or 0, for devices which do not use numbered reports), followed by the report data (16 bytes). In this example, the length passed in would be 17.

dat:a The data to send, including the report number as the first byte.

This function returns the actual number of bytes written and -1 on error.
See also:

- 190.2.20 SendFeatureReport(data as String) as Integer 26357

### 190.2.20 SendFeatureReport(data as String) as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Send a Feature report to the device.
**Notes:**

Feature reports are sent over the Control endpoint as a Set_Report transfer. The first byte of Data must contain the Report ID. For devices which only support a single report, this must be set to 0. The remaining bytes contain the report data. Since the Report ID is mandatory, calls to SendFeatureReport() will always contain one more byte than the report contains. For example, if a hid report is 16 bytes long, 17 bytes must

be passed to SendFeatureReport(): the Report ID (or 0, for devices which do not use numbered reports), followed by the report data (16 bytes). In this example, the length passed in would be 17.

dat:a The data to send, including the report number as the first byte.

This function returns the actual number of bytes written and -1 on error.
See also:

- 190.2.19 SendFeatureReport(data as MemoryBlock) as Integer 26357

### 190.2.21 Shutdown as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Finalize the HIDAPI library.
**Notes:**

This function frees all of the static data associated with HIDAPI. It should be called at the end of execution to avoid memory leaks.
This function returns 0 on success and -1 on error.

### 190.2.22 VersionString as String

MBS USB Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Queries version number of the library.
**Example:**

```
// shows 0.10.1
MsgBox HIDAPIDeviceMBS.VersionString
```

### 190.2.23 Write(data as MemoryBlock) as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Write an Output report to a HID device.
**Notes:**

The first byte of data must contain the Report ID. For devices which only support a single report, this must be set to 0x0. The remaining bytes contain the report data. Since the Report ID is mandatory, calls to

Write() will always contain one more byte than the report contains. For example, if a hid report is 16 bytes long, 17 bytes must be passed to Write(), the Report ID (or 0x0, for devices with a single report), followed by the report data (16 bytes). In this example, the length passed in would be 17.
Write() will send the data on the first OUT endpoint, if one exists. If it does not, it will send the data through the Control Endpoint (Endpoint 0).

data: The data to send, including the report number as the first byte.

This function returns the actual number of bytes written and -1 on error.
Length of data to send is data.size.
See also:

- 190.2.24 Write(data as String) as Integer 26359

### 190.2.24 Write(data as String) as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Write an Output report to a HID device.
**Notes:**

The first byte of data must contain the Report ID. For devices which only support a single report, this must be set to 0x0. The remaining bytes contain the report data. Since the Report ID is mandatory, calls to Write() will always contain one more byte than the report contains. For example, if a hid report is 16 bytes long, 17 bytes must be passed to Write(), the Report ID (or 0x0, for devices with a single report), followed by the report data (16 bytes). In this example, the length passed in would be 17.
Write() will send the data on the first OUT endpoint, if one exists. If it does not, it will send the data through the Control Endpoint (Endpoint 0).

data: The data to send, including the report number as the first byte.

This function returns the actual number of bytes written and -1 on error.
Length of data to send is LenB(data).
See also:

- 190.2.23 Write(data as MemoryBlock) as Integer 26358

### 190.2.25 Properties

### 190.2.26 DeviceHandle as Integer

MBS USB Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The device handle used.
**Notes:**

For Windows a HANDLE to the open device, for Mac a IOHIDDeviceRef reference and Linux the handle from open function.
(Read only property)

### 190.2.27 Error as String

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Get a string describing the last error which occurred.
**Notes:**

This function returns a string containing the last error which occurred or "" if none has occurred.
(Read only property)

### 190.2.28 FeatureReportLength as Integer

MBS USB Plugin, Plugin Version: 16.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** The length of a feature report.
**Notes:**

Not implemented for Linux.
Returns -1 if unknown.
On Mac this is more the maximum report length.
(Read only property)

### 190.2.29 Handle as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The internal object reference.
**Notes:** (Read only property)

### 190.2.30 InputReportLength as Integer

MBS USB Plugin, Plugin Version: 16.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** The length of an input report.
**Notes:**

Not implemented for Linux.
Returns -1 if unknown.
On Mac this is more the maximum report length.
(Read only property)

### 190.2.31 ManufacturerString as String

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The Manufacturer String from a HID device.
**Notes:** (Read only property)

### 190.2.32 NonBlocking as Boolean

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Set the device handle to be non-blocking.
**Notes:**

In non-blocking mode calls to Read() will return immediately with a value of 0 if there is no data to be read.
In blocking mode, Read() will wait (block) until there is data to read before returning.
Nonblocking can be turned on and off at any time.

Value true: enable or not the nonblocking reads.
Value false: to disable nonblocking.
(Read and Write property)

### 190.2.33 OutputReportLength as Integer

MBS USB Plugin, Plugin Version: 16.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** The length of an output report.
**Notes:**

Not implemented for Linux.
Returns -1 if unknown.
On Mac this is more the maximum report length.
(Read only property)

### 190.2.34 ProductString as String

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The Product String from a HID device.
**Notes:** (Read only property)

### 190.2.35 SerialNumber as String

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The Serial Number String from a HID device.
**Notes:** (Read only property)

## 190.3 class LibUSBConfigDescriptorMBS

### 190.3.1 class LibUSBConfigDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** A class representing the standard USB configuration descriptor.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 190.3.2 Methods

### 190.3.3 Constructor

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The private constructor.

### 190.3.4 GetInterface(index as Integer) as LibUSBInterfaceMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Queries interface by index.

### 190.3.5 Properties

### 190.3.6 AttributesBitmap as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Configuration characteristics.
**Notes:** (Read only property)

### 190.3.7 Configuration as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Index of string descriptor describing this configuration.
**Notes:** (Read only property)

### 190.3.8 ConfigurationValue as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Identifier value for this configuration.
**Notes:** (Read only property)

### 190.3.9 DescriptorType as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Descriptor type.
**Notes:** (Read only property)

### 190.3.10 extra as MemoryBlock

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Extra descriptors.
**Notes:** (Read only property)

### 190.3.11 extraLength as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Length of the extra descriptors, in bytes.
**Notes:** (Read only property)

### 190.3.12 InterfaceDescriptors as Variant

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Array of interfaces supported by this configuration.
**Notes:** (Read only property)

### 190.3.13 Length as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Size of this descriptor (in bytes)
**Notes:** (Read only property)

### 190.3.14 MaxPower as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Maximum power consumption of the USB device from this bus in this configuration when the device is fully opreation.
**Notes:**

Expressed in units of 2 mA when the device is operating in high-speed mode and in units of 8 mA when the device is operating in super-speed mode.
(Read only property)

### 190.3.15 NumInterfaces as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Number of interfaces supported by this configuration.
**Notes:** (Read only property)

### 190.3.16 TotalLength as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Total length of data returned for this configuration.
**Notes:** (Read only property)

## 190.4 class LibUSBDeviceDescriptorMBS

### 190.4.1 class LibUSBDeviceDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** A class representing the standard USB device descriptor.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 190.4.2 Methods

### 190.4.3 Constructor

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The private constructor.

### 190.4.4 Properties

### 190.4.5 DescriptorType as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Descriptor type.
**Notes:** (Read only property)

### 190.4.6 DeviceClass as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** USB-IF class code for the device.
**Notes:** (Read only property)

### 190.4.7 DeviceProtocol as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** USB-IF protocol code for the device, qualified by the DeviceClass and DeviceSubClass values.
**Notes:** (Read only property)

### 190.4.8 DeviceReleaseNumber as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Device release number in binary-coded decimal.
**Notes:** (Read only property)

### 190.4.9 DeviceSubClass as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** USB-IF subclass code for the device, qualified by the DeviceClass value.
**Notes:** (Read only property)

### 190.4.10 IndexManufacturer as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Index of string descriptor describing manufacturer.
**Notes:** (Read only property)

### 190.4.11 IndexProduct as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Index of string descriptor describing product.
**Notes:** (Read only property)

### 190.4.12 IndexSerialNumber as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Index of string descriptor containing device serial number.
**Notes:** (Read only property)

### 190.4.13 Length as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Size of this descriptor (in bytes).
**Notes:** (Read only property)

### 190.4.14 MaxPacketSize0 as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Maximum packet size for endpoint 0.
**Notes:** (Read only property)

### 190.4.15 NumConfigurations as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Number of possible configurations.
**Notes:** (Read only property)

### 190.4.16 ProductID as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** USB-IF product ID.
**Notes:** (Read only property)

### 190.4.17 USBReleaseNumber as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** USB specification release number in binary-coded decimal.
**Notes:** (Read only property)

### 190.4.18 VendorID as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** USB-IF vendor ID.
**Notes:** (Read only property)

### 190.4.19 Constants

### 190.4.20 kClassApplication = & hfe

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the USB class constants.
**Notes:** Application

### 190.4.21 kClassAudio = 1

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the USB class constants.
**Notes:** Audio

### 190.4.22 kClassComm = 2

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the USB class constants.
**Notes:** Comm

### 190.4.23 kClassContentSecurity = 13

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the USB class constants.
**Notes:** Security

### 190.4.24 kClassData = 10

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the USB class constants.
**Notes:** Data

### 190.4.25 kClassDiagnosticDevice = & hdc

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the USB class constants.
**Notes:** Diagnostic Device

### 190.4.26 kClassHID = 3

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the USB class constants.
**Notes:** HID

### 190.4.27 kClassHUB = 9

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the USB class constants.
**Notes:** HUB

### 190.4.28 kClassImage = 6

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the USB class constants.
**Notes:** Image

### 190.4.29 kClassMassStorage = 8

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the USB class constants.
**Notes:** Storage

### 190.4.30 kClassPerInterface = 0

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the USB class constants.
**Notes:** Classes per Interface

### 190.4.31 kClassPersonalHealthcare = 15

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the USB class constants.
**Notes:** Personal Healthcare

### 190.4.32 kClassPhysical = 5

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the USB class constants.
**Notes:** Physical

### 190.4.33 kClassPrinter = 7

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the USB class constants.
**Notes:** Printer

### 190.4.34 kClassPTP = 6

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the USB class constants.
**Notes:** PTP

### 190.4.35 kClassSmartCard = 11

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the USB class constants.
**Notes:** SmartCard

### 190.4.36 kClassVendorSpecific = 255

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the USB class constants.
**Notes:** Vendor Specific

### 190.4.37 kClassVideo = 14

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the USB class constants.
**Notes:** Video

### 190.4.38 kClassWireless = & he0

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the USB class constants.
**Notes:** Wireless

## 190.5 class LibUSBDeviceMBS

### 190.5.1 class LibUSBDeviceMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The class for a device.
**Notes:**

This is both for a device as general and an open connection.

LibUSB abstracts on Mac, Windows and Linux for using USB devices. SO far it's the best generic USB interface we have.
You need libUSB dylib (mac), dll (Windows) and so (Linux) files from LibUSB. For Linux the LibUSB library is usually preinstalled with a LibUSB package, so the plugin finds it automatically.

For MacOS you can take a look on the MacUSBDeviceMBS class and the IORegistryMBS class.
See also WindowsDeviceMBS, WinUSBDeviceMBS and WinUSBMBS classes for WIndows.

### 190.5.5 Videos

- Presentation from Munich conference about MBS Plugins.

### 190.5.6 Methods

### 190.5.7 AttachKernelDriver(interfaceNumber as Integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Re-attach an interface's kernel driver, which was previously detached using libusb_detach_kernel_driver().
**Notes:**

This call is only effective on Linux and returns kErrorNotSupported on all other platforms.

This functionality is not available on Darwin or Windows.

Parameters:
interfaceNumber: the interface to attach the driver from

Lasterror is set:
0 on success
kErrorNotFound if no kernel driver was active
kErrorInvalidParam if the interface does not exist
kErrorNoDevice if the device has been disconnected
kErrorNotSupported on platforms where the functionality is not available
kErrorBusy if the driver cannot be attached because the interface is claimed by a program or driver
another error code on other failure

### 190.5.8 BulkTransfer(endpoint as Integer, data as Ptr, Length as Integer, byref ActualLength as Integer, Timeout as Integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Perform a USB bulk transfer.
**Notes:**

The direction of the transfer is inferred from the direction bits of the endpoint address.

For bulk reads, the length field indicates the maximum length of data you are expecting to receive. If less data arrives than expected, this function will return that data, so be sure to check the transferred output parameter.

You should also check the transferred parameter for bulk writes. Not all of the data may have been written.

Also check transferred when dealing with a timeout error code. libusb may have to split your transfer into a number of chunks to satisfy underlying O/S requirements, meaning that the timeout may expire after the first few chunks have completed. libusb is careful not to lose any data that may have been transferred; do not assume that timeout conditions indicate a complete lack of I/O.

Parameters:

| | |
|---|---|
| endpoint | the address of a valid endpoint to communicate with |
| data | a suitably-sized data buffer for either input or output (depending on endpoint) |
| length | for bulk writes, the number of bytes from data to be sent. for bulk reads, the maximum number of bytes to receive into the data buffer. |
| transferred | output location for the number of bytes actually transferred. |
| timeout | timeout (in millseconds) that this function should wait before giving up due to no response being received. For an unlimited timeout, use value 0. |

Lasterror is set to:
0 on success (and populates transferred)
kErrorTimeout if the transfer timed out (and populates transferred)
kErrorPipe if the endpoint halted
kErrorOverflow if the device offered more data, see Packets and overflows
kErrorNoDevice if the device has been disconnected
another error code on other failures

### 190.5.9 ClaimInterface(interfaceNumber as Integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Claim an interface on a given device handle.
**Notes:**

You must claim the interface you wish to use before you can perform I/O on any of its endpoints.

It is legal to attempt to claim an already-claimed interface, in which case libusb just returns 0 without doing anything.

Claiming of interfaces is a purely logical operation; it does not cause any requests to be sent over the bus. Interface claiming is used to instruct the underlying operating system that your application wishes to take ownership of the interface.

This is a non-blocking function.

Parameters:
interfaceNumber: the bInterfaceNumber of the interface you wish to claim

Lasterror is set:
0 on success
kErrorNotFound if the requested interface does not exist
kErrorBusy if another program or driver has claimed the interface
kErrorNoDevice if the device has been disconnected
a error code on other failure

### 190.5.10 ClearHalt(endpoint as Integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Clear the halt/stall condition for an endpoint.
**Notes:**

Endpoints with halt status are unable to receive or transmit data until the halt condition is stalled.

You should cancel all pending transfers before attempting to clear the halt condition.

This is a blocking function.

Parameters:
endpoint: the endpoint to clear halt status

Returns:
0 on success
kErrorNotFound if the endpoint does not exist
kErrorNoDevice if the device has been disconnected
another error code on other failure

### 190.5.11 Close

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Close a device handle.
**Notes:**

Should be called on all open handles before your application exits.

Internally, this function destroys the reference that was added by Open on the given device.
This is a non-blocking function; no requests are sent over the bus.

### 190.5.12 ControlTransfer(requestType as Integer, Request as Integer, Value as Integer, Index as Integer, data as Ptr, Length as Integer, Timeout as Integer) as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Perform a USB control transfer.
**Notes:**

The direction of the transfer is inferred from the RequestType field of the setup packet.

The Value, Index and Length fields values should be given in host-endian byte order.

Parameters:

| | |
|---|---|
| RequestType | the request type field for the setup packet |
| Request | the request field for the setup packet |
| Value | the value field for the setup packet |
| Index | the index field for the setup packet |
| data | a suitably-sized data buffer for either input or output (depending on direction bits within bmRequestType) |
| Length | the length field for the setup packet. The data buffer should be at least this size. |
| timeout | timeout (in millseconds) that this function should wait before giving up due to no response being received. For an unlimited timeout, use value 0. |

on success, the number of bytes actually transferred is returned.

Lasterror is set to:
kErrorTimeout if the transfer timed out
kErrorPipe if the control request was not supported by the device
kErrorNoDevice if the device has been disconnected
another error code on other failures

### 190.5.13 DetachKernelDriver(interfaceNumber as Integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Detach a kernel driver from an interface.
**Notes:**

If successful, you will then be able to claim the interface and perform I/O.
This functionality is not available on Darwin or Windows.

Parameters:
interfaceNumber: the interface to detach the driver from

Lasterror is set:
0 on success
kErrorNotFound if no kernel driver was active
kErrorInvalidParam if the interface does not exist
kErrorNoDevice if the device has been disconnected
kErrorNotSupported on platforms where the functionality is not available
another error code on other failure

### 190.5.14 Devices as LibUSBDeviceMBS()

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns a list of USB devices currently attached to the system.
**Notes:**

This is your entry point into finding a USB device to operate.

This return value of this function indicates the number of devices in the resultant list.

The number of devices in the outputted list.
Lasterror is set to zero on success or or any error codes according to errors encountered by the backend.

### 190.5.15 ErrorName(ErrorCode as Integer) as String

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns a constant string with the ASCII name of a libusb error code.

### 190.5.16 GetActiveConfigDescriptor as LibUSBConfigDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Get the USB configuration descriptor for the currently active configuration.
**Notes:**

This is a non-blocking function which does not involve any requests being sent to the device.

Lasterror is set to:
0 on success
kErrorNotFound if the device is in unconfigured state
another error code on error.

### 190.5.17 GetConfigDescriptor(Index as Integer) as LibUSBConfigDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Get a USB configuration descriptor based on its index.
**Notes:**

This is a non-blocking function which does not involve any requests being sent to the device.

Parameters:

Index the index of the configuration you wish to retrieve

Lasterror is set to:
0 on success
kErrorNotFound if the configuration does not exist
another error code on error

### 190.5.18 GetConfigDescriptorByValue(Value as Integer) as LibUSBConfigDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Get a USB configuration descriptor with a specific ConfigurationValue.
**Notes:**

This is a non-blocking function which does not involve any requests being sent to the device.

Value: the bConfigurationValue of the configuration you wish to retrieve.

Lasterror is set to:
0 on success
kErrorNotFound if the configuration does not exist
another error code on error

### 190.5.19 GetConfiguration as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Determine the bConfigurationValue of the currently active configuration.
**Notes:**

You could formulate your own control request to obtain this information, but this function has the advantage that it may be able to retrieve the information from operating system caches (no I/O involved).

If the OS does not cache this information, then this function will block while a control transfer is submitted to retrieve the information.

This function will return a value of 0 in the config output parameter if the device is in unconfigured state.

Returns Configuration value of the active configuration (only valid for return code 0)

The lasterror is set to:
0 on success
kErrorNoDevice if the device has been disconnected
another error code on other failure

### 190.5.20 GetDescriptor(descType as Integer, descIndex as Integer, data as Ptr, Length as Integer) as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Retrieve a descriptor from the default control pipe.

**Notes:**

This is a convenience function which formulates the appropriate control message to retrieve the descriptor.

Parameters:

| | |
|---|---|
| descType | the descriptor type, see libusb_descriptor_type |
| descIndex | the index of the descriptor to retrieve |
| data | output buffer for descriptor |
| length | size of data buffer |

Returns number of bytes returned in data or zero.
Sets lasterror to error code on failure

### 190.5.21 GetDeviceDescriptor as LibUSBDeviceDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Get the USB device descriptor for a given device.
**Notes:**

This is a non-blocking function; the device descriptor is cached in memory.

Returns 0 on success or a error code on failure.

### 190.5.22 GetMaxISOPacketSize(EndPoint as Integer) as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Calculate the maximum packet size which a specific endpoint is capable is sending or receiving in the duration of 1 microframe.
**Notes:**

Only the active configution is examined. The calculation is based on the wMaxPacketSize field in the endpoint descriptor as described in section 9.6.6 in the USB 2.0 specifications.

If acting on an isochronous or interrupt endpoint, this function will multiply the value found in bits 0:10 by the number of transactions per microframe (determined by bits 11:12). Otherwise, this function just returns the numeric value found in bits 0:10.

This function is useful for setting up isochronous transfers, for example you might pass the return value from this function to libusb_set_iso_packet_lengths() in order to set the length field of every isochronous packet in a transfer.

Since v1.0.3.

Parameters:
endpoint: address of the endpoint in question

Returns the maximum packet size which can be sent/received on this endpoint.

The lasterror is set to:
0 for success.
kErrorNotFound if the endpoint does not exist
kErrorOther on other failure

### 190.5.23 GetMaxPacketSize(EndPoint as Integer) as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Convenience function to retrieve the wMaxPacketSize value for a particular endpoint in the active device configuration.
**Notes:**

This function was originally intended to be of assistance when setting up isochronous transfers, but a design mistake resulted in this function instead. It simply returns the wMaxPacketSize value without considering its contents. If you're dealing with isochronous transfers, you probably want libusb_get_max_iso_packet_size() instead.

Parameters:
endpoint: address of the endpoint in question

Returns the Max Packet Size value.

The lasterror is set:
0 for success.
kErrorNotFound if the endpoint does not exist
kErrorOther on other failure

### 190.5.24 GetStringDescriptor(descIndex as Integer, LangID as Integer = 0) as String

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Retrieve a descriptor from a device.
**Notes:**

This is a convenience function which formulates the appropriate control message to retrieve the descriptor. The string returned is Unicode, as detailed in the USB specifications.

Parameters:

| | |
|---|---|
| descIndex | the index of the descriptor to retrieve |
| LangID | the language ID for the string descriptor |

Returns string.
Lasterror is set to zero or error code on failure.
See also:

- 190.5.25 GetStringDescriptor(descIndex as Integer, LangID as Integer = 0, data as Ptr, Length as Integer) as Integer 26384

### 190.5.25 GetStringDescriptor(descIndex as Integer, LangID as Integer = 0, data as Ptr, Length as Integer) as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Retrieve a descriptor from a device.
**Notes:**

This is a convenience function which formulates the appropriate control message to retrieve the descriptor. The string returned is Unicode, as detailed in the USB specifications.

Parameters:

Returns number of bytes returned in data.
Lasterror is set to zero or error code on failure.
See also:

- 190.5.24 GetStringDescriptor(descIndex as Integer, LangID as Integer = 0) as String 26384

| | |
|---|---|
| descIndex | the index of the descriptor to retrieve |
| LangID | the language ID for the string descriptor |
| data | output buffer for descriptor |
| length | size of data buffer |

### 190.5.26 GetStringDescriptorAscii(descIndex as Integer) as String

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Retrieve a string descriptor in ASCII.
**Notes:**

Wrapper around GetStringDescriptor(). Uses the first language supported by the device.

Parameters:

| | |
|---|---|
| descIndex | the index of the descriptor to retrieve |

Returns string.
Lasterror is set to error code on failure and zero on success.
See also:

- 190.5.27 GetStringDescriptorAscii(descIndex as Integer, data as Ptr, Length as Integer) as Integer 26385

### 190.5.27 GetStringDescriptorAscii(descIndex as Integer, data as Ptr, Length as Integer) as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Retrieve a string descriptor in ASCII.
**Notes:**

Wrapper around GetStringDescriptor(). Uses the first language supported by the device.

Parameters:

Returns number of bytes returned in data.
Lasterror is set to error code on failure and zero on success.
See also:

| | |
|---|---|
| descIndex | the index of the descriptor to retrieve |
| data | output buffer for ASCII string descriptor |
| length | size of data buffer |

• 190.5.26 GetStringDescriptorAscii(descIndex as Integer) as String 26385

### 190.5.28 HasCapability(Capability as UInt32) as Boolean

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Check at runtime if the loaded library has a given capability.
**Notes:** Returns true if the running library has the capability, false otherwise.

### 190.5.29 Initialize as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Initialize libusb.

### 190.5.30 InterruptTransfer(endpoint as Integer, data as Ptr, Length as Integer, byref ActualLength as Integer, Timeout as Integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Perform a USB interrupt transfer.
**Notes:**

The direction of the transfer is inferred from the direction bits of the endpoint address.

For interrupt reads, the length field indicates the maximum length of data you are expecting to receive. If less data arrives than expected, this function will return that data, so be sure to check the transferred output parameter.

You should also check the transferred parameter for interrupt writes. Not all of the data may have been written.

Also check transferred when dealing with a timeout error code. libusb may have to split your transfer into

a number of chunks to satisfy underlying O/S requirements, meaning that the timeout may expire after the first few chunks have completed. libusb is careful not to lose any data that may have been transferred; do not assume that timeout conditions indicate a complete lack of I/O.

The default endpoint bInterval value is used as the polling interval.

Parameters:

| | |
|---|---|
| endpoint | the address of a valid endpoint to communicate with |
| data | a suitably-sized data buffer for either input or output (depending on endpoint) |
| length | for bulk writes, the number of bytes from data to be sent. for bulk reads, the maximum number of bytes to receive into the data buffer. |
| transferred | output location for the number of bytes actually transferred. |
| timeout | timeout (in millseconds) that this function should wait before giving up due to no response being received. For an unlimited timeout, use value 0. |

The lasterror property is set to:
0 on success (and populates transferred)
kErrorTimeout if the transfer timed out
kErrorPipe if the endpoint halted
kErrorOverflow if the device offered more data, see Packets and overflows
kErrorNoDevice if the device has been disconnected
another error code on other error

### 190.5.31 KernelDriverActive(interfaceNumber as Integer) as Boolean

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Determine if a kernel driver is active on an interface.
**Notes:**

If a kernel driver is active, you cannot claim the interface, and libusb will be unable to perform I/O.

This functionality is not available on Windows.

Parameters:
interfaceNumber: the interface to check

Lasterror is set:
0 if no kernel driver is active

1 if a kernel driver is active
kErrorNoDevice if the device has been disconnected
kErrorNotSupported on platforms where the functionality is not available
another error code on other failure

### 190.5.32 LibraryLoaded as Boolean

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Whether library is loaded.

### 190.5.33 LibraryLoadErrorMessage as String

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The last error message from loading library.

### 190.5.34 LibVersion as LibUSBVersionMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Queries version of library.

### 190.5.35 LoadLibrary(file as folderitem) as boolean

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Loads the libusb library.
**Notes:**

Returns true on success or false on failure.
The LibraryLoadErrorMessage function returns error message on failure.
See also:

- 190.5.36 LoadLibrary(path as string) as boolean

### 190.5.36 LoadLibrary(path as string) as boolean

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Loads the libusb library.
**Notes:**

Returns true on success or false on failure.
The LibraryLoadErrorMessage function returns error message on failure.
See also:

- 190.5.35 LoadLibrary(file as folderitem) as boolean 26388

### 190.5.37 Open as Boolean

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Open a device and obtain a device handle.
**Notes:**

A handle allows you to perform I/O on the device in question.

Internally, this function adds a reference to the device. This reference is removed during Close().

This is a non-blocking function; no requests are sent over the bus.

The last error to:
0 on success
kErrorNoMemory on memory allocation failure
kErrorAccess if the user has insufficient permissions
kErrorNoDevice if the device has been disconnected
another error code on other failure

### 190.5.38 OpenDevice(VID as Integer, PID as Integer) as LibUSBDeviceMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Convenience function for finding a device with a particular VID/PID combination.
**Notes:**

This function is intended for those scenarios where you are using libusb to knock up a quick test application - it allows you to avoid calling libusb_get_device_list() and worrying about traversing/freeing the list.

This function has limitations and is hence not intended for use in real applications: if multiple devices have the same IDs it will only give you the first one, etc.

Parameters:

| | |
|---|---|
| VID | the idVendor value to search for |
| PID | the idProduct value to search for |

Returns:
a handle for the first found device, or NULL on error or if the device could not be found.

### 190.5.39 ReleaseInterface(interfaceNumber as Integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Release an interface previously claimed with ClaimInterface.
**Notes:**

You should release all claimed interfaces before closing a device handle.

This is a blocking function. A SET_INTERFACE control request will be sent to the device, resetting interface state to the first alternate setting.

Parameters:
interfaceNumber: the bInterfaceNumber of the previously-claimed interface

The lasterror:
0 on success
kErrorNotFound if the interface was not claimed
kErrorNoDevice if the device has been disconnected
another error code on other failure

### 190.5.40 Reset

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Perform a USB port reset to reinitialize a device.
**Notes:**

The system will attempt to restore the previous configuration and alternate settings after the reset has completed.

If the reset fails, the descriptors change, or the previous state cannot be restored, the device will appear to be disconnected and reconnected. This means that the device handle is no longer valid (you should close it) and rediscover the device. An error code of kErrorNotFound indicates when this is the case.

This is a blocking function which usually incurs a noticeable delay.

Lasterror is set:
0 on success
kErrorNotFound if re-enumeration is required, or if the device has been disconnected
another error code on other failure

### 190.5.41 SetConfiguration(configuration as Integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Set the active configuration for a device.
**Notes:**

The operating system may or may not have already set an active configuration on the device. It is up to your application to ensure the correct configuration is selected before you attempt to claim interfaces and perform other operations.

If you call this function on a device already configured with the selected configuration, then this function will act as a lightweight device reset: it will issue a SET_CONFIGURATION request using the current configuration, causing most USB-related device state to be reset (altsetting reset to zero, endpoint halts cleared, toggles reset).

You cannot change/reset configuration if your application has claimed interfaces - you should free them with libusb_release_interface() first. You cannot change/reset configuration if other applications or drivers have claimed interfaces.

A configuration value of -1 will put the device in unconfigured state. The USB specifications state that a configuration value of 0 does this, however buggy devices exist which actually have a configuration 0.

You should always use this function rather than formulating your own SET_CONFIGURATION control request. This is because the underlying operating system needs to know when such changes happen.

This is a blocking function.

Parameters:
configuration: the bConfigurationValue of the configuration you wish to activate, or -1 if you wish to put the device in unconfigured state

The lasterror is set to:
0 on success
kErrorNotFound if the requested configuration does not exist
kErrorBusy if interfaces are currently claimed
kErrorNoDevice if the device has been disconnected
another error code on other failure

### 190.5.42 SetDebug(level as integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Set message verbosity.
**Notes:**

Level 0: no messages ever printed by the library (default)
Level 1: error messages are printed to stderr
Level 2: warning and error messages are printed to stderr
Level 3: informational messages are printed to stdout, warning and error messages are printed to stderr
The default level is 0, which means no messages are ever printed. If you choose to increase the message verbosity level, ensure that your application does not close the stdout/stderr file descriptors.

You are advised to set level 3. libusb is conservative with its message logging and most of the time, will only log messages that explain error conditions and other oddities. This will help you debug your software.

If the LIBUSB_DEBUG environment variable was set when libusb was initialized, this function does nothing: the message verbosity is fixed to the value in the environment variable.

If libusb was compiled without any message logging, this function does nothing: you'll never get any messages.
If libusb was compiled with verbose debug message logging, this function does nothing: you'll always get messages from all levels.

### 190.5.43 SetInterfaceAltSetting(interfaceNumber as Integer, alternateSetting as Integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Activate an alternate setting for an interface.
**Notes:**

The interface must have been previously claimed with ClaimInterface().

You should always use this function rather than formulating your own SET_INTERFACE control request. This is because the underlying operating system needs to know when such changes happen.

This is a blocking function.

Parameters:

| | |
|---|---|
| interfaceNumber | the InterfaceNumber of the previously-claimed interface |
| alternateSetting | the AlternateSetting of the alternate setting to activate |

The lasterror:
0 on success
kErrorNotFound if the interface was not claimed, or the requested alternate setting does not exist
kErrorNoDevice if the device has been disconnected
another error code on other failure

### 190.5.44 Shutdown

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Deinitialize libusb.
**Notes:** Should be called after closing all open devices and before your application terminates.

### 190.5.45 Properties

### 190.5.46 BusNumber as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Get the number of the bus that a device is connected to.
**Notes:** (Read only property)

### 190.5.47 DeviceAddress as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Get the address of the device on the bus it is connected to.
**Notes:** (Read only property)

### 190.5.48 DeviceHandle as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The handle to the device.
**Notes:** (Read only property)

### 190.5.49 DeviceSpeed as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Get the negotiated connection speed for a device.
**Notes:**

a speed value, where kSpeedUnknown means that the OS doesn't know or doesn't support returning the negotiated speed.
(Read only property)

### 190.5.50 Handle as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The handle to the open device.
**Notes:** (Read only property)

### 190.5.51 IsOpen as Boolean

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Whether device is open.
**Notes:**

True if you called OpenDevice successful.
(Read only property)

### 190.5.52 Lasterror as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The last error code.
**Notes:** (Read and Write property)

### 190.5.53 Constants

### 190.5.54 kCapabilitiesHasCapabilities = 0

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the capabilities constants.
**Notes:** The HasCapability() API is available.

### 190.5.55 kCapabilitiesHasHIDAccess = 256

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the capabilities constants.
**Notes:**

The library can access HID devices without requiring user intervention.
Note that before being able to actually access an HID device, you may still have to call additional libusb functions such as
DetachKernelDriver.

### 190.5.56 kCapabilitiesHasHotplug = 1

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the capabilities constants.
**Notes:** Hotplug support is available on this platform.

### 190.5.57 kCapabilitiesSupportsDetachKernelDriver = 257

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the capabilities constants.
**Notes:** The library supports detaching of the default USB driver, using DetachKernelDriver, if one is set by the OS kernel.

### 190.5.58 kDescriptorTypeBOS = 6

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the descriptor type constants.
**Notes:** BOS descriptor

### 190.5.59 kDescriptorTypeConfig = 2

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the descriptor type constants.
**Notes:** Configuration descriptor.

### 190.5.60 kDescriptorTypeDevice = 1

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the descriptor type constants.
**Notes:** Device descriptor.

### 190.5.61 kDescriptorTypeDeviceCapabilities = 16

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the descriptor type constants.
**Notes:** Device Capability descriptor

### 190.5.62 kDescriptorTypeEndpoint = 5

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the descriptor type constants.
**Notes:** Endpoint descriptor.

### 190.5.63 kDescriptorTypeHID = & h21

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the descriptor type constants.
**Notes:** HID descriptor.

### 190.5.64 kDescriptorTypeHub = & h29

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the descriptor type constants.
**Notes:** Hub descriptor.

### 190.5.65 kDescriptorTypeInterface = 4

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the descriptor type constants.
**Notes:** Interface descriptor.

### 190.5.66 kDescriptorTypePhysical = & h23

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the descriptor type constants.
**Notes:** Physical descriptor.

### 190.5.67 kDescriptorTypeReport = & h22

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the descriptor type constants.
**Notes:** HID report descriptor.

### 190.5.68 kDescriptorTypeString = 3

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the descriptor type constants.
**Notes:** String descriptor.

### 190.5.69 kDescriptorTypeSuperSpeedEndpointCompanion = & h30

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the descriptor type constants.
**Notes:** SuperSpeed Endpoint Companion descriptor

### 190.5.70 kDescriptorTypeSuperSpeedHub = & h2A

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the descriptor type constants.
**Notes:** SuperSpeed Hub descriptor

### 190.5.71 kErrorAccess = -3

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the error constants.
**Notes:** Access

### 190.5.72 kErrorBusy = -6

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the error constants.
**Notes:** Busy

### 190.5.73 kErrorInterrupted = -10

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the error constants.
**Notes:** Interrupted

### 190.5.74 kErrorInvalidParam = -2

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the error constants.
**Notes:** Invalid parameter

### 190.5.75 kErrorIO = -1

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the error constants.
**Notes:** I/O Error

### 190.5.76 kErrorNoDevice = -4

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the error constants.
**Notes:** No device.

### 190.5.77 kErrorNoMemory = -11

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the error constants.
**Notes:** Out of Memory

### 190.5.78 kErrorNotFound = -5

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the error constants.
**Notes:** Not found

### 190.5.79 kErrorNotSupported = -12

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the error constants.
**Notes:** Function not supported

### 190.5.80 kErrorOther = -99

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the error constants.
**Notes:** Other errors

### 190.5.81 kErrorOverflow = -8

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the error constants.
**Notes:** Overflow

### 190.5.82 kErrorPipe = -9

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the error constants.
**Notes:** Pipe

### 190.5.83 kErrorTimeout = -7

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the error constants.
**Notes:** Timeout

### 190.5.84 kLogLevelDebug = 4

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the debug log level constants.
**Notes:** debug and informational messages are printed to stdout, warnings and errors to stderr

### 190.5.85 kLogLevelError = 1

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the debug log level constants.
**Notes:** error messages are printed to stderr

### 190.5.86 kLogLevelInfo = 3

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the debug log level constants.
**Notes:** informational messages are printed to stdout, warning and error messages are printed to stderr

### 190.5.87 kLogLevelNone = 0

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the debug log level constants.
**Notes:** no messages ever printed by the library (default)

### 190.5.88 kLogLevelWarning = 2

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the debug log level constants.
**Notes:** warning and error messages are printed to stderr

### 190.5.89 kSpeedFull = 2

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the constants indicates the speed at which the device is operating.
**Notes:** The device is operating at full speed (12MBit/s).

### 190.5.90 kSpeedHigh = 3

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the constants indicates the speed at which the device is operating.
**Notes:** The device is operating at high speed (480MBit/s).

### 190.5.91 kSpeedLow = 1

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the constants indicates the speed at which the device is operating.
**Notes:** The device is operating at low speed (1.5MBit/s).

### 190.5.92 kSpeedSuper = 4

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the constants indicates the speed at which the device is operating.
**Notes:** The device is operating at super speed (5000MBit/s).

### 190.5.93 kSpeedUnknown = 0

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the constants indicates the speed at which the device is operating.
**Notes:** The OS doesn't report or know the device speed.

## 190.6 class LibUSBEndpointDescriptorMBS

### 190.6.1 class LibUSBEndpointDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** A class representing the standard USB endpoint descriptor.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 190.6.2 Methods

### 190.6.3 Constructor

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The private constructor.

### 190.6.4 Properties

### 190.6.5 AttributesBitmap as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Attributes which apply to the endpoint when it is configured using the bConfigurationValue.
**Notes:** (Read only property)

### 190.6.6 DescriptorType as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Descriptor type.
**Notes:** (Read only property)

### 190.6.7 EndpointAddress as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The address of the endpoint described by this descriptor.
**Notes:** (Read only property)

### 190.6.8 EndpointDirection as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The transfer direction.
**Notes:** (Read only property)

### 190.6.9 extra as MemoryBlock

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Extra descriptors.
**Notes:** (Read only property)

### 190.6.10 extraLength as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Length of the extra descriptors, in bytes.
**Notes:** (Read only property)

### 190.6.11 Interval as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Interval for polling endpoint for data transfers.
**Notes:** (Read only property)

### 190.6.12 Length as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Size of this descriptor (in bytes)
**Notes:** (Read only property)

### 190.6.13 MaxPacketSize as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Maximum packet size this endpoint is capable of sending/receiving.
**Notes:** (Read only property)

### 190.6.14 Refresh as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** For audio devices only: the rate at which synchronization feedback is provided.
**Notes:** (Read only property)

### 190.6.15 SynchAddress as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** For audio devices only: the address if the synch endpoint.
**Notes:** (Read only property)

### 190.6.16 TransferType as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The transfer type.
**Notes:** (Read only property)

### 190.6.17 Constants

### 190.6.18 kEndpointDirectionIn = 0

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the Endpoint Directions constants.
**Notes:** In: device-to-host

### 190.6.19 kEndpointDirectionOut = 128

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the Endpoint Directions constants.
**Notes:** Out: host-to-device.

### 190.6.20 kTransferTypeBulk = 2

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the Transfer Type constants.
**Notes:** Bulk endpoint.

### 190.6.21 kTransferTypeBulkStream = 4

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the Transfer Type constants.
**Notes:** Bulk stream transfer.

### 190.6.22 kTransferTypeControl = 0

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the Transfer Type constants.
**Notes:** Control endpoint.

### 190.6.23 kTransferTypeInterrupt = 3

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the Transfer Type constants.
**Notes:** Interrupt endpoint.

### 190.6.24 kTransferTypeISOChronous = 1

MBS USB Plugin, Plugin Version: 18.1.

**Function:** One of the Transfer Type constants.
**Notes:** Isochronous endpoint.

## 190.7 class LibUSBInterfaceDescriptorMBS

### 190.7.1 class LibUSBInterfaceDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** A class representing the standard USB interface descriptor.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 190.7.2 Methods

### 190.7.3 Constructor

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The private constructor.

### 190.7.4 EndpointDescriptor(index as Integer) as LibUSBEndpointDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Queries endpoint descriptors by index.

### 190.7.5 Properties

### 190.7.6 AlternateSetting as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Value used to select this alternate setting for this interface.
**Notes:** (Read only property)

### 190.7.7 DescriptorType as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Descriptor type.
**Notes:** (Read only property)

### 190.7.8 Endpoints as Variant

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Array of endpoint descriptors.
**Notes:** (Read only property)

### 190.7.9 extra as MemoryBlock

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Extra descriptors.
**Notes:** (Read only property)

### 190.7.10 ExtraLength as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Length of the extra descriptors, in bytes.
**Notes:** (Read only property)

### 190.7.11 IndexInterface as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Index of string descriptor describing this interface.
**Notes:** (Read only property)

### 190.7.12 InterfaceClass as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** USB-IF class code for this interface.
**Notes:** (Read only property)

### 190.7.13 InterfaceNumber as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Number of this interface.
**Notes:** (Read only property)

### 190.7.14 InterfaceProtocol as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** USB-IF protocol code for this interface, qualified by the InterfaceClass and InterfaceSubClass values.
**Notes:** (Read only property)

### 190.7.15 InterfaceSubClass as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** USB-IF subclass code for this interface, qualified by the InterfaceClass value.
**Notes:** (Read only property)

### 190.7.16 Length as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Size of this descriptor (in bytes)
**Notes:** (Read only property)

### 190.7.17 NumEndpoints as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Number of endpoints used by this interface (excluding the control endpoint).
**Notes:** (Read only property)

## 190.8 class LibUSBInterfaceMBS

### 190.8.1 class LibUSBInterfaceMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** A collection of alternate settings for a particular USB interface.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 190.8.2 Methods

### 190.8.3 Constructor

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The private constructor.

### 190.8.4 InterfaceDescriptor(index as Integer) as LibUSBInterfaceDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Queries interface descriptor by index.

### 190.8.5 Properties

### 190.8.6 Count as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The number of alternate settings that belong to this interface.
**Notes:** (Read only property)

### 190.8.7 InterfaceDescriptors as Variant

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Array of interface descriptors.
**Notes:** (Read only property)

## 190.9 class LibUSBISOPacketDescriptorMBS

### 190.9.1 class LibUSBISOPacketDescriptorMBS

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Isochronous packet descriptor.
**Notes:**

See LibUSBTransferMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 190.9.2 Blog Entries

- News from the MBS Xojo Plugins Version 22.2

### 190.9.3 Blog Entries

- News from the MBS Xojo Plugins Version 22.2

### 190.9.4 Methods

### 190.9.5 Constructor

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The private constructor.

### 190.9.6 Properties

### 190.9.7 ActualLength as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Amount of data that was actually transferred.
**Notes:** (Read and Write property)

### 190.9.8 Length as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Length of data to request in this packet.
**Notes:** (Read and Write property)

### 190.9.9 Status as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Status code for this packet.
**Notes:**

See constants in LibUSBTransferMBS class.
(Read and Write property)

## 190.10 class LibUSBTransferMBS

### 190.10.1 class LibUSBTransferMBS

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The class for asynchronous USB transfer.
**Notes:**

The user populates this class and then submits it in order to request a transfer. After the transfer has completed, the library populates the transfer with the results and passes it back to the user.

Please check LibUSB documentation and examples for asynchronous transfers.

### 190.10.2 Blog Entries

- News from the MBS Xojo Plugins Version 22.2

### 190.10.3 Blog Entries

- News from the MBS Xojo Plugins Version 22.2

### 190.10.4 Methods

### 190.10.5 Cancel as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Cancels a running transfer.
**Notes:** Returns error code.

### 190.10.6 Constructor(ISOPackets as Integer = 0)

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Allocates usb transfer object with given number of packets.

### 190.10.7 ControlTransferGetData as Ptr

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Queries pointer ot the setup part of the control transfer structure within the buffer.
**Notes:**

Convenience function since there is a 8 byte control block in front of the data.
Returns nil if not possible.

### 190.10.8 ControlTransferGetSetup as Ptr

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Queries pointer ot the setup part of the control transfer structure within the buffer.
**Notes:**

Convenience function since there is a 8 byte control block in front of the data.
Returns nil if not possible.

### 190.10.9 FillBulkStreamTransfer(Device as LibUSBDeviceMBS, EndPoint as Integer, StreamId as Integer, Buffer as MemoryBlock, Timeout as Integer)

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Helper function to populate the required fields for a bulk transfer using bulk streams.
**Notes:**

Device: the device that will handle the transfer
endpoint: address of the endpoint where this transfer will be sent
StreamId: id for this transfer
buffer: data buffer
timeout: timeout for the transfer in milliseconds

### 190.10.10 FillBulkTransfer(Device as LibUSBDeviceMBS, EndPoint as Integer, Buffer as MemoryBlock, Timeout as Integer)

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Helper function to populate the required fields for a bulk transfer.
**Notes:**

Device: the device that will handle the transfer
endpoint: address of the endpoint where this transfer will be sent
buffer: data buffer
timeout: timeout for the transfer in milliseconds

### 190.10.11 FillControlSetup(Buffer as MemoryBlock, RequestType as Integer, Request as Integer, Value as Integer, Index as Integer, Length as Integer)

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Helper function to populate the setup packet (first 8 bytes of the data buffer) for a control transfer.
**Notes:** The Index, Value and Length values should be given in host-endian byte order.

### 190.10.12 FillControlTransfer(Device as LibUSBDeviceMBS, Buffer as MemoryBlock, Timeout as Integer)

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Helper function to populate the required transfer fields for a control transfer.
**Notes:**

If you pass a transfer buffer to this function, the first 8 bytes will be interpreted as a control setup packet.

Therefore the recommended approach is:

- Allocate a suitably sized MemoryBlock (including space for control setup)
- Call FillControlSetup()
- If this is a host-to-device transfer with a data stage, put the data in place after the setup packet
- Call this function
- Call Submit()

Device: the device that will handle the transfer
buffer: The data buffer. If provided, this function will interpret the first 8 bytes as a setup packet and infer

the transfer length from that.
timeout: timeout for the transfer in milliseconds

### 190.10.13 FillInterruptTransfer(Device as LibUSBDeviceMBS, EndPoint as Integer, Buffer as MemoryBlock, Timeout as Integer)

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Helper function to populate the required fields for an interrupt transfer.
**Notes:**

Device: the device that will handle the transfer
endpoint: address of the endpoint where this transfer will be sent
buffer: data buffer
timeout: timeout for the transfer in milliseconds

### 190.10.14 FillISOTransfer(Device as LibUSBDeviceMBS, EndPoint as Integer, Buffer as MemoryBlock, NumISOPackets as Integer, Timeout as Integer)

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Helper function to populate the required \ref libusb_transfer fields for an isochronous transfer.
**Notes:**

Device: the device that will handle the transfer
endpoint: address of the endpoint where this transfer will be sent
buffer: data buffer
NumISOPackets: the number of isochronous packets
timeout: timeout for the transfer in milliseconds

### 190.10.15 ISOPacketBuffer(Index as Integer) as Ptr

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Queries buffer pointer for the packet.
**Notes:** This points within the buffer MemoryBlock.

### 190.10.16 ISOPacketDescriptor(index as Integer) as LibUSBISOPacketDescriptorMBS

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Isochronous packet descriptors, for isochronous transfers only.
**Notes:** Queries packet with given index. Zero based.

### 190.10.17 SetISOPacketLengths(Length as UInt32)

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets length field for all packets.
**Example:**

```
// 3 buffers
Dim t As New LibUSBTransferMBS(3)
t.buffer = New MemoryBlock(100)

// set all length to 4
t.SetISOPacketLengths 4

Dim p0 As LibUSBISOPacketDescriptorMBS = t.ISOPacketDescriptor(0)
Dim p1 As LibUSBISOPacketDescriptorMBS = t.ISOPacketDescriptor(1)
Dim p2 As LibUSBISOPacketDescriptorMBS = t.ISOPacketDescriptor(2)

Break // check
```

### 190.10.18 Submit as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Submits transfer asynchronously.
**Notes:**

Returns error code.

Later Completed event is called.

### 190.10.19 Properties

### 190.10.20 ActualLength as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Actual length of data that was transferred.
**Notes:**

Read-only, and only for use within transfer callback function.
Not valid for isochronous endpoint transfers.
(Read only property)

### 190.10.21 Buffer as MemoryBlock

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The memory buffer to use.
**Notes:**

Please assign MemoryBlock of right size as this sets length property.
(Read and Write property)

### 190.10.22 Device as LibUSBDeviceMBS

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The device that this transfer will be submitted to.
**Notes:** (Read and Write property)

### 190.10.23 Endpoint as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Address of the endpoint where this transfer will be sent.
**Notes:** (Read and Write property)

### 190.10.24 Flags as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** A bitwise OR combination of flags.
**Notes:** (Read and Write property)

### 190.10.25 ISOPackets as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Number of isochronous packets.
**Notes:**

Only used for I/O with isochronous endpoints.
(Read only property)

### 190.10.26 Length as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Length of buffer.
**Notes:**

Set to length of MemoryBlock assigned to buffer property.
(Read only property)

### 190.10.27 Status as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The status of the transfer.
**Notes:**

Read-only, and only for use within transfer callback function.

If this is an isochronous transfer, this field may read kTransferStatusCompleted even if there were errors in the frames. Use the status in LibUSBISOPacketDescriptorMBS in each packet to determine if errors occurred.

(Read only property)

### 190.10.28 Tag as Variant

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The tag for the transfer.
**Notes:**

A value you can use as you like, e.g. to store reference to your window.
(Read and Write property)

### 190.10.29 Timeout as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Timeout for this transfer in millseconds.
**Notes:**

A value of 0 indicates no timeout.
(Read and Write property)

### 190.10.30 Type as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Type of the endpoint.
**Notes:**

See kTransferType* constants.
(Read and Write property)

### 190.10.31 Events

### 190.10.32 Completed

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The completion event.
**Notes:**

Called when transfer is done (successful or failed).
Dispatched on main thread.

Not implemented for 32-bit Linux on Intel.

### 190.10.33 Constants

### 190.10.34 kTransferFlagsAddZeroPacket = 4

MBS USB Plugin, Plugin Version: 22.2.

**Function:** One of the flag constants.
**Notes:**

Terminate transfers that are a multiple of the endpoint's MaxPacketSize with an extra zero length packet. This is useful when a device protocol mandates that each logical request is terminated by an incomplete packet (i.e. the logical requests are not separated by other means).

This flag only affects host-to-device transfers to bulk and interrupt endpoints. In other situations, it is ignored.

This flag only affects transfers with a length that is a multiple of the endpoint's wMaxPacketSize. On transfers of other lengths, this flag has no effect. Therefore, if you are working with a device that needs a ZLP whenever the end of the logical request falls on a packet boundary, then it is sensible to set this flag on every transfer (you do not have to worry about only setting it on transfers that end on the boundary).

This flag is currently only supported on Linux. On other systems, libusb_submit_transfer() will return LIBUSB_ERROR_NOT_SUPPORTED for every transfer where this flag is set.
Available since libusb-1.0.9.

### 190.10.35 kTransferFlagsShortNotOK = 1

MBS USB Plugin, Plugin Version: 22.2.

**Function:** One of the flag constants.
**Notes:** Report short frames as errors.

### 190.10.36 kTransferStatusCancelled = 3

MBS USB Plugin, Plugin Version: 22.2.

**Function:** One of the status constants.
**Notes:** Transfer was cancelled.

### 190.10.37 kTransferStatusCompleted = 0

MBS USB Plugin, Plugin Version: 22.2.

**Function:** One of the status constants.
**Notes:** Transfer completed without error. Note that this does not indicate that the entire amount of requested data was transferred.

### 190.10.38 kTransferStatusError = 1

MBS USB Plugin, Plugin Version: 22.2.

**Function:** One of the status constants.
**Notes:** Transfer failed

### 190.10.39 kTransferStatusNoDevice = 5

MBS USB Plugin, Plugin Version: 22.2.

**Function:** One of the status constants.
**Notes:** Device was disconnected

### 190.10.40 kTransferStatusOverflow = 6

MBS USB Plugin, Plugin Version: 22.2.

**Function:** One of the status constants.
**Notes:** Device sent more data than requested

### 190.10.41 kTransferStatusStall = 4

MBS USB Plugin, Plugin Version: 22.2.

**Function:** One of the status constants.
**Notes:** For bulk/interrupt endpoints: halt condition detected (endpoint stalled). For control endpoints: control request not supported.

### 190.10.42 kTransferStatusTimeout = 2

MBS USB Plugin, Plugin Version: 22.2.

**Function:** One of the status constants.
**Notes:** Transfer timed out.

### 190.10.43 kTransferTypeBulk = 2

MBS USB Plugin, Plugin Version: 22.2.

**Function:** One of the transfer type constants.
**Notes:** Bulk endpoint

### 190.10.44 kTransferTypeBulkStream = 4

MBS USB Plugin, Plugin Version: 22.2.

**Function:** One of the transfer type constants.
**Notes:** Stream endpoint.

### 190.10.45 kTransferTypeControl = 0

MBS USB Plugin, Plugin Version: 22.2.

**Function:** One of the transfer type constants.
**Notes:** Control endpoint

### 190.10.46 kTransferTypeInterrupt = 3

MBS USB Plugin, Plugin Version: 22.2.

**Function:** One of the transfer type constants.
**Notes:** Interrupt endpoint

### 190.10.47 kTransferTypeISOChronous = 1

MBS USB Plugin, Plugin Version: 22.2.

**Function:** One of the transfer type constants.
**Notes:** Isochronous endpoint

## 190.11 class LibUSBVersionMBS

### 190.11.1 class LibUSBVersionMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Class representing the libusb version.

### 190.11.2 Methods

### 190.11.3 Constructor

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.
**Notes:** Queries library version if possible.

### 190.11.4 Properties

### 190.11.5 Describe as String

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Output of git describe ,Äìtags at library build time.
**Notes:** (Read only property)

### 190.11.6 Major as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Library major version.
**Notes:**

Currently 1.
(Read only property)

### 190.11.7 Micro as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Library micro version.
**Notes:** (Read only property)

### 190.11.8 Minor as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Library minor version.
**Notes:** (Read only property)

### 190.11.9 Nano as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Library nano version.
**Notes:** (Read only property)

### 190.11.10 RC as String

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Library release candidate suffix string, e.g. ”-rc4”.
**Notes:** (Read only property)

## 190.12 class LinuxHIDInterfaceMBS

### 190.12.1 class LinuxHIDInterfaceMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The class for linux to connect to USB HID devices.
**Notes:**

For newer development, please use our HIDAPIMBS class.

The constructor does the initialisation of the HID Library and the destructor does the cleanup. This works with several instances, too.

The plugin tries to load one of libhid.so, libhid.so.0 or libhid.so.0.0.0 and one of libusb.so or libusb-0.1.so.4 from your /usr/lib folder (or where else the path environment variable points to). If the libraries are missing, this class will not work properly.

### 190.12.2 Blog Entries

- MBS REALbasic Plugins, version 10.3pr4

### 190.12.4 Methods

### 190.12.5 Available as boolean

MBS USB Plugin, Plugin Version: 10.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Whether libhid is available.
**Notes:** Not all Linux distribution have libusb and libhid installed by default.

### 190.12.6 Close as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Closes the device.
**Notes:** Returns error code. See kError* constants.

### 190.12.7 DumpTreeToStderr as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Dumps the device tree to stderr.
**Example:**

```
dim h as LinuxHIDInterfaceMBS
// open device
call h.DumpTreeToStderr
```

**Notes:** Returns error code. See kError* constants.

### 190.12.8 DumpTreeToStdout as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Dumps the device tree to stdout.
**Example:**

```
dim h as LinuxHIDInterfaceMBS
// open device
call h.DumpTreeToStdout
```

**Notes:** Returns error code. See kError* constants.

### 190.12.9 ForceOpen(theInterface as Integer, Vendor as Integer, Product as Integer, retries as Integer) as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Opens the USB device with the given interface index, vendor and product codes.
**Example:**

```
dim h as new LinuxHIDInterfaceMBS

const vendor = & h7C0
const product = & h1500
const retries = 3

dim e as Integer = h.ForceOpen(0, vendor, product, retries)
```

**Notes:**

Vendor or Product code can be kMatchAny (0) to match all devices.
You can use the MatchDevice event to learn which devices are there and return true there to select one.
Returns error code. See kError* constants.

### 190.12.10 GetInputReport(path() as Integer, data as memoryblock, offset as Integer, size as Integer) as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Reads an input report.
**Notes:**

Path: The path to the endpoint.
Data: the memoryblock to store the data.
Offset: The offset where to start inside the memoryblock.
Size: the length of the data int he memoryblock.

Returns error code. See kError* constants.

### 190.12.11 InterruptRead(EndPoint as Integer, mem as memoryblock, size as Integer, timeout as Integer) as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Reads data from an endpoint with timeout.
**Notes:**

EndPoint: The index of the endpoint.
mem: the memoryblock where to store the data.
size: the length of the data block to read.
timeout: the timeout in milliseconds.

Returns error code. See kError* constants.

### 190.12.12 InterruptWrite(EndPoint as Integer, mem as memoryblock, size as Integer, timeout as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.0, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Writes data from an endpoint with timeout.
**Notes:**

EndPoint: The index of the endpoint.
mem: the memoryblock where to store the data.
size: the length of the data block to read.
timeout: the timeout in milliseconds.

Returns error code. See kError* constants.

### 190.12.13 IsInitialised as boolean

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Whether the HID library was initialised in the constructor.
**Notes:** Should always be true on linux.

### 190.12.14 IsOpen as boolean

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Whether the device is opened.

**Notes:** True if open, false if closed.

### 190.12.15 Open(theInterface as Integer, Vendor as Integer, Product as Integer) as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Opens the USB device with the given interface index, vendor and product codes.
**Example:**

```
dim h as new LinuxHIDInterfaceMBS

const vendor = & h7C0
const product = & h1500

dim e as Integer = h.Open(0, vendor, product)
```

**Notes:**

Vendor or Product code can be kMatchAny (0) to match all devices.
You can use the MatchDevice event to learn which devices are there and return true there to select one.
Returns error code. See kError* constants.

### 190.12.16 Reset

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Resets the device.
**Notes:** Returns error code. See kError* constants.

### 190.12.17 SetDebugLevel(level as Integer)

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Sets the debug level.
**Example:**

```
dim h as new LinuxHIDInterfaceMBS
h.SetDebugLevel(h.kDebugWarnings)
```

### 190.12.18 SetDebugOutputToStderr

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Tells HID library to write debug output to stderr.
**Example:**

```
dim h as new LinuxHIDInterfaceMBS
h.SetDebugOutputToStderr
```

### 190.12.19 SetDebugOutputToStdout

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Tells HID library to write debug output to stdout.
**Example:**

```
dim h as new LinuxHIDInterfaceMBS
h.SetDebugOutputToStdout
```

### 190.12.20 SetOutputReport(path() as Integer, data as memoryblock, offset as Integer, size as Integer) as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Writes data to the output.
**Example:**

```
dim h as LinuxHIDInterfaceMBS // your interface
dim n as Integer // some value

const IOW_PIPE_IO_PINS=0

dim m as MemoryBlock = NewMemoryBlock(4) // a device with 4 byte packets

m.Byte(3)=n
m.Byte(0)=IOW_PIPE_IO_PINS

dim path(-1) as Integer

path.Append & h00010000
path.Append 0

dim e as Integer = h.SetOutputReport(path, m, 0, m.size)
```

**Notes:**

Path: The path to the endpoint.
Data: the data to write.
Offset: The offset where to start inside the memoryblock.
Size: the length of the data int he memoryblock.

Returns error code. See kError* constants.
See also:

- 190.12.21 SetOutputReport(path() as Integer, data as string) as Integer 26436

### 190.12.21 SetOutputReport(path() as Integer, data as string) as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Writes data to the output.
**Notes:**

Path: The path to the endpoint.
Data: the data to write.

Returns error code. See kError* constants.
See also:

- 190.12.20 SetOutputReport(path() as Integer, data as memoryblock, offset as Integer, size as Integer) as Integer 26435

### 190.12.22 WriteIdentificationToStderr as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Writes identification to stderr.
**Notes:** Returns error code. See kError* constants.

### 190.12.23 WriteIdentificationToStdout as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Writes identification to stdout.
**Notes:** Returns error code. See kError* constants.

### 190.12.24 Properties

### 190.12.25 Handle as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The internal handle to the device connection.
**Notes:** (Read and Write property)

### 190.12.26 Events

### 190.12.27 MatchDevice(usbdev as LinuxUSBDeviceHandleMBS) as boolean

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: .

**Function:** The event called to decide whether you want to connect to this device.
**Example:**

```
Function MatchDevice(usbdev as LinuxUSBDeviceHandleMBS) As boolean
MsgBox usbdev.Device.Descriptor.SerialNumber
End Function
```

**Notes:**

If several devices match the given vendor/product codes in Open/ForceOpen, you can decide here which one you accept.
Return true to accept a device.

### 190.12.28 Constants

### 190.12.29 kDebugAll = 31

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the debug level constants.
**Notes:** same as kDebugWarnings + kDebugTraces + kDebugNotices + kDebugErrors + kDebugAsserts

### 190.12.30 kDebugAsserts = 16

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the debug level constants.

### 190.12.31 kDebugErrors = 1

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the debug level constants.

### 190.12.32 kDebugNone = 0

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the debug level constants.

### 190.12.33 kDebugNotices = 4

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the debug level constants.

### 190.12.34 kDebugNoTraces = 23

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the debug level constants.
**Notes:** same as kDebugWarnings + kDebugNotices + kDebugErrors + kDebugAsserts

### 190.12.35 kDebugTraces = 8

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the debug level constants.

### 190.12.36 kDebugWarnings = 2

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the debug level constants.

### 190.12.37 kErrorAlreadyInitialised = 3

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the error codes.
**Notes:** Device alreay initialised.

### 190.12.38 kErrorDeviceAlreadyOpened = 9

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the error codes.
**Notes:** Device already opened.

### 190.12.39 kErrorDeviceNotFound = 7

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the error codes.
**Notes:** Device is not found.

### 190.12.40 kErrorDeviceNotOpened = 8

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the error codes.
**Notes:** Device is not opened.

### 190.12.41 kErrorFailAlloc = 17

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the error codes.
**Notes:** Failed to allocate.

### 190.12.42 kErrorFailClaimIFace = 11

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the error codes.
**Notes:** Failed to claim the interface.

### 190.12.43 kErrorFailCloseDevice = 10

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the error codes.
**Notes:** Failed to close device.

### 190.12.44 kErrorFailDetachDriver = 12

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the error codes.
**Notes:** Failed to detach driver.

### 190.12.45 kErrorFailFindBusses = 4

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the error codes.
**Notes:** Failed to find buses.

### 190.12.46 kErrorFailFindDevices = 5

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the error codes.
**Notes:** Failed to find devices.

### 190.12.47 kErrorFailGetReport = 20

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the error codes.
**Notes:** Get Report failed.

### 190.12.48 kErrorFailIntRead = 21

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the error codes.

### 190.12.49 kErrorFailOpenDevice = 6

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the error codes.
**Notes:** Failed to open device.

### 190.12.50 kErrorFailSetReport = 19

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the error codes.
**Notes:** Set Report failed.

### 190.12.51 kErrorHIDDescShort = 14

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the error codes.

### 190.12.52 kErrorInvalidParameter = 1

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the error codes.
**Notes:** Invalid Parameter.

### 190.12.53 kErrorNotFound = 22

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the error codes.
**Notes:** Device not found.

### 190.12.54 kErrorNotHIDDevice = 13

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the error codes.
**Notes:** Not a HID Device.

### 190.12.55 kErrorNotInitialised = 2

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the error codes.
**Notes:** Not initialised.

### 190.12.56 kErrorOutOfSpace = 18

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the error codes.
**Notes:** Out of space.

### 190.12.57 kErrorReportDescLong = 16

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the error codes.

### 190.12.58 kErrorReportDescShort = 15

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the error codes.

### 190.12.59 kErrorSuccess = 0

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the error codes.
**Notes:** Success. No error.

### 190.12.60 kMatchAny = 0

MBS USB Plugin, Plugin Version: 10.3.

**Function:** The vendor/product ID to match any device.

## 190.13 class LinuxUSBBusMBS

### 190.13.1 class LinuxUSBBusMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The class for an USB Bus on Linux.
**Notes:** This class only works, if the plugin could load one of libusb.so or libusb-0.1.so.4 from your /usr/lib folder (or where else the path environment variable points to). If the libraries are missing, this class will not work properly.

### 190.13.2 Blog Entries

- MBS Real Studio Plugins, version 11.3pr7
- MBS Plugins 10.3 Release Notes
- MBS REALbasic Plugins, version 10.3pr4

### 190.13.3 Blog Entries

- MBS Real Studio Plugins, version 11.3pr7
- MBS Plugins 10.3 Release Notes
- MBS REALbasic Plugins, version 10.3pr4

### 190.13.4 Methods

### 190.13.5 Buses as LinuxUSBBusMBS

MBS USB Plugin, Plugin Version: 11.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Returns the buses list.
**Notes:**

This function allows you to query the current buses and devices.
No device is opened and you just read through libusb data structures.

### 190.13.6 RescanBusses as Integer

MBS USB Plugin, Plugin Version: 14.2, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Finds all USB busses on system.
**Notes:**

RescanBusses will find all of the busses on the system.
Returns the number of changes since previous call to this function (total of new busses and busses removed).

The plugin performs RescanBusses and RescanDevices automatically on application launch.

### 190.13.7 RescanDevices as Integer

MBS USB Plugin, Plugin Version: 14.2, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Find all devices on all USB devices.
**Notes:**

RescanDevices will find all of the devices on each bus.
This should be called after RescanBusses.
Returns the number of changes since the previous call to this function (total of new device and devices removed).

The plugin performs RescanBusses and RescanDevices automatically on application launch. So you can call RescanDevices at any time.

### 190.13.8 Properties

### 190.13.9 Devices as LinuxUSBDeviceMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The devices attached to this bus.
**Notes:** (Read and Write property)

### 190.13.10 DirName as String

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The dir name.
**Notes:** (Read and Write property)

### 190.13.11 Location as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The location value.
**Notes:** (Read and Write property)

### 190.13.12 NextBus as LinuxUSBBusMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The next bus.
**Notes:** (Read and Write property)

### 190.13.13 PrevBus as LinuxUSBBusMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The previous bus.
**Notes:** (Read and Write property)

### 190.13.14 RootDevice as LinuxUSBDeviceMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The root device on this device.
**Notes:** (Read and Write property)

## 190.14 class LinuxUSBDeviceDescriptionMBS

### 190.14.1 class LinuxUSBDeviceDescriptionMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** A class for an USB device description.
**Notes:** Some linux installations require app to be run with sudo to allow reading USB device strings.

### 190.14.2 Blog Entries

- MBS Real Studio Plugins, version 12.1pr6
- MBS Plugins 10.3 Release Notes
- MBS REALbasic Plugins, version 10.3pr4

### 190.14.3 Blog Entries

- MBS Real Studio Plugins, version 12.1pr6
- MBS Plugins 10.3 Release Notes
- MBS REALbasic Plugins, version 10.3pr4

### 190.14.4 Properties

### 190.14.5 cdDevice as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The device version.
**Notes:**

Identifies the version of the device. This value is a binary-coded decimal number.
(Read and Write property)

### 190.14.6 cdUSB as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The USB version.
**Notes:**

Identifies the version of the USB specification that this descriptor structure complies with. This value is a binary-coded decimal number.
(Read and Write property)

### 190.14.7 DescriptorType as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The descriptor type.
**Notes:**

Specifies the descriptor type. Must be set to USB_DEVICE_DESCRIPTOR_TYPE.
(Read and Write property)

### 190.14.8 DeviceClass as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The device class.
**Notes:**

Specifies the class code of the device as assigned by the USB specification group.
See the kDeviceClass* constants.
(Read and Write property)

### 190.14.9 DeviceProtocol as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The device protocol.
**Notes:**

Specifies the protocol code of the device as assigned by the USB specification group.
(Read and Write property)

### 190.14.10 DeviceSubClass as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The device sub class.
**Notes:**

Specifies the subclass code of the device as assigned by the USB specification group.
(Read and Write property)

### 190.14.11 Manufacturer as String

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The manufacturer name string.
**Notes:**

A string containing the name of the manufacturer of this device.
Some linux installations require app to be run with sudo to allow reading USB device strings.
(Read and Write property)

### 190.14.12 MaxPacketSize0 as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The maximum packet size.
**Notes:**

Specifies the maximum packet size, in bytes, for endpoint zero of the device. The value must be set to 8, 16, 32, or 64.
(Read and Write property)

### 190.14.13 NumConfigurations as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The number of configurations.
**Notes:**

Specifies the total number of possible configurations for the device.
(Read and Write property)

### 190.14.14 Product as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The product ID for this device.
**Notes:**

Specifies the product identifier. This value is assigned by the manufacturer and is device-specific.
Only available when the device has been opened.
(Read and Write property)

### 190.14.15 ProductName as String

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The product name for this device.
**Notes:**

A string that contains a description of the device.
Some linux installations require app to be run with sudo to allow reading USB device strings.
(Read and Write property)

### 190.14.16 SerialNumber as String

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The serial number string for this device.
**Notes:**

A string that contains a manufacturer-determined serial number for the device.
Can be empty if the library does not know it.
Some linux installations require app to be run with sudo to allow reading USB device strings.
(Read and Write property)

### 190.14.17 Vendor as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The vendor code for this device.
**Notes:**

Specifies the vendor identifier for the device as assigned by the USB specification committee.
Only available when the device has been opened.
(Read and Write property)

### 190.14.18 Constants

### 190.14.19 kDeviceClassAudio = 1

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the device class constants.
**Notes:** Audio device.

### 190.14.20 kDeviceClassCOMM = 2

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the device class constants.
**Notes:** COMM device.

### 190.14.21 kDeviceClassDATA = 10

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the device class constants.
**Notes:** DATA device.

### 190.14.22 kDeviceClassHID = 3

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the device class constants.
**Notes:** HID device.

### 190.14.23 kDeviceClassHUB = 9

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the device class constants.
**Notes:** The device is an USB HUB.

### 190.14.24 kDeviceClassMassStorage = 8

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the device class constants.
**Notes:** A mass storage device.

### 190.14.25 kDeviceClassPerInterface = 0

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the device class constants.

### 190.14.26 kDeviceClassPrinter = 7

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the device class constants.
**Notes:** Printer device.

### 190.14.27 kDeviceClassVendorSpecific = 255

MBS USB Plugin, Plugin Version: 10.3.

**Function:** One of the device class constants.
**Notes:** Some vendor specific device.

# 190.15 class LinuxUSBDeviceHandleMBS

## 190.15.1 class LinuxUSBDeviceHandleMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The class for a device handle.

## 190.15.2 Blog Entries

- MBS Plugins 10.3 Release Notes

## 190.15.4 Properties

## 190.15.5 AltSetting as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Some alt setting value.
**Notes:** (Read and Write property)

## 190.15.6 Bus as LinuxUSBBusMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The bus for this device handle.
**Notes:** (Read and Write property)

## 190.15.7 Config as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** A config value.
**Notes:** (Read and Write property)

### 190.15.8 Device as LinuxUSBDeviceMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The device.
**Notes:** (Read and Write property)

### 190.15.9 InterfaceIndex as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The interface index.
**Notes:** (Read and Write property)

# 190.16 class LinuxUSBDeviceMBS

## 190.16.1 class LinuxUSBDeviceMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The class for an USB device information on Linux.

## 190.16.3 Blog Entries

- Showing USB Devices
- MBS Plugins 10.3 Release Notes
- MBS REALbasic Plugins, version 10.3pr4

## 190.16.4 Methods

## 190.16.5 Children(index as Integer) as LinuxUSBDeviceMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Returns the child device with the given index.
**Notes:** Index is zero based and from 0 to ChildrenCount-1.

## 190.16.6 Properties

## 190.16.7 Bus as LinuxUSBBusMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The bus this device is attached to.
**Notes:** (Read and Write property)

### 190.16.8 ChildrenCount as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The number of child devices.
**Notes:** (Read and Write property)

### 190.16.9 Descriptor as LinuxUSBDeviceDescriptionMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The descriptior for this device.
**Notes:** (Read and Write property)

### 190.16.10 Filename as String

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The filename for this device.
**Notes:** (Read and Write property)

### 190.16.11 NextDevice as LinuxUSBDeviceMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The next device on the same level.
**Notes:** (Read and Write property)

### 190.16.12 PrevDevice as LinuxUSBDeviceMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The previous device on the same level.
**Notes:** (Read and Write property)

# 190.17 class MacHIDMBS

## 190.17.1 class MacHIDMBS

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A class to work with HID devices on Mac OS X.
**Notes:** For newer development, please use our HIDAPIMBS class.

## 190.17.2 Blog Entries

## 190.17.4 Methods

## 190.17.5 Close

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Closes the active connection.

## 190.17.6 Connect

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a connection to the current device.
**Example:**

```
Function OpenUSBDevice() As boolean
dim i as Integer
dim h as MacHIDMBS

h=FindDevice // see FindFirst example

if h=nil then
MsgBox "No XYZ device found."
Return false
end if

h.Connect

if h.Lasterror<>0 then
MsgBox "Failed to connect to USB Device."
Return false
end if

h.InstallCallback

Return true

End Function
```

**Notes:**

Lasterror is set.

Lasterror values for this function:

| | |
|---|---|
| -1 | Not supported (Windows and Linux). |
| 0 | Everything okay. |
| 1 | Failed to get IOKit Plugin Interface for this IO object. |
| 2 | Failed to query interface |
| 3 | Failed to open interface |
| 4 | Failed to create async port |
| 5 | Failed to create async event source |
| 6 | no longer used |
| 7 | Failed to start queue |

### 190.17.7 Disconnect

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Disconnets current USB device.
**Notes:** Lasterror is set.

### 190.17.8 FindFirstDevice as boolean

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Finds the first device and loads the properties.
**Example:**

```
Function FindDevice() As MyMacHIDMBS
dim h as MyMacHIDMBS
dim p as string

h=new MyMacHIDMBS // your own subclass of MacHIDMBS so you can get events

if h.FindFirstDevice then

p=h.Product
if p="MyProduct" then
Return h
end if

while h.FindNextDevice

p=h.Product
if p="MyProduct" then
Return h
end if

wend

end if
End Function
```

**Notes:** Returns true on success and false on failure.

### 190.17.9 FindNextDevice as boolean

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Finds next device.
**Notes:** Returns true on success and false on failure.

### 190.17.10 HIDProperties as Variant

MBS USB Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Queries HID properties dictionary.
**Notes:**

Value is a CFDictionaryMBS with details about current device. Returned as Variant to reduce plugin dependencies.

The plugin queries this dictionary to return SerialNumber, ProductID, Manufacturer, Product, VendorID and VersionNumber.

### 190.17.11 InstallCallback

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Installs the callback used for the event handler.
**Notes:**

Lasterror is set.
Please use after connect. For use with ReceivedData event.

### 190.17.12 Manufacturer as string

MBS USB Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The manufacturer name.
**Notes:** On any error an empty string is returned.

### 190.17.13 Product as string

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The product string of the selected device.
**Notes:** Lasterror is set.

### 190.17.14 ProductID as Integer

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The product ID of the selected device.
**Notes:** Lasterror is set.

### 190.17.15 ReadMessage(ReportID as Integer, reportType as Integer, length as Integer) as string

MBS USB Plugin, Plugin Version: 14.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Reads a message from usb device.
**Notes:**

This is for synchronously operation without the event/callback.
You can specify report id, report type and the maximum length to read.
Also set timeout property.

Doesn't work if InstallCallback with event is used.

### 190.17.16 ReadMessageMemory(ReportID as Integer, reportType as Integer, length as Integer) as memoryblock

MBS USB Plugin, Plugin Version: 14.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Reads a message from usb device.
**Notes:**

This is for synchronously operation without the event/callback.
You can specify report id, report type and the maximum length to read.
Also set timeout property.

Doesn't work if InstallCallback with event is used.

### 190.17.17 SendMessage(data as string)

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Sends a message to the USB device.
**Notes:**

A connection must be open.
Lasterror is set. Lasterror -536854447 is an USB timeout.
Uses kIOHIDReportTypeOutput.
See also:

- 190.17.18 SendMessage(ReportID as Integer, reportType as Integer, data as string) 26462

### 190.17.18 SendMessage(ReportID as Integer, reportType as Integer, data as string)

MBS USB Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Sends a message to the USB device.
**Notes:**

A connection must be open.
Lasterror is set. Lasterror -536854447 is an USB timeout.
ReportType can be kIOHIDReportTypeOutput or kIOHIDReportTypeFeature.
See also:

- 190.17.17 SendMessage(data as string) 26462

### 190.17.19 SendMessageMemory(data as memoryblock, offset as Integer, length as Integer)

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Sends a message to the USB device.
**Notes:**

A connection must be open.
Lasterror is set. Lasterror -536854447 is an USB timeout.
Internally ReportID=0 is used.

While writing a crossplatform application for one specific device we saw the following thing: The data buffer for the SendMessageMemory call must be 8 bytes long on Mac (with MacHIDMBS) and 61 bytes long for Windows (with WinHIDMBS) for our HID device. We have 1 byte for the ReportID and 60 data bytes where the first 8 are set like on the Mac. So if the calls fail on Windows, try with a higher length and check the WinHIDMBS.OutputReportByteLength property.

Uses kIOHIDReportTypeOutput.
See also:

- 190.17.20 SendMessageMemory(ReportID as Integer, reportType as Integer, data as memoryblock, offset as Integer, length as Integer) 26463

### 190.17.20 SendMessageMemory(ReportID as Integer, reportType as Integer, data as memoryblock, offset as Integer, length as Integer)

MBS USB Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Sends a message to the USB device.
**Notes:**

A connection must be open.
Lasterror is set. Lasterror -536854447 is an USB timeout.
ReportType can be kIOHIDReportTypeOutput or kIOHIDReportTypeFeature.
See also:

- 190.17.19 SendMessageMemory(data as memoryblock, offset as Integer, length as Integer) 26462

### 190.17.21 SerialNumber as string

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The serial number of the current selected device.
**Notes:** Lasterror is set.

### 190.17.22 VendorID as Integer

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The vendor ID of the selected device.
**Notes:** Lasterror is set.

### 190.17.23 VersionNumber as Integer

MBS USB Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The device specific version number.
**Notes:**

Value can be anything.
On any error, 0 is returned.

### 190.17.24 Properties

### 190.17.25 IOHIDDeviceInterface122Handle as Integer

MBS USB Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The internal handle for the device interface object.
**Notes:**

This is of type IOHIDDeviceInterface122** from IOKit.
(Read only property)

### 190.17.26 IOHIDObjectIteratorHandle as Integer

MBS USB Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The iterator used to find USB devices.
**Notes:**

This is of type io_iterator_t from IOKit.
(Read only property)

### 190.17.27 IOObjectHandle as Integer

MBS USB Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The internal object reference for current device.
**Notes:**

This is of type io_object_t from IOKit.
(Read only property)

### 190.17.28 Lasterror as Integer

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Last error code.
**Notes:**

0 is success.
-1 means that the function is not available.
else Mac OS USB error codes.
See table below, e.g. error -536854447 (=& he0004051) is an USB timeout.

| Constant | Number | LastError value | Description |
|---|---|---|---|
| kIOUSBUnknownPipeErr | & h61 | & he0004061 | Pipe ref not recognized |
| kIOUSBTooManyPipesErr | & h60 | & he0004060 | Too many pipes |
| kIOUSBNoAsyncPortErr | & h5f | & he000405f | no async port |
| kIOUSBNotEnoughPipesErr | & h5e | & he000405e | not enough pipes in interface |
| kIOUSBNotEnoughPowerErr | & h5d | & he000405d | not enough power for selected configuration |
| kIOUSBEndpointNotFound | & h57 | & he0004057 | Endpoint Not found |
| kIOUSBConfigNotFound | & h56 | & he0004056 | Configuration Not found |
| kIOUSBPortWasSuspended | & h52 | & he0004052 | The transaction was returned because the port was suspended |
| kIOUSBPipeStalled | & h4f | & he000404f | Pipe has stalled, error needs to be cleared |
| kIOUSBInterfaceNotFound | & h4e | & he000404e | Interface ref not recognized |
| kIOUSBLowLatencyBufferNotPreviouslyAllocated | & h4d | & he000404d | Attempted to use user land low latency isoc calls w/out calling PrepareBuffer (on the data buffer) first |
| kIOUSBLowLatencyFrameListNotPreviouslyAllocated | & h4c | & he000404c | Attempted to use user land low latency isoc calls w/out calling PrepareBuffer (on the frame list) first |
| kIOUSBHighSpeedSplitError | & h4b | & he000404b | Error to hub on high speed bus trying to do split transaction |
| kIOUSBSyncRequestOnWLThread | & h4a | & he000404a | A synchronous USB request was made on the workloop thread (from a callback?). Only async requests are permitted in that case |
| kIOUSBDeviceNotHighSpeed | & h49 | & he0004049 | Name is deprecated, see below |
| kIOUSBDeviceTransferredToCompanion | & h49 | & he0004049 | The device has been tranferred to another controller for enumeration |
| kIOUSBClearPipeStallNotRecursive | & h48 | & he0004048 | ClearPipeStall should not be called recursively |
| kIOUSBDevicePortWasNotSuspended | & h47 | & he0004047 | Port was not suspended |
| kIOUSBEndpointCountExceeded | & h46 | & he0004046 | The endpoint was not created because the controller cannot support more endpoints |
| kIOUSBDeviceCountExceeded | & h45 | & he0004045 | The device cannot be enumerated because the controller cannot support more devices |
| kIOUSBStreamsNotSupported | & h44 | & he0004044 | The request cannot be completed because the XHCI controller does not support streams |
| kIOUSBInvalidSSEndpoint | & h43 | & he0004043 | An endpoint found in a SuperSpeed device is invalid (usually because there is no Endpoint Companion Descriptor) |
| kIOUSBTooManyTransactionsPending | & h42 | & he0004042 | The transaction cannot be submitted because it would exceed the allowed number of pending transactions |
| kIOUSBTransactionReturned | & h50 | & he0004050 | The transaction has been returned to the caller |
| kIOUSBTransactionTimeout | & h51 | & he0004051 | Transaction timed out |

(Read and Write property)

### 190.17.29 OnlyOneEventPerTick as Boolean

MBS USB Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Whether to limit ReceivedData event.
**Notes:**

Some devices send a lot of measurement data.
This option allows to slow down and limit to 60 events per second.
So if device sends a thousand data records per second, we can ignore over 90% and just pick a few to display.
(Read and Write property)

### 190.17.30 TimeOut as Integer

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Timeout value to use for sending/reading USB data.
**Notes:**

Please specify time in Milliseconds. Default is 500ms.
(Read and Write property)

### 190.17.31 Events

### 190.17.32 DeviceRemoved(result as Integer)

MBS USB Plugin, Plugin Version: 8.7, Platform: macOS, Targets: .

**Function:** The event called whenever the device is removed.
**Notes:** You need to call connect to install the callback which raises this event.

### 190.17.33 ReceivedData(data as string, size as Integer)

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: .

**Function:** Data was received and is available for processing.
**Example:**

```
Sub ReceivedData(data as string, size as Integer)
dim m as MemoryBlock
dim s as string
dim n,i as Integer

// Debug Output data received:

m=data

n=lenb(data)-1
for i=0 to n
s=s+str(m.Byte(i))+" "
next

s=s+"= "+data

System.DebugLog s

End Sub
```

**Notes:** Event is only called when InstallCallback was used and a connection is open.

### 190.17.34 Constants

### 190.17.35 kIOHIDReportTypeFeature = 2

MBS USB Plugin, Plugin Version: 14.0.

**Function:** One of the report type constants.
**Notes:** Feature report.

### 190.17.36 kIOHIDReportTypeInput = 0

MBS USB Plugin, Plugin Version: 14.0.

**Function:** One of the report type constants.
**Notes:** Input report.

### 190.17.37 kIOHIDReportTypeOutput = 1

MBS USB Plugin, Plugin Version: 14.0.

**Function:** One of the report type constants.
**Notes:** Output report.

# 190.18 class MacUSBDeviceMBS

## 190.18.1 class MacUSBDeviceMBS

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** The class for an USB Device on Mac OS X.
**Example:**

```
// iterate over all devices without recursion and count devices
dim devices(-1) as MacUSBDeviceMBS

devices.Append MacUSBDeviceMBS.root

dim count as Integer = -1 // do not count Mac itself

while UBound(devices)>=0
dim dev as MacUSBDeviceMBS = devices.Pop

count = count + 1

for each child as MacUSBDeviceMBS in dev.children
devices.Append child
next
wend

MsgBox str(Count)+" USB devices."
```

**Notes:**

Use the root method to get the device hierarchy.

For Windows you can take a look on the WindowsDeviceMBS and WinUSBDeviceMBS classes.
For cross platform development also check LibUSBDeviceMBS classes.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- MacUSBDeviceMBS

### 190.18.4 Methods

### 190.18.5 children as MacUSBDeviceMBS()

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** The array with all the USB device having the current device as parent.

### 190.18.6 Constructor

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** The private constructor.
**Notes:**

This constructor makes sure you don't create useless MacUSBDeviceMBS objects by error. The only way to create an object is to use the root method to get the object hierarchy.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

### 190.18.7 root as MacUSBDeviceMBS

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** The root of the device tree.
**Example:**

```
// display devices with serialnumbers.
dim devices(-1) as MacUSBDeviceMBS

devices.Append MacUSBDeviceMBS.root

dim lines(-1) as string

while UBound(devices)>=0
dim dev as MacUSBDeviceMBS = devices.Pop

if len(dev.SerialNumber)>0 then
lines.Append dev.name+": "+dev.serialnumber
end if

for each child as MacUSBDeviceMBS in dev.children
devices.Append child
next
wend

MsgBox Join(lines,EndOfLine)
```

**Notes:** Root is the Mac itself. Below root you find the built in USB hubs.

### 190.18.8 Properties

### 190.18.9 Address as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** The device address number.
**Notes:** (Read and Write property)

### 190.18.10 BusPowerAvailable as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** The available bus power.
**Notes:**

Value is in milli ampere.
(Read and Write property)

### 190.18.11 ClassName as String

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** The class name for this device.
**Notes:**

Basicly this is what driver Apple uses.
(Read and Write property)

### 190.18.12 DeviceClass as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** The device class.
**Notes:**

See kUSB*Class constants.

And read here:
http://www.usb.org/developers/defined_class
(Read and Write property)

### 190.18.13 DeviceMaxPacketSize as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** The maximum device packet size.
**Notes:** (Read and Write property)

### 190.18.14 DeviceNumConfigs as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** The number of configurations for this device.
**Notes:** (Read and Write property)

### 190.18.15 DeviceProtocol as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** The device protocol.
**Notes:** (Read and Write property)

### 190.18.16 DeviceReleaseNumber as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** The device release number.
**Notes:** (Read and Write property)

### 190.18.17 DeviceSpeed as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** The device speed.
**Notes:** (Read and Write property)

### 190.18.18 DeviceSubClass as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** The device sub class.
**Notes:**

See kUSB*SubClass constants.
(Read and Write property)

### 190.18.19 ExtraPowerForPorts as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** The extra power asked for ports.
**Notes:**

Value is in milli ampere.
(Read and Write property)

### 190.18.20 Name as String

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** The name of this device node.
**Example:**

```
// show all names of all devices in a msgbox
dim names(-1) as string

// iterate over all devices without recursion
dim devices(-1) as MacUSBDeviceMBS

devices.Append MacUSBDeviceMBS.root

while UBound(devices)>=0
dim dev as MacUSBDeviceMBS = devices.Pop
names.Append dev.name

for each child as MacUSBDeviceMBS in dev.children
devices.Append child
next
wend

MsgBox Join(names,", ")
```

**Notes:** (Read and Write property)

### 190.18.21 NumEndpoints as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** The number of endpoints.
**Notes:** (Read and Write property)

### 190.18.22 Path as String

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** The object path.
**Notes:**

This is internally used by the kernel.
(Read and Write property)

### 190.18.23 Ports as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** The number of ports on an USB hub.
**Notes:** (Read and Write property)

### 190.18.24 ProductID as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** The product ID
**Notes:** (Read and Write property)

### 190.18.25 ProductName as String

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** The product name.
**Notes:** (Read and Write property)

### 190.18.26 Properties as Dictionary

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

**Function:** Creates dictionary with all the properties associated for this USB device in IORegistry.
**Notes:** (Read and Write property)

### 190.18.27 RequestedPower as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** Requested power.
**Notes:**

Value is in milli ampere.
(Read and Write property)

### 190.18.28 SerialNumber as String

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** The device serial number.
**Notes:** (Read and Write property)

### 190.18.29 VendorID as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** The vendor ID.
**Notes:**

Assigned by USB Org.
(Read and Write property)

### 190.18.30 VendorName as String

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

**Function:** The vendor name.
**Notes:** (Read and Write property)

### 190.18.31 Constants

### 190.18.32 kUSBApplicationSpecificClass = 254

MBS MacOSX Plugin, Plugin Version: 10.4.

**Function:** One of the USB device class constants.

### 190.18.33 kUSBATMNetworkingSubClass = 7

MBS MacOSX Plugin, Plugin Version: 10.4.

**Function:** One of the USB device sub class constants.
**Notes:** For kUSBCommunicationDataInterfaceClass.

### 190.18.34 kUSBAudioControlSubClass = 1

MBS MacOSX Plugin, Plugin Version: 10.4.

**Function:** One of the USB device sub class constants.
**Notes:** For kUSBAudioInterfaceClass.

### 190.18.35 kUSBAudioStreamingSubClass = 2

MBS MacOSX Plugin, Plugin Version: 10.4.

**Function:** One of the USB device sub class constants.
**Notes:** For kUSBAudioInterfaceClass.

### 190.18.36 kUSBCommAbstractSubClass = 2

MBS MacOSX Plugin, Plugin Version: 10.4.

**Function:** One of the USB device sub class constants.
**Notes:** For kUSBCommunicationDataInterfaceClass.

### 190.18.37 kUSBCommCAPISubClass = 5

MBS MacOSX Plugin, Plugin Version: 10.4.

**Function:** One of the USB device sub class constants.
**Notes:** For kUSBCommunicationDataInterfaceClass.

### 190.18.38 kUSBCommDirectLineSubClass = 1

MBS MacOSX Plugin, Plugin Version: 10.4.

**Function:** One of the USB device sub class constants.
**Notes:** For kUSBCommunicationDataInterfaceClass.

### 190.18.39 kUSBCommEthernetNetworkingSubClass = 6

MBS MacOSX Plugin, Plugin Version: 10.4.

**Function:** One of the USB device sub class constants.
**Notes:** For kUSBCommunicationDataInterfaceClass.

### 190.18.40 kUSBCommMultiChannelSubClass = 4

MBS MacOSX Plugin, Plugin Version: 10.4.

**Function:** One of the USB device sub class constants.
**Notes:** For kUSBCommunicationDataInterfaceClass.

### 190.18.41 kUSBCommonClassSubClass = 2

MBS MacOSX Plugin, Plugin Version: 10.4.

**Function:** One of the USB device sub class constants.
**Notes:** For kUSBMiscellaneousClass.

### 190.18.42 kUSBCommTelephoneSubClass = 3

MBS MacOSX Plugin, Plugin Version: 10.4.

**Function:** One of the USB device sub class constants.
**Notes:** For kUSBCommunicationDataInterfaceClass.

### 190.18.43 kUSBCommunicationClass = 2

MBS MacOSX Plugin, Plugin Version: 10.4.

**Function:** One of the USB device class constants.

### 190.18.44 kUSBCompositeClass = 0

MBS MacOSX Plugin, Plugin Version: 10.4.

**Function:** One of the USB device class constants.

### 190.18.45 kUSBCompositeSubClass = 0

MBS MacOSX Plugin, Plugin Version: 10.4.

**Function:** One of the USB device sub class constants.

### 190.18.46 kUSBDataClass = 10

MBS MacOSX Plugin, Plugin Version: 10.4.

**Function:** One of the USB device class constants.

### 190.18.47 kUSBDFUSubClass = 1

MBS MacOSX Plugin, Plugin Version: 10.4.

**Function:** One of the USB device sub class constants.
**Notes:** For kUSBApplicationSpecificInterfaceClass.

### 190.18.48 kUSBDiagnosticClass = 220

MBS MacOSX Plugin, Plugin Version: 10.4.

**Function:** One of the USB device class constants.

### 190.18.49 kUSBHIDBootInterfaceSubClass = 1

MBS MacOSX Plugin, Plugin Version: 10.4.

**Function:** One of the USB device sub class constants.
**Notes:** For kUSBHIDBootInterfaceSubClass.

### 190.18.50 kUSBHubClass = 9

MBS MacOSX Plugin, Plugin Version: 10.4.

**Function:** One of the USB device class constants.

### 190.18.51 kUSBHubSubClass = 0

MBS MacOSX Plugin, Plugin Version: 10.4.

**Function:** One of the USB device sub class constants.

### 190.18.52 kUSBIrDABridgeSubClass = 2

MBS MacOSX Plugin, Plugin Version: 10.4.

**Function:** One of the USB device sub class constants.
**Notes:** For kUSBApplicationSpecificInterfaceClass.

### 190.18.53 kUSBMassStorageATAPISubClass = 2

MBS MacOSX Plugin, Plugin Version: 10.4.

**Function:** One of the USB device sub class constants.
**Notes:** For kUSBMassStorageInterfaceClass.

### 190.18.54 kUSBMassStorageQIC157SubClass = 3

MBS MacOSX Plugin, Plugin Version: 10.4.

**Function:** One of the USB device sub class constants.
**Notes:** For kUSBMassStorageInterfaceClass.

### 190.18.55 kUSBMassStorageRBCSubClass = 1

MBS MacOSX Plugin, Plugin Version: 10.4.

**Function:** One of the USB device sub class constants.
**Notes:** For kUSBMassStorageInterfaceClass.

### 190.18.56 kUSBMassStorageSCSISubClass = 6

MBS MacOSX Plugin, Plugin Version: 10.4.

**Function:** One of the USB device sub class constants.
**Notes:** For kUSBMassStorageInterfaceClass.

### 190.18.57 kUSBMassStorageSFF8070iSubClass = 5

MBS MacOSX Plugin, Plugin Version: 10.4.

**Function:** One of the USB device sub class constants.
**Notes:** For kUSBMassStorageInterfaceClass.

### 190.18.58 kUSBMassStorageUFISubClass = 4

MBS MacOSX Plugin, Plugin Version: 10.4.

**Function:** One of the USB device sub class constants.
**Notes:** For kUSBMassStorageInterfaceClass.

### 190.18.59 kUSBMIDIStreamingSubClass = 3

MBS MacOSX Plugin, Plugin Version: 10.4.

**Function:** One of the USB device sub class constants.
**Notes:** For kUSBAudioInterfaceClass.

### 190.18.60 kUSBMiscellaneousClass = 239

MBS MacOSX Plugin, Plugin Version: 10.4.

**Function:** One of the USB device class constants.

### 190.18.61 kUSBPersonalHealthcareClass = 15

MBS MacOSX Plugin, Plugin Version: 10.4.

**Function:** One of the USB device class constants.

### 190.18.62 kUSBReprogrammableDiagnosticSubClass = 1

MBS MacOSX Plugin, Plugin Version: 10.4.

**Function:** One of the USB device sub class constants.
**Notes:** For kUSBDiagnosticDeviceInterfaceClass.

### 190.18.63 kUSBRFControllerSubClass = 1

MBS MacOSX Plugin, Plugin Version: 10.4.

**Function:** One of the USB device sub class constants.
**Notes:** For kUSBWirelessControllerInterfaceClass.

### 190.18.64 kUSBTestMeasurementSubClass = 3

MBS MacOSX Plugin, Plugin Version: 10.4.

**Function:** One of the USB device sub class constants.
**Notes:** For kUSBApplicationSpecificInterfaceClass.

### 190.18.65 kUSBVendorSpecificClass = 255

MBS MacOSX Plugin, Plugin Version: 10.4.

**Function:** One of the USB device class constants.

### 190.18.66 kUSBVideoControlSubClass = 1

MBS MacOSX Plugin, Plugin Version: 10.4.

**Function:** One of the USB device sub class constants.

### 190.18.67 kUSBVideoInterfaceCollectionSubClass = 3

MBS MacOSX Plugin, Plugin Version: 10.4.

**Function:** One of the USB device sub class constants.

### 190.18.68 kUSBVideoStreamingSubClass = 2

MBS MacOSX Plugin, Plugin Version: 10.4.

**Function:** One of the USB device sub class constants.

### 190.18.69 kUSBWirelessControllerClass = 224

MBS MacOSX Plugin, Plugin Version: 10.4.

**Function:** One of the USB device class constants.

# 190.19 class MacUSBMBS

## 190.19.1 class MacUSBMBS

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A class to talk to an USB device.
**Notes:** Written for a client and probably not yet universally useable, so it may not work with your device.

## 190.19.4 Methods

## 190.19.5 AbortPipe(PipeRef as Integer) as boolean

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Aborts any outstanding transactions on the pipe with status kIOReturnAborted.
**Notes:**

If there are outstanding asynchronous transactions on the pipe, the callbacks will happen.
Note that this command will also clear the halted bit on the endpoint in the controller, but will NOT clear

the data toggle bit. If you want to clear the data toggle bit as well, see ClearPipeStall or ClearPipeStallBothEnds for more information. The interface must be open for the pipe to exist.
pipeRef: Index for the desired pipe (1 - GetNumEndpoints).
Lasterror is set to kIOReturnSuccess if successful, kIOReturnNoDevice if there is no connection to an IOService, or kIOReturnNotOpen if the interface is not open for exclusive access.

### 190.19.6 ClearPipeStall(PipeRef as Integer) as boolean

MBS USB Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Clears the halted bit and the data toggle bit on the pipe's endpoint in the controller.
**Notes:**

This function also returns any outstanding transactions on the pipe with status kIOUSBTransactionReturned.
If there are outstanding asynchronous transactions on the pipe, the callbacks will happen. The data toggle may need to be resynchronized. The driver may handle this by sending a ClearFeature(ENDPOINT_HALT) to the default control pipe, specifying the device's endpoint for this pipe.

pipeRef: Index for the desired pipe (1 - NumEndpoints).
Lasterror is set to kIOReturnSuccess if successful, kIOReturnNoDevice if there is no connection to an IOService, or kIOReturnNotOpen if the interface is not open for exclusive access.

### 190.19.7 Close

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Closes connection to the device.

### 190.19.8 ConfigurationValue as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the current configuration value set in the device (the interface will be part of that configuration.)
**Notes:**

The interface does not have to be open to use this function.
Lasterror is set.

### 190.19.9 Connect as boolean

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Connects to the first device matching product and vendor IDs.
**Notes:** Returns true on success.

### 190.19.10 DeviceProduct as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the USB Product ID (idProduct) of the device.
**Notes:**

The device does not have to be open to use this function.
Lasterror is set. Returns the actual product ID of the device.

### 190.19.11 DeviceReleaseNumber as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the Device Release Number (bcdDevice) of the device.
**Notes:**

The device does not have to be open to use this function.
Lasterror is set.

### 190.19.12 DeviceVendor as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the USB Vendor ID (idVendor) of the device.
**Notes:**

The device does not have to be open to use this function.
Lasterror is set. Returns the actual vendor ID of the device.

### 190.19.13 InterfaceClass as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the USB Class of the interface.
**Notes:** Lasterror is set.

### 190.19.14 InterfaceNumber as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the interface number (zero-based index) of this interface within the current configuration of the device.
**Notes:** Lasterror is set.

### 190.19.15 InterfaceProtocol as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the USB Protocol of the interface.
**Notes:** Lasterror is set.

### 190.19.16 InterfaceSubClass as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the USB Subclass of the interface.
**Notes:** Lasterror is set.

### 190.19.17 LocationID as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the location ID.
**Notes:**

The location ID is a 32 bit number which is unique among all USB devices in the system, and which will not change on a system reboot unless the topology of the bus itself changes. The interface does not have to be open to use this function.
Lasterror is set.

### 190.19.18 NumEndpoints as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the number of endpoints in this interface.
**Notes:**

The interface does not have to be open to use this function.
Lasterror is set.

### 190.19.19 ReadPacket(PipeRef as Integer, MaxSize as Integer = 1024) as Memoryblock

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Reads data packet.
**Notes:** We developed this function for a client, so it's probably useless for everyone else.

### 190.19.20 ReadRaw(PipeRef as Integer, MaxSize as Integer = 1024) as Memoryblock

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Reads data on a BULK IN or an INTERRUPT pipe.
**Notes:** Reads up to MaxSize bytes from the given pipe. Pipe is in range 1 to GetNumEndpoints.

### 190.19.21 ResetPipe(PipeRef as Integer) as boolean

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Equivalent to ClearPipeStall.
**Notes:**

The interface must be open for the pipe to exist.
pipeRef: Index for the desired pipe (1 - GetNumEndpoints).
Lasterror is set to kIOReturnSuccess if successful, kIOReturnNoDevice if there is no connection to an IOService, or kIOReturnNotOpen if the interface is not open for exclusive access.

### 190.19.22 WritePacket(PipeRef as Integer, Data as Memoryblock) as boolean

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Sends data packet.
**Notes:**

We developed this function for a client, so it's probably useless for everyone else.

Lasterror is set.
See also:

- 190.19.23 WritePacket(PipeRef as Integer, Data as string) as boolean 26488

### 190.19.23 WritePacket(PipeRef as Integer, Data as string) as boolean

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Sends data packet.
**Notes:**

We developed this function for a client, so it's probably useless for everyone else.
Lasterror is set.
See also:

- 190.19.22 WritePacket(PipeRef as Integer, Data as Memoryblock) as boolean 26487

### 190.19.24 WriteRaw(PipeRef as Integer, Data as Memoryblock) as boolean

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Writes data on a BULK OUT or INTERRUPT OUT pipe.
**Notes:**

The interface must be open for the pipe to exist.
PipeRef: Index for the desired pipe (1 - GetNumEndpoints).
Data: the buffer of data to send.
Lasterror is set.
See also:

- 190.19.25 WriteRaw(PipeRef as Integer, Data as string) as boolean 26488

### 190.19.25 WriteRaw(PipeRef as Integer, Data as string) as boolean

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Writes data on a BULK OUT or INTERRUPT OUT pipe.
**Notes:**

The interface must be open for the pipe to exist.
PipeRef: Index for the desired pipe (1 - GetNumEndpoints).
Data: the buffer of data to send.
Lasterror is set.
See also:

- 190.19.24 WriteRaw(PipeRef as Integer, Data as Memoryblock) as boolean 26488

### 190.19.26 Properties

### 190.19.27 completionTimeout as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The completion timeout.
**Notes:**

Specifies a time value in milliseconds. Once the request is queued on the bus, if the entire request is not completed in this amount of time, the request will be aborted and returned.
Default is 1000.
(Read and Write property)

### 190.19.28 LastError as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The last error code.
**Notes:** (Read and Write property)

### 190.19.29 noDataTimeout as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The timeout for no data.
**Notes:**

Specifies a time value in milliseconds. Once the request is queued on the bus, if no data is transferred in this amount of time, the request will be aborted and returned.
Default is 1000.
(Read and Write property)

### 190.19.30 ProductID as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The product ID for connecting to the device.
**Notes:** (Read and Write property)

### 190.19.31 VendorID as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The vendor ID for connecting to the device.
**Notes:** (Read and Write property)

### 190.19.32 Constants

### 190.19.33 kIOReturnSuccess = 0

MBS USB Plugin, Plugin Version: 12.5.

**Function:** The error constant for no error.

### 190.19.34 kIOUSBConfigNotFound = & he0004056

MBS USB Plugin, Plugin Version: 13.5.

**Function:** One of the error constants.
**Notes:** Configuration Not found.

### 190.19.35 kIOUSBDeviceNotHighSpeed = & he0004049

MBS USB Plugin, Plugin Version: 13.5.

**Function:** One of the error constants.
**Notes:** The device is not a high speed device, so the EHCI driver returns an error.

### 190.19.36 kIOUSBDevicePortWasNotSuspended = & he0004050

MBS USB Plugin, Plugin Version: 13.5.

**Function:** One of the error constants.
**Notes:** Port was not suspended.

### 190.19.37 kIOUSBEndpointNotFound = & he0004057

MBS USB Plugin, Plugin Version: 13.5.

**Function:** One of the error constants.
**Notes:** Endpoint Not found.

### 190.19.38 kIOUSBHighSpeedSplitError = & he000404b

MBS USB Plugin, Plugin Version: 13.5.

**Function:** One of the error constants.
**Notes:** Error to hub on high speed bus trying to do split transaction.

### 190.19.39 kIOUSBInterfaceNotFound = & he000404e

MBS USB Plugin, Plugin Version: 13.5.

**Function:** One of the error constants.
**Notes:** Interface ref not recognized.

### 190.19.40 kIOUSBLowLatencyBufferNotPreviouslyAllocated = & he000404d

MBS USB Plugin, Plugin Version: 13.5.

**Function:** One of the error constants.
**Notes:** Attempted to use user land low latency isoc calls w/out calling PrepareBuffer (on the data buffer) first.

### 190.19.41 kIOUSBLowLatencyFrameListNotPreviouslyAllocated = & he000404c

MBS USB Plugin, Plugin Version: 13.5.

**Function:** One of the error constants.
**Notes:** Attempted to use user land low latency isoc calls w/out calling PrepareBuffer (on the frame list) first.

### 190.19.42 kIOUSBNoAsyncPortErr = & he000405f

MBS USB Plugin, Plugin Version: 13.5.

**Function:** One of the error constants.
**Notes:** No async port.

### 190.19.43 kIOUSBNotEnoughPipesErr = & he000405e

MBS USB Plugin, Plugin Version: 13.5.

**Function:** One of the error constants.
**Notes:** Not enough pipes in interface.

### 190.19.44 kIOUSBNotEnoughPowerErr = & he000405d

MBS USB Plugin, Plugin Version: 13.5.

**Function:** One of the error constants.
**Notes:** Not enough power for selected configuration.

### 190.19.45 kIOUSBPipeStalled = & he000404f

MBS USB Plugin, Plugin Version: 13.5.

**Function:** One of the error constants.
**Notes:** Pipe has stalled, error needs to be cleared.

### 190.19.46 kIOUSBSyncRequestOnWLThread = & he000404a

MBS USB Plugin, Plugin Version: 13.5.

**Function:** One of the error constants.
**Notes:** A synchronous USB request was made on the workloop thread (from a callback?). Only async requests are permitted in that case.

### 190.19.47 kIOUSBTooManyPipesErr = & he0004060

MBS USB Plugin, Plugin Version: 13.5.

**Function:** One of the error constants.
**Notes:** Too many pipes.

### 190.19.48 kIOUSBTransactionReturned = & he0004050

MBS USB Plugin, Plugin Version: 13.5.

**Function:** One of the error constants.
**Notes:** The transaction has been returned to the caller.

### 190.19.49 kIOUSBTransactionTimeout = & he0004051

MBS USB Plugin, Plugin Version: 13.5.

**Function:** One of the error constants.
**Notes:** Transaction timed out.

### 190.19.50 kIOUSBUnknownPipeErr = & he0004061

MBS USB Plugin, Plugin Version: 13.5.

**Function:** One of the error constants.
**Notes:** Pipe ref not recognized.

## 190.20 class MacUSBNotificationMBS

### 190.20.1 class MacUSBNotificationMBS

MBS USB Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The class for receiving notifications if an USB device has been attached or removed.
**Notes:**

Please make a subclass so you can put your own code in the events.

Use WinUSBNotificationMBS for Windows.

### 190.20.2 Blog Entries

- MBS Xojo Plugins, version 20.6pr1
- Showing USB Devices
- MBS Real Studio Plugins, version 11.2pr3

### 190.20.3 Blog Entries

- MBS Xojo Plugins, version 20.6pr1
- Showing USB Devices
- MBS Real Studio Plugins, version 11.2pr3

### 190.20.4 Methods

### 190.20.5 Constructor(vendor as Integer = 0, product as Integer = 0)

MBS USB Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Setup the notification system so you are informed about USB devices being attached or removed.
**Example:**

```
// look only for device with this vendor/product ID
dim m as new MyMacUSBNotificationMBS(& h5AC, & h263)
```

**Notes:**

You can use vendor and product IDs to limit the class to look only for devices with matching IDs.
Lasterror is set.

### 190.20.6 GetUSBDeviceInfo(DeviceHandle as Integer, byref Vendor as string, byref Product as string, byref SerialNumber as string, byref Revision as Integer) as boolean

MBS USB Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Queries USB details for a given handle.
**Notes:**

This is a convenience function to query details on the devices found within the events.
Returns true on success.

### 190.20.7 QueryBSDName(DeviceHandle as Integer) as string

MBS USB Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Function to query BSDName of a given device.
**Notes:**

If the device is a disk or USB stick and has been mounted, this would give the bsd name of the disk.
Returns "" on any error.

### 190.20.8 Release(DeviceHandle as Integer)

MBS USB Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Releases an object reference when you don't need it any longer.
**Notes:**

Please call Retain and Release in pairs.
Does nothing if handle is zero or when called on Linux/Windows.

### 190.20.9 Retain(DeviceHandle as Integer)

MBS USB Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Retains an object reference so it is available later.
**Notes:**

Please call Retain and Release in pairs.
Does nothing if handle is zero or when called on Linux/Windows.

### 190.20.10 Properties

### 190.20.11 LastError as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The last error code.
**Notes:**

Zero is no error while other values are Mac OS error codes.
(Read and Write property)

### 190.20.12 Events

### 190.20.13 DeviceAdded(properties as dictionary, NewDevice as boolean, ClassName as string, DeviceName as string, DeviceHandle as Integer)

MBS USB Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

**Function:** This event is called when the device is added.
**Notes:**

You find properties like product and vendor in the dictionary.
This event can be called from the constructor for existing devices with NewDevice = false. Later events have NewDevice = true so you see that this is a new device.

DeviceName and ClassName give details on the USB item found.
DeviceHandle is the internal object reference which can be used with other helper functions in this class (io_service_t).

### 190.20.14 DeviceRemoved(properties as dictionary, NewDevice as boolean, ClassName as string, DeviceName as string, DeviceHandle as Integer)

MBS USB Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

**Function:** This event is called when the device is removed.
**Notes:**

You find properties like product and vendor in the dictionary.
This event can be called from the constructor for existing devices with NewDevice = false. Later events have

NewDevice = true so you see that this is a new device.

DeviceName and ClassName give details on the USB item found.
DeviceHandle is the internal object reference which can be used with other helper functions in this class (io_service_t).

# 190.21 class WinHIDMBS

## 190.21.1 class WinHIDMBS

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** A class to work with HID devices on Windows.
**Example:**

```
dim m as new WinHIDMBS
dim s as string

# if not TargetWin32
MsgBox "This example requires Windows."
# endif

if m.FindFirstDevice then

do
ListBox1.AddRow ""

ListBox1.Cell(ListBox1.LastIndex,0)=hex(m.ProductID)
ListBox1.Cell(ListBox1.LastIndex,1)=hex(m.VendorID)
ListBox1.cell(ListBox1.LastIndex,2)=m.Product
ListBox1.cell(ListBox1.LastIndex,3)=m.Manufacturer
ListBox1.cell(ListBox1.LastIndex,4)=m.SerialNumber
ListBox1.cell(ListBox1.LastIndex,5)=hex(m.VersionNumber)

if left(m.Product,3)="RF1" then // my test device

if m.Connect then
// write 9 bytes report
// first byte is report ID plus 8 byte data
s=chr(0)+"P"+chr(0)+chr(0)+chr(0)+chr(0)+chr(0)+chr(0)+chr(0)

MsgBox "Send bytes: "+str(m.SendMessage(s))

do
s=m.ReadMessage(17)
loop until lenb(s)>0 // until we got something
MsgBox midb(s,2) // shows result. First byte is ReportID again

m.Disconnect
end if
end if

loop until not m.FindNextDevice
```

```
end if

Title=str(ListBox1.ListCount)+" devices found."
```

**Notes:**

For newer development, please use our HIDAPIMBS class.

Updated in version 10.4 of plugins to ignore devices which you don't have permissions to access them. So you will now see devices with VendorID=0 and ProductID=0.

This class can be used in three different ways. First normal with Connect and ReadMessage/SendMessage. Second with InstallListener and SendMessage/Poll functions. Third low level via GetInputReport and SetOutputReport.

### 190.21.5 Xojo Developer Magazine

- 10.5, page 9: News

### 190.21.6 Methods

### 190.21.7 Close

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Closes the active connection.

### 190.21.8 Connect as boolean

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Creates a connection to the current device.
**Example:**

```
Function OpenUSBDevice() As boolean
dim i as Integer
dim h as WinHIDMBS

h=FindDevice // see FindFirst example

if h=nil then
MsgBox "No XYZ device found."
Return false
end if

call h.Connect

if h.Lasterror<>0 then
MsgBox "Failed to connect to USB Device."
Return false
end if

Return true
```

```
End Function
```

**Notes:**

Lasterror is set.
Returns true on success and false on failure.

The plugin tries to open a read and a write connection. If both fail, connect returns false. If one is okay, it returns true.

Some devices don't allow read or write because of missing permissions.

### 190.21.9 DevicePath as string

MBS USB Plugin, Plugin Version: 9.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The internal path used by Windows to identify the device.
**Notes:** Only for debugging.

### 190.21.10 Disconnect

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Disconnets current USB device.
**Notes:** Lasterror is set.

### 190.21.11 FindFirstDevice as boolean

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Finds the first device and loads the properties.
**Example:**

```
Function FindDevice() As MyWinHIDMBS
dim h as MyWinHIDMBS
dim p as string

h=new MyWinHIDMBS // your own subclass of MacHIDMBS so you can get events

if h.FindFirstDevice then
```

```
p=h.Product
if p="MyProduct" then
Return h
end if

while h.FindNextDevice

p=h.Product
if p="MyProduct" then
Return h
end if

wend

end if
End Function
```

**Notes:**

Returns true on success and false on failure.
On Windows finds only devices which can be opened for Read/Write.

### 190.21.12 FindNextDevice as boolean

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Finds next device.
**Notes:** Returns true on success and false on failure.

### 190.21.13 GetInputReport(data as MemoryBlock, Offset as Integer = 0, Length as Integer = 0) as boolean

MBS USB Plugin, Plugin Version: 15.0, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Returns an input reports from a top-level collection.
**Notes:**

This is very low level.
First byte of data block is report ID.
If Length is 0, we use size of memoryblock.
Returns true on success.

see also:
https://msdn.microsoft.com/en-us/library/windows/hardware/ff538945(v=vs.85).aspx

### 190.21.14 InstallListener(PollSize as Integer) as boolean

MBS USB Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Installs a second thread which performs Read.
**Example:**

```
dim h as new WinHIDMBS

call h.InstallListener 9 // 8 bytes + Report ID
```

**Notes:**

Use PollString or PollMemory in a timer or a loop to get the data.
This is an alternative way compared to ReadMessage functions.

### 190.21.15 Manufacturer as string

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The manufacturer name.
**Notes:**

On any error an empty string is returned.
Lasterror is set.

### 190.21.16 PollMemory as memoryblock

MBS USB Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Reads a message from the device.
**Notes:**

A connection must be open and InstallListener must be used.
Lasterror is set.
You may want to try this function in a loop or a timer till you get data.

### 190.21.17 PollString as string

MBS USB Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Reads a message from the device.
**Example:**

```
dim m as WinHIDMBS // your WinHIDMBS object
dim s as string

do
s=m.PollString
loop until lenb(s)>0 // until we got something
MsgBox midb(s,2) // shows result. First byte is ReportID again
```

**Notes:**

A connection must be open and InstallListener must be used.
Lasterror is set.
You may want to try this function in a loop or a timer till you get data.

### 190.21.18 Product as string

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The product string of the selected device.
**Notes:** Lasterror is set.

### 190.21.19 ProductID as Integer

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The product ID of the selected device.
**Notes:** Lasterror is set.

### 190.21.20 ReadMessage(length as Integer, timeOut as Integer = 0) as string

MBS USB Plugin, Plugin Version: 13.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Reads a message from the device.
**Example:**

```
dim m as WinHIDMBS
```

```
dim s as string

do
s=m.ReadMessage(48)
loop until lenb(s)>0 // until we got something
MsgBox midb(s,2) // shows result. First byte is ReportID again
```

**Notes:**

Length is the length of the receive buffer you want to use.
The string returned is 0 to length bytes long.
A connection must be open.
Lasterror is set.
You may want to try this function in a loop till you get data.
Timeout is a timeout value in milliseconds.

### 190.21.21 ReadMessageMemory(length as Integer, timeOut as Integer = 0) as memoryblock

MBS USB Plugin, Plugin Version: 13.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Reads a message from the device.
**Example:**

```
dim m as WinHIDMBS
dim s as memoryblock

do
s=m.ReadMessageMemory(48)
loop until s<>nil // until we got something
MsgBox midb(s,2) // shows result. First byte is ReportID again
```

**Notes:**

Length is the length of the receive buffer you want to use.
The memoryblock returned has a size of 0 to length bytes.
A connection must be open.
Lasterror is set.
You may want to try this function in a loop till you get data.
Timeout is a timeout value in milliseconds.

### 190.21.22 SendMessage(data as string) as Integer

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Sends a message to the USB device.
**Example:**

```
dim m as WinHIDMBS // your hid object
dim s as string
// write 9 bytes report
// first byte is report ID plus 8 byte data
s=chr(0)+"P"+chr(0)+chr(0)+chr(0)+chr(0)+chr(0)+chr(0)+chr(0)
MsgBox "Send bytes: "+str(m.SendMessage(s))
```

**Notes:**

A connection must be open.
Returns number of bytes sent.

The first byte must be the Report ID which seems to be zero for most devices.

### 190.21.23 SendMessageMemory(data as memoryblock, Offset as Integer = 0, length as Integer = 0) as Integer

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Sends a message to the USB device.
**Notes:**

A connection must be open.
Lasterror is set.
Returns number of bytes sent.

While writing a crossplatform application we saw the following thing: The data buffer for the SendMessageMemory call must be 8 bytes long on Mac for our device (with MacHIDMBS) and 61 bytes long for Windows (with WinHIDMBS) for our HID device. We have 1 byte for the ReportID and 60 data bytes where the first 8 are set like on the Mac. So if the calls fail on Windows, try with a higher length and check the WinHIDMBS.OutputReportByteLength property.

The first byte must be the Report ID which seems to be zero for most devices.
If length is zero, we use the length of memoryblock.

### 190.21.24 SerialNumber as string

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The serial number of the current selected device.
**Notes:** Lasterror is set.

### 190.21.25 SetOutputReport(data as MemoryBlock, Offset as Integer = 0, Length as Integer = 0) as boolean

MBS USB Plugin, Plugin Version: 15.0, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Sends an output report.
**Notes:**

This is very low level.
First byte of data block is report ID.
If Length is 0, we use size of memoryblock.
Returns true on success.

see also
https://msdn.microsoft.com/en-us/library/windows/hardware/ff539690(v=vs.85).aspx

### 190.21.26 VendorID as Integer

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The vendor ID of the selected device.
**Notes:** Lasterror is set.

### 190.21.27 VersionNumber as Integer

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The device specific version number.
**Notes:**

Value can be anything.
On any error, 0 is returned.
Lasterror is set.

### 190.21.28 Properties

### 190.21.29 FeatureReportByteLength as Integer

MBS USB Plugin, Plugin Version: 9.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Maximum length, in bytes, of all the feature reports, including the report identifier, if report identifiers are used, which is added to the beginning of the report data.
**Notes:** (Read and Write property)

### 190.21.30 HidHandle as Integer

MBS USB Plugin, Plugin Version: 9.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The handle for the HID device.
**Notes:** (Read and Write property)

### 190.21.31 InputReportByteLength as Integer

MBS USB Plugin, Plugin Version: 9.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Maximum size, in bytes, of the input reports, including the report identifier, if report identifiers are used, which is added to the beginning of the report data.
**Notes:** (Read and Write property)

### 190.21.32 Lasterror as Integer

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Last error code.
**Notes:**

0 is success.
-1 means that the function is not available.
else Windows error codes like 5 for Access Denied.
(Read and Write property)

### 190.21.33 LasterrorString as String

MBS USB Plugin, Plugin Version: 9.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The last error code in a formatted and localized string.
**Notes:**

This does not work for plugin error codes.
Like -1 if the function is not available.
(Read only property)

### 190.21.34 OutputReportByteLength as Integer

MBS USB Plugin, Plugin Version: 9.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Maximum size, in bytes, of all the output reports, including the report identifier, if report identifiers are used, which is added to the beginning of the report data.
**Notes:** (Read and Write property)

### 190.21.35 PnPHandle as Integer

MBS USB Plugin, Plugin Version: 9.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The handle for Plug and Play.
**Notes:** (Read and Write property)

### 190.21.36 ReadHandle as Integer

MBS USB Plugin, Plugin Version: 9.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The handle of the stream for reading data from the USB device.
**Notes:** (Read and Write property)

### 190.21.37 ThreadHandle as Integer

MBS USB Plugin, Plugin Version: 9.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The handle for the thread which waits in the background for new data.
**Notes:** (Read and Write property)

### 190.21.38 WriteHandle as Integer

MBS USB Plugin, Plugin Version: 9.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The handle of the stream for writing data to the USB device.
**Notes:** (Read and Write property)

# 190.22 class WinUSBDeviceMBS

## 190.22.1 class WinUSBDeviceMBS

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The class to query USB devices.
**Example:**

```
dim devices(-1) as WinUSBDeviceMBS = WinUSBDeviceMBS.Devices

for each d as WinUSBDeviceMBS in devices
MsgBox d.Vendor+" - "+d.Product
next
```

## 190.22.2 Blog Entries

- Showing USB Devices
- MBS Real Studio Plugins, version 11.2pr6

## 190.22.3 Blog Entries

- Showing USB Devices
- MBS Real Studio Plugins, version 11.2pr6

## 190.22.4 Methods

## 190.22.5 Devices as WinUSBDeviceMBS()

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Queries a list of all USB Devices.
**Example:**

```
dim devices() as WinUSBDeviceMBS = WinUSBDeviceMBS.devices
for each d as WinUSBDeviceMBS in devices
msgbox d.vendor+" "+d.product+" "+d.serialnumber
next
```

**Notes:** Returns an emtpy array on errors.

### 190.22.6 Properties

### 190.22.7 cdUSB as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The device USB version.
**Notes:**

USB Specification Number which device complies too.

The cdUSB field reports the highest version of USB the device supports. The value is in binary coded decimal with a format of 0xJJMN where JJ is the major version number, M is the minor version number and N is the sub minor version number. e.g. USB 2.0 is reported as & h0200, USB 1.1 as 0x0110 and USB 1.0 as & h0100.
(Read and Write property)

### 190.22.8 DescriptorType as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The device descriptor type.
**Notes:**

Device Descriptor (0x01)
(Read and Write property)

### 190.22.9 DeviceClass as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The device class.
**Notes:**

See constants in MacUSBDeviceMBS class.
Assigned by USB Org
(Read and Write property)

### 190.22.10 DeviceID as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The device ID.

**Notes:** (Read and Write property)

### 190.22.11 DeviceProtocol as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The device protocol.
**Notes:**

Assigned by USB Org
(Read and Write property)

### 190.22.12 DeviceSubClass as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The device sub class.
**Notes:**

See constants in MacUSBDeviceMBS class.
Assigned by USB Org
(Read and Write property)

### 190.22.13 MaxEP0Size as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Maximum Packet Size for Zero Endpoint.
**Notes:**

Valid Sizes are 8, 16, 32, 64
(Read and Write property)

### 190.22.14 Product as String

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The product name.
**Notes:** (Read and Write property)

### 190.22.15 ProductID as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The product ID of the device.
**Notes:** (Read and Write property)

### 190.22.16 SerialNumber as String

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The serial number of the USB device.
**Example:**

```
dim devices(-1) as WinUSBDeviceMBS = WinUSBDeviceMBS.Devices

for each d as WinUSBDeviceMBS in devices
MsgBox d.Vendor+" - "+d.Product+": "+d.SerialNumber
next
```

**Notes:**

Not all vendors save the serial number in the device.
(Read and Write property)

### 190.22.17 Vendor as String

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The vendor name of the USB device.
**Notes:** (Read and Write property)

### 190.22.18 VendorID as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The vendor ID of the USB device.
**Notes:**

Assigned by USB Org.
(Read and Write property)

# 190.23 class WinUSBInterfaceDescriptionMBS

## 190.23.1 class WinUSBInterfaceDescriptionMBS

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** This class is used by USB clients to retrieve a USB-defined interface descriptor.

## 190.23.2 Properties

## 190.23.3 AlternateSetting as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The index number of the alternate setting of the interface.
**Notes:** (Read and Write property)

## 190.23.4 DescriptorType as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The descriptor type.
**Notes:**

Descriptor must be set to USB_INTERFACE_DESCRIPTOR_TYPE.
(Read and Write property)

## 190.23.5 InterfaceClass as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The class code of the device that the USB specification group assigned.
**Notes:** (Read and Write property)

## 190.23.6 InterfaceIndex as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The index of a string descriptor that describes the interface.
**Notes:**

For information about this field, see section 9.6.5 in the "Universal Serial Bus Revision 2.0" specification at USB Technology.
(Read and Write property)

### 190.23.7 InterfaceNumber as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The index number of the interface.
**Notes:** (Read and Write property)

### 190.23.8 InterfaceProtocol as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The protocol code of the device that the USB specification group assigned.
**Notes:** (Read and Write property)

### 190.23.9 InterfaceSubClass as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The subclass code of the device that the USB specification group assigned.
**Notes:** (Read and Write property)

### 190.23.10 Length as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The length, in bytes, of the descriptor.
**Notes:** (Read and Write property)

### 190.23.11 NumEndpoints as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The number of endpoints that are used by the interface, excluding the default status endpoint.
**Notes:** (Read and Write property)

# 190.24 class WinUSBMBS

## 190.24.1 class WinUSBMBS

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Provides access to any USB device on Windows.
**Notes:**

This class provides funtions exposed by Winusb.dll, which user-mode client drivers and applications can use to communicate with USB devices.
WinUSB functions require Windows XP or later.

see also
http://msdn.microsoft.com/en-us/library/windows/hardware/ff540174(v=vs.85).aspx
and
http://msdn.microsoft.com/en-us/library/windows/hardware/ff540046(v=vs.85).aspx# winusb

For PipeIDs, please use 1, 2, 3... for output pipe IDs and & h81, & h82, & h83... for input pipes.

For Mac you can take a look on the MacUSBDeviceMBS class and the IORegistryMBS class.
See also WinUSBDeviceMBS and WindowsDeviceMBS classes.
For cross platform development also check LibUSBDeviceMBS classes.

### 190.24.4 Methods

### 190.24.5 AbortPipe(PipeID as Integer)

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Aborts all of the pending transfers for a pipe. This is a synchronous operation.
**Notes:**

To reset a pipe associated with an endpoint in the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

PipeID: The identifier (ID) of the control pipe. The PipeID parameter is an 8-bit value that consists in a 7-bit address and a direction bit. This parameter corresponds to the EndpointAddress field in the endpoint descriptor.

Lasterror is zero on success and false on failure.

### 190.24.6 Available as boolean

MBS USB Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Returns true if winusb.dll has been found and loaded.
**Notes:** Always false on Linux and Mac OS X.

### 190.24.7 Constructor(path as string)

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Creates a WinUSB object for the device specified by a device path.
**Example:**

```
Dim path As String = "\\?\usb# vid_0e0f& pid_0003# 6& 30c8ca5f& 0& 5# { a5dcbf10-6530-11d2-901f-00c04fb951ed } "
Dim w As New WinUSBMBS(path)

If w.Lasterror <>0 Then
MsgBox "Lasterror: "+Str(w.Lasterror)
else
MsgBox "DeviceHandle: "+Hex(w.DeviceHandle)
End If
```

**Notes:**

Use WindowsDeviceMBS class to find USB devices and their device paths.
Lasterror is set.
On success DeviceHandle and Handle properties are not nil.

When Constructor is called, the policy settings of the interface are reset to the default values.
The Constructor call queries the underlying USB stack for various descriptors and allocates enough memory to store the retrieved descriptor data.
Constructor first retrieves the device descriptor and then gets the associated configuration descriptor. From the configuration descriptor, the call derives the associated interface descriptors and stores them in an array. The interfaces in the array are identified by zero-based indexes. An index value of 0 indicates the first interface (the default interface), a value of 1 indicates the second associated interface, and so on. Constructor parses the default interface descriptor for the endpoint descriptors and caches information such as the associated pipes or state specific data. The handle received in the InterfaceHandle parameter is a pointer to the memory block allocated for the first interface in the array.

If an application wants to use another interface on the device, it must call GetAssociatedInterface, specify the index of the interface, and retrieve a handle to the memory block allocated for the specified interface.

e.g. path like this format.
\\?\usb# vid_0e0f& pid_0003# 6& 30c8ca5f& 0& 5# { a5dcbf10-6530-11d2-901f-00c04fb951ed }

See also WinUSBDeviceMBS and WindowsDeviceMBS classes.
For cross platform development also check LibUSBDeviceMBS classes.

### 190.24.8 ControlTransfer(SetupPacket as WinUSBSetupPacketMBS, Buffer as MemoryBlock) as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Transmits control data over a default control endpoint.

**Notes:**

To send a control request to the entire device or the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

SetupPacket: The 8-byte setup packet of type WinUSBSetupPacketMBS.
Buffer: A buffer that contains the data to transfer. Can be empty.

Returns the actual number of transferred bytes.
Lasterror property is set.
See also:

- 190.24.9 ControlTransfer(SetupPacket as WinUSBSetupPacketMBS, Buffer as String) as Integer 26520

### 190.24.9 ControlTransfer(SetupPacket as WinUSBSetupPacketMBS, Buffer as String) as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Transmits control data over a default control endpoint.
**Notes:**

To send a control request to the entire device or the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

SetupPacket: The 8-byte setup packet of type WinUSBSetupPacketMBS.
Buffer: A buffer that contains the data to transfer. Can be empty.

Returns the actual number of transferred bytes.
Lasterror property is set.
See also:

- 190.24.8 ControlTransfer(SetupPacket as WinUSBSetupPacketMBS, Buffer as MemoryBlock) as Integer 26519

### 190.24.10 DeviceSpeed as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Queries device speed.
**Notes:**

Lasteror is set.

Use constants LowSpeed, HighSpeed and FullSpeed.

### 190.24.11 FlushPipe(PipeID as Integer)

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Discards any data that is cached in a pipe. This is a synchronous operation.
**Notes:**

To reset a pipe associated with an endpoint in the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

PipeID: The identifier (ID) of the control pipe. The PipeID parameter is an 8-bit value that consists in a 7-bit address and a direction bit. This parameter corresponds to the EndpointAddress field in the endpoint descriptor.

Lasterror is zero on success and false on failure.

### 190.24.12 GetAssociatedInterface(index as Integer) as WinUSBMBS

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Retrieves a WinUSBMBS object for an associated interface.
**Notes:**

This is a synchronous operation.

AssociatedInterfaceIndex: An index that specifies the associated interface to retrieve. A value of 0 indicates the first associated interface, a value of 1 indicates the second associated interface, and so on.

Returns new WinUBSMBS object.
The first associated interface is the interface that immediately follows the interface whose handle the WinUsb_Initialize routine retrieves.

Callers of GetAssociatedInterfacecan retrieve only one handle for each interface. If a caller attempts to retrieve more than one handle for the same interface, the routine will fail with an error of ERROR_ALREADY_EXISTS.

### 190.24.13 QueryInterfaceSettings(index as Integer) as WinUSBInterfaceDescriptionMBS

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Retrieves the interface descriptor for the specified alternate interface settings for a particular interface handle.
**Notes:**

To retrieve the settings of the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

AlternateSettingNumber: A value that indicates which alternate settings to return. A value of 0 indicates the first alternate setting, a value of 1 indicates the second alternate setting, and so on.

Returns WinUSBInterfaceDescriptionMBS object on success or nil on any error.

### 190.24.14 QueryPipe(AlternateInterfaceNumber as Integer, PipeIndex as Integer) as WinUSBPipeInformationMBS

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Retrieves information about the specified endpoint and the associated pipe for an interface.
**Notes:**

To query a pipe associated with an endpoint in the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

AlternateInterfaceNumber: A value that specifies the alternate interface to return the information for.
PipeIndex: A value that specifies the pipe to return information about. This value is not the same as the bEndpointAddress field in the endpoint descriptor. A PipeIndex value of 0 signifies the first endpoint that is associated with the interface, a value of 1 signifies the second endpoint, and so on. PipeIndex must be less than the value in the NumEndpoints field of the interface descriptor.

Returns pipe information or nil on error. Also sets Lasterror property.

The QueryPipe function does not retrieve information about the control pipe.

Each interface on the USB device can have multiple endpoints. To communicate with each of these endpoints, the bus driver creates pipes for each endpoint on the interface. The pipe indices are zero-based. Therefore for n number of endpoints, the pipes' indices are set from n-1. WinUsb_QueryPipe parses the configuration descriptor to get the interface specified by the caller. It searches the interface descriptor for the

endpoint descriptor associated with the caller-specified pipe. If the endpoint is found, the function populates a WinUSBPipeInformationMBS object with information from the endpoint descriptor.

### 190.24.15 ReadPipeMemory(PipeID as Integer, BufferLength as Integer) as Memoryblock

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Reads data from the specified pipe.
**Notes:**

To read a pipe associated with an endpoint in the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

PipeID: PipeID corresponds to the EndpointAddress field in the endpoint descriptor. For information about the layout of this field, see Table 9-13 in "Universal Serial Bus Specification Revision 2.0" at USB Technology. In the EndpointAddress field, Bit 7 indicates the direction of the endpoint: 0 for OUT; 1 for IN.
BufferLength: The maximum number of bytes to read.

Returns memoryblock with the data read. This may be shorter than BufferLength.
Lasterror is set.

Lasterror is 0 if the operation succeeds. Otherwise, lasterror has the Windows error code.

If the data returned by the device is greater than a maximum transfer length, WinUSB divides the request into smaller requests of maximum transfer length and submits them serially. If the transfer length is not a multiple of the endpoint's maximum packet size (retrievable through the WinUSBPipeInformationMBS class's MaximumPacketSize member), WinUSB increases the size of the transfer to the next multiple of MaximumPacketSize.
USB packet size does not factor into the transfer for a read request. If the device responds with a packet that is too large for the client buffer, the behavior of the read request corresponds to the type of policy set on the pipe. If policy type for the pipe is ALLOW_PARTIAL_READS, WinUSB adds the remaining data to the beginning of the next transfer. If ALLOW_PARTIAL_READS is not set, the read request fails. For more information about policy types, see WinUSB Functions for Pipe Policy Modification.

When no data is available in the endpoint (pipe is empty), ReadPipe does not return until there is data in the pipe. If an error condition occurs or the application-specified timeout expires, ReadPipe always returns false. To determine the actual reason for that return value, always check LastError. For example, in these cases the GetLastError error value indicates the actual reason:
If the application specified a timeout value in the pipe policy and that timeout expires, ReadPipe returns false and LastError is ERROR_SEM_TIMEOUT.
If an error condition occurs while reading data from the pipe, ReadPipe returns false and LastError is ER-

ROR_GEN_FAILURE.

### 190.24.16 ReadPipePacket(PipeID as Integer, MaxSize as Integer = 1024) as Memoryblock

MBS USB Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Reads a data packet.
**Notes:** We developed this function for a client, so it's probably useless for everyone else.

### 190.24.17 ReadPipeString(PipeID as Integer, BufferLength as Integer) as string

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Reads data from the specified pipe.
**Notes:**

To read a pipe associated with an endpoint in the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

PipeID: PipeID corresponds to the EndpointAddress field in the endpoint descriptor. For information about the layout of this field, see Table 9-13 in "Universal Serial Bus Specification Revision 2.0" at USB Technology. In the EndpointAddress field, Bit 7 indicates the direction of the endpoint: 0 for OUT; 1 for IN.
BufferLength: The maximum number of bytes to read.

Returns string with the data read. This may be shorter than BufferLength.
Lasterror is set.

Lasterror is 0 if the operation succeeds. Otherwise, lasterror has the Windows error code.

If the data returned by the device is greater than a maximum transfer length, WinUSB divides the request into smaller requests of maximum transfer length and submits them serially. If the transfer length is not a multiple of the endpoint's maximum packet size (retrievable through the WinUSBPipeInformationMBS class's MaximumPacketSize member), WinUSB increases the size of the transfer to the next multiple of MaximumPacketSize.
USB packet size does not factor into the transfer for a read request. If the device responds with a packet that is too large for the client buffer, the behavior of the read request corresponds to the type of policy set on the pipe. If policy type for the pipe is ALLOW_PARTIAL_READS, WinUSB adds the remaining data to the beginning of the next transfer. If ALLOW_PARTIAL_READS is not set, the read request fails. For more information about policy types, see WinUSB Functions for Pipe Policy Modification.

When no data is available in the endpoint (pipe is empty), ReadPipe does not return until there is data in the pipe. If an error condition occurs or the application-specified timeout expires, ReadPipe always returns false. To determine the actual reason for that return value, always check LastError. For example, in these cases the GetLastError error value indicates the actual reason:
If the application specified a timeout value in the pipe policy and that timeout expires, ReadPipe returns false and LastError is ERROR_SEM_TIMEOUT.
If an error condition occurs while reading data from the pipe, ReadPipe returns false and LastError is ERROR_GEN_FAILURE.

### 190.24.18 ResetPipe(PipeID as Integer)

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Resets the data toggle and clears the stall condition on a pipe.
**Notes:**

To reset a pipe associated with an endpoint in the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

PipeID: The identifier (ID) of the control pipe. The PipeID parameter is an 8-bit value that consists in a 7-bit address and a direction bit. This parameter corresponds to the EndpointAddress field in the endpoint descriptor.

Lasterror is zero on success and false on failure.

### 190.24.19 WritePipe(PipeID as Integer, Buffer as MemoryBlock) as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Writes data to a pipe.
**Notes:**

To write to a pipe associated with an endpoint in the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

PipeID: PipeID corresponds to the EndpointAddress field in the endpoint descriptor. For information about the layout of this field, see Table 9-13 in "Universal Serial Bus Specification Revision 2.0" at USB Technology. In the bEndpointAddress field, Bit 7 indicates the direction of the endpoint: 0 for OUT; 1 for IN.
Buffer: A buffer that contains the data to write.

Returns the actual number of bytes that were written to the pipe.

Lasterror is set. Zero for success.

To create a write request, your the application must allocate a buffer, fill it with the data that you want to write to the device, and send the buffer to the host controller by calling WritePipe.
The following restrictions apply to the size of the buffer if RAW_IO is set:

- The buffer length must be a multiple of the maximum endpoint packet size.
- The length must be less than or equal to the value of MAXIMUM_TRANSFER_SIZE retrieved by GetPipePolicy.

There are no restrictions on the size of the buffer if RAW_IO is not set as the pipe's policy type. If the size of the buffer is greater than the maximum transfer length reported by MAXIMUM_TRANSFER_SIZE, WinUSB divides the request into smaller requests and submits them serially to the host controller.
A write request that contains zero-length data is forwarded down the USB stack.
See also:

- 190.24.20 WritePipe(PipeID as Integer, Buffer as String) as Integer 26526

### 190.24.20 WritePipe(PipeID as Integer, Buffer as String) as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Writes data to a pipe.
**Notes:**

To write to a pipe associated with an endpoint in the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

PipeID: PipeID corresponds to the EndpointAddress field in the endpoint descriptor. For information about the layout of this field, see Table 9-13 in "Universal Serial Bus Specification Revision 2.0" at USB Technology. In the bEndpointAddress field, Bit 7 indicates the direction of the endpoint: 0 for OUT; 1 for IN.
Buffer: A buffer that contains the data to write.

Returns the actual number of bytes that were written to the pipe.
Lasterror is set. Zero for success.

To create a write request, your the application must allocate a buffer, fill it with the data that you want to write to the device, and send the buffer to the host controller by calling WritePipe.
The following restrictions apply to the size of the buffer if RAW_IO is set:

- The buffer length must be a multiple of the maximum endpoint packet size.

- The length must be less than or equal to the value of MAXIMUM_TRANSFER_SIZE retrieved by GetPipePolicy.

There are no restrictions on the size of the buffer if RAW_IO is not set as the pipe's policy type. If the size of the buffer is greater than the maximum transfer length reported by MAXIMUM_TRANSFER_SIZE, WinUSB divides the request into smaller requests and submits them serially to the host controller.
A write request that contains zero-length data is forwarded down the USB stack.
See also:

- 190.24.19 WritePipe(PipeID as Integer, Buffer as MemoryBlock) as Integer 26525

### 190.24.21 WritePipePacket(PipeID as Integer, Buffer as MemoryBlock) as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Sends data packet.
**Notes:** We developed this function for a client, so it's probably useless for everyone else.
See also:

- 190.24.22 WritePipePacket(PipeID as Integer, Buffer as String) as Integer 26527

### 190.24.22 WritePipePacket(PipeID as Integer, Buffer as String) as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Sends data packet.
**Notes:** We developed this function for a client, so it's probably useless for everyone else.
See also:

- 190.24.21 WritePipePacket(PipeID as Integer, Buffer as MemoryBlock) as Integer 26527

### 190.24.23 Properties

### 190.24.24 DeviceHandle as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The internal handle to the device.
**Notes:** (Read and Write property)

### 190.24.25 Lasterror as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The last error code.
**Notes:** (Read and Write property)

### 190.24.26 LasterrorMessage as String

MBS USB Plugin, Plugin Version: 16.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The last error message.
**Notes:** (Read and Write property)

### 190.24.27 Parent as WinUSBMBS

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Parent usb object.
**Notes:**

Objects created with GetAssociatedInterface have here the parent object, so you can go back to main interface.
(Read and Write property)

### 190.24.28 Tag as Variant

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The attached value.
**Notes:**

You can use this property as you like.
(Read and Write property)

### 190.24.29 USBHandle as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The internal handle to the USB device.
**Notes:** (Read and Write property)

### 190.24.30 CurrentAlternateSetting as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The current alternate interface setting for an interface.
**Notes:**

To get the current alternate setting in the first (default) interface on the device, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

Lasterror is set. You can set and get the value.
(Read and Write computed property)

### 190.24.31 PipePolicyAllowPartialReads(PipeID as Integer) as boolean

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Whether to allow partial reads.
**Notes:**

The default value is true. To disable set to false.
Disabling AllowPartialReads causes the read requests to fail whenever the device returns more data (on bulk and interrupt IN endpoints) than the caller requested.
Enabling AllowPartialReads causes WinUSB to save or discard the extra data when the device returns more data (on bulk and interrupt IN endpoints) than the caller requested. This behavior is defined by setting the auto flush value.
Lasterror is set.
(Read and Write computed property)

### 190.24.32 PipePolicyAutoClearStall(PipeID as Integer) as boolean

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Whether WinUSB resets the pipe in order to automatically clear the stall condition.
**Notes:**

Data continues to flow on the bulk and interrupt IN endpoints again as soon as a new or a queued transfer arrives on the endpoint. This policy parameter does not affect control pipes.
Disabling AutoClearStall causes all transfers (that arrive to the endpoint after the stalled transfer) to fail until the caller manually resets the endpoint's pipe by calling ResetPipe.
Lasterror is set.
(Read and Write computed property)

### 190.24.33 PipePolicyAutoFlush(PipeID as Integer) as boolean

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Whether to use auto flush.
**Notes:**

The default value is false (zero). To enable auto flush set to true.
auto flush must be used with AllowPartialReads enabled. If AllowPartialReads is TRUE, the value of auto flush determines the action taken by WinUSB when the device returns more data than the caller requested.
Disabling AllowPartialReads causes WinUSB to ignore the auto flush value.
Disabling auto flush with AllowPartialReads enabled causes WinUSB to save the extra data, add the data to the beginning of the caller's next read request, and send it to the caller in the next read operation.
Enabling auto flush with AllowPartialReads enabled causes WinUSB to discard the extra data remaining from the read request.
Lasterror is set.
(Read and Write computed property)

### 190.24.34 PipePolicyIgnoreShortPackets(PipeID as Integer) as boolean

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Enabling IgnoreShortPackets causes the host controller to not complete a read operation after it receives a short packet.
**Notes:**

Instead, the host controller completes the operation only after the host has read the specified number of bytes.
Disabling IgnoreShortPackets causes the host controller to complete a read operation when either the host has read the specified number of bytes or the host has received a short packet.
The default value is false. To enable set to true.
Lasterror is set.
(Read and Write computed property)

### 190.24.35 PipePolicyMaximumTransferSize(PipeID as Integer) as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Gets the maximum size of a USB transfer supported by WinUSB.
**Notes:**

This is a read-only policy.
Lasterror is set.
(Read and Write computed property)

### 190.24.36 PipePolicyPipeTransferTimeout(PipeID as Integer) as UInt32

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Specifies the time-out interval.
**Notes:**

The default value is zero.
The PipeTransferTimeout value specifies the time-out interval, in milliseconds. The host controller cancels transfers that do not complete within the specified time-out interval.
A value of zero (default) indicates that transfers do not time out because the host controller never cancels the transfer.
Lasterror is set.
(Read and Write computed property)

### 190.24.37 PipePolicyRawIO(PipeID as Integer) as boolean

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Whether to use Raw IO.
**Notes:**

The default value is false.
Enabling raw IO causes WinUSB to send data directly to the USB driver stack, bypassing WinUSB's queuing and error handling mechanism.
The buffers that are passed to ReadPipe must be configured by the caller as follows:

- The buffer length must be a multiple of the maximum endpoint packet size.
- The length must be less than or equal to the value of PipePolicyMaximumTransferSize.

Disabling raw IO (false) does not impose any restriction on the buffers that are passed to ReadPipe.
Lasterror is set.
(Read and Write computed property)

### 190.24.38 PipePolicyResetPipeOnResume(PipeID as Integer) as boolean

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Whether to reset pipe on resume.
**Notes:**

True indicates that on resume from suspend, WinUSB resets the endpoint before it allows the caller to send new requests to the endpoint.
Lasterror is set.

(Read and Write computed property)

### 190.24.39 PipePolicyShortPacketTerminate(PipeID as Integer) as boolean

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Whether the driver sends a zero-length packet at the end of every write request to the host controller.
**Notes:**

Lasterror is set.
(Read and Write computed property)

### 190.24.40 Constants

### 190.24.41 AutoSuspend = & h81

MBS USB Plugin, Plugin Version: 12.2.

**Function:** One of the power policy type constants.

### 190.24.42 FullSpeed = 2

MBS USB Plugin, Plugin Version: 12.2.

**Function:** One of the Device Speed Constants
**Notes:** Full Speed

### 190.24.43 HighSpeed = 3

MBS USB Plugin, Plugin Version: 12.2.

**Function:** One of the Device Speed Constants
**Notes:** High Speed

### 190.24.44 LowSpeed = 1

MBS USB Plugin, Plugin Version: 12.2.

**Function:** One of the Device Speed Constants
**Notes:** Low Speed

### 190.24.45 SuspendDelay = & h83

MBS USB Plugin, Plugin Version: 12.2.

**Function:** One of the power policy type constants.

## 190.25 class WinUSBNotificationMBS

### 190.25.1 class WinUSBNotificationMBS

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The class for getting notifications about USB devices being connected or removed.
**Notes:** Use MacUSBNotificationMBS for Mac OS X.

### 190.25.2 Blog Entries

- Showing USB Devices
- MBS Real Studio Plugins, version 11.3pr15
- MBS Real Studio Plugins, version 11.2pr3

### 190.25.3 Blog Entries

- Showing USB Devices

### 190.25.4 Methods

### 190.25.5 Constructor

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The constructor initializes the notification engine.
**Notes:** On success WindowHandle and NotifyHandle is not zero.

### 190.25.6 Properties

### 190.25.7 NotifyHandle as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Internal handle to the notification system.
**Notes:** (Read and Write property)

### 190.25.8 WindowHandle as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Internal handle to the dummy window for receiving notification.
**Notes:** (Read only property)

### 190.25.9 Events

### 190.25.10 DeviceAdded(Name as string)

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: .

**Function:** This event is called when a device has been attached.
**Notes:**

Name is typically for an USB device: "\\?\USB# Vid_05ac& Pid_8403# 000000009833# { a5dcbf10-6530-11d2-901f-00c04fb951ed } ".
That means you can get Vendor ID and Product ID from this string. Also the unique ID and finally the class GUID.

### 190.25.11 DeviceRemoved(Name as string)

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: .

**Function:** This event is called when a device has been removed.
**Notes:**

Name is typically for an USB device: "\\?\USB# Vid_05ac& Pid_8403# 000000009833# { a5dcbf10-6530-11d2-901f-00c04fb951ed } ".
That means you can get Vendor ID and Product ID from this string. Also the unique ID and finally the class GUID.

## 190.26 class WinUSBPipeInformationMBS

### 190.26.1 class WinUSBPipeInformationMBS

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The class for pipe details.

### 190.26.2 Properties

### 190.26.3 Interval as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The pipe interval.
**Notes:** (Read and Write property)

### 190.26.4 MaximumPacketSize as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The maximum size, in bytes, of the packets that are transmitted on the pipe.
**Notes:** (Read and Write property)

### 190.26.5 PipeId as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The pipe identifier (ID).
**Notes:** (Read and Write property)

### 190.26.6 PipeType as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The pipe type.
**Notes:** (Read and Write property)

### 190.26.7 Constants

### 190.26.8 UsbdPipeTypeBulk = 2

MBS USB Plugin, Plugin Version: 12.2.

**Function:** One of the pipe type constants.
**Notes:** Indicates that the pipe is a bulk transfer pipe.

### 190.26.9 UsbdPipeTypeControl = 0

MBS USB Plugin, Plugin Version: 12.2.

**Function:** One of the pipe type constants.
**Notes:** Indicates that the pipe is a control pipe.

### 190.26.10 UsbdPipeTypeInterrupt = 3

MBS USB Plugin, Plugin Version: 12.2.

**Function:** One of the pipe type constants.
**Notes:** Indicates that the pipe is a interrupt pipe.

### 190.26.11 UsbdPipeTypeIsochronous = 1

MBS USB Plugin, Plugin Version: 12.2.

**Function:** One of the pipe type constants.
**Notes:** Indicates that the pipe is an isochronous transfer pipe.

## 190.27 class WinUSBSetupPacketMBS

### 190.27.1 class WinUSBSetupPacketMBS

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The metadata needed to create an USB packet.

### 190.27.2 Properties

### 190.27.3 Index as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The meaning of this member varies according to the request.
**Notes:**

For an explanation of this member, see the Universal Serial Bus (USB) specification.
(Read and Write property)

### 190.27.4 Length as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The number of bytes to transfer.
**Notes:** (Read and Write property)

### 190.27.5 Request as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The device request.
**Notes:**

The values that are assigned to this member are defined in Table 9.3 of section 9.4 of the Universal Serial Bus (USB) specification.
(Read and Write property)

### 190.27.6 RequestType as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The request type.
**Notes:**

The values that are assigned to this member are defined in Table 9.2 of section 9.3 of the Universal Serial Bus (USB) specification (www.usb.org).
(Read and Write property)

### 190.27.7 Value as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The meaning of this member varies according to the request.
**Notes:**

For an explanation of this member, see the Universal Serial Bus (USB) specification.
(Read and Write property)

# Chapter 191

# User Notifications

## 191.1 class NSUserNotificationActionMBS

### 191.1.1 class NSUserNotificationActionMBS

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

**Function:** An action shown to the user as part of a NSUserNotification in the additionalActions property. **Deprecated:** This item is deprecated and should no longer be used. You can use UNNotificationActionMBS class instead. **Notes:** Available on Mac OS X 10.10 and newer.

### 191.1.2 Blog Entries

- MBS Xojo Plugins, version 20.6pr1
- MBS Xojo Plugins, version 19.2pr4
- New for Mac OS X 10.10 in MBS Xojo Plugins

### 191.1.4 Methods

### 191.1.5 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

**Function:** Whether this class is available.
**Notes:** Returns true on Mac OS X 10.10 or newer. False in all other cases.

### 191.1.6 Constructor(identifier as string, title as string)

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

**Function:** The constructor.

### 191.1.7 copy as NSUserNotificationActionMBS

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

**Function:** Creates a copy of this object.

### 191.1.8 Properties

### 191.1.9 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 191.1.10 Identifier as String

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

**Function:** The internal identifier for this action.
**Notes:** (Read only property)

### 191.1.11 Title as String

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

**Function:** The localized title of the action.
**Notes:** (Read only property)

## 191.2 class NSUserNotificationCenterDelegateMBS

### 191.2.1 class NSUserNotificationCenterDelegateMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** This class allows you to react to events from the user notification center.
**Deprecated:** This item is deprecated and should no longer be used. You can use UNUserNotificationCenterMBS class instead. **Notes:** This is for sending user notifications to the Mac your Xojo application runs on. Not for remote notifications or notifications to iOS devices.

### 191.2.2 Blog Entries

- Mac OS X 10.8 User Notifications with Filemaker and Real Studio

### 191.2.3 Blog Entries

- Mac OS X 10.8 User Notifications with Filemaker and Real Studio

### 191.2.4 Methods

### 191.2.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** The constructor.
**Notes:** Must be called to have the class register itself.

### 191.2.6 Destructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** The destructor.

### 191.2.7 Properties

### 191.2.8 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 191.2.9 Events

### 191.2.10 didActivateNotification(center as NSUserNotificationCenterMBS, notification as NSUserNotificationMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

**Function:** Sent to the delegate when a user clicks on a user notification presented by the user notification center.
**Example:**

```
Sub applicationDidFinishLaunching(Notification as NSNotificationMBS)
dim userInfo as Dictionary = Notification.userInfo
dim key as string = NSApplicationMBS.NSApplicationLaunchUserNotificationKey
dim UserNotification as NSUserNotificationMBS = userInfo.Lookup(key, nil)

if UserNotification <>nil then
MsgBox UserNotification.identifier+": "+UserNotification.informativeText
end if
End Sub
```

**Notes:**

center: The user notification center.
notification: The user notification object.

This would be a good time to take action in response to user interacting with a specific notification.

To take an action when your application is launched as a result of a user clicking on a notification, be sure to implement the applicationDidFinishLaunching method in the application class that implements the NSApplicationDelegateMBS class. The notification parameter to that method has a userInfo dictionary, and if that dictionary has the NSApplicationLaunchUserNotificationKey key. The value of that key is the NSUserNotification object that caused the application to launch. The NSUserNotification object is delivered to the NSApplication delegate because that message will be sent before your application has a chance to set a delegate for the NSUserNotificationCenter.

Available in OS X v10.8 and later.

### 191.2.11 didDeliverNotification(center as NSUserNotificationCenterMBS, notification as NSUserNotificationMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

**Function:** Sent to the delegate when a notification delivery date has arrived.
**Notes:**

center: The user notification center.
notification: The user notification object.

This method is always called, regardless of your application state and even if you deliver the user notification yourself using deliverNotification:.

This event is invoked before the shouldPresentNotification event.
Available in OS X v10.8 and later.

### 191.2.12 shouldPresentNotification(center as NSUserNotificationCenterMBS, notification as NSUserNotificationMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

**Function:** Sent to the delegate when the user notification center has decided not to present your notification.
**Notes:**

center: The user notification center.
notification: The user notification object.

Return true if the user notification should be displayed regardless; false otherwise.
Available in OS X v10.8 and later.

# 191.3 class NSUserNotificationCenterMBS

## 191.3.1 class NSUserNotificationCenterMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** The NSUserNotificationCenterMBS class delivers user notifications to the user from applications or helper applications.
**Example:**

```
dim u as new NSUserNotificationMBS

u.Title = "Hello World"
u.subtitle = "from Xojo."
u.informativeText = "Our first Notification from Xojo."

dim d as new date
d.Second = d.Second + 10
u.deliveryDate = d

dim c as new NSUserNotificationCenterMBS
c.scheduleNotification u
```

**Deprecated:** This item is deprecated and should no longer be used. You can use UNUserNotificationCenterMBS class instead. **Notes:**

When a user notifications is delivery date has been reached, or it is manually delivered, the notification center it may display the notification to the user. The user notification center reserves the right to decide if a delivered user notification is presented to the user. For example, it may suppress the notification if the application is already frontmost (the delegate can override this action). The application can check the result of this decision by examining the presented property of a delivered user notification.

NSUserNotificationMBS instances the NSUserNotificationCenterMBS are tracking will be in one of two states: scheduled or delivered. A scheduled user notification has a deliveryDate. On that delivery date, the notification will move from being scheduled to being delivered. Note that the user notification may be displayed later than the delivery date depending on a number of factors.

A delivered user notification has an actualDeliveryDate. That is the date when it moved from being scheduled to delivered, or when it was manually delivered using the deliverNotification method.

The application and the user notification center are both ultimately subject to the user's preferences. If the user decides to hide all alerts from your application, the presented property will still behave as above, but the user will not see any animation or hear any sound.

The NSUserNotificationCenterDelegateMBS class provides more information about the delivered user notification and allows forcing the display of a user notification even if the application is frontmost.

Note: It the user wakes more than 15 minutes after a scheduled notification is scheduled to fire, it is discarded. If the notification repeats with an interval less than 15 minutes, then it expires in 1 minute. Expired notifications are just discarded, unless they repeat, in which case, they stay in the scheduled list and just fire again later.
Important Many of the NSUserNotificationCenterMBS class's methods involve talking to a server process, so calling them repeatedly can have a negative effect on performance.

This is for sending user notifications to the Mac your Xojo application runs on. Not for remote notifications or notifications to iOS devices.

The NSUserNotificationCenterMBS class and the NSUserNotificationMBS class are both thread safe.

### 191.3.2 Blog Entries

### 191.3.3 Blog Entries

- MBS Xojo Plugins, version 20.6pr1
- MBS Xojo Plugins, version 19.2pr3
- Mac OS X 10.8 User Notifications with Filemaker and Real Studio

### 191.3.4 Methods

### 191.3.5 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Whether user notification framework is available.
**Notes:** Returns true on Mac OS X 10.8 and false otherwise.

### 191.3.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** The constructor.
**Notes:**

Initializes this object to point to the default user notification center.
Available in OS X v10.8 and later.

### 191.3.7 defaultUserNotificationCenter as NSUserNotificationCenterMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Returns the default user notification center.
**Notes:** Available in OS X v10.8 and later.

### 191.3.8 deliveredNotifications as NSUserNotificationMBS()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** An array of all user notifications delivered to the notification center.
**Notes:**

The number of notifications the user actually sees in the user interface may be less than the size of this array.

Note that these may or may not have been actually presented to the user. See the presented property in the NSUserNotificationMBS class.

Note: A scheduled user notification that specifies a deliveryRepeatInterval remains in the scheduledNotifications list, even though it has been delivered. The item that goes into the deliveredNotifications list is a copy of the user notification item.

Available in OS X v10.8 and later.

### 191.3.9 deliverNotification(notification as NSUserNotificationMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Deliver the specified user notification.
**Example:**

```
dim u as new NSUserNotificationMBS

u.Title = "Hello World"
u.subtitle = "just a test"

dim c as new NSUserNotificationCenterMBS
c.deliverNotification u
```

**Notes:**

notification: The user notification.

The notification will be presented to the user (subject to the user's preferences). The presented property of the NSUserNotification object will always be set to true if a notification is delivered using this method.

Available in OS X v10.8 and later.

### 191.3.10 removeAllDeliveredNotifications

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Remove all delivered user notifications from the user notification center.
**Notes:** Available in OS X v10.8 and later.

### 191.3.11 removeAllScheduledNotifications

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop only.

**Function:** Remove all scheduled user notifications from the user notification center.
**Notes:** Available in OS X v10.8 and later.

### 191.3.12 removeDeliveredNotification(notification as NSUserNotificationMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Remove a delivered user notification from the user notification center.
**Notes:**

notification: The user notification.

If the user notification is not in deliveredNotifications, nothing happens.

Available in OS X v10.8 and later.

### 191.3.13 removeScheduledNotification(notification as NSUserNotificationMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Removes the specified user notification for the scheduled notifications.
**Notes:**

notification: The user notification.

If the user notification's deliveryDate occurs before the cancellation finishes, the notification may still be delivered.
If the notification is not in the scheduled list, nothing happens.

Available in OS X v10.8 and later.

### 191.3.14 scheduledNotifications as NSUserNotificationMBS()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Specifies an array of scheduled user notifications that have not yet been delivered.
**Notes:**

Newly scheduled notifications are added to the end of the array. You may also bulk-schedule notifications by setting this array. Bulk setting new scheduled notifications unschedules existing notifications.

Note: The scheduled user notification could be changing to a delivered notification at the time you are calling this method. and if that case the user notification will still be delivered.

Available in OS X v10.8 and later.

### 191.3.15 scheduleNotification(notification as NSUserNotificationMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Schedules the specified user notification.
**Notes:**

notification: The user notification.

Scheduled notifications are added to the end of the notification queue.
Available in OS X v10.8 and later.

### 191.3.16 Properties

### 191.3.17 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

## 191.4 class NSUserNotificationMBS

### 191.4.1 class NSUserNotificationMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** The NSUserNotificationMBS class is used to configure a notification that is scheduled for display by the NSUserNotificationCenterMBS class.
**Example:**

```
dim u as new NSUserNotificationMBS

u.Title = "Hello World"
u.subtitle = "from Xojo."
u.informativeText = "Our first Notification from Xojo."

dim d as new date
d.Second = d.Second + 10
u.deliveryDate = d

dim c as new NSUserNotificationCenterMBS
c.scheduleNotification u
```

**Deprecated:** This item is deprecated and should no longer be used. You can use UNNotificationMBS class instead. **Notes:**

The NSUserNotificationMBS object not only configures the notification, when the notification is delivered information about when the notification was actually presented to the user (if at all) and other details are provided in the notification object. User applications can create NSUserNotification objects and register them with the NSUserNotificationCenterMBS object to notify the user when an application requires attention.

See NSUserNotificationCenterMBS Class Reference for more information.

Threading Information
The NSUserNotificationCenterMBS class and the NSUserNotificationMBS class are both thread safe.

This is for sending user notifications to the Mac your Xojo application runs on. Not for remote notifications or notifications to iOS devices.

### 191.4.6 Methods

### 191.4.7 additionalActions as NSUserNotificationActionMBS()

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

**Function:** Queries the array of additional actions.
**Notes:**

For Mac OS X 10.10 and newer. Will not cause exception if called on older versions, but simply return empty array.

An array of NSUserNotificationActionMBS objects that describe the different actions that can be taken on a notification in addition to the default action described by actionButtonTitle.

### 191.4.8 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Whether this class is available.
**Notes:**

Returns true on Mac OS X 10.8 and newer.
Returns false on other operation systems, e.g. older OS X, Windows or Linux.

### 191.4.9 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** The constructor to create a new notification.

### 191.4.10 copy as NSUserNotificationMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Creates a clone of the notification object.

### 191.4.11 NSUserNotificationDefaultSoundName as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** The default sound played by the user notification center for this notification.
**Notes:**

The default notification sound.
Available in OS X v10.8 and later.

### 191.4.12 Print

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Prints description of notification object to console for debugging.

### 191.4.13 setAdditionalActions(additionalActions() as NSUserNotificationAction-MBS)

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

**Function:** Sets the array of additional actions.
**Notes:**

For Mac OS X 10.10 and newer. Will not cause exception if called on older versions.

An array of NSUserNotificationActionMBS objects that describe the different actions that can be taken on a notification in addition to the default action described by actionButtonTitle.

### 191.4.14 Properties

### 191.4.15 actionButtonTitle as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Specifies the title of the action button displayed in the notification.
**Notes:**

This value should localized as it will be presented to the user. The string will be truncated to a length appropriate for display and the property will be modified to reflect the truncation.

Available in OS X v10.8 and later.
(Read and Write property)

### 191.4.16 activationType as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Specifies what caused a user notification to occur.
**Notes:**

This property specifies why the user notification was sent to to the NSUserNotificationCenterDelegateMBS didActivateNotification event. The supported values are described in constants.

Available in OS X v10.8 and later.
(Read only property)

### 191.4.17 actualDeliveryDate as date

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** The date this notification was actually delivered.
**Notes:**

The notification center will set this value if a notification is put in the scheduled list and the delivery time arrives.

If the notification is delivered directly using the deliverNotification: method of the NSUserNotificationCenterMBS class, this value will be set to the deliveryDate value. If the deliveryDate value nil this value is set to the current date.

This value is used to sort the list of notifications in the user interface.

Available in OS X v10.8 and later.
(Read only property)

### 191.4.18 actualDeliveryDateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop only.

**Function:** The date this notification was actually delivered.
**Notes:**

The notification center will set this value if a notification is put in the scheduled list and the delivery time arrives.

If the notification is delivered directly using the deliverNotification: method of the NSUserNotificationCen-

terMBS class, this value will be set to the deliveryDate value. If the deliveryDate value nil this value is set to the current date.

This value is used to sort the list of notifications in the user interface.

Available in OS X v10.8 and later.
(Read only property)

### 191.4.19 additionalActivationAction as NSUserNotificationActionMBS

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

**Function:** Queries which additional action was selected.
**Notes:**

For Mac OS X 10.10 and newer. Will not cause exception if called on older versions, but always return nil.

When a user selects an additional action that action will be set on the notification's additionalActivationAction property when passed into the delegate event didActivateNotification.
(Read only property)

### 191.4.20 contentImage as NSImageMBS

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

**Function:** Image shown in the content of the notification.
**Notes:** (Read and Write property)

### 191.4.21 deliveryDate as date

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Specifies when the notification should be delivered.
**Notes:**

The delivery date is specified in an absolute time.
After a notification is delivered, it may be presented to the user.
Available in OS X v10.8 and later.
(Read and Write property)

### 191.4.22 deliveryDateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop only.

**Function:** Specifies when the notification should be delivered.
**Notes:**

The delivery date is specified in an absolute time.
After a notification is delivered, it may be presented to the user.
Available in OS X v10.8 and later.
(Read and Write property)

### 191.4.23 deliveryRepeatInterval as NSDateComponentsMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Specifies the date components that control how often a user notification is repeated.
**Notes:**

This value may be nil if the notification should not repeat.

The date component values are relative to the date the notification was delivered.

If the calendar value of the deliveryRepeatInterval is nil, the current calendar will be used to calculate the repeat interval. For example, if a notification should repeat every hour, set the hour property of the deliveryRepeatInterval to 1.

This value is ignored unless the user notification is scheduled with the NSUserNotificationCenterMBS object.
Available in OS X v10.8 and later.
(Read and Write property)

### 191.4.24 deliveryTimeZone as NSTimeZoneMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Specify the time zone to interpret the delivery date in.
**Notes:**

If this value is nil and the user switches time zones, the notification center will adjust the time of presentation to account for the time zone change.

If a notification should be delivered at a time in a specific time zone (regardless of whether the user switches time zones), set this value to the specific time zone, for example the current time zone.

Available in OS X v10.8 and later.
(Read and Write property)

### 191.4.25 description as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Description of notification object for debugging.
**Notes:** (Read only property)

### 191.4.26 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 191.4.27 hasActionButton as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Specifies whether the notification displays an action button.
**Notes:**

Set to false if the notification has no action button. This will be the case for notifications that are purely for informational purposes and have no user action.

The default value is true.

Available in OS X v10.8 and later.
(Read and Write property)

### 191.4.28 hasReplyButton as boolean

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

**Function:** Set to true if the notification has a reply button.
**Notes:**

The default value is false. If both this and hasActionButton are true, the reply button will be shown.
(Read and Write property)

### 191.4.29 identifier as string

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

**Function:** This identifier is used to uniquely identify a notification.
**Notes:**

A notification delivered with the same identifier as an existing notification will replace that notification, rather then display a new one.

Available in OS X 10.9 and newer.
(Read and Write property)

### 191.4.30 informativeText as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** The body text of the notification.
**Notes:**

This value should localized as it will be presented to the user. The string will be truncated to a length appropriate for display and the property will be modified to reflect the truncation.
Available in OS X v10.8 and later.
(Read and Write property)

### 191.4.31 otherButtonTitle as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Specifies a custom title for the close button in an alert-style notification.
**Notes:**

This value should localized as it will be presented to the user. The string will be truncated to a length appropriate for display and the property will be modified to reflect the truncation.

An empty string will cause the default localized text to be used.

Available in OS X v10.8 and later.
(Read and Write property)

### 191.4.32 Presented as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Specifies whether the user notification has been presented.
**Notes:**

In some cases, for example when your application is frontmost, the notification center may decide not to actually present a delivered notification. In that case, the value of this property will be false. It will be set to true if the notification was presented according to user preferences.

Available in OS X v10.8 and later.
(Read only property)

### 191.4.33 remote as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Specifies whether the remote was generated by a push notification.
**Notes:**

If this property is true then the user notification was generated by a push notification (that is, remotely); if false it was generated locally.
Available in OS X v10.8 and later.
(Read only property)

### 191.4.34 response as NSAttributedStringMBS

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

**Function:** The response text.
**Notes:**

When a notification has been responded to, the NSUserNotificationCenter event didActivateNotification will be called with the notification with the activationType set to NSUserNotificationActivationTypeReplied and the response set on the response property.
(Read only property)

### 191.4.35 responsePlaceholder as string

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

**Function:** Optional placeholder for inline reply field.
**Notes:** (Read and Write property)

### 191.4.36 soundName as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Specifies the name of the sound to play when the notification is delivered.
**Notes:**

Passing the NSUserNotificationDefaultSoundName constant causes the default notification center sound to be played.
A value of nil means no sound is played.
Available in OS X v10.8 and later.
(Read and Write property)

### 191.4.37 subtitle as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Specifies the subtitle of the notification.
**Notes:**

This value should localized as it will be presented to the user. The string will be truncated to a length appropriate for display and the property will be modified to reflect the truncation.
Available in OS X v10.8 and later.
(Read and Write property)

### 191.4.38 title as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Specifies the title of the notification.
**Notes:**

This value should localized as it will be presented to the user. The string will be truncated to a length appropriate for display and the property will be modified to reflect the truncation.
Available in OS X v10.8 and later.
(Read and Write property)

### 191.4.39 userInfo as dictionary

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Application-specific user info that can be attached to the notification.
**Example:**

```
dim u as new NSUserNotificationMBS
dim d as new dictionary
d.value("Key") = "Value"
u.userinfo = d
```

**Notes:**

All items must be property list types or an exception will be thrown.
The userInfo content must be of reasonable serialized size (less than 1k) or an exception will be thrown.
Available in OS X v10.8 and later.
(Read and Write property)

### 191.4.40 Constants

### 191.4.41 NSUserNotificationActivationTypeActionButtonClicked = 2

MBS MacFrameworks Plugin, Plugin Version: 12.3.

**Function:** One of the activation type constants.
**Notes:**

The user clicked on the action button of the notification alert.
Available in OS X v10.8 and later.

### 191.4.42 NSUserNotificationActivationTypeAdditionalActionClicked = 4

MBS MacFrameworks Plugin, Plugin Version: 14.3.

**Function:** One of the activation type constants.
**Notes:**

User did select an additional action.
Only for Mac OS X 10.10 and newer.

### 191.4.43 NSUserNotificationActivationTypeContentsClicked = 1

MBS MacFrameworks Plugin, Plugin Version: 12.3.

**Function:** One of the activation type constants.
**Notes:**

The user clicked on the contents of the notification alert.
Available in OS X v10.8 and later.

### 191.4.44 NSUserNotificationActivationTypeNone = 0

MBS MacFrameworks Plugin, Plugin Version: 12.3.

**Function:** One of the activation type constants.
**Notes:**

The user did not interact with the notification alert.
Available in OS X v10.8 and later.

### 191.4.45 NSUserNotificationActivationTypeReplied = 3

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** The activation type for a notification which got a reply.

## 191.5 class UNCalendarNotificationTriggerMBS

### 191.5.1 class UNCalendarNotificationTriggerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** A trigger condition that causes a notification to be delivered at a specific date and time.
**Notes:**

Create a UNCalendarNotificationTriggerMBS object when you want to schedule the delivery of a local notification at the specified date and time. You specify the temporal information using an NSDateComponentsMBS object, which lets you specify only the time values that matter to you. The system uses the provided information to determine the next date and time that matches the specified information.
Subclass of the UNNotificationTriggerMBS class.

### 191.5.2 Methods

### 191.5.3 Constructor(dateComponents as NSDateComponentsMBS, repeats as boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** Creates a calendar trigger from the specified date components.
**Notes:**

dateComponents: The temporal information to use when constructing the trigger. Provide only the date components that are relevant for your trigger.
repeats: Specify false to deliver the notification one time. Specify YES to reschedule the notification request each time the notification is delivered.

Returns a new calendar trigger based on the specified temporal information.

If you specify true for the repeats parameter, you must explicitly remove the notification request to stop the delivery of the associated notification. Use the methods of UNUserNotificationCenterMBS to remove notification requests that are no longer needed.

### 191.5.4 trigger(dateComponents as NSDateComponentsMBS, repeats as boolean) as UNCalendarNotificationTriggerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** Creates a calendar trigger from the specified date components.
**Notes:**

dateComponents: The temporal information to use when constructing the trigger. Provide only the date components that are relevant for your trigger.
repeats: Specify false to deliver the notification one time. Specify YES to reschedule the notification request each time the notification is delivered.

Returns a new calendar trigger based on the specified temporal information.

If you specify true for the repeats parameter, you must explicitly remove the notification request to stop the delivery of the associated notification. Use the methods of UNUserNotificationCenterMBS to remove notification requests that are no longer needed.

### 191.5.5 Properties

### 191.5.6 dateComponents as NSDateComponentsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** The date components used to construct this object.
**Notes:**

Use this property to review the date components associated with this trigger.
(Read only property)

### 191.5.7 nextTriggerDate as Date

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The next date at which the trigger conditions will be met.
**Notes:**

Use this property to find out when a notification associated with this trigger will next be delivered.
(Read only property)

### 191.5.8 nextTriggerDateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

**Function:** The next date at which the trigger conditions will be met.
**Notes:**

Use this property to find out when a notification associated with this trigger will next be delivered.
(Read only property)

## 191.6 class UNMutableNotificationContentMBS

### 191.6.1 class UNMutableNotificationContentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** The editable content for a notification.
**Notes:**

Create a UNMutableNotificationContent object when you want to specify the payload for a local notification. Specifically, use this object to specify the title and message for an alert, the sound to play, or the value to assign to your app's badge. You might also provide details about how the system handles the notification. For example, you can specify a custom launch image and a thread identifier for visually grouping related notifications.
After creating your content object, assign it to a UNNotificationRequest object, add a trigger condition, and schedule your notification. The trigger condition defines when the notification is delivered to the user. Listing 1 shows the scheduling of a local notification that displays an alert and plays a sound after a delay of five seconds. The strings for the alert's title and body are stored in the app,Äôs Localizable.strings file.
Subclass of the UNNotificationContentMBS class.

### 191.6.2 Methods

### 191.6.3 addAttachment(attachment as UNNotificationAttachmentMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** Adds an attachment.

### 191.6.4 clearBadge

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** Clears the badge.

### 191.6.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** The constructor.

### 191.6.6 setAttachments(attachments() as UNNotificationAttachmentMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** Sets an array of attachments to display in an alert-based notification.
**Notes:**

Use this property to include images or movies, or to include playable audio files, with the contents of an alert. The system displays the attachments alongside the title and body of your alert. You can also customize the presentation of attachments using a notification content app extension.
All attachments must reside locally on the current device before they can be added. For local notifications, modify this property before scheduling the notification. For remote notifications, use a notification service app extension to locate and download the specified files and modify the notification content before it is delivered.
For more information on how to specify attachments, see UNNotificationAttachmentMBS.

### 191.6.7 Properties

### 191.6.8 badge as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** The number to apply to the app,Äôs icon.
**Notes:**

Use this property to specify the number to apply to the app,Äôs icon when the notification arrives. If your app is not authorized to display badge-based notifications, this property is ignored.
Specify the number 0 to remove the current badge, if present. Specify a number greater than 0 to display a badge with that number. Use clearBadge to leave the current badge unchanged.
(Read and Write property)

### 191.6.9 body as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** The localized message to display in the notification alert.
**Notes:**

Use this property to specify the body of the notification alert. If your app is not authorized to display alert-based notifications, this property is ignored.
The body text should contain the final text that you want to display, and should not contain any placeholder characters. To include a percent symbol (% ) in the message body, use two percent symbols (% % ). The system strips all other printf style escape characters from your string prior to display.
(Read and Write property)

### 191.6.10 categoryIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** The identifier of the category object that represents the notification's type.
**Notes:**

Use notification types to distinguish between the different types of notifications your app supports. You use this support primarily to create actionable notifications,Äîthat is, notifications with custom action buttons,Äîand to redirect your notifications through either your notification service app extension or your notification content app extension.
Assign a value to this property that matches the identifier property of one of the UNNotificationCategory objects you previously registered with your app. If you assign a string that does not match one of your registered categories, the system displays your notification without custom actions and without routing it through your app extensions.
(Read and Write property)

### 191.6.11 sound as UNNotificationSoundMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** The sound to play when the notification is delivered.
**Notes:**

Use this property to specify the sound that you want played when the notification arrives. If your app is not authorized to play sounds for notifications, this property is ignored.
For information on how to specify sounds for your notifications, see UNNotificationSoundMBS.
(Read and Write property)

### 191.6.12 subtitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** The localized subtitle, containing a secondary description of the reason for the alert.
**Notes:**

Use this property to specify additional context about the purpose of the notification. Subtitles offer additional context in cases where the title alone is not clear. Subtitles are not displayed in all cases. If your app is not authorized to display alert-based notifications, this property is ignored.
(Read and Write property)

### 191.6.13 summaryArgument as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** The string the notification adds to the category,Äôs summary format string.
**Notes:** (Read and Write property)

### 191.6.14 summaryArgumentCount as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** The number of items the notification adds to the category,Äôs summary format string.
**Notes:** (Read and Write property)

### 191.6.15 threadIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** An identifier that you use to group related notifications together.
**Notes:**

You may specify any value for the string, but assign the same thread identifier string to all notifications that you want to group together visually.
(Read and Write property)

### 191.6.16 title as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** The localized title, containing the reason for the alert.
**Notes:**

Use this property to specify the title of your notification alert. If your app is not authorized to display alert-based notifications, this property is ignored.
Title strings should be short, usually only a couple of words describing the reason for the notification. In watchOS, the title string is displayed as part of the short look notification interface, which has limited space.
(Read and Write property)

### 191.6.17 userInfo as Dictionary

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** A dictionary of custom information associated with the notification.
**Notes:**

Use this property to associate custom information with the notification. The contents of the dictionary are not seen by the user, but are accessible to your app or to any notification-related app extensions.

The keys in this dictionary must be property-list types,Äîthat is, they must be types that can be serialized into the property-list format.
(Read and Write property)

## 191.7 class UNNotificationActionMBS

### 191.7.1 class UNNotificationActionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** The class for an action for a notification.
**Notes:**

Use UNNotificationAction objects to define the actions that your app can perform in response to a delivered notification. You define the actions that your app supports. For example, a meeting app might define actions for accepting or rejecting a meeting invitation. The action object itself contains the title to display in an action button and the button's appearance. After creating action objects, add them to a UNNotificationCategory object and register your categories with the system.
For information on how to define actions and categories, see Declaring Your Actionable Notification Types.

When the user selects one of your actions in response to a notification, the system notifies the delegate of the shared UNUserNotificationCenterMBS object. Specifically, the system calls the didReceiveNotificationResponse event. The response object passed to your delegate includes the identifier string of the action that was selected, which you can use to perform the corresponding task.

### 191.7.2 Blog Entries

- MBS Xojo Plugins, version 20.6pr1

### 191.7.3 Blog Entries

- MBS Xojo Plugins, version 20.6pr1

### 191.7.4 Methods

### 191.7.5 action(identifier as string, title as string, options as integer) as UNNotificationActionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** Creates an action object with the specified title and options.
**Notes:**

identifier: The string that you use internally to identify the action. This string must be unique among all of your app's supported actions. When the user selects the action, the system passes this string to your app and asks you to perform the related task. This parameter must not be nil or an empty string.
title: The localized string to display to the user. This string is used as the title of a button, which is added to the notification interface. This parameter must not be nil.

options: Additional options describing how the action behaves. Include options when you need the related behavior. For a list of possible values, see constants.

### 191.7.6 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** Whether the UNNotificationAction class is available.
**Notes:** Returns true on MacOS 10.14 or newer in 64-bit MacOS application.

### 191.7.7 Constructor(identifier as string, title as string, options as integer)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** Creates an action object with the specified title and options.
**Notes:**

identifier: The string that you use internally to identify the action. This string must be unique among all of your app's supported actions. When the user selects the action, the system passes this string to your app and asks you to perform the related task. This parameter must not be nil or an empty string.
title: The localized string to display to the user. This string is used as the title of a button, which is added to the notification interface. This parameter must not be nil.
options: Additional options describing how the action behaves. Include options when you need the related behavior. For a list of possible values, see constants.

### 191.7.8 copy as UNNotificationActionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** Creates a copy of the object.

### 191.7.9 Properties

### 191.7.10 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 191.7.11 identifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** The unique string that your app uses to identify the action.
**Notes:**

When the user selects an action, the system reports the value of this string to your app. Because all actions are handled by a single delegate method, the identifier strings for all of your app's actions must be unique.
(Read only property)

### 191.7.12 options as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** The behaviors associated with the action.
**Notes:**

Options should be applied to an action when the corresponding behavior is required.
(Read only property)

### 191.7.13 title as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** The localized string to use as the title of the action.
**Notes:**

This string is used as the title of the button that the user taps or selects in the notification interface.
(Read only property)

### 191.7.14 Constants

### 191.7.15 OptionAuthenticationRequired = 1

MBS MacFrameworks Plugin, Plugin Version: 19.1.

**Function:** One of the option constants.
**Notes:**

The action can be performed only on an unlocked device.
When the user selects an action with this option, the system prompts the user to unlock the device. After unlocking, the system notifies your app of the selected action. You might use option to perform actions that require accessing data that is encrypted while the device is locked.

### 191.7.16 OptionDestructive = 2

MBS MacFrameworks Plugin, Plugin Version: 19.1.

**Function:** One of the option constants.
**Notes:**

The action performs a destructive task.
Use this option for actions that delete user data or change the app irrevocably. The action button is displayed with special highlighting to indicate that it performs a destructive task.

### 191.7.17 OptionForeground = 4

MBS MacFrameworks Plugin, Plugin Version: 19.1.

**Function:** One of the option constants.
**Notes:**

The action causes the app to launch in the foreground.
When the user selects an action containing this option, the system brings the app to the foreground, asking the user to unlock the device as needed. Use this option for actions that require the user to interact further with your app. Do not use this option simply to bring your app to the foreground.

### 191.7.18 OptionNone = 0

MBS MacFrameworks Plugin, Plugin Version: 19.1.

**Function:** One of the option constants.
**Notes:** The action has the default behavior.

# 191.8 class UNNotificationAttachmentMBS

## 191.8.1 class UNNotificationAttachmentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** A media file associated with a notification.
**Notes:**

Create a UNNotificationAttachmentMBS object when you want to include audio, image, or video content together in an alert-based notification. When creating the UNNotificationAttachmentMBS object, the file you specify must be on disk, and the file format must be one of the supported types.

You are responsible for supplying attachments before the system displays your notification's alert. For local notifications, add attachments when creating the notification,Äôs content. For remote notifications, use a notification service app extension to download the attached files and then add them to the notification's content before delivery.

The system validates attachments before displaying the associated notification. If you attach a file to a local notification request that is corrupted, invalid, or of an unsupported file type, the system doesn't schedule your request. For remote notifications, the system validates attachments after your notification service app extension finishes. Once validated, attached files are moved into the attachment data store so that they can be accessed by all of the appropriate processes. Attachments located inside an app,Äôs bundle are copied instead of moved.

Supported File Types
Table lists the types of files you can include as an attachment and the supported file formats. The table also lists the maximum size allowed for attachments of each type. An image file may contain a static image or an animated image sequence.

Supported attachment file types

| Attachment | Supported file types | Maximum size |
|---|---|---|
| Audio | kUTTypeAudioInterchangeFileFormat, kUTTypeWaveformAudio, kUTTypeMP3 and kUTTypeMPEG4Audio | 5 MB |
| Image | kUTTypeJPEG, kUTTypeGIF and kUTTypePNG | 10 MB |
| Movie | kUTTypeMPEG, kUTTypeMPEG2Video, kUTTypeMPEG4 and kUTTypeAVIMovie | 50 MB |

When creating an attachment, you can specify optional details about how to present the thumbnail image for the image or movie. Use the UNNotificationAttachmentOptionsThumbnailClippingRectKey option to use only the specified portion of an image as a thumbnail. For animated images and movies, use the UNNotificationAttachmentOptionsThumbnailTimeKey option to select which frame to use for the thumbnail image.

The amount of storage space allocated for attachments is limited for each app. To delete attachments, use the methods of the UNUserNotificationCenterMBS class to remove the notification requests that contain those attachments.

- MBS Xojo Plugins, version 19.2pr1

### 191.8.3 Blog Entries

- MBS Xojo Plugins, version 19.2pr1

### 191.8.4 Methods

### 191.8.5 attachment(identifier as String, File as FolderItem, options as Dictionary = nil, byref error as NSErrorMBS) as UNNotificationAttachmentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** Creates an attachment object from the specified file and options.
**Notes:**

identifier: The unique identifier of the attachment. Use this string to identify the attachment later. If you specify an empty string, this method creates a unique identifier string for you.
URL: The URL of the file you want to attach to the notification. The URL must be a file URL and the file must be readable by the current process. This parameter must not be nil. For a list of supported file types, see Supported File Types.
options: A dictionary of options related to the attached file. Use the options to specify meta information about the attachment, such as the clipping rectangle to use for the resulting thumbnail.
error: An error object indicating whether a problem occurred. If the attachment was created successfully, this parameter is set to nil. If an error occurs, it is set to an error object containing information about why the attachment was not created. You may specify nil for this parameter if you do not want the error information.

Returns an attachment object containing information about the specified file or nil if the attachment could not be created.

This method verifies that the specified file is readable and that the file format is one of the supported types. When errors occur, the method provides an appropriate error object.
When you schedule a notification request containing the attachment, the attachment,Äôs file is moved to a new location to facilitate access by the appropriate processes. After the move, the only way to access the file is using the methods of the UNUserNotificationCenterMBS object.

- 191.8.6 attachment(identifier as String, URL as String, options as Dictionary = nil, byref error as NSErrorMBS) as UNNotificationAttachmentMBS

### 191.8.6 attachment(identifier as String, URL as String, options as Dictionary = nil, byref error as NSErrorMBS) as UNNotificationAttachmentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** Creates an attachment object from the specified file and options.
**Notes:**

identifier: The unique identifier of the attachment. Use this string to identify the attachment later. If you specify an empty string, this method creates a unique identifier string for you.
URL: The URL of the file you want to attach to the notification. The URL must be a file URL and the file must be readable by the current process. This parameter must not be nil. For a list of supported file types, see Supported File Types.
options: A dictionary of options related to the attached file. Use the options to specify meta information about the attachment, such as the clipping rectangle to use for the resulting thumbnail.
error: An error object indicating whether a problem occurred. If the attachment was created successfully, this parameter is set to nil. If an error occurs, it is set to an error object containing information about why the attachment was not created. You may specify nil for this parameter if you do not want the error information.

Returns an attachment object containing information about the specified file or nil if the attachment could not be created.

This method verifies that the specified file is readable and that the file format is one of the supported types. When errors occur, the method provides an appropriate error object.
When you schedule a notification request containing the attachment, the attachment,Äôs file is moved to a new location to facilitate access by the appropriate processes. After the move, the only way to access the file is using the methods of the UNUserNotificationCenterMBS object.
See also:

- 191.8.5 attachment(identifier as String, File as FolderItem, options as Dictionary = nil, byref error as NSErrorMBS) as UNNotificationAttachmentMBS 26578

### 191.8.7 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** Whether the UNNotificationAttachment class is available.
**Notes:** Returns true on MacOS 10.14 or newer in 64-bit MacOS application.

### 191.8.8 Constructor(identifier as String, File as FolderItem, options as Dictionary = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** Creates an attachment object from the specified file and options.
**Notes:**

identifier: The unique identifier of the attachment. Use this string to identify the attachment later. If you specify an empty string, this method creates a unique identifier string for you.
URL: The URL of the file you want to attach to the notification. The URL must be a file URL and the file must be readable by the current process. This parameter must not be nil. For a list of supported file types, see Supported File Types.
options: A dictionary of options related to the attached file. Use the options to specify meta information about the attachment, such as the clipping rectangle to use for the resulting thumbnail.
error: An error object indicating whether a problem occurred. If the attachment was created successfully, this parameter is set to nil. If an error occurs, it is set to an error object containing information about why the attachment was not created. You may specify nil for this parameter if you do not want the error information.

Returns an attachment object containing information about the specified file or nil if the attachment could not be created.

This method verifies that the specified file is readable and that the file format is one of the supported types. When errors occur, the method provides an appropriate error object.
When you schedule a notification request containing the attachment, the attachment,Äôs file is moved to a new location to facilitate access by the appropriate processes. After the move, the only way to access the file is using the methods of the UNUserNotificationCenterMBS object.
See also:

- 191.8.9 Constructor(identifier as String, URL as String, options as Dictionary = nil) 26580

### 191.8.9 Constructor(identifier as String, URL as String, options as Dictionary = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** Creates an attachment object from the specified file and options.
**Notes:**

identifier: The unique identifier of the attachment. Use this string to identify the attachment later. If you specify an empty string, this method creates a unique identifier string for you.
URL: The URL of the file you want to attach to the notification. The URL must be a file URL and the file must be readable by the current process. This parameter must not be nil. For a list of supported file types, see Supported File Types.
options: A dictionary of options related to the attached file. Use the options to specify meta information about the attachment, such as the clipping rectangle to use for the resulting thumbnail.
error: An error object indicating whether a problem occurred. If the attachment was created successfully, this parameter is set to nil. If an error occurs, it is set to an error object containing information about why the attachment was not created. You may specify nil for this parameter if you do not want the error information.

Returns an attachment object containing information about the specified file or nil if the attachment could

not be created.

This method verifies that the specified file is readable and that the file format is one of the supported types. When errors occur, the method provides an appropriate error object.
When you schedule a notification request containing the attachment, the attachment,Äôs file is moved to a new location to facilitate access by the appropriate processes. After the move, the only way to access the file is using the methods of the UNUserNotificationCenterMBS object.

- 191.8.8 Constructor(identifier as String, File as FolderItem, options as Dictionary = nil) 26579

### 191.8.10 copy as UNNotificationAttachmentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: All.

**Function:** Creates a copy of the object.

### 191.8.11 UNNotificationAttachmentOptionsThumbnailClippingRectKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** The clipping rectangle for a thumbnail image.
**Notes:** The value of this key is a dictionary containing a normalized CGRectMBS,Äîthat is, a unit rectangle whose values are in the range 0.0 to 1.0 and represent the portion of the original image that you want to display. For example, specifying an origin of (0.25, 0.25) and a size of (0.5, 0.5) defines a clipping rectangle that shows only the center portion of the image.

### 191.8.12 UNNotificationAttachmentOptionsThumbnailHiddenKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** A Boolean value indicating whether the attachment,Äôs thumbnail is hidden.
**Notes:** The value of this key is a number containing a Boolean value. When set to true, the attachment,Äôs thumbnail is not displayed. If you do not include this key, the thumbnail is shown.

### 191.8.13 UNNotificationAttachmentOptionsThumbnailTimeKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** The frame number of an animation to use as a thumbnail image.
**Notes:** For animated images, the value of this key is an number containing the frame number to use as the thumbnail. For movies, the value of this key is the time (in seconds) into the movie from which to grab the

thumbnail image.

### 191.8.14 UNNotificationAttachmentOptionsTypeHintKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** A hint about an attachment,Äôs file type.
**Notes:** The value of this key is a string containing a Uniform Type Identifier (UTI) that describes the file,Äôs type. If you do not include this key, the attachment,Äôs filename extension is used to determine its type.

### 191.8.15 Properties

### 191.8.16 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 191.8.17 identifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** The unique identifier for the attachment.
**Notes:** (Read only property)

### 191.8.18 type as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** The UTI type of the attachment.
**Notes:**

The value of this property is derived from the attachment data.
(Read only property)

### 191.8.19 URL as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** The URL of the file for this attachment.
**Notes:**

The file at the specified URL is security scoped to your app. Before you access it, call the startAccessingSecurityScopedResource method of NSURL.
(Read only property)

## 191.9 class UNNotificationCategoryMBS

### 191.9.1 class UNNotificationCategoryMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** A type of notification that your app supports and the custom actions to display with it.
**Notes:**

A UNNotificationCategoryMBS object defines a type of notification that your executable can receive. You create category objects to define your app's actionable notifications,Äîthat is, notifications that have action buttons that the user can select in response to the notification. Each category object you create stores the actions and other behaviors associated with a specific type of notification. Register your category objects using the setNotificationCategories method of UNUserNotificationCenterMBS. You can register as many category objects as you want.

To apply category objects to your notifications, include the category,Äôs identifier string in the payload of any notifications you create. For local notifications, put this string in the categoryIdentifier property of the UNMutableNotificationContentMBS object that you use to specify the notification,Äôs content. For remote notifications, use this string as the value of the category key in the aps dictionary of your payload.

Categories can have associated actions, which define custom buttons to display for notifications of that category. When space is unlimited, the system displays up to 10 actions. When space is limited, the system displays at most two actions.

### 191.9.2 Methods

### 191.9.3 actions as UNNotificationActionMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** The actions to display when a notification of this type is presented.
**Notes:**

When displaying a notification assigned to this category, the system adds a button to the notification interface for each action in this property. These buttons are displayed after the notification,Äôs content but before the Dismiss button.
When displaying banner notifications, the system displays only the first two actions.

### 191.9.4 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** Whether the UNNotificationCategory class is available.

**Notes:** Returns true on MacOS 10.14 or newer in 64-bit MacOS application.

### 191.9.5 category(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, hiddenPreviewsBodyPlaceholder as String, categorySummaryFormat as String, options as Integer) as UNNotificationCategoryMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** Creates a category object containing the specified actions and options, a hidden previous placeholder, and the category,Äôs summary format string.
See also:

- 191.9.6 category(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, hiddenPreviewsBodyPlaceholder as String, options as Integer) as UNNotificationCategoryMBS 26585
- 191.9.7 category(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, options as Integer) as UNNotificationCategoryMBS 26586

### 191.9.6 category(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, hiddenPreviewsBodyPlaceholder as String, options as Integer) as UNNotificationCategoryMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** Creates a category object containing the specified actions, options, and a hidden previous placeholder.
**Notes:**

identifier: The unique identifier for the category. Each category that your app uses must have a unique identifier. Do not specify an empty string.
actions: The actions to display when notifications of this type are delivered. When minimal space is available, only the first two actions in the array are displayed. You may specify nil for this parameter if you do not want to display custom actions.
intentIdentifiers: The intent identifier strings that you want to associate with notifications of this type. The Intents framework defines constants for each type of intent that you can associate with your notifications.
hiddenPreviewsBodyPlaceholder: A placeholder string to display when the user has disabled notification previews for the app. Include the characters % u in the string to represent the number of notifications with the same thread identifier. (No other formatting characters are supported.) For example, the string "% u Messages" becomes "2 Messages" when there are two messages.
To specify different strings for the singular and plural cases, use the localizedUserNotificationStringForKey method of string to specify the value for this parameter. The key passed to that method contains the identifier of an entry in a .stringsdict property list of your project. A strings dictionary lets you specify different formatted strings based on the language rules, and is as described in Internationalization and Localization

Guide.
options: Additional options for handling notifications of this type. For a list of possible values, see UNNotificationCategoryOptions.

### 191.9.7 category(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, options as Integer) as UNNotificationCategoryMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

**Function:** Creates a category object containing the specified actions and options.
**Notes:**

identifier: The unique identifier for the category. Each category that your app uses must have a unique identifier. Do not specify an empty string.
actions: The actions to display when notifications of this type are delivered. When minimal space is available, only the first two actions in the array are displayed. You may specify nil for this parameter if you do not want to display custom actions.
intentIdentifiers: The intent identifier strings that you want to associate with notifications of this type. The Intents framework defines constants for each type of intent that you can associate with your notifications.
options: Additional options for handling notifications of this type. For a list of possible values, see UNNotificationCategoryOptions.

Returns an initialized category object.
