MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A reset form action resets all or specific fields of an interactive form to their default values.
See also CreateResetAction function in DynaPDF manual.

77.39.190 CreateSeparationCS(Colorant as string, Alternate as Integer, Handle as Integer, ColorValue as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a Separation color space.
Notes: This function passes colorant string in UTF-8 encoding to the library.
See also CreateSeparationCS function in DynaPDF manual.

77.39.191 CreateSeparationCSAnsi(Colorant as string, Alternate as Integer, Handle as Integer, ColorValue as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a Separation color space.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** This function passes colorant string in Windows ANSI encoding to the library.
See also CreateSeparationCS function in DynaPDF manual.

77.39.192 CreateSetOCGStateAction(On() as UInt32, Off() as UInt32, Toggle() as UInt32, PreserveRB as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a SetOCGState action that can be used to change the visibility state of certain Optional Content Groups (OCGs).
See also CreateSetOCGStateAction function in DynaPDF manual.

77.39.193 CreateSigField(Name as string, Parent as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates an empty signature field which can be used to digitally sign the PDF file.
Notes: If you see errors in Acrobat Reader with signing multiple fields, please try DynaPDF.CreateStructureTree function and test whether it works then.
See also CreateSigField function in DynaPDF manual.

77.39.194 CreateSigFieldAP(SigField as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a signature appearance template in the exact size of the base signature field.
See also CreateSigFieldAP function in DynaPDF manual.

77.39.195 CreateSoftMask(TranspGroup as UInt32, MaskType as Integer, BackColor as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new soft mask.
Notes:

MaskType: pass ksmtAlpha or ksmtLuminosity constants.
Requires DynaPDF Pro license.
See also CreateSoftMask function in DynaPDF manual.

77.39.196 CreateStdPattern(Pattern as Integer, LineWidth as Double, Distance as Double, LineColor as Integer, BackColor as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a hatch pattern.
See also CreateStdPattern function in DynaPDF manual.

77.39.197 CreateStructureTree as boolean

MBS DynaPDF Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a global structure tree that is required to create Tagged PDF files.
Notes:

Tagged PDF files require a root node of type Art, Div, Document, Part, or Sect. This function creates a root node of type Document if nothing else was already imported. Other types can be created with the function CreateStructureTreeEx.

Notice:
DynaPDF is able to extend an existing structure tree that was imported from an external PDF file. However, when editing external PDF files the following rules must be considered:

- The structure information of a PDF file will only be imported when the entire PDF file is imported with ImportPDFFile(). When importing single pages with ImportPage() or ImportPageEx() of a PDF file that contains structure information then tagging will be disabled because DynaPDF is not able to import the structure information of a PDF file on a per page basis.
- Import first the PDF file and call then CreateStructureTree(). The reverse order causes that the structure tree will not be imported and tagging will be disabled!
- Only one PDF file with structure information can be imported without invalidating the structure information.
- Keep in mind that the structure tree of a PDF file is a complex global structure that is difficult to edit. Because of this, probably millions of PDF files exist that contain damages in the structure tree, mostly due to editing actions in certain viewer applications. When opening an existing page with EditPage() the function tries to find the corresonding StructParents array of the page in the ParentTree of the document's Structure Tree. When this action fails then tagging will be disabled for this page. OpenTag() and CloseTag() do not produce further warnings in this case. The function GetIsTaggingEnabled() can be used to determine whether tagging is still enabled after an existing page was opened for editing.

When creating Tagged PDF files it is important to create the PDF file in the logical reading order.

If the function succeeds the return value is true. If the function fails the return value is false.
See also CreateStructureTree function in DynaPDF manual.

77.39.198 CreateStructureTreeEx(Tag as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 23.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates the global structure tree as described at CreateStructureTree().
Notes:

The only difference is that the type of the root node can be specified.

Returns true on success and false on failure.

77.39.199 CreateSubmitAction(Flags as Integer, URL as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A submit form action submits the field values of an interactive form to a web server.
See also CreateSubmitAction function in DynaPDF manual.

77.39.200 CreateTable(AllocRows as UInt32, NumCols as UInt32, width as Double, DefRowHeight as Double) as DynaPDFTableMBS

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a table with the given size.
Notes: Returns a new table object.
See also CreateTable function in DynaPDF manual.

77.39.201 CreateTextField(Name as string, Parent as Integer, Multiline as boolean, MaxLen as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a text field.
Example:

```
Dim pdf As DynapdfMBS // your PDF environment with open page

// create field on current page
Dim Field1 As Integer = pdf.CreateTextField("Field1", -1, True, 0, 50.0, 100, 200.0, 100.0)

// and fill value
```

Call pdf.SetTextFieldValue(Field1, "Hello", "", pdf.ktaLeft)

See also CreateTextField function in DynaPDF manual.

77.39.202 CreateTraceFile(File as FolderItem) as Boolean

MBS DynaPDF Plugin, Plugin Version: 21.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a trace file.
Notes:

The plugin writes debug messages to this file so you can check what functions you called.

Improved with 16.2 plugin to really cover over 99% of all calls with parameters and result. Please report if you miss something.

While assignment to TraceFile property or CreateTraceFile() always overwrites existing log file, the AppendTraceFile method can append to it.

77.39.203 CreateURIAction(URL as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function:

A uniform resource identifier (URI) is a string that identifies (resolves to) a resource on the internet - typically a file that is the destination of a hyperlink, although it can also resolve to a query or other entity.
Notes:

A URI action causes a URI to be resolved. The parameter URL must be 7√Ö] bit ASCII string.

See also CreateURIAction function in DynaPDF manual.

77.39.204 CreateViewport(Name as String, X1 as Double, Y1 as Double, X2 as Double, Y2 as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a viewport.
Notes:

A viewport is a rectangular region of a page that can be associated with a measure dictionary. A measure dictionary achieves a coordinate conversion so that the distance and area can be calculated in other units like meters, feets, or millimeters, for example.
This is especially useful for CAD drawings which are not defined in PDF units. A PDF unit represents 1/72 inch.
A page can contain an arbitrary number of viewports and every viewport can be assigned with its own measure dictionary, e.g. to calculate coordinates in different units on the same page.
Viewports should be created in drawing order. Since viewports might overlap a PDF viewer examines the array starting with the last one and itereates in reverse order. The first one whose bounding box contains the point or cursor coordiante is chosen.
See also CreateRectilinearMeasure().
See also CreateViewport function in DynaPDF manual.

77.39.205 CreateViewportAnsi(Name as String, X1 as Double, Y1 as Double, X2 as Double, Y2 as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a viewport.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

A viewport is a rectangular region of a page that can be associated with a measure dictionary. A measure dictionary achieves a coordinate conversion so that the distance and area can be calculated in other units like meters, feets, or millimeters, for example.
This is especially useful for CAD drawings which are not defined in PDF units. A PDF unit represents 1/72 inch.
A page can contain an arbitrary number of viewports and every viewport can be assigned with its own measure dictionary, e.g. to calculate coordinates in different units on the same page.
Viewports should be created in drawing order. Since viewports might overlap a PDF viewer examines the array starting with the last one and itereates in reverse order. The first one whose bounding box contains the point or cursor coordiante is chosen.
See also CreateRectilinearMeasure().

This is ANSI version, so all strings are converted to ANSI encoding.
See also CreateViewport function in DynaPDF manual.

77.39.206 CreateXFAStream(Name as String, Buffer as String) as Integer

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates an XFA stream and adds it to the global XFA resource array.
Notes:

The parameter Name must be the name of the XFA resource. Buffer must be a valid XFA stream buffer or

"", if the buffer should be set later with SetXFAStream().

If the function succeeds the return value is the stream handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also CreateXFAStream function in DynaPDF manual.

77.39.207 DecryptPDF(File as folderitem, PwdType as Integer, Password as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function decrypts a PDF file by using the supplied password to decrypt the file.
See also DecryptPDF function in DynaPDF manual.

77.39.208 DecryptPDFAnsi(Path as string, PwdType as Integer, Password as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function decrypts a PDF file by using the supplied password to decrypt the file.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** Same as DecryptPDF, but takes path name in Windows ANSI encoding.
See also DecryptPDF function in DynaPDF manual.

77.39.209 DeleteAcroForm

MBS DynaPDF Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes an acrobat reader form.
See also DeleteAcroForm function in DynaPDF manual.

77.39.210 DeleteActionFromObj(ObjType as Integer, ActHandle as Integer, ObjHandle as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function deletes an action from a PDF object.
See also DeleteActionFromObj function in DynaPDF manual.

77.39.211 DeleteActionFromObjEx(ObjType as Integer, ObjHandle as Integer, ActIndex as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function can be used to delete an action from an object without using an action handle.
See also DeleteActionFromObjEx function in DynaPDF manual.

77.39.212 DeleteAltFontList(FontListHandle as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes an alternate font list that was created by DynaPDF.CreateAltFontList.
Notes:

If the parameter Handle was set to -1 all available lists will be deleted.
Returns true on success.
See also DeleteAltFontList function in DynaPDF manual.

77.39.213 DeleteAnnotation(Handle as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function deletes an annotation.
See also DeleteAnnotation function in DynaPDF manual.

77.39.214 DeleteAnnotationFromPage(PageNum as UInt32, Handle as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes an annotation from a page.
See also DeleteAnnotationFromPage function in DynaPDF manual.

77.39.215 DeleteAppEvents(ApplyEvent as Boolean, TOCAppEvent as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function deletes all application events if any.
Notes:

The function can optionally apply the visibility state of an event before the application events will be deleted. The new visibility state will be stored in the PDF file. To apply the visibility state of a specific event without deletion call ApplyAppEvent() instead.

If the function succeeds and if application events were deleted the return value is 1. If the no application events were defined the return value is 0. If the function fails the return value is a negative error code.

See also DeleteAppEvents function in DynaPDF manual.

77.39.216 DeleteBookmark(ABmk as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function deletes a bookmark.
See also DeleteBookmark function in DynaPDF manual.

77.39.217 DeleteEmbeddedFile(handle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes the embedded file with the given handle.
See also DeleteEmbeddedFile function in DynaPDF manual.

77.39.218 DeleteField(Field as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function deletes an interactive form field.
See also DeleteField function in DynaPDF manual.

77.39.219 DeleteFieldEx(URL as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function deletes an interactive form field by using its full qualified name, that is the name of any parent group field separated by a period (.) plus the field name.
See also DeleteFieldEx function in DynaPDF manual.

77.39.220 DeleteJavaScripts(DelJavaScriptActions as boolean)

MBS DynaPDF Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes java scripts.
See also DeleteJavaScripts function in DynaPDF manual.

77.39.221 DeleteNamedDest(Name as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes a named destination.
Notes: If Name is an empty string all named destinations will be deleted.
See also DeleteNamedDest function in DynaPDF manual.

77.39.222 DeleteNamedDestByIndex(Index as integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes a named destination.
Notes: If Index is set to a negative value all named destinations will be deleted.
See also DeleteNamedDestByIndex function in DynaPDF manual.

77.39.223 DeleteOCGFromAppEvent(Handle as UInt32, Events as Integer, Categories as Integer, DelCategoryOnly as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes an OCG or layer from one or more application events, or it deletes only one or more categories from an application event in which the OCG was found (if DelCategoryOnly is true).
Notes:

If DelCategoryOnly is true, and if no more categories are left in the application event, then the event will be deleted. See also AddOCGToAppEvent() and SetOCGContUsage() for further information.
If the function succeeds the return value is true. If the function fails the return value is false.
See also DeleteOCGFromAppEvent function in DynaPDF manual.

77.39.224 DeleteOCGFromDisplayTree(OCGHandle as UInt32, Recursive as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 21.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes a layer or OCG (Optional Content Group) from the display tree of the currently active layer configuration.
Notes:

Notice:
If the PDF file was not imported with ImportPDFFile() the function ImportOCProperties() must be called in order to import the global Optional Content Properties.
It is also required to load a layer configuration with LoadLayerConfig() before the function can be called.

The display tree is a linked list that contains UI nodes. UI stands for User Interface. Every node in this tree can contain an OCG or an array of OCGs with an optional label.
This function can be used to delete an OCG from the display tree without traversing every node of it with GetOCUINode() beforehand. Therefore, the function is suitable for console applications but GUI based applications should use DeleteOCUINode() instead. DeleteOCUINode() can also be used to delete the entire display tree with just one function call.

If the function succeeds the return value is true. If the function fails the return value is false.
See also DeleteOCGFromDisplayTree function in DynaPDF manual.

77.39.225 DeleteOCUINode(OCGNodeHandle as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes an OCUINode.
Notes:

Deletes an OCUINode (Optional Content User Interface Node) from the display tree of the currently active layer configuration or the entire tree if Node is set to 0.

If the PDF file was not imported with ImportPDFFile() the function ImportOCProperties() must be called in order to import the global Optional Content Properties.
It is also required to load a layer configuration with LoadLayerConfig() before the function can be called.

Note that the deletion of the display tree does not delete any layer or OCG (Optional Content Group). All OCGs still exists and are fully functional. However, users are not able to change the visibility state of OCGs which are not included in the display tree of the corresponding layer configuration.

If the parameter Node is set then it must be a valid pointer of an OCUINode that was returned by GetOCUINode(). Note that the deletion of a node invalidates all pointers which were previously returned by GetOCUINode().

Return value: If the function succeeds the return value is true. If the function fails the return value is false.
See also DeleteOCUINode function in DynaPDF manual.

77.39.226 DeleteOutputIntent(Index as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Can be used to delete a specific or all output intents.
Notes:

A PDF file can contain more than one output intent. Call GetOutputIntentCount to determine the number of available output intents. If the parameter Index is set to -1 all output intents will be deleted.

If the function succeeds the return value is the remaining number of output intents. If the function fails the return value is a negative error code.
See also DeleteOutputIntent function in DynaPDF manual.

77.39.227 DeletePage(PageNum as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function deletes a page.
Example:

```
// new PDF
Dim pdf As New MyDynapdfMBS

pdf.SetLicenseKey "Lite" // For this example you can use a Lite, Pro or Enterprise License

// create output file
Dim outFile As folderitem = SpecialFolder.Desktop.Child("NewPDF.pdf")
Call pdf.CreateNewPDF(outFile)

// set flags to import all
Dim flags As Integer = Bitwise.BitOr(pdf.kifImportAsPage, pdf.kifImportAll)
Call pdf.SetImportFlags(flags)

// import PDF
Dim inFile As folderitem = SpecialFolder.Desktop.Child("test.pdf")

Call pdf.OpenImportFile(inFile)
Call pdf.ImportPDFFile(1)

// now delete one page
Call pdf.DeletePage(2)

// close output file
```

Call pdf.closefile

See also DeletePage function in DynaPDF manual.

77.39.228 DeletePageLabels

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function deletes all page labels contained in the current open document, if any.
See also DeletePageLabels function in DynaPDF manual.

77.39.229 DeleteSeparationInfo(AllPages as boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function deleted the separation of the current open page or of all pages if the parameter AllPages is set to true.
See also DeleteSeparationInfo function in DynaPDF manual.

77.39.230 DeleteTemplate(handle as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function deletes a template.
See also DeleteTemplate function in DynaPDF manual.

77.39.231 DeleteTemplateEx(index as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function deletes a template by using an index instead of a template handle.
See also DeleteTemplateEx function in DynaPDF manual.

77.39.232 DeleteXFAForm

MBS DynaPDF Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes XFA Form.
See also DeleteXFAForm function in DynaPDF manual.

77.39.233 DrawArc(PosX as Double, PosY as Double, Radius as Double, StartAngle as Double, EndAngle as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function draws an arc by using a start and end angle.
See also DrawArc function in DynaPDF manual.

77.39.234 DrawArcEx(PosX as Double, PosY as Double, Width as Double, Height as Double, StartAngle as Double, EndAngle as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function draws an elliptical arc.
Example:

```
dim pdf as new DynaPDFMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("Create PDF.pdf")

pdf.SetLicenseKey "Starter" // For this example you can use a Starter, Lite, Pro or Enterprise License

// create new PDF
call pdf.CreateNewPDF f

// We want to use top-down coordinates
call pdf.SetPageCoords pdf.kpcTopDown

// new page
call pdf.Append

// black
call pdf.SetStrokeColor 0

// draw an arc
call pdf.DrawArcEx 100,100,100,100, 90,180
call pdf.StrokePath

// and a second one
call pdf.DrawArcEx 200,200,100,100, 0,90
call pdf.StrokePath
```

```
// and a third one. 0 to 0 gives a full circle
call pdf.DrawArcEx 300,300,100,100, 0,0
call pdf.StrokePath

// finish page
call pdf.EndPage

// Close file
call pdf.CloseFile

// open PDF
f.Launch
```

See also DrawArcEx function in DynaPDF manual.

77.39.235 DrawChord(PosX as Double, PosY as Double, Width as Double, Height as Double, StartAngle as Double, EndAngle as Double, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function draws an elliptical chord (a region bounded by the intersection of an ellipse and a line segment, called a secant).
See also DrawChord function in DynaPDF manual.

77.39.236 DrawCircle(PosX as Double, PosY as Double, Radius as Double, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function draws a circle.
Example:

```
dim pdf as new DynaPDFMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("Create PDF with Line.pdf")

pdf.SetLicenseKey "Starter" // For this example you can use a Starter, Lite, Pro or Enterprise License

// Create a new PDF
call pdf.CreateNewPDF f

// We want to use top-down coordinates
call pdf.SetPageCoords pdf.kpcTopDown
```

```
// Add a page
call pdf.Append

// a circle, filled
call pdf.SetFillColor pdf.RGB(0,255,0) // green
call pdf.DrawCircle(100, 100, 100, pdf.kfmFill)

// a circle, stoked
call pdf.SetStrokeColor pdf.RGB(255,0,0) // red
call pdf.DrawCircle(200, 200, 100, pdf.kfmStroke)

// end page
call pdf.EndPage

// Close page
call pdf.CloseFile

// Open PDF
f.Launch
```

See also DrawCircle function in DynaPDF manual.

77.39.237 DrawNGon(PosX as double, PosY as double, Radius as double, Alpha as double, NumSides as Integer, FillMode as integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a n-gon.
Notes:

PosX: X-Coordinate of the midpoint of the ngon
PosY: Y-Coordinate of the midpoint of the ngon
Radius: The radius.
Alpha: Rotation angle in degrees
NumSides: Number of sides. Must be greater 2.
FillMode: Fill mode, e.g. kfmFillStroke

The function A n-gon is a polygon with "n" number of sides. The minimum number of sides is three.
A n-gon is a closed path that can be filled, stroked or both. It is also possible to draw a n-gon invisible to apply the filling rules nonzero winding number or even-odd. The filling rules are described at ClipPath().
The parameter FillMode is ignored if the circle is drawn inside a clipping path. The fill modes are described at ClosePath().

If the function succeeds the return value is true. If the function fails the return value is false.
See also DrawNGon function in DynaPDF manual.

77.39.238 DrawPie(PosX as Double, PosY as Double, Width as Double, Height as Double, StartAngle as Double, EndAngle as Double, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function draws a pie-shaped wedge bounded by the intersection of an ellipse and two angles.
See also DrawPie function in DynaPDF manual.

77.39.239 EditPage(PageNum as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function prepares a page for editing.
Example:

```
dim pdf as DynaPDFMBS // your dynapdf instance

// edit page 1
call pdf.EditPage(1)
// set a font
call pdf.SetFont( "Times New Roman",pdf.kfsNone,46,True,pdf.kcp1252 )
// set a color
call pdf.SetFillColor(0)

// now add a text annotation
call pdf.FreeTextAnnot( 100, 100, 100, 100, "author", "test", 0 )

// end page
call pdf.EndPage
```

See also EditPage function in DynaPDF manual.

77.39.240 EditTemplate(index as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function prepares a template for editing.

See also EditTemplate function in DynaPDF manual.

77.39.241 EditTemplate2(handle as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prepares the template for editing.
See also EditTemplate2 function in DynaPDF manual.

77.39.242 Ellipse(PosX as Double, PosY as Double, Width as Double, Height as Double, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function draws an ellipse.
See also Ellipse function in DynaPDF manual.

77.39.243 EnableMutex(Value as boolean)

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to enable mutex or not.

77.39.244 EncryptPDF(File as folderitem, OpenPwd as string, OwnerPwd as string, KeyLen as Integer, Restrict as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function encrypts a PDF file.
See also EncryptPDF function in DynaPDF manual.

77.39.245 EncryptPDFAnsi(Path as string, OpenPwd as string, OwnerPwd as string, KeyLen as Integer, Restrict as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function encrypts a PDF file.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** Same as EncryptPDF, but takes path name in Windows ANSI encoding.

See also EncryptPDF function in DynaPDF manual.

77.39.246 EndContinueText as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function finishes a continue text block that was created with the function BeginContinueText() beforehand.
Deprecated: This item is deprecated and should no longer be used. See also EndContinueText function in DynaPDF manual.

77.39.247 EndLayer as boolean

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function closes a layer that was opened by BeginLayer.
Notes:

If the function succeeds the return value is true. If the function fails the return value is false.

See also EndLayer function in DynaPDF manual.

77.39.248 EndPage as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function closes an open page that was opened by Append() or EditPage().
Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

bBool=pdf.EndPage
```

See also EndPage function in DynaPDF manual.

77.39.249 EndPattern as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function closes an open pattern that was opened by BeginPattern() or CreateStdPattern().
See also EndPattern function in DynaPDF manual.

77.39.250 EndTemplate as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function closes an open template that was opened by BeginTemplate(), EditTemplate() or EditTemplate2().
See also EndTemplate function in DynaPDF manual.

77.39.251 EnumDocFonts as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function enumerates all fonts used in the current PDF document.
Notes: Will call the EnumDocFont event.
See also EnumDocFonts function in DynaPDF manual.

77.39.252 EnumDocFontsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function enumerates all fonts used in the current PDF document and returns the count.
Notes: Returns the number of fonts found. Does not call the event.

77.39.253 EnumHostFonts as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function enumerates all fonts found in the search directories by passing the font names to a callback function.
Deprecated: This item is deprecated and should no longer be used. You can use GetSysFontInfos instead.
Notes: Calls the EnumHostFont event.
See also EnumHostFonts function in DynaPDF manual.

77.39.254 EnumHostFontsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function enumerates all fonts found in the search directories.
Deprecated: This item is deprecated and should no longer be used. You can use GetSysFontInfos instead.
Notes: Returns the number of fonts found. Does not call the event.

77.39.255 EnumHostFontsEx as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function enumerates all fonts found in the search directories in the same way as EnumHostFonts().
Deprecated: This item is deprecated and should no longer be used. You can use GetSysFontInfos instead.
Notes: Calls the EnumHostFontEx event.
See also EnumHostFontsEx function in DynaPDF manual.

77.39.256 EnumHostFontsExCount as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function enumerates all fonts found in the search directories in the same way as EnumHostFontsCount().
Deprecated: This item is deprecated and should no longer be used. You can use GetSysFontInfos instead.
Notes: Returns the number of fonts found. Does not call the event.

77.39.257 ExchangeBookmarks(Bmk1 as Integer, Bmk2 as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function exchanges two bookmarks.
See also ExchangeBookmarks function in DynaPDF manual.

77.39.258 ExchangePages(first as Integer, second as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function exchanges two pages.
See also ExchangePages function in DynaPDF manual.

77.39.259 ExtractPageText(RemoveText as boolean = false) as String

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts text of current open page.
Notes:

This is a convenience function so you don't need to use DynaPDFStackMBS class yourself.
Returns the text of the page. Use EditPage() to open a page and than EndPage() to close it.

If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs.
Requires DynaPDF Pro license.

Deprecated in favor of newer ExtractText function.

77.39.260 ExtractPageTextRect(Left as Double, Top as Double, Right as Double, Bottom as Double, RemoveText as boolean = false) as String

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts text of current open page within given rectangle.
Notes:

Text that starts within the given rectangle is captured.
Be aware that PDF coordinates start on bottom left of page with 0/0.

This is a convenience function so you don't need to use DynaPDFStackMBS class yourself.
Returns the text of the page. Use EditPage() to open a page and than EndPage() to close it.

If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs.
Requires DynaPDF Pro license.

Deprecated in favor of newer ExtractText function.

77.39.261 ExtractText(PageNum as Integer, Flags as Integer, rect as DynaPDFRectMBS = nil, byref text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts the text of the page PageNum.
Example:

```
dim pdf as DynaPDFMBS
```

```
dim Page as Integer = 1 // first page
dim Flags as Integer = ktefDefault
dim text as string
dim ok as boolean = pdf.ExtractText(Page, Flags, text)

if ok then
msgbox text
end if
```

Notes:

The first page is denoted by 1.

Text lines can be sorted in x- and y-direction. The flag ktefDeleteOverlappingText causes that identical text records which are placed on the same position (with a tolerance of 2 units) will be deleted. The records must occur one after the other in order to detect them.

The optional parameter Area can be set to restrict the text extraction to that rectangle. The rectangle must be defined according to the current coordinate system. That means either in bottom up or top down coordinates, see SetPageCoords() for further information. Note also that the function considers the orientation of the page. The width and height of the rectangle must be exchanged if the orientation is 90, -90, 270, or -270 degrees.

If the function succeeds the return value is true. If the function fails the return value is false.
See also ExtractText function in DynaPDF manual.

77.39.262 FileAttachAnnot(PosX as Double, PosY as Double, Icon as Integer, Author as string, Desc as string, File as folderitem, Compress as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts a file attachment annotation on the current open page.
Notes: On Windows, the Desc and the Author parameters are converted to unicode.
See also FileAttachAnnot function in DynaPDF manual.

77.39.263 FileAttachAnnotEx(PosX as double, PosY as double, Icon as integer, Author as string, Desc as string, Filename as String, FileBuffer as MemoryBlock, Compress as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a file attachment annotation exactly in the same way as FileAttachAnnot() but accepts a file buffer as input.
Notes:

See FileAttachAnnot() for further information. The parameter FileName is required. It should contain the file name including extension, e.g. "MyImage.jpg".

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also FileAttachAnnotEx function in DynaPDF manual.
See also:

- 77.39.264 FileAttachAnnotEx(PosX as double, PosY as double, Icon as integer, Author as string, Desc as string, Filename as String, FileBuffer as String, Compress as boolean) as Integer 14816

77.39.264 FileAttachAnnotEx(PosX as double, PosY as double, Icon as integer, Author as string, Desc as string, Filename as String, FileBuffer as String, Compress as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a file attachment annotation exactly in the same way as FileAttachAnnot() but accepts a file buffer as input.
Notes:

See FileAttachAnnot() for further information. The parameter FileName is required. It should contain the file name including extension, e.g. "MyImage.jpg".

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also FileAttachAnnotEx function in DynaPDF manual.
See also:

- 77.39.263 FileAttachAnnotEx(PosX as double, PosY as double, Icon as integer, Author as string, Desc as string, Filename as String, FileBuffer as MemoryBlock, Compress as boolean) as Integer 14816

77.39.265 FileLink(PosX as Double, PosY as Double, Width as Double, Height as Double, FileLink as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a file link annotation.
Notes: Here you can pass a string which may be a relative file path like simply the file name of other pdf file in same folder.
See also FileLink function in DynaPDF manual.

77.39.266 FileLinkAnsi(PosX as Double, PosY as Double, Width as Double, Height as Double, FileLink as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a file link annotation.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** Here you can pass a string which may be a relative file path like simply the file name of other pdf file in same folder.
See also FileLink function in DynaPDF manual.

77.39.267 FindBookmark(DestPage as Integer, Text as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function searches for a bookmark in the document outline tree.
Notes: The text parameter is converted to unicode.
See also FindBookmark function in DynaPDF manual.

77.39.268 FindBookmarkAnsi(DestPage as Integer, Text as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function searches for a bookmark in the document outline tree.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text parameter is converted to ANSI.
See also FindBookmark function in DynaPDF manual.

77.39.269 FindEmbeddedFile(Name as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches for the embedded file Name and returns the handle of it when it can be found.
Notes:

The file can then be extracted with GetEmbeddedFile().

If the function succeeds the return value is an embedded file handle, a value greater or equal zero. If the file cannot be found the return value is -1.
See also FindEmbeddedFile function in DynaPDF manual.

77.39.270 FindField(Name as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function searches for an interactive form field by using the fully qualified field name.
Notes: The Name parameter is converted to unicode.
See also FindField function in DynaPDF manual.

77.39.271 FindFieldAnsi(Name as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function searches for an interactive form field by using the fully qualified field name.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The Name parameter is converted to ANSI.
See also FindField function in DynaPDF manual.

77.39.272 FindLinkAnnot(URL as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function searches for a file link or web link annotation.
See also FindLinkAnnot function in DynaPDF manual.

77.39.273 FindNextBookmark as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function searches for the next bookmark with the same search parameters which were used by a previous call of FindBookmark().
See also FindNextBookmark function in DynaPDF manual.

77.39.274 FinishSignature(PKCS7 as Memoryblock) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function writes the PKCS# 7 signature object to the PDF file and writes finally the finish PDF file to disk and frees all used resources if the file was not created in memory.
Notes:

If the file was created in memory GetBuffer() can now be called to obtain the finish PDF buffer.
CloseAndSignFileExt() must be called prior this function can be called.

Return values: If the function succeeds the return value is true. If the function fails the return value is false.
See also FinishSignature function in DynaPDF manual.
See also:

- 77.39.275 FinishSignature(PKCS7 as string) as boolean 14819

77.39.275 FinishSignature(PKCS7 as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function writes the PKCS# 7 signature object to the PDF file and writes finally the finish PDF file to disk and frees all used resources if the file was not created in memory.
Notes:

If the file was created in memory GetBuffer() can now be called to obtain the finish PDF buffer.
CloseAndSignFileExt() must be called prior this function can be called.

Return values: If the function succeeds the return value is true. If the function fails the return value is false.
See also FinishSignature function in DynaPDF manual.
See also:

- 77.39.274 FinishSignature(PKCS7 as Memoryblock) as boolean 14819

77.39.276 FlattenAnnotOrField(AnnotationOrFieldHandle as Integer, AnnotFlattenFlags as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws an annotation or form field on the current open page.
Notes:

Form fields are annotations of type atWidget. The annotations of a page can be enumerated with GetPageAnnotEx() / GetPageAnnotCount().
The annotation or form field is deleted from the page's annotation array after it was flattened. If the function succeeds the return value is true. If the function fails the return value is false.

See also FlattenAnnotOrField function in DynaPDF manual.

77.39.277 FlattenAnnots(AnnotFlattenFlags as Integer = 0) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flattens the annotations.
Notes:

By default all annotations which have an appearance stream and which have the print flag set are flattened. All annotations are deleted when the function returns with the exception of file attachment annotations. If you want to flatten the view state then set the flag affUseViewState.

Annotation flags:

kaffNone	0	Printable annotations independent of the type
kaffUseViewState	1	If set, annotations which are visible in a viewer become flattened.
kaffMarkupAnnots	2	If set, markup annotations are flattened only. Link, Sound, or FileAttach annotations are no markup annotations. These types will be left intact.

See also FlattenAnnots function in DynaPDF manual.

77.39.278 FlattenForm as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function converts all fields of an Interactive Form to native PDF vector graphics and deletes the form after all fields are converted, incl. all JavaScript actions which are connected with form fields, pages, or the catalog object, and global JavaScript functions.
Notes: Requires DynaPDF Pro license.
See also FlattenForm function in DynaPDF manual.

77.39.279 FlushPageContent(stack as DynaPDFStackMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function replaces the content stream of a page or template that was changed with the function ReplacePageText() or ReplacePageTextEx() beforehand.
Notes:

The function must be called after all changes are made. See GetPageText() for an example application.

Return values:
If the function succeeds the return value is true. If the function fails the return value is false.

See also FlushPageContent function in DynaPDF manual.

77.39.280 FlushPages(Flags as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flushes pages.
Notes: Do not use FlushPages and SetUseSwapFile together. Use one function.
See also FlushPages function in DynaPDF manual.

77.39.281 FlushPagesEx(Flags as integer, LastPage as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes the pages in memory to the PDF file exactly like FlushPages().
Notes: The only difference is that the last page can be specified. The function calls FlushPages() if LastPage is smaller than 1.
See also FlushPagesEx function in DynaPDF manual.

77.39.282 FreeImageBuffer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Frees the current image buffer.
See also FreeImageBuffer function in DynaPDF manual.

77.39.283 FreeImageObj(Handle as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function releases memory that was allocated by GetImageObj to decompress the image.
Notes: If the function succeeds the return value is true. If the function fails the return value is false.
See also FreeImageObj function in DynaPDF manual.

77.39.284 FreePDF as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function frees all used resources except the font cache.
See also FreePDF function in DynaPDF manual.

77.39.285 FreeTextAnnot(PosX as Double, PosY as Double, Width as Double, Height as Double, Author as string, Text as string, Align as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a free text annotation.
Example:

```
dim pdf as DynaPDFMBS // your dynapdf instance

// edit page 1
call pdf.EditPage(1)
// set a font
call pdf.SetFont( "Times New Roman",pdf.kfsNone,46,True,pdf.kcp1252 )
// set a color
call pdf.SetFillColor(0)

// now add a text annotation
call pdf.FreeTextAnnot( 100, 100, 100, 100, "author", "test", 0 )

// end page
call pdf.EndPage
```

Notes: The Name and Author parameters are converted to unicode.
See also FreeTextAnnot function in DynaPDF manual.

77.39.286 FreeTextAnnotAnsi(PosX as Double, PosY as Double, Width as Double, Height as Double, Author as string, Text as string, Align as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a free text annotation.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The Name and Author parameters are converted to ANSI.

See also FreeTextAnnot function in DynaPDF manual.

77.39.287 Get3DAnnotStream(Annot as UInt32, byref Data as String, byref SubType as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Retrieves the data stream of a 3D annotation.
Notes:

At time of publication, PDF supports U3D and PRC files. Check the value of the string SubType to determine the file type. The default format is U3D. SubType can be "" in this case. For PRC files, SubType is required to be present.

Returns true on success and false on failure.
See also Get3DAnnotStream function in DynaPDF manual.

77.39.288 GetActionCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of actions contained in a document.
See also GetActionCount function in DynaPDF manual.

77.39.289 GetActionHandle(ObjType as Integer, ObjHandle as UInt32, ActIndex as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the handle of an action.
Notes:

To determine the number of available actions of a specific object call GetObjActionCount. Since the Catalog object contains no handle, the parameter ObjHandle will be ignored for this object type.

If the function succeeds the return value is the action handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also GetActionHandle function in DynaPDF manual.

77.39.290 GetActionType(ActHandle as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the type of an annotation.
See also GetActionType function in DynaPDF manual.

77.39.291 GetActionTypeEx(ObjType as Integer, ObjHandle as Integer, ActIndex as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the action type of an action used by a specific PDF object.
See also GetActionTypeEx function in DynaPDF manual.

77.39.292 GetActiveFont as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the handle of the active font or -1 if no font is set.
See also GetActiveFont function in DynaPDF manual.

77.39.293 GetAllocBy as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the pre allocated buffer size of page content streams in bytes.
See also GetAllocBy function in DynaPDF manual.

77.39.294 GetAnnot(ahandle as Integer) as DynaPDFAnnotationMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function retrieves the most important properties of an annotation.
Example:

```
dim pdf as DynaPDFMBS // your instance

dim c as Integer = pdf.GetAnnotCount

for i as Integer = 0 to c-1
dim a as DynaPDFAnnotationMBS = pdf.GetAnnot(i)
```

```
MsgBox str(a.Type)
next
```

Deprecated: This item is deprecated and should no longer be used. You can use GetAnnotEx instead. See also GetAnnot function in DynaPDF manual.

77.39.295 GetAnnotBBox(ahandle as Integer) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function retrieves the bounding box of an annotation measured in bottom up coordinates. See also GetAnnotBBox function in DynaPDF manual.

77.39.296 GetAnnotCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of annotations currently used in the document.
See also GetAnnotCount function in DynaPDF manual.

77.39.297 GetAnnotEx(ahandle as Integer) as DynaPDFAnnotationExMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function retrieves the most important properties of an annotation.
Example:

```
dim pdf as DynaPDFMBS // your instance

dim c as Integer = pdf.GetAnnotCount

for i as Integer = 0 to c-1
dim a as DynaPDFAnnotationExMBS = pdf.GetAnnotEx(i)

MsgBox str(a.Type)
next
```

See also GetAnnotEx function in DynaPDF manual.

77.39.298 GetAnnotFlags as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the default flags used for newly created annotations.
See also GetAnnotFlags function in DynaPDF manual.

77.39.299 GetAnnotLink(Handle as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function returns the URL or file path of a file link annotation.
See also GetAnnotLink function in DynaPDF manual.

77.39.300 GetAnnotType(Handle as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the type of a specific annotation.
See also GetAnnotType function in DynaPDF manual.

77.39.301 GetAscent as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the ascender of the active font.
See also GetAscent function in DynaPDF manual.

77.39.302 GetBBox(boundary as Integer) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns a bounding box of a PDF page.
Example:

```
// Just set the trim box to the same value as the media box as an example

dim r as DynaPDFRectMBS = pdf.GetBBox(pdf.kpbMediaBox)
call pdf.SetBBox(pdf.kpbTrimBox, r.Left, r.Bottom, r.Right, r.Top)
```

See also GetBBox function in DynaPDF manual.

77.39.303 GetBidiMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current bidirectional mode.
Notes:

Useful constants:

kbmLeftToRight	0	Apply the bidi algorithm in Left to Right layout
kbmRightToLeft	1	Apply the bidi algorithm in Right to Left layout
kbmNone	2	Default ->do not apply the bidi algorithm

See also GetBidiMode function in DynaPDF manual.

77.39.304 GetBookmark(ahandle as Integer) as DynaPDFBookmarkMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function returns the properties of a bookmark.
See also GetBookmark function in DynaPDF manual.

77.39.305 GetBookmarkCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of bookmarks defined in the document.
See also GetBookmarkCount function in DynaPDF manual.

77.39.306 GetBorderStyle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the global border style which is used for newly created Interactive Form fields.
See also GetBorderStyle function in DynaPDF manual.

77.39.307 GetBuffer as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns a pointer to the buffer of a memory based PDF file.
Notes: The result string has no encoding set.
See also GetBuffer function in DynaPDF manual.

77.39.308 GetBufferMemory as Memoryblock

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns a pointer to the buffer of a memory based PDF file.
Notes: The result string has no encoding set.

77.39.309 GetCapHeight as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the cap height of the active font.
See also GetCapHeight function in DynaPDF manual.

77.39.310 GetCharacterSpacing as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current character spacing.
See also GetCharacterSpacing function in DynaPDF manual.

77.39.311 GetCheckBoxChar as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the character used for newly created check boxes.
See also GetCheckBoxChar function in DynaPDF manual.

77.39.312 GetCheckBoxCharEx(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the check box character for the given field.
See also GetCheckBoxCharEx function in DynaPDF manual.

77.39.313 GetCheckBoxDefState(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function returns the default state of a check box, that is 1 == checked or 0 == unchecked.
See also GetCheckBoxDefState function in DynaPDF manual.

77.39.314 GetCMap(index as Integer) as DynaPDFCMapMBS

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the CMap object with the given index.
See also GetCMap function in DynaPDF manual.

77.39.315 GetCMapCount as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of character maps.
See also GetCMapCount function in DynaPDF manual.

77.39.316 GetColorSpace as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the active color space.
See also GetColorSpace function in DynaPDF manual.

77.39.317 GetColorSpaceCount as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of color spaces.
Example:

```
Sub DrawSomething(pdf as DynaPDFMBS)
// draw all colorants with their own color
```

```
Dim MyX, MyY as Double

MyX = 10
MyY = 100

// set a font
call pdf.SetFont "Times", pdf.kfsItalic, 10.0, true, pdf.kcp1252

// loop over all color spaces
dim Colorcount as Integer = pdf.GetColorSpaceCount

For j as Integer = 0 to Colorcount-1
MyX = 10
dim MyColourSpace as DynaPDFColorSpaceMBS = PDF.GetColorSpaceObj(j)
dim ColorantsCount as Integer = MyColourSpace.ColorantsCount
dim c as Integer = MyColourSpace.NumInComponents
Call pdf.SetExtColorSpace j

// draw name of each colorant
for i as Integer = 0 to c-1

// build array with colors and set 100% for the one color we need
dim values() as Double
redim values(c-1)
values(i) = 1.0

// get name
dim name as string = "# "+str(i)
if i <= ColorantsCount then
name = MyColourSpace.Colorants(i)
end if

// seaw name
Call pdf.SetFillColor(values)
call pdf.WriteText(MyX,MyY, name)

// next
MyX = MyX + pdf.GetTextWidth(name) + 20
next

// next
MyY = MyY+20
Next
End Sub
```

See also GetColorSpaceCount function in DynaPDF manual.

77.39.318 GetColorSpaceObj(index as Integer) as DynaPDFColorSpaceMBS

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries a ColorSync Profile for the given index.
Notes: Index from 0 to GetColorSpaceCount-1.
See also GetColorSpaceObj function in DynaPDF manual.

77.39.319 GetCompressionFilter as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the standard compression filter for images.
See also GetCompressionFilter function in DynaPDF manual.

77.39.320 GetCompressionLevel as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the active compression level.
See also GetCompressionLevel function in DynaPDF manual.

77.39.321 GetContent as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function returns a pointer to the content stream of the currently open page or template.
Notes: The result string has no encoding set.
See also GetContent function in DynaPDF manual.

77.39.322 GetDefBitsPerPixel as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns default color depth in bits per pixel, which determines whether images should be down sampled.
See also GetDefBitsPerPixel function in DynaPDF manual.

77.39.323 GetDescent as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the descender of the active font.
See also GetDescent function in DynaPDF manual.

77.39.324 GetDocInfo(dinfo as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves a document info entry as Unicode string.
Notes: The result is an unicode string.
See also GetDocInfo function in DynaPDF manual.

77.39.325 GetDocInfoCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of document info entries defined in the document.
See also GetDocInfoCount function in DynaPDF manual.

77.39.326 GetDocInfoEx(index as Integer, byref DInfo as Integer, byref key as string, byref value as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns a document info entry.
Notes: Key is an ascii string and value an unicode string.
See also GetDocInfoEx function in DynaPDF manual.

77.39.327 GetDocumentColorSpaces as DynaPDFColorSpaceMBS()

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries Colorspace objects for all colorspaces in the current working document.

77.39.328 GetDocUsesTransparency(Flags as UInt32 = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether this document uses transparency.
Notes:

Checks whether a PDF file uses native PDF Transparency (PDF 1.4). The file uses transparency when it contains soft masks, blend modes other than Normal, or fill or stroke alpha values smaller than 1.0.
The function checks all pages, templates, extended graphics states, images, annotations, and form fields.
If the file uses transparency the return value is true. If it uses no transparency the return value is false.
See also GetDocUsesTransparency function in DynaPDF manual.

77.39.329 GetDrawDirection as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the actual draw direction for closed vector graphics such as rectangles, circles, ellipses and so on.
See also GetDrawDirection function in DynaPDF manual.

77.39.330 GetDynaPDFVersion as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the version string of DynaPDF.
Notes: Result is an ASCII string.
See also GetDynaPDFVersion function in DynaPDF manual.

77.39.331 GetEmbeddedFile(Handle as Integer, byref FileSpec as DynaPDF-FileSpecMBS, Decompress as boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the most important properties of an embedded file as well as a pointer to the file buffer.
Example:

```
// new PDF Environment
dim pdf as new MyDynaPDFMBS
call pdf.CreateNewPDF nil

// import PDF file
dim f as FolderItem = SpecialFolder.Desktop.Child("Create PDF with hidden data.pdf")
call pdf.SetImportFlags(pdf.kifImportAll + pdf.kifImportAsPage)
call pdf.OpenImportFile(f)
call pdf.ImportPDFFile(1)
```

```
// walk over list of embedded files and get their data
dim c as Integer = pdf.GetEmbeddedFileCount
for i as Integer = 0 to c-1
dim e as DynaPDFFileSpecMBS
if pdf.GetEmbeddedFile(i, e, true) then
dim data as string = e.Buffer

Break
end if
next

// cleanup
call pdf.CloseFile
```

See also GetEmbeddedFile function in DynaPDF manual.

77.39.332 GetEmbeddedFileCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of embedded files available in the PDF file.
Example:

```
// new PDF Environment
dim pdf as new MyDynaPDFMBS
call pdf.CreateNewPDF nil

// import PDF file
dim f as FolderItem = SpecialFolder.Desktop.Child("Create PDF with hidden data.pdf")
call pdf.SetImportFlags(pdf.kifImportAll + pdf.kifImportAsPage)
call pdf.OpenImportFile(f)
call pdf.ImportPDFFile(1)

// walk over list of embedded files and get their data
dim c as Integer = pdf.GetEmbeddedFileCount
for i as Integer = 0 to c-1
dim e as DynaPDFFileSpecMBS
if pdf.GetEmbeddedFile(i, e, true) then
dim data as string = e.Buffer

Break
end if
next

// cleanup
```

call pdf.CloseFile

See also GetEmbeddedFileCount function in DynaPDF manual.

77.39.333 GetEMFPatternDistance as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the distance between lines of standard patterns during EMF conversion.
See also GetEMFPatternDistance function in DynaPDF manual.

77.39.334 GetErrLogMessage(index as Integer) as DynaPDFErrorMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Querties the error message details for the given index.
Notes: Index from 0 to GetErrLogMessageCount-1.
See also GetErrLogMessage function in DynaPDF manual.

77.39.335 GetErrLogMessageCount as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of error log messages.
See also GetErrLogMessageCount function in DynaPDF manual.

77.39.336 GetErrorMessage as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the last error message as a string, or "" if no error occurred.
See also GetErrorMessage function in DynaPDF manual.

77.39.337 GetErrorMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current error mode.
See also GetErrorMode function in DynaPDF manual.

77.39.338 GetField(index as Integer) as DynaPDFFieldMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the most important properties of a field.
Deprecated: This item is deprecated and should no longer be used. You can use GetFieldEx instead. See also GetField function in DynaPDF manual.

77.39.339 GetFieldBackColor as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the default background color used for newly created interactive form fields.
See also GetFieldBackColor function in DynaPDF manual.

77.39.340 GetFieldBorderColor as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the default border color used for newly created interactive form fields.
See also GetFieldBorderColor function in DynaPDF manual.

77.39.341 GetFieldBorderStyle(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the border style of a specific form field.
See also GetFieldBorderStyle function in DynaPDF manual.

77.39.342 GetFieldBorderWidth(aField as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the line width of the border of a field.
See also GetFieldBorderWidth function in DynaPDF manual.

77.39.343 GetFieldCalcOrder as UInt32()

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries field calculation order.
Notes:

Retrieves the calculation order of form fields which contain an action in the OnCalc event (see AddActionToObj() for further information). This is the order in which their values will be recalculated when the value of any field changes. The retrieved array values are field handles.

To change the calculation order of a specific field call SetFieldCalcOrder().
See also GetFieldCalcOrder function in DynaPDF manual.

77.39.344 GetFieldChoiceValue(Field as Integer, ValIndex as Integer) as DynaPDFChoiceValueMBS

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the choice values for this field.
See also GetFieldChoiceValue function in DynaPDF manual.

77.39.345 GetFieldColor(Field as Integer, ColorType as Integer, byref ColorSpace as Integer, byref ColorValue as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves a specific color of an interactive form field.
See also GetFieldColor function in DynaPDF manual.

77.39.346 GetFieldCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of fields contained in the document.
See also GetFieldCount function in DynaPDF manual.

77.39.347 GetFieldEx(index as Integer) as DynaPDFFieldExMBS

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the most important properties of a field.
Example:

```
dim pdf as new MyDynaPDFMBS

pdf.SetLicenseKey "Lite" // For this example you can use a Lite, Pro or Enterprise License

call pdf.CreateNewPDF(nil)
call pdf.SetImportFlags(BitwiseOr(pdf.kifImportAll, pdf.kifImportAsPage))

dim filePath as FolderItem=SpecialFolder.Desktop.Child("acroform.pdf")
if (pdf.OpenImportFile(filePath, pdf.kptOpen, "") <0) then
MsgBox "Input file """+filePath.name+""" not found!"
quit
end if

// import all pages
dim r as Integer = pdf.ImportPDFFile( 1, 1.0, 1.0)

// now check all fields
dim n as Integer = pdf.GetFieldCount
for i as Integer = 0 to n-1
dim f as DynaPDFFieldExMBS = pdf.GetFieldEx(i)

break // inspect in debugger
next
```

Notes: See dynapdf_help.pdf for more details.
See also GetFieldEx function in DynaPDF manual.

77.39.348 GetFieldExpValCount(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of values/export values which are defined for a field.
See also GetFieldExpValCount function in DynaPDF manual.

77.39.349 GetFieldExpValue(Field as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function retrieves the export value(s) of a check box, list box, or combo box.
See also GetFieldExpValue function in DynaPDF manual.

77.39.350 GetFieldExpValueEx(Field as Integer, ValIndex as Integer, byref Value as string, byref ExpValue as string, byref Selected as boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function can be used to enumerate the choice values of a combo box, list box, or radio button.
See also GetFieldExpValueEx function in DynaPDF manual.

77.39.351 GetFieldFlags(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the flags of a specific interactive form field.
See also GetFieldFlags function in DynaPDF manual.

77.39.352 GetFieldGroupType(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the base type of a field group.
See also GetFieldGroupType function in DynaPDF manual.

77.39.353 GetFieldHighlightMode(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the highlight mode of buttons, checkboxes, and signature fields.
See also GetFieldHighlightMode function in DynaPDF manual.

77.39.354 GetFieldIndex(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the index or tab order of the field.
See also GetFieldIndex function in DynaPDF manual.

77.39.355 GetFieldMapName(Field as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the mapping name of a specific form field if set.
Notes: The result string is in unicode or ASCII encoding.
See also GetFieldMapName function in DynaPDF manual.

77.39.356 GetFieldName(Field as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the name of a specific interactive form field.
See also GetFieldName function in DynaPDF manual.

77.39.357 GetFieldOrientation(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the orientation of a field.
See also GetFieldOrientation function in DynaPDF manual.

77.39.358 GetFieldTextAlign(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the text alignment of a text field or button field.
See also GetFieldTextAlign function in DynaPDF manual.

77.39.359 GetFieldTextColor as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the default text color used for newly created fields.
See also GetFieldTextColor function in DynaPDF manual.

77.39.360 GetFieldToolTip(Field as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves a pointer to the tool tip string of a specific interactive form field.
Notes: The result string has either unicode or ascii encoding.
See also GetFieldToolTip function in DynaPDF manual.

77.39.361 GetFieldType(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the field type.
See also GetFieldType function in DynaPDF manual.

77.39.362 GetFillColor as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current color used for fillings.
See also GetFillColor function in DynaPDF manual.

77.39.363 GetFontCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the font count.
See also GetFontCount function in DynaPDF manual.

77.39.364 GetFontEx(index as Integer) as DynaPDFFontMBS

MBS DynaPDF Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the font information for the font specified by the index value.
Example:

```
// create PDF object with page
dim pdf as new DynaPDFMBS
call pdf.CreateNewPDF(nil)
call pdf.Append

// draw some text
call pdf.SetFont "Times", pdf.kfsItalic, 40.0, true, pdf.kcp1252
call pdf.WriteFText pdf.ktaCenter, "My first Xojo output!"

// and list all fonts:
```

```
dim n as Integer = pdf.GetFontCount-1

for i as Integer = 0 to n
MsgBox pdf.GetFontEx(i).FontName
next
```

Deprecated: This item is deprecated and should no longer be used. You can use GetFontInfo instead.
Notes:

Returns nil on any error.
Index from 0 to GetFontCount-1.
See also GetFontEx function in DynaPDF manual.

77.39.365 GetFontInfoEx(index as Integer) as DynaPDFFontInfoMBS

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Retrieves the most important properties of a font.
Notes:

This function accepts a font handle instead. A font handle is a simple array index. To enumerate all fonts of a document execute the function in a loop from zero to GetFontCount - 1.

If the function succeeds the return value is font info object. If the function fails the return value is nil.
See also GetFontInfoEx function in DynaPDF manual.

77.39.366 GetFontMetrics(FontHandle as Integer) as DynaPDFFontMetricsMBS

MBS DynaPDF Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries font metrics for a font handle.
See also GetFontMetrics function in DynaPDF manual.

77.39.367 GetFontOrigin as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current font origin.
See also GetFontOrigin function in DynaPDF manual.

77.39.368 GetFontSearchOrder as Integer()

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the font search order.
Notes:

The values in the array use this constants:

kfbtTrueType	TrueType, TrueType Collections, or OpenType fonts with TrueType outlines
kfbtType1	Type1 font
kfbtOpenType	OpenType font with Postscript outlines
kfbtStdFont	PDF Standard font
kfbtDisabled	This value can be used to disable a specific font format.

The array has 4 values.
See also GetFontSearchOrder function in DynaPDF manual.

77.39.369 GetFontSelMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current font selection mode.
See also GetFontSelMode function in DynaPDF manual.

77.39.370 GetFontWeight as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the weight that will be used to emulate a bold font style.
See also GetFontWeight function in DynaPDF manual.

77.39.371 GetFTextHeight(Align as Integer, aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function measures the height of a formatted text block.
Notes: The text parameter is converted to unicode.
See also GetFTextHeight function in DynaPDF manual.

77.39.372 GetFTextHeightAnsi(Align as Integer, aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function measures the height of a formatted text block.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text parameter is converted to ANSI.
See also GetFTextHeight function in DynaPDF manual.

77.39.373 GetFTextHeightEx(Width as Double, Align as Integer, aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function measures the height of a formatted text block.
Notes: The text parameter is converted to unicode.
See also GetFTextHeightEx function in DynaPDF manual.

77.39.374 GetFTextHeightExAnsi(Width as Double, Align as Integer, aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function measures the height of a formatted text block.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text parameter is converted to ANSI.
See also GetFTextHeightEx function in DynaPDF manual.

77.39.375 GetGlyphIndex(Index as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the glyph index of the given code page or Unicode index.
Notes:

How Index must be defined depends on the code page with which the font was loaded. For example, if the font was loaded with a 8 bit code page, then indexes below 256 are treated as index into the code page table. Higher indexes are treated as Unicode value in this case. Note that all Unicode encoded glyphs of the font are accessible in this case, also if the font was loaded with a 8 bit code page!

At time of publication the function does not support CJK code pages which require a conversion to Unicode, e.g. cpCJK_Big5_Uni, cpCJK_EUC_JP_Uni, and so on.

If the function succeeds the return value is greater or equal zero. If the function fails the return value is a negative error code.
See also GetGlyphIndex function in DynaPDF manual.

77.39.376 GetGlyphOutline(Index as UInt32) as DynaPDFGlyphOutlineMBS

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the outline of a glyph of the active font.
Notes:

Note that not all glyphs have an outline. A space character, for example, has no outline and therefore the size can be zero. The function returns normalized outlines scaled to a font size of 1000 units.

Please see dynapdf_help.pdf and our example project on how to process the outline data.
See also GetGlyphOutline function in DynaPDF manual.

77.39.377 GetGoToAction(index as Integer, Decompress as Boolean = false, ImageParseFlags as Integer = & h00000080) as DynaPDFGoToActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries details for a GoToR action.
Notes:

Index is from 0 to GetActionCount-1.

If Decompress is true, all file specification containing compressed data are uncompressed.
And ImageParseFlags defines how GetImageObj is called internally to decompress image. Default is to only get image info, but you can pass other values to actually get image data.
See also GetGoToAction function in DynaPDF manual.

77.39.378 GetGoToRAction(index as Integer, Decompress as Boolean = false, ImageParseFlags as Integer = & h00000080) as DynaPDFGoToActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries details for a GoTo action.
Notes:

Index is from 0 to GetActionCount-1.

If Decompress is true, all file specification containing compressed data are uncompressed.
And ImageParseFlags defines how GetImageObj is called internally to decompress image. Default is to only get image info, but you can pass other values to actually get image data.
See also GetGoToRAction function in DynaPDF manual.

77.39.379 GetGStateFlags as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current graphics state flags.
See also GetGStateFlags function in DynaPDF manual.

77.39.380 GetHideAction(index as Integer) as DynaPDFHideActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries details for a hide action.
Notes: Index is from 0 to GetActionCount-1.
See also GetHideAction function in DynaPDF manual.

77.39.381 GetIconColor as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the icon color used for newly created text annotations.
See also GetIconColor function in DynaPDF manual.

77.39.382 GetImageBuffer as string

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the image buffer.
See also GetImageBuffer function in DynaPDF manual.

77.39.383 GetImageBufferMemory as memoryblock

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the image buffer.

77.39.384 GetImageCount(File as folderitem) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of images contained in a multi page image.
See also GetImageCount function in DynaPDF manual.
See also:

- 77.39.385 GetImageCount(Path as string) as Integer 14847

77.39.385 GetImageCount(Path as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of images contained in a multi page image.
See also GetImageCount function in DynaPDF manual.
See also:

- 77.39.384 GetImageCount(File as folderitem) as Integer 14847

77.39.386 GetImageCountEx(Buffer as Memoryblock) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function determines the number of images in a multi-page image in the same way as GetImageCount(), but accepts a file buffer as input.
See also GetImageCountEx function in DynaPDF manual.
See also:

- 77.39.387 GetImageCountEx(Buffer as string) as Integer 14847

77.39.387 GetImageCountEx(Buffer as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function determines the number of images in a multi-page image in the same way as GetImageCount(), but accepts a file buffer as input.
See also GetImageCountEx function in DynaPDF manual.
See also:

- 77.39.386 GetImageCountEx(Buffer as Memoryblock) as Integer 14847

77.39.388 GetImageHeight(Handle as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the height of an image in pixel.
See also GetImageHeight function in DynaPDF manual.

77.39.389 GetImageObj(Handle as UInt32, Flags as Integer) as DynaPDFImageMBS

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the properties of an image as well as the decompressed image buffer if needed.
Notes:

For the flags use the constants: kpfNone, kpfDecomprAllImages, kpfNoJPXDecode, kpfDitherImagesToBW, kpfConvImagesToGray, kpfConvImagesToRGB, kpfConvImagesToCMYK or kpfImageInfoOnly.

By default all images are returned decompressed, with exception of image types which are already stored in a valid file format like JPEG and JPEG 2000 images.
If all image types should be decompressed set the flag kpfDecompressAllImages.
This function allocates memory that should be released with FreeImageObj when finish.
Image handles are simple array indexes. The number of image objects can be determined with GetImageObjCount. Note that this array does not include inline images which are stored in content streams. Such images can only be accessed with ParseContent().

Returns the function succeeds the return value is true. If the function fails the return value is false.
See also GetImageObj function in DynaPDF manual.

77.39.390 GetImageObjCount as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of image objects which were loaded with DynaPDF functions or imported from external PDF files.
Notes:

The images can be accessed with GetImageObj().
The return value is the number of image objects. This function cannot fail.
See also GetImageObjCount function in DynaPDF manual.

77.39.391 GetImageWidth(Handle as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the width of an image in pixel.
See also GetImageWidth function in DynaPDF manual.

77.39.392 GetImportDataAction(index as Integer, Decompress as Boolean = false, ImageParseFlags as Integer = & h00000080) as DynaPDFImportDataActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries details for an import action.
Notes:

Index is from 0 to GetActionCount-1.

If Decompress is true, all file specification containing compressed data are uncompressed.
And ImageParseFlags defines how GetImageObj is called internally to decompress image. Default is to only get image info, but you can pass other values to actually get image data.
See also GetImportDataAction function in DynaPDF manual.

77.39.393 GetImportFlags as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current import flags used to import PDF files.
See also GetImportFlags function in DynaPDF manual.

77.39.394 GetImportFlags2 as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries import flags 2.
See also GetImportFlags2 function in DynaPDF manual.

77.39.395 GetInBBox(PageNum as Integer, Boundary as Integer) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves a bounding box of an external PDF page.
Example:

```
dim pdf as new MyDynaPDFMBS

// open some PDF
call pdf.CreateNewPDF(nil)
call pdf.OpenImportFile(file, 0, "")

// query page size
dim bounds as DynaPDFRectMBS = pdf.GetInBBox(1, pdf.kpbMediaBox)
```

See also GetInBBox function in DynaPDF manual.

77.39.396 GetInDocInfo(DInfo as Integer, byref value as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves a document info entry from an external PDF file as Unicode string.
See also GetInDocInfo function in DynaPDF manual.

77.39.397 GetInDocInfoCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of available document info entries of the currently opened import file or a negative error code on failure.
See also GetInDocInfoCount function in DynaPDF manual.

77.39.398 GetInDocInfoEx(index as Integer, byref DInfo as Integer, byref key as string, byref value as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns a document info entry from the currently opened import file.
Example:

```
dim p as new DynaPDFMBS

call p.CreateNewPDF(nil)

// Skip anything that is not required
call p.SetImportFlags p.kifImportAll+p.kifImportAsPage
```

```
// From which PDF file do you want to extract the information?
call p.OpenImportFile(file, p.kptOpen, "")

// lookup all document information

dim count as integer = p.GetInDocInfoCount
for i as integer = 0 to count-1

dim DInfo as integer
dim key as string
dim value as string
if p.GetInDocInfoEx(i, DInfo, key, value) >= 0 then

dim Type as string
select case dinfo
case p.kdiAuthor
type = "Author"
case p.kdiCreator
type = "Creator"
case p.kdiKeywords
type = "Keywords"
case p.kdiProducer
type = "Producer"
case p.kdiSubject
type = "Subject"
case p.kdiTitle
type = "Title"
case p.kdiCompany
type = "Company"
case p.kdiPDFX_Ver
type = "PDF/X Version"
case p.kdiCustom
type = "Custom"
case p.kdiPDFX_Conf
type = "PDF/X Config"
case p.kdiCreationDate
type = "Creation Date"
case p.kdiModDate
type = "Modification Date"
else
Break
type = "?"
end Select

List.AddRow type, key, value
end if
```

```
next

// close import file
call p.CloseImportFile
```

Notes:

The key result is an ASCII string.
The value result is an ASCII or Unicode string.
See also GetInDocInfoEx function in DynaPDF manual.

77.39.399 GetInEncryptionFlags as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the encryption flags of the currently opened import file.
See also GetInEncryptionFlags function in DynaPDF manual.

77.39.400 GetInFieldCount as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns number of field in open import file.
See also GetInFieldCount function in DynaPDF manual.

77.39.401 GetInIsCollection as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function checks whether the currently opened import file is a portable collection.
Notes: Changed to integer in order to allow returning error codes besides 0 for false and 1 for true.
See also GetInIsCollection function in DynaPDF manual.

77.39.402 GetInIsEncrypted as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function checks whether the currently opened import file is encrypted.
Notes: Changed to integer in order to allow returning error codes besides 0 for false and 1 for true.

See also GetInIsEncrypted function in DynaPDF manual.

77.39.403 GetInIsSigned as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function can be used to determine whether a PDF file contains a digital signature.
Notes: Changed to integer in order to allow returning error codes besides 0 for false and 1 for true.
See also GetInIsSigned function in DynaPDF manual.

77.39.404 GetInIsTaggedPDF as integer

MBS DynaPDF Plugin, Plugin Version: 21.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the currently open import file is a Tagged PDF file.
Notes:

The PDF file must be opened beforehand with OpenImportFile() or OpenImportBuffer().
The return value is a set flags indicating the tagging status of the file.

If the function succeeds, the return value is greater or equal zero. If the function fails, the return value is a negative error code.
See also GetInIsTaggedPDF function in DynaPDF manual.

77.39.405 GetInIsTrapped as Integer

MBS DynaPDF Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the input PDF is trapped.
Notes: Changed to integer in order to allow returning error codes besides 0 for false and 1 for true.
See also GetInIsTrapped function in DynaPDF manual.

77.39.406 GetInIsXFAForm as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the input PDF is a XFA form.
Notes: Changed to integer in order to allow returning error codes besides 0 for false and 1 for true.
See also GetInIsXFAForm function in DynaPDF manual.

77.39.407 GetInMetadata(PageNum as Integer) as String

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Access the optional metadata streams of pages or the global metadata stream of the current open import file.
Notes:

Metadata streams are in XMP format that is a superset of XML. The PDF file must be opened with OpenImportImportFile or OpenImportBuffer beforehand.
Although the global XMP stream does usually exist in todays PDF files, metadata streams are optional and maybe not present. The function returns true if no error occurs, also if no metadata stream is present.
See also GetInMetadata function in DynaPDF manual.

77.39.408 GetInOrientation(PageNum as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the orientation of a specific page within the currently open import file (see also OpenImportFile()).
See also GetInOrientation function in DynaPDF manual.

77.39.409 GetInPageCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of pages contained in an external PDF file.
See also GetInPageCount function in DynaPDF manual.

77.39.410 GetInPDFVersion as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the minor PDF version number of an external PDF file.
See also GetInPDFVersion function in DynaPDF manual.

77.39.411 GetInPDFVersionEx as DynaPDFVersionInfoMBS

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the version information of the currently open import file.
See also GetInPDFVersionEx function in DynaPDF manual.

77.39.412 GetInPrintSettings as DynaPDFPrintSettingsMBS

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the print settings for the imported document.
Notes: This is a PDF 1.7 extension.
See also GetInPrintSettings function in DynaPDF manual.

77.39.413 GetInRepairMode as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function can be used to determine whether the current open import file was opened in repair or normal mode.
Notes: Changed to integer in order to allow returning error codes besides 0 for false and 1 for true.
See also GetInRepairMode function in DynaPDF manual.

77.39.414 GetIsFixedPitch as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns 1 if the active font is a fixed pitch font or 0 if the font is a variable pitch font.
Notes: Changed to integer in order to allow returning error codes besides 0 for false and 1 for true.
See also GetIsFixedPitch function in DynaPDF manual.

77.39.415 GetIsTaggingEnabled as boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether tagging is enabled.
See also GetIsTaggingEnabled function in DynaPDF manual.

77.39.416 GetItalicAngle as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the italic angle in degrees that will be used to emulate italic style fonts.
See also GetItalicAngle function in DynaPDF manual.

77.39.417 GetJavaScript(Handle as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns a global JavaScript as string.
Notes:

The result text string has either unicode or ASCII encoding.

You can use JavaScriptEngineMBS class to execute JavaScript without HTMLViewer in our own cross platform JavaScript engine.

If the JavaScript is attached to a field, please use GetFieldEx functions to get the action handle (DynaPDFFieldExMBS.Action) and then use GetJavaScriptAction instead.
See also GetJavaScript function in DynaPDF manual.

77.39.418 GetJavaScriptAction(Handle as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a java script action value for the given handle.
Deprecated: This item is deprecated and should no longer be used. You can use GetJavaScriptActionEx instead. **Notes:** May return an unicode string.
See also GetJavaScriptAction function in DynaPDF manual.
See also:

- 77.39.419 GetJavaScriptAction(ObjType as Integer, ObjHandle as Integer, ActIndex as Integer, byref ObjEvent as Integer) as string 14856

77.39.419 GetJavaScriptAction(ObjType as Integer, ObjHandle as Integer, ActIndex as Integer, byref ObjEvent as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a java script action value for the given object.
Deprecated: This item is deprecated and should no longer be used. You can use GetJavaScriptActionEx instead. **Notes:**

May return an unicode string.

The ObjEvent parameter was added in plugin version 9.3 and contains a value from the koe* constants.
See also GetJavaScriptAction function in DynaPDF manual.

See also:

- 77.39.418 GetJavaScriptAction(Handle as Integer) as string 14856

77.39.420 GetJavaScriptActionEx(index as Integer) as DynaPDFJavaScriptActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries details for an javascript action.
Notes: Index is from 0 to GetActionCount-1.
See also GetJavaScriptActionEx function in DynaPDF manual.

77.39.421 GetJavaScriptCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of global JavaScripts contained in a document.
See also GetJavaScriptCount function in DynaPDF manual.

77.39.422 GetJavaScriptEx(Name as string) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns a global JavaScript as string by using the script s name instead of a handle to identify the script.
Notes:

The result string is an unicode or an ASCII string.

You can use JavaScriptEngineMBS class to execute JavaScript without HTMLViewer in our own cross platform JavaScript engine.

If the JavaScript is attached to a field, please use GetFieldEx functions to get the action handle (DynaPDFFieldExMBS.Action) and then use GetJavaScriptAction instead.
See also GetJavaScriptEx function in DynaPDF manual.

77.39.423 GetJavaScriptName(Handle as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the name of a global JavaScript.
Notes: The result string has either unicode or ASCII encoding.
See also GetJavaScriptName function in DynaPDF manual.

77.39.424 GetJPEGQuality as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current JPEG compression quality in percent used for newly inserted images which are compressed with JPEG.
See also GetJPEGQuality function in DynaPDF manual.

77.39.425 GetJPEGVersion as String

MBS DynaPDF Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries JPEG library version.
Notes: Currently reporting 9.1 for version 9b.

77.39.426 GetLanguage as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the language identifier of the document as an ISO 3166 language tag or IANA tag, or "" if not set.
See also GetLanguage function in DynaPDF manual.

77.39.427 GetLastTextPosX as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the x coordinate of the last printed text.

77.39.428 GetLastTextPosY as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the y coordinate of the last printed text.

77.39.429 GetLaunchAction(index as Integer, Decompress as Boolean = false, ImageParseFlags as Integer = & h00000080) as DynaPDFLaunchActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries details for a launch action.
Notes:

Index is from 0 to GetActionCount-1.

If Decompress is true, all file specification containing compressed data are uncompressed.
And ImageParseFlags defines how GetImageObj is called internally to decompress image. Default is to only get image info, but you can pass other values to actually get image data.
See also GetLaunchAction function in DynaPDF manual.

77.39.430 GetLayerConfig(Index as Integer) as DynaPDFOCLayerConfigMBS

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Retrieves the most important properties of a layer configuration.
Notes:

A PDF file can contain one or more layer configurations so that different layers can be initially shown or hidden.
A PDF file that contains layers (Optional Content Groups in PDF syntax) contains usually at least a default configuration dictionary. This configuration is loaded by default when the visibility state of a layer or optional content group must be determined, e.g. when rendering a page.
To determine the number of available configurations call GetLayerConfigCount(). The first index is denoted by 0.

If the function succeeds the return value is the object. If the function fails the return value is nil.
See also GetLayerConfig function in DynaPDF manual.

77.39.431 GetLayerConfigCount as Integer

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of available layer configurations.
Notes:

Note that it is possible that a document contains layers but no layer configuration. To determine whether a document contains layers or optional content groups use GetOCGCount().
To load a specific layer configuration call LoadLayerConfig().

See also GetLayerConfigCount function in DynaPDF manual.

77.39.432 GetLeading as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current leading.
See also GetLeading function in DynaPDF manual.

77.39.433 GetLineCapStyle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current line cap style used for vector graphics.
See also GetLineCapStyle function in DynaPDF manual.

77.39.434 GetLineJoinStyle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current line join style used for vector graphics.
See also GetLineJoinStyle function in DynaPDF manual.

77.39.435 GetLineWidth as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current line width used for stroked vector graphics and the border of interactive objects.
See also GetLineWidth function in DynaPDF manual.

77.39.436 GetLinkHighlightMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current highlight mode used for newly created annotations.
See also GetLinkHighlightMode function in DynaPDF manual.

77.39.437 GetLogMetafileSize(FileName as folderitem) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the logical bounding box of an enhanced or Windows metafile.
See also GetLogMetafileSize function in DynaPDF manual.

77.39.438 GetLogMetafileSizeEx(Buffer as Memoryblock) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the logical bounding box of an enhanced or Windows metafile.
See also GetLogMetafileSizeEx function in DynaPDF manual.
See also:

- 77.39.439 GetLogMetafileSizeEx(Buffer as string) as DynaPDFRectMBS 14861

77.39.439 GetLogMetafileSizeEx(Buffer as string) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the logical bounding box of an enhanced or Windows metafile.
See also GetLogMetafileSizeEx function in DynaPDF manual.
See also:

- 77.39.438 GetLogMetafileSizeEx(Buffer as Memoryblock) as DynaPDFRectMBS 14861

77.39.440 GetMatrix(byref Matrix as DynaPDFMatrixMBS) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the current transformation.
See also GetMatrix function in DynaPDF manual.

77.39.441 GetMaxFieldLen(TxtField as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the allowed maximum string length of a text field, or zero if the length is not restricted.
See also GetMaxFieldLen function in DynaPDF manual.

77.39.442 GetMetaConvFlags as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the conversion flags used to convert enhanced metafiles to PDF.
See also GetMetaConvFlags function in DynaPDF manual.

77.39.443 GetMetadata(ObjType as Integer, Handle as Integer) as String

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function can be used to access the optional metadata streams of pages, fonts, images, pages, templates, as well as the global metadata stream that is associated with the Catalog object.
Notes:

Metadata streams are in XMP format that is a superset of XML.
The global metadata stream will be created when this function is called. The returned stream is a preview of the XMP stream that will be stored in the file when CloseFile or CloseFileEx is called. Note that the creation and modification date will be updated when the file is closed.
The original global XMP stream of external PDF files can be accessed with GetInMetadata().
Metadata streams are optional and maybe not present. The function returns true if no error occurs, also if no metadata stream is present.
See also GetMetadata function in DynaPDF manual.

77.39.444 GetMissingGlyphs as UInt32()

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an array with missing glyphs.
Notes: See also GetMissingGlyphsString.
See also GetMissingGlyphs function in DynaPDF manual.

77.39.445 GetMissingGlyphsString as String

MBS DynaPDF Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a string containing the missing glpyhs characters.
Notes:

This is a convenience function which builds a string from the array given by pdfGetMissingGlyphs.

See also GetMissingGlyphs.

77.39.446 GetMiterLimit as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current miter limit used to draw stroked vector graphics.
See also GetMiterLimit function in DynaPDF manual.

77.39.447 GetMovieAction(index as Integer, Decompress as Boolean = false, ImageParseFlags as Integer = & h00000080) as DynaPDFFieldMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries details for a movie action.
Notes:

Index is from 0 to GetActionCount-1.

If Decompress is true, all file specification containing compressed data are uncompressed.
And ImageParseFlags defines how GetImageObj is called internally to decompress image. Default is to only get image info, but you can pass other values to actually get image data.
See also GetMovieAction function in DynaPDF manual.

77.39.448 GetNamedAction(index as Integer) as DynaPDFNamedActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries details for a named action.
Notes: Index is from 0 to GetActionCount-1.
See also GetNamedAction function in DynaPDF manual.

77.39.449 GetNamedDest(index as Integer) as DynaPDFNamedDestMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries information about the named destination with the given index.
Notes:

Index from 0 to GetNamedDestCount-1.
Returns nil on any error.
See also GetNamedDest function in DynaPDF manual.

77.39.450 GetNamedDestCount as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of named destination objects.
See also GetNamedDestCount function in DynaPDF manual.

77.39.451 GetNeedAppearance as boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether appearance is needed.
See also GetNeedAppearance function in DynaPDF manual.

77.39.452 GetObjActionCount(ObjType as Integer, ObjHandle as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of actions used by an object.
Deprecated: This item is deprecated and should no longer be used. You can use GetObjActions instead.
See also GetObjActionCount function in DynaPDF manual.

77.39.453 GetObjActions(ObjType as Integer, ObjHandle as Integer, byref Actions as DynaPDFObjActionsMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries details for an object action.
Notes:

Index is from 0 to GetActionCount-1.

The function retrieves the first action and additional trigger events that should be executed when a specific event occurs.
If the object type is a page, then use the page number as handle.

Trigger events are supported by the global Catalog object (this is the document root), Pages, and Form Fields. All other objects do not support trigger events.
Actions are defined as a single linked list. That means one action can execute another action (if NextAction of that action is >= 0).
Note that an action can reference itself! The application must check whether an action is already in the

execution list before it will be executed.

If an error occurred, the plugin returns nil.
On success, we provide the DynaPDFObjActionsMBS object in Actions parameter.

Return values:

<0	An error occurred, e.g. due to an invalid handle.
0	The object contains no action or trigger event.
1	The object contains an action.
2	The object contains a trigger event.
3	The object contains an action and a trigger event.

See also GetObjActions function in DynaPDF manual.

77.39.454 GetOCG(Handle as UInt32) as DynaPDFOCGMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the properties of an OCG, also called layer.
Notes:

An OCG handle is a simple array index. You can loop over all available OCGs from 0 to GetOCGCount - 1. If the member HaveContUsage is true, the OCG contains a Content Usage dictionary. The contents of this dictionary can be accessed with the function GetOCGContUsage. A Content Usage dictionary contains additional information about a layer or OCG.

If the OCG is also included in an application event, this is the case if AppEvent is non-zero, then the Content Usage dictionary is used to control the visibility state of the layer. The member Categories specifies which categories control the visibility state.

Returns nil on any error.
See also GetOCG function in DynaPDF manual.

77.39.455 GetOCGContUsage(Handle as UInt32) as DynaPDFOCGContUsageMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the properties of the Content Usage dictionary that is associated with an OCG or layer.
Notes:

If the OCG is not included in an application event, then the contents in this dictionary serves as pure information.
If the OCG is included in one or more application events, then these settings control also the visibility state of the OCG. The function GetOCG returns the events and categories which control the layer visibility.
If UserNamesCount is greater zero, the dictionary contains also user names. The user names can be accessed with GetOCGUsageUserName.
Ôøº

Returns nil on any error.
See also GetOCGContUsage function in DynaPDF manual.

77.39.456 GetOCGCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of OCGs or layers which are available in document.
Notes: This function cannot fail, the return value is always greater or equal zero.
See also GetOCGCount function in DynaPDF manual.

77.39.457 GetOCGUsageUserName(Handle as UInt32, Index as UInt32, byref Name as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a user name of a Content Usage dictionary that is associated with an OCG or layer.
Notes:

The functions a pointer of the original string that is stored in the PDF file.
If the function succeeds the return value is true. If the function fails the return value is false.
See also GetOCGUsageUserName function in DynaPDF manual.

77.39.458 GetOCUINode(Node as Integer) as DynaPDFOCUINodeMBS

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Retrieves the most important properties of an Optional Content UI node (UI stands for User Interface).
Notes:

If the PDF file was not already imported with ImportPDFFile() the function ImportOCProperties() must be called to import the global Optional Content Properties.
UI nodes are part of a layer configuration. Therefore, a layer configuration must be loaded with LoadLayerConfig() before the function can be called.

Optional Content Groups (OCGs) which are returned by this function should be visible in the user interface of a viewer application. All other OCGs should not be shown by default.
UI nodes are stored in a single linked list. To get the pointer of the root node set the parameter Node to 0. The parameter OutNode will be ignored in this case but it is required otherwise.
The next node of the root is in the NextItem property. If no further node is available the return value will be 0.
Every node can contain one or more child nodes, an optional label, or a reference to an OCG.
See also GetOCUINode function in DynaPDF manual.

77.39.459 GetOpacity as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the opacity value used to draw the visible appearance of an annotation (requires Acrobat 5 or higher).
See also GetOpacity function in DynaPDF manual.

77.39.460 GetOrientation as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the orientation of the current open page if an open page was detected or the default orientation for newly created pages if no open page was detected.
See also GetOrientation function in DynaPDF manual.

77.39.461 GetOutputIntent(Index as Integer) as DynaPDFOutputIntentMBS

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an output intent as well as the properties of it.
Notes:

An output intent is an ICC profile that describes the characteristics of the output device. The profile is mostly embedded but certain standards like PDF/X 4p, for example, allow also the usage of non-embedded profiles.

The parameter Index is the array index of the output intent. To determine the number of available intents call GetOutputIntentCount.

Returns nil in case of error.
See also GetOutputIntent function in DynaPDF manual.

77.39.462 GetOutputIntentCount as Integer

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of available output intents.
See also GetOutputIntentCount function in DynaPDF manual.

77.39.463 GetPage(PageNum as UInt32) as DynaPDFPageMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the page object for the given page number.
Notes: If you like to open a page for editing, please use editpage function.

77.39.464 GetPageAnnot(index as Integer) as DynaPDFAnnotationMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Retrieves the page annotation with the given index.
Deprecated: This item is deprecated and should no longer be used. You can use GetPageAnnotEx instead.
See also GetPageAnnot function in DynaPDF manual.

77.39.465 GetPageAnnotCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the page annotation count.
See also GetPageAnnotCount function in DynaPDF manual.

77.39.466 GetPageAnnotEx(index as Integer) as DynaPDFAnnotationExMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries an extended annotation with the given index.
See also GetPageAnnotEx function in DynaPDF manual.

77.39.467 GetPageColorSpaces as DynaPDFColorSpaceMBS()

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries for current open page the color spaces used.
Notes:

Color spaces used for drawing colors (Stroke and Fill Color) and for image color space.
The list may be empty if for example everything is drawn in standard color spaces like RGB.

77.39.468 GetPageCoords as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the page coordinate system setting.
Notes: The native coordinate system of the Portable Document Format is bottom up.
See also GetPageCoords function in DynaPDF manual.

77.39.469 GetPageCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of pages of the current PDF file if any.
See also GetPageCount function in DynaPDF manual.

77.39.470 GetPageField(Index as Integer) as DynaPDFFieldMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the most important properties of a field.
Deprecated: This item is deprecated and should no longer be used. You can use GetPageFieldEx instead.
See also GetPageField function in DynaPDF manual.

77.39.471 GetPageFieldCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of fields used by a page.
See also GetPageFieldCount function in DynaPDF manual.

77.39.472 GetPageFieldEx(Index as Integer) as DynaPDFFieldExMBS

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the most important properties of a field.
Notes: The parameter Index must be a valid index to the page's field array. To enumerate the fields of a page execute the function in a loop from 0 to GetPageFieldCount - 1.
See also GetPageFieldEx function in DynaPDF manual.

77.39.473 GetPageHeight as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the height of the currently open page.
See also GetPageHeight function in DynaPDF manual.

77.39.474 GetPageLabel(index as Integer, byref Label as DynaPDFPageLabelMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the properties of a page label.
See also GetPageLabel function in DynaPDF manual.

77.39.475 GetPageLabelCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of page labels defined in the document.
See also GetPageLabelCount function in DynaPDF manual.

77.39.476 GetPageLayout as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the page layout that is used when opening the document with Adobe s Acrobat.
See also GetPageLayout function in DynaPDF manual.

77.39.477 GetPageMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the page mode that is used when opening the document with Adobe's Acrobat.
See also GetPageMode function in DynaPDF manual.

77.39.478 GetPageNum as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the page number of the currently open page.
See also GetPageNum function in DynaPDF manual.

77.39.479 GetPageText(stack as DynaPDFStackMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function can be used to extract the text of a page or template, or to find a specific text that should be replaced or deleted with the function ReplacePageText() or ReplacePageTextEx().
Notes:

InitStack must be called before you use GetPageText.

If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs.
Requires DynaPDF Pro license.
See also GetPageText function in DynaPDF manual.

77.39.480 GetPageWidth as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the width of the currently open page.
See also GetPageWidth function in DynaPDF manual.

77.39.481 GetPDFVersion as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the minor version of the output PDF file as Integer value.

Notes: Zero stand for PDF 1.0, one for PDF 1.1 and so on.
See also GetPDFVersion function in DynaPDF manual.

77.39.482 GetPDFVersionEx as DynaPDFVersionInfoMBS

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Retrieves the major and minor version of the PDF document as well as the underlying PDF standard, if any.
Example:

```
Dim d As New DynaPDFMBS
Dim v As DynaPDFVersionInfoMBS = d.GetPDFVersionEx

Break // check in debugger
```

Notes:

Result includes:

Major	PDF major version, e.g. 1
Minor	PDF minor version, e.g. 7
MainVer	Set only if the file conforms to a specific PDF standard, e.g. "PDF/X // 1a:2003", "PDF/A 3b", and so on.
SubVer	e.g. "ZUGFeRD 2.0", "Factur-X", and so on

Returns nil in case of an error.
See also GetPDFVersionEx function in DynaPDF manual.

77.39.483 GetPNGVersion as String

MBS DynaPDF Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries PNG library version used in DynaPDF.

77.39.484 GetPrintSettings as DynaPDFPrintSettingsMBS

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the print settings for the current document.
Notes: This is a PDF 1.7 extension.
See also GetPrintSettings function in DynaPDF manual.

77.39.485 GetResetAction(Handle as UInt32) as DynaPDFResetFormActionMBS

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the properties of a Reset Form Action.
See also GetResetAction function in DynaPDF manual.

77.39.486 GetResolution as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the resolution in DPI (Dots per Inch), in which images are stored by DynaPDF.
See also GetResolution function in DynaPDF manual.

77.39.487 GetSaveNewImageFormat as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If false, images are not downscaled if necessary.
See also GetSaveNewImageFormat function in DynaPDF manual.

77.39.488 GetSeparationInfo(byref Colorant as string, byref ColorSpace as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the separation info stored in the current open page.
See also GetSeparationInfo function in DynaPDF manual.

77.39.489 GetSpaceWidth(FontHandle as Integer, FontSize as Double) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the width of the space character of the font depending on the font size.
Notes:

If the font contains no space character a default size is used to compute the space width.
The parameter FontHandle must be a valid pointer to a PDF font. Such a reference is returned by GetPageText, EnumDocFonts, or by the content parser (see ParseContent).

Returns: If the function succeeds the return value is the space width. If the function fails the return value is zero. This function does not use the exception handling of DynaPDF. No error message is set on failure.

See also GetSpaceWidth function in DynaPDF manual.

77.39.490 GetStrokeColor as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current stroke color.
See also GetStrokeColor function in DynaPDF manual.

77.39.491 GetSubmitAction(Handle as UInt32) as DynaPDFSubmitFormActionMBS

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the properties of a Submit Form Action.
Notes: Returns nil in case of an error.
See also GetSubmitAction function in DynaPDF manual.

77.39.492 GetSysFontInfo as DynaPDFSysFontMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the most important properties of a system font.
Example:

```
// list all fonts
dim d as new DynaPDFMBS

dim f as DynaPDFSysFontMBS = d.GetSysFontInfo
while f<>nil
Listbox1.AddRow f.FamilyName
```

```
f = f.NextFont
wend
```

Notes:

The function returns the fonts in the current font search order. That means if the search order is { fbtTrueType, fbtOpenType, fbtType1, fbtStdFont } , for example, then the function returns first all TrueType fonts sorted in ascending order, then all OpenType fonts, and so on.
Since standard fonts are no system fonts, these fonts are not returned.
See also GetSysFontInfo function in DynaPDF manual.
See also:

- 77.39.493 GetSysFontInfo(PostscriptName as String) as DynaPDFSysFontMBS 14875

77.39.493 GetSysFontInfo(PostscriptName as String) as DynaPDFSysFontMBS

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries system font with given postscript name.
Example:

```
dim d as new DynaPDFMBS

// find one font with postscript name
dim font as DynaPDFSysFontMBS = d.GetSysFontInfo("Verdana-BoldItalic")

// find all with family name
dim fonts() as DynaPDFSysFontMBS = d.GetSysFontInfos("Verdana")

Break // see in debugger
```

Notes: Returns nil if font is not found.
See also GetSysFontInfo function in DynaPDF manual.
See also:

- 77.39.492 GetSysFontInfo as DynaPDFSysFontMBS 14874

77.39.494 GetSysFontInfos as DynaPDFSysFontMBS()

MBS DynaPDF Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an array with the most important properties of system fonts.
Example:

```
dim pdf as new MyDynaPDFMBS

// get all fonts
dim fonts() as DynaPDFSysFontMBS = pdf.GetSysFontInfos

// add one row for each font
for each f as DynaPDFSysFontMBS in fonts

dim name as string = f.FamilyName

if f.BaseType = pdf.kfbtOpenType and f.CIDOrdering = "" then
// This font cannot be used with Unicode

else
// Anything is ok
end if

next
```

Notes:

The function returns the fonts in the current font search order. That means if the search order is { fbtTrueType, fbtOpenType, fbtType1, fbtStdFont } , for example, then the function returns first all TrueType fonts sorted in ascending order, then all OpenType fonts, and so on.
Since standard fonts are no system fonts, these fonts are not returned.
See also:

- 77.39.495 GetSysFontInfos(Name as String) as DynaPDFSysFontMBS() 14876

77.39.495 GetSysFontInfos(Name as String) as DynaPDFSysFontMBS()

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an array with the most important properties of system fonts.
Example:

```
dim d as new DynaPDFMBS

// find one font with postscript name
dim font as DynaPDFSysFontMBS = d.GetSysFontInfo("Verdana-BoldItalic")

// find all with family name
dim fonts() as DynaPDFSysFontMBS = d.GetSysFontInfos("Verdana")

Break // see in debugger
```

Notes:

Matchs fonts by family name, full name or Postscript name.

The function returns the fonts in the current font search order. That means if the search order is { fbtTrueType, fbtOpenType, fbtType1, fbtStdFont } , for example, then the function returns first all TrueType fonts sorted in ascending order, then all OpenType fonts, and so on.
Since standard fonts are no system fonts, these fonts are not returned.
See also:

- 77.39.494 GetSysFontInfos as DynaPDFSysFontMBS() 14875

77.39.496 GetTabLen as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the tabulator length in spaces that is used to emulate tabulators during text formatting (see WriteFText() for further information).
See also GetTabLen function in DynaPDF manual.

77.39.497 GetTemplCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of templates used by a page.
See also GetTemplCount function in DynaPDF manual.

77.39.498 GetTemplHandle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the handle of the current open template or a negative error code on failure.
See also GetTemplHandle function in DynaPDF manual.

77.39.499 GetTemplHeight(Handle as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the height of a template.
See also GetTemplHeight function in DynaPDF manual.

77.39.500 GetTemplWidth(Handle as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the width of a template. The parameter Handle must be a valid template handle.
Notes: If the function succeeds the return value is the width of the template. If the function fails the return value is a negative error code.
See also GetTemplWidth function in DynaPDF manual.

77.39.501 GetTextDrawMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the text draw mode. Se draw modes are described in detail under SetTextDrawMode().
See also GetTextDrawMode function in DynaPDF manual.

77.39.502 GetTextFieldValue(Field as Integer, byref Value as string, byref DefValue as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the text of a field.
Notes: The strings may be ANSI or Unicode encoded.
See also GetTextFieldValue function in DynaPDF manual.

77.39.503 GetTextHeight(Align as Integer, aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function measures the height of a formatted text block.
Example:

```
dim pdf as DynaPDFMBS // your PDF instance

dim text as string = "Hello \ul# World"

dim h1 as Integer = pdf.GetTextHeight(pdf.ktaLeft, text)
dim h2 as Integer = pdf.GetFTextHeight(pdf.ktaLeft, text)

dim h3 as Integer = pdf.GetTextHeightEx(150, pdf.ktaLeft, text)
dim h4 as Integer = pdf.GetFTextHeightEx(150, pdf.ktaLeft, text)
```

```
// see different heights in debugger.
```

Notes:

GetTextHeight does escape backslashes so no formatting commands are taken from the string.
The text parameter is converted to unicode.

77.39.504 GetTextHeightAnsi(Align as Integer, aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function measures the height of a formatted text block.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

GetTextHeightAnsi does escape backslashes so no formatting commands are taken from the string.

The text parameter is converted to ANSI.

77.39.505 GetTextHeightEx(Width as Double, Align as Integer, aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function measures the height of a formatted text block.
Example:

```
dim pdf as new MyDynaPDFMBS

call pdf.CreateNewPDF nil
call pdf.Append

call pdf.SetFont("Helvetica", pdf.kfsnone, 12, true, pdf.kcpUnicode)

dim h as Double = pdf.GetTextHeightEx(100, pdf.ktaLeft, "Hello World. Just a test string.")

MsgBox "height: "+str(h)

call pdf.EndPage
call pdf.CloseFile
```

Notes:

GetTextHeightEx does escape backslashes so no formatting commands are taken from the string.
The text parameter is converted to unicode.

77.39.506 GetTextHeightExAnsi(Width as Double, Align as Integer, aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function measures the height of a formatted text block.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

GetTextHeightExAnsi does escape backslashes so no formatting commands are taken from the string.
The text parameter is converted to ANSI.

77.39.507 GetTextRect(byref PosX as Double, byref PosY as Double, byref Width as Double, byref Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the bounding rectangle to output formatted text.
See also GetTextRect function in DynaPDF manual.

77.39.508 GetTextRise as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current text rise used to output text.
See also GetTextRise function in DynaPDF manual.

77.39.509 GetTextScaling as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current value of horizontal text scaling.
See also GetTextScaling function in DynaPDF manual.

77.39.510 GetTextWidth(aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function calculates the width of a string.
Notes: The text parameter is converted to unicode.
See also GetTextWidth function in DynaPDF manual.
See also:

- 77.39.511 GetTextWidth(FontHandle as integer, Text as String, CharSpacing as Single, WordSpacing as Single, TextScale as Single) as double 14881

77.39.511 GetTextWidth(FontHandle as integer, Text as String, CharSpacing as Single, WordSpacing as Single, TextScale as Single) as double

MBS DynaPDF Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates text width.
Notes:

The function can be used to calculate the width of a sub string that was returned by the content parser (see ParseContent() for further information). The parameter FontHandle must be a valid handle of a font object that was provided in the SetFont event. Note that this function is optimized for speed and does not use the normal error handling of DynaPDF. The parameters CharSpacing, WordSpacing, and TextScale must be taken from the current graphics state.

If the function succeeds the return value is the string width measured in text space. If the parameter FontHandle is set 0 the return value is 0.0.
See also GetTextWidth function in DynaPDF manual.
See also:

- 77.39.510 GetTextWidth(aText as string) as Double 14881

77.39.512 GetTextWidthAnsi(aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function calculates the width of a string.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text parameter is converted to ANSI.
See also GetTextWidth function in DynaPDF manual.
See also:

- 77.39.510 GetTextWidth(aText as string) as Double 14881
- 77.39.511 GetTextWidth(FontHandle as integer, Text as String, CharSpacing as Single, WordSpacing as Single, TextScale as Single) as double 14881

77.39.513 GetTIFFVersion as String

MBS DynaPDF Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries version of tiff library.
Notes:

Should be 3.7.2 on plugins 17.1.
Version is always same on Mac, Windows and Linux.
If you notice a mismatch, something is wrong!

77.39.514 GetTransparentColor as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the transparent color value that is used for newly inserted images.
See also GetTransparentColor function in DynaPDF manual.

77.39.515 GetTrapped as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the trapped key of the document.
See also GetTrapped function in DynaPDF manual.

77.39.516 GetTypoLeading as double

MBS DynaPDF Plugin, Plugin Version: 21.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the typographic leading or line height of a font.
Notes:

This is sTypoAscender ,Äì sTypoDescender + sTypoLineGap of the OS/2 table of TrueType and OpenType fonts. The value is scaled to the current font size. Type1 fonts do not support these metrics.

The function can be called after a font was activated in the graphics state, e.g. with SetFont(), SetFontEx(), SetCIDFont(), or ChangeFont().

If typographic metrics are not available the return value is Ascent ,Äì Descent. If the value is smaller than the font size then the font size is returned.

If the function succeeds the return value is the typographic leading of the active font, this is a value greater

zero. If the function fails the return value is a negative error code.
See also GetTypoLeading function in DynaPDF manual.

77.39.517 GetURIAction(index as Integer) as DynaPDFURIActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries details for an URI action.
Notes: Index is from 0 to GetActionCount-1.
See also GetURIAction function in DynaPDF manual.

77.39.518 GetUseExactPwd as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If the property UseExactPwd is false, an encrypted PDF file can always be decrypted, if either the open or owner password in the file is an empty string.
See also GetUseExactPwd function in DynaPDF manual.

77.39.519 GetUseGlobalImpFiles as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The property specifies whether import files should be loaded permanent into memory, e.g. to enable splitting of large PDF files.
See also GetUseGlobalImpFiles function in DynaPDF manual.

77.39.520 GetUserRights as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the encryption flags of an imported PDF file or -1 if the imported PDF file was not encrypted.
See also GetUserRights function in DynaPDF manual.

77.39.521 GetUserUnit as single

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the user unit of the current open page.
Notes:

A user unit acts like a scaling factor. The page format and all page coordinates are multiplied with this factor in a viewer application. The default size of a PDF unit is 1/72 inch and the default user unit is 1.0. User units can be useful if the page format would be too large to be expressed in standard PDF units. The largest page format in PDF is limited to 14400 units or 200 inches. This limit can be extended with the user unit.
The largest value that is supported is 75.0 which results in a maximum page format of 15,000 x 15,000 inches or 1,800,000 units.
See also GetUserUnit function in DynaPDF manual.

77.39.522 GetUseStdFonts as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns 1 (true) if the 14 standard fonts are enabled.
See also GetUseStdFonts function in DynaPDF manual.

77.39.523 GetUsesTransparency(Page as Integer = -1) as Boolean

MBS DynaPDF Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether a page or the entire document uses transparency.
Notes:

This is no quick check as GetDocUsesTransparency() applies. The function parses the page or pages to determine whether transparent objects are relly used.
To check whether a specific page uses transparency set the parameter PageNum to the wished page number. The first page is denoted by 1. To check the entire PDF file set PageNum to -1.

The return value is a bit mask on success (a positive integer value), or a negative error code on failure.
The following flags are defined:

- 0: The page or document uses no transparency.
- 1: The content stream of a page contains transparent objects.
- 2: A page defines the blending color space (Group dictionary).
- 4: A page contains transparent annotations or form fields.

The above values can occur in any combination. To check whether a specific flag was set use a binary and operator: BitwiseAnd(value, flag)

See also GetUsesTransparency function in DynaPDF manual.

77.39.524 GetUseSystemFonts as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The property specifies whether the % Windows% /Fonts directory should be added automatically to the list of available font search paths.
See also GetUseSystemFonts function in DynaPDF manual.

77.39.525 GetUseTransparency as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The property specifies whether images should get a transparent background.
See also GetUseTransparency function in DynaPDF manual.

77.39.526 GetUseVisibleCoords as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The property specifies whether DynaPDF should consider the crop box to calculate to position of an object.
See also GetUseVisibleCoords function in DynaPDF manual.

77.39.527 GetViewerPreferences(byref Preference as Integer, byref AddVal as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the viewer preferences specified in the document.
See also GetViewerPreferences function in DynaPDF manual.

77.39.528 GetViewport(Page as UInt32, index as Integer) as DynaPDFViewportMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a viewport that is associated with a page.
Notes:

A viewport is a rectangular region of a page, that specifies usually a measure coordinate system or points in a geospatical coordinate system.
Since viewports might overlap, to determine the viewport to use for any point on a page, the viewports in the array shall be examined, starting with the last one and iterating in reverse, and the first one whose BBox entry contains the point shall be chosen.
To determine how viewports and measure dictionaries can be used, please have a look into the PDF Reference 2.0, ISO/DIS 32000-2, Section Measurement properties.
Returns nil on any error.
See also GetViewport function in DynaPDF manual.

77.39.529 GetViewportCount(Page as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of viewports which are associated with a page.
Notes:

The first page has the page number 1.
If the function succeeds the return value is the number of viewports, a number greater or equal zero. If the function fails the return value is a negative error code. The function can only fail if the page number is invalid.
See also GetViewportCount function in DynaPDF manual.

77.39.530 GetWMFDefExtent(byref width as Integer, byref height as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the default size which is used to convert non portable WMF files to EMF.
See also GetWMFDefExtent function in DynaPDF manual.

77.39.531 GetWMFPixelPerInch as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the default pixels per inch of the y-axis which are used to convert portable WMF files to EMF.
See also GetWMFPixelPerInch function in DynaPDF manual.

77.39.532 GetWordSpacing as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current word spacing.
See also GetWordSpacing function in DynaPDF manual.

77.39.533 GetXFAStream(Handle as UInt32) as DynaPDFXFAStreamMBS

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns an XFA stream.
Notes:

The parameter Index is the array index. The function GetXFAStreamCount() returns the number of available streams.
An XFA form consist of several XML streams. The stream name must be used to determine which stream was returned.
If the function succeeds the return value is 1. If the function fails the return value is 0.
See also GetXFAStream function in DynaPDF manual.

77.39.534 GetXFAStreamCount as Integer

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of available XFA streams.
Notes:

XFA streams are available after a PDF file was imported.
If the function succeeds the return value is the number of available XFA streams. If the function fails the return value is a negative error code.
See also GetXFAStreamCount function in DynaPDF manual.

77.39.535 GetZlibVersion as String

MBS DynaPDF Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries version of zlib library.
Notes:

Should be 1.2.7 on plugins 17.x.
Version is always same on Mac, Windows and Linux.
If you notice a mismatch, something is wrong!

77.39.536 GofRGB(RGB as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns G of a RGB color value.
Example:

```
dim rgb as Integer = DynaPDFMBS.RGB(1,2,3)
MsgBox str(DynaPDFMBS.GofRGB(rgb)) // shows 2
```

77.39.537 HaveOpenDoc as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If an error occurred it is not always clear whether the PDF file was already deleted or if it is still in memory.
See also HaveOpenDoc function in DynaPDF manual.

77.39.538 HaveOpenPage as Boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether a page is open.
See also HaveOpenPage function in DynaPDF manual.

77.39.539 HighlightAnnot(SubType as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double, ColorValue as Integer, Author as string, Subject as string, Comment as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a highlight annotation with unicode text.
See also HighlightAnnot function in DynaPDF manual.

77.39.540 HighlightAnnotAnsi(SubType as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double, ColorValue as Integer, Author as string, Subject as string, Comment as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a highlight annotation with ANSI text.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. See also HighlightAnnot function in DynaPDF manual.

77.39.541 HighlightOnAllPages(SearchText as string, ColorValue as Color, CaseInsenitive as boolean = false) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Highlights text on all pages of the current document.
Notes:

If CaseInsenitive is true, the case of letters is ignored (also umlauts and accents)
Searches on all pages in the document.
Returns number of times the text was found.

77.39.542 HighlightOnCurrentPage(SearchText as string, ColorValue as Color, CaseInsenitive as boolean = false) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Highlights text on all pages of the current page.
Notes:

If CaseInsenitive is true, the case of letters is ignored (also umlauts and accents)
Use EditPage function to open the page before you search on it.
Returns number of times the text was found.

77.39.543 ImportBookmarks as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function imports the outline tree of the currently opened import file (see OpenImportFile() or OpenImportBuffer()).
See also ImportBookmarks function in DynaPDF manual.

77.39.544 ImportCatalogObjects as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function imports global objects of the currently opened import file such as bookmarks, JavaScripts, embedded files, open actions, invisible page templates, rendering intents, the document info

entries, and certain other global properties such as the page mode or page layout.
See also ImportCatalogObjects function in DynaPDF manual.

77.39.545 ImportDocInfo as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function imports the document info entries from the currently opened import file.
See also ImportDocInfo function in DynaPDF manual.

77.39.546 ImportEncryptionSettings as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Imports the encryption settings from the currently open import file (see OpenImportFile() or OpenImportBuffer() for further information).
Notes:

If the PDF file is not encrypted, the function does nothing. To determine whether the open PDF file is encrypted call GetInIsEncrypted().
The encryption settings should be imported to make sure that the PDF file can be saved with the same settings after it was edited. The user rights should be considered if the file was opened with the open password, also if the password was just an empty string. See GetUserRights() for further information.
If the file was opened with the owner password, then all editing rights should be grated. The PDF file must be closed with CloseFile() or CloseAndSignFile() for example. Don't use
CloseFileEx() for example since this function would override the encryption settings.
If the file should be saved unencrypted call ResetEncryptionSettings() before closing the file. Return values: If the function succeeds the return value is true. If the function fails the return value is false.
See also ImportEncryptionSettings function in DynaPDF manual.

77.39.547 ImportOCProperties as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Imports the global Optional Content Properties of the curent open import file.
Notes:

OC properties are normally automatically imported by functions like ImportPDFFile() or when importing a page that contains layers. However, a viewer application must be able to access the OC properties right after the PDF file was opened so that the layer configuration and the layer tree can be loaded (see LoadLayerConfig() and GetOCUINode() for further information).
The function can be called multiple times without causing unwanted side effects.

If the function succeeds the return value is true. If the function fails the return value is false.
See also ImportOCProperties function in DynaPDF manual.

77.39.548 ImportPage(PageNum as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function imports a page of an external PDF file and converts this page to a template.
Notes: Requires DynaPDF Pro license.
See also ImportPage function in DynaPDF manual.

77.39.549 ImportPageEx(PageNum as Integer, ScaleX as Double = 1.0, ScaleY as Double = 1.0) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function imports a PDF page of an external PDF file incl. interactive objects such as annotations, form fields and so on, if any.
Notes: Requires DynaPDF Pro license.
See also ImportPageEx function in DynaPDF manual.

77.39.550 ImportPDFFile(DestPage as Integer, ScaleX as Double = 1.0, ScaleY as Double = 1.0) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function imports an external PDF file incl. interactive objects such as annotations, bookmarks, form fields and so on.
Example:

```
// new PDF
Dim pdf As New MyDynapdfMBS

pdf.SetLicenseKey "Lite" // For this example you can use a Lite, Pro or Enterprise License

// create output file
Dim outFile As folderitem = SpecialFolder.Desktop.Child("NewPDF.pdf")
Call pdf.CreateNewPDF(outFile)

// set flags to import all
Dim flags As Integer = Bitwise.BitOr(pdf.kifImportAsPage, pdf.kifImportAll)
Call pdf.SetImportFlags(flags)
```

```
// import PDF
Dim inFile As folderitem = SpecialFolder.Desktop.Child("test.pdf")

Call pdf.OpenImportFile(inFile)
Call pdf.ImportPDFFile(1)

// now delete one page
Call pdf.DeletePage(2)

// close output file
Call pdf.closefile
```

Notes:

Scaling factor is ignored if importing as pages (not templates).

This function returns the page number of the last page imported. It does not return how many pages are imported. If you need number of imported pages, please use returned value minus DestPage.
See also ImportPDFFile function in DynaPDF manual.

77.39.551 ImportPDFPage(PageNum as Integer, ScaleX as Double = 1.0, ScaleY as Double = 1.0) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Imports a PDF page.
Notes:

If a page is open, this function calls EndPage.
Than it appends a new page, calls ImportPageEx and Endpage.

On success the return value is zero. If the function fails the return value is a negative error code.
See also ImportPDFPage function in DynaPDF manual.

77.39.552 InitColorManagement(profiles as DynaPDFColorProfilesMBS, DestSpace as Integer, Flags as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes color management with the given default profiles.
Notes:

Pass nil for profiles to disable color management.

DestSpace can be kcsDeviceRGB, kcsDeviceCMYK or kcsDeviceGray.
Flags can be kicmDefault or kicmBPCompensation for:
Black point compensation preserves the black point when converting CMYK colors to different color spaces.

See also InitColorManagement function in DynaPDF manual.

77.39.553 InitColorManagementEx(profiles as DynaPDFColorProfilesExMBS, DestSpace as Integer, Flags as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initialize color management.
Notes:

The function enables color management in the functions RenderPage(), RenderPageEx(), RenderPageToImage(), and RenderPDFFile() exactly like InitColorManagement() but accepts ICC profile buffers instead of file paths. See InitColorManagement() for further information.

To disable color management set the parameter Profiles to nil.

Initializing the color management requires a considerable amount of processing time. It is strongly recommended to use one PDF instance as long as possible so that it must not be initialized again when another PDF file will be rendered.
The color management can be initialized right after the PDF instance was created.

Returns true on succes or false on failure.
See also InitColorManagementEx function in DynaPDF manual.

77.39.554 InitStack(byref stack as DynaPDFStackMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function initializes the variable Stack with default values and prepares the editing of a content stream.
Example:

```
dim s as DynaPDFStackMBS
dim pdf as DynaPDFMBS // get your DynaPDF object

call pdf.InitStack(s)
```

Notes:

If stack is nil, a new one will be created and stored in the variable.

Return values:
If the function succeeds the return value is true. If the function fails the return value is false.

See also InitStack function in DynaPDF manual.

77.39.555 InkAnnot(points() as DynaPDFPointMBS, LineWidth as Double, ColorValue as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an Ink annotation.
Notes:

An ink annotation (PDF 1.3) represents a freehand "scribble" composed of one or more disjoint paths. The parameter Points represents a stroked path. More paths can be added with AddInkList.
The points are interpreted in currect user space. Any transformation that was applied on the coordinate system will be taken into account.
The points are connected with bezier curves to achieve a smooth transition between points. If the points should be connected with straight lines, then create a PolyLine annotation instead (see PolyLineAnnot).
This annotation type has an associated PopUp annotation that displays the string Content in a floating window. The initial window state of the associated PopUp annotation is closed by default but the state can be changed with SetAnnotOpenState() if necessary.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also InkAnnot function in DynaPDF manual.

77.39.556 InkAnnotAnsi(points() as DynaPDFPointMBS, LineWidth as Double, ColorValue as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an Ink annotation.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

An ink annotation (PDF 1.3) represents a freehand "scribble" composed of one or more disjoint paths. The

parameter Points represents a stroked path. More paths can be added with AddInkList.
The points are interpreted in currect user space. Any transformation that was applied on the coordinate system will be taken into account.
The points are connected with bezier curves to achieve a smooth transition between points. If the points should be connected with straight lines, then create a PolyLine annotation instead (see PolyLineAnnot).
This annotation type has an associated PopUp annotation that displays the string Content in a floating window. The initial window state of the associated PopUp annotation is closed by default but the state can be changed with SetAnnotOpenState() if necessary.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also InkAnnot function in DynaPDF manual.

77.39.557 InsertBarcode(PosX as double, PosY as double, Width as double, Height as double, HAlign as Integer, VAlign as Integer, Barcode as DynaPDFBarcode2MBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inserts a barcode to the current open page.
Example:

```
Dim d As New DynapdfMBS
// create/edit a page, then draw barcode:

// UPCA
Dim b1 As New DynaPDFBarcode2MBS
b1.BarcodeType = b1.kbctUPCA
b1.Data = "72527270270"

Call d.InsertBarcode(100, 100, 200, 50, d.kcoLeft, d.kcoTop, b1)
```

Notes:

See the kbct* constants for the types supported.

Options are very similar to what we have in our BarcodeGeneratorMBS class as both use the same zint library.
See also InsertBarcode function in DynaPDF manual.

77.39.558 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as memoryblock) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts a Device Independent Bitmap from a file buffer.
Deprecated: This item is deprecated and should no longer be used. You can use InsertImageFromBuffer instead. See also InsertBMPFromBuffer function in DynaPDF manual.
See also:

- 77.39.559 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as string) as Integer 14896
- 77.39.560 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, BufferAddress as Integer) as Integer 14896

77.39.559 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts a Device Independent Bitmap from a file buffer.
Deprecated: This item is deprecated and should no longer be used. You can use InsertImageFromBuffer instead. See also InsertBMPFromBuffer function in DynaPDF manual.
See also:

- 77.39.558 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as memoryblock) as Integer 14896
- 77.39.560 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, BufferAddress as Integer) as Integer 14896

77.39.560 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, BufferAddress as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts a Device Independent Bitmap from a file buffer.
Deprecated: This item is deprecated and should no longer be used. You can use InsertImageFromBuffer instead. See also InsertBMPFromBuffer function in DynaPDF manual.
See also:

- 77.39.558 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as memoryblock) as Integer 14896
- 77.39.559 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as string) as Integer 14896

77.39.561 InsertBMPFromHandle(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, hBitmap as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function inserts a bitmap in the same way as InsertImage() but accepts a HBITMAP handle as input.
See also InsertBMPFromHandle function in DynaPDF manual.

77.39.562 InsertBookmark(title as String, parent as Integer, DestPage as Integer, Open as boolean, AddChildren as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function inserts a bookmark to the global outline tree of the document.
Notes: The title parameter is converted to unicode.
See also InsertBookmark function in DynaPDF manual.

77.39.563 InsertBookmarkAnsi(title as String, parent as Integer, DestPage as Integer, Open as boolean, AddChildren as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function inserts a bookmark to the global outline tree of the document.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The title parameter is converted to ANSI.
See also InsertBookmark function in DynaPDF manual.

77.39.564 InsertBookmarkEx(title as String, parent as Integer, NamedDest as Integer, Open as boolean, AddChildren as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function inserts a bookmark to the global outline tree of the document.
Notes: The title parameter is converted to unicode.
See also InsertBookmarkEx function in DynaPDF manual.

77.39.565 InsertBookmarkExAnsi(title as String, parent as Integer, NamedDest as Integer, Open as boolean, AddChildren as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function inserts a bookmark to the global outline tree of the document.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The title parameter is converted to ANSI.
See also InsertBookmarkEx function in DynaPDF manual.

77.39.566 InsertImage(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, File as folderitem) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts an image from a file.
Example:

```
dim pdf as DynaPDFMBS

// ... add page

// use transparency from image
call pdf.SetUseTransparency(False)

// max 300 dpi for recompressed images
call pdf.SetResolution(300)

// use JPEG when compressing new pictures
call pdf.SetCompressionFilter(pdf.kcfJPEG)

// pass through JPEGs if possible
call pdf.SetSaveNewImageFormat(false)

// insert image
dim source as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
call pdf.InsertImage(0, 0, 300, 200, source)
```

Deprecated: This item is deprecated and should no longer be used. You can use InsertImage instead.
Notes:

Please call SetUseTransparency(false) before inserting image if you don't like one of the colors (default white) to become transparent.

DynaPDF 3.0 adds support for pictures with alpha channel for this function.
See also InsertImage function in DynaPDF manual.

77.39.567 InsertImageEx(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, File as folderitem, index as Integer = 1) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts an image from a file.
Example:

```
dim pdf as DynaPDFMBS

// ... add page

// use transparency from image
call pdf.SetUseTransparency(False)

// max 300 dpi for recompressed images
call pdf.SetResolution(300)

// use JPEG when compressing new pictures
call pdf.SetCompressionFilter(pdf.kcfJPEG)

// pass through JPEGs if possible
call pdf.SetSaveNewImageFormat(false)

// insert image
dim source as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
call pdf.InsertImageEx(0, 0, 300, 200, source)
```

Notes:

Please call SetUseTransparency(false) before inserting image if you don't like one of the colors (default white) to become transparent.

DynaPDF 3.0 adds support for pictures with alpha channel for this function.
See also InsertImageEx function in DynaPDF manual.
See also:

- 77.39.568 InsertImageEx(PosX as double, PosY as double, ScaleWidth as double, ScaleHeight as double, Path as String, index as integer = 1) as integer 14900

77.39.568 InsertImageEx(PosX as double, PosY as double, ScaleWidth as double, ScaleHeight as double, Path as String, index as integer = 1) as integer

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts an image from a file.
Example:

```
Dim d As New DynaPDFMBS

// create PDF in memory
Call d.CreateNewPDF

// add a picture
Call d.Append
Call d.InsertImageEx(100, 100, 100, 100, "/Users/cs/Pictures/mond.jpg")
Call d.EndPage

// okay?
If d.HaveOpenDoc Then

// open target file
Call d.OpenOutputFile("/Users/cs/Desktop/mond.pdf")

// write and close
Call d.CloseFile

End If
```

Notes:

Please call SetUseTransparency(false) before inserting image if you don't like one of the colors (default white) to become transparent.

DynaPDF 3.0 adds support for pictures with alpha channel for this function.
See also InsertImageEx function in DynaPDF manual.
See also:

- 77.39.567 InsertImageEx(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, File as folderitem, index as Integer = 1) as Integer 14899

77.39.569 InsertImageFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as Memoryblock, index as Integer = 1) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts an image in exactly the same way as InsertImageEx(), but it accepts a file buffer as input.
Notes:

Please call SetUseTransparency(false) before inserting image if you don't like one of the colors (default white) to become transparent.

DynaPDF 3.0 adds support for pictures with alpha channel for this function.
Please pass positon and size as doubles. If you use integers, Xojo will give a compile error.
See also InsertImageFromBuffer function in DynaPDF manual.
See also:

- 77.39.570 InsertImageFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as string, index as Integer = 1) as Integer 14901

77.39.570 InsertImageFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as string, index as Integer = 1) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts an image in exactly the same way as InsertImageEx(), but it accepts a file buffer as input.
Notes:

Please call SetUseTransparency(false) before inserting image if you don't like one of the colors (default white) to become transparent.

DynaPDF 3.0 adds support for pictures with alpha channel for this function.
Please pass positon and size as doubles. If you use integers, Xojo will give a compile error.
See also InsertImageFromBuffer function in DynaPDF manual.
See also:

- 77.39.569 InsertImageFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as Memoryblock, index as Integer = 1) as Integer 14901

77.39.571 InsertMetafile(FileName as folderitem, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function converts an Enhanced Meta File (EMF) or Windows Meta File (WMF) to a native PDF vector graphic.
Notes: Requires DynaPDF Lite license.
See also InsertMetafile function in DynaPDF manual.

77.39.572 InsertMetafileEx(Buffer as memoryblock, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function converts an Enhanced Meta File (EMF) or Windows Meta File (WMF) to a native PDF vector graphic in the same way as InsertMetafile().
Notes: Requires DynaPDF Lite license.
See also InsertMetafileEx function in DynaPDF manual.
See also:

- 77.39.573 InsertMetafileEx(Buffer as string, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean 14902

77.39.573 InsertMetafileEx(Buffer as string, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function converts an Enhanced Meta File (EMF) or Windows Meta File (WMF) to a native PDF vector graphic in the same way as InsertMetafile().
Notes: Requires DynaPDF Lite license.
See also InsertMetafileEx function in DynaPDF manual.
See also:

- 77.39.572 InsertMetafileEx(Buffer as memoryblock, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean 14902

77.39.574 InsertMetafileExt(FileName as folderitem, View as DynaPDFRectMBS, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function converts an Enhanced Meta File (EMF) or Windows Meta File (WMF) to a native PDF vector graphic in the same way as InsertMetafile().
Notes: Requires DynaPDF Lite license.
See also InsertMetafileExt function in DynaPDF manual.

77.39.575 InsertMetafileExtEx(Buffer as Memoryblock, View as DynaPDFRectMBS, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function converts an Enhanced Meta File (EMF) or Windows Meta File (WMF) to a native PDF vector graphic in the same way as InsertMetafileExt().
Notes: Requires DynaPDF Lite license.
See also InsertMetafileExtEx function in DynaPDF manual.
See also:

- 77.39.576 InsertMetafileExtEx(Buffer as String, View as DynaPDFRectMBS, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean 14903

77.39.576 InsertMetafileExtEx(Buffer as String, View as DynaPDFRectMBS, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function converts an Enhanced Meta File (EMF) or Windows Meta File (WMF) to a native PDF vector graphic in the same way as InsertMetafileExt().
Notes: Requires DynaPDF Lite license.
See also InsertMetafileExtEx function in DynaPDF manual.
See also:

- 77.39.575 InsertMetafileExtEx(Buffer as Memoryblock, View as DynaPDFRectMBS, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean 14903

77.39.577 InsertMetafileFromHandle(hEnhMetafileHandle as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function inserts an Enhanced Metafile exactly in the same way as InsertMetafile() but accepts a HENHMETAFILE handle as input.
Notes: Requires DynaPDF Lite license.

See also InsertMetafileFromHandle function in DynaPDF manual.

77.39.578 InsertMetafileFromHandleEx(hEnhMetafileHandle as Integer, View as DynaPDFRectMBS, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function inserts an Enhanced Metafile exactly in the same way as InsertMetafileExt() but accepts a HENHMETAFILE handle as input.
Notes: Requires DynaPDF Lite license.
See also InsertMetafileFromHandleEx function in DynaPDF manual.

77.39.579 InsertPicture(pic as picture, mask as picture, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Takes a Xojo picture with a mask and adds it to the PDF.
Example:

```
// insert MBS Logo with round Mask
dim d as new MyDynaPDFMBS
dim file as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

call d.CreateNewPDF file
call d.Append

// get picture
dim p as Picture = LogoMBS(500)

// get mask
dim m as new Picture(500, 500, 32)
m.Graphics.ForeColor = & cFFFFFF
m.Graphics.FillRect 0,0,500,500
m.Graphics.ForeColor = & c000000
m.Graphics.FillOval 0,0,500,500

// add image to pdf
call d.InsertPicture(p, m, 50, 150, 500, 500)

call d.EndPage
call d.CloseFile
```

Notes:

Please call SetUseTransparency(false) before inserting image if you don't like one of the colors (default white) to become transparent.
This is a convenience function to handle picture with mask.

Internally this calls pdfInsertRawImage so check the documtation on this function in the dynapdf manual.
For images with alpha channel, we pass a PNG via pdfInsertImageFromBuffer.

Usually InsertPicture with the mask/alpha is better.
PosX and PosY are the destination position and ScaledWidth and ScaledHeight is the new size of the image.
See also:

- 77.39.580 InsertPicture(pic as picture, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Integer 14905

77.39.580 InsertPicture(pic as picture, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Takes a Xojo picture and adds it to the PDF.
Notes:

Please call SetUseTransparency(false) before inserting image if you don't like one of the colors (default white) to become transparent.
Internally this calls pdfInsertRawImage so check the documtation on this function in the dynapdf manual.
For images with alpha channel, we pass a PNG via pdfInsertImageFromBuffer.

PosX and PosY are the destination position and ScaledWidth and ScaledHeight is the new size of the image.
See also:

- 77.39.579 InsertPicture(pic as picture, mask as picture, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Integer 14904

77.39.581 InsertRawImage(Data as String, BitsPerPixel as Integer, ColorCount as Integer, ImgWidth as Integer, ImgHeight as Integer, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts an image from a raw image buffer which contains no image header.
See also InsertRawImage function in DynaPDF manual.
See also:

- 77.39.582 InsertRawImage(Memory as MemoryBlock, BitsPerPixel as Integer, ColorCount as Integer, ImgWidth as Integer, ImgHeight as Integer, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Integer 14906

77.39.582 InsertRawImage(Memory as MemoryBlock, BitsPerPixel as Integer, ColorCount as Integer, ImgWidth as Integer, ImgHeight as Integer, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts an image from a raw image buffer which contains no image header.
See also InsertRawImage function in DynaPDF manual.
See also:

- 77.39.581 InsertRawImage(Data as String, BitsPerPixel as Integer, ColorCount as Integer, ImgWidth as Integer, ImgHeight as Integer, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Integer 14905

77.39.583 InsertRawImageEx(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Image as DynaPDFRawImageMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts an image from a raw image buffer that contains no image header.
Notes:

See also InsertRawImageEx in dynapdf_help.pdf manual file.
Returns false if image parameter has invalid values.
See also InsertRawImageEx function in DynaPDF manual.

77.39.584 IsBidiText(Text as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the position of the first bidirectional character that can be found in the string or -1 if no such character can be found.
Notes: The text parameter is converted to unicode.
See also IsBidiText function in DynaPDF manual.

77.39.585 IsColorPage(GrayIsColor as Boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function checks whether a page is a color page or if all graphic elements of the page use black & white only.
Notes: Value is 0 for false, 1 for true or negative for an error.
See also IsColorPage function in DynaPDF manual.

77.39.586 IsEmptyPage as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function checks whether a page is empty.
Notes: Value is 0 for false, 1 for true or negative for an error.
See also IsEmptyPage function in DynaPDF manual.

77.39.587 IsWrongPwd(errCode as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether an error code is for a wrong password.
Notes: We have several error codes which result from different password protections and this function considers them all.
See also IsWrongPwd function in DynaPDF manual.

77.39.588 KofCMYK(CMYK as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns K of a CMYK color value.
Example:

```
dim cmyk as Integer = DynaPDFMBS.CMYK(1,2,3,4)
MsgBox str(DynaPDFMBS.KofCMYK(cmyk)) // shows 4
```

Notes: Returns different values on BigEndian and LittleEndian systems.

77.39.589 LAB(L as Integer, A as Integer, B as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Builds a LAB color value based on the given component values.
Example:

```
dim lab as Integer = DynaPDFMBS.LAB(1,2,3)
MsgBox hex(lab)
```

77.39.590 LineAnnot(x1 as Double, y1 as Double, x2 as Double, y2 as Double, LineWidth as Double, StartLineEndStyle as Integer, EndLineEndStyle as Integer, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a line annotation.
See also LineAnnot function in DynaPDF manual.

77.39.591 LineAnnotAnsi(x1 as Double, y1 as Double, x2 as Double, y2 as Double, LineWidth as Double, StartLineEndStyle as Integer, EndLineEndStyle as Integer, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a line annotation.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. See also LineAnnot function in DynaPDF manual.

77.39.592 LineTo(PosX as Double, PosY as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function draws a path from the current position up to the specified point.
Example:

```
dim pdf as new DynaPDFMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("Create PDF with Line.pdf")
```

```
pdf.SetLicenseKey "Starter" // For this example you can use a Starter, Lite, Pro or Enterprise License

// Create a new PDF
call pdf.CreateNewPDF f

// We want to use top-down coordinates
call pdf.SetPageCoords pdf.kpcTopDown

// Add a page
call pdf.Append

// black
call pdf.SetStrokeColor 0

// line down
call pdf.MoveTo(100,100)
call pdf.LineTo(200,200)
call pdf.StrokePath

// line up
call pdf.MoveTo(200,200)
call pdf.LineTo(300,100)
call pdf.StrokePath

// end page
call pdf.EndPage

// Close page
call pdf.CloseFile

// Open PDF
f.Launch
```

See also LineTo function in DynaPDF manual.

77.39.593 LoadCMap(CMapName as string, Embed as Boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads a character map.
See also LoadCMap function in DynaPDF manual.

77.39.594 LoadError as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error message from LoadLibrary call.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.dylib")

if DynaPDFMBS.LoadLibrary(f) then
MsgBox "OK"
else
MsgBox DynaPDFMBS.LoadError
end if
```

77.39.595 LoadFDFData(FileName as folderitem, Password as string, Flags as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads PDF form data from the given PDF file.
See also LoadFDFData function in DynaPDF manual.

77.39.596 LoadFDFDataEx(Buffer as memoryblock, Password as string, Flags as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads PDF form data from the given PDF file in the buffer.
See also LoadFDFDataEx function in DynaPDF manual.
See also:

- 77.39.597 LoadFDFDataEx(Buffer as string, Password as string, Flags as Integer) as Boolean 14910

77.39.597 LoadFDFDataEx(Buffer as string, Password as string, Flags as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads PDF form data from the given PDF file in the buffer.
See also LoadFDFDataEx function in DynaPDF manual.
See also:

- 77.39.596 LoadFDFDataEx(Buffer as memoryblock, Password as string, Flags as Integer) as Boolean 14910

77.39.598 LoadFont(Buffer as memoryblock, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function loads a font from a file buffer.
Notes: Added CollectionIndex parameter in 12.1 plugin version.
See also LoadFont function in DynaPDF manual.
See also:

- 77.39.599 LoadFont(Buffer as string, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer 14911

77.39.599 LoadFont(Buffer as string, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function loads a font from a file buffer.
Notes: Added CollectionIndex parameter in 12.1 plugin version.
See also LoadFont function in DynaPDF manual.
See also:

- 77.39.598 LoadFont(Buffer as memoryblock, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer 14911

77.39.600 LoadFontEx(File as folderitem, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function loads a font from a font file and activates it in the graphics state if the function was called within an open page or template.
See also LoadFontEx function in DynaPDF manual.
See also:

- 77.39.601 LoadFontEx(Filepath as string, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer 14912

77.39.601 LoadFontEx(Filepath as string, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function loads a font from a font file and activates it in the graphics state if the function was called within an open page or template.
See also LoadFontEx function in DynaPDF manual.
See also:

- 77.39.600 LoadFontEx(File as folderitem, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer 14911

77.39.602 LoadLayerConfig(Index as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the specified layer configuration.
Notes:

A PDF file that contains layers (Optional Content Groups in PDF syntax) contains usually at least a default configuration dictionary. This configuration is loaded by default when the visibility state of a layer or optional content group must be determined, e.g. when rendering a page.
Use this function to load another configuration if available. To determine the number of available configurations call GetLayerConfigCount().

The paramter Index can be one of the following:

- -1: Load the default configuration.
- -2: If a configuration was already loaded, leave it unchanged. Load
- the default configuration otherwise.
- 0..Count -1: Load the specified configuration.

If the function succeeds the return value is true. If the function fails the return value is false.
See also LoadLayerConfig function in DynaPDF manual.

77.39.603 LoadLibrary(File as FolderItem) as boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the dynapdf library file.
Example:

```
MsgBox "Version before: "+DynaPDFMBS.DynaPDFVersion

dim f as FolderItem = SpecialFolder.Desktop.Child("dynapdf.dylib")

if DynaPDFMBS.LoadLibrary(f) then
MsgBox "Version after: "+DynaPDFMBS.DynaPDFVersion
else
MsgBox DynaPDFMBS.LoadError
end if
```

Notes:

Returns true on success or false on failure.

While the plugin comes with an internal dynapdf library, you can use this method to load a different version of the library.
See also:

- 77.39.604 LoadLibrary(Path as string) as boolean 14913

77.39.604 LoadLibrary(Path as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the dynapdf library file.
Notes:

Returns true on success or false on failure.

While the plugin comes with an internal dynapdf library, you can use this method to load a different version of the library.
See also:

- 77.39.603 LoadLibrary(File as FolderItem) as boolean 14912

77.39.605 LockLayer(layer as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unlocks a layer.
See also LockLayer function in DynaPDF manual.

77.39.606 LofLAB(LAB as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns L of a LAB color value.
Example:

```
dim lab as Integer = DynaPDFMBS.LAB(1,2,3)
MsgBox str(DynaPDFMBS.LofLAB(lab)) // shows 1
```

77.39.607 MofCMYK(CMYK as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns M of a CMYK color value.
Example:

```
dim cmyk as Integer = DynaPDFMBS.CMYK(1,2,3,4)
MsgBox str(DynaPDFMBS.MofCMYK(cmyk)) // shows 2
```

Notes: Returns different values on BigEndian and LittleEndian systems.

77.39.608 MovePage(source as Integer, dest as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function moves a page to another position in the document.
See also MovePage function in DynaPDF manual.

77.39.609 MoveTo(PosX as Double, PosY as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function moves the current position to the point specified by PosX, PosY.
Example:

```
dim pdf as new DynaPDFMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("Create PDF with Line.pdf")

pdf.SetLicenseKey "Starter" // For this example you can use a Starter, Lite, Pro or Enterprise License

// Create a new PDF
```

```
call pdf.CreateNewPDF f

// We want to use top-down coordinates
call pdf.SetPageCoords pdf.kpcTopDown

// Add a page
call pdf.Append

// black
call pdf.SetStrokeColor 0

// line down
call pdf.MoveTo(100,100)
call pdf.LineTo(200,200)
call pdf.StrokePath

// line up
call pdf.MoveTo(200,200)
call pdf.LineTo(300,100)
call pdf.StrokePath

// end page
call pdf.EndPage

// Close page
call pdf.CloseFile

// Open PDF
f.Launch
```

See also MoveTo function in DynaPDF manual.

77.39.610 MultiplyMatrix(M1 as DynaPDFMatrixMBS, M2 as DynapdfMatrixMBS, NewMatrix as DynapdfMatrixMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function multiplies two transformation matrices and stores the result in the parameter NewMatrix.
Notes: You must pass three non nil matrix references into the function.
See also MultiplyMatrix function in DynaPDF manual.

77.39.611 OpenImportBuffer(Buffer as Memoryblock, PwdType as Integer = 0, Password as string = "") as Integer

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function reads an external PDF from a file buffer so that it can be imported entirely or parts of it.
Notes: Requires DynaPDF Lite license.
See also OpenImportBuffer function in DynaPDF manual.
See also:

- 77.39.612 OpenImportBuffer(Buffer as string, PwdType as Integer = 0, Password as string = "") as Integer 14916

77.39.612 OpenImportBuffer(Buffer as string, PwdType as Integer = 0, Password as string = "") as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function reads an external PDF from a file buffer so that it can be imported entirely or parts of it.
Notes: Requires DynaPDF Lite license.
See also OpenImportBuffer function in DynaPDF manual.
See also:

- 77.39.611 OpenImportBuffer(Buffer as Memoryblock, PwdType as Integer = 0, Password as string = "") as Integer 14916

77.39.613 OpenImportFile(File as folderitem, PwdType as Integer = 0, Password as string = "") as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function opens an external PDF file so that it can be imported entirely or parts of it.
Notes: Requires DynaPDF Lite license.
See also OpenImportFile function in DynaPDF manual.
See also:

- 77.39.614 OpenImportFile(Path as String, PwdType as integer = 0, Password as string = "") as integer 14916

77.39.614 OpenImportFile(Path as String, PwdType as integer = 0, Password as string = "") as integer

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function opens an external PDF file so that it can be imported entirely or parts of it.
Notes: Requires DynaPDF Lite license.
See also OpenImportFile function in DynaPDF manual.
See also:

- 77.39.613 OpenImportFile(File as folderitem, PwdType as Integer = 0, Password as string = "") as Integer 14916

77.39.615 OpenOutputFile(File as folderitem) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function opens the output file into which the PDF file should be written.
Example:

```
Dim d As New DynaPDFMBS

// create PDF in memory
Call d.CreateNewPDF

// add a picture
Call d.Append
Call d.InsertImageEx(100, 100, 100, 100, "/Users/cs/Pictures/mond.jpg")
Call d.EndPage

// okay?
If d.HaveOpenDoc Then

// open target file
Dim f As FolderItem = SpecialFolder.Desktop.Child("mond.pdf")
Call d.OpenOutputFile(f)

// write and close
Call d.CloseFile

End If
```

See also OpenOutputFile function in DynaPDF manual.
See also:

- 77.39.616 OpenOutputFile(Path as String) as Boolean 14917

77.39.616 OpenOutputFile(Path as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function opens the output file into which the PDF file should be written.
Example:

```
Dim d As New MyDynaPDFMBS

// create PDF in memory
Call d.CreateNewPDF

// add a picture
Call d.Append
Call d.InsertImageEx(100, 100, 100, 100, "/Users/cs/Pictures/mond.jpg")
Call d.EndPage

// okay?
If d.HaveOpenDoc Then

// open target file
Call d.OpenOutputFile("/Users/cs/Desktop/mond.pdf")

// write and close
Call d.CloseFile

End If
```

See also OpenOutputFile function in DynaPDF manual.
See also:

- 77.39.615 OpenOutputFile(File as folderitem) as Boolean 14917

77.39.617 OpenOutputFileEncrypted(File as folderitem, OpenPwd as string, OwnerPwd as string, KeyLen as Integer, Restrict as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens the output file and sets the encryption parameters.
Notes:

This function enables in combination with FlushPages the creation of very large encrypted PDF files with minimal memory usage.
The function can be called in a while statement, e.g. to display a open file dialog if the file could not be opened. Once the function succeeds the PDF file can be finished with CloseFile.

If the function succeeds the return value is true. If the function fails the return value is false.
See also OpenOutputFileEncrypted function in DynaPDF manual.
See also:

- 77.39.618 OpenOutputFileEncrypted(Path as String, OpenPwd as string, OwnerPwd as string, KeyLen as integer, Restrict as integer) as Boolean 14919

77.39.618 OpenOutputFileEncrypted(Path as String, OpenPwd as string, OwnerPwd as string, KeyLen as integer, Restrict as integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens the output file and sets the encryption parameters.
Notes:

This function enables in combination with FlushPages the creation of very large encrypted PDF files with minimal memory usage.
The function can be called in a while statement, e.g. to display a open file dialog if the file could not be opened. Once the function succeeds the PDF file can be finished with CloseFile.

If the function succeeds the return value is true. If the function fails the return value is false.
See also OpenOutputFileEncrypted function in DynaPDF manual.
See also:

- 77.39.617 OpenOutputFileEncrypted(File as folderitem, OpenPwd as string, OwnerPwd as string, KeyLen as Integer, Restrict as Integer) as Boolean 14918

77.39.619 OpenTag(Tag as Integer, Lang as string, AltText as string, Expansion as string, BBox as DynaPDFRectMBS = nil) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a tag.
Notes:

Rect: Optional parameter BBox that is required by the tags btFigure and btTable.

BBox must be defined in the current coordinate system that is used to output the corresponding contents. All transformations will be taken into account.
See also OpenTag function in DynaPDF manual.

77.39.620 OpenTagAnsi(Tag as Integer, Lang as string, AltText as string, Expansion as string, BBox as DynaPDFRectMBS = nil) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a tag with ANSI encoding.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function

instead. **Notes:** Rect: Optional parameter BBox that is required by the tags btFigure and btTable.
See also OpenTag function in DynaPDF manual.

77.39.621 Optimize(Flags as Integer = 0, Params as DynaPDFOptimizeParamsMBS = nil) as boolean

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optimizes PDF.
Example:

```
dim pdf as new DynapdfMBS
// import PDF here

dim flags as integer = Bitwise.BitOr(_
pdf.kofInMemory, _ // Optimize the file fully in memory. Only useful for small PDF files.
pdf.kofScaleImages, _ // Scale images as specified in the DynaPDFOptimizeParamsMBS class.
pdf.kofNewLinkNames, _ // If set, rename all object links to short names like F1, F2 etc.
pdf.kofDeleteInvPaths, _ // Delete invisible paths.
pdf.kofDeletePrivateData, _ // Delete private data objects from pages, templates, and images.
pdf.kofIgnoreZeroLineWidth, _
pdf.kofDeleteAlternateImages, _ // If set, alternate images will be deleted.
pdf.kofDeleteThumbnails) // Thumbnails can be deleted since PDF viewers can create thumbnails easily on demand.

// pdf.kofInMemory // Optimize the file fully in memory. Only useful for small PDF files.
// pdf.kofConvertAllColors // If set, Separation, DeviceN, and NChannel color spaces will be converted to the device space.
// pdf.kofIgnoreICCBased // If set, ICCBased color spaces will be left unchanged.
// pdf.kofScaleImages // Scale all images
// pdf.kofNewLinkNames // If set, rename all object links to short names like F1, F2 etc.
// pdf.kofDeleteInvPaths // Delete invisible paths. An invisible path is a path that was finished with the no-op operator "n".
// more flags in DynaPDF documentation

Dim o As New DynaPDFOptimizeParamsMBS

o.MinColorRes = 100 // scale images with more than 100 dpi
o.ResColorImages = 150 // down to 150 dpi

call pdf.Optimize(flags, o)
```

Notes:

This repairs also a lot of errors in the PDF and can shrink the PDF size.
After optimize, please close PDF. If you need to further edit it, please import it again in a new environment.

You need to use InitColorManagement to get color conversion working well if needed.

Note that this function requires the DynaPDF Pro.
See also Optimize function in DynaPDF manual.

77.39.622 PageLink(PosX as Double, PosY as Double, Width as Double, Height as Double, DestPage as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts a page link onto the current open page.
See also PageLink function in DynaPDF manual.

77.39.623 PageLink2(PosX as Double, PosY as Double, Width as Double, Height as Double, NamedDest as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts a page link onto the current open page by using a named destination as target.
See also PageLink2 function in DynaPDF manual.

77.39.624 PageLink3(PosX as Double, PosY as Double, Width as Double, Height as Double, NamedDest as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function adds a page link to the current open page by using a named destination as target.
Notes:

The difference in comparison to PageLink2() is that the named destination can be defined as string.
This makes it possible to create the link, also if you don't have the required information to create the named destination at this point. If the named destination does not exist when the file is closed then the link does nothing. See also, CreateNamedDest().

Return values:
If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the

function fails the return value is a negative error code.

See also PageLink3 function in DynaPDF manual.

77.39.625 PageLinkEx(PosX as Double, PosY as Double, Width as Double, Height as Double, DestType as Integer, DestPage as Integer, a as Double = 0.0, b as Double = 0.0, c as Double = 0.0, d as Double = 0.0) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts a page link onto the current open page.
See also PageLinkEx function in DynaPDF manual.

77.39.626 PageStatistic(page as Integer = -1) as DynaPDFPageStatisticMBS

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries statistics from a page.
Notes:

If page is -1 the current open page is used. Else the plugin uses editpage(page) to open the page and run the statistics on that.
Returns nil on any error or statistic value.

77.39.627 ParseContent(ParseInterface as DynaPDFParseInterfaceMBS, flags as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses the content of a page.
Notes: Requires DynaPDF Pro license.
See also ParseContent function in DynaPDF manual.

77.39.628 PlaceImage(ImgHandle as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Images can be used multiple times on different positions and with different sizes. This function

places an image onto a page or template that was already inserted beforehand by an image function.
See also PlaceImage function in DynaPDF manual.

77.39.629 PlaceSigFieldValidateIcon(SigField as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function places the validation icon in a signature field to the whished position.
See also PlaceSigFieldValidateIcon function in DynaPDF manual.

77.39.630 PlaceTemplate(TmplHandle as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function places a template onto a page, another open template, or pattern.
See also PlaceTemplate function in DynaPDF manual.

77.39.631 PlaceTemplateEx(TmplHandle as Integer, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Places a template.
See also PlaceTemplateEx function in DynaPDF manual.

77.39.632 PolygonAnnot(Vertices() as DynaPDFPointMBS, LineWidth as Double, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a Polygon Annotation.
Notes:

The vertices are connected by straight lines. The path is always closed before it will be drawn. It is not required to close the path explicitly. At least two vertices must be provided.
The coordinates of the vertices are interpretet in current user space. Any transformation that was applied on the coordinate system will be taken into account.
The stroke or fill color can be set to the special constant kNO_COLOR to fill or stroke the polygon. It is

not allowed to set both colors to kNO_COLOR since this would result in an invisible annotation.
This annotation type has an associated PopUp annotation that displays the string Content in a floating window. The initial window state of the associated PopUp annotation is closed by default but the state can be changed with SetAnnotOpenState if necessary.
ÔøºÔøº

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also PolygonAnnot function in DynaPDF manual.

77.39.633 PolygonAnnotAnsi(Vertices() as DynaPDFPointMBS, LineWidth as Double, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a Polygon Annotation.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

The vertices are connected by straight lines. The path is always closed before it will be drawn. It is not required to close the path explicitly. At least two vertices must be provided.
The coordinates of the vertices are interpretet in current user space. Any transformation that was applied on the coordinate system will be taken into account.
The stroke or fill color can be set to the special constant kNO_COLOR to fill or stroke the polygon. It is not allowed to set both colors to kNO_COLOR since this would result in an invisible annotation.
This annotation type has an associated PopUp annotation that displays the string Content in a floating window. The initial window state of the associated PopUp annotation is closed by default but the state can be changed with SetAnnotOpenState if necessary.
ÔøºÔøº

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also PolygonAnnot function in DynaPDF manual.

77.39.634 PolyLineAnnot(Vertices() as DynaPDFPointMBS, LineWidth as Double, StartLineEndStyle as Integer, EndLineEndStyle as Integer, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a PolyLine Annotation.
Notes:

The vertices are connected by straight lines. At least two vertices must be provided.
The coordinates of the vertices are interpretet in current user space. Any transformation that was applied on the coordinate system will be taken into account.
The parameter FillColor is only used if the line end style of the start or end point has an interior that can be filled. The special constant kNO_COLOR represents a transparent interior.
The stroke color is required and must not be set to kNO_COLOR.

This annotation type has an associated PopUp annotation that displays the string Content in a floating window. The initial window state of the associated PopUp annotation is closed by default but the state can be changed with SetAnnotOpenState if necessary.
The parameter LineWidth must be in the range 0 through 12 units. Values outside the valid range will be adjusted to the nearest allowed value. A zero line width produces a 1 pixel wide line.
The line end styles can be changed if necessary with SetAnnotLineEndStyle.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also PolyLineAnnot function in DynaPDF manual.

77.39.635 PolyLineAnnotAnsi(Vertices() as DynaPDFPointMBS, LineWidth as Double, StartLineEndStyle as Integer, EndLineEndStyle as Integer, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a PolyLine Annotation.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

The vertices are connected by straight lines. At least two vertices must be provided.
The coordinates of the vertices are interpretet in current user space. Any transformation that was applied on the coordinate system will be taken into account.
The parameter FillColor is only used if the line end style of the start or end point has an interior that can be filled. The special constant kNO_COLOR represents a transparent interior.
The stroke color is required and must not be set to kNO_COLOR.

This annotation type has an associated PopUp annotation that displays the string Content in a floating window. The initial window state of the associated PopUp annotation is closed by default but the state can be changed with SetAnnotOpenState if necessary.
The parameter LineWidth must be in the range 0 through 12 units. Values outside the valid range will be adjusted to the nearest allowed value. A zero line width produces a 1 pixel wide line.
The line end styles can be changed if necessary with SetAnnotLineEndStyle.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also PolyLineAnnot function in DynaPDF manual.

77.39.636 PrintGetDevMode as String

MBS DynaPDF Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop only.

Function: Queries last print dev mode.
Notes:

You can store this in a preferences file for next printing.
This is same data structure as in WindowsDeviceModeMBS class.

77.39.637 PrintGetDevNames(byref Driver as String, byref Device as String, byref Output as String, byref DefaultFlag as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop only.

Function: Queries printer device names.
Notes:

Driver: File name (without the extension) of the device driver.
Device: Name of the device.
Output: Device name for the physical output medium (output port).
DefaultFlag: 1 if the selected printer is the default one.

Returns true on success or false on failure.

77.39.638 PrintPDFFile(TempDir as FolderItem, DocName as string, DCHandle as integer, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.1, Platform: Windows, Targets: All.

Function: Prints current PDF file.
Notes:

Returns true on success and false on failure.
Flags can be a combination of the flag values kpffPrintAsImage, kpffDefault, kpffColor, kpffAutoRotateAndCenter and kpff1Bit.

Margin can be nil. If not nil, specifies the margins to use.
DCHandle is the handle of the graphics context.

If you only want to print a selection of pages, please only import those pages via ImportPDFPage function. Or use DeletePage to remove the pages you don't want to print.

Does not work with a graphics handle from Xojo 2016r4 and newer due to switch to DirectDraw APIs.
Or in other words, you can use a HDC handle from graphics class in Xojo 2016r3 and older to print PDF.
See also PrintPDFFile function in DynaPDF manual.
See also:

- 77.39.639 PrintPDFFile(TempDir as FolderItem, DocName as string, PrinterName as String, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean 14927

77.39.639 PrintPDFFile(TempDir as FolderItem, DocName as string, PrinterName as String, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platform: Windows, Targets: All.

Function: Prints current PDF file.
Notes:

Returns true on success and false on failure.
Flags can be a combination of the flag values kpffPrintAsImage, kpffDefault, kpffColor, kpffAutoRotateAndCenter and kpff1Bit.
Margin can be nil. If not nil, specifies the margins to use.
PrinterName is the name of the printer to use. The plugin will open the printer and print PDF there with default settings.

If you only want to print a selection of pages, please only import those pages via ImportPDFPage function. Or use DeletePage to remove the pages you don't want to print.
See also PrintPDFFile function in DynaPDF manual.
See also:

- 77.39.638 PrintPDFFile(TempDir as FolderItem, DocName as string, DCHandle as integer, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean 14926

77.39.640 PrintPDFFileWithDialog(TempDir as FolderItem, DocName as string, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil, parentWindow as Window = nil) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop only.

Function: Prints current PDF file with dialog.
Notes:

Returns true on success and false on failure.
Flags can be a combination of the flag values kpffPrintAsImage, kpffDefault, kpffColor, kpffAutoRotateAndCenter and kpff1Bit.
Margin can be nil. If not nil, specifies the margins to use.
Shows print dialog and allows user to set printer.

If you only want to print a selection of pages, please only import those pages via ImportPDFPage function.
Or use DeletePage to remove the pages you don't want to print.

After this call you can use PrintGetDevNames and PrintGetDevMode to get printer settings.
And before this call you can use PrintSetDevMode and PrintSetDevNames to restore printer settings.
See also:

- 77.39.641 PrintPDFFileWithDialog(TempDir as FolderItem, DocName as string, Flags as Integer, Margin as DynaPDFRectMBS, PrintParams as DynaPDFPrintParamsMBS, parentWindow as DesktopWindow) as Boolean 14928

77.39.641 PrintPDFFileWithDialog(TempDir as FolderItem, DocName as string, Flags as Integer, Margin as DynaPDFRectMBS, PrintParams as DynaPDFPrintParamsMBS, parentWindow as DesktopWindow) as Boolean

MBS DynaPDF Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Prints current PDF file with dialog.
Notes:

Returns true on success and false on failure.
Flags can be a combination of the flag values kpffPrintAsImage, kpffDefault, kpffColor, kpffAutoRotateAndCenter and kpff1Bit.
Margin can be nil. If not nil, specifies the margins to use.
Shows print dialog and allows user to set printer.

If you only want to print a selection of pages, please only import those pages via ImportPDFPage function.
Or use DeletePage to remove the pages you don't want to print.

After this call you can use PrintGetDevNames and PrintGetDevMode to get printer settings.
And before this call you can use PrintSetDevMode and PrintSetDevNames to restore printer settings.
See also:

- 77.39.640 PrintPDFFileWithDialog(TempDir as FolderItem, DocName as string, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil, parentWindow as Window = nil) as Boolean 14928

77.39.642 PrintPDFPage(PageNumber as Integer, DocName as string, DCHandle as integer, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platform: Windows, Targets: All.

Function: Prints a page.
Notes: See PrintPDFFile for details and options.
See also:

- 77.39.643 PrintPDFPage(PageNumber as Integer, DocName as string, PrinterName as String, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean 14929

77.39.643 PrintPDFPage(PageNumber as Integer, DocName as string, PrinterName as String, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platform: Windows, Targets: All.

Function: Prints a page.
Notes:

See PrintPDFFile for details and options.

Version 18.4 and newer use device mode set with DynaPDFMBS.PrintSetDevMode method for printer settings.
See also:

- 77.39.642 PrintPDFPage(PageNumber as Integer, DocName as string, DCHandle as integer, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean 14929

77.39.644 PrintPDFPageWithDialog(PageNumber as Integer, DocName as string, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil, parentWindow as Window = nil) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop only.

Function: Prints a page with dialog.
Notes: See PrintPDFFileWithDialog for details and options.
See also:

- 77.39.645 PrintPDFPageWithDialog(PageNumber as Integer, DocName as string, Flags as Integer, Margin as DynaPDFRectMBS, PrintParams as DynaPDFPrintParamsMBS, parentWindow as DesktopWindow) as Boolean 14930

77.39.645 PrintPDFPageWithDialog(PageNumber as Integer, DocName as string, Flags as Integer, Margin as DynaPDFRectMBS, PrintParams as DynaPDFPrintParamsMBS, parentWindow as DesktopWindow) as Boolean

MBS DynaPDF Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Prints a page with dialog.
Notes: See PrintPDFFileWithDialog for details and options.
See also:

- 77.39.644 PrintPDFPageWithDialog(PageNumber as Integer, DocName as string, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil, parentWindow as Window = nil) as Boolean 14930

77.39.646 PrintSetDevMode(data as MemoryBlock) as Boolean

MBS DynaPDF Plugin, Plugin Version: 18.5, Platform: Windows, Targets: Desktop only.

Function: Set last print dev mode.
Notes:

Returns true on success.
This is same data structure as in WindowsDeviceModeMBS class.
See also:

- 77.39.647 PrintSetDevMode(data as String) as Boolean 14931

77.39.647 PrintSetDevMode(data as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop only.

Function: Set last print dev mode.
Notes:

Returns true on success.
This is same data structure as in WindowsDeviceModeMBS class.
See also:

- 77.39.646 PrintSetDevMode(data as MemoryBlock) as Boolean 14930

77.39.648 PrintSetDevNames(Driver as String, Device as String, Output as String, DefaultFlag as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop only.

Function: Sets printer device names.
Notes:

Driver: File name (without the extension) of the device driver.
Device: Name of the device.
Output: Device name for the physical output medium (output port).
DefaultFlag: 1 if the selected printer is the default one.

Returns true on success or false on failure.

77.39.649 ReadImageFormat(FileName as folderitem, byref Width as Integer, byref Height as Integer, byref BitsPerPixel as Integer, byref UseZip as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the most important properties of an image file.
See also ReadImageFormat function in DynaPDF manual.

77.39.650 ReadImageFormat2(FileName as folderitem, Index as Integer, byref Width as Integer, byref Height as Integer, byref BitsPerPixel as Integer, byref UseZip as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the most important properties of an image file.
Example:

```
// read image format and resolution and calculate physical size
dim bits as integer
dim useZip as Boolean
dim resX as integer = 0
dim resY as integer = 0
dim physHeight as integer
dim physWidth as integer
dim w as integer
dim h as integer

call pdf.ReadImageFormat2(Source, 1, w, h, bits, useZip)
call pdf.ReadImageResolution(Source, 1, resX, resY)

if (resX <>resY and resX >0 and resY >0) then
if (resX >resY) then
physWidth = w
physHeight = h \(resX \resY)
else
physWidth = w \(resY \resX)
physHeight = h
end if
else
physHeight = h
physWidth = w
end if
```

See also ReadImageFormat2 function in DynaPDF manual.

77.39.651 ReadImageFormatEx(hBitmap as Integer, byref Width as Integer, byref Height as Integer, byref BitsPerPixel as Integer, byref UseZip as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the most important properties of a memory bitmap.
See also ReadImageFormatEx function in DynaPDF manual.

77.39.652 ReadImageFormatFromBuffer(Buffer as memoryblock, Index as Integer, byref Width as Integer, byref Height as Integer, byref BitsPerPixel as Integer, byref UseZip as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the most important properties of an image in the same way as ReadImageFormat2(), but accepts an image buffer as input.
See also ReadImageFormatFromBuffer function in DynaPDF manual.
See also:

- 77.39.653 ReadImageFormatFromBuffer(Buffer as string, Index as Integer, byref Width as Integer, byref Height as Integer, byref BitsPerPixel as Integer, byref UseZip as Boolean) as Boolean 14933

77.39.653 ReadImageFormatFromBuffer(Buffer as string, Index as Integer, byref Width as Integer, byref Height as Integer, byref BitsPerPixel as Integer, byref UseZip as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the most important properties of an image in the same way as ReadImageFormat2(), but accepts an image buffer as input.
See also ReadImageFormatFromBuffer function in DynaPDF manual.
See also:

- 77.39.652 ReadImageFormatFromBuffer(Buffer as memoryblock, Index as Integer, byref Width as Integer, byref Height as Integer, byref BitsPerPixel as Integer, byref UseZip as Boolean) as Boolean 14933

77.39.654 ReadImageResolution(FileName as folderitem, Index as Integer, byref ResX as Integer, byref ResY as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the horizontal and vertical resolution of an image file.
Example:

```
// read image format and resolution and calculate physical size
dim bits as integer
dim useZip as Boolean
dim resX as integer = 0
dim resY as integer = 0
dim physHeight as integer
dim physWidth as integer
dim w as integer
dim h as integer
```

```
call pdf.ReadImageFormat2(Source, 1, w, h, bits, useZip)
call pdf.ReadImageResolution(Source, 1, resX, resY)

if (resX <>resY and resX >0 and resY >0) then
if (resX >resY) then
physWidth = w
physHeight = h \(resX \resY)
else
physWidth = w \(resY \resX)
physHeight = h
end if
else
physHeight = h
physWidth = w
end if
```

See also ReadImageResolution function in DynaPDF manual.

77.39.655 ReadImageResolutionEx(Buffer as Memoryblock, Index as Integer, byref ResX as Integer, byref ResY as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the horizontal and vertical resolution of an image file in the same way as ReadImageResolution() but accepts an image buffer as input.
See also ReadImageResolutionEx function in DynaPDF manual.
See also:

- 77.39.656 ReadImageResolutionEx(Buffer as string, Index as Integer, byref ResX as Integer, byref ResY as Integer) as Boolean 14934

77.39.656 ReadImageResolutionEx(Buffer as string, Index as Integer, byref ResX as Integer, byref ResY as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the horizontal and vertical resolution of an image file in the same way as ReadImageResolution() but accepts an image buffer as input.
See also ReadImageResolutionEx function in DynaPDF manual.
See also:

- 77.39.655 ReadImageResolutionEx(Buffer as Memoryblock, Index as Integer, byref ResX as Integer, byref ResY as Integer) as Boolean 14934

77.39.657 Rectangle(PosX as Double, PosY as Double, Width as Double, Height as Double, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function draws a rectangle.
See also Rectangle function in DynaPDF manual.

77.39.658 ReEncryptPDF(File as folderitem, PwdType as Integer, InPwd as string, OpenPwd as string, OwnerPwd as string, KeyLen as Integer, Restrict as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function encrypts an already encrypted or unencrypted PDF file.
See also ReEncryptPDF function in DynaPDF manual.

77.39.659 ReEncryptPDFAnsi(Path as string, PwdType as Integer, InPwd as string, OpenPwd as string, OwnerPwd as string, KeyLen as Integer, Restrict as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function encrypts an already encrypted or unencrypted PDF file.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** Same as ReEncryptPDF, but takes path name in Windows ANSI encoding.
See also ReEncryptPDF function in DynaPDF manual.

77.39.660 RenameSpotColor(Colorant as string, NewName as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Renames a colorant.
Example:

```
// your instance
dim pdf as DynaPDFMBS

// rename the color
call pdf.RenameSpotColor("Magenta", "Magenta2")
```

Notes: Strings are converted to UTF-8.
See also RenameSpotColor function in DynaPDF manual.

77.39.661 RenderAnnotOrField(Handle as UInt32, IsAnnot as boolean, State as Integer, Matrix as DynaPDFMatrixMBS, Flags as Integer, PixFmt as Integer, Filter as Integer, byref Out as DynaPDFBitmapMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function renders an annotation or field independent of the page.
Notes:

Please check dynapdf_help.pdf for details on RenderAnnotOrField function.
Plugin will fill out parameter only if result is zero.
Requires DynaPDF Pro license.
See also RenderAnnotOrField function in DynaPDF manual.

77.39.662 RenderPagePicture(PageNum as Integer) as picture

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Renders a picture for the page with the given page number.
Example:

```
dim pdf as new MyDynaPDFMBS

// For this example you can use a Pro or Enterprise License
pdf.SetLicenseKey "Pro"

// create in memory
call pdf.CreateNewPDF nil

// set import flags
call pdf.SetImportFlags pdf.kifImportAsPage

// open the PDF file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
call pdf.OpenImportFile(f, 0, "")

// import all the pages
call pdf.ImportPDFFile(1, 1.0, 1.0)

// and render first page
dim out as Picture = pdf.RenderPagePicture(1)
```

```
// display in window
Backdrop = out
```

Notes:

Please note that for most cases RenderPageToImage and RenderPDFFile are better choices for rendering. Especially if you plan to compress images later anyway. And you avoid trouble with color matching. For this function to work correct you have to initialize DynaPDF with right color space for screen (Generic RGB on Mac and screen profile for Windows).

The picture size is set to the Cropbox. If no crop box is defined, it uses the media box.

Returns nil on any error.

If you render a lot of pages from the same PDF, consider using DynaPDFRasterizerMBS class as it's faster when you reuse the rasterizer.

Currently not available for Linux Desktop apps.
Requires DynaPDF Pro license.

For pages with orientation of 90 or 270 degree, the plugin will take that into account and swap width/height to have rendered picture have the riuht size.
See also:

- 77.39.663 RenderPagePicture(PageNum as Integer, Width as Integer, Height as Integer, DefScale as Integer = 2, matrix as DynaPDFMatrixMBS = nil) as picture 14937

77.39.663 RenderPagePicture(PageNum as Integer, Width as Integer, Height as Integer, DefScale as Integer = 2, matrix as DynaPDFMatrixMBS = nil) as picture

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Renders a picture for the page with the given page number.
Example:

```
dim pdf as new MyDynaPDFMBS

// For this example you can use a Pro or Enterprise License
pdf.SetLicenseKey "Pro"

// create in memory
```

```
call pdf.CreateNewPDF nil

// set import flags
call pdf.SetImportFlags pdf.kifImportAsPage

// open the PDF file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
call pdf.OpenImportFile(f, 0, "")

// import all the pages
call pdf.ImportPDFFile(1, 1.0, 1.0)

// and render first page with window size
dim out as Picture = pdf.RenderPagePicture(1, Width, Height)

// display in window
Backdrop = out
```

Notes:

Please note that for most cases RenderPageToImage and RenderPDFFile are better choices for rendering. Especially if you plan to compress images later anyway. And you avoid trouble with color matching. For this function to work correct you have to initialize DynaPDF with right color space for screen (Generic RGB on Mac and screen profile for Windows).

The picture is created with the given size. The PDF page is scaled to fit size. You can use the constants kpsFitBest, kpsFitHeight or kpsFitWidth for the DefScale parameter. The matrix allows you to move, rotate or scale the PDF inside the picture.

Returns nil on any error.

If you render a lot of pages from the same PDF, consider using DynaPDFRasterizerMBS class as it's faster when you reuse the rasterizer.

Currently not available for Linux Desktop apps.
Requires DynaPDF Pro license.

If page is rotated, please swap width and height yourself.
See also:

- 77.39.662 RenderPagePicture(PageNum as Integer) as picture 14936

77.39.664 RenderPageToImage(PageNumber as UInt32, OutFile as folderitem, Resolution as UInt32, Width as UInt32, Height as UInt32, Flags as UInt32, PixFmt as UInt32, Filter as UInt32, Format as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function renders a PDF page into an image.
Example:

```
dim pdf as new MyDynaPDFMBS // your DynaPDF subclass with Error event filled

// where to get PDF page
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

// where to write
dim t as FolderItem = SpecialFolder.Desktop.Child("test.jpg")

pdf.SetLicenseKey "Pro" // For this example you can use a Pro or Enterprise License

call pdf.CreateNewPDF nil
call pdf.SetImportFlags(pdf.kifImportAll + pdf.kifImportAsPage)

// open file
call pdf.OpenImportFile(f,0,"")

// add page
call pdf.Append

// import the page
call pdf.ImportPageEx(1,1.0,1.0)
call pdf.EndPage

// render the page
call pdf.RenderPageToImage(1, t, 72, ImageView1.Width, ImageView1.Height, DynaPDFRasterImageMBS.krfDe-
fault, DynaPDFRasterizerMBS.kpxfRGB, DynaPDFMBS.kcfJPEG, DynaPDFMBS.kifmJPEG)
```

Notes:

PixFmt: pass kpxf* constants like DynaPDFRasterizerMBS.kpxfRGB.
Filter: Pass kcf* constants like DynaPDFMBS.kcfJPEG.
Format: pass kifm* constants like DynaPDFMBS.kifmJPEG.

The page that should be rendered must be closed (Append() or EditPage() open a page and EndPage() closes a page).
If the parameter OutFile is set to nil the image is created in memory. In this case call GetImageBuffer() to

retrieve the image buffer and finally FreeImageBuffer() to release it.

The output image size can be calculated in different ways:

- If Resolution is >0 the image width and height is calculated according to the specified resolution. On a 32 bit machine it is possible to render pages in up to 1200 DPI depending on the page format. Larger resolutions require special techniques like banding to restrict the memory usage. However, no such feature is available in DynaPDF.
- If Width >0 and if Height == 0 the image height is calculated according to the given width to archive an image with exact proportions.
- If Width == 0 and if Height >0 then image width is calculated according to the given height to archive an image with exact proportions.
- If Width >0 and if Height >0 the image is scaled to the width and height.

The pixel format and the output image format must be compatible. Because TIFF is the only image format that supports different compression filters, the parameter Filter will be ignored for all other output formats.
If the function succeeds the return value is true. If the function fails the return value is false.
Requires DynaPDF Pro license.
See also RenderPageToImage function in DynaPDF manual.

77.39.665 RenderPageToImageMT(PageNumber as UInt32, OutFile as folderitem, Resolution as UInt32, Width as UInt32, Height as UInt32, Flags as UInt32, PixFmt as UInt32, Filter as UInt32, Format as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function renders a PDF page into an image.
Notes:

PixFmt: pass kpxf* constants like DynaPDFRasterizerMBS.kpxfRGB.
Filter: Pass kcf* constants like DynaPDFMBS.kcfJPEG.
Format: pass kifm* constants like DynaPDFMBS.kifmJPEG.

The page that should be rendered must be closed (Append() or EditPage() open a page and EndPage() closes a page).
If the parameter OutFile is set to nil the image is created in memory. In this case call GetImageBuffer() to retrieve the image buffer and finally FreeImageBuffer() to release it.

The output image size can be calculated in different ways:

- If Resolution is >0 the image width and height is calculated according to the specified resolution. On a 32 bit machine it is possible to render pages in up to 1200 DPI depending on the page format. Larger resolutions require special techniques like banding to restrict the memory usage. However, no such feature is available in DynaPDF.
- If Width >0 and if Height == 0 the image height is calculated according to the given width to archive an image with exact proportions.
- If Width == 0 and if Height >0 then image width is calculated according to the given height to archive an image with exact proportions.
- If Width >0 and if Height >0 the image is scaled to the width and height.

The pixel format and the output image format must be compatible. Because TIFF is the only image format that supports different compression filters, the parameter Filter will be ignored for all other output formats. If the function succeeds the return value is true. If the function fails the return value is false.

Requires DynaPDF Pro license.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

77.39.666 RenderPageToPicture(PageNum as integer, pic as picture, DefScale as integer = 2, matrix as DynaPDFMatrixMBS = nil, RenderWithAlpha as boolean = false) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Renders the page into the given picture.
Example:

```
dim pdf as new MyDynaPDFMBS

// For this example you can use a Pro or Enterprise License
pdf.SetLicenseKey "Pro"

// create in memory
call pdf.CreateNewPDF nil

// set import flags
call pdf.SetImportFlags pdf.kifImportAsPage

// open the PDF file
```

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
call pdf.OpenImportFile(f, 0, "")

// import all the pages
call pdf.ImportPDFFile(1, 1.0, 1.0)

// create picture
dim out as new Picture(800, 600, 32)

// render first page in the existing picture
call pdf.RenderPageToPicture(1, out)

// display in window
Backdrop = out
```

Notes:

Please note that for most cases RenderPageToImage and RenderPDFFile are better choices for rendering. Especially if you plan to compress images later anyway. And you avoid trouble with color matching. For this function to work correct you have to initialize DynaPDF with right color space for screen (Generic RGB on Mac and screen profile for Windows).

This method draws into an existing picture. The PDF page is scaled to fit size. You can use the constants kpsFitBest, kpsFitHeight or kpsFitWidth for the DefScale parameter. The matrix allows you to move, rotate or scale the PDF inside the picture.

Returns nil on any error.

This does not work on Linux desktop targets as the plugin can't write into a picture there.

If you render a lot of pages from the same PDF, consider using DynaPDFRasterizerMBS class as it's faster when you reuse the rasterizer.
Requires DynaPDF Pro license.

Added RenderWithAlpha parameter in plugin version 19.0.
If RenderWithAlpha is true, we render with alpha channel. If the destination is a picture has alpha channel, you should get the alpha there. Otherwise for picture without alpha channel, we only copy RGB channels.

77.39.667 RenderPDFFile(OutFile as folderitem, Resolution as UInt32, Flags as UInt32, PixFmt as UInt32, Filter as UInt32, Format as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function renders all PDF pages which are currently in memory and stores the result in a proprietary image format.
Example:

```
dim file as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim pdf as new MyDynaPDFMBS

call pdf.CreateNewPDF nil
call pdf.OpenImportFile(file, 0, "")
call pdf.ImportPDFFile(1, 1.0, 1.0)

// create a TIFF file:

dim outfile as FolderItem = SpecialFolder.Desktop.Child("test.tif")

dim Flags as Integer = DynaPDFRasterImageMBS.krfDefault
dim PixFmt as Integer = DynaPDFRasterizerMBS.kpxfRGB
dim Format as Integer = DynaPDFMBS.kifmTIFF // use kifm* constants
dim Filter as Integer = DynaPDFMBS.kcfLZW // pick a compression scheme for the file format

call pdf.RenderPDFFile(outfile, 300, Flags, PixFmt, Filter, Format)

// create a folder of JPEG file:

dim outfolder as FolderItem = SpecialFolder.Desktop.Child("test files")
outfolder.CreateAsFolder

Flags = DynaPDFRasterImageMBS.krfDefault
PixFmt = DynaPDFRasterizerMBS.kpxfRGB
Format = DynaPDFMBS.kifmJPEG // use kifm* constants
Filter = DynaPDFMBS.kcfJPEG

call pdf.RenderPDFFile(outfolder, 300, Flags, PixFmt, Filter, Format)
```

Deprecated: This item is deprecated and should no longer be used. You can use RenderPDFFileEx instead.
Notes:

One page PDF can go to e.g. a JPEG file.
Multi page PDF file can go to a TIFF file with several images.
Or you specify a folder and get a folder of JPEG/PNG/TIFF files.
See also RenderPDFFile function in DynaPDF manual.

77.39.668 RenderPDFFileEx(OutFile as folderitem, Resolution as UInt32, Width as Integer, Height as Integer, Flags as UInt32, PixFmt as UInt32, Filter as UInt32, Format as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Renders all PDF pages which are currently in memory and stores the result in a proprietary image format.
Notes:

The pages in memory could be imported from one or more external PDF files, e.g. with ImportPDFFile(), created with DynaPDF functions, or a combination of both.

The parameter OutFile can be a path to an existing directory or the file name of the output image. The latter type can be used with TIFF images because this format supports multi-page output. When a file path is used with a single page image format only the first page will be rendered.

The function checks whether the path is a directory or a file name.
The function can render pages in a specific resolution, or scale them to a given width or height.

Depending on which parameters are set the image size is calculated as follows:

- Resolution >0 and Width == 0 and Height == 0: Pages are rendered according to the given resolution. Note that PDF pages can be very large. Therefore, it is maybe not possible to render all pages in the whished resolution.
- Resolution >0 and Width <0 and or Height <0: Pages are rendered according to the given resolution. Negative values of Width and Height are interpreted as maximum width or height if Resolution is greater zero. Since PDF pages can be very large, it is recommended to set the maximum width and height to a value that is low enough so that no out of memory exception occurs, e.g. 5000 x 5000 pixels.
- Resolution == 0 and Width >0 or Height >0: Pages are scaled to the given Width or Height. If Width and Height are greater zero then pages are scaled to that size independent of the original page format (not recommended). It is usually best to set the width or height to zero so that the function can calculate the missing value to preserve the aspect ratio.

On a 32 bit system it is possible to render PDF pages in RGB with up to around 1200 DPI, depending on the page format and available memory. The resolution of gray images can be higher but the encoder must be able to handle such large images. The PNG and bitmap encoders accept images in almost arbitrary resolutions but all other encoders can fail when the resolution is larger than about 2000 DPI.

The function calls the progress events.
Returns true on success or false on failure.

See also RenderPDFFileEx function in DynaPDF manual.

77.39.669 RenderPDFFileExMT(OutFile as folderitem, Resolution as UInt32, Width as Integer, Height as Integer, Flags as UInt32, PixFmt as UInt32, Filter as UInt32, Format as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Renders all PDF pages which are currently in memory and stores the result in a proprietary image format.
Notes:

The pages in memory could be imported from one or more external PDF files, e.g. with ImportPDFFile(), created with DynaPDF functions, or a combination of both.

The parameter OutFile can be a path to an existing directory or the file name of the output image. The latter type can be used with TIFF images because this format supports multi-page output. When a file path is used with a single page image format only the first page will be rendered.

The function checks whether the path is a directory or a file name.
The function can render pages in a specific resolution, or scale them to a given width or height.

Depending on which parameters are set the image size is calculated as follows:

On a 32 bit system it is possible to render PDF pages in RGB with up to around 1200 DPI, depending on the page format and available memory. The resolution of gray images can be higher but the encoder

must be able to handle such large images. The PNG and bitmap encoders accept images in almost arbitrary resolutions but all other encoders can fail when the resolution is larger than about 2000 DPI.

The function calls the progress events.
Returns true on success or false on failure.

Same as RenderPDFFile, but multithreaded.

Requires DynaPDF Pro license.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

77.39.670 RenderPDFFileMT(OutFile as folderitem, Resolution as UInt32, Flags as UInt32, PixFmt as UInt32, Filter as UInt32, Format as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function renders all PDF pages which are currently in memory and stores the result in a proprietary image format.
Deprecated: This item is deprecated and should no longer be used. You can use RenderPDFFileEx instead.
Notes:

Same as RenderPDFFile, but multithreaded.
Also check the dynapdf manual on the pdfRenderPDFFileA function (pdfRenderPDFFileW on Windows).

Requires DynaPDF Pro license.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

77.39.671 ReOpenImportFile(Handle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function re-opens a PDf file so that further contents can be imported from it.
Notes:

The parameter Handle must be a valid file handle that OpenImportFile() or OpenImportBuffer() returned. When the file is no longer needed close the parser instance with CloseImportFileEx().
If the function succeeds the return value is true. If the function fails the return value is false.
See also ReOpenImportFile function in DynaPDF manual.

77.39.672 ReplaceFont(PDFFontRef as Integer, Name as string, Style as integer = 0, NameIsFamilyName as boolean = true) as integer

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces a PDF font with another one.
Notes:

The function can be called in the OnFontNotFound event of the function CheckConformance(). The return value of the event should be the return value of this function. The parameter PDFFontRef is a parameter of the event. The font reference is required and must be passed unchanged to the function.

On Linux or Unix system fonts must be loaded with AddFontSearchPath() before this function can be called. This should be done before the first PDF file is imported.

If the function succeeds the return value is zero. If the function fails the return value is a negative error code.
See also ReplaceFont function in DynaPDF manual.

77.39.673 ReplaceFontAnsi(PDFFontRef as Integer, Name as string, Style as integer = 0, NameIsFamilyName as boolean = true) as integer

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces a PDF font with another one.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

The function can be called in the OnFontNotFound event of the function CheckConformance(). The return value of the event should be the return value of this function. The parameter PDFFontRef is a parameter of the event. The font reference is required and must be passed unchanged to the function.

On Linux or Unix system fonts must be loaded with AddFontSearchPath() before this function can be called. This should be done before the first PDF file is imported.

If the function succeeds the return value is zero. If the function fails the return value is a negative error code.
See also ReplaceFont function in DynaPDF manual.

77.39.674 ReplaceFontEx(PDFFontRef as Integer, FontFile as FolderItem, Embed as boolean = true) as integer

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces a PDF font with another one.
Notes:

The font file can be loaded directly. It is not required to install the font on the system. The function can be called in the OnFontNotFound event of the function CheckConformance(). The return value of the event should be the return value of this function. The parameter PDFFontRef is a parameter of the event. The font reference is required and must be passed unchanged to the function.

If the function succeeds the return value is zero. If the function fails the return value is a negative error code.
See also ReplaceFontEx function in DynaPDF manual.
See also:

- 77.39.675 ReplaceFontEx(PDFFontRef as Integer, FontFilePath as string, Embed as boolean = true) as integer 14948

77.39.675 ReplaceFontEx(PDFFontRef as Integer, FontFilePath as string, Embed as boolean = true) as integer

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces a PDF font with another one.
Notes:

The font file can be loaded directly. It is not required to install the font on the system. The function can be called in the OnFontNotFound event of the function CheckConformance(). The return value of the event should be the return value of this function. The parameter PDFFontRef is a parameter of the event. The font reference is required and must be passed unchanged to the function.

If the function succeeds the return value is zero. If the function fails the return value is a negative error code.
See also ReplaceFontEx function in DynaPDF manual.
See also:

- 77.39.674 ReplaceFontEx(PDFFontRef as Integer, FontFile as FolderItem, Embed as boolean = true) as integer 14948

77.39.676 ReplaceFontExAnsi(PDFFontRef as Integer, FontFilePath as string, Embed as boolean = true) as integer

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces a PDF font with another one.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

The font file can be loaded directly. It is not required to install the font on the system. The function can be called in the OnFontNotFound event of the function CheckConformance(). The return value of the event should be the return value of this function. The parameter PDFFontRef is a parameter of the event. The font reference is required and must be passed unchanged to the function.

If the function succeeds the return value is zero. If the function fails the return value is a negative error code.
See also ReplaceFontEx function in DynaPDF manual.
See also:

- 77.39.674 ReplaceFontEx(PDFFontRef as Integer, FontFile as FolderItem, Embed as boolean = true) as integer 14948
- 77.39.675 ReplaceFontEx(PDFFontRef as Integer, FontFilePath as string, Embed as boolean = true) as integer 14948

77.39.677 ReplaceICCProfile(ColorSpace as Integer, ICCFile as folderitem) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function is used to dynamically create ICC based color spaces within OnReplaceICCProfile event of CheckConformance().
Notes: Use in OnReplaceICCProfile event.
See also ReplaceICCProfile function in DynaPDF manual.

77.39.678 ReplaceICCProfileEx(ColorSpace as integer, ICCFileData as MemoryBlock) as integer

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces an ICC profile exactly in the same way as ReplaceICCProfile() but accepts a file buffer as input.
Notes:

If the function succeeds the return value is zero. If the function fails the return value is a negative error code.

Use in OnReplaceICCProfile event.
See also ReplaceICCProfileEx function in DynaPDF manual.
See also:

- 77.39.679 ReplaceICCProfileEx(ColorSpace as integer, ICCFileData as String) as integer 14950

77.39.679 ReplaceICCProfileEx(ColorSpace as integer, ICCFileData as String) as integer

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces an ICC profile exactly in the same way as ReplaceICCProfile() but accepts a file buffer as input.
Notes:

If the function succeeds the return value is zero. If the function fails the return value is a negative error code.
Use in OnReplaceICCProfile event.
See also ReplaceICCProfileEx function in DynaPDF manual.
See also:

- 77.39.678 ReplaceICCProfileEx(ColorSpace as integer, ICCFileData as MemoryBlock) as integer 14949

77.39.680 ReplaceImage(ImageToReplace as DynaPDFImageMBS, ImageFile as FolderItem, Index as Integer = 1, ColorSpace as Integer = 0, CSHandle as Integer = -1, Flags as Integer = 0) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces an image with another image.
Notes:

The parameter ImageToReplace must be a valid pointer of an image object which is retrieved by functions like GetImageObj() or ParseContent().
The resolution, aspect ratio, color space and so on can be freely chosen. However, note that this function does not change the output position or size. If the aspect ratio of the new image is different, then it will be stretched or shrinked to fit into the output rectangle.
The parameter ColorSpace specifies the destination color space into which the image should be converted or saved, if the image is already defined in that color space. CSHandle must be the handle of that color space if a non-device space is used. The will be ignored for devices spaces.

The function works in the very same way as InsertImageEx() with the following differences:
,Äc The color of an image mask cannot be set or changed because this would require changes on the content stream in which the image is used. An image mask will be created if the image color depth is 1 bit and if color key masking is enabled (see SetUseTransparency()). SetUseTransparency() should normally be set to false before calling this function.

,Äc The image will never be downscaled, independent of the current resolution, because the size of the output rectangle is not known.

If the image that should be replaced is a soft mask of another base image, then make sure that the destination color space is set to kesDeviceGray, kesCalGray, or to a one channel ICC based color space because a soft mask must not contain more than one color channel.
The flags kgfUseImageColorSpace, kgfIgnoreICCProfiles, kgfRealPassThrough, and kfNoBitmapAlpha are all supported. See SetGStateFlags() for further information.

If the function succeeds the return value is true. If the function fails the return value is false.
See also ReplaceImage function in DynaPDF manual.

77.39.681 ReplaceImageEx(ImageToReplace as DynaPDFImageMBS, ImageData as MemoryBlock, Index as Integer = 1, ColorSpace as Integer = 0, CSHandle as Integer = -1, Flags as Integer = 0) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces an image with a new image exactly like ReplaceImage() but accepts a file buffer as input.
Notes:

See ReplaceImage() for further information.

If the function succeeds the return value is 1. If the function fails the return value is 0.
See also ReplaceImageEx function in DynaPDF manual.
See also:

- 77.39.682 ReplaceImageEx(ImageToReplace as DynaPDFImageMBS, ImageData as String, Index as Integer = 1, ColorSpace as Integer = 0, CSHandle as Integer = -1, Flags as Integer = 0) as Boolean 14951

77.39.682 ReplaceImageEx(ImageToReplace as DynaPDFImageMBS, ImageData as String, Index as Integer = 1, ColorSpace as Integer = 0, CSHandle as Integer = -1, Flags as Integer = 0) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces an image with a new image exactly like ReplaceImage() but accepts a file buffer as input.
Notes:

See ReplaceImage() for further information.

If the function succeeds the return value is 1. If the function fails the return value is 0.
See also ReplaceImageEx function in DynaPDF manual.
See also:

- 77.39.681 ReplaceImageEx(ImageToReplace as DynaPDFImageMBS, ImageData as MemoryBlock, Index as Integer = 1, ColorSpace as Integer = 0, CSHandle as Integer = -1, Flags as Integer = 0) as Boolean 14951

77.39.683 ReplacePageText(text as string, stack as DynaPDFStackMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function deletes or replaces a text string of a content stream that was found by the function GetPageText() beforehand.
Notes:

Be aware that ReplacePageText can't always replace text as encoding must match and fonts may not have the characters for the new text. For that better use ReplacePageTextEx.

If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs.
Requires DynaPDF Pro license.
See also ReplacePageText function in DynaPDF manual.

77.39.684 ReplacePageTextEx(text as string, stack as DynaPDFStackMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function deletes or replaces a text string of a content stream that was found by the function GetPageText() beforehand.
Notes:

The text parameter is converted to unicode.

If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs.
Requires DynaPDF Pro license.
See also ReplacePageTextEx function in DynaPDF manual.

77.39.685 ReplacePageTextExAnsi(text as string, stack as DynaPDFStackMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function deletes or replaces a text string of a content stream that was found by the function GetPageText() beforehand.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

The text parameter is converted to ANSI.
Requires DynaPDF Pro license.
See also ReplacePageTextEx function in DynaPDF manual.

77.39.686 ResetAnnotAP(Handle as integer = -1) as Boolean

MBS DynaPDF Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Forces a rebuild of the appearance stream of the specified annotation.
Notes: If Handle is set to -1 all annotation appearances will be rebuild. This function be useful if an imported annotation has an invalid or empty appearance stream.
See also ResetAnnotAP function in DynaPDF manual.

77.39.687 ResetEncryptionSettings as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resets the encryption settings which were imported from an external PDF file so that the PDF file in memory can be saved unencrypted.
Notes: If the function succeeds the return value is true. If the function fails the return value is false.
See also ResetEncryptionSettings function in DynaPDF manual.

77.39.688 ResetLineDashPattern as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function resets a previously defined line dash pattern to its default value (straight line).
See also ResetLineDashPattern function in DynaPDF manual.

77.39.689 RestoreGraphicState as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function restores a previously saved graphics state.
See also RestoreGraphicState function in DynaPDF manual.

77.39.690 RGB(R as Integer, G as Integer, B as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Builds a RGB color value based on the given component values.
Example:

```
dim rgb as Integer = DynaPDFMBS.RGB(1,2,3)
MsgBox hex(rgb)
```

77.39.691 RofRGB(RGB as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns R of a RGB color value.
Example:

```
dim rgb as Integer = DynaPDFMBS.RGB(1,2,3)
MsgBox str(DynaPDFMBS.RofRGB(rgb)) // shows 1
```

77.39.692 RotateCoords(alpha as Double, OriginX as Double, OriginY as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function rotates the coordinate system at the point OriginX, OriginY by applying a transformation matrix.
Notes: Please do not try to scale/skew/translate back later. use SaveGraphicState and RestoreGraphicState.
See also RotateCoords function in DynaPDF manual.

77.39.693 RotateTemplate(OldTemplate as Integer, Rotation as Integer, RotateCoords as boolean = true) as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates a template.
Notes:

Returns a new template handle.
This is a convenience function which creates a new template and draws the existing template there with rotation.

Returns negative number for errors. The plugin uses -1 for plugin errors like wrong rotation angle.

RotateCoords: Whether to rotate coordinate system.
This is now done by DynaPDF automatically, so for current version of the library, this must be false. But older versions need the true.

77.39.694 RoundRect(PosX as Double, PosY as Double, Width as Double, Height as Double, Radius as Double, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function draws a rectangle with rounded corners.
Example:

```
dim pdf as new DynaPDFMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("Create PDF with Round Rectangles.pdf")

pdf.SetLicenseKey "Starter" // For this example you can use a Starter, Lite, Pro or Enterprise License

call pdf.CreateNewPDF f
call pdf.Append

dim PosX as Double = 100.0
dim PosY as Double = 100.0
dim Width as Double = 100.0
dim Height as Double = 100.0
dim Radius as Double = 20.0
dim FillMode as Integer = pdf.kfmFill

call pdf.RoundRect(PosX, PosY, Width, Height, Radius, FillMode)

PosX = 300.0
dim RadiusX as Double = 30.0
dim RadiusY as Double = 30.0

call pdf.RoundRectEx(PosX, PosY, Width, Height, RadiusX, RadiusY, FillMode)

call pdf.EndPage
call pdf.CloseFile

f.Launch
```

See also RoundRect function in DynaPDF manual.

77.39.695 RoundRectEx(PosX as Double, PosY as Double, Width as Double, Height as Double, rWidth as Double, rHeight as Double, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function draws a rectangle with elliptical corners.
Example:

```
dim pdf as new DynaPDFMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("Create PDF with Round Rectangles.pdf")

pdf.SetLicenseKey "Starter" // For this example you can use a Starter, Lite, Pro or Enterprise License

call pdf.CreateNewPDF f
call pdf.Append

dim PosX as Double = 100.0
dim PosY as Double = 100.0
dim Width as Double = 100.0
dim Height as Double = 100.0
dim Radius as Double = 20.0
dim FillMode as Integer = pdf.kfmFill

call pdf.RoundRect(PosX, PosY, Width, Height, Radius, FillMode)

PosX = 300.0
dim RadiusX as Double = 30.0
dim RadiusY as Double = 30.0

call pdf.RoundRectEx(PosX, PosY, Width, Height, RadiusX, RadiusY, FillMode)

call pdf.EndPage
call pdf.CloseFile

f.Launch
```

See also RoundRectEx function in DynaPDF manual.

77.39.696 SaveGraphicState as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function saves the current graphics state.
See also SaveGraphicState function in DynaPDF manual.

77.39.697 ScaleCoords(sx as Double, sy as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function scales the coordinate system by applying a transformation matrix.
Notes: Please do not try to scale/skew/translate back later. use SaveGraphicState and RestoreGraphicState.
See also ScaleCoords function in DynaPDF manual.

77.39.698 SelfTest as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function checks the size of all required data types and checks whether the endian configuration of the library is correct.
See also SelfTest function in DynaPDF manual.

77.39.699 Set3DAnnotProps(Annot as Integer, ActType as Integer, DeActType as Integer, InstType as Integer, DeInstType as Integer, DisplayToolbar as boolean, DisplayModelTree as boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the properties of a 3D Annotation.
See also Set3DAnnotProps function in DynaPDF manual.

77.39.700 Set3DAnnotScriptAnsi(Annot as Integer, Value as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the 3D Annoation Script.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. See also Set3DAnnotScript function in DynaPDF manual.

77.39.701 SetAllocBy(Value as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the size of the memory blocks in kilo bytes, which will be allocated if memory must be allocated for page content streams.
See also SetAllocBy function in DynaPDF manual.

77.39.702 SetAltFonts(FontListHandle as Integer, List() as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills an alternate font list created by CreateAltFontList() with data.
Notes:

Alternate font list are tested if one more glyphs were not found in the current font. Since the fonts in the list are used as fallback they should be compatible to the active font in regard to properties like serif, sans serif, proportional or fixed pitch, and so on.
A list should be sorted by priority and not by name. That means index 0 should contain a font name that is most probably the best match. If this one was not available or incompatible then the next font in the list will be tested until the end of the list was reached. If no suitable font was found then system fonts are tested.
The fonts in the list should support the language that must be output. Otherwise, the fonts can never be selected. An alternate font list can be arbitrary large but it is usually best to restrict the number fonts in a list to speed up processing.
A list can contain font names which are not available on the system. This causes no error. Non existing fonts are simply ignored. This makes it possible to define suitable alternate font lists statically. Such lists can then be loaded on demand.
After a list was filled with data it can be activated with ActivateAltFontList(). If a list is no longer needed delete it with DeleteAltFontList().

Please note that alternate font lists are used only, if complex text layout was enabled. This can be done by setting the flag kgfComplexText with SetGStateFlags().

Returns true on success.
See also SetAltFonts function in DynaPDF manual.

77.39.703 SetAnnotBorderEffect(Handle as Integer, BorderEffect as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the border effect for an annotation.
Notes:

Returns true on success.
Handle is in range of 0 to number of annotations - 1.
See also SetAnnotBorderEffect function in DynaPDF manual.

77.39.704 SetAnnotBorderStyle(Handle as Integer, BorderStyle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the annotation border style.
See also SetAnnotBorderStyle function in DynaPDF manual.

77.39.705 SetAnnotBorderWidth(Handle as Integer, LineWidth as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the annotation border width.
See also SetAnnotBorderWidth function in DynaPDF manual.

77.39.706 SetAnnotColor(Handle as Integer, ColorType as Integer, PDFColorSpace as Integer, ColorValue as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the annotation color.
See also SetAnnotColor function in DynaPDF manual.

77.39.707 SetAnnotFlags(Flags as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the default flags used for newly created annotations.
See also SetAnnotFlags function in DynaPDF manual.

77.39.708 SetAnnotFlagsEx(Handle as Integer, Flags as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the annotation flags.
See also SetAnnotFlagsEx function in DynaPDF manual.

77.39.709 SetAnnotHighlightMode(Handle as Integer, HighlightMode as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the annotation highlight mode.
See also SetAnnotHighlightMode function in DynaPDF manual.

77.39.710 SetAnnotIcon(Handle as Integer, AnnotIcon as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the annotation icon.
See also SetAnnotIcon function in DynaPDF manual.

77.39.711 SetAnnotLineDashPattern(Handle as UInt32, dash as memoryblock, NumValues as integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets or deletes the line dash pattern of an annotation.
Notes:

The following annotation types support line dash patterns:

- atCircle
- atInk
- atLine
- atPolygon
- atPolyLine
- atSquare

Memoryblock must contain floating point values (Single).
Returns true on success.

If array is nil, the pattern is removed.
See also SetAnnotLineDashPattern function in DynaPDF manual.
See also:

- 77.39.712 SetAnnotLineDashPattern(Handle as UInt32, dash() as single) as Boolean

77.39.712 SetAnnotLineDashPattern(Handle as UInt32, dash() as single) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets or deletes the line dash pattern of an annotation.
Notes:

The following annotation types support line dash patterns:

- atCircle
- atInk
- atLine
- atPolygon
- atPolyLine
- atSquare

Returns true on success.

If array is nil, the pattern is removed.
See also SetAnnotLineDashPattern function in DynaPDF manual.
See also:

- 77.39.711 SetAnnotLineDashPattern(Handle as UInt32, dash as memoryblock, NumValues as integer) as Boolean 14960

77.39.713 SetAnnotLineEndStyle(Handle as UInt32, StartLineStyle as Integer, EndLineStyle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or changes the line end styles of a Line or PolyLine Annotation.
Notes: If the function succeeds the return value is true. If the function fails the return value is false.
See also SetAnnotLineEndStyle function in DynaPDF manual.

77.39.714 SetAnnotMigrationState(Handle as Integer, State as Integer, Name as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a migration state to a markup annotation.
Notes:

All annotation types with exception of 3D, Link, Movie, Screen, PrinterMark, TrapNet, and Watermark are markup annotations.
Migration states are stored in text annotations as reply to the base annotation. Further states are stored as reply to the last reply; the result is a single linked list. Because the base annotation contains no reference to the last reply or migration state the function must search for it. To speed upÔøºprocessing the function returns the handle of the text annotation so that the next state can directly be added to this annotation.

The migration state is defined since PDF 1.5. The function adjusts the PDF version automatically if it is lower than PDF 1.5.

If the function succeeds the return value is the handle of the text annotation, a value greater or equal zero. If the function fails the return value is a negative error code.

State can be kasNone, kasAccepted, kasRejected, kasCancelled, kasCompleted.
See also SetAnnotMigrationState function in DynaPDF manual.

77.39.715 SetAnnotMigrationStateAnsi(Handle as Integer, State as Integer, Name as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a migration state to a markup annotation.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

All annotation types with exception of 3D, Link, Movie, Screen, PrinterMark, TrapNet, and Watermark are markup annotations.
Migration states are stored in text annotations as reply to the base annotation. Further states are stored as reply to the last reply; the result is a single linked list. Because the base annotation contains no reference to the last reply or migration state the function must search for it. To speed upÔøºprocessing the function returns the handle of the text annotation so that the next state can directly be added to this annotation.

The migration state is defined since PDF 1.5. The function adjusts the PDF version automatically if it is lower than PDF 1.5.

If the function succeeds the return value is the handle of the text annotation, a value greater or equal zero. If the function fails the return value is a negative error code.

State can be kasNone, kasAccepted, kasRejected, kasCancelled, kasCompleted.
See also SetAnnotMigrationState function in DynaPDF manual.

77.39.716 SetAnnotOpacity(Handle as Integer, opacity as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the opacity of a markup annotation.
Notes:

The function GetAnnotEx() or GetPageAnnotEx() can be used to determine whether an annotation is a markup annotation.

Returns true on succes or false on failure.
See also SetAnnotOpacity function in DynaPDF manual.

77.39.717 SetAnnotOpenState(Handle as Integer, Open as Boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the annotation open state.
See also SetAnnotOpenState function in DynaPDF manual.

77.39.718 SetAnnotOrFieldDate(CSHandle as UInt32, IsField as Boolean, Type as Integer, DateTime as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or changes the creation or modification date of an annotation or form field.
Notes:

If the parameter IsField is set to true, a valid field handle must be passed to the parameter Handle. An annotation handle is expected otherwise.
Annotations and form fields support a modification date but a creation date is supported by markup annotations only.
The following annotation types are markup annotations:

- Care
- Circle
- FileAttach
- FreeText

- Highlight, Squiggly, Strikeout, Underline
- Ink
- Line
- Polygon
- Projection
- Redact
- Sound
- Square
- Stamp
- Text

The function GetAnnotEx() or GetPageAnnotEx() can also be used to determine whether an annotation is a markup annotation.

If the function succeeds the return value is 1. If the function fails the return value is 0.
See also SetAnnotOrFieldDate function in DynaPDF manual.

77.39.719 SetAnnotQuadPoints(Handle as UInt32, points() as DynaPDFPointMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets or changes the quad points defintion of a Highlight, Link, Redakt, Squiggly, atStrikeOut, or Underline annotation.
Notes:

The function must be called within an open page.
Independent of the used coordinate system (bottom up or top down), the points must be defined in the following order:
x1,y1 x3,y3
x2,y2 x4,y4
Ôøº
The coordinates of the vertices are interpreted in current user space. Any transformation that was applied on the coordinate system will be taken into account.
The number of points must be 4 or a multiple of 4.

Returns true on success.
See also SetAnnotQuadPoints function in DynaPDF manual.

77.39.720 SetAnnotString(Handle as Integer, StringType as Integer, Value as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a stamp annotation.
See also SetAnnotString function in DynaPDF manual.

77.39.721 SetAnnotStringAnsi(Handle as Integer, StringType as Integer, Value as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a stamp annotation.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. See also SetAnnotString function in DynaPDF manual.

77.39.722 SetAnnotSubject(Handle as Integer, Value as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or changes the optional subject string of an annotation.
Notes: The value parameter is converted to unicode.
See also SetAnnotSubject function in DynaPDF manual.

77.39.723 SetAnnotSubjectAnsi(Handle as Integer, Value as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or changes the optional subject string of an annotation.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The value parameter is converted to ANSI.
See also SetAnnotSubject function in DynaPDF manual.

77.39.724 SetBBox(Boundary as Integer, LeftX as Double, LeftY as Double, RightX as Double, RightY as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets a specific bounding box of the current open PDF page.
See also SetBBox function in DynaPDF manual.

77.39.725 SetBidiMode(BidiMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or changes the bidirectional mode.
See also SetBidiMode function in DynaPDF manual.

77.39.726 SetBlack(FillColor as Boolean, StrokeColor as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets black color.
Notes:

This function is a bit optimized to check the current color space.
Depending on whether it's RGB, Gray, CMYK or Lab, it will set different color values.
And if other color space is active, it switches to Gray colorspace to set black.

77.39.727 SetBookmarkDest(ABmk as Integer, DestType as Integer, a as Double, b as Double, c as Double, d as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or changes the destination of a bookmark.
See also SetBookmarkDest function in DynaPDF manual.

77.39.728 SetBookmarkStyle(ABmk as Integer, Style as Integer, RGBColor as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the bookmark style.
See also SetBookmarkStyle function in DynaPDF manual.

77.39.729 SetBorderStyle(Style as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function set the global border style which is used for newly created form fields.
See also SetBorderStyle function in DynaPDF manual.

77.39.730 SetCharacterSpacing(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the current character spacing. The function requires an open page, template or pattern.
See also SetCharacterSpacing function in DynaPDF manual.

77.39.731 SetCheckBoxChar(CheckBoxChar as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the character which should be used for newly created check boxes.
See also SetCheckBoxChar function in DynaPDF manual.

77.39.732 SetCheckBoxDefState(Field as Integer, Checked as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function changes the default state of a check box; it can differ from the current visible state of the check box.
See also SetCheckBoxDefState function in DynaPDF manual.

77.39.733 SetCheckBoxState(Field as Integer, Checked as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the state of a check box. The parameter Field must be a valid check box handle.
See also SetCheckBoxState function in DynaPDF manual.

77.39.734 SetCIDFont(CMapHandle as Integer, Name as string, Style as Integer, Size as Double, Embed as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a CID Font.
See also SetCIDFont function in DynaPDF manual.

77.39.735 SetCMapDir(path as folderitem, flags as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the character map directory.
Example:

```
dim pdf as DynaPDFMBS // your dynapdf instance
call pdf.SetCMapDir SpecialFolder.Desktop.Child("CMAP"), 3
```

Notes:

Takes an integer instead of a boolean starting with plugin version 11.2pr6.
See klcmDefault, klcmDelayed and klcmRecursive constants.
Requires DynaPDF Pro license.
See also SetCMapDir function in DynaPDF manual.
See also:

- 77.39.736 SetCMapDir(path as string, flags as Integer) as Integer 14968

77.39.736 SetCMapDir(path as string, flags as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the character map directory.
Example:

```
dim pdf as DynaPDFMBS // your dynapdf instance
call pdf.SetCMapDir SpecialFolder.Desktop.Child("CMAP"), pdf.klcmRecursive
```

Notes:

Takes an integer instead of a boolean starting with plugin version 11.2pr6.
See klcmDefault, klcmDelayed and klcmRecursive constants.
Requires DynaPDF Pro license.
See also SetCMapDir function in DynaPDF manual.
See also:

- 77.39.735 SetCMapDir(path as folderitem, flags as Integer) as Integer 14968

77.39.737 SetColDefFile(EmbFile as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the initial document of a portable collection that should be opened in the viewer application. See also CreateCollection().
See also SetColDefFile function in DynaPDF manual.

77.39.738 SetColorMask(ImageHandle as Integer, Mask as Ptr, Count as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The functions sets or overrides the color mask of an image.
Notes: See also SetColorMask function in dynapdf_help.pdf manual.
See also SetColorMask function in DynaPDF manual.
See also:

- 77.39.739 SetColorMask(ImageHandle as Integer, Mask() as Integer) as boolean 14969

77.39.739 SetColorMask(ImageHandle as Integer, Mask() as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The functions sets or overrides the color mask of an image.
Notes:

Same as other SetColorMask function, but values are taken from array.
See also SetColorMask function in dynapdf_help.pdf manual.
See also SetColorMask function in DynaPDF manual.
See also:

- 77.39.738 SetColorMask(ImageHandle as Integer, Mask as Ptr, Count as UInt32) as boolean 14969

77.39.740 SetColors(ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the fill and stroke color.
See also SetColors function in DynaPDF manual.

77.39.741 SetColorSpace(ColorSpace as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the color space.
Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// get the colorspace of the image file
const DP_csDeviceRGB=0
const DP_csDeviceCMYK=1
const DP_csDeviceGray=2

dim iColorSpace as Integer

iColorSpace=DP_csDeviceRGB

// define color space
bBool=pdf.SetColorSpace(iColorSpace)
```

See also SetColorSpace function in DynaPDF manual.

77.39.742 SetColSortField(ColField as Integer, AscendingOrder as boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the collection field that should be used to sort the list of embedded files.
See also SetColSortField function in DynaPDF manual.

77.39.743 SetCompressionFilter(Filter as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the compression filter which is used to compress images.
Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// set compression filter
bBool = pdf.SetCompressionFilter(pdf.kcfJPEG)
```

Notes: Use kcfCCITT3, kcfCCITT4, kcfFlate, kcfFlateBW, kcfJP2K, kcfJPEG or kcfLZW constants.
See also SetCompressionFilter function in DynaPDF manual.

77.39.744 SetCompressionLevel(CompressLevel as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the current compression level.
See also SetCompressionLevel function in DynaPDF manual.

77.39.745 SetContent(buffer as memoryblock) as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function replaces the content stream of the currently open page or template with a new one.
See also SetContent function in DynaPDF manual.
See also:

- 77.39.746 SetContent(buffer as string) as Boolean 14971

77.39.746 SetContent(buffer as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function replaces the content stream of the currently open page or template with a new one.
See also SetContent function in DynaPDF manual.
See also:

- 77.39.745 SetContent(buffer as memoryblock) as Boolean 14971

77.39.747 SetDateTimeFormat(TxtField as Integer, Fmt as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function restricts the allowed value of a text field to a date time format and applies this format if the value was valid.
See also SetDateTimeFormat function in DynaPDF manual.

77.39.748 SetDefBitsPerPixel(value as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the default color depth in bits per pixel, which determines whether images should be downsampled.
See also SetDefBitsPerPixel function in DynaPDF manual.

77.39.749 SetDocInfo(DInfo as Integer, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function set or changes a document info entry.
Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean
dim source as FolderItem // source pdf file?

const diAuthor=0
const diCreator=1
const diKeywords=2
const diProducer=3
const diSubject=4
const diTitle=5

// Define some pdf properties:
bBool=pdf.SetDocInfo(diAuthor, SystemInformationMBS.Username)
bBool=pdf.SetDocInfo(diCreator, "SysProgName"+" - "+"MetSysProgVer")
bBool=pdf.SetDocInfo(diKeywords, "")
bBool=pdf.SetDocInfo(diProducer, "SysProgName"+" - "+"MetSysProgVer")
bBool=pdf.SetDocInfo(diSubject, "")
bBool=pdf.SetDocInfo(diTitle, source.name)
```

Notes: The text parameter is converted to unicode.
See also SetDocInfo function in DynaPDF manual.

77.39.750 SetDocInfoAnsi(DInfo as Integer, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function set or changes a document info entry.

Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean
dim source as FolderItem // source pdf file?

const diAuthor=0
const diCreator=1
const diKeywords=2
const diProducer=3
const diSubject=4
const diTitle=5

// Define some pdf properties:
bBool=pdf.SetDocInfoAnsi(diAuthor, SystemInformationMBS.Username)
bBool=pdf.SetDocInfoAnsi(diCreator, "SysProgName"+" - "+"MetSysProgVer")
bBool=pdf.SetDocInfoAnsi(diKeywords, "")
bBool=pdf.SetDocInfoAnsi(diProducer, "SysProgName"+" - "+"MetSysProgVer")
bBool=pdf.SetDocInfoAnsi(diSubject, "")
bBool=pdf.SetDocInfoAnsi(diTitle, source.name)
```

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text parameter is converted to ANSI.
See also SetDocInfo function in DynaPDF manual.

77.39.751 SetDocInfoEx(DInfo as Integer, Key as string, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function set or changes a document info entry.
Notes: The Text parameter is converted to unicode.
See also SetDocInfoEx function in DynaPDF manual.

77.39.752 SetDocInfoExAnsi(DInfo as Integer, Key as string, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function set or changes a document info entry.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function

instead. **Notes:** The Text parameter is converted to ANSI.
See also SetDocInfoEx function in DynaPDF manual.

77.39.753 SetDrawDirection(Direction as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the draw direction of closed vector graphics such as rectangles, ellipses, triangles and so on.
See also SetDrawDirection function in DynaPDF manual.

77.39.754 SetEMFFrameDPI(DPIX as Integer, DPIY as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function can be used to adjust DPI value which is used to calculate the picture size of an EMF file.
See also SetEMFFrameDPI function in DynaPDF manual.

77.39.755 SetEMFPatternDistance(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the default distance between lines of standard patterns during EMF conversion.
See also SetEMFPatternDistance function in DynaPDF manual.

77.39.756 SetErrorMode(ErrMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The error mode specifies which error types should be treated as fatal error.
See also SetErrorMode function in DynaPDF manual.

77.39.757 SetExtColorSpace(Handle as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function activates an extended color space in the graphics state.
Notes: Requires DynaPDF Pro license.

See also SetExtColorSpace function in DynaPDF manual.

77.39.758 SetExtFillColorSpace(Handle as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the colorspace for filling.
Notes:

Pass Colorspace handle like for SetExtColorSpace.
Requires DynaPDF Pro license.
See also SetExtFillColorSpace function in DynaPDF manual.

77.39.759 SetExtGState(Handle as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function applies an extended graphics state.
See also SetExtGState function in DynaPDF manual.

77.39.760 SetExtStrokeColorSpace(Handle as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the colorspace for filling.
Notes:

Pass Colorspace handle like for SetExtColorSpace.
Requires DynaPDF Pro license.
See also SetExtStrokeColorSpace function in DynaPDF manual.

77.39.761 SetFieldBackColor(ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the background color used for newly created interactive form fields and annotations.
See also SetFieldBackColor function in DynaPDF manual.

77.39.762 SetFieldBBox(Handle as Integer, rect as DynaPDFRectMBS) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the bounding box of a field.
See also SetFieldBBox function in DynaPDF manual.

77.39.763 SetFieldBorderColor(ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the border color used for newly created interactive form fields and annotations.
See also SetFieldBorderColor function in DynaPDF manual.

77.39.764 SetFieldBorderStyle(Field as Integer, Style as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the border style of a specific Interactive Form field.
See also SetFieldBorderStyle function in DynaPDF manual.

77.39.765 SetFieldBorderWidth(Field as Integer, LineWidth as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function can be used to change the border width of a field.
See also SetFieldBorderWidth function in DynaPDF manual.

77.39.766 SetFieldCalcOrder(CurrIndex as UInt32, NewIndex as UInt32) as Boolean

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves a field in the global calc order array.
Notes:

This is the order in which field values will be recalculated when the value of any field changes.
The current calc order can be accessed with GetFieldCalcOrder(). The calc order array contains field handles. A field handle is a simple array index.

Returns true on success.

See also SetFieldCalcOrder function in DynaPDF manual.

77.39.767 SetFieldColor(Field as Integer, ColorType as Integer, ColorSpace as Integer, ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets a specific color of an interactive form field.
See also SetFieldColor function in DynaPDF manual.

77.39.768 SetFieldExpValue(Field as Integer, ValIndex as Integer, Value as string, ExpValue as string, Selected as boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function can be used to change the choice values of a combo box, list box, or radio button.
See also SetFieldExpValue function in DynaPDF manual.

77.39.769 SetFieldExpValueAnsi(Field as Integer, ValIndex as Integer, Value as string, ExpValue as string, Selected as boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function can be used to change the choice values of a combo box, list box, or radio button.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. See also SetFieldExpValue function in DynaPDF manual.

77.39.770 SetFieldExpValueEx(Field as Integer, ValIndex as Integer, Selected as boolean, DefSelected as boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function marks a choice value of a combo or list box as selected or unselected.
Notes:

It can also be used to change the state of check boxes or the children of a radio button. The parameter ValIndex will be ignored if the field is a normal check box (no child of a redio button or field group).

To enumerate the choice values of a combo box, list box or radio button use the function GetFieldExpValueEx().

Return value:
If the function succeeds the return value is true. If the function fails the return value is false.

See also SetFieldExpValueEx function in DynaPDF manual.

77.39.771 SetFieldFlags(Field as Integer, Flags as Integer, Reset as boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the flags of a specific interactive form field.
Example:

```
Dim pdf As DynapdfMBS // your PDF environment with open page

// create field on current page
Dim Field1 As Integer = pdf.CreateTextField("Field1", -1, True, 0, 50.0, 100, 200.0, 100.0)

// and fill value
Call pdf.SetTextFieldValue(Field1, "Hello", "", pdf.ktaLeft)

// make a field the user should not mess up with
Dim Flags As Integer
flags = Bitwise.BitOr(pdf.kffNoView, pdf.kffInvisible, pdf.kffHidden, pdf.kffReadOnly)
Call pdf.SetFieldFlags(field1, flags, False)
```

See also SetFieldFlags function in DynaPDF manual.

77.39.772 SetFieldFont(Field as Integer, Name as string, Style as Integer = 0, Size as double = 12, Embed as boolean = true, CodePage as integer = & h27) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or changes the font of a form field.
Notes: See documentation of SetFieldFont function in dynapdf_help manual file for details.
See also SetFieldFont function in DynaPDF manual.

77.39.773 SetFieldFontAnsi(Field as Integer, Name as string, Style as Integer = 0, Size as Double = 12, Embed as boolean = true, CodePage as Integer = & h27) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or changes the font of a form field.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** See documentation of SetFieldFont function in dynapdf_help manual file for details.
See also SetFieldFont function in DynaPDF manual.

77.39.774 SetFieldFontEx(Field as UInt32, Handle as UInt32, FontSize as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or replaces the font of a field.
Notes:

The function requires a font handle that was returned by SetFieldFont.
Returns true on success and false on failure.
See also SetFieldFontEx function in DynaPDF manual.

77.39.775 SetFieldFontSize(aField as Integer, FontSize as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the font size of a specific field.
See also SetFieldFontSize function in DynaPDF manual.

77.39.776 SetFieldHighlightMode(Field as Integer, HighlightMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the highlight mode of a specific field.
See also SetFieldHighlightMode function in DynaPDF manual.

77.39.777 SetFieldIndex(Field as Integer, Index as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function can be used to set the tab order of interactive form fields.
See also SetFieldIndex function in DynaPDF manual.

77.39.778 SetFieldMapName(Field as Integer, Name as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or changes the mapping name of a field.
Notes: The parameter name is converted to unicode.
See also SetFieldMapName function in DynaPDF manual.

77.39.779 SetFieldMapNameAnsi(Field as Integer, Name as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or changes the mapping name of a field.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The parameter name is converted to ANSI.
See also SetFieldMapName function in DynaPDF manual.

77.39.780 SetFieldName(Field as Integer, NewName as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the name of an interactive form field.
See also SetFieldName function in DynaPDF manual.

77.39.781 SetFieldNameAnsi(Field as Integer, NewName as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the name of an interactive form field.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text parameter is converted to ANSI.
See also SetFieldName function in DynaPDF manual.

77.39.782 SetFieldOrientation(Field as Integer, Value as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or changes the orientation of a field.
See also SetFieldOrientation function in DynaPDF manual.

77.39.783 SetFieldTextAlign(Field as Integer, Align as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function set or changes the text alignment of a text or button field.
See also SetFieldTextAlign function in DynaPDF manual.

77.39.784 SetFieldTextColor(ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the text color which is used for newly created interactive form fields.
See also SetFieldTextColor function in DynaPDF manual.

77.39.785 SetFieldToolTip(Field as Integer, Value as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function set or changes the tool tip or description string of an interactive form field.
Notes: The value parameter is converted to unicode.
See also SetFieldToolTip function in DynaPDF manual.

77.39.786 SetFieldToolTipAnsi(Field as Integer, Value as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function set or changes the tool tip or description string of an interactive form field.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The value parameter is converted to ANSI.
See also SetFieldToolTip function in DynaPDF manual.

77.39.787 SetFillColor(ColorValue as Color) as Boolean

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the fill color.
Notes:

Raises an exception if current color space is CMYK or Gray and not RGB.
The parameter Color must be defined in the current color space.
See also SetFillColor function in DynaPDF manual.
See also:

- 77.39.788 SetFillColor(ColorValue as Integer) as Boolean 14982
- 77.39.789 SetFillColor(values() as Double) as boolean 14983
- 77.39.790 SetFillColor(values() as single) as boolean 14984

77.39.788 SetFillColor(ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the fill color.
Example:

```
// new DynaPDF Object. Use your own subclass to catch errors in error event
dim pdf as new DynaPDFMBS

// For this example you can use a Starter, Lite, Pro or Enterprise License
pdf.SetLicenseKey "Starter"

// destination pdf file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

// create new pdf document
call pdf.CreateNewPDF f

// add new page
call pdf.append

// set red text color
call pdf.SetFillColor pdf.RGB(255,0,0)

// set font
call pdf.SetFont "Times", pdf.kfsItalic, 40.0, true, pdf.kcp1252

// write some text
call pdf.WriteFText pdf.ktaCenter, "My first PDF!"

// close page
call pdf.EndPage

// close file
call pdf.CloseFile
```

```
// open in users preferred PDF viewer application
f.Launch
```

Notes: The parameter Color must be defined in the current color space.
See also SetFillColor function in DynaPDF manual.
See also:

- 77.39.787 SetFillColor(ColorValue as Color) as Boolean 14981
- 77.39.789 SetFillColor(values() as Double) as boolean 14983
- 77.39.790 SetFillColor(values() as single) as boolean 14984

77.39.789 SetFillColor(values() as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets fill color based on an array of floats.
Example:

```
// new DynaPDF Object. Use your own subclass to catch errors in error event
dim pdf as new DynaPDFMBS

// For this example you can use a Starter, Lite, Pro or Enterprise License
pdf.SetLicenseKey "Starter"

// destination pdf file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

// create new pdf document
call pdf.CreateNewPDF f

// add new page
call pdf.append

// set blue text color with values in memoryblock
dim colorvalues() as Double = array(0.0, 1.0, 0.0)
call pdf.SetFillColor colorvalues

// set font
call pdf.SetFont "Times", pdf.kfsItalic, 40.0, true, pdf.kcp1252

// write some text
call pdf.WriteFText pdf.ktaCenter, "My first PDF!"

// close page
call pdf.EndPage
```

```
// close file
call pdf.CloseFile

// open in users preferred PDF viewer application
f.Launch
```

Notes: The number of components must match.
See also SetFillColor function in DynaPDF manual.
See also:

- 77.39.787 SetFillColor(ColorValue as Color) as Boolean 14981
- 77.39.788 SetFillColor(ColorValue as Integer) as Boolean 14982
- 77.39.790 SetFillColor(values() as single) as boolean 14984

77.39.790 SetFillColor(values() as single) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets fill color based on an array of floats.
Notes: The number of components must match.
See also SetFillColor function in DynaPDF manual.
See also:

- 77.39.787 SetFillColor(ColorValue as Color) as Boolean 14981
- 77.39.788 SetFillColor(ColorValue as Integer) as Boolean 14982
- 77.39.789 SetFillColor(values() as Double) as boolean 14983

77.39.791 SetFillColorEx(colorvalues as memoryblock, count as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the fill color using the values in parameters.
Example:

```
// new DynaPDF Object. Use your own subclass to catch errors in error event
dim pdf as new DynaPDFMBS

// For this example you can use a Starter, Lite, Pro or Enterprise License
pdf.SetLicenseKey "Starter"

// destination pdf file
```

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

// create new pdf document
call pdf.CreateNewPDF f

// add new page
call pdf.append

// set blue text color with values in memoryblock
dim m as new MemoryBlock(3)
m.Byte(0) = 0
m.Byte(1) = 0
m.Byte(2) = 255
call pdf.SetFillColorEx m,3

// set font
call pdf.SetFont "Times", pdf.kfsItalic, 40.0, true, pdf.kcp1252

// write some text
call pdf.WriteFText pdf.ktaCenter, "My first PDF!"

// close page
call pdf.EndPage

// close file
call pdf.CloseFile

// open in users preferred PDF viewer application
f.Launch
```

Notes: Pass as many color values as needed for the current color space. 3 for RGB, 4 for CMYK. All values must be in the range of 0 to 255.
See also SetFillColorEx function in DynaPDF manual.
See also:

- 77.39.792 SetFillColorEx(ParamArray colorvalue as Integer) as Boolean 14985

77.39.792 SetFillColorEx(ParamArray colorvalue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the fill color using the values in parameters.
Example:

```
// new DynaPDF Object. Use your own subclass to catch errors in error event
dim pdf as new DynaPDFMBS
```

```
// For this example you can use a Starter, Lite, Pro or Enterprise License
pdf.SetLicenseKey "Starter"

// destination pdf file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

// create new pdf document
call pdf.CreateNewPDF f

// add new page
call pdf.append

// set red text color
call pdf.SetFillColorEx 255,0,0

// set font
call pdf.SetFont "Times", pdf.kfsItalic, 40.0, true, pdf.kcp1252

// write some text
call pdf.WriteFText pdf.ktaCenter, "My first PDF!"

// close page
call pdf.EndPage

// close file
call pdf.CloseFile

// open in users preferred PDF viewer application
f.Launch
```

Notes: Pass as many color values as needed for the current color space. 3 for RGB, 4 for CMYK. All values must be in the range of 0 to 255.
See also SetFillColorEx function in DynaPDF manual.
See also:

- 77.39.791 SetFillColorEx(colorvalues as memoryblock, count as Integer) as Boolean 14984

77.39.793 SetFillColorSpace(Colorspace as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the fill color space.
See also SetFillColorSpace function in DynaPDF manual.

77.39.794 SetFloatPrecision(NumTextDecDigits as UInt32, NumVectDecDigits as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the output precision of text and vector coordinates.
Notes:

The default precision for text and vector graphics is two decimal digits. This corresponds to 7200 DPI. The output precision of bezier curves is one higher as for vector graphics. The maximum output precision is 5 decimal digits.
Note that higher values increase the resulting file size.

NumTextDecDigits: Number decimal digits for text object.
NumVectDecDigits: Number of decimal digits for vector objects.

Returns boolean, true for success.
See also SetFloatPrecision function in DynaPDF manual.

77.39.795 SetFont(Name as string, Style as Integer = 0, Size as Double = 12, Embed as boolean = true, CP as Integer = & h27) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function loads a font that can be used for text output and interactive form fields.
Notes:

The name parameter is converted to unicode.

If font is not found by name, please check SetFontSelMode function.
See also SetFont function in DynaPDF manual.

77.39.796 SetFontAnsi(Name as string, Style as integer = 0, Size as double = 12, Embed as boolean = true, CodePage as integer = & h27) as integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function loads a font that can be used for text output and interactive form fields.
Example:

```
dim pdf as DynaPDFMBS // your PDF object
call pdf.SetFontAnsi("Helvetica", pdf.kfsNone, 10.0, true, pdf.kcp1252)
```

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

The name parameter is converted to ANSI.

If font is not found by name, please check SetFontSelMode function.
See also SetFont function in DynaPDF manual.

77.39.797 SetFontEx(Name as string, Style as Integer = 0, Size as Double = 12, Embed as boolean = true, CodePage as Integer = & h27) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function loads a font that can be used for text output and interactive form fields.
Notes:

The name parameter is converted to unicode.

If font is not found by name, please check SetFontSelMode function.
See also SetFontEx function in DynaPDF manual.

77.39.798 SetFontExAnsi(Name as string, Style as Integer = 0, Size as Double = 12, Embed as boolean = true, CodePage as Integer = & h27) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function loads a font that can be used for text output and interactive form fields.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

The name parameter is converted to ANSI.

If font is not found by name, please check SetFontSelMode function.
See also SetFontEx function in DynaPDF manual.

77.39.799 SetFontOrigin(Origin as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the current font origin that is used to position text strings.
See also SetFontOrigin function in DynaPDF manual.

77.39.800 SetFontSearchOrder(Order() as Integer)

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the font search order.
Notes:

The values in the array use this constants:

kfbtTrueType	TrueType, TrueType Collections, or OpenType fonts with TrueType outlines
kfbtType1	Type1 font
kfbtOpenType	OpenType font with Postscript outlines
kfbtStdFont	PDF Standard font
kfbtDisabled	This value can be used to disable a specific font format.

The array has 4 values.
See also SetFontSearchOrder function in DynaPDF manual.

77.39.801 SetFontSearchOrderEx(Order1 as Integer, Order2 as Integer, Order3 as Integer, Order4 as Integer)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the font search order in the same way as SetFontSearchOrder() but it does not use an array to set the search order to improve compatibility to programming languages with limited array support.
Notes: use the font base constants.
See also SetFontSearchOrderEx function in DynaPDF manual.

77.39.802 SetFontSelMode(Mode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the font selection mode.
See also SetFontSelMode function in DynaPDF manual.

77.39.803 SetFontWeight(Weight as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The font weight specifies the thickness or boldness of a font.
See also SetFontWeight function in DynaPDF manual.

77.39.804 SetGStateFlags(Flags as Integer, Reset as boolean)

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets optional flags affecting the graphics state and coordinate handling.
See also SetGStateFlags function in DynaPDF manual.

77.39.805 SetIconColor(ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The icon color is used for the closed state of a text annotation.
See also SetIconColor function in DynaPDF manual.

77.39.806 SetImportFlags(Flags as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets optional flags to control the import of external PDF files.
Example:

```
// set flags to import all
Dim flags As Integer = Bitwise.BitOr(pdf.kifImportAsPage, pdf.kifImportAll)
Call pdf.SetImportFlags(flags)
```

See also SetImportFlags function in DynaPDF manual.

77.39.807 SetImportFlags2(Flags as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets optional flags to control the import of external PDF files.
See also SetImportFlags2 function in DynaPDF manual.

77.39.808 SetItalicAngle(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The property ItalicAngle is used to emulate an italic font if the font is not available in an italic style.
See also SetItalicAngle function in DynaPDF manual.

77.39.809 SetJPEGQuality(Value as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the quality of JPEG compressed images in percent if JPEG compression is used.
See also SetJPEGQuality function in DynaPDF manual.

77.39.810 SetLanguage(ISOTag as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The property specifies the language of the document.
See also SetLanguage function in DynaPDF manual.

77.39.811 SetLeading(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the leading that will be used by the functions AddContinueText() and WriteF-Text() to calculate the distance between two text lines.
Notes: This is for setting the line height.
See also SetLeading function in DynaPDF manual.

77.39.812 SetLicenseKey(Value as string)

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Use this function to enter your license key.
Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
pdf.SetLicenseKey("1234567890") // enter your code here
```

Deprecated: This item is deprecated and should no longer be used. You can use SetLicenseKeyGlobal instead. **Notes:**

If the value represents a correct license key the demo string does not longer appear on PDF pages. Once a correct key was set, it will be active until the library is unloaded or the current PDF object is released. Note that the key must be entered for each PDF object or process of a multi-threading application separately.

The license key must not be stored in the registry or other files in an unencrypted form.

You need to buy a license key from MBS.
The key will unlock the library to not run in demo mode.

Pro license is required for the following functions:

- BeginTransparencyGroup
- ConvertColors
- Create3DAnnot
- CreateSoftMask
- FlattenForm
- GetPageText
- ImportPage and ImportPageEx
- ParseContent
- RenderAnnotOrField
- RenderPage
- SetCMapDir
- SetExtColorSpace, SetExtFillColorSpace and SetExtStrokeColorSpace.
- SetUseGlobalImpFiles

Lite is required for:

- AddRenderingIntent and AddRenderingIntentEx

- CreateFormFields
- CloseFileEx
- ConvertEMFSpool
- CreateCollection
- CreateExtGState
- InsertMetafile and InsertMetafileEx
- OpenImportBuffer, OpenImportFile and OpenImportStream
- SetPDFVersion for PDF/A and PDF/X

And all functions relaying on those functions internally.
See also SetLicenseKey function in DynaPDF manual.

77.39.813 SetLicenseKeyGlobal(Value as string)

MBS DynaPDF Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Use this function to enter your license key.
Notes: This method stores the key for later use. The constructor uses than this key to call SetLicenseKey for any new instance of the DynaPDFMBS class. This way you can register in the app.open event for your whole application.
See also:

- 77.39.814 SetLicenseKeyGlobal(Value as string) 14993

77.39.814 SetLicenseKeyGlobal(Value as string)

MBS DynaPDF Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Private method to avoid you call this on an object.
Notes:

Please call shared method in app.open.
Because if you make a new object and set key, it's too late.
See also:

- 77.39.813 SetLicenseKeyGlobal(Value as string) 14993

77.39.815 SetLineAnnotParms(Handle as UInt32, FontHandle as Integer, FontSize as Double, Params as DynaPDFLineAnnotParameterMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or changes the properties of a line annotation relating to measure lines.
Notes:

The parameter Parms can be set to nil to delete all measure line specific values. The parameters FontHandle and FontSize will be ignored in this case.
The member Caption specifies whether the parameter Content of the function LineAnnot should be used as caption of the measure line. Although a measure line can display the string in a PopUp annotation like ordinary line annotations, this is not recommended and not fully supported in Adobe's Acrobat or Reader. If Caption is true (recommended), the caption is drawn horizontally centered either on top or inside the measure line. The text position can be changed from its normal position with the members CaptionOffsetX and CaptionOffsetY.
The parameter FontHandle can be used to specify an arbitrary font that should be used to draw the caption. Although it is possible to use any font or font size greater 0 with DynaPDF, a PDF viewer will change the font and font size to it's default values when the annotation will be edited since line annotations support no property to specify the font or font size.
ÔøºÔøºFunction Reference

The default font to draw the caption is Helvetica and the default font size is 9 units. In order to use the default font set the parameter FontHandle to -1. The default font size is used if the parameter FontSize is set to to zero.

Returns true on success or false on failure.
See also SetLineAnnotParms function in DynaPDF manual.

77.39.816 SetLineCapStyle(Style as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the line cap style that specifies how the endpoint of a line will be drawn.
See also SetLineCapStyle function in DynaPDF manual.

77.39.817 SetLineDashPattern(Dash as string, Phase as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The line dash pattern controls the pattern of dashes and gaps used to stroke paths.
See also SetLineDashPattern function in DynaPDF manual.

77.39.818 SetLineDashPattern2(dash() as double, Phase as double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a line dash pattern with a given array.
Notes:

Returns true on success.
If array is nil, the pattern is removed.
See also SetLineDashPattern2 function in DynaPDF manual.

77.39.819 SetLineDashPatternEx(dash as memoryblock, NumValues as Integer, Phase as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets a line dash pattern in the same way as SetLineDashPattern().
Deprecated: This item is deprecated and should no longer be used. You can use SetLineDashPattern2 instead. **Notes:**

dash is a memoryblock with doubles.
So dash.size=NumValues*8.
See also SetLineDashPatternEx function in DynaPDF manual.
See also:

- 77.39.820 SetLineDashPatternEx(dash() as double, Phase as integer) as Boolean 14995

77.39.820 SetLineDashPatternEx(dash() as double, Phase as integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a line dash pattern with a given array.
Deprecated: This item is deprecated and should no longer be used. You can use SetLineDashPattern2 instead. **Notes:**

However, this version accepts an array of doubles instead of a string value.
Returns true on success.
See SetLineDashPattern for more details.

If array is nil, the pattern is removed.
See also SetLineDashPatternEx function in DynaPDF manual.
See also:

- 77.39.819 SetLineDashPatternEx(dash as memoryblock, NumValues as Integer, Phase as Integer) as Boolean 14995

77.39.821 SetLineJoinStyle(Style as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the line join style which specifies how two line segments are connected.
See also SetLineJoinStyle function in DynaPDF manual.

77.39.822 SetLineWidth(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the line width used to stroke paths.
See also SetLineWidth function in DynaPDF manual.

77.39.823 SetLinkHighlightMode(Mode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the highlight mode that is used by link annotations.
See also SetLinkHighlightMode function in DynaPDF manual.

77.39.824 SetListFont(Handle as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function marks an arbitrary font as list font.
See also SetListFont function in DynaPDF manual.

77.39.825 SetMatrix(Matrix as DynaPDFMatrixMBS) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function left multiplies the current transformation matrix with the new one.
See also SetMatrix function in DynaPDF manual.

77.39.826 SetMaxErrLogMsgCount(value as Integer)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the maximum number of error log messages kept in memory.
See also SetMaxErrLogMsgCount function in DynaPDF manual.

77.39.827 SetMaxFieldLen(TxtField as Integer, MaxLen as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the maximum count of characters which can be entered into a text field.
Notes:

A value of zero determines that the string length should not be restricted.

See also SetMaxFieldLen function in DynaPDF manual.

77.39.828 SetMetaConvFlags(Flags as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets specific flags to control the conversion of metafiles.
See also SetMetaConvFlags function in DynaPDF manual.

77.39.829 SetMetadata(ObjType as Integer, Handle as Integer, Buffer as Memoryblock) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or replaces the XMP metadata stream of a specific object.
Notes:

The function deletes the XMP stream if empty buffer will be provided.

If the global XMP stream of the Catalog object should be replaced then proceed as follows:

- Set the wished output PDF version with SetPDFVersion.
- Get a preview of the XMP stream with GetMetadata.
- Modify the returned stream as needed and save it with SetMetadata, finished!

The above steps make sure that the XMP metadata and document info contain the same values. This is especially important for PDF standards like PDF/A or PDF/X. DynaPDF makes sure that the creation and

modification date will not be changed when closing the file.

Returns true on success and false on failure.
See also SetMetadata function in DynaPDF manual.
See also:

- 77.39.830 SetMetadata(ObjType as Integer, Handle as Integer, Buffer as String) as Boolean 14998

77.39.830 SetMetadata(ObjType as Integer, Handle as Integer, Buffer as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or replaces the XMP metadata stream of a specific object.
Notes:

The function deletes the XMP stream if empty buffer will be provided.

If the global XMP stream of the Catalog object should be replaced then proceed as follows:

- Set the wished output PDF version with SetPDFVersion.
- Get a preview of the XMP stream with GetMetadata.
- Modify the returned stream as needed and save it with SetMetadata, finished!

The above steps make sure that the XMP metadata and document info contain the same values. This is especially important for PDF standards like PDF/A or PDF/X. DynaPDF makes sure that the creation and modification date will not be changed when closing the file.

Returns true on success and false on failure.
See also SetMetadata function in DynaPDF manual.
See also:

- 77.39.829 SetMetadata(ObjType as Integer, Handle as Integer, Buffer as Memoryblock) as Boolean 14997

77.39.831 SetMiterLimit(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the miter limit.
See also SetMiterLimit function in DynaPDF manual.

77.39.832 SetNeedAppearance(value as boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the appearance flag.
See also SetNeedAppearance function in DynaPDF manual.

77.39.833 SetNumberFormat(TxtField as Integer, Sep as Integer, DecPlaces as Integer, NegStyle as Integer, CurrStr as string, Prepend as boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function restricts the allowed input characters of a text field to numbers and formats the resulting string as specified.
See also SetNumberFormat function in DynaPDF manual.

77.39.834 SetOCGContUsage(Handle as UInt32, Value as DynaPDFOCGContUsageMBS) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates or changes the Content Usage dictionary of an OCG.
Notes:

See dynapdf_help.pdf manual for details.
If the function succeeds the return value is true. If the function fails the return value is false.
See also SetOCGContUsage function in DynaPDF manual.

77.39.835 SetOCGState(Handle as UInt32, On as Boolean, SaveState as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the visibility state of an OCG or layer.
Notes:

If the parameter SaveState is true, the new state is also saved in the PDF file. Otherwise, the state is only changed temporarily so that the whished state can be rendered with RenderPage or RenderPageToImage for example.
Note that only the new state of the current OCG will be be saved. If the state of other OCGs were changed beforehand, while SaveState was set to false, then these changes will not be considered.

If the function succeeds the return value is true. If the function fails the return value is false.
See also SetOCGState function in DynaPDF manual.

77.39.836 SetOpacity(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the opacity value which is used to render the appearance of a text annotation.
See also SetOpacity function in DynaPDF manual.

77.39.837 SetOrientation(Value as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the orientation of a page.
See also SetOrientation function in DynaPDF manual.

77.39.838 SetOrientationEx(Value as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the orientation of a page, incl. important page properties such as the width and height, and the coordinate system.
See also SetOrientationEx function in DynaPDF manual.

77.39.839 SetPageCoords(PageCoords as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The native coordinate system of the Portable Document Format is bottom up.
Notes: Value can be kpcTopDown or kpcBottomUp. Default is kpcBottomUp.
See also SetPageCoords function in DynaPDF manual.

77.39.840 SetPageFormat(Value as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets a predefined page or paper format.
Notes:

Common paper formats and sizes in points:

Format	Size in units (Width x Height)
DIN A3	842.0 x 1191.0
DIN A4	595.0 x 842.0
DIN A5	419.0 x 595.0
DIN B4	709.0 x 1001.0
DIN B5	499.0 x 709.0
DIN B6	354.0 x 499.0
DIN C3	918.0 x 1298.0
DIN C4	649.0 x 918.0
DIN C5	459.0 x 649.0
DIN C6	323.0 x 459.0
DIN C65	323.0 x 649.0
DIN DL	312.0 x 624.0
DIN E4	623.0 x 879.0
DIN E5	439.0 x 624.0
DIN E6	312.0 x 439.0
DIN E65	312.0 x 624.0
DIN M5	439.0 x 632.0
DIN M65	317.0 x 632.0
US Legal	612.0 x 1008.0
US Letter	612.0 x 792.0

See also SetPageFormat function in DynaPDF manual.

77.39.841 SetPageHeight(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the height of the currently open page if any, or the default height for newly created pages.
Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean
dim dWidth as Double = 800 // new width
dim dHeight as Double = 600 // new heihht

// define page size
bBool=pdf.SetPageWidth(dWidth)
bBool=pdf.SetPageHeight(dHeight)
```

Notes:

Common paper formats and sizes in points:

Format	Size in units (Width x Height)
DIN A3	842.0 x 1191.0
DIN A4	595.0 x 842.0
DIN A5	419.0 x 595.0
DIN B4	709.0 x 1001.0
DIN B5	499.0 x 709.0
DIN B6	354.0 x 499.0
DIN C3	918.0 x 1298.0
DIN C4	649.0 x 918.0
DIN C5	459.0 x 649.0
DIN C6	323.0 x 459.0
DIN C65	323.0 x 649.0
DIN DL	312.0 x 624.0
DIN E4	623.0 x 879.0
DIN E5	439.0 x 624.0
DIN E6	312.0 x 439.0
DIN E65	312.0 x 624.0
DIN M5	439.0 x 632.0
DIN M65	317.0 x 632.0
US Legal	612.0 x 1008.0
US Letter	612.0 x 792.0

See also SetPageHeight function in DynaPDF manual.

77.39.842 SetPageLayout(Layout as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the page layout that is used when opening the document with Adobe's Acrobat.
Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// define page view
'plSinglePage = 0, // Show one page at time
```

```
'plOneColumn = 1, // Show the pages continous
'plTwoColumnLeft = 2, // Two columns, start with left column
'plTwoColumnRight = 3 // Two columns, start with right column
bBool=pdf.SetPageLayout(0)
```

See also SetPageLayout function in DynaPDF manual.

77.39.843 SetPageMode(Mode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the page mode that is used when opening the document with Adobe's Acrobat.
Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// define page mode
'pmUseNone = 0, // Default
'pmUseOutlines = 1, // Show the outline tree
'pmUseThumbs = 2, // Show the thumb nails
'pmFullScreen = 3 // Open the document in full-screen mode
bBool=pdf.SetPageMode(0)
```

See also SetPageMode function in DynaPDF manual.

77.39.844 SetPageWidth(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the width of the currently open page if any, or the default width for newly created pages.
Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean
dim dWidth as Double = 800 // new width
dim dHeight as Double = 600 // new heihht

// define page size
bBool=pdf.SetPageWidth(dWidth)
```

bBool=pdf.SetPageHeight(dHeight)

Notes:

Common paper formats and sizes in points:

Format	Size in units (Width x Height)
DIN A3	842.0 x 1191.0
DIN A4	595.0 x 842.0
DIN A5	419.0 x 595.0
DIN B4	709.0 x 1001.0
DIN B5	499.0 x 709.0
DIN B6	354.0 x 499.0
DIN C3	918.0 x 1298.0
DIN C4	649.0 x 918.0
DIN C5	459.0 x 649.0
DIN C6	323.0 x 459.0
DIN C65	323.0 x 649.0
DIN DL	312.0 x 624.0
DIN E4	623.0 x 879.0
DIN E5	439.0 x 624.0
DIN E6	312.0 x 439.0
DIN E65	312.0 x 624.0
DIN M5	439.0 x 632.0
DIN M65	317.0 x 632.0
US Legal	612.0 x 1008.0
US Letter	612.0 x 792.0

See also SetPageWidth function in DynaPDF manual.

77.39.845 SetPDFVersion(Version as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the output PDF file version.
Example:

```
const pvPDF_1_3=3

dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean
```

```
// ask to create a pdf in version 1.3
bBool=pdf.SetPDFVersion(DynaPDFMBS.kpvPDFA_2005)
```

Notes: Requires DynaPDF Lite license for PDF/A and PDF/X versions.
See also SetPDFVersion function in DynaPDF manual.

77.39.846 SetPrintSettings(Mode as Integer, PickTrayByPDFSize as Integer, NumCopies as Integer, PrintScaling as Integer, PrintRanges() as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the print settings.
Notes:

This is a PDF 1.7 extension.

For the Mode use the kdpm* constants.
For the PrintScaling use the kps* constants.
See also SetPrintSettings function in DynaPDF manual.

77.39.847 SetRenderingIntent(ImgHandle as Integer, RenderingIntent as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set function sets the rendering intent of an image.
Notes:

The rendering intent describes how colors should be interpreted.
The parameter ImgHandle must be a valid image handle that was returned by InsertImage or InsertImageFile. Imported images returned in ParseContent, for example, can be changed too.

If the function succeeds the return value is true. If the function fails the return value is false.
See also SetRenderingIntent function in DynaPDF manual.

77.39.848 SetResolution(Value as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the resolution in DPI (Dots per Inch), in which images are stored by DynaPDF.
Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// set maximum resolution
bBool = pdf.SetResolution(150)
```

See also SetResolution function in DynaPDF manual.

77.39.849 SetSaveNewImageFormat(value as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The property SaveNewImageFormat specifies whether images should be downscaled if the original resolution of the image is higher than the value of the property resolution (see also SetResolution()).
Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// whether you want image to be recompressed
bBool=pdf.SetSaveNewImageFormat(False)
```

See also SetSaveNewImageFormat function in DynaPDF manual.

77.39.850 SetSeparationInfo(Handle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the separation info of the current open page.
See also SetSeparationInfo function in DynaPDF manual.

77.39.851 SetStrokeColor(ColorValue as color) as Boolean

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the color used for stroked graphics objects.
Notes: Raises an exception if current color space is CMYK or Gray and not RGB.

See also SetStrokeColor function in DynaPDF manual.
See also:

- 77.39.852 SetStrokeColor(ColorValue as Integer) as Boolean 15007
- 77.39.853 SetStrokeColor(values() as Double) as boolean 15007
- 77.39.854 SetStrokeColor(values() as single) as boolean 15007

77.39.852 SetStrokeColor(ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the color used for stroked graphics objects.
See also SetStrokeColor function in DynaPDF manual.
See also:

- 77.39.851 SetStrokeColor(ColorValue as color) as Boolean 15006
- 77.39.853 SetStrokeColor(values() as Double) as boolean 15007
- 77.39.854 SetStrokeColor(values() as single) as boolean 15007

77.39.853 SetStrokeColor(values() as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets stroke color based on an array of floats.
Notes: The number of components must match.
See also SetStrokeColor function in DynaPDF manual.
See also:

- 77.39.851 SetStrokeColor(ColorValue as color) as Boolean 15006
- 77.39.852 SetStrokeColor(ColorValue as Integer) as Boolean 15007
- 77.39.854 SetStrokeColor(values() as single) as boolean 15007

77.39.854 SetStrokeColor(values() as single) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets stroke color based on an array of floats.
Notes: The number of components must match.
See also SetStrokeColor function in DynaPDF manual.
See also:

- 77.39.851 SetStrokeColor(ColorValue as color) as Boolean 15006

- 77.39.852 SetStrokeColor(ColorValue as Integer) as Boolean 15007
- 77.39.853 SetStrokeColor(values() as Double) as boolean 15007

77.39.855 SetStrokeColorEx(colorvalues as memoryblock, count as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the stroke color using the values in parameters.
Example:

```
dim p as DynaPDFMBS // get a pdf object

dim colorvalues as memoryblock

colorvalues=NewMemoryBlock(3)
colorvalues.Byte(0)=255
colorvalues.Byte(1)=128
colorvalues.Byte(2)=0

if p.SetStrokeColorEx(colorvalues, 3) then
' ok
else
' failed
end if
```

Notes: Pass as many color values as needed for the current color space. 3 for RGB, 4 for CMYK. All values must be in the range of 0 to 255.
See also SetStrokeColorEx function in DynaPDF manual.
See also:

- 77.39.856 SetStrokeColorEx(ParamArray colorvalue as Integer) as Boolean 15008

77.39.856 SetStrokeColorEx(ParamArray colorvalue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the stroke color using the values in parameters.
Example:

```
dim p as DynaPDFMBS // get a pdf object

if p.SetStrokeColorEx(255,128,0) then
' ok
else
```

```
' failed
end if
```

Notes: Pass as many color values as needed for the current color space. 3 for RGB, 4 for CMYK. All values must be in the range of 0 to 255.
See also SetStrokeColorEx function in DynaPDF manual.
See also:

- 77.39.855 SetStrokeColorEx(colorvalues as memoryblock, count as Integer) as Boolean 15008

77.39.857 SetStrokeColorSpace(Colorspace as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the stroke color space. In PDF, fill and stroke colors use both their own color spaces.
See also SetStrokeColorSpace function in DynaPDF manual.

77.39.858 SetTabLen(TabLen as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the tabulator length, specified in number of spaces, which will be used to emulate tabulators during text formatting (see WriteFText() for further information).
See also SetTabLen function in DynaPDF manual.

77.39.859 SetTemplBBox(TemplateHandle as Integer, PageBoundary as Integer, BBoxRect as DynaPDFRectMBS) as Boolean

MBS DynaPDF Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets or changes a bounding box of a template.
Notes:

Templates support the bounding boxes kpbMediaBox and kpbCropBox only. The latter one is considered by PlaceTemplateEx() only.

A crop box can be set to clip the contents of a template without changing its bounding box. This can be useful when placing imported pages on another page.
If BBox is set to nil, the bounding box is deleted. Note that only the crop box can be deleted.

Returns true on success or false in case of an error.
See also SetTemplBBox function in DynaPDF manual.
See also:

- 77.39.860 SetTemplBBox(TemplateHandle as Integer, PageBoundary as Integer, Left as Double, Top as Double, Right as Double, Bottom as Double) as Boolean 15010

77.39.860 SetTemplBBox(TemplateHandle as Integer, PageBoundary as Integer, Left as Double, Top as Double, Right as Double, Bottom as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets or changes a bounding box of a template.
Notes:

Templates support the bounding boxes kpbMediaBox and kpbCropBox only. The latter one is considered by PlaceTemplateEx() only.

A crop box can be set to clip the contents of a template without changing its bounding box. This can be useful when placing imported pages on another page.
If BBox is set to nil, the bounding box is deleted. Note that only the crop box can be deleted.

Returns true on success or false in case of an error.
See also SetTemplBBox function in DynaPDF manual.
See also:

- 77.39.859 SetTemplBBox(TemplateHandle as Integer, PageBoundary as Integer, BBoxRect as DynaPDFRectMBS) as Boolean 15009

77.39.861 SetTextDrawMode(Mode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The text draw mode specifies how text should be rendered.
See also SetTextDrawMode function in DynaPDF manual.

77.39.862 SetTextFieldValue(Field as Integer, Value as string, DefValue as string, Align as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or changes the value and default value of a text field.
Notes: The Value and the DefValue strings are converted to unicode.

See also SetTextFieldValue function in DynaPDF manual.

77.39.863 SetTextFieldValueAnsi(Field as Integer, Value as string, DefValue as string, Align as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or changes the value and default value of a text field.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The Value and the DefValue strings are converted to ANSI.
See also SetTextFieldValue function in DynaPDF manual.

77.39.864 SetTextFieldValueAnsiEx(Field as Integer, Value as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the text field value.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead.

77.39.865 SetTextFieldValueEx(Field as Integer, Value as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the text field value.
See also SetTextFieldValueEx function in DynaPDF manual.

77.39.866 SetTextRect(PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function defines the output rectangle that is used to output formatted text by the function WriteFText().
See also SetTextRect function in DynaPDF manual.

77.39.867 SetTextRise(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text rise specifies the distance, to move the baseline up or down from its default location.
See also SetTextRise function in DynaPDF manual.

77.39.868 SetTextScaling(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The scaling value adjusts the width of glyphs by stretching or compressing them in the horizontal direction.
See also SetTextScaling function in DynaPDF manual.

77.39.869 SetTransparentColor(ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the transparent color which is used for newly inserted images.
Example:

```
dim pdf as DynaPDFMBS

call pdf.SetTransparentColor pdf.kNO_COLOR
```

See also SetTransparentColor function in DynaPDF manual.

77.39.870 SetTrapped(value as boolean)

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the trapped key of the document.
See also SetTrapped function in DynaPDF manual.

77.39.871 SetUseExactPwd(value as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If the property UseExactPwd is false, an encrypted PDF file can always be decrypted, if either the open or owner password in the file is an empty string.
See also SetUseExactPwd function in DynaPDF manual.

77.39.872 SetUseGlobalImpFiles(value as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The property can be used to load an external PDF file permanent into memory, e.g. to split a large PDF file into smaller pieces.
Notes: Requires DynaPDF Pro license.
See also SetUseGlobalImpFiles function in DynaPDF manual.

77.39.873 SetUseImageInterpolation(Index as Integer, Value as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enables or disables image interpolation explictely for a given image.
Notes:

If nothing was specified (this is the default), a viewer applications can only use a heuristic to determine whether image interpolation should be enabled or not. The result is then of course application specific.
The parameter Handle must be a valid image handle that was returned by a DynaPDF function like InsertImage(), InsertImageEx(), or InsertImageFromBuffer(), for example.

If the function succeeds the return value is true. If the function fails the return value is false.
See also SetUseImageInterpolation function in DynaPDF manual.

77.39.874 SetUserUnit(value as single) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the user unit of the current open page.
Notes:

A user unit acts like a scaling factor. The page format and all page coordinates are multiplied with this factor in a viewer application. The default size of a PDF unit is 1/72 inch. User units can be useful if the page format would be too large to be expressed in standard PDF units. The largest page format in PDF is limited to 14400 units or 200 inches. This limit can be extended with the user unit.
The largest value that is supported is 75.0 which results in a maximum page format of 15,000 x 15,000 inches or 1,800,000 units. Note that all functions which return page coordinates or page properties do not consider the user unit.
The page format must still be in the range 3..14400 units. It is also strongly recommended to set the user unit only if necessary. This is only the case if the required page format is larger 14400 units.
Default value = 1.0

Return values:

If the function succeeds the return value is true. If the function fails the return value is false.
See also SetUserUnit function in DynaPDF manual.

77.39.875 SetUseStdFonts(value as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function can be used to disable the 14 standard fonts temporarily.
See also SetUseStdFonts function in DynaPDF manual.

77.39.876 SetUseSwapFile(SwapContents as Boolean, SwapLimit as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: When creating large PDF files with many or large images it is sometimes recommended to page out large objects to a temp file to restrict the memory usage.
Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object

// define a swap file in case memory is low
dim b as Boolean=pdf.SetUseSwapFile(False, 256*1024*1024)
if b=False then
MsgBox "Failed to create swap file."
Return
end if
```

Deprecated: This item is deprecated and should no longer be used. **Notes:**

Do not use FlushPages and SetUseSwapFile together. Use one function.
See also SetUseSwapFile function in DynaPDF manual.

77.39.877 SetUseSwapFileEx(SwapContents as Boolean, SwapLimit as Integer, SwapDir as FolderItem) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function enables paging out of large objects to restrict the memory usage in the same way as SetUseSwapFile().
Deprecated: This item is deprecated and should no longer be used. See also SetUseSwapFileEx function

in DynaPDF manual.

77.39.878 SetUseSystemFonts(value as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The property specifies whether the Windows/Fonts directory should be added automatically to the list of available font search paths.
See also SetUseSystemFonts function in DynaPDF manual.

77.39.879 SetUseTransparency(value as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The property specifies whether images should get a transparent background.
Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// allow transparency for images
bBool=pdf.SetUseTransparency(False)
```

See also SetUseTransparency function in DynaPDF manual.

77.39.880 SetUseVisibleCoords(value as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The property specifies whether DynaPDF should consider the crop box to calculate to position of an object.
See also SetUseVisibleCoords function in DynaPDF manual.

77.39.881 SetViewerPreferences(Value as Integer, AddVal as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the viewer preferences which can be used to control a few parameter of Adobe's Acrobat, such as hide the toolbar or men bar.

See also SetViewerPreferences function in DynaPDF manual.

77.39.882 SetWhite(FillColor as Boolean, StrokeColor as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets white color.
Notes:

This function is a bit optimized to check the current color space.
Depending on whether it's RGB, Gray, CMYK or Lab, it will set different color values.
And if other color space is active, it switches to Gray colorspace to set white.

77.39.883 SetWMFDefExtent(Width as Integer, Height as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the default size which is used to convert non-portable WMF files to EMF. See InsertMetafile() for further information.
See also SetWMFDefExtent function in DynaPDF manual.

77.39.884 SetWMFPixelPerInch(Value as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the default pixels per inch of the y-axis which are used to convert portable WMF files to EMF.
See also SetWMFPixelPerInch function in DynaPDF manual.

77.39.885 SetWordSpacing(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the word spacing.
See also SetWordSpacing function in DynaPDF manual.

77.39.886 SetXFAStream(Index as UInt32, Buffer as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function replaces the contents of an XFA stream with new contents.
Notes:

Index must be a valid XFA resource index. XFA streams can be enumerated with GetXFAStream() / GetXFAStreamCount().
The function does not check whether the provided XFA buffer is valid. The buffer is written to the stream as is.

If the function succeeds the return value is true. If the function fails the return value is false.
See also SetXFAStream function in DynaPDF manual.

77.39.887 ShowDifferences(PageIndex1 as Integer, OtherPDF as DynaPDFMBS, PageIndex2 as Integer, CheckMoving as boolean, HighlightColor as UInt32 = & hFFFF, ScaleFactor as Integer = 1, ColorTolerance as Integer = 3, debug as boolean = false) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shows differences on two PDF pages by adding highlight annotations.
Notes:

Please pass page indexes for both pages. OtherPDF can be same as the current instance you call this method on.

CheckMoving: Whether to check for moving parts, e.g. the big part of the page shifted up one line.

Returns number of annotations on success which means that highlight annotations have been added to both pages.
Or returns negative value in case of error.
You can than render a page to show differences to user.
Requires a DynaPDF Pro license. Without a license, the DynaPDF watermark will reduce the accuracy.

Scale: When comparison, scales up the pictures used for comparison. Default is 1 for 72dpi, but you can use 2 for double.
ColorTolerance: The tolerance for color comparison.
Colors where red, green or blue components are within given tolerance are considered equal. So FFFFFF and FFFFFD are equal.
Default is 3.

Debug Parameter: Whether to write debug images to temp folder.
If true, we write png files to temp folder. One image is before the check, one with all similar lines removed and one with result of comparison. Red pixels show you the raster, green equal pixels.

77.39.888 SkewCoords(alpha as Double, beta as Double, OriginX as Double, OriginY as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function skews the coordinate system and sets the coordinate origin to the point OriginX, OriginY.
Notes: Please do not try to scale/skew/translate back later. use SaveGraphicState and RestoreGraphicState.
See also SkewCoords function in DynaPDF manual.

77.39.889 SortFieldsByIndex as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sorts the interactive form fields of a page by comparing the internal indices which can be set for each field separately (see SetFieldIndex() for further information).
See also SortFieldsByIndex function in DynaPDF manual.

77.39.890 SortFieldsByName as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sorts the interactive form fields of a page in ascending order by field name.
See also SortFieldsByName function in DynaPDF manual.

77.39.891 SquareAnnot(PosX as Double, PosY as Double, Width as Double, Height as Double, LineWidth as Double, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Comment as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function draws a square annotation on the current open page.
Notes:

If the parameters Width and Height are equal the function draws a square, a rectangle otherwise. If the annotation should beÔøºdrawn without a border, set the parameter LineWidth zo zero or StrokeColor to the special constant kNO_COLOR.
If the interior should be transparent set FillColor to the special constant kNO_COLOR.
Although the line width can be set to any positive floating point value, Adobe's Acrobat or Reader restrict the line width to 0 through 12 units. The line width should be restricted in the same way to avoid issues in

Adobe viewer products.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails, the return value is a negative error code.
See also SquareAnnot function in DynaPDF manual.

77.39.892 SquareAnnotAnsi(PosX as Double, PosY as Double, Width as Double, Height as Double, LineWidth as Double, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Comment as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function draws a square annotation on the current open page.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

If the parameters Width and Height are equal the function draws a square, a rectangle otherwise. If the annotation should beÔøºdrawn without a border, set the parameter LineWidth zo zero or StrokeColor to the special constant kNO_COLOR.
If the interior should be transparent set FillColor to the special constant kNO_COLOR.
Although the line width can be set to any positive floating point value, Adobe's Acrobat or Reader restrict the line width to 0 through 12 units. The line width should be restricted in the same way to avoid issues in Adobe viewer products.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails, the return value is a negative error code.
See also SquareAnnot function in DynaPDF manual.

77.39.893 StampAnnot(SubType as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double, Author as string, Subject as string, Comment as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a stamp annotation.
See also StampAnnot function in DynaPDF manual.

77.39.894 StampAnnotAnsi(SubType as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double, Author as string, Subject as string, Comment as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a stamp annotation with ANSI encoded texts.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. See also StampAnnot function in DynaPDF manual.

77.39.895 StrokePath as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function strokes the current path without closing it.
See also StrokePath function in DynaPDF manual.

77.39.896 TestGlyphs(FontHandle as Integer, Text as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function checks whether all glyphs of the text are available in the specified font.
Example:

```
// create dummy PDF with one page
dim d as new myDynaPDFMBS

call d.CreateNewPDF
call d.Append

// check this text
dim x as string = "ÊÇ®Â•Ω" // Hello in Chinese

// load 2 fonts to check
dim FontHandle1 as Integer = d.SetFont("Times", 12)
dim FontHandle2 as Integer = d.SetFont("Arial Unicode MS", 12)

dim r1 as Integer = d.TestGlyphs(FontHandle1, x)

if r1 = -1 then
MsgBox "Times supports chinese characters"
else
MsgBox "Times does not support chinese characters"
end if
```

```
dim r2 as Integer = d.TestGlyphs(FontHandle2, x)

if r2 = -1 then
MsgBox "Arial Unicode MS supports chinese characters"
else
MsgBox "Arial Unicode MS does not support chinese characters"
end if
```

Notes:

The return value is the position of the first missing glyph, or -1 if all glyphs are available.
If the font uses a mixed 8/16 bit CJK code page that requires a conversion to Unicode (a code page that ends with "_Uni"), then the return value corresponds to the converted Unicode string and not to the CJK input string.
See also TestGlyphs function in DynaPDF manual.

77.39.897 TestGlyphsAnsi(FontHandle as Integer, Text as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function checks whether all glyphs of the text are available in the specified font.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

The return value is the position of the first missing glyph, or -1 if all glyphs are available.
If the font uses a mixed 8/16 bit CJK code page that requires a conversion to Unicode (a code page that ends with "_Uni"), then the return value corresponds to the converted Unicode string and not to the CJK input string.
The text parameter is converted to ANSI.
See also TestGlyphs function in DynaPDF manual.

77.39.898 TextAnnot(PosX as Double, PosY as Double, Width as Double, Height as Double, Author as string, Text as string, Icon as Integer, Open as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a text annotation.
Notes: The text and the author parameters are converted to unicode.
See also TextAnnot function in DynaPDF manual.

77.39.899 TextAnnotAnsi(PosX as Double, PosY as Double, Width as Double, Height as Double, Author as string, Text as string, Icon as Integer, Open as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a text annotation.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text and the author parameters are converted to ANSI.
See also TextAnnot function in DynaPDF manual.

77.39.900 TranslateCoords(OriginX as Double, OriginY as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function translates the coordinate system to the new origin OriginX, OriginY.
See also TranslateCoords function in DynaPDF manual.

77.39.901 TranslateRawCode(IFont as Integer, text as string, byref Width as Double, byref Decoded as boolean, CharSpacing as Double, WordSpacing as Double, TextScale as Double) as string

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Translates a raw code.
Notes: Deprecated. Please use other variant with more parameters.
See also TranslateRawCode function in DynaPDF manual.
See also:

- 77.39.902 TranslateRawCode(IFont as integer, text as string, textOffset as Integer, byref Width as double, byref Decoded as boolean, CharSpacing as double, WordSpacing as double, TextScale as double, byref count as integer) as string 15022

77.39.902 TranslateRawCode(IFont as integer, text as string, textOffset as Integer, byref Width as double, byref Decoded as boolean, CharSpacing as double, WordSpacing as double, TextScale as double, byref count as integer) as string

MBS DynaPDF Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function converts a source character to Unicode.
Notes:

The code length of a character depends on the font's encoding. PDF supports encodings with fixed and variable code lengths from one through four bytes per character. The Count parameter provides the number of bytes which were consumed to convert the character to Unicode; this value must be used to increment the textOffset parameter for further calls.
The resulting Unicode character or sequence is returned in function result. The width parameter is used to return the character width.
The parameter Decoded is set to true if the source character could be sucsessfully converted to Unicode. If Decode is false the output string and character width contain no meaningful values.
The function can only fail when processing strings of CID fonts, e.g. if the font depends on an external CMap that could not be loaded, or if the font uses a damaged CMap. The search path(s) to external CMaps should always be set before extracting text from PDF files with SetCMapDir().
Passing an invalid or undefined code sequence to the function does not result in an error. In this case the notdef character is added to the output string (this is usually 0 or 0xFFFD if the font contains a ToUnicode CMap).
Notice:
To improve processing speed the function does not check whether the parameters are valid.
Remarks:
This function was designed to convert raw strings on a per character basis to Unicode which were returned by ParseContent() or GetPageText(). The parameters CharSpacing, WordSpacing, and TextScale must be taken from the current graphics state or from the structure DynaPDFStackMBS.
Return values:
The count value of this function is always greater or equal to one. Check the parameter Decoded to determine whether the function succeed.
See also TranslateRawCode function in DynaPDF manual.
See also:

- 77.39.901 TranslateRawCode(IFont as Integer, text as string, byref Width as Double, byref Decoded as boolean, CharSpacing as Double, WordSpacing as Double, TextScale as Double) as string 15022

77.39.903 TranslateString(IFont as Integer, text as string, flags as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Translates a string.
See also TranslateString function in DynaPDF manual.
See also:

- 77.39.904 TranslateString(stack as DynaPDFStackMBS, flags as Integer) as string 15023

77.39.904 TranslateString(stack as DynaPDFStackMBS, flags as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function translates a binary string returned by GetPageText() to Unicode.

See also TranslateString function in DynaPDF manual.
See also:

- 77.39.903 TranslateString(IFont as Integer, text as string, flags as Integer) as string 15023

77.39.905 Triangle(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x3 as Double, y3 as Double, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function draws a triangle.
See also Triangle function in DynaPDF manual.

77.39.906 UnLockLayer(layer as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Locks a layer.
See also UnLockLayer function in DynaPDF manual.

77.39.907 WatermarkAnnot(PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a Watermark annotation.
Example:

```
// create watermark annotation
Dim AnnotHandle As Integer = pdf.WatermarkAnnot(100, 100, 300, 200)

// it's empty initially

// so we create an annotation appearance stream
Dim x As Integer = pdf.CreateAnnotAP(AnnotHandle)

// set a color and draw rectangle
Call pdf.SetFillColor(& cFF7777)
Call pdf.Rectangle 0, 0, 300, 200, pdf.kfmFill

Call pdf.SetStrokeColor(& c000000)
Call pdf.SetFillColor(& c000000)
Call pdf.SetFont("Helvetica", pdf.kfsBold, 30)
Call pdf.WriteText(20, 20, "Hello World")
```

```
// close template
Call pdf.EndTemplate
```

Notes:

Watermark annotations have no interactive elements like other annotation types. This property is useful in many cases because it is usually not possible to select or change the contents of a watermark annotation in viewer applications.
The annotation has no appearance after it was created. Call CreateAnnotAP to create an appearance template for the annotation. After the appearance template was created you can draw text, images or vector graphics into it. The template must be closed with EndTemplate when finished. It is also possible to import an external page or EMF contents into the template.
Watermark annotations can be shared on multiple pages. To place the annotation on other pages call AddAnnotToPage.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also WatermarkAnnot function in DynaPDF manual.

77.39.908 WebLink(PosX as Double, PosY as Double, Width as Double, Height as Double, aText as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts a web link onto the current open page.
Notes: The text parameter is converted to unicode.
See also WebLink function in DynaPDF manual.

77.39.909 WebLinkAnsi(PosX as Double, PosY as Double, Width as Double, Height as Double, aText as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts a web link onto the current open page.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text parameter is converted to ANSI.
See also WebLink function in DynaPDF manual.

77.39.910 WeightFromStyle(s as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts a style value to a weight value.

77.39.911 WeightToStyle(s as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts a weight value to a style value.

77.39.912 WidthFromStyle(s as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts a style constant to the width value.

77.39.913 WidthToStyle(s as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts a width value to a style value.

77.39.914 WriteAngleText(aText as string, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a string in a user defined angle around a radius.
Notes: The text parameter is converted to unicode.
See also WriteAngleText function in DynaPDF manual.
See also:

- 77.39.915 WriteAngleText(glyphs() as Integer, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean

77.39.915 WriteAngleText(glyphs() as Integer, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a string in a user defined angle around a radius.
Notes:

This version takes an array of integers. So if you are using the kcpUnicode on SetFont, please pass an array of unicode codepoints. If you use kcpGlyphIndexes, please pass an array of glyph values.

See also WriteAngleText function in DynaPDF manual.
See also:

- 77.39.914 WriteAngleText(aText as string, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean 15026

77.39.916 WriteAngleTextAnsi(aText as string, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a string in a user defined angle around a radius.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text parameter is converted to ANSI, so use only with SetFont with kcp1252.
See also WriteAngleText function in DynaPDF manual.
See also:

- 77.39.914 WriteAngleText(aText as string, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean 15026
- 77.39.915 WriteAngleText(glyphs() as Integer, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean 15027

77.39.917 WriteAngleTextDirect(aText as string, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a string in a user defined angle around a radius.
Notes: The text parameter is not converted, so pass a string in the right encoding.
See also:

- 77.39.918 WriteAngleTextDirect(glyphs() as Integer, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean 15028

77.39.918 WriteAngleTextDirect(glyphs() as Integer, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a string in a user defined angle around a radius.
Notes:

This version takes an array of integers. So pass in values in the encoding you are using. This can be glyph values or bytes in any encoding you selected in the SetFont method.

See also:

- 77.39.917 WriteAngleTextDirect(aText as string, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean 15027

77.39.919 WriteFText(Align as Integer, aText as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Instead of printing text on a line by line basis it is also possible to output text into a rectangle by applying a formatting algorithm.
Notes:

The text parameter is converted to unicode.

The PageBreak event is called when needed by the plugin.
See also WriteFText function in DynaPDF manual.
See also:

- 77.39.920 WriteFText(Align as Integer, glyphs() as Integer) as Boolean 15028

77.39.920 WriteFText(Align as Integer, glyphs() as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Instead of printing text on a line by line basis it is also possible to output text into a rectangle by applying a formatting algorithm.
Notes:

This version takes an array of integers. So if you are using the kcpUnicode on SetFont, please pass an array of unicode codepoints. If you use kcpGlyphIndexes, please pass an array of glyph values.

The PageBreak event is called when needed by the plugin.
See also WriteFText function in DynaPDF manual.

See also:

- 77.39.919 WriteFText(Align as Integer, aText as string) as Boolean 15028

77.39.921 WriteFTextAnsi(Align as Integer, aText as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Instead of printing text on a line by line basis it is also possible to output text into a rectangle by applying a formatting algorithm.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

The text parameter is converted to ANSI, so use only with SetFont with kcp1252.

The PageBreak event is called when needed by the plugin.
See also WriteFText function in DynaPDF manual.
See also:

- 77.39.919 WriteFText(Align as Integer, aText as string) as Boolean 15028
- 77.39.920 WriteFText(Align as Integer, glyphs() as Integer) as Boolean 15028

77.39.922 WriteFTextDirect(Align as Integer, aText as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Instead of printing text on a line by line basis it is also possible to output text into a rectangle by applying a formatting algorithm.
Notes:

The text parameter is not converted, so pass a string in the right encoding.

The PageBreak event is called when needed by the plugin.
See also:

- 77.39.923 WriteFTextDirect(Align as Integer, glyphs() as Integer) as Boolean 15029

77.39.923 WriteFTextDirect(Align as Integer, glyphs() as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Instead of printing text on a line by line basis it is also possible to output text into a rectangle by applying a formatting algorithm.
Notes:

This version takes an array of integers. So pass in values in the encoding you are using. This can be glyph values or bytes in any encoding you selected in the SetFont method.

The PageBreak event is called when needed by the plugin.
See also:

- 77.39.922 WriteFTextDirect(Align as Integer, aText as string) as Boolean 15029

77.39.924 WriteFTextEx(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, aText as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a formatted text exactly in the same way as WriteFText().
Notes:

The text parameter is converted to unicode.

The PageBreak event is called when needed by the plugin.
See also WriteFTextEx function in DynaPDF manual.
See also:

- 77.39.925 WriteFTextEx(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, glyphs() as Integer) as Boolean 15030

77.39.925 WriteFTextEx(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, glyphs() as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a formatted text exactly in the same way as WriteFText().
Notes:

This version takes an array of integers. So if you are using the kcpUnicode on SetFont, please pass an array of unicode codepoints. If you use kcpGlyphIndexes, please pass an array of glyph values.

The PageBreak event is called when needed by the plugin.

77.39.929 WriteStyledText(Align as Integer, StyledText as StyledText, LeadingFactor as double = -1) as Boolean

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes styled text.
Notes:

Same as WriteFText, but calls ConvertStyledText for you to convert the styled text to formatting commands.

LeadingFactor: Added in v21.0. If you pass a value >0, the plugin will add \LD [ ] commands to styled text to set leading relative to font size. This way you define the spacing beteween lines. e.g. 1.2.

If you have a problem with the conversion, you can always use ConvertStyledText function directly and inspect what it generates. And you can of course modify it and e.g. convert "* " on a beginning of a line to a list.
See also WriteStyledText function in DynaPDF manual.
See also:

- 77.39.930 WriteStyledText(Align as Integer, TextArea as TextArea, LeadingFactor as double = -1) as Boolean 15032

77.39.930 WriteStyledText(Align as Integer, TextArea as TextArea, LeadingFactor as double = -1) as Boolean

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Writes styled text from TextArea.
Notes:

Same as WriteFText, but calls ConvertStyledText for you to convert the styled text to formatting commands.

LeadingFactor: Added in v21.0. If you pass a value >0, the plugin will add \LD [ ] commands to styled text to set leading relative to font size. This way you define the spacing beteween lines. e.g. 1.2.

77.39.938 WriteTextMatrix(Matrix as DynaPDFMatrixMBS, glyphs() as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a text onto the current open page, template, or pattern by using a transformation matrix to calculate the position of the string.
Notes:

This version takes an array of integers. So if you are using the kcpUnicode on SetFont, please pass an array of unicode codepoints. If you use kcpGlyphIndexes, please pass an array of glyph values.

See also WriteTextMatrix function in DynaPDF manual.
See also:

- 77.39.939 WriteTextMatrix(Matrix as DynaPDFMatrixMBS, Text as string) as Boolean 15036

77.39.939 WriteTextMatrix(Matrix as DynaPDFMatrixMBS, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a text onto the current open page, template, or pattern by using a transformation matrix to calculate the position of the string.
Notes: The text parameter is converted to unicode.
See also WriteTextMatrix function in DynaPDF manual.
See also:

- 77.39.938 WriteTextMatrix(Matrix as DynaPDFMatrixMBS, glyphs() as Integer) as Boolean 15035

77.39.940 WriteTextMatrixAnsi(Matrix as DynaPDFMatrixMBS, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a text onto the current open page, template, or pattern by using a transformation matrix to calculate the position of the string.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text parameter is converted to ANSI, so use only with SetFont with kcp1252.
See also WriteTextMatrix function in DynaPDF manual.
See also:

- 77.39.938 WriteTextMatrix(Matrix as DynaPDFMatrixMBS, glyphs() as Integer) as Boolean 15035
- 77.39.939 WriteTextMatrix(Matrix as DynaPDFMatrixMBS, Text as string) as Boolean 15036

77.39.941 WriteTextMatrixDirect(Matrix as DynaPDFMatrixMBS, glyphs() as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a text onto the current open page, template, or pattern by using a transformation matrix to calculate the position of the string.
Notes:

This version takes an array of integers. So pass in values in the encoding you are using. This can be glyph values or bytes in any encoding you selected in the SetFont method.

See also:

- 77.39.942 WriteTextMatrixDirect(Matrix as DynaPDFMatrixMBS, Text as string) as Boolean 15037

77.39.942 WriteTextMatrixDirect(Matrix as DynaPDFMatrixMBS, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a text onto the current open page, template, or pattern by using a transformation matrix to calculate the position of the string.
Notes: The text parameter is not converted, so pass a string in the right encoding.
See also:

- 77.39.941 WriteTextMatrixDirect(Matrix as DynaPDFMatrixMBS, glyphs() as Integer) as Boolean 15036

77.39.943 YofCMYK(CMYK as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns Y of a CMYK color value.
Example:

```
dim cmyk as Integer = DynaPDFMBS.CMYK(1,2,3,4)
MsgBox str(DynaPDFMBS.YofCMYK(cmyk)) // shows 3
```

Notes: Returns different values on BigEndian and LittleEndian systems.

77.39.944 Properties

77.39.945 ActiveFontInfo as DynaPDFFontInfoMBS

MBS DynaPDF Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries font info for active font.
Notes:

Added, so you can see it in debugger.
(Read only property)

77.39.946 ClearRectMode as Integer

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The ClearRect Mode for Graphics class.
Example:

```
dim pdf as new DynaPDFMBS
pdf.ClearRectMode = kClearRectModeIgnoreAll
```

Notes:

When graphics class is called with ClearRect method, the area in the PDF page is filled with white color.
If you like to ignore such calls, please set value to ignore all or just big rectangles.
(Read and Write property)

77.39.947 DynaPDFVersion as String

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The DynaPDF version text.
Notes: (Read only property)

77.39.948 ErrorCount as Integer

MBS DynaPDF Plugin, Plugin Version: 21.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of warnings reported by DynaPDF.
Notes:

Use Error event to track them.
Or catch exceptions.
(Read only property)

77.39.949 FontSize as Double

MBS DynaPDF Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the font size of the active font.
Notes:

The function returns the font size, a value greater zero on success, or a negative error code on failure.

If you set this property, it calls ChangeFontSize internally.
(Read and Write property)

77.39.950 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The IPDF handle passed to each API function.
Notes:

The constructor fills this handle and the destructor frees it.
(Read only property)

77.39.951 HasLite as Boolean

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether a lite or pro license is in use.
Notes:

Relevant for some example projects and graphics class support to know whether CreateExtGState is available.
(Read only property)

77.39.952 HasPro as Boolean

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether a pro license is in use.
Notes:

Relevant for some example projects and graphics class support to know whether Render Engine is available.
(Read only property)

77.39.953 ImportFlags as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set import flags.
Notes:

Same as using GetImportFlags and SetImportFlags.
(Read and Write property)

77.39.954 ImportFlags2 as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set import flags 2.
Notes:

Same as using GetImportFlags2 and SetImportFlags2.
(Read and Write property)

77.39.955 JasperVersion as String

MBS DynaPDF Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns version of Jasper library.
Example:

MsgBox DynaPDFMBS.JasperVersion

Deprecated: This item is deprecated and should no longer be used. **Notes:**

DynaPDF uses customized version of Jasper library, so this may not be the latest public version.
But it's patched to fix a couple of issues seen in PDF context.
(Read only property)

77.39.956 PageCoords as Integer

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The page coordinate system setting.
Notes:

The native coordinate system of the Portable Document Format is bottom up.
Also check the dynapdf manual on the pdfGetPageCoords and pdfSetPageCoords functions.
Value can be kpcTopDown or kpcBottomUp. Default is kpcBottomUp.
(Read and Write property)

77.39.957 PageGraphics as Graphics

MBS DynaPDF Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The page graphics object.
Example:

```
Dim pdf As New DynapdfMBS
// please subclass DynapdfMBS to implement error event

Dim f As FolderItem = SpecialFolder.Desktop.Child("DynaPDF Graphics.pdf")

'pdf.SetLicenseKey "Starter"
// For this example you can use a Starter, Lite, Pro or Enterprise License

// Create new PDF. Use f = nil for in-memory PDF
Call pdf.CreateNewPDF(f)

// append a new page, so we have an open page
Call pdf.Append

// get graphics object to draw on the page
Dim g As Graphics = pdf.PageGraphics

// draw as usual
g.DrawString "Hello World", 105, 100
g.DrawRect 100, 80, 100, 100

// close page and file
Call pdf.EndPage
Call pdf.CloseFile

// for in-memory PDF, use GetBuffer here to grab it.
'Dim PDFData As String = pdf.GetBuffer
```

Notes:

We create a temporary picture and subclass the graphics to reproduce all drawing commands called on this graphics object to the current PDF Page.

For every drawing command, we apply the following properties from graphics object to DynaPDF:

- ForeColor
- Bold
- Italic

- Underline
- TextUnit
- TextFont
- TextSize
- ScaleX
- ScaleY
- PenHeight
- PenWidth
- CharacterSpacing

Supports the following graphics commands:

- Draw/Fill Oval/Rect/RoundRect/Line/Polygon
- DrawString
- StringHeight and StringWidth
- DrawPicture
- NextPage
- Get/Set Pixel.
- Clip
- Supports vector graphics classes (Object2D)
- Supports report engine

Some notes:

- Handle() function returns handle for picture.
- Pixel reads from temporary picture
- ClearRect draws white rectangle
- DrawCautionIcon, DrawNoteIcon and DrawStopIcon are not supported.
- NextPage method calls NextPage event. If missing, we end page and create a new one. In the event, please call EndPage and maybe Append or import an existing PDF page from import PDF.
- If CMYK, Gray or Lab colorspace is set, the plugin will keep them for white/black colors, but switch to RGB for all other colors.

StyledTextPrinter is not supported, but you can do similar things via WriteStyledText or WriteStyledTextEx methods in DynaPDFMBS class.

If no page is open, call this may append a new page. If no document is open, we call CreateNewPDF for you with nil folderitem, so an in memory PDF get's created.

Seems like reports on Windows may not work for v19.2 of our plugins. This is fixed for 19.3.
(Read only property)

77.39.958 PageGraphicsPicture as Picture

MBS DynaPDF Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The temporary picture for page graphics.
Notes:

For debugging it may be useful to see the temporary picture with all the draws made on the PDF page.
This is not 1 to 1 what you will see in rendered PDF Page.

This can be viewed even when graphics object is cleared.
(Read only property)

77.39.959 PrintCancelled as Boolean

MBS DynaPDF Plugin, Plugin Version: 20.5, Platform: Windows, Targets: All.

Function: Whether last print operation was cancelled.
Notes:

Set by PrintPDFFileWithDialog and PrintPDFPageWithDialog methods if user presses cancel button.
Otherwise will be false.
(Read and Write property)

77.39.960 SpaceWidthFactor as Single

MBS DynaPDF Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The space width factor.
Notes:

Sets the space width factor that is used by DynaPDF.ExtractText to determine whether the distance between two text records or glyphs should be interpreted as space character.

PDF files do often not contain space characters. Depending on the font type, i.e. fixed pitch or proportional fonts, different default widths are used during text extraction. However, the full space width is mostly too large to find spaces. Therefore, the text extraction algorithm multiplies the default space width with the space width factor to find suitable values.
The default value is 0.7. Increase the value if too many spaces occur in extracted text and decrease the value if too few spaces were found.
The value must be large zero. Although the upper bound is not restricted, values larger than 2 are mostly not meaningful.
(Read and Write property)

77.39.961 TIFFVersion as String

MBS DynaPDF Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns version of tiff library.
Example:

MsgBox DynaPDFMBS.TIFFVersion

Notes:

DynaPDF uses customized version of tiff library, so this may not be the latest public version.
But it's patched to fix a couple of issues seen in PDF context.
(Read only property)

77.39.962 TraceFile as FolderItem

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The trace file.
Notes:

The plugin writes debug messages to this file so you can check what functions you called.

Improved with 16.2 plugin to really cover over 99% of all calls with parameters and result. Please report if you miss something.

See also AppendTraceFile method to append the log file.
(Read and Write property)

77.39.963 TraceHandle as Integer

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal file handle for the trace file.
Notes:

If this is not zero, the tracing option is turned on.
You can set this value indirectly by using the TraceFile property.
(Read only property)

77.39.964 ValidateTextEncodings as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to validate text encodings.
Example:

```
dim pdf as new DynaPDFMBS

call pdf.CreateNewPDF nil
call pdf.Append

// enable validating
pdf.ValidateTextEncodings = true

// make text without text encoding
dim s as string = "Hello World"
s = DefineEncoding(s, nil) // remove encoding

call pdf.SetFont "Times", pdf.kfsItalic, 20.0, true, pdf.kcp1252
// now cause exception
call pdf.WriteText 50.0, 580.0, s

call pdf.EndPage
call pdf.CloseFile
```

Notes:

You should enable this for debugging to find bugs with text encodings.
(Read and Write property)

77.39.965 WarningCount as Integer

MBS DynaPDF Plugin, Plugin Version: 21.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of errors reported by DynaPDF.
Notes:

Use Error event to track them.
Or catch exceptions.
(Read only property)

77.39.966 zlibVersion as String

MBS DynaPDF Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns version of zLib library.
Example:

MsgBox DynaPDFMBS.zlibVersion

Notes:

DynaPDF uses customized version of zlib library, so this may not be the latest public version.
But it's patched to fix a couple of issues seen in PDF context.
(Read only property)

77.39.967 Events

77.39.968 EnumDocFont(Font as DynaPDFFontMBS, FontInfo as DynaPDFFontInfoMBS, Type as Integer, BaseFont as string, Fontname as string, Embedded as boolean, IsFormFont as boolean, Flags as Integer, FontRef as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: .

Function: The event being called if you use the EnumDocFonts function.
Notes:

Font is deprecated. FontRef is the internal reference to the font.
FontInfo is the new property to use for font details.

77.39.969 EnumHostFont(FamilyName as string, PostScriptName as string, Style as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called by EnumHostFonts.

77.39.970 EnumHostFontEx(FamilyName as string, PostScriptName as string, Style as Integer, BaseType as Integer, Embeddable as boolean, Flags as Integer, FilePath as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called by EnumHostFontsEx.

77.39.971 Error(ErrorCode as Integer, ErrorMessage as string, ErrorType as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: .

Function: The error callback.
Notes:

ErrCode is a positive error number starting at zero; it is an index into the array of error messages. ErrType is a bitmask to determine what kind of error occurred. The following
constants are defined:

const E_WARNING = & h02000000
const E_SYNTAX_ERROR = & h04000000
const E_VALUE_ERROR = & h08000000
const E_FONT_ERROR = & h10000000
const E_FATAL_ERROR = & h20000000
const E_FILE_ERROR = & h40000000

At time of publication only one flag is set at any one time. Future versions may be set multiple flags, e.g. E_SYNTAX_ERROR and E_WARNING. Because of this, it is recommended to mask out the error type with a bitwise and operator.
If the callback function returns a value other than zero (0), processing stops immediately.

You can return kErrorEventRaise (-2), we raise an exception.
We also raise the exception when no Error event is implemented.

77.39.972 InitProgress(ProgType as Integer, MaxCount as Integer)

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: .

Function: Called when a progress ist starting.
Notes:

The return value of the progress callback function must be 0, any other return value breaks processing.

See pt* constants for ProgType.

77.39.973 NextPage(g as graphics)

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called for graphics.nextpage method.
Notes:

If you don't implement this event, the plugin will end the page and append a new page.
You can implement this event to do your own code to import e.g. an existing page as background.

77.39.974 OnFontNotFound(PDFFontRef as Integer, FontName as string, Style as Integer, StdFontIndex as Integer, IsSymbolFont as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: .

Function: The events called when a font is not found.
Notes:

Please call one of the ReplaceFont functions here and return their return code from the callback.
Or return -1 if your code has an error.
See also OnFontNotFound function in DynaPDF manual.

77.39.975 OnReplaceICCProfile(Type as Integer, ColorSpace as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when an ICC profile is replaced.
Notes: Please use various ReplaceICCProfile functions to provide replacement profile.
See also OnReplaceICCProfile function in DynaPDF manual.

77.39.976 PageBreak(LastPosX as Double, LastPosY as Double, PageBreak as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called on every pagebreak.
Notes:

The parameter PageBreak of the event specifies why the event was called:

- If true, a page break tag in the string was found (see WriteFText for further information).
- If false, the output rectangle was filled with text entirely.

The usage of the event is described in detail under WriteFText(). However, the following return values of the event can be used the change the text alignment:

New Alignment Left	1
New Alignment Right	2
New Alignment Center	3
New Alignment Justify	4

A return value of zero indicates that the alignment must not be changed. Negative return values break processing immediately. WriteFText() returns then with a warning.

When the event is called, the coordinate system is always bottom-up, it can be changed to top-down coordinates inside the event if necessary. The current page is still open, the page must be closed with EndPage() before a new page can be added or opened with Append() or EditPage(). To determine the current page number, call GetPageNum().

For example SetFont may fail if you try normal font family names. That is because SetFontSelMode is used with postscript names and you may want to set it to ksmPostScriptName using SetFontSelMode for SetFont to accept family names.

77.39.977 Progress(ActivePage as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: .

Function: The progress callback.
Notes: The return value of the progress callback function must be 0, any other return value breaks processing.

77.39.978 RasterShowText(MatrixBefore as DynaPDFMatrixMBS, MatrixAfter as DynapdfMatrixMBS, TextBuffers() as DynaPDFTextRecordAMBS, Texts() as String, Width as Double, Vertical as boolean, FontRef as Integer, textScaling as Double)

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Rastering draws text.
Notes:

This is experimental and will be replaced later with a better API in a future DynaPDF release.
Works only if you have a plugin where this is enabled by us.

If you implement this event, you get an event whenever one of the rasterizers draws some text on a page. MatrixBefore tells you start position, MatrixAfter end position. TextBuffers provide raw text data. Texts array the matching unicode text. Width is length of text in points. Vertical is true for vertical text. FontRef is the internal font reference. You can query fonts with EnumDocFont before to get a list of all fonts and find it in the array. Do not use font functions in the event as that can confuse the rasterizer.

Do not use with MT methods, please.

77.39.979 Constants

77.39.980 kadAnnotation = 0

MBS DynaPDF Plugin, Plugin Version: 13.5.

Function: One of the destination object types.
Notes: Destination is annotation handle.

77.39.981 kadCatalog = 1

MBS DynaPDF Plugin, Plugin Version: 13.5.

Function: One of the destination object types.
Notes: Destination is root object of document (no handle).

77.39.982 kadField = 2

MBS DynaPDF Plugin, Plugin Version: 13.5.

Function: One of the destination object types.
Notes: Destination is field handle.

77.39.983 kadImage = 3

MBS DynaPDF Plugin, Plugin Version: 13.5.

Function: One of the destination object types.
Notes: Destination is image handle.

77.39.984 kadPage = 4

MBS DynaPDF Plugin, Plugin Version: 13.5.

Function: One of the destination object types.
Notes: Destination is page handle.

77.39.985 kadTemplate = 5

MBS DynaPDF Plugin, Plugin Version: 13.5.

Function: One of the destination object types.
Notes: Destination is template handle.

77.39.986 kaeExport = 1

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the application event constants.
Notes: Export

77.39.987 kaePrint = 2

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the application event constants.
Notes: Print

77.39.988 kaeView = 4

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the application event constants.
Notes: View

77.39.989 kaffFormFields = 16

MBS DynaPDF Plugin, Plugin Version: 18.4.

Function: One of the annotation flatten flags.
Notes: If set, form fields will be flattened too.

77.39.990 kaffKeepEmptySigFields = & h00008000

MBS DynaPDF Plugin, Plugin Version: 20.0.

Function: One of the annotation flatten flags.
Notes: If set, signature fields which are not already signed will be kept.

77.39.991 kaffKeepFileAttach = & h00002000

MBS DynaPDF Plugin, Plugin Version: 18.5.

Function: One of the annotation flatten flags.
Notes: If set, file attachment annotations will be kept.

77.39.992 kaffKeepLinkAnnots = & h00001000

MBS DynaPDF Plugin, Plugin Version: 18.5.

Function: One of the annotation flatten flags.
Notes: If set, link annotations will be kept.

77.39.993 kaffKeepTextAnnots = & h00004000

MBS DynaPDF Plugin, Plugin Version: 18.5.

Function: One of the annotation flatten flags.
Notes: If set, text annotations will be kept.

77.39.994 kaffMarkupAnnots = 2

MBS DynaPDF Plugin, Plugin Version: 8.6.

Function: One of the annotation flatten flags.
Notes: If set, markup annotations are flattened only. Link, Sound, or FileAttach annotations are no markup annotations. These types will be left intact.

77.39.995 kaffNone = 0

MBS DynaPDF Plugin, Plugin Version: 8.6.

Function: One of the annotation flatten flags.
Notes:

Printable annotations independent of the type.
By default all annotations which have an appearance stream and which have the print flag set are flattened.
All annotations are deleted when the function returns with the exception of file attachment annotations.
If you want to flatten the view state then set the flag affUseViewState.

77.39.996 kaffNonPDFA_1 = 4

MBS DynaPDF Plugin, Plugin Version: 18.4.

Function: One of the annotation flatten flags.
Notes: Flatten all annotations which are unsupported in PDF/A 1.

77.39.997 kaffNonPDFA_2 = 8

MBS DynaPDF Plugin, Plugin Version: 18.4.

Function: One of the annotation flatten flags.
Notes: Flatten all annotations which are unsupported in PDF/A 2/3.

77.39.998 kaffPreserveZOrder = & h00400000

MBS DynaPDF Plugin, Plugin Version: 18.5.

Function: One of the annotation flatten flags.
Notes: If set, preserve the z-order under any curcumstances. That means visible overlapping annotations or form fields will be flattened, regardless the type.

77.39.999 kaffSigFields = 64

MBS DynaPDF Plugin, Plugin Version: 20.0.

Function: One of the annotation flatten flags.
Notes: Meaningful only if affFormFields is not set. If set, signature fields with an appearance stream will be flattened.

77.39.1000 kaffUseFieldViewState = 32

MBS DynaPDF Plugin, Plugin Version: 18.4.

Function: One of the annotation flatten flags.
Notes: Meaningful only if kaffFormFields or kaffSigFields is set. If set, flatten the view state of form fields. Use the print state otherwise.

77.39.1001 kaffUseViewState = 1

MBS DynaPDF Plugin, Plugin Version: 8.6.

Function: One of the annotation flatten flags.
Notes: If set, annotations which are visible in a viewer become flattened.

77.39.1002 kafHidden = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF annotation flags constants for SetAnnotFlags.
Notes: One of the three options to hide the annotation (see dynapdf manual)

77.39.1003 kafInvisible = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF annotation flags constants for SetAnnotFlags.
Notes: One of the three options to hide the annotation (see dynapdf manual)

77.39.1004 kafLocked = & h00000080

MBS DynaPDF Plugin, Plugin Version: 15.3.

Function: One of the DynaPDF annotation flags constants for SetAnnotFlags.
Notes: (PDF 1.4) If set, do not allow the annotation to be deleted or its properties (including position and size) to be modified by the user. However, this flag does not restrict changes to the annotation,Äôs contents.

77.39.1005 kafLockedContents = & h00000200

MBS DynaPDF Plugin, Plugin Version: 15.3.

Function: One of the DynaPDF annotation flags constants for SetAnnotFlags.
Notes: (PDF 1.7) If set, do not allow the contents of the annotation to be modified by the user. This flag does not restrict deletion of the annotation or changes to other annotation properties, such as position and size.

77.39.1006 kafNone = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF annotation flags constants for SetAnnotFlags.
Notes: No flags are set

77.39.1007 kafNoRotate = 16

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF annotation flags constants for SetAnnotFlags.
Notes: Do not rotate the annotation

77.39.1008 kafNoView = 32

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF annotation flags constants for SetAnnotFlags.
Notes: One of the three options to hide the annotation (see dynapdf manual)

77.39.1009 kafNoZoom = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF annotation flags constants for SetAnnotFlags.
Notes: Do not zoom the annotation

77.39.1010 kafPrint = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF annotation flags constants for SetAnnotFlags.
Notes: Annotation is printable

77.39.1011 kafReadOnly = 64

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF annotation flags constants for SetAnnotFlags.
Notes: Changes are not allowed.

77.39.1012 kafToggleNoView = & h00000100

MBS DynaPDF Plugin, Plugin Version: 15.3.

Function: One of the DynaPDF annotation flags constants for SetAnnotFlags.
Notes: (PDF 1.5) If set, invert the interpretation of the NoView flag for certain events.

77.39.1013 kaiComment = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

MBS DynaPDF Plugin, Plugin Version: 8.1.

Function: One of the PDF base tag constants.

77.39.1165 kbtH = 12

MBS DynaPDF Plugin, Plugin Version: 8.1.

Function: One of the PDF base tag constants.

77.39.1166 kbtH1 = 13

MBS DynaPDF Plugin, Plugin Version: 8.1.

Function: One of the PDF base tag constants.

77.39.1167 kbtH2 = 14

MBS DynaPDF Plugin, Plugin Version: 8.1.

Function: One of the PDF base tag constants.

77.39.1168 kbtH3 = 15

MBS DynaPDF Plugin, Plugin Version: 8.1.

Function: One of the PDF base tag constants.

77.39.1169 kbtH4 = 16

MBS DynaPDF Plugin, Plugin Version: 8.1.

Function: One of the PDF base tag constants.

77.39.1170 kbtH5 = 17

MBS DynaPDF Plugin, Plugin Version: 8.1.

Function: One of the PDF base tag constants.

77.39.1171 kbtH6 = 18

MBS DynaPDF Plugin, Plugin Version: 8.1.

Function: One of the PDF base tag constants.

77.39.1172 kbtIndex = 19

MBS DynaPDF Plugin, Plugin Version: 8.1.

Function: One of the PDF base tag constants.

77.39.1173 kbtLink = 20

MBS DynaPDF Plugin, Plugin Version: 8.1.

Function: One of the PDF base tag constants.
Notes: A link annotation must be inserted to finish the tag (FileLink(), PageLink(), or WebLink()!

77.39.1174 kbtList = 21

MBS DynaPDF Plugin, Plugin Version: 8.1.

Function: One of the PDF base tag constants.
Notes: L

77.39.1175 kbtListElem = 22

MBS DynaPDF Plugin, Plugin Version: 8.1.

Function: One of the PDF base tag constants.
Notes: LI, ->Correct nesting: btList/btListElem

77.39.1176 kbtListText = 23

MBS DynaPDF Plugin, Plugin Version: 8.1.

Function: One of the PDF base tag constants.
Notes: LBody ->Correct nesting: btList/btListElem/btListText

77.39.1177 kbtNote = 24

MBS DynaPDF Plugin, Plugin Version: 8.1.

Function: One of the PDF base tag constants.

77.39.1178 kbtP = 25

MBS DynaPDF Plugin, Plugin Version: 8.1.

Function: One of the PDF base tag constants.

77.39.1179 kbtPart = 26

MBS DynaPDF Plugin, Plugin Version: 8.1.

Function: One of the PDF base tag constants.

77.39.1180 kbtQuote = 27

MBS DynaPDF Plugin, Plugin Version: 8.1.

Function: One of the PDF base tag constants.

77.39.1181 kbtReference = 28

MBS DynaPDF Plugin, Plugin Version: 8.1.

Function: One of the PDF base tag constants.

77.39.1182 kbtSection = 29

MBS DynaPDF Plugin, Plugin Version: 8.1.

Function: One of the PDF base tag constants.
Notes: Sect

77.39.1183 kbtSpan = 30

MBS DynaPDF Plugin, Plugin Version: 8.1.

Function: One of the PDF base tag constants.

77.39.1184 kbtTable = 31

MBS DynaPDF Plugin, Plugin Version: 8.1.

Function: One of the PDF base tag constants.

77.39.1185 kbtTableDataCell = 32

MBS DynaPDF Plugin, Plugin Version: 8.1.

Function: One of the PDF base tag constants.
Notes: TD

77.39.1186 kbtTableHeader = 33

MBS DynaPDF Plugin, Plugin Version: 8.1.

Function: One of the PDF base tag constants.
Notes: TH

77.39.1187 kbtTableRow = 34

MBS DynaPDF Plugin, Plugin Version: 8.1.

Function: One of the PDF base tag constants.
Notes: TR

77.39.1188 kbtTOC = 35

MBS DynaPDF Plugin, Plugin Version: 8.1.

Function: One of the PDF base tag constants.

77.39.1189 kbtTOCEntry = 36

MBS DynaPDF Plugin, Plugin Version: 8.1.

Function: One of the PDF base tag constants.
Notes: TOCI

77.39.1190 kcbChecked = 1

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the checkbox state constants.

77.39.1191 kcbfIgnoreWhiteAreas = 1

MBS DynaPDF Plugin, Plugin Version: 8.1.

Function: One of the flag constants for ComputeBBox.
Notes: Ignore white vector graphics or text.

77.39.1192 kcbfNone = 0

MBS DynaPDF Plugin, Plugin Version: 8.1.

Function: One of the flag constants for ComputeBBox.

77.39.1193 kcbfParse1BitImages = 2

MBS DynaPDF Plugin, Plugin Version: 8.1.

Function: One of the flag constants for ComputeBBox.
Notes: Find the visible area in 1 bit images. This is the most important case since scanned faxes are usually 1 bit images.

77.39.1194 kcbfParseAllImages = 14

MBS DynaPDF Plugin, Plugin Version: 8.1.

Function: One of the flag constants for ComputeBBox.
Notes: Find the visible area in all images.

77.39.1195 kcbfParseColorImages = 8

MBS DynaPDF Plugin, Plugin Version: 8.1.

Function: One of the flag constants for ComputeBBox.
Notes: Find the visible area in color images. This is usually not required and slow downs processing a lot.

77.39.1196 kcbfParseGrayImages = 4

MBS DynaPDF Plugin, Plugin Version: 8.1.

Function: One of the flag constants for ComputeBBox.
Notes: Find the visible area in gray images.

77.39.1197 kcbUnChecked = 2

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the checkbox state constants.

77.39.1198 kcbUnknown = 0

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the checkbox state constants.

77.39.1199 kccCheck = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the checkbox character constants.

77.39.1200 kccCircle = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the checkbox character constants.

77.39.1201 kccCross1 = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the checkbox character constants.

77.39.1202 kccCross2 = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the checkbox character constants.

77.39.1203 kccCross3 = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the checkbox character constants.

77.39.1204 kccCross4 = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the checkbox character constants.

77.39.1205 kccDiamond = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the checkbox character constants.

77.39.1206 kccfBW_To_Gray = 0

MBS DynaPDF Plugin, Plugin Version: 8.6.

Function: One of the flag constants for color conversion.
Notes: Default, RGB Black and White set with rg or RG inline operators are converted to gray

77.39.1207 kccfRGB_To_Gray = 1

MBS DynaPDF Plugin, Plugin Version: 8.6.

Function: One of the flag constants for color conversion.
Notes: If set, inline color operators rg and RG are converted to gray

77.39.1208 kccfToGrayAdjust = 2

MBS DynaPDF Plugin, Plugin Version: 12.4.

Function: One of the flag constants for color conversion.
Notes: Converts RGB and gray inline operators to gray and allows to darken or lighten the colors.

77.39.1209 kccSquare = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the checkbox character constants.

77.39.1210 kccStar = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the checkbox character constants.

77.39.1211 kcfCCITT3 = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for compression filter.
Notes: PDF or TIFF output ->B& W CCITT Fax G3 compression ->fast but less compression ratio

77.39.1212 kcfCCITT4 = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for compression filter.
Notes: PDF or TIFF output ->B& W CCITT Fax G4 compression ->slower but higher compression ratio

77.39.1213 kcfConvGrayToOtsu = & h00002000

MBS DynaPDF Plugin, Plugin Version: 18.1.

Function: One of the DynaPDF constants for compression filter.
Notes: The Otsu filter is a special filter to produce black & white images. It is very useful if an OCR scan should be applied on the resulting 1 bit image. The flag is considered in AddRasImage(), RenderPDFFile(),

and RenderPageToImage() if the pixel format was set to pxfGray.

77.39.1214 kcfDitherFloydSteinberg = & h00001000

MBS DynaPDF Plugin, Plugin Version: 18.1.

Function: One of the DynaPDF constants for compression filter.
Notes: Floyd Steinberg dithering. Special flags for AddRasImage(). These flags can be combined with the filters cfFlate, cfCCITT3, cfCCITT4, and LZW.

77.39.1215 kcfFlate = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for compression filter.
Notes: PDF or TIFF output

77.39.1216 kcfFlateBW = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for compression filter.
Notes: TIFF, PNG, or BMP output ->Dithered black & white output. The resulting image will be compressed with Flate or left uncompressed if the output image format is a bitmap. If you want to use CCITT Fax 4 compression (TIFF only) set the flag icUseCCITT4 in the AddImage() function call. Note that this filter is not supported for PDF creation!

77.39.1217 kcfIgnoreICCProfile = & h00008000

MBS DynaPDF Plugin, Plugin Version: 21.1.

Function: One of the DynaPDF constants for compression filter.
Notes: Meaningful only if color management is enabled. If set, the device ICC profile is not embedded in the image.

77.39.1218 kcfJBIG2 = 8

MBS DynaPDF Plugin, Plugin Version: 18.4.

Function: One of the DynaPDF constants for compression filter.
Notes: JBIG2 for PDF output only.

77.39.1219 kcfJP2K = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for compression filter.
Notes: PDF or JPEG2000 output

77.39.1220 kcfJPEG = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for compression filter.
Notes: PDF, JPEG, or TIFF output

77.39.1221 kcfLZW = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for compression filter.
Notes: TIFF or GIF output ->Very fast but less compression ratios than flate

77.39.1222 kcfLZWBW = 5

MBS DynaPDF Plugin, Plugin Version: 13.1.

Function: One of the DynaPDF constants for compression filter.
Notes: TIFF output ->Very fast but less compression ratios than flate. For black and white.

77.39.1223 kcfNone = & h000000FF

MBS DynaPDF Plugin, Plugin Version: 20.4.

Function: One of the DynaPDF constants for compression filter.
Notes: No compression, only for TIFF format.

77.39.1224 kcfOrderedDithering = & h00004000

MBS DynaPDF Plugin, Plugin Version: 21.0.

Function: One of the DynaPDF constants for compression filter.
Notes: Ordered dithering. The difference in comparison to the pixel format pxf1Bit is that we render into a GrayA buffer instead of a native 1 bit buffer since this one produces incorrect results in certain transparency calculations.

77.39.1225 kcfPresLosslessFilter = & h00010000

MBS DynaPDF Plugin, Plugin Version: 21.5.

Function: One of the DynaPDF constants for compression filter.
Notes:

Preserve loss-less compression filters.
Use the specified filter otherwise.

77.39.1226 kcfPresLossyFilter = & h00020000

MBS DynaPDF Plugin, Plugin Version: 21.5.

Function: One of the DynaPDF constants for compression filter.
Notes:

Preserve lossy compression filters.
Use the specified filter otherwise.

77.39.1227 kcisCompressedSize = 8

MBS DynaPDF Plugin, Plugin Version: 11.0.

Function: One of the DynaPDF constants for user defined columns is stored in collection items.
Notes:

The compressed file size.
Data value comes from the embedded file.

77.39.1228 kcisCreationDate = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for user defined columns is stored in collection items.
Notes:

The creation date of this file.
Data value comes from the embedded file.

77.39.1229 kcisCustomDate = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for user defined columns is stored in collection items.
Notes: User defined date.

77.39.1230 kcisCustomNumber = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for user defined columns is stored in collection items.
Notes: User defined number.

77.39.1231 kcisCustomString = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for user defined columns is stored in collection items.
Notes: User defined string.

77.39.1232 kcisDescription = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for user defined columns is stored in collection items.
Notes:

The description of the file.
Data value comes from the embedded file.

77.39.1233 kcisFileName = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for user defined columns is stored in collection items.
Notes:

The file name.
Data value comes from the embedded file.

77.39.1234 kcisModDate = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for user defined columns is stored in collection items.
Notes:

The modification date.
Data value comes from the embedded file.

77.39.1235 kcisSize = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for user defined columns is stored in collection items.
Notes:

The file size.
Data value comes from the embedded file.

77.39.1236 kcivCustom = 4

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the DynaPDF constants for specifying how a file collection is shown.
Notes: Custom: PDF 1.7 Extension Level 3, the collection view is presented by a SWF file.

77.39.1237 kcivDetails = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for specifying how a file collection is shown.
Notes: Details.

77.39.1238 kcivHidden = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for specifying how a file collection is shown.
Notes: Hidden.

77.39.1239 kcivNotSet = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for specifying how a file collection is shown.
Notes: Not set.

77.39.1240 kcivTile = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for specifying how a file collection is shown.
Notes: Title.

77.39.1241 kclDefault = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for compression level.

77.39.1242 kClearRectModeDefault = 0

MBS DynaPDF Plugin, Plugin Version: 20.2.

Function: One of the Clear Rect Mode constants.
Notes: Let all ClearRect calls pass through.

77.39.1243 kClearRectModeIgnoreAll = 2

MBS DynaPDF Plugin, Plugin Version: 20.2.

Function: One of the Clear Rect Mode constants.
Notes: Ignore all clearRect calls.

77.39.1244 kClearRectModeIgnoreBig = 1

MBS DynaPDF Plugin, Plugin Version: 20.2.

Function: One of the Clear Rect Mode constants.
Notes: Ignore clear rect calls bigger than half of page size.

77.39.1245 kclFastest = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for compression level.

77.39.1246 kclMax = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for compression level.

77.39.1247 kclNone = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for compression level.

77.39.1248 kcmEvenOdd = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for clipping mode.

77.39.1249 kcmFill = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for color modes.

77.39.1250 kcmFillStroke = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for color modes.

77.39.1251 kcmStroke = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for color modes.

77.39.1252 kcmWinding = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for clipping mode.

77.39.1253 kcoAllowDeviceSpaces = & h40000000

MBS DynaPDF Plugin, Plugin Version: 16.1.

Function: One of the check flag constants for CheckConformance.
Notes: If set, device color spaces will not be replaced with ICC based color spaces. This flag is meaningful for normalization only.

77.39.1254 kcoApplyExportState = & h00020000

MBS DynaPDF Plugin, Plugin Version: 16.0.

Function: One of the check flag constants for CheckConformance.
Notes: Meaningful only if coDeleteAppEvents is set. Apply the export state.

77.39.1255 kcoApplyPrintState = & h00040000

MBS DynaPDF Plugin, Plugin Version: 16.0.

Function: One of the check flag constants for CheckConformance.
Notes: Meaningful only if coDeleteAppEvents is set. Apply the print state.

77.39.1256 kcoBottom = 1

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the cell orientation constants.
Notes: Bottom

77.39.1257 kcoCenter = 2

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the cell orientation constants.
Notes: Center

77.39.1258 kcoCheckImages = & h00800000

MBS DynaPDF Plugin, Plugin Version: 18.2.

Function: One of the check flag constants for CheckConformance.
Notes: Images will be decompressed to identify damages.

77.39.1259 kcoDefault = & h0010FFFF

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the check flag constants for CheckConformance.
Notes: Default flags

77.39.1260 kcoDefault_Normalize = & h50000000

MBS DynaPDF Plugin, Plugin Version: 21.2.

Function: One of the check flag constants for CheckConformance.
Notes: kcoAllowDeviceSpaces + kcoNoFontEmbedding: Common default flags for different PDF/A versions:

77.39.1261 kcoDefault_PDFA_1 = & h0030FFFF

MBS DynaPDF Plugin, Plugin Version: 21.2.

Function: One of the check flag constants for CheckConformance.
Notes: The ability to flatten layers was added after coDefault was defined. Includes kcoFlattenLayers

77.39.1262 kcoDefault_PDFA_2 = & h0050FFFF

MBS DynaPDF Plugin, Plugin Version: 21.2.

Function: One of the check flag constants for CheckConformance.
Notes: Presentations are prohibited in PDF/A 2 and PDF/A 3. Includes kcoDeletePresentation

77.39.1263 kcoDefault_PDFA_3 = & h0050FF7F

MBS DynaPDF Plugin, Plugin Version: 21.2.

Function: One of the check flag constants for CheckConformance.
Notes: Embedded files are allowed in PDF/A 3. kcoDefault_PDFA_2, but without kcoDeleteEmbeddedFiles.

77.39.1264 kcoDeleteActionsAndScripts = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the check flag constants for CheckConformance.
Notes: Delete actions and scripts. Imported files only.

77.39.1265 kcoDeleteAlternateImages = & h00000800

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the check flag constants for CheckConformance.
Notes:

Delete alternate images.
Alternate images are seldom used and prohibited in PDF/A.

77.39.1266 kcoDeleteAppEvents = & h00008000

MBS DynaPDF Plugin, Plugin Version: 16.0.

Function: One of the check flag constants for CheckConformance.
Notes: PDF/A 2 and 3. Application events are prohibited in PDF/A. The view state will be applied.

77.39.1267 kcoDeleteDamagedImages = & h01000000

MBS DynaPDF Plugin, Plugin Version: 18.2.

Function: One of the check flag constants for CheckConformance.
Notes: Meaningful only if coCheckImages is set.

77.39.1268 kcoDeleteEmbeddedFiles = & h00000080

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the check flag constants for CheckConformance.
Notes: Delete embedded files. Imported files only

77.39.1269 kcoDeleteHalftones = & h00100000

MBS DynaPDF Plugin, Plugin Version: 16.0.

Function: One of the check flag constants for CheckConformance.
Notes: Delete halftone screens.

77.39.1270 kcoDeleteInvRenderingIntent = 16

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the check flag constants for CheckConformance.
Notes: Delete rendering intent. Imported files only

77.39.1271 kcoDeleteMultiMediaContents = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the check flag constants for CheckConformance.
Notes: Delete multimedia content. Imported files only.

77.39.1272 kcoDeleteOPIComments = & h00000100

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the check flag constants for CheckConformance.
Notes: Delete OPI comments. Imported files only

77.39.1273 kcoDeletePostscript = & h00000400

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the check flag constants for CheckConformance.
Notes: Delete Postscript XObjects.

77.39.1274 kcoDeletePresentation = & h00400000

MBS DynaPDF Plugin, Plugin Version: 16.1.

Function: One of the check flag constants for CheckConformance.
Notes: Presentations are prohibited in PDF/A 2 and 3.

77.39.1275 kcoDeleteReplies = & h00080000

MBS DynaPDF Plugin, Plugin Version: 16.0.

Function: One of the check flag constants for CheckConformance.
Notes: Delete annotation replies. If absent, replies will be converted to regular text annotations.

77.39.1276 kcoDeleteSignatures = & h00000200

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the check flag constants for CheckConformance.
Notes: Delete signatures. Imported files only

77.39.1277 kcoDeleteTransferFuncs = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the check flag constants for CheckConformance.
Notes: Delete transfer functions. Imported files only

77.39.1278 kcoEmbedSubsets = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the check flag constants for CheckConformance.
Notes: Already done.

77.39.1279 kcoFlattenFormFields = 32

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the check flag constants for CheckConformance.
Notes: Flatten form fields.

77.39.1280 kcoFlattenLayers = & h00200000

MBS DynaPDF Plugin, Plugin Version: 16.1.

Function: One of the check flag constants for CheckConformance.
Notes: PDF/A 1b only. Flatten layers if any.

77.39.1281 kcoFlushPages = & h20000000

MBS DynaPDF Plugin, Plugin Version: 16.0.

Function: One of the check flag constants for CheckConformance.
Notes: Write converted pages directly into the output file to reduce the memory usage.

77.39.1282 kcoLeft = 0

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the cell orientation constants.
Notes: Left

77.39.1283 kcoMakeLayerVisible = & h00004000

MBS DynaPDF Plugin, Plugin Version: 16.4.

Function: One of the check flag constants for CheckConformance.
Notes: PDF/A 2 and 3 prohibit invisible layers. Layers can also be flattened if this is no option.

77.39.1284 kcoNoFontEmbedding = & h10000000

MBS DynaPDF Plugin, Plugin Version: 7.7.

Function: One of the check flag constants for CheckConformance.
Notes:

Normalization only.
If this flag is set not PDF/A file will be produced!

77.39.1285 kcoReComprJPEG2000Images = & h00001000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the check flag constants for CheckConformance.
Notes:

Recompresses JPEG 2000 as flate images.
Recompression results in lower quality and usually in larger images. It is often better to keep such files as is.

77.39.1286 kcoRepairDamagedImages = & h02000000

MBS DynaPDF Plugin, Plugin Version: 18.2.

Function: One of the check flag constants for CheckConformance.
Notes: Meaningful only if coCheckImages is set. If set, try to recompress a damaged image. The new image is maybe incomplete but error free. This flag can be combined with coDeleteDamagedImages to delete the image if recompression fails.

77.39.1287 kcoReplaceV4ICCProfiles = 64

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the check flag constants for CheckConformance.
Notes: Replace V4 ICC Profiles. Imported files only

77.39.1288 kcoReplCCITTFaxWithFlate = & h00010000

MBS DynaPDF Plugin, Plugin Version: 10.3.

Function: One of the check flag constants for CheckConformance.
Notes: Replace CCITT Fax compression with Flate.

77.39.1289 kcoResetAnnotAppearance = & h80000000

MBS DynaPDF Plugin, Plugin Version: 20.3.

Function: One of the check flag constants for CheckConformance.
Notes: If set, appearance streams of annotations are rebuild before executing CheckConformance.

77.39.1290 kcoResolveOverprint = & h00002000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the check flag constants for CheckConformance.
Notes: PDF/A 2 and 3. Set the overprint mode to 0 if the overprint mode = 1 and if overprinting for fill or stroke is true and if a ICCBased CMYK color space is used. Note that DeviceCMYK is treated as ICCBased color space due to implicit color conversion rules.

77.39.1291 kcoRight = 1

Notes: e.g. 12/24/99 14:59

77.39.1416 kdfM_D_YY_H_MM_TT = 12

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the date/time constants.
Notes: e.g. 12/24/99 14:59:59

77.39.1417 kdfNone = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Decode Filter constants.

77.39.1418 kdfRunLengthDecode = 9

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Decode Filter constants.

77.39.1419 kdfYY_MM_DD = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the date/time constants.
Notes: e.g. 99.12.24

77.39.1420 kdi3D_AppDefault = 0

MBS DynaPDF Plugin, Plugin Version: 9.8.

Function: One of the De-instantiation type constants for Set3DAnnotProps.

77.39.1421 kdi3D_Instantiated = 2

MBS DynaPDF Plugin, Plugin Version: 9.8.

Function: One of the De-instantiation type constants for Set3DAnnotProps.
Notes: The annotation will be instantiated but animations are disabled.

77.39.1422 kdi3D_Live = 3

MBS DynaPDF Plugin, Plugin Version: 9.8.

Function: One of the De-instantiation type constants for Set3DAnnotProps.
Notes: The annotation will be instantiated and animations are enabled (default).

77.39.1423 kdi3D_UnInstantiated = 1

MBS DynaPDF Plugin, Plugin Version: 9.8.

Function: One of the De-instantiation type constants for Set3DAnnotProps.
Notes: The annotation will be uninstantiated (default)

77.39.1424 kdiAuthor = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for document information.
Notes: Author Name

77.39.1425 kdiCompany = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for document information.
Notes: Company Name

77.39.1426 kdiCreationDate = 10

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the DynaPDF constants for document information.
Example:

```
// set creation date
call pdf.SetDocInfoEx pdf.kdiCreationDate, "", "D:20150418131854Z00'00'"
```

Notes: Creation Date

77.39.1427 kdiCreator = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for document information.
Notes: Creator Name

77.39.1428 kdiCustom = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for document information.
Notes: User defined key

77.39.1429 kdiKeywords = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for document information.
Notes: Keywords

77.39.1430 kdiModDate = 11

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the DynaPDF constants for document information.
Notes: Modification date.

77.39.1431 kdiPDFX_Conf = 9

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the DynaPDF constants for document information.

77.39.1432 kdiPDFX_Ver = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for document information.
Notes: GetInDocInfo() only ->The PDF/X version is set by SetPDFVersion()!

77.39.1433 kdiProducer = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for document information.
Example:

```
dim pdf as DynaPDFMBS // your dynapdf instance
call pdf.SetDocInfo pdf.kdiProducer, "Xojo test application"
```

Notes: Producer Name

77.39.1434 kdiSubject = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for document information.
Example:

```
dim pdf as DynaPDFMBS // your dynapdf instance
call pdf.SetDocInfo pdf.kdiSubject, "My first Xojo output"
```

Notes: Subject line

77.39.1435 kdiTitle = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for document information.
Example:

```
dim pdf as DynaPDFMBS // your dynapdf instance
call pdf.SetDocInfo pdf.kdiTitle, "My first Xojo output"
```

Notes: Title tag.

77.39.1436 kdmClipping = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for draw modes.

77.39.1437 kdmFillClip = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for draw modes.

77.39.1438 kdmFillStroke = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for draw modes.

77.39.1439 kdmFillStrokeClip = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for draw modes.

77.39.1440 kdmInvisible = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for draw modes.

77.39.1441 kdmNormal = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for draw modes.

77.39.1442 kdmStroke = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for draw modes.

77.39.1443 kdmStrokeClip = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for draw modes.

77.39.1444 kdpmFlipLongEdge = 3

MBS DynaPDF Plugin, Plugin Version: 8.7.

Function: One of the duplex mode constants for the print settings.
Notes: flip long edge

77.39.1445 kdpmFlipShortEdge = 2

MBS DynaPDF Plugin, Plugin Version: 8.7.

Function: One of the duplex mode constants for the print settings.
Notes: flip short edge

77.39.1446 kdpmNone = 0

MBS DynaPDF Plugin, Plugin Version: 8.7.

Function: One of the duplex mode constants for the print settings.
Notes: Use the default value of the viewer

77.39.1447 kdpmSimplex = 1

MBS DynaPDF Plugin, Plugin Version: 8.7.

Function: One of the duplex mode constants for the print settings.
Notes: Simplex

77.39.1448 kDRV_FLOAT_PRECISION = 5

MBS DynaPDF Plugin, Plugin Version: 8.6.

Function: The precision used for float values.

77.39.1449 kdsCommaDot = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for thousand and decimal separators.
Notes: 1,234.56

77.39.1450 kdsDotComma = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for thousand and decimal separators.
Notes: 1.234,56

77.39.1451 kdsNoneComma = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for thousand and decimal separators.
Notes: 1234,56

77.39.1452 kdsNoneDot = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for thousand and decimal separators.
Notes: 1234.56

77.39.1453 kdsQuoteDot = 4

MBS DynaPDF Plugin, Plugin Version: 21.5.

Function: One of the DynaPDF constants for thousand and decimal separators.
Notes: Quote with dot.

77.39.1454 kdt3D_AppDefault = 0

MBS DynaPDF Plugin, Plugin Version: 9.8.

Function: One of the 3D DeActivateType constants.

77.39.1455 kdt3D_Explicit = 3

MBS DynaPDF Plugin, Plugin Version: 9.8.

Function: One of the 3D DeActivateType constants.
Notes: The annotation should remain active until explicitely deactivated by a script or action.

77.39.1456 kdt3D_PageClosed = 1

MBS DynaPDF Plugin, Plugin Version: 9.8.

Function: One of the 3D DeActivateType constants.
Notes: The annotaiton should be deactivated as soon as the page is closed.

77.39.1457 kdt3D_PageInvisible = 2

MBS DynaPDF Plugin, Plugin Version: 9.8.

Function: One of the 3D DeActivateType constants.
Notes: The annotaiton should be deactivated as soon as the page becomes invisible (default).

77.39.1458 kdtCreationDate = 0

MBS DynaPDF Plugin, Plugin Version: 13.5.

Function: One of the date types.
Notes: Creation Date, Markup annotations only.

77.39.1459 kdtFit = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the destination type constants for a link.
Notes: no parameters

77.39.1460 kdtFitB = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the destination type constants for a link.
Notes: no parameters

77.39.1461 kdtFitBH_Top = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the destination type constants for a link.
Notes: one parameter (a)

77.39.1462 kdtFitBV_Left = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the destination type constants for a link.
Notes: one parameter (a)

77.39.1463 kdtFitH_Top = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the destination type constants for a link.
Notes: one parameter

77.39.1464 kdtFitV_Left = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the destination type constants for a link.
Notes: one parameter (a)

77.39.1465 kdtFit_Rect = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the destination type constants for a link.
Notes: four parameters (a, b, c, d) ->(left, bottom, right, top)

77.39.1466 kdtModDate = 1

MBS DynaPDF Plugin, Plugin Version: 13.5.

Function: One of the date types.
Notes: Modification Date, Annotations or form fields.

77.39.1467 kdtXY_Zoom = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the destination type constants for a link.
Notes: Three parameters (a, b, c) ->(X, Y, Zoom)

77.39.1468 kDYNAPDF_REVISION = "$ Rev: 374 $ "

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: The version of the dynapdf library.

77.39.1469 kDYNAPDF_VERSIONSTRING = "4.0.73.213"

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: The version of the dynapdf library.

77.39.1470 keflChild = 0

MBS DynaPDF Plugin, Plugin Version: 13.2.

Function: One of the possible values for embedded file location.
Notes: The file is an embedded file in the current document.

77.39.1471 keflChildAnnot = 1

MBS DynaPDF Plugin, Plugin Version: 13.2.

Function: One of the possible values for embedded file location.
Notes: The file is located in a file attachment annotion in the current document.

77.39.1472 keflExternal = 2

MBS DynaPDF Plugin, Plugin Version: 13.2.

Function: One of the possible values for embedded file location.
Notes: The file is an embedded file in an external document.

77.39.1473 keflExternalAnnot = 3

MBS DynaPDF Plugin, Plugin Version: 13.2.

Function: One of the possible values for embedded file location.
Notes: The file is located in a file attachment annotion in an external document.

77.39.1474 keflParent = 4

MBS DynaPDF Plugin, Plugin Version: 13.2.

Function: One of the possible values for embedded file location.
Notes: The file is located in the parent document.

77.39.1475 keflParentAnnot = 5

MBS DynaPDF Plugin, Plugin Version: 13.2.

Function: One of the possible values for embedded file location.
Notes: The file is located in a file attachment annotion in the parent document.

77.39.1476 kefpAnsiPath = 0

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the flags for the EnumHostFontEx event.
Notes: Code page 1252 on Windows, UTF-8 otherwise. The font has embedding rights.

77.39.1477 kefpEditable = 4

MBS DynaPDF Plugin, Plugin Version: 14.0.

Function: One of the flags for the EnumHostFontEx event.
Notes: If set, the font has editing rights (important for form fields).

77.39.1478 kefpEmbeddable = 2

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the flags for the EnumHostFontEx event.
Notes: The font has embedding rights.

77.39.1479 kefpUnicodePath = 1

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the flags for the EnumHostFontEx event.
Notes: FilePath is in Unicode format. Make a typecast to (UI16*) in this case. The plugin handles that for you.

77.39.1480 kemAllErrors = & h0000FFFF

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the error mode constants.
Notes: All errors

77.39.1481 kemFileError = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the error mode constants.
Notes: File Error

77.39.1482 kemFontError = 16

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the error mode constants.
Notes: Font Error

77.39.1483 kemIgnoreAll = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the error mode constants.
Notes: Ignore All

77.39.1484 kemLogFonts = & h00010000

MBS DynaPDF Plugin, Plugin Version: 20.0.

Function: One of the error mode constants.
Notes: If set, CheckConformance() logs which fonts were replaced with system fonts or converted to Type3.

77.39.1485 kemLogFontsVerbose = & h00020000

MBS DynaPDF Plugin, Plugin Version: 20.0.

Function: One of the error mode constants.
Notes: If set, the path to the font file is added to the message too. Use with kemLogFonts.

77.39.1486 kemNoFuncNames = & h10000000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the error mode constants.
Notes: Do not print function names in error messages

77.39.1487 kemSyntaxError = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the error mode constants.
Notes: Syntax Error

77.39.1488 kemUseErrLog = & h20000000

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the error mode constants.
Notes: Redirect all error messages to the error log.

77.39.1489 kemValueError = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the error mode constants.
Notes: Value Error

77.39.1490 kemWarning = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the error mode constants.
Notes: Warning

77.39.1491 kErrorEventContinue = 0

MBS DynaPDF Plugin, Plugin Version: 20.4.

Function: One of the return codes for the error event.
Notes: Please return zero to ignore the error and continue with your code.

77.39.1492 kErrorEventRaise = -2

MBS DynaPDF Plugin, Plugin Version: 20.4.

Function: One of the return codes for the error event.
Notes: Please return -2 to raise an exception.

77.39.1493 kErrorEventStop = -1

MBS DynaPDF Plugin, Plugin Version: 20.4.

Function: One of the return codes for the error event.
Notes: Please return -1 to stop processing.

77.39.1494 kesCalGray = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the extended color space constants.
Notes: CIE-based color space

77.39.1495 kesCalRGB = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the extended color space constants.
Notes: CIE-based color space

77.39.1496 kesDeviceCMYK = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the extended color space constants.
Notes: Device color space

77.39.1497 kesDeviceGray = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the extended color space constants.
Notes: Device color space

77.39.1498 kesDeviceN = 10

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the extended color space constants.
Notes: Special color space

77.39.1499 kesDeviceRGB = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the extended color space constants.
Notes: Device color space

77.39.1500 kesICCBased = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the extended color space constants.
Notes: CIE-based color space ->contains an ICC profile

77.39.1501 kesIndexed = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the extended color space constants.
Notes: Special color space

77.39.1502 kesLab = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the extended color space constants.
Notes: CIE-based color space

77.39.1503 kesNChannel = 11

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the extended color space constants.
Notes: Special color space

77.39.1504 kesPattern = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the extended color space constants.
Notes: Special color space

77.39.1505 kesSeparation = 9

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the extended color space constants.
Notes: Special color space

77.39.1506 kE_FATAL_ERROR = & h20000000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for error types.
Notes:

Note that error codes are negative; to determine the error type use the absolute value:

// if bitwiseand(-errCode,E_FATAL_ERROR)=E_FATAL_ERROR then msgbox "A fatal error occurred!"

77.39.1507 kE_FILE_ERROR = & h40000000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for error types.
Notes:

Note that error codes are negative; to determine the error type use the absolute value:

// if bitwiseand(-errCode,E_FILE_ERROR)=E_FILE_ERROR then msgbox "A fatal error occurred!"

77.39.1508 kE_FONT_ERROR = & h10000000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for error types.
Notes:

Note that error codes are negative; to determine the error type use the absolute value:

// if bitwiseand(-errCode,E_FONT_ERROR)=E_FONT_ERROR then msgbox "A fatal error occurred!"

77.39.1509 kE_SYNTAX_ERROR = & h04000000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for error types.
Notes:

Note that error codes are negative; to determine the error type use the absolute value:

// if bitwiseand(-errCode,E_SYNTAX_ERROR)=E_SYNTAX_ERROR then msgbox "A fatal error occurred!"

77.39.1510 kE_VALUE_ERROR = & h08000000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for error types.
Notes:

Note that error codes are negative; to determine the error type use the absolute value:

// if bitwiseand(-errCode,E_VALUE_ERROR)=E_VALUE_ERROR then msgbox "A fatal error occurred!"

77.39.1511 kE_WARNING = & h02000000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for error types.
Notes:

Note that error codes are negative; to determine the error type use the absolute value:

// if bitwiseand(-errCode,E_WARNING)=E_WARNING then msgbox "A fatal error occurred!"

77.39.1512 kfaiGraph = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the file attach icon constants.
Notes: Graph.

77.39.1513 kfaiPaperClip = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the file attach icon constants.
Notes: Paper Clip

77.39.1514 kfaiPushPin = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the file attach icon constants.
Notes: Push Pin

77.39.1515 kfaiTag = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the file attach icon constants.
Notes: Tag

77.39.1516 kfbtDisabled = 4

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the font base type constants.
Notes: This value can be used to disable a specific font format. See SetFontSearchOrder() for further information.

77.39.1517 kfbtOpenType = 2

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the font base type constants.
Notes: OpenType font with Postscript outlines

77.39.1518 kfbtStdFont = 3

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the font base type constants.
Notes: PDF Standard font

77.39.1519 kfbtTrueType = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the font base type constants.
Notes: TrueType, TrueType Collections, or OpenType fonts with TrueType outlines

77.39.1520 kfbtType1 = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the font base type constants.
Notes: Type1 font

77.39.1521 kfcBackColor = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for field or annotation colors.

77.39.1522 kfcBorderColor = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for field or annotation colors.

77.39.1523 kfcTextColor = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for field or annotation colors.

77.39.1524 kffComb = & h01000000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the field flags constants.
Notes: PDF 1.5 Text fields only

77.39.1525 kffCommitOnSelCh = & h04000000

MBS DynaPDF Plugin, Plugin Version: 9.3.

Function: One of the field flags constants.
Notes: (PDF 1.5) If set, the new value is committed as soon as a selection is made with the pointing device. This allows applications to perform an action once a selection is made, without requiring the user to exit the field. If clear, the new value is not committed until the user exits the field. Supported by combo boxes and list boxes only.

77.39.1526 kffDoNotScroll = & h00800000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the field flags constants.
Notes: PDF 1.4 Text fields only

77.39.1527 kffDoNotSpellCheck = & h00400000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the field flags constants.
Notes: PDF 1.4 Text fields, combo boxes. If the field is a combo box, this flag is meaningful only if ffEdit is also set.

77.39.1528 kffEdit = & h00040000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the field flags constants.
Notes: Combo boxes only

77.39.1529 kffFileSelect = & h00100000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the field flags constants.
Notes: PDF 1.4 Text fields only

77.39.1530 kffHidden = 16

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the field flags constants.

Function: One of the field flags constants.

77.39.1544 kffsCIDFontType0C = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for font file sub types.
Notes: CFF based Type1 CID font

77.39.1545 kffsCIDFontType2 = 4

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the font file type constants.
Notes: TrueType based CID Font

77.39.1546 kffsNoSubtype = 9

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for font file sub types.
Notes: The font file is in the format of FontType

77.39.1547 kffsOpenType = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for font file sub types.
Notes: TrueType based OpenType font

77.39.1548 kffsOpenTypeC = 3

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the font file type constants.
Notes: CFF based OpenType font

77.39.1549 kffSorted = & h00080000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the field flags constants.
Notes: Use this flag to change the sort flag of combo boxes or list boxes

77.39.1550 kffsType1C = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for font file sub types.
Notes: CFF based Type1 font.

77.39.1551 kfmClose = 11

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for the fill mode.
Notes: Close the path, but do not fill or stroke it. More vertices are required or stroke the path in a separate step.

77.39.1552 kfmFill = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for the fill mode.
Notes: Fill path.

77.39.1553 kfmFillEvOdd = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for the fill mode.
Notes: Fill even odd.

77.39.1554 kfmFillEvOddNoClose = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for the fill mode.
Notes: Fill even odd and no close.

77.39.1555 kfmFillNoClose = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for the fill mode.
Notes: Fill, but don't close.

77.39.1556 kfmFillStroke = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for the fill mode.
Notes: Fill and stroke.

77.39.1557 kfmFillStrokeEvOdd = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for the fill mode.
Notes: Fill and stroke even odd.

77.39.1558 kfmFillStrokeEvOddNoClose = 9

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for the fill mode.
Notes: Fill and stroke even odd, no close.

77.39.1559 kfmFillStrokeNoClose = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for the fill mode.
Notes: Fill, Stroke, but don't close.

77.39.1560 kfmNoFill = 10

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for the fill mode.
Notes: Don't fill.

77.39.1561 kfmStroke = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for the fill mode.
Notes: Stroke path.

77.39.1562 kfmStrokeNoClose = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for the fill mode.
Notes: Stroke, but do not close.

77.39.1563 kfoOpen = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for file operation for use with CreateLaunchAction function.
Notes: Open file.

77.39.1564 kfoPrint = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for file operation for use with CreateLaunchAction function.
Notes: Print file.

77.39.1565 kfpfDefault = 0

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the flush constants for Flush method.
Notes: Write anything to the file that is possible.

77.39.1566 kfpfExclLastPage = 2

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the flush constants for Flush method.
Notes: If set, the last page is not flushed.

77.39.1567 kfpfImagesOnly = 1

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the flush constants for Flush method.
Notes: If set, only images are written to the file. The pages are still in memory and can be modified with EditPage(). Flushed images can still be referenced in other pages. The image handles remain valid.

77.39.1568 kfsBlack = & h38400000

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the font style constants for the weight class.

77.39.1569 kfsBold = & h2BC00000

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the font style constants for the weight class.
Notes: The old constant 2 is still supported to preserve backward compatibility

77.39.1570 kfsCondensed = & h00000300

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the font style constants for the width class.

77.39.1571 kfsDblUnderline = 32

MBS DynaPDF Plugin, Plugin Version: 21.5.

Function: One of the constants for font style.
Notes: Double underlined text.

77.39.1572 kfsDemiBold = & h25800000

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the font style constants for the weight class.

77.39.1573 kfsExpanded = & h00000700

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the font style constants for the width class.

77.39.1574 kfsExtraBold = & h32000000

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the font style constants for the weight class.

77.39.1575 kfsExtraCondensed = & h00000200

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the font style constants for the width class.

77.39.1576 kfsExtraExpanded = & h00000800

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the font style constants for the width class.

77.39.1577 kfsExtraLight = & h0C800000

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the font style constants for the weight class.

77.39.1578 kfsItalic = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for font style.

77.39.1579 kfsLight = & h12C00000

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the font style constants for the weight class.

77.39.1580 kfsMedium = & h1F400000

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the font style constants for the weight class.

77.39.1581 kfsNone = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for font style.

77.39.1582 kfsNormal = & h00000500

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the font style constants for the width class.

77.39.1583 kfsRegular = & h19000000

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the font style constants for the weight class.
Notes: Same as fsNone

77.39.1584 kfsSemiCondensed = & h00000400

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the font style constants for the width class.

77.39.1585 kfsSemiExpanded = & h00000600

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the font style constants for the width class.

77.39.1586 kfsStriked = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for font style.

77.39.1587 kfsThin = & h06400000

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the font style constants for the weight class.

77.39.1588 kfsUltraBlack = & h3E800000

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the font style constants for the weight class.

77.39.1589 kfsUltraCondensed = & h00000100

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the font style constants for the width class.

77.39.1590 kfsUltraExpanded = & h00000900

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the font style constants for the width class.

77.39.1591 kfsUnderlined = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for font style.
Notes: Underlined text.

77.39.1592 kfsVerticalMode = 16

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the constants for font style.
Notes: Not considered at this time (v2.5)

77.39.1593 kftButton = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the field type constants.
Notes: Button

77.39.1594 kftCheckBox = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: Checkbox

77.39.1595 kftComboBox = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: Combobox

77.39.1596 kftGroup = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: This is not a real field type, it is just an array of fields.

77.39.1597 kftListBox = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: Listbox

77.39.1598 kftMMType1 = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for font types.
Notes: Multiple Master

77.39.1599 kftRadioBtn = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: Radio Button

77.39.1600 kftSignature = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: Signature

77.39.1601 kftText = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: Text.

77.39.1602 kftTrueType = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for font types.
Notes: TrueType font

77.39.1603 kftType0 = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for font types.
Notes: CID font ->the descendant font can be a TrueType, Type1 (CFF), or OpenType font

77.39.1604 kftType1 = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for font types.
Notes: Type1 font

77.39.1605 kftType3 = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for font types.
Notes: Type3 font

77.39.1606 kgfAnsiStringIsUTF8 = 32

MBS DynaPDF Plugin, Plugin Version: 12.4.

Function: One of the graphics state flag constants.
Notes:

If set, single byte strings in Ansi functions are treated as UTF-8 encoded Unicode strings.
Currently not useable with plugins.

77.39.1607 kgfCompatible = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the graphics state flag constants.
Notes: Compatible graphics state to earlier DynaPDF versions ->default

77.39.1608 kgfComplexText = & h00000400

MBS DynaPDF Plugin, Plugin Version: 20.1.

Function: One of the graphics state flag constants.
Notes: If set, text is processed with Uniscribe on Windows.

77.39.1609 kgfDisableBidiCtrls = & h00001000

MBS DynaPDF Plugin, Plugin Version: 22.0.

Function: One of the graphics state flag constants.
Notes: Meaningful only if gfComplexText is set too. If set, bidi control characters are ignored. This flag can be useful if the result of web browsers should be emulated since web browsers do not support bidi control characters. This flag is also used internally to create the appearance stream of form fields since form fields do not support bidi control characters.

77.39.1610 kgfDisableJavascript = & h00000800

MBS DynaPDF Plugin, Plugin Version: 21.5.

Function: One of the graphics state flag constants.
Notes: If set, Javascript actions associated with the OnFormat event of text fields are not executed to format the field value.

77.39.1611 kgfDoNotComprMetadata = & h00002000

MBS DynaPDF Plugin, Plugin Version: 22.4.

Function: One of the graphics state flag constants.
Notes: If set, arbitrary metadata stream associated with PDF objects other that the global metadata stream will not be compressed. This can be useful since certain standards prohibit compression of metadata streams. The flag is automatically for PDF/X files.

77.39.1612 kgfIgnoreICCProfiles = 16

MBS DynaPDF Plugin, Plugin Version: 9.3.

Function: One of the graphics state flag constants.
Notes: Meaningful only if the flag kgfUseImageColorSpace is set. If set, an embedded profile is not used to create an ICCBased color space for the image. The image is inserted in the corresponding device color

space instead.

77.39.1613 kgfNativeBlackWhite = 4

MBS DynaPDF Plugin, Plugin Version: 8.1.

Function: One of the graphics state flag constants.
Notes: Do not convert RGB black or white to DeviceGray

77.39.1614 kgfNoBitmapAlpha = & h00000080

MBS DynaPDF Plugin, Plugin Version: 14.3.

Function: One of the graphics state flag constants.
Notes: If set, the alpha channel in 32 bit bitmaps will be ignored. Useful for bitmaps with an invalid alpha channel.

77.39.1615 kgfNoImageDuplCheck = & h00000100

MBS DynaPDF Plugin, Plugin Version: 14.3.

Function: One of the graphics state flag constants.
Notes: Disables duplicate check for images.

77.39.1616 kgfNoObjCompression = & h00000200

MBS DynaPDF Plugin, Plugin Version: 16.1.

Function: One of the graphics state flag constants.
Notes: If set, object compression will be disabled.

77.39.1617 kgfRealPassThrough = 64

MBS DynaPDF Plugin, Plugin Version: 14.3.

Function: One of the graphics state flag constants.
Notes: If set, JPEG images are inserted as is. JPEG images are normally rebuild, also in pass-through mode, to avoid issues with certain malformed JPEG images which cannot be displayed in Adobes Acrobat or Reader. If you know that your JPEG images work then set this flag to avoid unnecessary processing time.

77.39.1618 kgfRealTopDownCoords = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the graphics state flag constants.
Notes: If set, the page coordinate system is not reset to bottom-up when transforming the coordinate system. However, real top-down coordinates require a large internal overhead and where never fully implemented. The usage of this flag should be avoided if possible.

77.39.1619 kgfRestorePageCoords = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the graphics state flag constants.
Notes: Restore the coordinate system with the graphics state (the value of PageCoords, see SetPageCoords())

77.39.1620 kgfUpdatePDFVTModDate = & h00004000

MBS DynaPDF Plugin, Plugin Version: 23.1.

Function: One of the graphics state flag constants.
Notes: If set, the key GTS_PDFVTModDate will be set to the file's modification date.

77.39.1621 kgfUseImageColorSpace = 8

MBS DynaPDF Plugin, Plugin Version: 9.3.

Function: One of the graphics state flag constants.
Notes: If set, the active color space is ignored when inserting an image. The color space is taken from the image file instead.

77.39.1622 khmInvert = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Highlight Mode Constants.

77.39.1623 khmNone = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Highlight Mode Constants.

77.39.1624 khmOutline = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Highlight Mode Constants.

77.39.1625 khmPush = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Highlight Mode Constants.

77.39.1626 khmPushUpd = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Highlight Mode Constants.
Notes: Update appearance stream on changes

77.39.1627 khtDetached = 0

MBS DynaPDF Plugin, Plugin Version: 10.2.

Function: One of the constants for CloseAndSignFileExt.
Notes: Returns the byte ranges of the finish PDF buffer to create a detached signature.

77.39.1628 khtSHA1 = 1

MBS DynaPDF Plugin, Plugin Version: 10.2.

Function: One of the constants for CloseAndSignFileExt.
Notes: Returns the SHA1 hash of the PDF file so that it can be signed.

77.39.1629 kicfDefault = 0

MBS DynaPDF Plugin, Plugin Version: 11.2.

Function: One of the cache initialization flags.

77.39.1630 kicfIgnoreOpenAction = 1

MBS DynaPDF Plugin, Plugin Version: 11.2.

Function: One of the cache initialization flags.

77.39.1631 kicfIgnorePageLayout = 2

MBS DynaPDF Plugin, Plugin Version: 11.2.

Function: One of the cache initialization flags.

77.39.1632 kicmBPCompensation = 1

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the flags to pass to InitColorManagement function.
Notes: Black point compensation preserves the black point when converting CMYK colors to different color spaces.

77.39.1633 kicmCheckBlackPoint = 2

MBS DynaPDF Plugin, Plugin Version: 14.2.

Function: One of the flags to pass to InitColorManagement function.
Notes: If set, soft proofing will be disabled if the black point of the output intent is probably invalid.

77.39.1634 kicmDefault = 0

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the flags to pass to InitColorManagement function.
Notes: Default rules.

77.39.1635 kicNone = 0

MBS DynaPDF Plugin, Plugin Version: 7.7.

Function: One of the image conversion flag constants.
Notes: Default value.

77.39.1636 kictCMYK = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for ICC profile types.

77.39.1637 kictGray = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for ICC profile types.

77.39.1638 kictLab = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for ICC profile types.

77.39.1639 kictRGB = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for ICC profile types.

77.39.1640 kicUseCCITT4 = 1

MBS DynaPDF Plugin, Plugin Version: 7.7.

Function: One of the image conversion flag constants.
Notes: Use CCITT Fax 4 compression instead of Flate for dithered images.

77.39.1641 kif2CopyEncryptDict = 64

MBS DynaPDF Plugin, Plugin Version: 17.0.

Function: One of the constants for ImportFlags2.
Notes:

If set, the encryption settings of an encrypted PDF file are copied to the new PDF file.
The flag does nothing if the file is not encrypted.

77.39.1642 kif2DuplicateCheck = 16

MBS DynaPDF Plugin, Plugin Version: 12.4.

Function: One of the constants for ImportFlags2.
Notes: Perform a duplicate check on color spaces, fonts, images, patterns, and templates when merging PDF files.

77.39.1643 kif2MergeLayers = 1

MBS DynaPDF Plugin, Plugin Version: 8.1.

Function: One of the constants for ImportFlags2.
Notes: If set, layers with identical name are merged. If this flag is absent DynaPDF imports such layers separately so that each layer refers still to the pages where it was orignally used.

77.39.1644 kif2NoMetadata = 8

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the constants for ImportFlags2.
Notes: Ignore metadata streams which are attached to fonts, pages, images, and so on.

77.39.1645 kif2NoResNameCheck = 32

MBS DynaPDF Plugin, Plugin Version: 16.5.

Function: One of the constants for ImportFlags2.
Notes: Useful in viewer applications

77.39.1646 kif2Normalize = 2

MBS DynaPDF Plugin, Plugin Version: 10.3.

Function: One of the constants for ImportFlags2.
Notes: Replace LZW compression with Flate, apply limit checks, repair errors if possible.

77.39.1647 kif2UseProxy = 4

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the constants for ImportFlags2.
Notes: Not meaningful for PDF files which are loaded from a memory buffer. If set, all streams are loaded from the file on demand but they are never hold in memory. This reduces drastically the memory usage and enables the processing of almost arbitrary large PDF files with minimal memory usage. The corresponding PDF file must not be deleted before CloseFile() or CloseFileEx() was called.

77.39.1648 kif3DAnnot = & h00100000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

77.39.1649 kifAllAnnots = & h009F0000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

77.39.1650 kifAllPageObjects = & h40000000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

77.39.1651 kifArticles = 16

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

77.39.1652 kifBookmarks = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

77.39.1653 kifBoxColorInfo = & h00000200

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

77.39.1654 kifCatalogAction = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

77.39.1655 kifContentOnly = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

77.39.1656 kifDocInfo = & h00008000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

77.39.1657 kifEmbeddedFiles = & h00200000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

77.39.1658 kifEnumFonts = & h20000000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

77.39.1659 kifFileCollections = & h00400000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

77.39.1660 kifFormFields = & h01000000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

77.39.1661 kifFreeText = & h00010000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

77.39.1662 kifImportAll = & h0FFFFFFE

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

77.39.1663 kifImportAsPage = & h80000000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

77.39.1664 kifJavaScript = & h00002000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

77.39.1665 kifJSActions = & h00004000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

77.39.1666 kifLink = & h00040000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

77.39.1667 kifmBMP = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the image format constants.
Notes: BMP: DeviceGray, DeviceRGB, Black & White ->Uncompressed.

77.39.1668 kifmJPC = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the image format constants.
Notes: JPEG 2000: DeviceRGB, DeviceCMYK, DeviceGray ->JPEG2000 compression.

77.39.1669 kifmJPEG = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the image format constants.
Notes: JPEG: DeviceRGB, DeviceCMYK, DeviceGray ->JPEG compression.

77.39.1670 kifmPNG = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the image format constants.
Notes: PNG: DeviceGray, DeviceRGB, Black & White ->Flate compression.

77.39.1671 kifmTIFF = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the image format constants.
Notes: TIFF: DeviceRGB, DeviceCMYK, DeviceGray, Black & White ->CCITT Fax Group 3/4, JPEG, Flate, LZW.

77.39.1672 kifNoContent = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

77.39.1673 kifOtherAnnots = & h00800000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

77.39.1683 kifThumbs = 64

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

77.39.1684 kifTransition = & h00000800

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

77.39.1685 kifTranspGroups = & h00000080

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

77.39.1686 kit3D_AppDefault = 0

MBS DynaPDF Plugin, Plugin Version: 9.8.

Function: One of the Instantiation type constants for Set3DAnnotProps.
Notes: Default

77.39.1687 kit3D_Instantiated = 1

MBS DynaPDF Plugin, Plugin Version: 9.8.

Function: One of the Instantiation type constants for Set3DAnnotProps.
Notes: The annotation will be instantiated but animations are disabled.

77.39.1688 kit3D_Live = 2

MBS DynaPDF Plugin, Plugin Version: 9.8.

Function: One of the Instantiation type constants for Set3DAnnotProps.
Notes: The annotation will be instantiated and animations are enabled (default).

77.39.1689 kjsBevelJoin = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for line join styles.
Notes: Bevel Join

77.39.1690 kjsMiterJoin = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for line join styles.
Notes: Miter Join

77.39.1691 kjsRoundJoin = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for line join styles.
Notes: Round Join

77.39.1692 kkl128bit = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for key length.
Notes: RC4 Encryption ->Acrobat 5 or higher

77.39.1693 kkl128bitEx = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for key length.
Notes: RC4 Encryption ->Acrobat 6 or higher

77.39.1694 kkl40bit = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for key length.
Notes: RC4 Encryption ->Acrobat 3 or higher

77.39.1695 kklAES128 = 3

MBS DynaPDF Plugin, Plugin Version: 9.1.

Function: One of the DynaPDF constants for key length.
Notes: AES Encryption ->Acrobat 7 or higher

77.39.1696 kklAES256 = 4

MBS DynaPDF Plugin, Plugin Version: 9.1.

Function: One of the DynaPDF constants for key length.
Notes: AES Encryption ->Acrobat 9 or higher

77.39.1697 kklAESRev6 = 5

MBS DynaPDF Plugin, Plugin Version: 15.4.

Function: One of the DynaPDF constants for key length.
Notes: AES Encryption ->PDF 2.0, Acrobat X or higher

77.39.1698 klcmDefault = 0

MBS DynaPDF Plugin, Plugin Version: 11.2.

Function: One of the constants for flags to SetCMapDir function
Notes: Load the cmaps in the directory now.

77.39.1699 klcmDelayed = 2

MBS DynaPDF Plugin, Plugin Version: 11.2.

Function: One of the constants for flags to SetCMapDir function
Notes: Load the cmap files only when a font requires an external cmap.

77.39.1700 klcmRecursive = 1

MBS DynaPDF Plugin, Plugin Version: 11.2.

Function: One of the constants for flags to SetCMapDir function
Notes: Load sub directories recursively.

77.39.1701 kleButt = 1

MBS DynaPDF Plugin, Plugin Version: 14.0.

Function: One of the flags for the line end style.
Notes: Butt

77.39.1702 kleCircle = 2

MBS DynaPDF Plugin, Plugin Version: 14.0.

Function: One of the flags for the line end style.
Notes: Circle

77.39.1703 kleClosedArrow = 3

MBS DynaPDF Plugin, Plugin Version: 14.0.

Function: One of the flags for the line end style.
Notes: Left Close Arrow

77.39.1704 kleDiamond = 4

MBS DynaPDF Plugin, Plugin Version: 14.0.

Function: One of the flags for the line end style.
Notes: Diamond

77.39.1705 kleNone = 0

MBS DynaPDF Plugin, Plugin Version: 14.0.

Function: One of the flags for the line end style.
Notes: No end

77.39.1706 kleOpenArrow = 5

MBS DynaPDF Plugin, Plugin Version: 14.0.

Function: One of the flags for the line end style.
Notes: Left Open Arrow

77.39.1707 kleRClosedArrow = 6

MBS DynaPDF Plugin, Plugin Version: 14.0.

Function: One of the flags for the line end style.
Notes: Right Close Arrow

77.39.1708 kleROpenArrow = 7

MBS DynaPDF Plugin, Plugin Version: 14.0.

Function: One of the flags for the line end style.
Notes: Right Open Arrow

77.39.1709 kleSlash = 8

MBS DynaPDF Plugin, Plugin Version: 14.0.

Function: One of the flags for the line end style.
Notes: Slash

77.39.1710 kleSquare = 9

MBS DynaPDF Plugin, Plugin Version: 14.0.

Function: One of the flags for the line end style.
Notes: Square

77.39.1711 klsArtwork = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for a 3D Rendering mode for Create3DView.
Notes: Lights from file lsBlue,

77.39.1712 klsBlue = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for a 3D Rendering mode for Create3DView.

77.39.1713 klsCAD = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for a 3D Rendering mode for Create3DView.

77.39.1714 klsCube = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for a 3D Rendering mode for Create3DView.

77.39.1715 klsDay = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for a 3D Rendering mode for Create3DView.

77.39.1716 klsHard = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for a 3D Rendering mode for Create3DView.

77.39.1717 klsHeadlamp = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for a 3D Rendering mode for Create3DView.

77.39.1718 klsNight = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for a 3D Rendering mode for Create3DView.

77.39.1719 klsNoLights = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for a 3D Rendering mode for Create3DView.

77.39.1720 klsNotSet = 12

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for a 3D Rendering mode for Create3DView.

77.39.1721 klsPrimary = 9

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for a 3D Rendering mode for Create3DView.

77.39.1722 klsRed = 10

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for a 3D Rendering mode for Create3DView.

77.39.1723 klsWhite = 11

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for a 3D Rendering mode for Create3DView.

77.39.1724 kmdoCatalog = 0

MBS DynaPDF Plugin, Plugin Version: 14.0.

Function: One of the metadata object contants.
Notes: The global XMP stream of the document (no handle needed)

77.39.1725 kmdoFont = 1

MBS DynaPDF Plugin, Plugin Version: 14.0.

Function: One of the metadata object contants.
Notes: Parameter Handle must be a font handle.

77.39.1726 kmdoImage = 2

MBS DynaPDF Plugin, Plugin Version: 14.0.

Function: One of the metadata object contants.
Notes: Parameter Handle must be an image handle.

77.39.1727 kmdoPage = 3

MBS DynaPDF Plugin, Plugin Version: 14.0.

Function: One of the metadata object contants.
Notes: Parameter Handle must be a page number.

77.39.1728 kmdoTemplate = 4

MBS DynaPDF Plugin, Plugin Version: 14.0.

Function: One of the metadata object contants.
Notes: Parameter Handle must be a template handle.

77.39.1729 kmfApplyBidiAlgo = & h00080000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: Apply the bidirectional algorithm on Unicode strings

77.39.1730 kmfClipRclBounds = & h01000000

MBS DynaPDF Plugin, Plugin Version: 8.5.

Function: One of the metaflags constants.
Notes:

If set, the graphic is drawn into a clipping path with the size of rclBounds.
This flag is useful if the graphic contains content outside of its bounding box.

77.39.1731 kmfClipView = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: Draw the file into a clipping rectangle

77.39.1732 kmfCurrComprFilter = & h20000000

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the meta flag constants.
Notes:

If set, the currently active compression filter is used to compress the image (see SetCompressionFilter()).
This flag is used only if the file is rastered to an image.

77.39.1733 kmfDebug = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: Write debug information into the content stream.

77.39.1734 kmfDefault = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: Default conversion

77.39.1735 kmfDefBkModeTransp = & h00040000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: Initialize the background mode to transparent (SetBkMode() overrides this state).

77.39.1736 kmfDisableRasterEMF = & h02000000

MBS DynaPDF Plugin, Plugin Version: 8.7.

Function: One of the metaflags constants.
Notes: If set, EMF files which use unsupported ROP codes are not rastered.

77.39.1737 kmfDontSkipROP_DPa = & h10000000

MBS DynaPDF Plugin, Plugin Version: 20.2.

Function: One of the metaflags constants.
Notes:

If set, the ROP code 0x00A000C9 (DPa) is considered in BitBlt, StretchBlt, TranparentBlt, and AlphaBlend records.
This kind of ROP code combines a pattern brush with the backdrop. If the flag mfDisableRasterEMF is absent, the usage of such a ROP code causes that the file is rendered to an image.

77.39.1738 kmfFullScale = & h00010000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: Recommended if 32 bit coordinates are used

77.39.1739 kmfGDIFontSelection = & h00100000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: Use the GDI to select fonts

77.39.1740 kmfIgnoreEmbFonts = & h08000000

MBS DynaPDF Plugin, Plugin Version: 13.4.

Function: One of the meta flag constants.
Notes: If set, embedded fonts in GDIComment records will be ignored. This flag must be set if the fonts of an EMF spool file were pre-loaded with ConvertEMFSpool(). Spool fonts must always be loaded in a pre-processing step since required fonts are not necessarily embedded in the EMF files.

77.39.1741 kmfIntersectClipRect = & h00002000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: enabled by default ->can be disabled with mfNoClippingRgn

77.39.1742 kmfNoBBoxCheck = & h04000000

MBS DynaPDF Plugin, Plugin Version: 13.3.

Function: One of the meta flag constants.
Notes: Disable the bbox check.

77.39.1743 kmfNoBmpPatterns = & h00000400

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: Ignore bitmap patterns

77.39.1744 kmfNoClippingRgn = 64

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: Disables SelectClippingRegion, IntersectClipRect, and SelectClipPath

77.39.1745 kmfNoFontEmbedding = & h00000080

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: Do not embed fonts ->Fonts should be embedded!!!

77.39.1746 kmfNoImages = & h00000100

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: Ignore image records

77.39.1747 kmfNoStdPatterns = & h00000200

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: Ignore standard patterns

77.39.1748 kmfNoText = & h00000800

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: Ignore text records

77.39.1749 kmfNoTextClipping = & h00400000

MBS DynaPDF Plugin, Plugin Version: 8.5.

Function: One of the metaflags constants.
Notes: If set, the ETO_CLIPPED flag in text records is ignored.

77.39.1750 kmfNoTextScaling = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: Do not scale text

77.39.1751 kmfNoUnicode = & h00008000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: Avoid usage of Unicode fonts ->recommended to enable PDF 1.2 compability

77.39.1752 kmfRclFrameEx = & h00200000

MBS DynaPDF Plugin, Plugin Version: 8.1.

Function: One of the DynaPDF constants.

77.39.1753 kmfShowBounds = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: Show the bounding boxes of text strings

77.39.1754 kmfSrcCopy_Only = & h00800000

MBS DynaPDF Plugin, Plugin Version: 8.5.

Function: One of the metaflags constants.
Notes: If set, images which use a ROP code other than SRCCOPY are ignored. This is useful when pro-

cessing Excel 2007 spool files.

77.39.1755 kmfUseRclBounds = 16

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: Use rclBounds instead of rclFrame

77.39.1756 kmfUseRclFrame = & h00020000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: This flag should be set if the rclFrame rectangle is properly set

77.39.1757 kmfUseSpacingArray = 32

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: enabled by default ->can be disabled with mfUseTextScaling

77.39.1758 kmfUseTextScaling = & h00004000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: Scale text instead of using the intercharacter spacing array

77.39.1759 kmfUseUnicode = & h00001000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: Ignore ANSI_CHARSET

77.39.1760 kmiNotTagged = 0

MBS DynaPDF Plugin, Plugin Version: 21.4.

Function: One of the flags for tagged PDF file status.
Notes: This is no Tagged PDF file.

77.39.1761 kmiSuspects = 2

MBS DynaPDF Plugin, Plugin Version: 21.4.

Function: One of the flags for tagged PDF file status.
Notes: The file contains suspect contents that whose ordering does not ordered meet the requirements of the Tagged PDF specifications.

77.39.1762 kmiTagged = 1

MBS DynaPDF Plugin, Plugin Version: 21.4.

Function: One of the flags for tagged PDF file status.
Notes: This is a Tagged PDF file.

77.39.1763 kmiUserProperties = 4

MBS DynaPDF Plugin, Plugin Version: 21.4.

Function: One of the flags for tagged PDF file status.
Notes: A flag indicating that at least one structure element contains user properties. User properties are stored in User Property dictionaries.

77.39.1764 knaDefault = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for a 3D named action.

Function: One of the DynaPDF constants.

77.39.1786 kNEW_ALIGN_LEFT = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.

77.39.1787 kNEW_ALIGN_RIGHT = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.

77.39.1788 kNO_COLOR = & hFFFFFFF1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the RGB color constants.
Notes:

This value can be used for form fields, annotations and standard patterns to determine that the specific color is not set.
For example, when a form field should have a transparent background, set the field background color to NO_COLOR. The background appears then transparent.

77.39.1789 knsMinusBlack = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the negative number format constants for SetNumberFormat.
Notes: The number is colored black with a minus sign.

77.39.1790 knsParensBlack = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the negative number format constants for SetNumberFormat.
Notes: The number is colored black with parenthesis.

77.39.1791 knsParensRed = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the negative number format constants for SetNumberFormat.
Notes: The number is colored red with parenthesis.

77.39.1792 knsRed = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the negative number format constants for SetNumberFormat.
Notes: The number is colored red.

Function: One of the DynaPDF constants.
Notes: PDF 1.5 ->Form fields only

77.39.1810 koeOnPageInVisible = 14

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: PDF 1.5 ->Form fields only

77.39.1811 koeOnPageOpen = 15

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: PDF 1.5 ->Form fields only

77.39.1812 koeOnPageVisible = 13

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: PDF 1.5 ->Form fields only

77.39.1813 koeOnValidate = 12

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: All form fields, except buttons

77.39.1814 kofAdjZeroLineWidthOnly = & h00002000

MBS DynaPDF Plugin, Plugin Version: 17.0.

Function: One of the constants for the Optimize function.
Notes: Meaningful only if the parameter MinLineWidth of the optimize parameters is greater zero. If set, change the line width of real hairlines only (a hairline is a one pixel width line ->LineWidth = 0).

77.39.1815 kofCompressWithJBIG2 = & h00004000

MBS DynaPDF Plugin, Plugin Version: 18.4.

Function: One of the constants for the Optimize function.
Notes: If set, 1 bit images are compressed with JBIG2 if not already compressed with this filter.

77.39.1816 kofConvertAllColors = 2

MBS DynaPDF Plugin, Plugin Version: 14.2.

Function: One of the constants for the Optimize function.
Notes: If set, Separation, DeviceN, and NChannel color spaces will be converted to the device space.

77.39.1817 kofConvertGrayTo1Bit = & h00010000

MBS DynaPDF Plugin, Plugin Version: 18.4.

Function: One of the constants for the Optimize function.
Notes: Useful for scanned faxes since many scanners create gray images for black & white input.

77.39.1818 kofConvertToCMYK = & h00080000

MBS DynaPDF Plugin, Plugin Version: 19.3.

Function: One of the constants for the Optimize function.
Notes: If set, images, text, and vector graphics are converted to DeviceCMYK.

77.39.1819 kofConvertToGray = & h00020000

MBS DynaPDF Plugin, Plugin Version: 19.3.

Function: One of the constants for the Optimize function.
Notes: If set, images, text, and vector graphics are converted to DeviceGray.

77.39.1820 kofConvertToRGB = & h00040000

MBS DynaPDF Plugin, Plugin Version: 19.3.

Function: One of the constants for the Optimize function.
Notes: If set, images, text, and vector graphics are converted to DeviceRGB.

77.39.1821 kofConvNonEmbFontsOnly = & h00800000

MBS DynaPDF Plugin, Plugin Version: 21.0.

Function: One of the constants for the Optimize function.
Notes: Meaningful only, if the flag kofConvTextToOutlines is set. If set, text of non-embedded fonts are converted to outlines only. Embedded fonts remain embedded.

77.39.1822 kofConvTextToOutlines = & h00400000

MBS DynaPDF Plugin, Plugin Version: 21.0.

Function: One of the constants for the Optimize function.
Notes: If set, texts of non-Type3 fonts are converted to outlines or vector graphics. The resulting file contains no fonts with exception of Type3 fonts, if any. Such files are large but avoid printing issues due to missing or damaged fonts.

77.39.1823 kofDefault = 0

MBS DynaPDF Plugin, Plugin Version: 16.4.

Function: One of the constants for the Optimize function.
Notes: Just rebuild the content streams.

77.39.1824 kofDeleteAlternateImages = & h00000400

MBS DynaPDF Plugin, Plugin Version: 16.4.

Function: One of the constants for the Optimize function.
Notes: If set, alternate images will be deleted.

77.39.1825 kofDeleteInvPaths = 64

MBS DynaPDF Plugin, Plugin Version: 16.1.

Function: One of the constants for the Optimize function.
Notes: Delete invisible paths. An invisible path is a path that was finished with the no-op operator "n".

77.39.1826 kofDeletePrivateData = & h00000100

MBS DynaPDF Plugin, Plugin Version: 16.4.

Function: One of the constants for the Optimize function.
Notes:

Delete private data objects from pages, templates, and images.
For example Indesign may store the original Photoshop image within the PDF file.

77.39.1827 kofDeleteThumbnails = & h00000200

MBS DynaPDF Plugin, Plugin Version: 16.4.

Function: One of the constants for the Optimize function.
Notes: Thumbnails can be deleted since PDF viewers can create thumbnails easily on demand.

77.39.1828 kofFailOnOverprinting = & h08000000

MBS DynaPDF Plugin, Plugin Version: 21.1.

Function: One of the constants for the Optimize function.
Notes: Meaningful only if a color conversion flag is set. If set, the function returns with a fatal error if an object with enabled overprinting was found on the page. The appearance of overprinted objects would change and make the page maybe unusable. Overprinted objects can be left unchanged (set the flag kofSkipOverprintedObj in this case) or Optimize() can return with a fatal error to avoid the creation of an invalid document.

77.39.1829 kofFlattenLayers = & h00000080

MBS DynaPDF Plugin, Plugin Version: 16.1.

Function: One of the constants for the Optimize function.
Notes: Flatten layers if any.

77.39.1830 kofIgnoreDeviceN = & h01000000

MBS DynaPDF Plugin, Plugin Version: 21.1.

Function: One of the constants for the Optimize function.
Notes: If set, DeviceN color spaces are left unchanged.

77.39.1831 kofIgnoreICCBased = 4

MBS DynaPDF Plugin, Plugin Version: 14.2.

Function: One of the constants for the Optimize function.
Notes: If set, ICCBased color spaces will be left unchanged.

77.39.1832 kofIgnoreNChannel = & h02000000

MBS DynaPDF Plugin, Plugin Version: 21.1.

Function: One of the constants for the Optimize function.
Notes: If set, NChannel color spaces are left unchanged.

77.39.1833 kofIgnoreSeparation = & h04000000

MBS DynaPDF Plugin, Plugin Version: 21.1.

Function: One of the constants for the Optimize function.
Notes: If set, Separation color spaces are left unchanged.

77.39.1834 kofIgnoreSeparationAll = & h80000000

MBS DynaPDF Plugin, Plugin Version: 22.0.

Function: One of the constants for the Optimize function.
Notes: Meaningful only if a color conversion flag is set. If set, Separation color spaces with the special colorant "All" will be ignored.

77.39.1835 kofIgnoreZeroLineWidth = & h00001000

MBS DynaPDF Plugin, Plugin Version: 16.4.

Function: One of the constants for the Optimize function.
Notes: Meaningful only if the parameter MinLineWidth of the DynaPDFOptimizeParamsMBS class is greater zero. If set, ignore line width operators with a value of zero (zero means one device unit).

77.39.1836 kofInMemory = 1

MBS DynaPDF Plugin, Plugin Version: 16.1.

Function: One of the constants for the Optimize function.
Notes: Optimize the file fully in memory. Only useful for small PDF files.

77.39.1837 kofNewLinkNames = 32

MBS DynaPDF Plugin, Plugin Version: 16.1.

Function: One of the constants for the Optimize function.
Notes: If set, rename all object links to short names like F1, F2 etc.

77.39.1838 kofNoFilterCheck = & h00008000

MBS DynaPDF Plugin, Plugin Version: 18.4.

Function: One of the constants for the Optimize function.
Notes: Meaningful only, if the flag ofCompressWithJBIG2 is set. If set, re-compress all 1 bit images, also if already compressed with JBIG2.

77.39.1839 kofNoImageSizeCheck = & h00000800

MBS DynaPDF Plugin, Plugin Version: 16.4.

Function: One of the constants for the Optimize function.
Notes: Meaningful only if ofScaleImages is set. If set, do not check whether the scaled image is smaller as the original image.

77.39.1840 kofRemoveBatesNumbers = & h20000000

MBS DynaPDF Plugin, Plugin Version: 21.1.

Function: One of the constants for the Optimize function.
Notes: Remove bates numbers if any. The type BatesN can also contain headers / footers.

77.39.1841 kofRemoveHeaderFooter = & h40000000

MBS DynaPDF Plugin, Plugin Version: 21.1.

Function: One of the constants for the Optimize function.
Notes: Remove headers / footers if any. This type is set if no bates numbering was added.

77.39.1842 kofReplaceJP2KWithJPEG = & h00100000

MBS DynaPDF Plugin, Plugin Version: 19.3.

Function: One of the constants for the Optimize function.
Notes: Meaningful only, if the flag kofConvertToGray, kofConvertToRGB, or kofConvertToCMYK is set. If set, JPEG 2000 compressed images (which are converted to another color space) will be compressed with JPEG instead JPEG 2000. JPEG 2000 compression is very slow and requires much memory. JPEG compression is around 10 times faster and produces almost identical results.

77.39.1843 kofScaleImages = 8

MBS DynaPDF Plugin, Plugin Version: 14.2.

Function: One of the constants for the Optimize function.
Notes: Scale images as specified in the DynaPDFOptimizeParamsMBS class.

77.39.1844 kofSkipMaskedImages = 16

MBS DynaPDF Plugin, Plugin Version: 16.4.

Function: One of the constants for the Optimize function.
Notes: Meaningful only if ofScaleImages is set. If set, don't scale images with a color mask.

77.39.1845 kofSkipOverprintedObj = & h10000000

MBS DynaPDF Plugin, Plugin Version: 21.1.

Function: One of the constants for the Optimize function.
Notes: Meaningful only if a color conversion flag is set. If set, objects that would be rendered with enabled overprinting are left unchanged to avoid color errors on the page.

77.39.1846 kofUseOtsuFilter = & h00200000

MBS DynaPDF Plugin, Plugin Version: 20.2.

Function: Whether to use Otsu filter.
Notes:

Meaningfulonly, if the flag kofConvertGrayTo1Bit is set.
The Otsu filter is useful for gray scanned faxes.

77.39.1847 koiAll = 8

MBS DynaPDF Plugin, Plugin Version: 10.5.

Function: One of the object intent constants for CreateOCG.

77.39.1848 koiDesign = 2

MBS DynaPDF Plugin, Plugin Version: 10.5.

Function: One of the object intent constants for CreateOCG.

77.39.1849 koiEmpty = 16

MBS DynaPDF Plugin, Plugin Version: 10.5.

Function: One of the object intent constants for CreateOCG.
Notes: Internal (refers to koiView if used)

77.39.1850 koiView = 4

MBS DynaPDF Plugin, Plugin Version: 10.5.

Function: One of the object intent constants for CreateOCG.
Notes: Default.

77.39.1851 koiVisible = 32

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the object intent constants for CreateOCG.
Notes: Visible

77.39.1852 kooAnnotation = 0

MBS DynaPDF Plugin, Plugin Version: 10.5.

Function: One of the object type constants for AddObjectToLayer.
Notes: Handle is an annotation handle.

77.39.1853 kooField = 1

MBS DynaPDF Plugin, Plugin Version: 10.5.

Function: One of the object type constants for AddObjectToLayer.
Notes: Handle is a field handle.

77.39.1854 kooImage = 2

MBS DynaPDF Plugin, Plugin Version: 10.5.

Function: One of the object type constants for AddObjectToLayer.
Notes: Handle is a image handle.

77.39.1855 kooTemplate = 3

MBS DynaPDF Plugin, Plugin Version: 10.5.

Function: One of the object type constants for AddObjectToLayer.
Notes: Handle is a template handle.

77.39.1856 korDownLeft = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the origin constants.

77.39.1857 korTopLeft = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the origin constants.

77.39.1858 kotAction = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the object type constants.
Notes: Action

77.39.1859 kotAnnotation = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the object type constants.
Notes: Annotation

77.39.1860 kotBookmark = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the object type constants.
Notes: Bookmark

77.39.1861 kotCatalog = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the object type constants.
Notes: Catalog. PDF 1.4

77.39.1862 kotField = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the object type constants.
Notes: Field

77.39.1863 kotPage = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the object type constants.
Notes: Page

77.39.1864 kotPageLink = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the object type constants.
Notes: Page Link.

77.39.1865 koucExport = 1

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the usage Categories which control the layer state.
Notes: Export

77.39.1866 koucLanguage = 2

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the usage Categories which control the layer state.
Notes: Language

77.39.1867 koucNone = 0

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the usage Categories which control the layer state.

77.39.1868 koucPrint = 4

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the usage Categories which control the layer state.
Notes: Print

77.39.1869 koucUser = 8

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the usage Categories which control the layer state.
Notes: User

77.39.1870 koucView = 16

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the usage Categories which control the layer state.
Notes: View

77.39.1871 koucZoom = 32

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the usage Categories which control the layer state.
Notes: Zoom

77.39.1872 kovAllOff = 0

MBS DynaPDF Plugin, Plugin Version: 10.5.

Function: One of the visibility constants for CreateOCMD.
Notes: All Off

77.39.1873 kovAllOn = 1

MBS DynaPDF Plugin, Plugin Version: 10.5.

Function: One of the visibility constants for CreateOCMD.
Notes: All On

77.39.1874 kovAnyOff = 2

MBS DynaPDF Plugin, Plugin Version: 10.5.

Function: One of the visibility constants for CreateOCMD.
Notes: Any Off

77.39.1875 kovAnyOn = 3

MBS DynaPDF Plugin, Plugin Version: 10.5.

Function: One of the visibility constants for CreateOCMD.
Notes: Any On

77.39.1876 kovNotSet = 4

MBS DynaPDF Plugin, Plugin Version: 10.5.

Function: One of the visibility constants for CreateOCMD.
Notes: Not Set

77.39.1877 kpbArtBox = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the PDF box constants.
Notes: Art box.

77.39.1878 kpbBleedBox = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the PDF box constants.
Notes: Bleed box.

77.39.1879 kpbCropBox = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the PDF box constants.
Notes: Crop Box.

77.39.1880 kpbMediaBox = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the PDF box constants.
Notes: Media Box.

77.39.1881 kpbTrimBox = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the PDF box constants.
Notes: Trim Box.

77.39.1882 kpcBottomUp = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for the page coordinates.

77.39.1883 kpcrHandClosed = 1

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the cursor constants.

77.39.1884 kpcrHandNormal = 0

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the cursor constants.

77.39.1885 kpcrHandPoint = 2

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the cursor constants.

77.39.1886 kpcrIBeam = 3

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the cursor constants.

77.39.1887 kpcTopDown = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for the page coordinates.

77.39.1888 kPDF_ANNOT_INDEX = & h40000000

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: Special flag for GetPageFieldEx() to indicate that an annotation index was passed to the function.
Notes: See GetPageFieldEx() for further information.

77.39.1889 kPDF_AQUA = & h00FFFF00

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: aqua

77.39.1890 kPDF_BLACK = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: black

77.39.1891 kPDF_BLUE = & h00FF0000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: blue

77.39.1892 kPDF_CREAM = & h00F0FBFF

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: cream

77.39.1893 kPDF_DKGRAY = & h00808080

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: dark gray

77.39.1894 kPDF_FUCHSIA = & h00FF00FF

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: fuchsia

77.39.1895 kPDF_GRAY = & h00808080

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: gray

77.39.1896 kPDF_GREEN = & h00008000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: green

77.39.1897 kPDF_LIME = & h0000FF00

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: lime

77.39.1898 kPDF_LIST_FONT = "Wingdings-Regular"

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: Default font to display the list symbol ->can be changed with SetListFont()

77.39.1899 kPDF_LIST_SEP_WIDTH = 10

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: Default width between the list symbol and text (see WriteFText() in the help file for further information)

77.39.1900 kPDF_LTGRAY = & h00C0C0C0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: light gray

77.39.1901 kPDF_MAROON = & h00000080

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: maroon

77.39.1902 kPDF_MAX_INT = & h7FFFFFFF

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: The maximum integer value.

77.39.1903 kPDF_MAX_LIST_COUNT = 32

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: Maximum count of nested list levels (WriteFText())
Notes: Was 6, but got changed to 32 for DynaPDF version 4.0.28.81.

77.39.1904 kPDF_MEDGRAY = & h00A4A0A0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: medium gray

77.39.1905 kPDF_MOGREEN = & h00C0DCC0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: mogreen

77.39.1906 kPDF_NAVY = & h00800000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: navy

77.39.1907 kPDF_OLIVE = & h00008080

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: olive

77.39.1908 kPDF_PURPLE = & h00800080

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: purple

77.39.1909 kPDF_RED = & h000000FF

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: red

77.39.1910 kPDF_SILVER = & h00C0C0C0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: silver

77.39.1911 kPDF_SKYBLUE = & h00F0CAA6

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: skyblue

77.39.1912 kPDF_TABLEN = 3

MBS DynaPDF Plugin, Plugin Version: 8.6.

Function: The default tab length.

77.39.1913 kPDF_TEAL = & h00808000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: teal

77.39.1914 kPDF_WHITE = & h00FFFFFF

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: white

77.39.1915 kPDF_YELLOW = & h0000FFFF

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: yellow

77.39.1916 kpeBackgroundImage = 0

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the possible pagination artefact for an optional content group.
Notes: Background image.

77.39.1917 kpeForegroundImage = 1

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the possible pagination artefact for an optional content group.
Notes: Foreground Image.

77.39.1918 kpeHeaderFooter = 2

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the possible pagination artefact for an optional content group.
Notes: Header or Footer

77.39.1919 kpeLogo = 3

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the possible pagination artefact for an optional content group.
Notes: Logo

77.39.1920 kpeNone = 4

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the possible pagination artefact for an optional content group.

77.39.1921 kpfConvImagesToCMYK = 64

MBS DynaPDF Plugin, Plugin Version: 7.7.

Function: One of the PDF Parser constants.
Notes: Convert images to CMYK.

77.39.1922 kpfConvImagesToGray = 16

MBS DynaPDF Plugin, Plugin Version: 7.7.

Function: One of the PDF Parser constants.
Notes: Convert images to grayscale.

77.39.1923 kpfConvImagesToRGB = 32

MBS DynaPDF Plugin, Plugin Version: 7.7.

Function: One of the PDF Parser constants.
Notes: Convert images to RGB.

77.39.1924 kpfDecomprAllImages = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the parser flags.
Notes: This flag causes that all image formats will be decompressed with the exception of JBIG2 compressed images. If this flag is not set, images which are already stored in a valid image file format are returned as is. This is the case for RGB JPEG and JPEG2000 compressed images. If you want to extract the images of a PDF file this flag should be absent!

77.39.1925 kpfDIN_A0 = 20

MBS DynaPDF Plugin, Plugin Version: 18.5.

Function: One of the DynaPDF page format constants for SetPageFormat.
Notes: DIN A0

77.39.1926 kpfDIN_A1 = 21

MBS DynaPDF Plugin, Plugin Version: 18.5.

Function: One of the DynaPDF page format constants for SetPageFormat.
Notes: DIN A1

77.39.1927 kpfDIN_A10 = 27

MBS DynaPDF Plugin, Plugin Version: 18.5.

Function: One of the DynaPDF page format constants for SetPageFormat.
Notes: DIN A10

77.39.1928 kpfDIN_A2 = 22

MBS DynaPDF Plugin, Plugin Version: 18.5.

Function: One of the DynaPDF page format constants for SetPageFormat.
Notes: DIN A2

77.39.1929 kpfDIN_A3 = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF page format constants for SetPageFormat.
Notes: DIN A3

77.39.1930 kpfDIN_A4 = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF page format constants for SetPageFormat.
Notes: DIN A4

77.39.1931 kpfDIN_A5 = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF page format constants for SetPageFormat.
Notes: DIN A5

77.39.1932 kpfDIN_A6 = 23

MBS DynaPDF Plugin, Plugin Version: 18.5.

Function: One of the DynaPDF page format constants for SetPageFormat.
Notes: DIN A6

77.39.1933 kpfDIN_A7 = 24

MBS DynaPDF Plugin, Plugin Version: 18.5.

Function: One of the DynaPDF page format constants for SetPageFormat.
Notes: DIN A7

77.39.1934 kpfDIN_A8 = 25

MBS DynaPDF Plugin, Plugin Version: 7.7.

Function: One of the PDF Parser constants.
Notes: Floyd-Steinberg dithering.

77.39.1952 kpff1Bit = 1

MBS DynaPDF Plugin, Plugin Version: 15.1.

Function: One of the printing flags.
Notes: Print with 1 bit in black and white.

77.39.1953 kpffAllCap = & h00010000

MBS DynaPDF Plugin, Plugin Version: 20.2.

Function: One of the PDF font flag constants.
Notes: All capitals font

77.39.1954 kpffAutoCenter = & h00000400

MBS DynaPDF Plugin, Plugin Version: 18.3.

Function: One of the printing flags.
Notes: Automatically scale the page to match printer context.

77.39.1955 kpffAutoRotate = & h00000200

MBS DynaPDF Plugin, Plugin Version: 18.3.

Function: One of the printing flags.
Notes: Automatically rotate the page to match printer context.

77.39.1956 kpffAutoRotateAndCenter = 4

MBS DynaPDF Plugin, Plugin Version: 15.1.

Function: One of the printing flags.
Notes:

Automatically rotate and scale the page to match printer context.
With newer versions you can use kpffAutoRotate and kpffAutoCenter separately.

77.39.1957 kpffColor = 2

MBS DynaPDF Plugin, Plugin Version: 15.1.

Function: One of the printing flags.
Notes: Print in color.

77.39.1958 kpffDefault = 0

MBS DynaPDF Plugin, Plugin Version: 15.1.

Function: One of the printing flags.
Notes: Default print settings.

77.39.1959 kpffFixedPitch = 1

MBS DynaPDF Plugin, Plugin Version: 20.2.

Function: One of the PDF font flag constants.
Notes: Fixed pitch

77.39.1960 kpffForceBold = & h00040000

MBS DynaPDF Plugin, Plugin Version: 20.2.

Function: One of the PDF font flag constants.
Notes: Bold required

77.39.1961 kpffItalic = 64

MBS DynaPDF Plugin, Plugin Version: 20.2.

Function: One of the PDF font flag constants.
Notes: Italic font

77.39.1962 kpffNoEndDoc = & h00000080

MBS DynaPDF Plugin, Plugin Version: 15.2.

Function: One of the printing flags.
Notes: Do not call EndDoc on Windows

77.39.1963 kpffNonSymbolic = 32

MBS DynaPDF Plugin, Plugin Version: 20.2.

Function: One of the PDF font flag constants.
Notes: Non symbolic font.

77.39.1964 kpffNoStartDoc = 32

MBS DynaPDF Plugin, Plugin Version: 15.2.

Function: One of the printing flags.
Notes: Do not call StartDoc on Windows

77.39.1965 kpffNoStartPage = 64

MBS DynaPDF Plugin, Plugin Version: 15.2.

Function: One of the printing flags.
Notes: Do not call StartPage on Windows

77.39.1966 kpffPrintAsImage = 8

MBS DynaPDF Plugin, Plugin Version: 15.1.

Function: One of the printing flags.
Notes: Print by rendering each page as image and drawing it in the graphics context.

77.39.1967 kpffPrintPageAsIs = & h00000100

MBS DynaPDF Plugin, Plugin Version: 17.2.

Function: One of the printing flags.
Notes: If set, do not scale or rotate a page to fit into the printable area.

77.39.1968 kpffScriptStyle = 8

MBS DynaPDF Plugin, Plugin Version: 20.2.

Function: One of the PDF font flag constants.
Notes: Font in script style.

77.39.1969 kpffSerifs = 2

MBS DynaPDF Plugin, Plugin Version: 20.2.

Function: One of the PDF font flag constants.
Notes: Serif font

77.39.1970 kpffShrinkToPrintArea = 16

MBS DynaPDF Plugin, Plugin Version: 15.1.

Function: One of the printing flags.
Notes: Shrink PDF to print area.

77.39.1971 kpffSmallCap = & h00020000

MBS DynaPDF Plugin, Plugin Version: 20.2.

Function: One of the PDF font flag constants.
Notes: Small Caps font

77.39.1972 kpffSymbolic = 4

MBS DynaPDF Plugin, Plugin Version: 20.2.

Function: One of the PDF font flag constants.
Notes: Symbolic font.

77.39.1973 kpfImageInfoOnly = & h00000080

MBS DynaPDF Plugin, Plugin Version: 8.2.

Function: One of the image import flags.
Notes: If set, images are not decompressed. This flag is useful if you want to enumerate the images of a PDF file or if you want to determine how many images are stored in it. Note that images can be compressed with multiple filters. The member Filter of the structure TPDFImage contains only the last filter with which the image was compressed. There is no indication whether multiple decode filters are required to decompress the image buffer. So, it makes no sense to set this flag if you want to try to decompress the image buffer manually with your own decode filters.

77.39.1974 kpfNoJPXDecode = 4

MBS DynaPDF Plugin, Plugin Version: 7.7.

Function: One of the PDF Parser constants.
Notes: Meaningful only if the flag pfDecomprAllImages is set. If set, JPEG2000 images are returned as is so that you can use your own library to decompress such images since the the entire JPEG2000 codec is still marked as experimental. If we find an alternative to the currently used Jasper library then we will replace it immediatly with another one...

77.39.1975 kpfNone = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the PDF Parser constants.

77.39.1976 kpfUS_Legal = 18

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the page mode constants.

77.39.1992 kpmUseAttachments = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the page mode constants.
Notes: PDF 1.6

77.39.1993 kpmUseNone = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the page mode constants.

77.39.1994 kpmUseOC = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the page mode constants.
Notes: PDF 1.5

77.39.1995 kpmUseOutlines = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the page mode constants.

77.39.1996 kpmUseThumbs = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the page mode constants.

77.39.1997 kpsAppDefault = 0

MBS DynaPDF Plugin, Plugin Version: 8.7.

Function: One of the print scaling flag constants.

77.39.1998 kpsFitBest = 2

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the constants to specify how the page should be scaled into the image buffer.
Notes: Scale the page so that it fits fully into the image buffer.

77.39.1999 kpsFitHeight = 1

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the constants to specify how the page should be scaled into the image buffer.
Notes: Scale the page to the height of the image buffer.

77.39.2000 kpsFitWidth = 0

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the constants to specify how the page should be scaled into the image buffer.
Notes: Scale the page to the width of the image buffer.

77.39.2001 kpsFitZoom = 3

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the constants to specify how the page should be scaled into the image buffer.
Notes: This mode must be used if the scaling factors of the transformation matrix are <>1.0

77.39.2002 kpsNone = 1

MBS DynaPDF Plugin, Plugin Version: 8.7.

Function: One of the print scaling flag constants.

77.39.2003 kpt3DOrthographic = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for 3D projection types.
Notes: Orthographic

77.39.2004 kpt3DPerspective = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for 3D projection types.
Notes: Perspective

77.39.2005 kptColored = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the pattern type constants.

77.39.2006 kptConvertPage = 3

MBS DynaPDF Plugin, Plugin Version: 21.1.

Function: One of the DynaPDF constants for the progtype parameter in the progress event.
Notes: Start converting the PDF file (Optimize(), CheckConformance())

77.39.2007 kptDontCopyBuf = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for password type to pass when opening files.
Notes: If set, OpenImportBuffer() does not copy the PDF buffer to an internal buffer. This increases the processing speed and reduces the memory usage. The PDF buffer must not be released until CloseImportFile() or CloseFile() was called.

77.39.2008 kptForceRepair = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for password type to pass when opening files.
Notes: Meaningful only when opening a PDF file with OpenImportFile() or OpenImportBuffer(). If set, the PDF parser rebuilds the cross-reference table by scanning all the objects in the file. This can be useful if the cross-reference table contains damages while the top level objects are intact. Setting this flag makes only sence if the file was already previously opened in normal mode and if errors occured when importing

pages of it.

77.39.2009 kptImportPage = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for the progtype parameter in the progress event.
Notes: This value is for: Start page import

77.39.2010 kptOpen = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for password type to pass when opening files.
Notes: No password.

77.39.2011 kptOwner = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for password type to pass when opening files.
Notes: Owner password provided.

77.39.2012 kptPrintPage = 2

MBS DynaPDF Plugin, Plugin Version: 15.2.

Function: One of the DynaPDF constants for the progtype parameter in the progress event.
Notes: Progress for printing a page.

77.39.2013 kptShadingPattern = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the pattern type constants.

77.39.2014 kptUnColored = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the pattern type constants.

77.39.2015 kptWritePage = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for the progtype parameter in the progress event.
Notes: This value is for: Start writing a page to file or buffer

77.39.2016 kpvFacturX_Basic = & h00100000

MBS DynaPDF Plugin, Plugin Version: 19.2.

Function: One of the PDF Version constants.
Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// Factur-X Basic
bBool=pdf.SetPDFVersion(DynaPDFMBS.kpvFacturX_Basic)
```

Notes: Basic profile for FacturX.

77.39.2017 kpvFacturX_Basic_WL = & h00200000

MBS DynaPDF Plugin, Plugin Version: 19.2.

Function: One of the PDF Version constants.
Notes: Basic WL profile for FacturX.

77.39.2018 kpvFacturX_Comfort = & h00400000

MBS DynaPDF Plugin, Plugin Version: 19.2.

Function: One of the PDF Version constants.
Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// Factur-X Comfort
bBool=pdf.SetPDFVersion(DynaPDFMBS.kpvFacturX_Comfort)
```

Notes: Comfort profile for FacturX.

77.39.2019 kpvFacturX_Extended = & h00800000

MBS DynaPDF Plugin, Plugin Version: 19.2.

Function: One of the PDF Version constants.
Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// Factur-X Extended
bBool=pdf.SetPDFVersion(DynaPDFMBS.kpvFacturX_Extended)
```

Notes: Extended profile for FacturX.

77.39.2020 kpvFacturX_Mask = & h02F80000

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the PDF Version constants.
Notes:

Mask for all FacturX variants.
Contains kpvFacturX_Minimum, kpvFacturX_Basic, kpvFacturX_Basic_WL, kpvFacturX_Comfort, kpvFacturX_Extended and kpvFacturX_XRechnung,

77.39.2021 kpvFacturX_Minimum = & h00080000

MBS DynaPDF Plugin, Plugin Version: 19.2.

Function: One of the PDF Version constants.
Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// Factur-X Minimum
bBool=pdf.SetPDFVersion(DynaPDFMBS.kpvFacturX_Minimum)
```

Notes: Minimum profile for FacturX.

77.39.2022 kpvPDFA_1a = 16

MBS DynaPDF Plugin, Plugin Version: 13.1.

Function: One of the PDF Version constants.
Notes: The flag to indicate it is a ZUGFeRD PDF and not FacturX.

77.39.2057 kpvZUGFeRD_Basic = & h00010000

MBS DynaPDF Plugin, Plugin Version: 16.3.

Function: One of the PDF Version constants.
Notes:

ZUGFeRD Basic level.
This constant are flags which can be combined with kpvPDFA_3a, kpvPDFA_3b, and kpvPDFA_3u. If

used stand alone PDF/A 3b with the correspondig ZUGFeRD metadata will be created.

77.39.2058 kpvZUGFeRD_Comfort = & h00020000

MBS DynaPDF Plugin, Plugin Version: 16.3.

Function: One of the PDF Version constants.
Notes:

ZUGFeRD Comfort level.
This constant are flags which can be combined with kpvPDFA_3a, kpvPDFA_3b, and kpvPDFA_3u. If used stand alone PDF/A 3b with the correspondig ZUGFeRD metadata will be created.

77.39.2059 kpvZUGFeRD_Extended = & h00040000

MBS DynaPDF Plugin, Plugin Version: 16.3.

Function: One of the PDF Version constants.
Notes:

ZUGFeRD Extended level.
This constant are flags which can be combined with kpvPDFA_3a, kpvPDFA_3b, and kpvPDFA_3u. If used stand alone PDF/A 3b with the correspondig ZUGFeRD metadata will be created.

77.39.2060 kpvZUGFeRD_Mask = & h00070000

MBS DynaPDF Plugin, Plugin Version: 16.3.

Function: One of the PDF Version constants.
Notes: The mask to bitwise AND the value and get the ZUGFeRD part.

77.39.2061 kpxf1Bit = 0

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the pixel format constants.
Notes: 1 bit per pixel black and white.

77.39.2062 kpxfABGR = 7

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the pixel format constants.
Notes: ABGR.

77.39.2063 kpxfARGB = 6

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the pixel format constants.
Notes: ARGB

77.39.2064 kpxfBGR = 3

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the pixel format constants.
Notes: BGR

77.39.2065 kpxfBGRA = 5

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the pixel format constants.
Notes: BGRA

77.39.2066 kpxfCMYK = 9

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the pixel format constants.
Notes: CMYK without alpha

77.39.2067 kpxfCMYKA = 10

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the pixel format constants.
Notes: CMYK with alpha

77.39.2068 kpxfGray = 1

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the pixel format constants.
Notes: 8 bit grayscale.

77.39.2069 kpxfGrayA = 8

MBS DynaPDF Plugin, Plugin Version: 11.2.

Function: One of the pixel format constants.
Notes: 8 bit grayscale with alpha.

77.39.2070 kpxfRGB = 2

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the pixel format constants.
Notes: RGB

77.39.2071 kpxfRGBA = 4

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the pixel format constants.
Notes: RGBA

77.39.2072 krfClipBoxMask = 28

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes: The mask for Clip flags.

77.39.2073 krfClipToArtBox = 4

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the raster flag constants.
Notes:

Clip the page to the art box if any.

Only one of these clip flags must be set at time!

77.39.2074 krfClipToBleedBox = 8

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the raster flag constants.
Notes:

Clip the page to the bleed box if any.

Only one of these clip flags must be set at time!

77.39.2075 krfClipToTrimBox = 16

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the raster flag constants.
Notes:

Clip the page to the bleed box if any.

Only one of these clip flags must be set at time!

77.39.2076 krfCompositeWhite = & h00001000

MBS DynaPDF Plugin, Plugin Version: 13.1.

Function: One of the raster flag constants.
Notes: Composite pixel formats with an alpha channel finally with a white background. The alpha channel is 255 everywhere after composition. This flag is mainly provided for debug purposes but it can also be useful if the image must be copied on screen with a function that doesn't support alpha blending.

77.39.2077 krfDefault = 0

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the raster flag constants.
Notes: Render the page as usual

77.39.2078 krfDisableAAClipping = & h00200000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes: Disable Anti-Aliasing for clipping paths. This flag is the most important one since clipping paths cause often visible artefacts in PDF files with flattened transparency.

77.39.2079 krfDisableAAText = & h00400000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes: Disable Anti-Aliasing for text.

77.39.2080 krfDisableAAVector = & h00800000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes: Disable Anti-Aliasing for vector graphics.

77.39.2081 krfDisableAntiAliasing = & h00E00000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes: Combination of krfDisableAAVector, krfDisableAAText and krfDisableAAClipping.

77.39.2082 krfDisableBiLinearFilter = & h01000000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes: Disable the BiLevel filter for images. Sometetimes useful if sharp images are needed, e.g. for barcodes.

77.39.2083 krfEnableBlendCS = & h10000000

MBS DynaPDF Plugin, Plugin Version: 22.3.

Function: One of the raster flag constants.
Notes: If set, the page is rendered in the color space of the page group, soft proof color space, or output intent (if set), and finally converted to the destination colorspace.

77.39.2084 krfExclAnnotations = 32

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the raster flag constants.
Notes: Don't render annotations.

77.39.2085 krfExclButtons = & h00004000

MBS DynaPDF Plugin, Plugin Version: 14.4.

Function: One of the raster flag constants.
Notes:

If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude buttons. If all fields should be skipped then set the flag rfExclFormFields instead.

77.39.2086 krfExclCheckBoxes = & h00008000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes:

If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude checkboxes. If all fields should be skipped then set the flag rfExclFormFields instead.

77.39.2087 krfExclComboBoxes = & h00010000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes:

If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude combobox. If all fields should be skipped then set the flag rfExclFormFields instead.

77.39.2088 krfExclFormFields = 64

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the raster flag constants.
Notes: Don't render form fields.

77.39.2089 krfExclListBoxes = & h00020000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes:

If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude listbox. If all fields should be skipped then set the flag rfExclFormFields instead.

77.39.2090 krfExclPageContent = & h00002000

MBS DynaPDF Plugin, Plugin Version: 14.4.

Function: One of the raster flag constants.
Notes: If set, only annotations and form fields will be rendered (if any).

77.39.2091 krfExclSigFields = & h00080000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes:

If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude signature fields.

If all fields should be skipped then set the flag rfExclFormFields instead.

77.39.2092 krfExclTextFields = & h00040000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes:

If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude text fields. If all fields should be skipped then set the flag rfExclFormFields instead.

77.39.2093 krfIgnoreCropBox = 2

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the raster flag constants.
Notes: Ignore the crop box and render anything inside the media box without clipping.

77.39.2094 krfInitBlack = & h00000800

MBS DynaPDF Plugin, Plugin Version: 13.1.

Function: One of the raster flag constants.
Notes: Initialize the image buffer to black before rendering (RGBA or GrayA must be initialized to black)

77.39.2095 krfRenderInvisibleText = & h02000000

MBS DynaPDF Plugin, Plugin Version: 18.2.

Function: One of the raster flag constants.
Notes: If set, treat text rendering mode Invisible as Normal.

77.39.2096 krfRenderPrintState = & h20000000

MBS DynaPDF Plugin, Plugin Version: 23.1.

Function: One of the raster flag constants.
Notes: If set, the print state of layers, annotations, and form fields will be rendered.

77.39.2097 krfRotate180 = & h00000200

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the raster flag constants.
Notes: Rotate the page 180 degress.

77.39.2098 krfRotate270 = & h00000400

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the raster flag constants.
Notes: Rotate the page 270 degress.

77.39.2099 krfRotate90 = & h00000100

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the raster flag constants.
Example:

```
dim pdf as new DynaPDFMBS // make subclass to catch error event

dim f as FolderItem = SpecialFolder.Desktop.Child("dynapdf_help.pdf")

// create PDF
call pdf.CreateNewPDF(nil)
// set import flags
call pdf.SetImportFlags(pdf.kifImportAll + pdf.kifImportAsPage)

// open import file
call pdf.OpenImportFile(f, 0, "")

// import all pdf pages
call pdf.ImportPDFFile(1, 1.0, 1.0)

dim PageCount as Integer = pdf.GetPageCount

// create rasterizer.
dim r as new DynaPDFRasterizerMBS(pdf, 1000,1000)

// create options
dim o as new DynaPDFRasterImageMBS

// fill white
```

```
o.InitWhite = true

// scale to fit
o.DefScale = o.kpsFitBest

// rotate
o.Flags = o.krfRotate90

// render all pages
for i as Integer = 1 to PageCount

dim p as DynaPDFPageMBS = pdf.GetPage(i)
if r.RenderPage(p, o) then
// save to disc
dim outfile as FolderItem = SpecialFolder.Desktop.Child("page "+Format(i,"0")+".jpg")
call outfile.SaveAsJPEGMBS(r.Pic, 75)
end
next
```

Notes: Rotate the page 90 degress.

77.39.2100 krfScaleToBBox = & h00100000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes: Meaningful only, if rfClipToArtBox, rfClipToBleedBox, or rfClipToTrimBox is set. If set, the picture size is set to the size of the whished bounding box.

77.39.2101 krfScaleToMediaBox = 1

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the raster flag constants.
Notes: Render the real paper format. Contents outside the crop box is clipped.

77.39.2102 krfSkipUpdateBG = & h00000080

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the raster flag constants.

Notes: Don't generate an update event after initializing the background to white.

77.39.2103 kriAbsoluteColorimetric = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the rendering intent constants.

77.39.2104 krifByteAligned = & h00001000

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the flags for adding raw images.

77.39.2105 krifCMYKData = & h00004000

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the flags for adding raw images.

77.39.2106 krifRGBData = & h00002000

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the flags for adding raw images.

77.39.2107 kriPerceptual = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the rendering intent constants.

77.39.2108 kriRelativeColorimetric = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the rendering intent constants.

77.39.2109 kriSaturation = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the rendering intent constants.

77.39.2110 krmBoundingBox = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for a 3D rendering mode.

77.39.2111 krmHiddenWireframe = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for a 3D rendering mode.

77.39.2112 krmIllustration = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for a 3D rendering mode.

77.39.2113 krmNotSet = 15

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for a 3D rendering mode.

77.39.2114 krmShadedIllustration = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for a 3D rendering mode.

77.39.2115 krmShadedVertices = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for a 3D rendering mode.

77.39.2116 krmShadedWireframe = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for a 3D rendering mode.

77.39.2117 krmSolid = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for a 3D rendering mode.

77.39.2118 krmSolidOutline = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for a 3D rendering mode.

77.39.2119 krmSolidWireframe = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for a 3D rendering mode.

77.39.2120 krmTransparent = 9

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for a 3D rendering mode.

77.39.2121 krmTranspBBox = 10

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for a 3D rendering mode.

77.39.2122 krmTranspBBoxOutline = 11

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for a 3D rendering mode.

77.39.2123 krmTranspWireframe = 12

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for a 3D rendering mode.

77.39.2124 krmVertices = 13

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for a 3D rendering mode.

77.39.2125 krmWireframe = 14

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for a 3D rendering mode.

77.39.2126 krsAddObj = 32

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF restriction constants.

77.39.2127 krsApproved = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the rubber stamp constants for StampAnnotation.

77.39.2128 krsAsIs = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the rubber stamp constants for StampAnnotation.

77.39.2129 krsAssemble = & h00000400

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF restriction constants.
Notes: This flag is only used for 128 bit encryption. So this flag is ignored if 40 bit encryption is used.

77.39.2130 krsConfidential = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the rubber stamp constants for StampAnnotation.

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the DynaPDF constants for font selection modes.
Notes: Full name.

77.39.2169 ksmPostScriptName = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for font selection modes.
Notes:

If font selection mode is set to smPostScriptName the font styles fsItalic or fsBold are ignored.
The PostScriptName is already a unique font name incl. style information.

77.39.2170 ksmtAlpha = 0

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the soft mask constants.
Notes: Alpha mode.

77.39.2171 ksmtLuminosity = 1

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the soft mask constants.
Notes: Luminosity mode.

77.39.2172 kspcDefault = 0

MBS DynaPDF Plugin, Plugin Version: 13.4.

Function: One of the constants for ConvertEMFSpool.
Notes: Default flags.

77.39.2173 kspcDontAddMargins = 2

MBS DynaPDF Plugin, Plugin Version: 13.4.

Function: One of the constants for ConvertEMFSpool.
Notes: If set, the page format is calculated from the EMF files as is. The current page format is not used to calculate margins which are maybe required. Note that the parameters LeftMargin and TopMargin will still be considered.

77.39.2174 kspcFlushPages = 8

MBS DynaPDF Plugin, Plugin Version: 13.4.

Function: One of the constants for ConvertEMFSpool.
Notes: If set, the function writes every finish page directly to the output file to reduce the memory usage. This flag is meaningful only if the PDF file is not created in memory. Note also that it is not possible to access already flushed pages again with EditPage().

77.39.2175 kspcIgnorePaperFormat = 1

MBS DynaPDF Plugin, Plugin Version: 13.4.

Function: One of the constants for ConvertEMFSpool.
Notes: If set, the current page format is used as is for the entire spool file.

77.39.2176 kspcLoadSpoolFontsOnly = 4

MBS DynaPDF Plugin, Plugin Version: 13.4.

Function: One of the constants for ConvertEMFSpool.
Notes: If set, only embedded fonts will be loaded. The EMF files must be converted with the flag mfIgnoreEmbFonts in this case. This flag can be useful if you want to use your own code to convert the EMF files of the spool file.

77.39.2177 kspCross = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Standard Pattern Constants.

77.39.2178 kspDiaCross = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Standard Pattern Constants.

77.39.2179 kspHorizontal = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Standard Pattern Constants.

77.39.2180 kspLDiagonal = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Standard Pattern Constants.

77.39.2181 kspRDiagonal = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Standard Pattern Constants.

77.39.2182 kspVertical = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Standard Pattern Constants.

77.39.2183 kst3DHeight = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for a 3D scale type.

77.39.2184 kst3DMax = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for a 3D scale type.

77.39.2185 kst3DMin = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for a 3D scale type.

77.39.2186 kst3DValue = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for a 3D scale type.

77.39.2187 kst3DWidth = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for a 3D scale type.

77.39.2188 kstAxial = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the shading type constants.

77.39.2189 kstCoonsPatch = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the shading type constants.

77.39.2190 kstFreeFormGouraud = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the shading type constants.

77.39.2191 kstFunctionBased = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the shading type constants.

77.39.2192 kstLatticeFormGouraud = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the shading type constants.

77.39.2193 kstRadial = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the shading type constants.

77.39.2194 kstTensorProduct = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the shading type constants.

77.39.2195 ktaCenter = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for the text alignment.
Notes: Center

77.39.2196 ktaJustify = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for the text alignment.
Notes: Justify

77.39.2197 ktaLeft = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for the text alignment.
Notes: Left

77.39.2198 ktaPlainText = & h10000000

MBS DynaPDF Plugin, Plugin Version: 19.2.

Function: One of the constants for the text alignment.
Notes: Added to alignment flag to tell WriteFText to not interpret escape commands.

77.39.2199 ktaRight = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for the text alignment.
Notes: Right

77.39.2200 ktefDefault = 0

MBS DynaPDF Plugin, Plugin Version: 18.0.

Function: One of the text extraction flags.
Notes: Create text lines in the original order.

77.39.2201 ktefDeleteOverlappingText = 4

MBS DynaPDF Plugin, Plugin Version: 18.0.

Function: One of the text extraction flags.
Notes: Delete duplicate text records on same position.

77.39.2202 ktefSortTextX = 1

MBS DynaPDF Plugin, Plugin Version: 18.0.

Function: One of the text extraction flags.
Notes: Sort text records in x-direction.

77.39.2203 ktefSortTextXY = 3

MBS DynaPDF Plugin, Plugin Version: 18.0.

Function: One of the text extraction flags.
Notes: Sort text records in x and y-direction.

77.39.2204 ktefSortTextY = 2

MBS DynaPDF Plugin, Plugin Version: 18.0.

Function: One of the text extraction flags.
Notes: Sort text records in y-direction.

77.39.2205 ktoAnnots = 4

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the Tab Order constants.
Notes: Annotation order ->PDF 1.7 Extension Level 3

77.39.2206 ktoColumn = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Tab Order constants.
Notes: Column.

77.39.2207 ktoFields = 5

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the Tab Order constants.
Notes: Widget order (Form Fields) ->PDF 1.7 Extension Level 3.

77.39.2208 ktoNone = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Tab Order constants.

77.39.2209 ktoRow = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Tab Order constants.
Notes: Row.

77.39.2210 ktoStructure = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for the tab order.
Notes: Structure

77.39.2211 kTRANSP_3D_ANNOT = & h40000000

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the annotation flags.
Notes:

This flag can be combined with the annotation handle in Set3DAnnotProps().

3D Annotations with a transparent background are supported since PDF 1.7, Extension Level 3

77.39.2212 kttConstSpacing = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Tiling Type Constants.

77.39.2213 kttFastConstSpacing = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Tiling Type Constants.

77.39.2214 kttNoDistortion = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Tiling Type Constants.

77.39.2215 kusbCursorHandClosed = 32

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the scrollbar update constants.
Notes:

Occurs when the cursor leaves an action field and if the left mouse button is pressed.
The cursor constants are set by MouseMove. Since we have only one cursor there is never more than one constant set.

77.39.2216 kusbCursorHandNormal = 16

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the scrollbar update constants.
Notes:

This is the default if the left mouse button is not pressed and if we are not over an action field.
The cursor constants are set by MouseMove. Since we have only one cursor there is never more than one constant set.

77.39.2217 kusbCursorHandPoint = 64

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the scrollbar update constants.
Notes:

Occurs when we enter link or button field.
The cursor constants are set by MouseMove. Since we have only one cursor there is never more than one constant set.

77.39.2218 kusbCursorIBeam = & h00000080

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the scrollbar update constants.
Notes:

Occurs when we enter an action field that accepts text input.
The cursor constants are set by MouseMove. Since we have only one cursor there is never more than one constant set.

77.39.2219 kusbCursorMask = & h00003FF0

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the scrollbar update constants.
Notes: Bitmask to mask out the cursor constants.

77.39.2220 kusbHorzRange = 4

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the scrollbar update constants.
Notes: Update the horizontal scroll range.

77.39.2221 kusbHorzScrollPos = 8

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the scrollbar update constants.
Notes: Update the horizontal scroll position.

77.39.2222 kusbNoUpdate = 0

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the scrollbar update constants.
Notes: Nothing to do.

77.39.2223 kusbUpdateAll = 15

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the scrollbar update constants.
Notes: Update both scroll ranges and the scroll positions.

77.39.2224 kusbVertRange = 1

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the scrollbar update constants.
Notes: Update the vertical scroll range.

77.39.2225 kusbVertScrollPos = 2

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the scrollbar update constants.
Notes: Update the vertical scroll position.

77.39.2226 kvpCenterWindow = 16

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the viewer preference constants.

77.39.2227 kvpDirection = & h00000080

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the viewer preference constants.

77.39.2228 kvpDisplayDocTitle = 32

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the viewer preference constants.

77.39.2229 kvpFitWindow = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the viewer preference constants.

77.39.2230 kvpHideMenuBar = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the viewer preference constants.

77.39.2231 kvpHideToolBar = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the viewer preference constants.

77.39.2232 kvpHideWindowUI = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the viewer preference constants.

77.39.2233 kvpNonFullScrPageMode = 64

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the viewer preference constants.

77.39.2234 kvpPrintArea = & h00000400

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the viewer preference constants.

77.39.2235 kvpPrintClip = & h00000800

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the viewer preference constants.

77.39.2236 kvpUseNone = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the viewer preference constants.

77.39.2237 kvpViewArea = & h00000100

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the viewer preference constants.

77.39.2238 kvpViewClip = & h00000200

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the viewer preference constants.

77.39.2239 Screenshots

77.39.2240 DynaPDF1.jpg

Function: A PDF file created with the unregistered DynaPDF plugin.

77.39.2241 DynaPDF2.jpg

Function: A PDF file created with the unregistered DynaPDF plugin showing an embedded picture and a blue triangle on top.

77.39.2242 DynaPDF3.jpg

Function: A PDF file created with the unregistered DynaPDF plugin showing an embedded PDF.

77.40 class DynaPDFMeasureMBS

77.40.1 class DynaPDFMeasureMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a measure dictionary.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.40.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr8

77.40.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr8

77.40.4 Methods

77.40.5 Angles as DynaPDFNumberFormatMBS()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number format array to measure angles.

77.40.6 Area as DynaPDFNumberFormatMBS()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number format array to measure areas.

77.40.7 Bounds as Single()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Array of numbers taken pairwise to describe the bounds for which geospatial transforms are valid.

77.40.8 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.40.9 Distance as DynaPDFNumberFormatMBS()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number format array to measure distances.

77.40.10 GPTS as Single()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Required, an array of numbers that shall be taken pairwise, defining points in geographic space as degrees of latitude and longitude, respectively.

77.40.11 LPTS as Single()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional, an array of numbers that shall be taken pairwise to define points in a 2D unit square.

77.40.12 Slope as DynaPDFNumberFormatMBS()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number format array for measurement of the slope of a line.

77.40.13 X as DynaPDFNumberFormatMBS()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number format array for measurement of change along the x-axis and, if Y is not present, along the y-axis as well.

77.40.14 Y as DynaPDFNumberFormatMBS()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number format array for measurement of change along the y-axis.

77.40.15 Properties

77.40.16 AnglesCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of objects in the array.
Notes: (Read and Write property)

77.40.17 AreaCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of objects in the array.
Notes: (Read and Write property)

77.40.18 BoundCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of values in the array.
Notes:

Should be a multiple of two.
(Read and Write property)

77.40.19 CXY as Single

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional, meaningful only when Y is present.
Notes: (Read and Write property)

77.40.20 DCS_EPSG as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional, either EPSG or WKT is set.
Notes: (Read and Write property)

77.40.21 DCS_IsSet as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the DCS members are set.
Notes: (Read and Write property)

77.40.22 DCS_Projected as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the DCS values contains a pojected coordinate system.
Notes: (Read and Write property)

77.40.23 DCS_WKT as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional ASCII string.
Notes: (Read and Write property)

77.40.24 DistanceCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of objects in the array.
Notes: (Read and Write property)

77.40.25 GCS_EPSG as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional, either EPSG or WKT is set.
Notes: (Read and Write property)

77.40.26 GCS_Projected as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the GCS values contains a pojected coordinate system.
Notes: (Read and Write property)

77.40.27 GCS_WKT as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional ASCII string.
Notes: (Read and Write property)

77.40.28 GPTSCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of values in the array.
Notes: (Read and Write property)

77.40.29 IsRectilinear as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the members of the rectilinear measure dictionary are set.
Notes:

The geospatial members otherwise.
(Read and Write property)

77.40.30 LPTSCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of values in the array.
Notes: (Read and Write property)

77.40.31 OriginX as Single

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Origin of the measurement coordinate system.
Notes: (Read and Write property)

77.40.32 OriginY as Single

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Origin of the measurement coordinate system.
Notes: (Read and Write property)

77.40.33 PDU1 as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional preferred linear display units.
Notes: (Read and Write property)

77.40.34 PDU2 as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional preferred area display units.
Notes: (Read and Write property)

77.40.35 PDU3 as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional preferred angular display units.
Notes: (Read and Write property)

77.40.36 R as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A text string expressing the scale ratio of the drawing.
Notes: (Read and Write property)

77.40.37 SlopeCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of objects in the array.
Notes: (Read and Write property)

77.40.38 XCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of objects in the array.
Notes: (Read and Write property)

77.40.39 YCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of objects in the array.
Notes: (Read and Write property)

77.41 class DynaPDFMissingFunctionExceptionMBS

77.41.1 class DynaPDFMissingFunctionExceptionMBS

MBS DynaPDF Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The exception for a missing function.
Notes:

Only used when DynaPDF library is loaded manually and is an older version and missing a function.
Subclass of the RuntimeException class.

77.42 class DynaPDFMovieActionMBS

77.42.1 class DynaPDFMovieActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a movie action.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.42.2 Methods

77.42.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.42.4 FWPosition(index as Integer) as Single

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The position.
Notes: Index from 0 to 1.

77.42.5 FWScale(index as Integer) as Single

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The scaling.
Notes: Index from 0 to 1.

77.42.6 Properties

77.42.7 Annot as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional. The movie annotation handle identifying the movie that shall be played.
Notes:

Either Annot or Title should be set, but not both.
(Read only property)

77.42.8 Mode as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mode.
Notes: (Read only property)

77.42.9 NextAction as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle to the next action.
Notes:

-1 or next action handle to be executed if any
(Read only property)

77.42.10 NextActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of the next action.
Notes:

Only set if NextAction is >= 0.
(Read only property)

77.42.11 Operation as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Operation.
Notes: (Read only property)

77.42.12 Rate as Single

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The playback rate.
Notes: (Read only property)

77.42.13 ShowControls as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to show controls.
Notes: (Read only property)

77.42.14 Synchronous as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Synchronous flag.
Notes: (Read only property)

77.42.15 Title as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The title of a movie annotation that shall be played.
Notes:

Either Annot or Title should be set, but not both.
(Read only property)

77.42.16 Volume as Single

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The volume.
Notes: (Read only property)

77.43 class DynaPDFNamedActionMBS

77.43.1 class DynaPDFNamedActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a named action.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.43.2 Methods

77.43.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.43.4 Properties

77.43.5 Name as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the action.
Notes:

Only set if Type = knaUserDefined.
(Read only property)

77.43.6 NewWindow as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to show in a new window or not.
Notes:

-1 = viewer default, 0 = false, 1 = true.
(Read only property)

77.43.7 NextAction as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle to the next action.
Notes:

-1 or next action handle to be executed if any
(Read only property)

77.43.8 NextActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of the next action.
Notes:

Only set if NextAction is >= 0.
(Read only property)

77.43.9 Type as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Known pre-defined actions.
Notes:

See kna* constants.
(Read only property)

77.44 class DynaPDFNamedDestMBS

77.44.1 class DynaPDFNamedDestMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for the Named Destination.

- MBS REALbasic Plugins, version 11.1pr4

77.44.4 Properties

77.44.5 DestFile as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination file.
Notes: (Read only property)

77.44.6 DestPage as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination page.
Notes: (Read only property)

77.44.7 DestPos as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination position.
Notes: (Read only property)

77.44.8 DestType as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination type.
Notes:

Values can be a kdt* constant.
(Read only property)

77.44.9 Name as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of that destination.
Notes:

This string is either Unicode or ANSI encoded.
(Read only property)

77.45 class DynaPDFNotInitializedExceptionMBS

77.45.1 class DynaPDFNotInitializedExceptionMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: An exception for the case a function is called and the library is not initialized.
Notes:

Should only happen on the unsupported platforms.
Subclass of the RuntimeException class.

77.46 class DynaPDFNumberFormatMBS

77.46.1 class DynaPDFNumberFormatMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a number format.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.46.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr8

77.46.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr8

77.46.4 Methods

77.46.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.46.6 Properties

77.46.7 C as Single

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The conversion factor used to multiply a value in partial units.
Notes: (Read and Write property)

77.46.8 D as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A positive integer that shall specify the precision or denominator of a fractional amount.
Notes: (Read and Write property)

77.46.9 F as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number format.
Notes:

can be kmnfDecimal, kmnfFractional, kmnfRound or kmnfTruncate.
(Read and Write property)

77.46.10 FD as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, a fractional value formatted according to the D entry may not have its denominator reduced or low-order zeros truncated.
Notes: (Read and Write property)

77.46.11 O as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The label position.
Notes:

Can be kmlpSuffix or kmlpPrefix.
(Read and Write property)

77.46.12 PS as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text to be concatenated to the left of the label specified by U.
Notes: (Read and Write property)

77.46.13 RD as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text for the decimal position in displaying numerical values.
Notes: (Read and Write property)

77.46.14 RT as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text to be used between orders of thousands in display of numerical values.
Notes: (Read and Write property)

77.46.15 SS as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text that shall be concatenated after the label specified by U.
Notes: (Read and Write property)

77.46.16 U as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Label, should be a universally recognized abbreviation.
Notes: (Read and Write property)

77.46.17 Constants

77.46.18 kmlpPrefix = 1

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the label position constants.
Notes: Prefix

77.46.19 kmlpSuffix = 0

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the label position constants.
Notes: Suffix

77.46.20 kmnfDecimal = 0

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the number formats.
Notes: Decimal

77.46.21 kmnfFractional = 1

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the number formats.
Notes: Fractional

77.46.22 kmnfRound = 2

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the number formats.
Notes: Round

77.46.23 kmnfTruncate = 3

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the number formats.
Notes: Truncate

77.47 class DynaPDFObjActionsMBS

77.47.1 class DynaPDFObjActionsMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an object action.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.47.2 Blog Entries

- MBS Xojo Plugins, version 18.0pr9

77.47.3 Blog Entries

- MBS Xojo Plugins, version 18.0pr9

77.47.4 Methods

77.47.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.47.6 Properties

77.47.7 Action as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle to the action.
Notes:

-1 or action handle to be executed if any
(Read only property)

77.47.8 ActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of the action.
Notes:

Only set if Action is >= 0.
(Read only property)

77.47.9 Events as DynaPDFObjEventMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Additional events if any.
Notes: (Read only property)

77.48 class DynaPDFObjEventMBS

77.48.1 class DynaPDFObjEventMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class with information about an object event.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.48.2 Methods

77.48.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.48.4 Properties

77.48.5 Action as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Action to be executed.
Notes: (Read only property)

77.48.6 ActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of the action.
Notes:

See kat* constants.
(Read only property)

77.48.7 NextObject as DynaPDFObjEventMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pointer to the next event if any.
Notes: (Read only property)

77.48.8 ObjEvent as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The event when the action should be executed.
Notes:

See koe* constants.
(Read only property)

77.49 class DynaPDFOCGContUsageMBS

77.49.1 class DynaPDFOCGContUsageMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for content usage properties of an optional layer.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.49.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.2pr6

77.49.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.2pr6

77.49.4 Methods

77.49.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.49.6 Properties

77.49.7 ExportState as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The export state.
Notes:

0 = Off, 1 = On, PDF_MAX_INT = not set (2147483647)
(Read and Write property)

77.49.8 InfoCreator as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The application that created the group.
Notes: (Read and Write property)

77.49.9 InfoSubtype as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A name defining the type of content, e.g. Artwork, Technical etc.
Notes: (Read and Write property)

77.49.10 LangPreferred as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The preffered state if there is a partial but no exact match of the lang id.
Notes:

0 = Off, 1 = On, PDF_MAX_INT (2147483647) = not set.
(Read and Write property)

77.49.11 Language as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A language code as described at DynaPDFMBS.SetLanguage.
Notes: (Read and Write property)

77.49.12 PageElement as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If the group contains a pagination artefact.
Notes: (Read and Write property)

77.49.13 PrintState as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The print state.
Notes:

0 = Off, 1 = On, PDF_MAX_INT = not set (2147483647).
(Read and Write property)

77.49.14 PrintSubtype as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of content that is controlled by the OCG, e.g. Trapping, PrintersMarks or Watermark.
Notes: (Read and Write property)

77.49.15 UserNamesCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The user names can be accessed with GetOCGUsageUserName.
Notes: (Read and Write property)

77.49.16 UserType as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The user for whom the OCG is primarily intendet.
Notes:

Can be kutIndividual, kutOrganization, kutTitle or kutNotSet. (constants defined in DynaPDFMBS)
(Read and Write property)

77.49.17 ViewState as Integer

MBS DynaPDF Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The view state.
Notes:

0 = Off, 1 = On, PDF_MAX_INT (2147483647) = not set
(Read and Write property)

77.49.18 ZoomMax as Single

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum zoom factor at which the OCG should be On.
Notes:

-1 = not set
(Read and Write property)

77.49.19 ZoomMin as Single

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Minimum zoom factor at which the OCG should be On.
Notes:

-1 = not set
(Read and Write property)

77.50 class DynaPDFOCGMBS

77.50.1 class DynaPDFOCGMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for details ob OCG layers.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.50.2 Methods

77.50.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.50.4 Properties

77.50.5 AppEvents as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If non-zero, the layer is included in one or more app events which control the layer state.
Notes:

Only valid if HaveContUsage is true.
see TOCAppEvent constants: kaeExport, kaePrint and kaeView. (constants defined in DynaPDFMBS)
(Read and Write property)

77.50.6 Categories as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Usage Categories which control the layer state.
Notes:

Only valid if HaveContUsage is true.
See UsageCategory constants: koucNone, koucExport, koucLanguage, koucPrint, koucUser, koucView or oucZoom. (constants defined in DynaPDFMBS)
(Read and Write property)

77.50.7 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

77.50.8 HaveContUsage as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the layer contains a Content Usage dictionary.
Notes:

see GetOCGContUsage function.
(Read and Write property)

77.50.9 Intent as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The intent.
Notes:

See intent enumeration. Can be koiDesign, koiView, koiAll or koiEmpty. (constants defined in DynaPDFMBS)
(Read and Write property)

77.50.10 IsAll as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: An accessor for intent state koiAll.
Notes: (Read only property)

77.50.11 IsDesign as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: An accessor for intent state koiDesign.
Notes: (Read only property)

77.50.12 IsEmpty as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: An accessor for intent state koiEmpty.
Notes: (Read only property)

77.50.13 IsView as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: An accessor for intent state koiView.
Notes: (Read only property)

77.50.14 IsVisible as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: An accessor for intent state koiVisible.
Notes: (Read only property)

77.50.15 Name as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The layer name.
Notes: (Read and Write property)

77.51 class DynaPDFOCLayerConfigMBS

77.51.1 class DynaPDFOCLayerConfigMBS

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an optional content layer configuration.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.51.4 Methods

77.51.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.51.6 Properties

77.51.7 Intent as Integer

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The object intent.
Notes:

Possible values koiDesign, koiView, or koiAll.
(Read only property)

77.51.8 IsDefault as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, this is the default configuration.
Notes: (Read only property)

77.51.9 Name as String

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional configuration name.
Notes: (Read only property)

77.51.10 NameLen as Integer

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length in characters.
Notes: (Read only property)

77.52 class DynaPDFOCUINodeMBS

77.52.1 class DynaPDFOCUINodeMBS

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an optional content user interface node.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.52.4 Methods

77.52.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.52.6 Properties

77.52.7 Label as String

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional label.
Notes: (Read only property)

77.52.8 LabelLength as Integer

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Label Length in characters.
Notes: (Read only property)

77.52.9 NewNode as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, a new child node must be created.
Notes: (Read only property)

77.52.10 NextChild as Integer

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: If set, the next child node that must be loaded.
Notes: (Read only property)

77.52.11 NextItem as Integer

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The next item handle in the list.
Notes: (Read only property)

77.52.12 OCG as Integer

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional OCG handle.
Notes:

-1 if not set. See GetOCG method.
(Read only property)

77.53 class DynaPDFOptimizeParamsMBS

77.53.1 class DynaPDFOptimizeParamsMBS

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for optimize parameters.
Example:

```
dim o as new DynaPDFOptimizeParamsMBS

o.MinColorRes = 100 // scale colored images with more than 100 dpi
o.ResColorImages = 150 // down to 150 dpi
```

77.53.6 Methods

77.53.7 Constructor

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.

77.53.8 ExcludeCS as UInt32()

MBS DynaPDF Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Array of color space handles which should be excluded from color conversion.
Notes:

Queries array, which you can change.
If you set IncludeCS, this array controls which color spaces will be converted.

77.53.9 setExcludeCS(values() as UInt32)

MBS DynaPDF Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the array of color space handles which should be excluded from color conversion.
Notes: Replaces the current array with a new one.

77.53.10 Properties

77.53.11 ExcludeCSCount as Integer

MBS DynaPDF Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of color space handles in the array.
Notes:

This is ExcludeCS.ubound + 1.
(Read only property)

77.53.12 Filter1Bit as Integer

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Filter for black & white images.
Notes:

See kcf* constants. Default is kcfJPEG.
(Read and Write property)

77.53.13 FilterColor as Integer

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Filter for multi-channel images.
Notes:

See kcf* constants. Default is kcfJPEG.
(Read and Write property)

77.53.14 FilterGray as Integer

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The filter for gray image compression.
Notes:

See kcf* constants. Default is kcfJPEG.
(Read and Write property)

77.53.15 IncludeCS as Boolean

MBS DynaPDF Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If set, only these color spaces in ExcludeCS will be converted.
Notes:

If false, the conversion excludes the color spaces in ExcludeCS array.
If true, the conversion only includes the color spaces in ExcludeCS array.
(Read and Write property)

77.53.16 JP2KQuality as Integer

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The JPEG 2000 quality.
Notes:

Default is 80.
(Read and Write property)

77.53.17 JPEGQuality as Integer

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The JPEG quality.
Notes:

Default is 80.
(Read and Write property)

77.53.18 Min1BitRes as Integer

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Minimum resolution before scaling for one bit images.
Notes:

Default is 100.
Can be zero to disable.
(Read and Write property)

77.53.19 MinColorRes as Integer

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Minimum resolution before scaling for color images.
Notes:

Default is 100.
Can be zero to disable.
(Read and Write property)

77.53.20 MinGrayRes as Integer

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Minimum resolution before scaling for gray images.
Notes:

Default is 100 dpi.
Can be zero to disable.
(Read and Write property)

77.53.21 MinLineWidth as Single

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Minimum line width for lines.
Notes:

Zero means no hair line removal.
(Read and Write property)

77.53.22 Res1BitImages as Integer

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resolution for 1 bit black & white images.
Notes:

Default is 150.
Can be zero to disable.
(Read and Write property)

77.53.23 ResColorImages as Integer

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resolution for images with more than one color channel.
Notes:

Default is 150.
Can be zero to disable.
(Read and Write property)

77.53.24 ResGrayImages as Integer

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resolution for Gray images.
Notes:

Default is 150.
Can be zero to disable.
(Read and Write property)

77.54 class DynaPDFOutputIntentMBS

77.54.1 class DynaPDFOutputIntentMBS

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for details on an output intent.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.54.2 Methods

77.54.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Private constructor.

77.54.4 Properties

77.54.5 Buffer as String

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: ICC profile buffer (optional)
Notes: (Read and Write property)

77.54.6 BufferSize as Integer

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Buffer size in bytes.
Notes: (Read and Write property)

77.54.7 Info as String

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Info string or name of the ICC profile.
Notes: (Read and Write property)

77.54.8 NumComponents as Integer

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of components.
Notes: (Read and Write property)

77.54.9 OutputCondition as String

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Describtion of the output device.
Notes: (Read and Write property)

77.54.10 OutputConditionID as String

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Describtion of the output device.
Notes: (Read and Write property)

77.54.11 RegistryName as String

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The registry in which OutputConditionID is defined.
Notes: (Read and Write property)

77.54.12 SubType as String

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The sub type.
Notes:

GTS_PDFX, GTS_PDFA1, or ISO_PDFE1
(Read and Write property)

77.55 class DynaPDFPageLabelMBS

77.55.1 class DynaPDFPageLabelMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a Page label.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.55.2 Blog Entries

77.55.4 Methods

77.55.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.55.6 Properties

77.55.7 FirstPageNum as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: First page number to be displayed in the page label.
Notes:

Subsequent pages are numbered sequentially from this value.
(Read only property)

77.55.8 Format as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The format of the page label.
Notes: (Read only property)

77.55.9 Prefix as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The prefix.
Notes:

This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

77.55.10 PrefixLen as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The length of the prefix in characters.
Notes: (Read only property)

77.55.11 PrefixUni as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the prefix is in unicode.
Notes: (Read only property)

77.55.12 StartRange as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The start range.
Notes: (Read only property)

77.56 class DynaPDFPageMBS

77.56.1 class DynaPDFPageMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a DynaPDF page.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- MBS Xojo Plugins, version 18.2pr6

77.56.4 Methods

77.56.5 BBox(type as Integer) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the requested bounding box.
Notes:

use the constants kpbArtBox, kpbBleedBox, kpbCropBox, kpbMediaBox or kpbTrimBox.

If orientation gives you 90, 270, -90 or -270, you may want to swap width and height of the rectangle.

77.56.6 CalcPagePixelSize(DefScale as UInt32, Scale as single, FrameWidth as UInt32, FrameHeight as UInt32, Flags as UInt32, byref Width as UInt32, byref Height as UInt32)

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function calculates the image size of a page exactly in the way as RenderPage() does, if called with the same parameters.
Example:

```
// your PDF environment
dim pdf as new DynaPDFMBS

// some PDF
dim file as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

call pdf.CreateNewPDF(nil)

// We import all pages
call pdf.SetImportFlags(pdf.kifImportAsPage)
call pdf.OpenImportFile(file, 0, "")
call pdf.ImportPDFFile(1,1.0,1.0)

// get first page
dim p as DynaPDFPageMBS = pdf.GetPage(1)

// and calculate how big it would be:
dim PageWidth, PageHeight as UInt32

dim DefScale as UInt32 = DynaPDFMBS.kpsFitBest
dim Scale as Single = 1.0
dim Flags as Uint32 = DynaPDFRasterImageMBS.krfDefault

p.CalcPagePixelSize(DefScale, Scale, window1.Width, window1.Height, Flags, PageWidth, PageHeight)

MsgBox "PageWidth: "+str(PageWidth)+EndOfLine+"PageHeight: "+str(PageHeight)
```

Notes:

This makes it possible to create the image in the required size so that it can be rendered without a border.

77.56.7 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.56.8 GetWidthHeight(Flags as UInt32, byref Width as Single, byref Height as Single, Rotate as Integer = 0) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates page width and height.

77.56.9 SetBBox(type as integer, BBox as DynaPDFRectMBS) as Boolean

MBS DynaPDF Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets or changes the bounding box of a page.
Notes:

This function is intended to be fast as possible. It requires no open page like DynaPDFMBS.SetBBox(), it does not change the default media or crop box, and it does not adjust the current coordinate system if the media box will be changed.

The function is useful if only one or more bounding boxes must be changed, whithout editing a page, or when a specific area of a page should be rendered. In the latter case change the crop box and restore it to the previous value when finish.
To delete a bounding box set the bounding box to 0, 0, 0, 0. The parameter BBox is required to be present, it cannot be nil.

If the function succeeds the return value is true. If the function fails the return value is false.

77.56.10 Properties

77.56.11 ArtBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries art box for this page.
Notes:

May be nil if not defined.
(Read only property)

77.56.12 BleedBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries bleed box for this page.
Notes:

May be nil if not defined.
(Read only property)

77.56.13 CropBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries crop box for this page.
Notes:

May be nil if not defined.
(Read only property)

77.56.14 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

77.56.15 MediaBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries media box for this page.
Notes: (Read only property)

77.56.16 Orientation as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the page orientation.
Notes: (Read only property)

77.56.17 Page as Integer

MBS DynaPDF Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The original page number used to query this page.
Notes: (Read only property)

77.56.18 PDF as DynaPDFMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The reference back to parent dynaPDF object.
Notes: (Read only property)

77.56.19 TrimBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries trim box for this page.
Notes:

May be nil if not defined.
(Read only property)

77.56.20 Constants

77.56.21 kpbArtBox = 0

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the PDF box constants.
Notes: Art box.

77.56.22 kpbBleedBox = 1

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the PDF box constants.
Notes: Bleed box.

77.56.23 kpbCropBox = 2

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the PDF box constants.
Notes: Crop Box.

77.56.24 kpbMediaBox = 4

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the PDF box constants.
Notes: Media Box.

77.56.25 kpbTrimBox = 3

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the PDF box constants.
Notes: Trim Box.

77.57 class DynaPDFPageStatisticMBS

77.57.1 class DynaPDFPageStatisticMBS

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for page statistics.
Notes:

You could count yourself with DynaPDFParseInterfaceMBS class and using the events.
This is just a convenience way to learn about whether for example there is an image on the page.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.57.6 Methods

77.57.7 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.57.8 Properties

77.57.9 BezierCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bezier curves.
Notes: (Read and Write property)

77.57.10 ClipPathCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of path clippings.
Notes: (Read and Write property)

77.57.11 ClosePathCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of paths closed.
Notes: (Read and Write property)

77.57.12 DrawShadingCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of shading drawings.
Notes: (Read and Write property)

77.57.13 FontCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of fonts used.
Notes: (Read and Write property)

77.57.14 ImageCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of images used.
Notes: (Read and Write property)

77.57.15 LayerCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of layers used.
Notes: (Read and Write property)

77.57.16 LineCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of lines.
Notes: (Read and Write property)

77.57.17 PatternCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of patterns used.
Notes: (Read and Write property)

77.57.18 RectangleCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of rectangles.
Notes: (Read and Write property)

77.57.19 TemplateCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of templates.
Notes: (Read and Write property)

77.57.20 TextCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of text fragments.
Notes: (Read and Write property)

77.57.21 TextLength as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The length in characters of the text on the page.
Notes: (Read and Write property)

77.58 class DynaPDFParseInterfaceMBS

77.58.1 class DynaPDFParseInterfaceMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for parsing pdf content.
Notes: You need to implement the BeginTemplate event in order to get events for images, vector graphics and text on the templates used on the page.

77.58.4 Events

77.58.5 ApplyPattern(ObjectPtr as Integer, Type as Integer, PatternPtr as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.
Notes:

Type is one of the following constants:

kptColored	= 0
kptUnColored	= 1
kptShadingPattern	= 2

77.58.6 BeginLayer(OCHandle as Integer, InVisible as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: .

Function: Called when the PDF parser found a begin layer command.
Notes:

The plugin will process the OCG object for you. So if handle is -1, there is no layer handle.
If it is >= 0, you have a handle. If it is <0, something failed.

77.58.7 BeginPattern(ObjectPtr as Integer, Fill as Boolean, PatternType as Integer, BBox as DynaPDFRectMBS, Matrix as DynaPDFMatrixMBS, XStep as Double, YStep as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.
Notes:

PatternType is one of the following constants:

kptColored	= 0
kptUnColored	= 1
kptShadingPattern	= 2

77.58.8 BeginTemplate(ObjectPtr as Integer, Handle as Integer, BBox as DynaPDFRectMBS, Matrix as DynaPDFMatrixMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.
Notes: You need to implement this event in order to get text, images and vector graphics from inside templates.

77.58.9 BezierTo1(ObjectPtr as Integer, x1 as Double, y1 as Double, x3 as Double, y3 as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

77.58.10 BezierTo2(ObjectPtr as Integer, x2 as Double, y2 as Double, x3 as Double, y3 as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

77.58.11 BezierTo3(ObjectPtr as Integer, x1 as Double, y1 as Double, x2 as Double, y2 as Double, x3 as Double, y3 as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

77.58.12 ClipPath(ObjectPtr as Integer, EvenOdd as boolean, Mode as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.
Notes: For the Mode parameter, the kfm* constants are used.

77.58.13 ClosePath(ObjectPtr as Integer, Mode as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.
Notes: For the Mode parameter, the kfm* constants are used.

77.58.14 DrawShading(ObjectPtr as Integer, Type as Integer, Shading as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.
Notes:

For the type parameter you use the kst* constants.

77.58.15 EndLayer(OCHandle as Integer, InVisible as boolean)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: .

Function: Called when the PDF parser found an end layer command.

77.58.16 EndPattern

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

77.58.17 EndTemplate

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

77.58.18 InsertImage(image as DynaPDFImageMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.
Notes: You can return zero on success or 1 to stop processing.

77.58.19 LineTo(ObjectPtr as Integer, x as Double, y as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

77.58.20 MoveTo(ObjectPtr as Integer, x as Double, y as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

77.58.21 MulMatrix(ObjectPtr as Integer, matrix as DynaPDFMatrixMBS)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: A matrix multiplication was found.

77.58.22 Rectangle(ObjectPtr as Integer, x as Double, y as Double, w as Double, h as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: The parser found a rectangle.

77.58.23 RestoreGraphicState as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

77.58.24 SaveGraphicState as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

77.58.25 SetCharSpacing(ObjectPtr as Integer, Value as Double)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

77.58.26 SetExtGState(ObjectPtr as Integer, GS as DynaPDFExtGState2MBS)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

77.58.27 SetFillColor(ObjectPtr as Integer, NumComps as Integer, Color1 as Double, Color2 as Double, Color3 as Double, Color4 as Double, Colors() as Double, ColorspaceType as Integer, ColorSpace as DynaPDFColorSpaceMBS)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.
Notes:

Colors array contains NumComps color values. First four values are provided directly with Color1, Color2, Color3 and Color4 parameters.
ColorSpaceType uses the kes* constants.
You can use ConvColor to convert colors to RGB or CMYK if needed.

77.58.28 SetFont(ObjectPtr as Integer, fontType as Integer, Embedded as boolean, FontName as string, Style as Integer, FontSize as Double, FontHandle as Integer, FontInfo as DynaPDFFontInfoMBS)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

77.58.29 SetLeading(ObjectPtr as Integer, Value as Double)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

77.58.30 SetLineCapStyle(ObjectPtr as Integer, Style as Integer)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

77.58.31 SetLineDashPattern(ObjectPtr as integer, dash() as Double, NumValues as integer, Phase as Double)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

77.58.32 SetLineJoinStyle(ObjectPtr as Integer, Style as Integer)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

77.58.33 SetLineWidth(ObjectPtr as Integer, Value as Double)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

77.58.34 SetMiterLimit(ObjectPtr as Integer, Value as Double)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

77.58.35 SetStrokeColor(ObjectPtr as Integer, NumComps as Integer, Color1 as Double, Color2 as Double, Color3 as Double, Color4 as Double, Colors() as Double, ColorspaceType as Integer, ColorSpace as DynaPDFColorSpaceMBS)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.
Notes:

Colors array contains NumComps color values. First four values are provided directly with Color1, Color2, Color3 and Color4 parameters.
ColorSpaceType uses the kes* constants.
You can use ConvColor to convert colors to RGB or CMYK if needed.

77.58.36 SetTextDrawMode(ObjectPtr as Integer, Mode as Integer)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

77.58.37 SetTextScale(ObjectPtr as Integer, Value as Double)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

77.58.38 SetWordSpacing(ObjectPtr as Integer, Value as Double)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

77.58.39 ShowTextArrayA(ObjectPtr as Integer, Matrix as DynaPDFMatrixMBS, Kerning() as DynapdfTextRecordAMBS, Count as Integer, Width as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

77.58.40 ShowTextArrayW(Source() as DynaPDFTextRecordAMBS, Matrix as DynapdfMatrixMBS, Kerning() as DynapdfTextRecordWMBS, Count as Integer, Width as Double, Decoded as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

77.59 class DynaPDFPointDataDictionaryMBS

77.59.1 class DynaPDFPointDataDictionaryMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a dictionary with point data.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.59.4 Methods

77.59.5 Arrays as DynaPDFPointDataMBS()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of entries in the point data dictionary.

77.59.6 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.59.7 Properties

77.59.8 Count as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of point data arrays
Notes: (Read and Write property)

77.59.9 Subtype as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The sub type for the point data.
Notes:

Should be Cloud.
(Read and Write property)

77.60 class DynaPDFPointDataMBS

77.60.1 class DynaPDFPointDataMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The data class for point data dictionary entries.
Notes:

A point data dictionary specifies points in 2D space for geospatical measures. The parameter DataType specifies the type of points, such as LAT for latitude in degrees, LON for longitute in degrees, or ALT for altitude in metres.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- MBS Xojo / Real Studio Plugins, version 15.0pr8

77.60.4 Methods

77.60.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.60.6 values as Single()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Array with values.

77.60.7 Properties

77.60.8 DataType as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Data type as string.
Notes:

Specifies the type of points, such as LAT for latitude in degrees, LON for longitute in degrees, or ALT for altitude in metres.
(Read and Write property)

77.60.9 Index as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The index in the dictionary.
Notes: (Read and Write property)

77.60.10 ValCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of values in the array.
Notes: (Read and Write property)

77.61 class DynaPDFPointMBS

77.61.1 class DynaPDFPointMBS

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a point.

77.61.2 Methods

77.61.3 Constructor(x as Double = 0.0, y as Double = 0.0)

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.

77.61.4 Properties

77.61.5 X as Double

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The X value.
Notes: (Read and Write property)

77.61.6 Y as Double

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Y value.
Notes: (Read and Write property)

77.62 class DynaPDFPrintParamsMBS

77.62.1 class DynaPDFPrintParamsMBS

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for additional print parameters.

77.62.2 Blog Entries

- MBS Xojo Plugins, version 19.5pr6
- MBS Xojo Plugins, version 17.2pr4

77.62.3 Blog Entries

- MBS Xojo Plugins, version 19.5pr6
- MBS Xojo Plugins, version 17.2pr4

77.62.4 Properties

77.62.5 Compress as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to compress images sent to printer.
Notes:

Meaningful only for image output. If true, compressed images are send to the printer.
(Read and Write property)

77.62.6 FilterColor as Integer

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compression filter to use for color images.
Notes:

Meaningful only for image output. Supported filters on Windows: kcfFlate and kcfJPEG.
(Read and Write property)

77.62.7 FilterGray as Integer

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compression filter to use for grayscale images.
Notes:

Meaningful only for image output. Supported filters on Windows: kcfFlate and kcfJPEG.
(Read and Write property)

77.62.8 IgnoreDCSize as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, PageSize is used to calculate the output format.
Notes: (Read and Write property)

77.62.9 JPEGQuality as Integer

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: JPEG Quality in percent (1..100).
Notes:

Zero means Default, which is 60% .
(Read and Write property)

77.62.10 MaxRes as Integer

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum print resolution.
Notes:

Zero means Default, which is 600 DPI.
(Read and Write property)

77.62.11 PageSize as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The page size to use.
Notes:

Considered only, if IgnoreDCSize is set to true.
(Read and Write property)

77.63 class DynaPDFPrintSettingsMBS

77.63.1 class DynaPDFPrintSettingsMBS

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for the print settings in a PDF document.
Notes: This requires PDF 1.7.

77.63.2 Methods

77.63.3 PrintRanges(index as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of print ranges.
Notes: If set, the array contains PrintRangesCount * 2 values. Each pair consists of the first and last pages in the sub-range. The first page in the PDF file is denoted by 0.

77.63.4 Properties

77.63.5 DuplexMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The duplex mode.
Notes:

Use the kdpm* constants.
(Read only property)

77.63.6 NumCopies as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of copies.
Notes:

-1 means not set. Values larger than 5 are ignored in viewer applications.
(Read only property)

77.63.7 PickTrayByPDFSize as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The setting for picking the tray by the PDF size.
Notes:

-1 means not set. 0 = false, 1 = true.
(Read only property)

77.63.8 PrintRangesCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of ranges available in PrintRanges.
Notes: (Read only property)

77.63.9 PrintScaling as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The print scaling setting.
Notes:

kdpmNone means not set.
(Read only property)

77.64 class DynaPDFRasterImageMBS

77.64.1 class DynaPDFRasterImageMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for advanced rendering options.
Example:

```
dim pdf as new DynaPDFMBS // make subclass to catch error event

dim f as FolderItem = SpecialFolder.Desktop.Child("dynapdf_help.pdf")

// create PDF
call pdf.CreateNewPDF(nil)
// set import flags
call pdf.SetImportFlags(pdf.kifImportAll + pdf.kifImportAsPage)

// open import file
call pdf.OpenImportFile(f, 0, "")

// import all pdf pages
call pdf.ImportPDFFile(1, 1.0, 1.0)

dim PageCount as Integer = pdf.GetPageCount

// create rasterizer.
dim r as new DynaPDFRasterizerMBS(pdf, 1000,1000)

// create options
dim o as new DynaPDFRasterImageMBS

// fill white
o.InitWhite = true

// scale to fit
o.DefScale = o.kpsFitBest

// rotate
o.Flags = o.krfRotate90

// render all pages
for i as Integer = 1 to PageCount

dim p as DynaPDFPageMBS = pdf.GetPage(i)
if r.RenderPage(p, o) then
// save to disc
dim outfile as FolderItem = SpecialFolder.Desktop.Child("page "+Format(i,"0")+".jpg")
```

```
call outfile.SaveAsJPEGMBS(r.Pic, 75)
end
next
```

Notes: This class is named RasterImage due to the name in the underlying DynaPDF library. A better name would be RasterizerOptions as it includes options for the rasterizer engine.

77.64.4 Properties

77.64.5 ClipRect as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional clipping rectangle defined in device coordinates (Pixels)
Notes: (Read and Write property)

77.64.6 DefScale as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies how the page should be scaled into the image buffer.
Notes:

can be kpsFitBest, kpsFitHeight or kpsFitWidth.
(Read and Write property)

77.64.7 DrawFrameRect as Boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the area outside the page's bounding box is filled with the frame color.
Notes:

InitWhite can still be used, with or without a clipping rectangle.
(Read and Write property)

77.64.8 Flags as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flags for the raster operation.
Notes:

This is a bit mask. Flags can be combined with a binary or operator.
Use a combination of krf* constants.
(Read and Write property)

77.64.9 FrameColor as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color for drawing the frame.
Notes:

Must be defined in the color space of the pixel format but in the natural component order, e.g. RGB.
(Read and Write property)

77.64.10 InitWhite as Boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to clear the buffer first.
Notes:

If true, the buffer is initialized with white color (default).
Must be set to false if you want to raster the page over an existing image.

When a clipping rectangle is set, only the area inside the clipping rectangle is initialized to white.
(Read and Write property)

77.64.11 Matrix as DynaPDFMatrixMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional transformation matrix.
Notes:

The matrix can be used to zoom into the page or to move the picture to a specific area in the image buffer.
(Read and Write property)

77.64.12 NumAnnots as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of rendered form annotations (excluding invisible annotation but annotations with no appearance are included)
Notes: (Read and Write property)

77.64.13 NumBezierCurves as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of bezier curves which where rendered. Glyph outlines are not taken into account.
Notes: (Read and Write property)

77.64.14 NumClipPaths as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of clipping paths used in the page. Should be small as possible!
Notes: (Read and Write property)

77.64.15 NumFormFields as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of rendered form fields (excluding invisible fields but fields with no appearance are included)
Notes: (Read and Write property)

77.64.16 NumGlyphs as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: When the number of glyphs equals NumTextRecords then there is probably some room for optimization...
Notes: (Read and Write property)

77.64.17 NumImages as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of images that were rendered.
Notes: (Read and Write property)

77.64.18 NumLineTo as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of LineTo operators.
Notes: (Read and Write property)

77.64.19 NumPaths as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of paths which were processed.
Notes: (Read and Write property)

77.64.20 NumPatterns as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of pattern which were processed.
Notes: (Read and Write property)

77.64.21 NumRectangles as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of rectangle operators.
Notes: (Read and Write property)

77.64.22 NumRestoreGState as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Should be equal to NumSaveGraphicStates.
Notes: (Read and Write property)

77.64.23 NumSaveGState as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of save graphics state operators.
Notes: (Read and Write property)

77.64.24 NumShadings as Integer

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of shadings.
Notes: (Read and Write property)

77.64.25 NumSoftMasks as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of soft masks that were processed.
Notes:

Alpha channels of images are not taken into account.
(Read and Write property)

77.64.26 NumTextRecords as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of independent text records which were rendered.
Notes: (Read and Write property)

77.64.27 PageSpace as DynaPDFMatrixMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The matrix represents the mapping from page space to device space.
Notes:

Output parameter.
This matrix is required when further objects should be drawn on the page, e.g. the bounding boxes.
(Read and Write property)

77.64.28 UpdateOnImageCoverage as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: DynaPDF multiplies the output image area with this factor to determine when the window should be updated.
Notes:

The factor should be around 0.5 through 5.0. Larger values cause less frequently update events.
(Read and Write property)

77.64.29 UpdateOnPathCount as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Call OnUpdateWindow event when the UpdateOnPathCount limit was reached.
Notes:

Clipping paths increment the number too.
Only full paths are considered, independent of the number of vertices they contain. The value should be larger than 50 and smaller than 10000.
(Read and Write property)

77.64.30 Yield as Boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to yield time to other threads.
Notes:

Set to true if you render page in a thread, so time is given to other threads.
(Read and Write property)

77.64.31 Events

77.64.32 UpdateWindow(r as DynaPDFRectMBS, pic as Variant) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called regularly so you can update your GUI.
Notes:

Please set UpdateOnPathCount and UpdateOnImageCoverage to use this event.
If you draw to a picture, the picture is passed as parameter for your convenience.

Pic is a variant so the plugin compiles in older Xojo versions for console targets.

Returns -1 to stop the processing.

77.64.33 Constants

77.64.34 kpsFitBest = 2

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the constants to specify how the page should be scaled into the image buffer.
Notes: Scale the page so that it fits fully into the image buffer.

77.64.35 kpsFitHeight = 1

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the constants to specify how the page should be scaled into the image buffer.
Notes: Scale the page to the height of the image buffer.

77.64.36 kpsFitWidth = 0

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the constants to specify how the page should be scaled into the image buffer.
Notes: Scale the page to the width of the image buffer.

77.64.37 krfClipToArtBox = 4

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the raster flag constants.
Notes:

Clip the page to the art box if any.

Only one of these clip flags must be set at time!

77.64.38 krfClipToBleedBox = 8

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the raster flag constants.
Notes:

Clip the page to the bleed box if any.

Only one of these clip flags must be set at time!

77.64.39 krfClipToTrimBox = 16

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the raster flag constants.
Notes:

Clip the page to the bleed box if any.

Only one of these clip flags must be set at time!

77.64.40 krfCompositeWhite = & h00001000

MBS DynaPDF Plugin, Plugin Version: 13.1.

Function: One of the raster flag constants.
Notes: Composite pixel formats with an alpha channel finally with a white background. The alpha channel is 255 everywhere after composition. This flag is mainly provided for debug purposes but it can also be useful if the image must be copied on screen with a function that doesn't support alpha blending.

77.64.41 krfDefault = 0

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the raster flag constants.
Notes: Render the page as usual

77.64.42 krfDisableAAClipping = & h00200000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes: Disable Anti-Aliasing for clipping paths. This flag is the most important one since clipping paths cause often visible artefacts in PDF files with flattened transparency.

77.64.43 krfDisableAAText = & h00400000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes: Disable Anti-Aliasing for text.

77.64.44 krfDisableAAVector = & h00800000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes: Disable Anti-Aliasing for vector graphics.

77.64.45 krfDisableAntiAliasing = & h00E00000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes: Fully disable Anti-Aliasing.

77.64.46 krfDisableBiLinearFilter = & h01000000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes: Disable the BiLevel filter for images. Sometetimes useful if sharp images are needed, e.g. for barcodes.

77.64.47 krfEnableBlendCS = & h10000000

MBS DynaPDF Plugin, Plugin Version: 22.3.

Function: One of the raster flag constants.
Notes: If set, the page is rendered in the color space of the page group, soft proof color space, or output intent (if set), and finally converted to the destination colorspace.

77.64.48 krfExclAnnotations = 32

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the raster flag constants.
Notes: Don't render annotations.

77.64.49 krfExclButtons = & h00004000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes:

If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude buttons. If all fields should be skipped then set the flag rfExclFormFields instead.

77.64.50 krfExclCheckBoxes = & h00008000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes:

Exclude check boxes.
If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude checkboxes.
If all fields should be skipped then set the flag rfExclFormFields instead.

77.64.51 krfExclComboBoxes = & h00010000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes:

Exclude combo boxes.
If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude combobox.
If all fields should be skipped then set the flag rfExclFormFields instead.

77.64.52 krfExclFormFields = 64

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the raster flag constants.
Notes: Don't render form fields.

77.64.53 krfExclListBoxes = & h00020000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes:

Exclude listbox fields.
If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude listbox.
If all fields should be skipped then set the flag rfExclFormFields instead.

77.64.54 krfExclPageContent = & h00002000

MBS DynaPDF Plugin, Plugin Version: 14.4.

Function: One of the raster flag constants.
Notes: If set, only annotations and form fields will be rendered (if any).

77.64.55 krfExclSigFields = & h00080000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes:

Exclude signature fields.
If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude signature fields.
If all fields should be skipped then set the flag rfExclFormFields instead.

77.64.56 krfExclTextFields = & h00040000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes:

Exclude text fields.
If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude text fields.
If all fields should be skipped then set the flag rfExclFormFields instead.

77.64.57 krfIgnoreCropBox = 2

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the raster flag constants.
Notes: Ignore the crop box and render anything inside the media box without clipping.

77.64.58 krfInitBlack = & h00000800

MBS DynaPDF Plugin, Plugin Version: 13.1.

Function: One of the raster flag constants.

Notes: Initialize the image buffer to black before rendering (RGBA or GrayA must be initialized to black)

77.64.59 krfRenderInvisibleText = & h02000000

MBS DynaPDF Plugin, Plugin Version: 18.2.

Function: One of the raster flag constants.
Notes: If set, treat text rendering mode Invisible as Normal.

77.64.60 krfRenderPrintState = & h20000000

MBS DynaPDF Plugin, Plugin Version: 23.1.

Function: One of the raster flag constants.
Notes: If set, the print state of layers, annotations, and form fields will be rendered.

77.64.61 krfRotate180 = & h00000200

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the raster flag constants.
Notes: Rotate the page 180 degress.

77.64.62 krfRotate270 = & h00000400

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the raster flag constants.
Notes: Rotate the page 270 degress.

77.64.63 krfRotate90 = & h00000100

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the raster flag constants.
Example:

```
dim pdf as new DynaPDFMBS // make subclass to catch error event

dim f as FolderItem = SpecialFolder.Desktop.Child("dynapdf_help.pdf")
```

```
// create PDF
call pdf.CreateNewPDF(nil)
// set import flags
call pdf.SetImportFlags(pdf.kifImportAll + pdf.kifImportAsPage)

// open import file
call pdf.OpenImportFile(f, 0, "")

// import all pdf pages
call pdf.ImportPDFFile(1, 1.0, 1.0)

dim PageCount as Integer = pdf.GetPageCount

// create rasterizer.
dim r as new DynaPDFRasterizerMBS(pdf, 1000,1000)

// create options
dim o as new DynaPDFRasterImageMBS

// fill white
o.InitWhite = true

// scale to fit
o.DefScale = o.kpsFitBest

// rotate
o.Flags = o.krfRotate90

// render all pages
for i as Integer = 1 to PageCount

dim p as DynaPDFPageMBS = pdf.GetPage(i)
if r.RenderPage(p, o) then
// save to disc
dim outfile as FolderItem = SpecialFolder.Desktop.Child("page "+Format(i,"0")+".jpg")
call outfile.SaveAsJPEGMBS(r.Pic, 75)
end
next
```

Notes: Rotate the page 90 degress.

77.64.64 krfScaleToBBox = & h00100000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes:

Considered only, if the flag rfClipToArtBox, rfClipToBleedBox, or rfClipToTrimBox is set.
If set, the picture size is set to the size of the whished bounding box.

77.64.65 krfScaleToMediaBox = 1

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the raster flag constants.
Notes: Render the real paper format. Contents outside the crop box is clipped.

77.64.66 krfSkipUpdateBG = & h00000080

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the raster flag constants.
Notes: Don't generate an update event after initializing the background to white.

77.65 class DynaPDFRasterizerMBS

77.65.1 class DynaPDFRasterizerMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for the rasterizer interface.

77.65.8 Methods

77.65.9 Abort

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Aborts raster process.
Notes: Stops the function RenderPage as soon as possible when RenderPage() is running in a separate thread.

77.65.10 AddRasImage(Filter as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function adds an image from the rasterizer to the current open image file.
Notes: The output image must be opened with CreateImage() beforehand.

77.65.11 AttachImageBuffer(Pic as Picture, RenderWithAlpha as boolean = false) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Attaches a new image buffer of the same pixelformat.
Notes:

Returns true on success.
Added RenderWithAlpha parameter in plugin version 19.0.
If RenderWithAlpha is true, we render with alpha channel. If the destination is a picture has alpha channel, you should get the alpha there. Otherwise for picture without alpha channel, we only copy RGB channels.
See also:

- 77.65.12 AttachImageBuffer(Rows as Memoryblock, Buffer as Memoryblock, Width as UInt32, Height as UInt32, ScanlineLen as Int32, PixelFormat as UInt32) as boolean 15374

77.65.12 AttachImageBuffer(Rows as Memoryblock, Buffer as Memoryblock, Width as UInt32, Height as UInt32, ScanlineLen as Int32, PixelFormat as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Attaches a new image buffer of the same pixelformat.
Notes:

For Pixelformat pass one of the kpx* constants.
You can pass Rows or Buffer, but the other memoryblock should be nil.
Returns true on success.
See also:

- 77.65.11 AttachImageBuffer(Pic as Picture, RenderWithAlpha as boolean = false) as boolean 15374

77.65.13 Constructor(PDF as DynaPDFMBS, DeviceContextHandle as Integer, Width as UInt32, Height as UInt32, PixFmt as UInt32)

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes rasterizer targeting a device context.
Notes:

Special version to simplify rendering into a device context. It creates a DIB Section into which pages can be rendered.

See also:

- 77.65.14 Constructor(PDF as DynaPDFMBS, Pic as Picture, RenderWithAlpha as boolean = false) 15375
- 77.65.15 Constructor(PDF as DynaPDFMBS, Rows as Memoryblock, Buffer as Memoryblock, Width as UInt32, Height as UInt32, ScanlineLen as Int32, PixelFormat as UInt32) 15375
- 77.65.16 Constructor(PDF as DynaPDFMBS, Width as Integer, Height as Integer) 15376

77.65.14 Constructor(PDF as DynaPDFMBS, Pic as Picture, RenderWithAlpha as boolean = false)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new rasterizer object targeting the given picture.
Notes:

Added RenderWithAlpha parameter in plugin version 19.0.
If RenderWithAlpha is true, we render with alpha channel. If the destination is a picture has alpha channel, you should get the alpha there. Otherwise for picture without alpha channel, we only copy RGB channels.
See also:

- 77.65.13 Constructor(PDF as DynaPDFMBS, DeviceContextHandle as Integer, Width as UInt32, Height as UInt32, PixFmt as UInt32) 15374
- 77.65.15 Constructor(PDF as DynaPDFMBS, Rows as Memoryblock, Buffer as Memoryblock, Width as UInt32, Height as UInt32, ScanlineLen as Int32, PixelFormat as UInt32) 15375
- 77.65.16 Constructor(PDF as DynaPDFMBS, Width as Integer, Height as Integer) 15376

77.65.15 Constructor(PDF as DynaPDFMBS, Rows as Memoryblock, Buffer as Memoryblock, Width as UInt32, Height as UInt32, ScanlineLen as Int32, PixelFormat as UInt32)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new rasterizer object targeting the given memory area.
Notes:

For Pixelformat pass one of the kpx* constants.
You can pass Rows or Buffer, but the other memoryblock should be nil.
See also:

- 77.65.13 Constructor(PDF as DynaPDFMBS, DeviceContextHandle as Integer, Width as UInt32, Height as UInt32, PixFmt as UInt32) 15374
- 77.65.14 Constructor(PDF as DynaPDFMBS, Pic as Picture, RenderWithAlpha as boolean = false) 15375
- 77.65.16 Constructor(PDF as DynaPDFMBS, Width as Integer, Height as Integer) 15376

77.65.16 Constructor(PDF as DynaPDFMBS, Width as Integer, Height as Integer)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Notes:

Creates a new picture as buffer for you with the given size.
PDF must not be nil and point to a valid DynaPDF context.
See also:

- 77.65.13 Constructor(PDF as DynaPDFMBS, DeviceContextHandle as Integer, Width as UInt32, Height as UInt32, PixFmt as UInt32) 15374
- 77.65.14 Constructor(PDF as DynaPDFMBS, Pic as Picture, RenderWithAlpha as boolean = false) 15375
- 77.65.15 Constructor(PDF as DynaPDFMBS, Rows as Memoryblock, Buffer as Memoryblock, Width as UInt32, Height as UInt32, ScanlineLen as Int32, PixelFormat as UInt32) 15375

77.65.17 Redraw(DeviceContextHandle as Integer, DestX as Integer, DestY as Integer)

MBS DynaPDF Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Because there is no direct access to the internal DIB Sesction when rendering into a device context, this function can be used to redraw the bitmap on the device context.
Notes:

If RenderPageEx() was called in a separate thread then this function can be called after the thread returned. While the thread is running you can change the position by directly manipulating the coordinate variables which were passed to RenderPageEx().
The function calls the system function SetDIBitsToDevice() to copy the image into the device context.

77.65.18 RenderPage(page as DynaPDFPageMBS, options as DynaPDFRasterImageMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Renders a page of a PDF Document with the given options.
Notes: Returns true on success and false on failure.

77.65.19 RenderPageEx(DeviceContextHandle as Integer, byref DestX as Integer, byref DestY as Integer, page as DynaPDFPageMBS, options as DynaPDFRasterImageMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Renders a page into a device context.
Notes:

Only valid if you called Constructor with DeviceContextHandle.
Returns true on success.

77.65.20 RenderPageMT(page as DynaPDFPageMBS, options as DynaPDFRasterImageMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Renders a page of a PDF Document with the given options.
Notes:

Returns true on success and false on failure.

Same as RenderPage, but with additional multithreading.

As the actual transfer runs on a preemptive thread, the event UpdateWindow is called asynchrounously and run a few milliseconds later.

Do not call other functions on this DynaPDFRasterizerMBS instance while RenderPageMT is running!

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

77.65.21 ResizeBitmap(DeviceContextHandle as Integer, Width as Integer, Height as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the size of the DIB Section.
Notes:

Only valid if you called Constructor with DeviceContextHandle.
Returns true on success.

77.65.22 Properties

77.65.23 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference to the rasterizer object.
Notes:

If the constructor is successful, this value is not zero.
(Read only property)

77.65.24 Height as Integer

MBS DynaPDF Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the picture or buffer.
Notes: (Read only property)

77.65.25 MinLineWidth as Double

MBS DynaPDF Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The minimum line width in which thin lines are rendered.
Notes:

The value should be in the range 0.1 through 1.0.
Default value: 0.5
(Read and Write property)

77.65.26 PDF as DynaPDFMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The reference back to parent dynaPDF object.
Notes: (Read only property)

77.65.27 Pic as Picture

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The target picture.
Notes: (Read only property)

77.65.28 PixelFormat as Integer

MBS DynaPDF Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The pixel format of picture.
Notes: (Read only property)

77.65.29 Premultiply as Boolean

MBS DynaPDF Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to premultiply pixels.
Notes:

This is used when we render ARGB or ABGR and copy it to the Xojo picture.
Some picture formats in Xojo need pre-multiplied pixel values, so this is turned on automatically when needed.
(Read and Write property)

77.65.30 ScanlineLen as Integer

MBS DynaPDF Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The scan line length in bytes of the picture.
Notes: (Read only property)

77.65.31 ScreenResolution as Integer

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the screen resolution in DPI.
Notes:

The screen resolution is sometimes required, e.g. to render Text annotations correctly. This type of annotation has a fixed size that is independent of the current scaling factor. However, the correct size depends on

the screen resolution on which the image is rendered.

Default is zero.
(Read and Write property)

77.65.32 TempBuffer as Ptr

MBS DynaPDF Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The temporary buffer data pointer.
Notes:

If the picture pixel format is not directly supported with DynaPDF, we render in a temporary buffer and copy it to the picture.
(Read only property)

77.65.33 TempPixelFormat as Integer

MBS DynaPDF Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The temporary buffer pixel format.
Notes: (Read only property)

77.65.34 TempScanlineLen as Integer

MBS DynaPDF Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The temporary buffer scan line length in bytes.
Notes: (Read only property)

77.65.35 Width as Integer

MBS DynaPDF Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the picture or buffer.
Notes: (Read only property)

77.65.36 Constants

77.65.37 kpxf1Bit = 0

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the pixel format constants.
Notes: 1 bit per pixel black and white.

77.65.38 kpxfABGR = 7

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the pixel format constants.
Notes: ABGR.

77.65.39 kpxfARGB = 6

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the pixel format constants.
Notes: ARGB

77.65.40 kpxfBGR = 3

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the pixel format constants.
Notes: BGR

77.65.41 kpxfBGRA = 5

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the pixel format constants.
Notes: BGRA

77.65.42 kpxfCMYK = 9

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the pixel format constants.
Notes: CMYK without alpha

77.65.43 kpxfCMYKA = 10

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the pixel format constants.
Notes: CMYK with alpha

77.65.44 kpxfGray = 1

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the pixel format constants.
Notes: 8 bit grayscale.

77.65.45 kpxfGrayA = 8

MBS DynaPDF Plugin, Plugin Version: 11.2.

Function: One of the pixel format constants.
Notes: 8 bit grayscale with alpha.

77.65.46 kpxfRGB = 2

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the pixel format constants.
Notes: RGB

77.65.47 kpxfRGBA = 4

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the pixel format constants.
Notes: RGBA

77.66 class DynaPDFRawImageMBS

77.66.1 class DynaPDFRawImageMBS

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class to hold information about a raw image.
Notes: Used with InsertRawImageEx.

77.66.4 Methods

77.66.5 setBuffer(data as MemoryBlock)

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the buffer to point to the bytes in the memoryblock.
Notes: Size is optional. Some memoryblocks have no known size and there you need to specify one.
See also:

- 77.66.6 setBuffer(data as MemoryBlock, size as Int64) 15384
- 77.66.7 setBuffer(data as Ptr) 15385
- 77.66.8 setBuffer(data as Ptr, size as Int64) 15385
- 77.66.9 setBuffer(data as string) 15386
- 77.66.10 setBuffer(data as string, size as Int64) 15386

77.66.6 setBuffer(data as MemoryBlock, size as Int64)

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the buffer to point to the bytes in the memoryblock.
Notes: Size is optional. Some memoryblocks have no known size and there you need to specify one.
See also:

- 77.66.5 setBuffer(data as MemoryBlock) 15384
- 77.66.7 setBuffer(data as Ptr) 15385
- 77.66.8 setBuffer(data as Ptr, size as Int64) 15385
- 77.66.9 setBuffer(data as string) 15386
- 77.66.10 setBuffer(data as string, size as Int64) 15386

77.66.7 setBuffer(data as Ptr)

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Private method to set the buffer using a pointer to some memory.
Notes: This is a private method to make sure nobody passes a ptr instead of memoryblock or ptr+size.
See also:

- 77.66.5 setBuffer(data as MemoryBlock) 15384
- 77.66.6 setBuffer(data as MemoryBlock, size as Int64) 15384
- 77.66.8 setBuffer(data as Ptr, size as Int64) 15385
- 77.66.9 setBuffer(data as string) 15386
- 77.66.10 setBuffer(data as string, size as Int64) 15386

77.66.8 setBuffer(data as Ptr, size as Int64)

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the buffer using a pointer to some memory.
Notes: Please provide the right size.
See also:

- 77.66.5 setBuffer(data as MemoryBlock) 15384
- 77.66.6 setBuffer(data as MemoryBlock, size as Int64) 15384
- 77.66.7 setBuffer(data as Ptr) 15385
- 77.66.9 setBuffer(data as string) 15386
- 77.66.10 setBuffer(data as string, size as Int64) 15386

77.66.9 setBuffer(data as string)

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets buffer to point to contents of this string.
Notes: If you specify a size, the size can be smaller than thing length to use only first part.
See also:

- 77.66.5 setBuffer(data as MemoryBlock) 15384
- 77.66.6 setBuffer(data as MemoryBlock, size as Int64) 15384
- 77.66.7 setBuffer(data as Ptr) 15385
- 77.66.8 setBuffer(data as Ptr, size as Int64) 15385
- 77.66.10 setBuffer(data as string, size as Int64) 15386

77.66.10 setBuffer(data as string, size as Int64)

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets buffer to point to contents of this string.
Notes: If you specify a size, the size can be smaller than thing length to use only first part.
See also:

- 77.66.5 setBuffer(data as MemoryBlock) 15384
- 77.66.6 setBuffer(data as MemoryBlock, size as Int64) 15384
- 77.66.7 setBuffer(data as Ptr) 15385
- 77.66.8 setBuffer(data as Ptr, size as Int64) 15385
- 77.66.9 setBuffer(data as string) 15386

77.66.11 Properties

77.66.12 BitsPerComponent as Integer

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bits per component.
Notes:

For example 8 for the usual RGB images.
(Read and Write property)

77.66.13 Buffer as Ptr

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The buffer as pointer.
Notes:

Please use setBuffer methods to set this.
(Read only property)

77.66.14 BufSize as Int64

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The buffer size.
Notes: (Read only property)

77.66.15 CS as Integer

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image color space.
Notes: (Read and Write property)

77.66.16 CSHandle as Integer

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Color space handle or -1.
Notes: (Read and Write property)

77.66.17 HasAlpha as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The image has an alpha channel?
Notes: (Read and Write property)

77.66.18 Height as Integer

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Height in pixels.
Notes: (Read and Write property)

77.66.19 IsBGR as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Windows bitmap format?
Notes: (Read and Write property)

77.66.20 Memory as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The memoryblock used with setBuffer.
Notes: (Read only property)

77.66.21 MinIsWhite as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether image has value zero for white instead of black.
Notes:

One bit images only.
(Read and Write property)

77.66.22 NumComponents as Integer

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of components.
Notes:

Maximum is 32 for DynaPDF.
(Read and Write property)

77.66.23 Stride as Integer

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bytes per row.
Notes:

A negative value mirrors the image.
(Read and Write property)

77.66.24 String as String

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The String used with setBuffer.
Notes: (Read only property)

77.66.25 Width as Integer

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Width in pixels.
Notes: (Read and Write property)

77.67 class DynaPDFRectMBS

77.67.1 class DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A rectangle for DynaPDF.

77.67.6 Methods

77.67.7 Constructor(left as Double = 0.0, top as Double = 0.0, right as Double = 0.0, bottom as Double = 0.0)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new rectangle with the given values.

77.67.8 Properties

77.67.9 Bottom as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The bottom coordinate.
Notes: (Read and Write property)

77.67.10 Left as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The left coordinate.
Notes: (Read and Write property)

77.67.11 Right as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The right coordinate.
Notes: (Read and Write property)

77.67.12 Top as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The top coordinate.
Notes: (Read and Write property)

77.67.13 Width as Double

MBS DynaPDF Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the rectangle.
Notes:

This is the difference between right and left.

Height property is missing as it depends on the coordinate origin. For top-down coordinates you would calculate bottom - top while for bottom-up coordinates you calculate top - bottom.
(Read and Write property)

77.68 class DynaPDFRelFileNodeMBS

77.68.1 class DynaPDFRelFileNodeMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The information on a related file node.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.68.2 Methods

77.68.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.68.4 Properties

77.68.5 EF as DynaPDFFileSpecMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Embedded file.
Notes: (Read only property)

77.68.6 Name as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Name of this file spcification.
Notes: (Read only property)

77.68.7 NextNode as DynaPDFRelFileNodeMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Next node if any.
Notes: (Read only property)

77.69 class DynaPDFResetFormActionMBS

77.69.1 class DynaPDFResetFormActionMBS

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for reset form action.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.69.2 Methods

77.69.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.69.4 Fields(index as Integer) as DynaPDFFieldExMBS

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries array of fields.
Notes: Index is from 0 to FieldsCount-1.

77.69.5 Properties

77.69.6 FieldsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of fields in the array.
Notes: (Read only property)

77.69.7 Include as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Include or exclude given fields?
Notes:

If true, the fields in the array must be reset. If false, these fields must be excluded.
(Read only property)

77.69.8 NextAction as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The next action.
Notes:

-1 or next action handle to be executed if any.
(Read only property)

77.69.9 NextActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of the next action.
Notes:

See kat* constants.
(Read only property)

77.70 class DynaPDFSigDictMBS

77.70.1 class DynaPDFSigDictMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for details on signature fields.

77.70.2 Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

77.70.3 Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

77.70.4 Properties

77.70.5 Cert as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: X.509 Certificate when SubFilter is adbe.x509.rsa_sha1.
Notes: (Read and Write property)

77.70.6 ContactInfo as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional contact info string, e.g. an email address
Notes: (Read and Write property)

77.70.7 Contents as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The signature.
Notes:

This is either a DER encoded PKCS# 1 binary data object or a DER-encoded PKCS# 7 binary data object depending on the used SubFilter.

(Read and Write property)

77.70.8 Filter as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the security handler, usually Adobe.PPKLite.
Notes: (Read and Write property)

77.70.9 Location as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional location of the signer.
Notes: (Read and Write property)

77.70.10 Name as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional signers name.
Notes: (Read and Write property)

77.70.11 PropAuthTime as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional. The number of seconds since the signer was last authenticated.
Notes: (Read and Write property)

77.70.12 PropAuthType as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional. The method that shall be used to authenticate the signer.
Notes:

Valid values are PIN, Password, and Fingerprint.
(Read and Write property)

77.70.13 Reason as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional reason.
Notes: (Read and Write property)

77.70.14 Revision as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional, The version of the signature handler that was used to create the signature.
Notes: (Read and Write property)

77.70.15 SignTime as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Date/Time string.
Notes: (Read and Write property)

77.70.16 SubFilter as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A name that describes the encoding of the signature value.
Notes:

Should be adbe.x509.rsa_sha1, adbe.pkcs7.detached, or adbe.pkcs7.sha1.
(Read and Write property)

77.70.17 Version as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version of the signature dictionary format.
Notes: (Read and Write property)

77.71 class DynaPDFSigParmsMBS

77.71.1 class DynaPDFSigParmsMBS

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for PDF signature parameters.

77.71.2 Blog Entries

- Sign PDF with DynaPDF and your custom signature
- MBS REALbasic Plugins, version 11.1pr4

77.71.3 Blog Entries

- Sign PDF with DynaPDF and your custom signature
- MBS REALbasic Plugins, version 11.1pr4

77.71.4 Properties

77.71.5 ContactInfo as String

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional, e.g. an email address.
Notes:

Internally this string is converted to ANSI or Unicode encoding.
(Read and Write property)

77.71.6 Encrypt as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the file will be encrypted.
Notes: (Read and Write property)

77.71.7 HashType as Integer

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The hash type: khtDetached or khtSHA1.
Notes: (Read and Write property)

77.71.8 KeyLen as Integer

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Key length to encrypt the file.
Notes:

This value is ignored if Encrypt is set to false.
On of the kkl* constants like kkl128bit.
(Read and Write property)

77.71.9 Location as String

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional location of the signer.
Notes:

Internally this string is converted to ANSI or Unicode encoding.
(Read and Write property)

77.71.10 OpenPwd as String

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional open password.
Notes:

This value is ignored if Encrypt is set to false.
(Read and Write property)

77.71.11 OwnerPwd as String

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional owner password.
Notes:

This value is ignored if Encrypt is set to false.
(Read and Write property)

77.71.12 PKCS7ObjLen as Integer

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Max length of the signed PKCS# 7 object.
Notes: (Read and Write property)

77.71.13 Range1 as String

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Hash or byte range.
Notes: (Read and Write property)

77.71.14 Range1Length as Integer

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the buffer Range1.
Notes: (Read and Write property)

77.71.15 Range2 as String

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Second range value.
Notes:

Set only if HashType = htDetached.
(Read and Write property)

77.71.16 Range2Length as Integer

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of buffer Range2.
Notes: (Read and Write property)

77.71.17 Reason as String

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional reason why the file was signed.
Notes:

Internally this string is converted to ANSI or Unicode encoding.
(Read and Write property)

77.71.18 Restrict as Integer

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: What should be restricted?
Notes:

This value is ignored if Encrypt is set to false.
A combination of krs* constants.
(Read and Write property)

77.71.19 Signer as String

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional, see manual.
Notes:

Internally this string is converted to ANSI or Unicode encoding.
(Read and Write property)

77.72 class DynaPDFStackMBS

77.72.1 class DynaPDFStackMBS

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for the current text found by GetPageText.
Notes: Before you can use it, call InitStack.

77.72.2 Blog Entries

- MBS Xojo Plugins, version 17.1pr5
- MBS Xojo / Real Studio Plugins, version 16.2pr1
- MBS REALbasic Plugins, version 11.1pr4

77.72.3 Blog Entries

- MBS Xojo Plugins, version 17.1pr5
- MBS Xojo / Real Studio Plugins, version 16.2pr1
- MBS REALbasic Plugins, version 11.1pr4

77.72.4 Methods

77.72.5 KerningAdvance(index as UInt32) as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Negative values move the cursor to the right.

77.72.6 KerningLength(index as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length in characters.

77.72.7 KerningText(index as UInt32) as string

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Translated Unicode string.
Notes:

May contain chr(0) characters.
Encoding is UTF8.

77.72.8 KerningWidth(index as UInt32) as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: String width measured in text space.

77.72.9 RawKernAdvance(index as UInt32) as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Negative values move the cursor to the right.

77.72.10 RawKernLength(index as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Raw text length in bytes.

77.72.11 RawKernText(index as UInt32) as string

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Raw text.

77.72.12 Properties

77.72.13 CharSP as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Current character spacing, info only.
Notes: (Read only property)

77.72.14 CIDFont as Boolean

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, a CID font is used to render the text.
Notes:

It is not possible to replace a text with ReplacePageText() in this case. However, it is still possible to delete the text. If the text should be replaced use either ReplacePageTextEx() or WriteTextMatrixEx().
(Read only property)

77.72.15 ConvColors as Boolean

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function:

If true (default), all colors are converted to the destination color space
DestSpace.
Notes:

The default color space is DeviceRGB. This variable can be changed after the structure has been initialized with InitStack(). If set to false, colors of complex color spaces are still converted into the alternate color space but the color space can then be changed arbitrary often. See also the description of FillCS.
(Read and Write property)

77.72.16 ctm as DynaPDFMatrixMBS

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The transformation matrix.
Notes:

Pre-multiplied global transformation matrix.
(Read only property)

77.72.17 DeleteKerningAt as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: This member can be used in combination with ReplacePageText().
Notes:

ReplacePageText() deletes or replaces normally always a complete text record but this is often not required especially if a text must be deleted or replaced in the middle or end of a kerning array. To make text replacement easier it is possible to preserve an arbitrary number of kerning records from deletion. The value of DeleteKerningAt represents the first array index which should be deleted. All kerning records above this index will be deleted too. Take a look into the demo examples/edit_text which is delivered with DynaPDF to determine how this member can be used.
(Read and Write property)

77.72.18 DestSpace as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination color space in which all colors should be converted.
Notes:

If
ConvColor is set to false, the value of this member is ignored. If the destination color space should be DeviceCMYK initialize the members FillColor and StrokeColor with PDF_CMYK(0,0,0,255); which represents black.
(Read and Write property)

77.72.19 DrawMode as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The draw mode used to render the text.
Notes:

See SetTextDrawMode() for further information.
(Read only property)

77.72.20 Embedded as Boolean

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the font is embedded.
Notes:

This information is very important if the text should be replaced. The function ReplacePageText() can be used if the font is not embedded and if the member CIDFont is false. Otherwise, the function ReplacePageTextEx() or WriteTextMatrixEx() must be used to replace the text, see the examples on the following pages for further information.

(Read only property)

77.72.21 FillColor as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The fill color represents the text color if the text draw mode is dmNormal.
Notes:

Depending on the draw mode the fill and stroke color can be invoked to render the text.
(Read only property)

77.72.22 FillCS as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function:

This is the current color space in which the color value of FillColor is defined.
Notes:

If ConvColor is set to true (default) the value is always equal to DestSpace. If ConvColor is set to false the fill color is still returned in a device color space but the color space can be changed arbitrary often. Colors of complex color spaces, such as Separation or DeviceN, are always converted into the alternate color space. If the original or alternate color space is an ICC based color space the color value is returned as is and the color space is set depending on the number of components. The ICC profile is not invoked to calculate the color value in the device color space. Future versions of DynaPDF maybe use the ICC profile to convert the color into device color space.
(Read only property)

77.72.23 Font as DynaPDFFontMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font object used to print the string.
Notes:

Deprecated. Better use FontInfo property.

Reading this property creates a new object each time.
Please put object in local variable and avoid querying the property value several times.
(Read only property)

77.72.24 FontFlags as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The PDF font flags.
Notes: (Read and Write property)

77.72.25 FontHandle as Integer

MBS DynaPDF Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal font object handle.
Notes:

In DynaPDF documentation named IFont, a pointer to the C object for the font.
(Read only property)

77.72.26 FontInfo as DynaPDFFontInfoMBS

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font object used to print the string.
Notes:

Reading this property creates a new object each time.
Please put object in local variable and avoid querying the property value several times.
(Read only property)

77.72.27 FontSize as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The font size used to display the text.
Notes: (Read only property)

77.72.28 HScale as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Current horizontal scaling, info only.
Notes: (Read only property)

77.72.29 KerningCount as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of kerning records.
Notes:

RawKern and Kerning contain always the same number of records.
(Read only property)

77.72.30 Leading as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The leading is already included in the text transformation matrix tm.
Notes:

The value of leading must not be considered to calculate the text position.
(Read only property)

77.72.31 LineWidth as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The current line width; it can be ignored if the text is not stroked.
Notes: (Read only property)

77.72.32 SpaceWidth as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The space width.
Notes:

The space width can be used to determine whether a space character is
emulated at a given position. A default space width is set if the font does not

contain a space character. Note that many documents emulate spaces with kerning space. Such documents contain usually no space character. It is usually best to use the half space width to determine whether a space character is emulated. This is especially important if a document uses condensed fonts which contain no space character.
(Read only property)

77.72.33 StrokeColor as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The stoke color.
Notes:

The stroke color can be ignored if the text draw mode is not dmStroke, dmFillStroke, dmStrokeClip or dmFillStrokeClip since it is then not used to render the text.
(Read only property)

77.72.34 StrokeCS as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function:

This is the current color space in which the color value of StrokeColor is defined.
Notes:

The color space is set in an identical manner like FillCS.
(Read only property)

77.72.35 Text as String

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The raw text line that was found in the content stream.
Notes:

This string can contain single or multi-byte characters. This member should no longer be used to extract or replace text. Use the Kerning array instead.
(Read only property)

77.72.36 TextLen as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The string length in bytes, not characters!
Notes:

If TextLen is zero no text was found or an error occurred.
(Read only property)

77.72.37 TextRise as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The text rise is already included in the text transformation matrix tm.
Notes:

The
value is always 0.0.
(Read only property)

77.72.38 TextWidth as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The text width measured in text space.
Notes:

This is the width of the entire kerning array incl. kerning space.
(Read only property)

77.72.39 tm as DynaPDFMatrixMBS

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The transformation matrix.
Notes:

Pre-multiplied text transformation matrix.
(Read only property)

77.72.40 WordSP as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Current word spacing, info only.
Notes: (Read only property)

77.72.41 x as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The position.
Notes:

These members are no longer used. All positioning operators are already
included in the text transformation matrix tm.
(Read only property)

77.72.42 y as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The position.
Notes:

These members are no longer used. All positioning operators are already
included in the text transformation matrix tm.
(Read only property)

77.73 class DynaPDFSubmitFormActionMBS

77.73.1 class DynaPDFSubmitFormActionMBS

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for submit form action details.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.73.2 Methods

77.73.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.73.4 Fields(index as Integer) as DynaPDFFieldExMBS

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries array of field.
Notes: Index is from 0 to FieldCount-1.

77.73.5 Properties

77.73.6 CharSet as String

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional charset in which the form should be submitted.
Notes: (Read only property)

77.73.7 FieldsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of fields in the array.
Notes: (Read only property)

77.73.8 Flags as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Various flags.
Notes:

See CreateSubmitAction() for further information.
(Read only property)

77.73.9 NextAction as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The next action.
Notes:

-1 or next action handle to be executed if any.
(Read only property)

77.73.10 NextActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of the next action.
Notes:

See kat* constants.
(Read only property)

77.73.11 URL as String

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The URL of the script at the Web server that will process the submission.
Notes: (Read only property)

77.74 class DynaPDFSysFontMBS

77.74.1 class DynaPDFSysFontMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for system font info.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.74.2 Blog Entries

- MBS Xojo Plugins, version 18.4pr1
- MBS Xojo / Real Studio Plugins, version 15.0pr8

77.74.3 Blog Entries

- MBS Xojo Plugins, version 18.4pr1
- MBS Xojo / Real Studio Plugins, version 15.0pr8

77.74.4 Methods

77.74.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.74.6 NextFont as DynaPDFSysFontMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries next font in the chain of fonts.
Notes: Returns nil on the end of list.

77.74.7 Properties

77.74.8 BaseType as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font type.
Notes:

Can be kfbtTrueType, kfbtType1, kfbtOpenType or kfbtStdFont.
(Read and Write property)

77.74.9 CIDOrdering as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: CID Ordering.
Notes:

OpenType CID fonts only.
(Read and Write property)

77.74.10 CIDRegistry as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CID Registry.
Notes:

OpenType CID fonts only
(Read and Write property)

77.74.11 CIDSupplement as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CID Supplement.
Notes:

OpenType CID fonts only
(Read and Write property)

77.74.12 DataOffset as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Data offset.
Notes: (Read and Write property)

77.74.13 FamilyName as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Family name.
Notes: (Read and Write property)

77.74.14 FilePath as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font file path.
Notes: (Read and Write property)

77.74.15 FileSize as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: File size in bytes.
Notes: (Read and Write property)

77.74.16 Flags as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flags.
Notes:

Can be combination of kefpAnsiPath, kefpUnicodePath, kefpEmbeddable and kefpEditable.
(Read and Write property)

77.74.17 FullName as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Full name.
Notes: (Read and Write property)

77.74.18 Index as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Zero based font index if stored in a TrueType collection.
Notes: (Read and Write property)

77.74.19 IsFixedPitch as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the font is a fixed pitch font.
Notes: (Read and Write property)

77.74.20 Length1 as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the clear text portion of a Type1 font.
Notes: (Read and Write property)

77.74.21 Length2 as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the eexec encrypted binary portion of a Type1 font.
Notes: (Read and Write property)

77.74.22 PostScriptName as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Postscript mame.
Notes: (Read and Write property)

77.74.23 Style as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font style.
Notes:

See kfs* constants.
(Read and Write property)

77.74.24 UnicodeRange1 as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Supported unicode ranges, part 1.
Notes: (Read and Write property)

77.74.25 UnicodeRange2 as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Supported unicode ranges, part 2.
Notes: (Read and Write property)

77.74.26 UnicodeRange3 as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Supported unicode ranges, part 3.
Notes: (Read and Write property)

77.74.27 UnicodeRange4 as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Supported unicode ranges, part 4.
Notes: (Read and Write property)

77.74.28 Constants

77.74.29 kurAlphabeticPresentationForms = & h40000000

77.75 class DynaPDFTableMBS

77.75.1 class DynaPDFTableMBS

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a table in DynaPDF.
Notes:

This tables are more for doing a layout, but can also be used to show a list or a worksheet like in Excel.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.75.6 Methods

77.75.7 AddColumn(left as boolean, width as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a column to the table.
See also AddColumn function in DynaPDF manual.

77.75.8 AddRow(height as Double = 0.0) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a row with given height.
See also AddRow function in DynaPDF manual.

77.75.9 AddRows(count as UInt32, height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a couple of rows with given height.
See also AddRows function in DynaPDF manual.

77.75.10 ClearColumn(Col as Integer, Types as Integer)

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function deletes the content in the specified column in all rows.
Notes: The paramter Types is described in ClearContent() below.
See also ClearColumn function in DynaPDF manual.

77.75.11 ClearContent(Types as Integer)

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears content of table.
Notes: See kdc constants for possible flags.
See also ClearContent function in DynaPDF manual.

77.75.12 ClearRow(Row as Integer, Types as Integer)

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function deletes the content in the specified row.
Notes: The paramter Types is described in ClearContent().
See also ClearRow function in DynaPDF manual.

77.75.13 Constructor

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.75.14 DeleteColumn(column as UInt32)

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes the column.

77.75.15 DeleteRow(row as UInt32)

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes the row with the given index.
See also DeleteRow function in DynaPDF manual.

77.75.16 DeleteRows

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes all rows.
See also DeleteRows function in DynaPDF manual.

77.75.17 DrawTable(x as Double, y as Double, MaxHeight as Double = 0.0) as Double

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws the table at the given position into the PDF:
Notes:

The function draws the table on the specified position. The x/y-coordinates specify the top left cornerof the table. The table flows always from top to bottom.

The function must be executed in a while statement if the parameter MaxHeight is set to a value greater than zero.

The function draws the header rows if any and at least one row to avoid an endless loop if themaximum height would be smaller as the first row height.

If the function succeeds the return value is the height of the table that was drawn so that additionalcontents can be drawn below the table if necessary. If the function fails the return value is -1.
See also DrawTable function in DynaPDF manual.

77.75.18 GetFirstRow as Integer

MBS DynaPDF Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries first row from last draw operation.
See also GetFirstRow function in DynaPDF manual.

77.75.19 GetFlags(Row as Integer, Column as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries flag for a cell, a column or a row.
Notes: If Row is -1, only column flags are returned. If Column is -1, the row flags are returned for given row.
See also GetFlags function in DynaPDF manual.

77.75.20 GetNextHeight(MaxHeight as Double, byref NextRow as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the next row.
Example:

```
dim pdf as new DynaPDFMBS
call pdf.CreateNewPDF(nil)
call pdf.Append

// create dummy table with 20 rows, 1 column and 500 points width. 20 points per row by default.
dim table as DynaPDFTableMBS = pdf.CreateTable(20, 1, 500.0, 20.0)

// fill in dummy data
for i as Integer = 1 to 20
dim rowNum as Integer = table.AddRow
call table.SetCellText(rowNum, 0, pdf.ktaLeft, table.kcoCenter, str(i))
next

// and do some calculations
dim nextrow as Integer
dim h as Double = table.GetNextHeight(0, nextrow)

MsgBox str(h)+" with no limit."

dim h2 as Double = table.GetNextHeight(200, nextrow)

MsgBox str(h2)+" with limit of 200 and rows till "+str(nextrow-1)

break
```

Notes:

If MaxHeight is zero, returns the height of table.
If MaxHeight is the height of space available, plugin calculates the effective height of table and which row

would be the next one.
Returns negative number on error.
See also GetNextHeight function in DynaPDF manual.

77.75.21 GetNextRow as Integer

MBS DynaPDF Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries next row of last draw operation.
See also GetNextRow function in DynaPDF manual.

77.75.22 GetNumCols as Integer

MBS DynaPDF Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of columns of last draw operation.
See also GetNumCols function in DynaPDF manual.

77.75.23 GetNumRows as Integer

MBS DynaPDF Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of rows of last draw operation.
See also GetNumRows function in DynaPDF manual.

77.75.24 GetTableHeight as Double

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the table height.
See also GetTableHeight function in DynaPDF manual.

77.75.25 GetTableWidth as Double

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates table width.
See also GetTableWidth function in DynaPDF manual.

77.75.26 HaveMore as boolean

MBS DynaPDF Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether there are more rows to draw.
Notes: If you draw a table, you can loop and fill pages until the whole table is drawn.
See also HaveMore function in DynaPDF manual.

77.75.27 SetBackColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the back color of the table, a row or cells.
Example:

```
dim pdf as DynaPDFMBS // your PDF environment
dim tbl as DynaPDFTableMBS = pdf.CreateTable(3, 3, 500.0, 20.0) // make some table

const allRows = -1
const allColumns = -1

// add a few rows
rowNum = tbl.AddRow(-1.0)
rowNum = tbl.AddRow(-1.0)
rowNum = tbl.AddRow(-1.0)
rowNum = tbl.AddRow(-1.0)

// row 0 in 100% Cyan
call tbl.SetBackColor(0, allColumns, array(255,0,0,0), pdf.kcsDeviceCMYK)
// row 1 in 100% Cyan
call tbl.SetBackColor(1, allColumns, array(0, 255, 0, 0), pdf.kcsDeviceCMYK)
// row 2 in 100% Cyan
call tbl.SetBackColor(2, allColumns, array(0, 0, 255, 0), pdf.kcsDeviceCMYK)
// row 3 in RGB red with 50% transparency
call tbl.SetBackColor(3, allColumns, array(255, 0, 0))
```

Notes:

Default is none (transparent)
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 77.75.28 SetBackColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean 15449

77.75.28 SetBackColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the back color of the table, a row or cells.
Example:

```
dim pdf as DynaPDFMBS // your PDF environment
dim tbl as DynaPDFTableMBS = pdf.CreateTable(3, 3, 500.0, 20.0) // make some table

// now fill all rows and columns with RGB red specified by integer values
const allRows = -1
const allColumns = -1
call tbl.SetBackColor(allRows, allColumns, 255, 0, 0)
```

Notes:

Default is none (transparent)
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 77.75.27 SetBackColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 15448

77.75.29 SetBackColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the back color of the table, a row or cells.
Example:

```
dim pdf as DynaPDFMBS // your PDF environment
dim tbl as DynaPDFTableMBS = pdf.CreateTable(3, 3, 500.0, 100.0) // make some table

const allRows = -1
const allColumns = -1
```

```
// add a few rows
rowNum = tbl.AddRow(-1.0)
rowNum = tbl.AddRow(-1.0)
rowNum = tbl.AddRow(-1.0)
rowNum = tbl.AddRow(-1.0)

// row 0 in 100% Cyan
call tbl.SetBackColorFloat(0, allColumns, array(1.0, 0.0, 0.0, 0.0), pdf.kcsDeviceCMYK)
// row 1 in 100% Cyan
call tbl.SetBackColorFloat(1, allColumns, array(0.0, 1.0, 0.0, 0.0), pdf.kcsDeviceCMYK)
// row 2 in 100% Cyan
call tbl.SetBackColorFloat(2, allColumns, array(0.0, 0.0, 1.0, 0.0), pdf.kcsDeviceCMYK)
// row 3 in RGB red
call tbl.SetBackColorFloat(3, allColumns, array(1.0, 0.0, 0.0))
```

Notes:

Default is none (transparent)
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 77.75.30 SetBackColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean 15450

77.75.30 SetBackColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the back color of the table, a row or cells.
Example:

```
dim pdf as DynaPDFMBS // your PDF environment
dim tbl as DynaPDFTableMBS = pdf.CreateTable(3, 3, 500.0, 20.0) // make some table

// now fill all rows and columns with RGB red specified by double values
const allRows = -1
const allColumns = -1
call tbl.SetBackColorFloat(allRows, allColumns, 1.0, 0.0, 0.0)
```

Notes:

Default is none (transparent)

If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 77.75.29 SetBackColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 15449

77.75.31 SetBackColorValue(Row as Integer, Column as Integer, TPDFColorSpace as Integer, ColorValue as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the back color of the table, a row or cells.
Example:

```
dim pdf as DynaPDFMBS // your PDF environment
dim tbl as DynaPDFTableMBS = pdf.CreateTable(3, 3, 500.0, 20.0) // make some table

// now fill all rows and columns with RGB red specified by RGB() call
const allRows = -1
const allColumns = -1

dim c as Integer = DynaPDFMBS.RGB(255, 0, 0)
call tbl.SetBackColorValue(allRows, allColumns, DynaPDFMBS.kcsDeviceRGB, c)
```

Notes:

Default is none (transparent)
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a color space and a matching color value.
For example kcsDeviceRGB and RGB(r,g,b), kcsDeviceCMYK and CMYK(c,m,y,k) or kcsDeviceGray with gray color.

77.75.32 SetBorderColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the border color of the table, a row or cells.
Example:

```
// set color in CMYK with cyan (255 = 100% )
Call tbl.SetBorderColor(-1, -1, Array(255, 0, 0, 0), pdf.kesDeviceCMYK)
Call tbl.SetBorderWidth(-1, -1, 2.0, 2.0, 2.0, 2.0)
```

Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 77.75.33 SetBorderColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean 15452

77.75.33 SetBorderColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the border color of the table, a row or cells.
Example:

```
const AllRows = -1
const AllColumns = -1

// set gray color for all borders to RGB(100,100,100)
call tbl.SetBorderColor(AllRows, AllColumns, 100, 100, 100)

// set border for all cells with fine line
call table.SetBorderWidth(AllRows, AllColumns, 0.5, 0.5, 0.5, 0.5)
```

Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 77.75.32 SetBorderColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 15451

77.75.34 SetBorderColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the border color of the table, a row or cells.
Example:

```
// set color in CMYK with magenta (1.0 = 100% )
Call tbl.SetBorderColorFloat(-1, -1, Array(0.0, 1.0, 0.0, 0.0), pdf.kesDeviceCMYK)
Call tbl.SetBorderWidth(-1, -1, 2.0, 2.0, 2.0, 2.0)
```

Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 77.75.35 SetBorderColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean 15453

77.75.35 SetBorderColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the border color of the table, a row or cells.
Example:

```
// set color in RGB with blue (1.0 = 100% )
Call tbl.SetBorderColorFloat(-1, -1, 0.0, 0.0, 1.0)
Call tbl.SetBorderWidth(-1, -1, 2.0, 2.0, 2.0, 2.0)
```

Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 77.75.34 SetBorderColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 15453

77.75.36 SetBorderColorValue(Row as Integer, Column as Integer, TPDFColorSpace as Integer, ColorValue as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the border color of the table, a row or cells.
Example:

```
// set color in CMYK with magenta (255 = 100% )
Call tbl.SetBorderColorValue(-1, -1, pdf.kesDeviceCMYK, pdf.CMYK(0, 255, 0, 0))
Call tbl.SetBorderWidth(-1, -1, 2.0, 2.0, 2.0, 2.0)

// set color in RGB with green (255 = 100% )
Call tbl.SetBorderColorValue(row, -1, pdf.kesDeviceRGB, pdf.RGB(0, 255, 0))
Call tbl.SetBorderWidth(row, -1, 2.0, 2.0, 2.0, 2.0)
```

Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a color space and a matching color value.
For example kcsDeviceRGB and RGB(r,g,b), kcsDeviceCMYK and CMYK(c,m,y,k) or kcsDeviceGray with gray color.

77.75.37 SetBorderWidth(Row as Integer, Column as Integer, left as Double, top as Double, right as Double, bottom as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the border width of the table, a row or cells.
Example:

```
// set border for a row to right/bottom with fine line
call table.SetBorderWidth(rowNum, -1, 0.0, 0.0, 0.5, 0.5)
```

Notes:

Default value is 0.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

77.75.38 SetCellAction(Row as Integer, Column as Integer, ActionHandle as UInt32, Mode as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an invisible link annotation for the specified cell or table and associates the provided action with that annotation.
Notes:

The result is an interactive area that executes the action if the user clicks on cell or table.
A cell action is always a background object that is created in the size of the background area when the table is drawn.

Unlike other cell objects like images, text, and so on, a cell link is no persistent object because the action will be deleted when then PDF file in memory will be closed or when destructor will be called.
If the table should be drawn into more than one PDF file then re-create the actions and cell action before drawing the table into the next PDF file.

Actions can be created with functions like CreateGoToAction(), CreateGoToRAction(), and so on.

If the function succeeds the return value is true. If the function fails the return value is false.
See also SetCellAction function in DynaPDF manual.

77.75.39 SetCellDashPattern(Row as Integer, Column as Integer, CellSide as Integer, LineCapStyle as Integer, values() as Double, Phase as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Apply a line dash pattern to cell, row, and table borders.
Notes: Pass kcsTop, kcsBottom, kcsLeft or kcsRight for CellSide parameter.
See also SetCellDashPattern function in DynaPDF manual.

77.75.40 SetCellImage(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, path as FolderItem, index as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the cell image.

See also SetCellImage function in DynaPDF manual.
See also:

- 77.75.41 SetCellImage(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, path as string, index as Integer = 0) as boolean 15456

77.75.41 SetCellImage(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, path as string, index as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the cell image.
See also SetCellImage function in DynaPDF manual.
See also:

- 77.75.40 SetCellImage(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, path as FolderItem, index as Integer = 0) as boolean 15455

77.75.42 SetCellImageAnsi(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, path as string, index as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets cell image.
See also SetCellImage function in DynaPDF manual.
See also:

- 77.75.40 SetCellImage(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, path as FolderItem, index as Integer = 0) as boolean 15455
- 77.75.41 SetCellImage(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, path as string, index as Integer = 0) as boolean 15456

77.75.43 SetCellImageData(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, ImageData as MemoryBlock, index as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets cell image.
Example:

```
dim PictureData as memoryblock // from database maybe?
dim w as Double = 300 // destination size
dim h as Double = 200
dim row as Integer
dim column as Integer

dim table as DynaPDFTableMBS // your table

call table.SetCellImageData(row, column, true, table.kcoCenter, table.kcoCenter, w, h, PictureData, 0)
```

Notes: Returns true on success.
See also:

- 77.75.44 SetCellImageData(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, ImageData as string, index as Integer = 0) as boolean 15457

77.75.44 SetCellImageData(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, ImageData as string, index as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets cell image.
Example:

```
dim PictureData as string // from database maybe?
dim w as Double = 300 // destination size
dim h as Double = 200
dim row as Integer
dim column as Integer

dim table as DynaPDFTableMBS // your table

call table.SetCellImageData(row, column, true, table.kcoCenter, table.kcoCenter, w, h, PictureData, 0)
```

See also:

- 77.75.43 SetCellImageData(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, ImageData as MemoryBlock, index as

Integer = 0) as boolean 15456

77.75.45 SetCellOrientation(Row as Integer, Column as Integer, Orientation as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the cell orientation.
Notes: See dynapdf_help.pdf for details.
See also SetCellOrientation function in DynaPDF manual.

77.75.46 SetCellPadding(Row as Integer, Column as Integer, left as Double, top as Double, right as Double, bottom as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the cell padding of the table, a row or cells.
Notes:

Default is zero.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

77.75.47 SetCellPicture(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as double, Height as Double, Pic as Picture) as boolean

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets cell image with given picture.
Example:

```
dim Pic as picture // your picture from database maybe?
dim w as Double = 300 // destination size
dim h as Double = 200
dim row as Integer
dim column as Integer

dim table as DynaPDFTableMBS // your table

call table.SetCellPicture(row, column, true, table.kcoCenter, table.kcoCenter, w, h, Pic)
```

Notes: Returns true on success.

77.75.48 SetCellSpacing(Row as Integer, Column as Integer, left as Double, top as Double, right as Double, bottom as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the cell spacing of the table, a row or cells.
Notes:

Default is zero.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

77.75.49 SetCellTable(Row as Integer, Column as Integer, HAlign as Integer, VAlign as Integer, SubTable as DynaPDFTableMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts a sub table into the specfied cell.
Notes:

A sub table is always a foreground object that has a strong width and height. That means, if the cell is not large enough then it will be expanded.
Note that the function creates no copy of the table. Do not delete the sub table when it is used by another table.
In programming languages which use reference counting like Xojo, it is important to delete the tables in right order. Delete first the tables which contain references to sub tables. Finally, delete the sub tables.

If the function succeeds the return value is true. If the function fails the return value is false.
See dynapdf_help.pdf for details.
See also SetCellTable function in DynaPDF manual.

77.75.50 SetCellTemplate(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, TmplHandle as Integer, Width as Double = 0, Height as Double = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts a template into the specified cell.
Notes: See dynapdf_help.pdf for details.
See also SetCellTemplate function in DynaPDF manual.

77.75.51 SetCellText(Row as Integer, Column as Integer, HTextAlign as Integer, VAlign as Integer, text as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the text of a cell.
Notes:

Use DynaPDFMBS.ktaLeft and similar text align constants for HAlign.
But use DynaPDFTableMBS.kcoCenter and similar cell orientation constants for Valign.
See also SetCellText function in DynaPDF manual.

77.75.52 SetCellTextAnsi(Row as Integer, Column as Integer, HTextAlign as Integer, VAlign as Integer, text as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the text of a cell with ANSI text.
Notes:

Use DynaPDFMBS.ktaLeft and similar text align constants for HAlign.
But use DynaPDFTableMBS.kcoCenter and similar cell orientation constants for Valign.
See also SetCellText function in DynaPDF manual.

77.75.53 SetColWidth(column as UInt32, Width as Double, ExtTable as Boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the column width for a column.
See also SetColWidth function in DynaPDF manual.

77.75.54 SetFlags(Row as Integer, Column as Integer, Flags as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the flags for a cell.
Notes: If Row is -1, all rows are modified. If Column is -1, all columns are modified.
See also SetFlags function in DynaPDF manual.

77.75.55 SetFont(Row as Integer, Column as Integer, name as string, Style as Integer = 0, Embed as Boolean = true, CodePage as Integer = & h27) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the font of the table, a row or cells.
Example:

```
dim tbl as DynaPDFTableMBS // your table

// set font for all cells
call tbl.SetFont -1, -1, "Helvetica", pdf.kfsNone, true, pdf.kcpUnicode
// set bold font for a special cell
call tbl.SetFont rowNum, 2, "Helvetica", pdf.kfsBold, true, pdf.kcpUnicode
```

Notes:

Default is Helvetica, Code page 1252, Embed false.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.
See also SetFont function in DynaPDF manual.

77.75.56 SetFontAnsi(Row as Integer, Column as Integer, name as string, Style as Integer = 0, Embed as Boolean = true, CodePage as Integer = & h27) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the font of the table, a row or cells.
Notes:

Default is Helvetica, Code page 1252, Embed false.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.
See also SetFont function in DynaPDF manual.

77.75.57 SetFontSelMode(Row as Integer, Column as Integer, value as Int32) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the font selection mode of the table, a row or cells.
Notes:

Default is ksmFamilyName.

If Row is -1, all rows are modified. If Column is -1, all columns are modified.
See also SetFontSelMode function in DynaPDF manual.

77.75.58 SetFontSize(Row as Integer, Column as Integer, size as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the font size of the table, a row or cells.
Notes:

Default is 10.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.
See also SetFontSize function in DynaPDF manual.

77.75.59 SetGridHorizontalColor(channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the horizontal grid color.
Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 77.75.60 SetGridHorizontalColor(paramarray channels as Integer) as boolean 15462

77.75.60 SetGridHorizontalColor(paramarray channels as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the horizontal grid color.
Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 77.75.59 SetGridHorizontalColor(channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 15462

77.75.61 SetGridHorizontalColorFloat(channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the horizontal grid color.
Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 77.75.62 SetGridHorizontalColorFloat(paramarray channels as Double) as boolean 15463

77.75.62 SetGridHorizontalColorFloat(paramarray channels as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the horizontal grid color.
Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 77.75.61 SetGridHorizontalColorFloat(channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 15463

77.75.63 SetGridHorizontalColorValue(TPDFColorSpace as Integer, ColorValue as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the horizontal grid color.
Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a color space and a matching color value.
For example kcsDeviceRGB and RGB(r,g,b), kcsDeviceCMYK and CMYK(c,m,y,k) or kcsDeviceGray with gray color.

77.75.64 SetGridVerticalColor(channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the vertical grid color.
Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 77.75.65 SetGridVerticalColor(paramarray channels as Integer) as boolean 15464

77.75.65 SetGridVerticalColor(paramarray channels as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the vertical grid color.
Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 77.75.64 SetGridVerticalColor(channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 15464

77.75.66 SetGridVerticalColorFloat(channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the vertical grid color.
Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 77.75.67 SetGridVerticalColorFloat(paramarray channels as Double) as boolean 15465

77.75.67 SetGridVerticalColorFloat(paramarray channels as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the vertical grid color.
Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 77.75.66 SetGridVerticalColorFloat(channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 15464

77.75.68 SetGridVerticalColorValue(TPDFColorSpace as Integer, ColorValue as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the vertical grid color.
Notes:

Default is black.

Pass a color space and a matching color value.
For example kcsDeviceRGB and RGB(r,g,b), kcsDeviceCMYK and CMYK(c,m,y,k) or kcsDeviceGray with gray color.

77.75.69 SetGridWidth(h as Double, v as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the grid width.
Notes: Default is 0.

See also SetGridWidth function in DynaPDF manual.

77.75.70 SetImageColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the image color of the table, a row or cells.
Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 77.75.71 SetImageColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean 15466

77.75.71 SetImageColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the image color of the table, a row or cells.
Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 77.75.70 SetImageColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 15466

77.75.72 SetImageColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the image color of the table, a row or cells.
Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 77.75.73 SetImageColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean 15467

77.75.73 SetImageColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the image color of the table, a row or cells.
Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 77.75.72 SetImageColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 15466

77.75.74 SetImageColorValue(Row as Integer, Column as Integer, TPDFColorSpace as Integer, ColorValue as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the image color.
Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a color space and a matching color value.
For example kcsDeviceRGB and RGB(r,g,b), kcsDeviceCMYK and CMYK(c,m,y,k) or kcsDeviceGray with gray color.

77.75.75 SetPDF(pdf as DynaPDFMBS)

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the target PDF for this table.

77.75.76 SetRowHeight(Row as Integer, value as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the row height of a row.
See also SetRowHeight function in DynaPDF manual.

77.75.77 SetTableWidth(Value as single, AdjustType as Integer, MinColWidth as single)

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the width of the table.
Notes:

At least one column must be modified when the width will be changed. The parameter AdjustType specifies how the column width should be modified. If the new width is larger, then the difference can be added to the left or right column, or all columns can get a unique width (TableWidth / NumColumns). The parameter MinColWidth is ignored in this case.
If the new width is smaller then the difference must be subtracted from the columns. The parameter MinColWidth specifies in this case the minimum width of columns that must be adjusted. It is only used if AdjustType is not set to kcoaUniqueWidth. The column widths are adjusted starting from the left or right side as specified. If the width of the first column is not large enough to subtract the difference, then the minimum column width is set to the column. This adjustment continues until the gap is zero. If the new table width is smaller as MinColWidth * NumColumns then the widths of the remaining columns will be set to zero. Such cases should be avoided since the column widths must be adjusted again when the table is drawn.

kcoaUniqueWidth	Set the column widths to TableWidth / NumColumns
kcoaAdjLeft	Adjust the widths starting from the left side
kcoaAdjRight	Adjust the widths starting from the right side

See dynapdf_help manual for details.
Returns true on success or false on failure.
See also SetTableWidth function in DynaPDF manual.

77.75.78 SetTextColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the text color of the table, a row or cells.
Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 77.75.79 SetTextColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean 15469

77.75.79 SetTextColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the text color of the table, a row or cells.
Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 77.75.78 SetTextColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 15469

77.75.80 SetTextColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the text color of the table, a row or cells.
Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 77.75.81 SetTextColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean 15470

77.75.81 SetTextColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the text color of the table, a row or cells.
Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 77.75.80 SetTextColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 15469

77.75.82 SetTextColorValue(Row as Integer, Column as Integer, TPDFColorSpace as Integer, ColorValue as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the horizontal grid color.
Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a color space and a matching color value.
For example kcsDeviceRGB and RGB(r,g,b), kcsDeviceCMYK and CMYK(c,m,y,k) or kcsDeviceGray with gray color.

77.75.83 Properties

77.75.84 Parent as Variant

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reference to parent object.
Notes: (Read only property)

77.75.85 PDF as DynaPDFMBS

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reference to parent PDF object.
Notes: (Read only property)

77.75.86 Constants

77.75.87 kcctAction = 4

MBS DynaPDF Plugin, Plugin Version: 19.1.

Function: One of the cell content type constants.
Notes: Action

77.75.88 kcctImage = 1

MBS DynaPDF Plugin, Plugin Version: 12.4.

Function: One of the cell content type constants.
Notes: Image.

77.75.89 kcctTable = 2

MBS DynaPDF Plugin, Plugin Version: 12.4.

Function: One of the cell content type constants.
Notes: Table.

77.75.90 kcctTemplate = 3

MBS DynaPDF Plugin, Plugin Version: 13.2.

Function: One of the cell content type constants.
Notes: Template.

77.75.91 kcctText = 0

MBS DynaPDF Plugin, Plugin Version: 12.4.

Function: One of the cell content type constants.
Notes: Text

77.75.92 kcoaAdjLeft = 1

MBS DynaPDF Plugin, Plugin Version: 13.2.

Function: One of the column adjustment constants.
Notes: Adjust the widths starting from the left side.

77.75.93 kcoaAdjRight = 2

MBS DynaPDF Plugin, Plugin Version: 13.2.

Function: One of the column adjustment constants.
Notes: Adjust the widths starting from the right side.

77.75.94 kcoaUniqueWidth = 0

MBS DynaPDF Plugin, Plugin Version: 13.2.

Function: One of the column adjustment constants.
Notes: Set the column widths to TableWidth / NumColumns.

77.75.95 kcoBottom = 1

MBS DynaPDF Plugin, Plugin Version: 12.4.

Function: One of the cell orientation constants.
Notes: Bottom

77.75.96 kcoCenter = 2

MBS DynaPDF Plugin, Plugin Version: 12.4.

Function: One of the cell orientation constants.
Notes: Center

77.75.97 kcoLeft = 0

MBS DynaPDF Plugin, Plugin Version: 12.4.

Function: One of the cell orientation constants.
Notes: Left

77.75.98 kcoRight = 1

MBS DynaPDF Plugin, Plugin Version: 12.4.

Function: One of the cell orientation constants.
Notes: Right

77.75.99 kcoTop = 0

MBS DynaPDF Plugin, Plugin Version: 12.4.

Function: One of the cell orientation constants.
Notes: Top

77.75.100 kcsBottom = 1

MBS DynaPDF Plugin, Plugin Version: 20.0.

Function: One of the cell side constants.
Notes: Bottom side

77.75.101 kcsLeft = 0

MBS DynaPDF Plugin, Plugin Version: 20.0.

Function: One of the cell side constants.
Notes: Left side

77.75.102 kcsRight = 2

MBS DynaPDF Plugin, Plugin Version: 20.0.

Function: One of the cell side constants.
Notes: Right side

77.75.103 kcsTop = 3

MBS DynaPDF Plugin, Plugin Version: 20.0.

Function: One of the cell side constants.
Notes: Top side

77.75.104 kdcAction = 16

MBS DynaPDF Plugin, Plugin Version: 19.1.

Function: One of the delete option flags for ClearContent function.
Notes: Delete action.

77.75.105 kdcAllCont = 31

MBS DynaPDF Plugin, Plugin Version: 12.4.

Function: One of the delete option flags for ClearContent function.
Notes: Delete all content types

77.75.106 kdcBackGround = & h20000000

MBS DynaPDF Plugin, Plugin Version: 12.4.

Function: One of the delete option flags for ClearContent function.
Notes: Delete background objects

77.75.107 kdcBoth = & h30000000

MBS DynaPDF Plugin, Plugin Version: 12.4.

Function: One of the delete option flags for ClearContent function.
Notes: Delete both foreground and background objects

77.75.108 kdcForeGround = & h10000000

MBS DynaPDF Plugin, Plugin Version: 12.4.

Function: One of the delete option flags for ClearContent function.
Notes: Delete foreground objects

77.75.109 kdcImage = 2

MBS DynaPDF Plugin, Plugin Version: 12.4.

Function: One of the delete option flags for ClearContent function.
Notes: Delete image.

77.75.110 kdcTable = 8

MBS DynaPDF Plugin, Plugin Version: 12.4.

Function: One of the delete option flags for ClearContent function.
Notes: Delete table.

77.75.111 kdcTemplate = 4

MBS DynaPDF Plugin, Plugin Version: 13.2.

Function: One of the delete option flags for ClearContent function.
Notes: Template table.

77.75.112 kdcText = 1

MBS DynaPDF Plugin, Plugin Version: 12.4.

Function: One of the delete option flags for ClearContent function.
Notes:

Delete text.
Text is always a foreground object

77.75.113 ktfAddFlags = 32

MBS DynaPDF Plugin, Plugin Version: 15.2.

Function: One of the cell flags.
Notes:

If used when setting flags, the flags are not replacing existing values, but added.
This way a call can set one flag and later another call can add a second flag without clearing first one.

77.75.114 ktfDefault = 0

MBS DynaPDF Plugin, Plugin Version: 12.5.

Function: One of the cell flags.
Notes: Default flag.

77.75.115 ktfFixedTextHeight = 64

MBS DynaPDF Plugin, Plugin Version: 21.5.

Function: One of the cell flags.
Notes: If set, text does not increase the row height if necessary. The row height must be non-zero in this case. The flag is ignored otherwise.

77.75.116 ktfHeaderRow = 2

MBS DynaPDF Plugin, Plugin Version: 13.1.

Function: One of the cell flags.
Notes: Header rows are drawn first after a page break occurred

77.75.117 ktfNoLineBreak = 4

MBS DynaPDF Plugin, Plugin Version: 13.2.

Function: One of the cell flags.
Notes: Prohibit line breaks in cells whith text ->Can be set to the entire table, columns, rows, and cells.

77.75.118 ktfScaleToRect = 8

MBS DynaPDF Plugin, Plugin Version: 13.2.

Function: One of the cell flags.
Notes:

If set, the specified output width and height represents the maximum size of the image or template.
The image or template is scaled into this rectangle without changing the aspect ratio.

77.75.119 ktfStatic = 1

MBS DynaPDF Plugin, Plugin Version: 12.5.

Function: One of the cell flags.
Notes: This flag marks a row, column, or cell as static to avoid the deletion of the content with ClearContent().

77.75.120 ktfUseImageCS = 16

MBS DynaPDF Plugin, Plugin Version: 13.2.

Function: One of the cell flags.
Notes: If set, images are inserted in the native image color space.

77.76 class DynaPDFTextRecordAMBS

77.76.1 class DynaPDFTextRecordAMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an ANSI text.

77.76.2 Blog Entries

- DynaPDF Text Position Examples updated
- DynaPDF Text Position Examples

77.76.3 Blog Entries

- DynaPDF Text Position Examples updated
- DynaPDF Text Position Examples

77.76.4 Properties

77.76.5 Advance as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The advance value for this text.
Notes:

Negative values move the cursor the right, positive to the left

(Read only property)

77.76.6 Length as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Raw text length in bytes.
Notes: (Read and Write property)

77.76.7 Text as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Raw text.
Notes: (Read and Write property)

77.77 class DynaPDFTextRecordWMBS

77.77.1 class DynaPDFTextRecordWMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an unicode text.

77.77.2 Blog Entries

- DynaPDF Text Position Examples updated
- DynaPDF Text Position Examples

77.77.3 Blog Entries

- DynaPDF Text Position Examples updated
- DynaPDF Text Position Examples

77.77.4 Properties

77.77.5 Advance as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The advance value for this text.
Notes:

Negative values move the cursor the right, positive to the left

(Read only property)

77.77.6 Length as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length in characters.
Notes: (Read and Write property)

77.77.7 Text as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Already translated Unicode string.
Notes: (Read and Write property)

77.77.8 Width as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: String width measured in text space.
Notes: (Read only property)

77.78 class DynaPDFURIActionMBS

77.78.1 class DynaPDFURIActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an URL action.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.78.2 Methods

77.78.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.78.4 Properties

77.78.5 BaseURL as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional, if defined in the Catalog object.
Notes: (Read only property)

77.78.6 IsMap as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A flag specifying whether to track the mouse position when the URI is resolved.
Notes:

e.g. http://test.org?50,70.
(Read only property)

77.78.7 NextAction as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle to the next action.
Notes:

-1 or next action handle to be executed if any
(Read only property)

77.78.8 NextActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of the next action.
Notes:

Only set if NextAction is >= 0.
(Read only property)

77.78.9 URI as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Uniform Resource Identifier.
Notes: (Read only property)

77.79 class DynaPDFVersionInfoMBS

77.79.1 class DynaPDFVersionInfoMBS

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for version information.
Example:

```
Dim d As New DynaPDFMBS
Dim v As DynaPDFVersionInfoMBS = d.GetPDFVersionEx

Break // check in debugger
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.79.5 Xojo Developer Magazine

- 21.1, page 20

77.79.6 Methods

77.79.7 Constructor

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

77.79.8 Properties

77.79.9 FXConfLevel as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The conformance level for ZUGFeRD, Factur-X or XRechnung.
Notes: (Read only property)

77.79.10 FXDocName as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The document file name for ZUGFeRD, Factur-X or XRechnung.
Notes: (Read only property)

77.79.11 FXDocType as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The document type for ZUGFeRD, Factur-X or XRechnung.
Notes: (Read only property)

77.79.12 FXVersion as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The version for ZUGFeRD, Factur-X or XRechnung.
Notes: (Read only property)

77.79.13 MainVer as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The main version.
Notes:

Set only if the file conforms to a specific PDF standard, e.g. "PDF/X // 1a:2003", "PDF/A 3b", and so on.
(Read only property)

77.79.14 Major as Integer

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: PDF major version.
Notes:

e.g. 1
(Read only property)

77.79.15 Minor as Integer

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: PDF minor version.
Notes:

e.g. 7
(Read only property)

77.79.16 PDFAConformance as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The PDF/A conformance.
Notes:

e.g. A, B, E, F, U, or UA.
(Read only property)

77.79.17 PDFAVersion as Integer

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The PDF/A version.
Notes:

If greater zero, this is a PDF/A file.
(Read only property)

77.79.18 PDFEVersion as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The PDF/E version.
Notes:

e.g. PDF/E-1
(Read only property)

77.79.19 PDFVTModDate as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The PDF/VT Modification date.
Notes:

e.g. 2016-05-07T15:42:23+01:00
(Read only property)

77.79.20 PDFVTVersion as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The PDF/VT version.
Notes:

e.g. PDF/VT-2
(Read only property)

77.79.21 PDFXConformance as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The PDF/X conformance.
Notes:

e.g. PDF/X-1a:2001 or PDF/X-1a:2003. PDF/X 3 and above do not set this key anymore.
(Read only property)

77.79.22 PDFXVersion as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The PDF/X Version string.
Notes:

e.g. PDF/X-1:2001, PDF/X-1:2003, and so on.
(Read only property)

77.79.23 SubVer as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The sub version string.
Notes:

e.g. "ZUGFeRD 2.0", "Factur-X", and so on
(Read only property)

77.79.24 VersionConst as Integer

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The version number constant for DynaPDF.
Notes:

If >= 0 this is the TPDFVersion constant as integer.
If the version is not supported by DynaPDF, this member is set to -1.
(Read only property)

77.80 class DynaPDFViewportMBS

77.80.1 class DynaPDFViewportMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The viewport details class.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.80.4 Methods

77.80.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.80.6 Properties

77.80.7 BBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Bounding box.
Notes: (Read and Write property)

77.80.8 Measure as DynaPDFMeasureMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional measure dictionary.
Notes: (Read and Write property)

77.80.9 Name as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional name.
Notes: (Read and Write property)

77.80.10 PtData as DynaPDFPointDataDictionaryMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Point Data dictionary.
Notes: (Read and Write property)

77.81 class DynaPDFXFAStreamMBS

77.81.1 class DynaPDFXFAStreamMBS

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a XFA stream.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.81.4 Methods

77.81.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.81.6 Properties

77.81.7 Buffer as String

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: XML Stream.
Notes: (Read and Write property)

77.81.8 Index as Integer

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The stream index.
Notes: (Read and Write property)

77.81.9 Name as String

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Stream name.
Notes: (Read and Write property)

77.81.10 Size as Integer

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Buffer size in bytes.
Notes: (Read and Write property)

Chapter 78

EmailParser

78.1 class MimeAddressListMBS

78.1.1 class MimeAddressListMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a list of addresses.

78.1.2 Methods

78.1.3 Addresses as MimeAddressMBS()

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of addresses.
See also:

- 78.1.4 Addresses(index as Integer) as MimeAddressMBS 15495

78.1.4 Addresses(index as Integer) as MimeAddressMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries address by index.
Notes: Index is zero based.
See also:

- 78.1.3 Addresses as MimeAddressMBS() 15495

78.1.5 Constructor(TextToParse as String)

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses a text with addresses.

78.1.6 Properties

78.1.7 AddressesVariant as Variant

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of addresses.
Notes:

This property is only to see array in debugger.
(Read only property)

78.1.8 Count as Integer

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of addresses in this list.
Notes: (Read only property)

78.1.9 StringValue as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The address list as a string.
Notes: (Read only property)

78.2 class MimeAddressMBS

78.2.1 class MimeAddressMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an address which can be an email or a group.

78.2.2 Methods

78.2.3 Constructor(TextToParse as String)

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses an address from text.
Example:

```
dim m as new MimeAddressMBS("=?utf-8?Q?M=C3=BCller?= <zivi@mac.com>")
MsgBox m.Mailbox.LabelDecoded
```

78.2.4 Properties

78.2.5 Group as MimeGroupMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The group for this address.
Notes: (Read only property)

78.2.6 isGroup as Boolean

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this address is a group.
Notes: (Read only property)

78.2.7 Mailbox as MimeMailboxMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mailbox for this address.
Notes: (Read only property)

78.2.8 StringValue as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The address as a string.
Notes: (Read only property)

78.3 class MimeAttachmentMBS

78.3.1 class MimeAttachmentMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an attachment.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.3.2 Blog Entries

- MBS Xojo Plugins, version 22.6pr3

78.3.3 Blog Entries

- MBS Xojo Plugins, version 22.6pr3

78.3.4 Methods

78.3.5 Constructor

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.3.6 Properties

78.3.7 Body as MimeBodyMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The reference to the body of this attachment.
Notes:

The StringValue of the body has the attachment's encoded data.
(Read only property)

78.3.8 ContentDescription as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content description.
Notes: (Read only property)

78.3.9 ContentDisposition as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content disposition.
Notes:

e.g. inline; filename="agb.pdf"
(Read only property)

78.3.10 contentId as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content ID for inline graphics.
Notes:

e.g. c1441531740.48804.1@MacbookPro-Christian.local
(Read only property)

78.3.11 ContentTransferEncoding as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content transfer encoding.
Notes:

e.g. base64
(Read only property)

78.3.12 ContentType as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content type.
Notes:

e.g. text/plain, charset=utf-8 or application/pdf; name="agb.pdf"
(Read only property)

78.3.13 Data as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The data for this attachment.
Notes:

Decoded for your convenience.
(Read only property)

78.3.14 Filename as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The filename for this attachment.
Notes:

The class pulls this from various header fields and decodes it if necessary.
The file name may contain invalid characters for your platform.
Like double colons for OS X or backslash for Windows.
(Read only property)

78.3.15 Header as MimeHeaderMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The header details for this attachment.
Notes: (Read only property)

78.3.16 MimeType as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mime type of the attachment.
Notes:

e.g. "application/pdf" for a PDF file
See also MimeTypeToFileExtensionMBS function.
(Read only property)

78.3.17 MimeVersion as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mime version of the attachment.
Notes:

e.g. "1.0"
(Read only property)

78.4 class MimeBodyMBS

78.4.1 class MimeBodyMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a body of a mime entity.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.4.2 Methods

78.4.3 Constructor

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.4.4 Parts as MimeEntityMBS()

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of parts.
Notes: Mime Entities are organized often in a tree. The email is an entity and has sub entities for html, plain text and attachments.
See also:

- 78.4.5 Parts(index as Integer) as MimeEntityMBS 15503

78.4.5 Parts(index as Integer) as MimeEntityMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries part by index.
Notes: Index is zero based.
See also:

- 78.4.4 Parts as MimeEntityMBS() 15503

78.4.6 Properties

78.4.7 epilogue as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The epilogue of the body.
Notes: (Read only property)

78.4.8 PartsVariant as Variant

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of parts.
Notes:

Mime Entities are organized often in a tree. The email is an entity and has sub entities for html, plain text and attachments.
This property is only to see array in debugger.
(Read only property)

78.4.9 preamble as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The preamble of the body.
Notes:

This is sometimes a message like: "This is a MIME encoded message."
(Read only property)

78.4.10 StringValue as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The string value of the body.
Notes: (Read only property)

78.5 class MimeEmailMBS

78.5.1 class MimeEmailMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an email.
Notes: Subclass of the MimeEntityMBS class.

78.5.6 Methods

78.5.7 Attachments as MimeAttachmentMBS()

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of attachments.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

MsgBox str(m.Attachments.Ubound+1)+" attachments and "+str(m.Inlines.Ubound+1)+" inlines"

for each a as MimeAttachmentMBS in m.Inlines
MsgBox "Inline: " + a.Filename
next
```

See also:

- 78.5.8 Attachments(index as Integer) as MimeAttachmentMBS 15506

78.5.8 Attachments(index as Integer) as MimeAttachmentMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries attachment by index.
Notes: Index is zero based.
See also:

- 78.5.7 Attachments as MimeAttachmentMBS() 15506

78.5.9 Constructor(Content as MemoryBlock)

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses an email from a memoryblock.
See also:

- 78.5.10 Constructor(Content as string) 15507
- 78.5.11 Constructor(File as FolderItem) 15507

78.5.10 Constructor(Content as string)

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses an email from a string.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim b as BinaryStream = BinaryStream.Open(f)
dim s as string = b.Read(b.Length)
dim m as new MimeEmailMBS(s)

MsgBox m.Subject
```

Notes:

This is to parse raw email text, e.g. eml file.
To parse emlx, open the text file and read the first line. The first line contains the length of the email. Then read the following number of bytes of that value and that is the eml content. Followed by a plist structure.
See also:

- 78.5.9 Constructor(Content as MemoryBlock) 15507
- 78.5.11 Constructor(File as FolderItem) 15507

78.5.11 Constructor(File as FolderItem)

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses an email from a text file.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

MsgBox m.Subject
```

Notes: You can pass here an EML file.
See also:

- 78.5.9 Constructor(Content as MemoryBlock) 15507
- 78.5.10 Constructor(Content as string) 15507

78.5.12 DecodeInline(Text as String) as String

MBS CURL Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a text with inline encoded text.
Example:

```
dim e,s as string

s = "=?UTF-8?B?WW91ciBBY2NvdW50IFNuYXBzaG90?="
e = MimeEmailMBS.DecodeInline(s)

MsgBox e
```

Notes:

This is the function our plugin uses to decode names and subject in the email.
You don't need to use it unless you got subject/name encoded from somewhere else.

78.5.13 HTMLToPlainText(HTMLText as String) as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts html to plain text.
Notes:

This is the function our plugin uses internally to fill PlainText field for html only email.
Removes HTML tags, decodes entities and adds returns where appropriated.

78.5.14 Inlines as MimeAttachmentMBS()

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of inline items.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

MsgBox str(m.Attachments.Ubound+1)+" attachments and "+str(m.Inlines.Ubound+1)+" inlines"

for each a as MimeAttachmentMBS in m.Inlines
MsgBox "Inline: " + a.Filename
next
```

Notes: Inline items are like attachments, but shown in the email and normally referenced by ID from the html text.
See also:

- 78.5.15 Inlines(index as Integer) as MimeAttachmentMBS 15509

78.5.15 Inlines(index as Integer) as MimeAttachmentMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries inline by index.
Notes: Index is zero based.
See also:

- 78.5.14 Inlines as MimeAttachmentMBS() 15508

78.5.16 Properties

78.5.17 AttachmentsVariant as Variant

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of attachments.
Notes:

This property is only to see array in debugger.
(Read only property)

78.5.18 Date as Date

MBS CURL Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries the sent date of the email.
Notes:

Can be undefined and return nil.
The plugin looks in email headers for a Date: header and parses the date.
The returned date is normalized to current time zone.
(Read only property)

78.5.19 HTMLText as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The html text of the email.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

MsgBox m.HTMLText
```

Notes:

Decoded for your convenience.
You may want to use ReplaceLineEndings to make sure the line endings are what you need them to be.
(Read only property)

78.5.20 InlinesVariant as Variant

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of inline items.
Notes:

Inline items are like attachments, but shown in the email and normally referenced by ID from the html text.
This property is only to see array in debugger.
(Read only property)

78.5.21 PlainText as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The plain text of the email.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)
```

MsgBox m.PlainText

Notes:

Decoded for your convenience.
You may want to use ReplaceLineEndings to make sure the line endings are what you need them to be.
(Read only property)

78.5.22 RaiseUnknownFormatExceptions as Boolean

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to raise an exception when plugin finds encoding in email which is not in list of known encodings.
Notes:

Used to find unknown encodings.
(Read and Write property)

78.5.23 ReceivedDate as Date

MBS CURL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries the receive date of the email.
Notes:

Can be undefined and return nil.
The plugin looks in email headers for a Receive: header and parses the date.
The returned date is normalized to current time zone.
(Read only property)

78.5.24 Source as String

MBS CURL Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The source code of the email parsed.
Notes: (Read only property)

78.5.25 Subject as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The decoded subject line of the email.
Notes: (Read only property)

78.6 class MimeEntityMBS

78.6.1 class MimeEntityMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a mime entity.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.6.2 Methods

78.6.3 Constructor

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.6.4 Properties

78.6.5 Body as MimeBodyMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The raw content of this entity.
Notes:

This may be quoted printable, base64 or otherwise encoded.
(Read only property)

78.6.6 BodyDecoded as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The decoded body content.
Notes: (Read only property)

78.6.7 Header as MimeHeaderMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The header for this entity.
Notes:

The email itself has header, but each entity in the mime tree has also headers.
(Read only property)

78.7 class MimeFieldMBS

78.7.1 class MimeFieldMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a header field.

78.7.2 Methods

78.7.3 Constructor(TextToParse as String)

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses the text in a field.

78.7.4 Properties

78.7.5 Name as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The field name.
Notes: (Read only property)

78.7.6 Value as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The field value.
Notes: (Read only property)

78.8 class MimeGroupMBS

78.8.1 class MimeGroupMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an email group.
Example:

```
dim g as new MimeGroupMBS("clients:=?utf-8?Q?Josef=20M=C3=BCller?= <josef@test.test>, =?utf-8?Q?Peter=20M=C3=BCller?= <peter@test.test>;")

MsgBox g.NameDecoded+" "+str(g.Count)
MsgBox g.Mailboxes(0).LabelDecoded
MsgBox g.Mailboxes(1).LabelDecoded
```

78.8.2 Methods

78.8.3 Constructor(TextToParse as String)

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses a group.
Example:

```
dim g as new MimeGroupMBS("clients:=?utf-8?Q?Josef=20M=C3=BCller?= <josef@test.test>, =?utf-8?Q?Peter=20M=C3=BCller?= <peter@test.test>;")

MsgBox g.NameDecoded+" "+str(g.Count)
```

78.8.4 Mailboxes as MimeMailboxMBS()

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of mailboxes in this group.
See also:

- 78.8.5 Mailboxes(index as Integer) as MimeMailboxMBS 15516

78.8.5 Mailboxes(index as Integer) as MimeMailboxMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries a mailbox in the group.
Example:

```
dim g as new MimeGroupMBS("clients:=?utf-8?Q?Josef=20M=C3=BCller?= <josef@test.test>, =?utf-8?Q?Peter=20M=C3=BCller?= <peter@test.test>;")

MsgBox g.Mailboxes(0).LabelDecoded
MsgBox g.Mailboxes(1).LabelDecoded
```

See also:

- 78.8.4 Mailboxes as MimeMailboxMBS() 15516

78.8.6 Properties

78.8.7 Count as Integer

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of emails in this group.
Notes: (Read only property)

78.8.8 MailboxesVariant as Variant

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of mailboxes in this group.
Notes:

This property is only to see array in debugger.
(Read only property)

78.8.9 Name as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the group.
Notes:

The name property has the raw name while the NameDecoded property has the decoded version for displaying to user.
(Read only property)

78.8.10 NameDecoded as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the group.
Notes:

The name property has the raw name while the NameDecoded property has the decoded version for displaying to user.
(Read only property)

78.8.11 StringValue as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The group as a string.
Notes: (Read only property)

78.9 class MimeHeaderMBS

78.9.1 class MimeHeaderMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for headers of a mime entity.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.9.2 Methods

78.9.3 Constructor

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.9.4 FieldByName(name as string) as MimeFieldMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds a field by name.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
MsgBox h.FieldByName("Date").Value
```

Notes: e.g. "Sat, 5 Sep 2015 23:52:13 +0200" for the date field.

78.9.5 Fields as MimeFieldMBS()

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of fields in this header.
See also:

- 78.9.6 Fields(index as Integer) as MimeFieldMBS 15520

78.9.6 Fields(index as Integer) as MimeFieldMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries field by index.
Notes: Index is zero based.
See also:

- 78.9.5 Fields as MimeFieldMBS() 15519

78.9.7 hasField(name as string) as boolean

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether a certain field exists.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
if h.hasField("Date") then
MsgBox "Has date: "+h.FieldByName("Date").Value
end if
```

78.9.8 Properties

78.9.9 bcc as MimeAddressListMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The BCC address list.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
// get BCC
dim l as MimeAddressListMBS = h.BCC
// get addresses
dim a() as MimeAddressMBS = l.Addresses
// get first one
dim b as MimeAddressMBS = a(0)
// assume it's an email and get it
```

```
dim x as MimeMailboxMBS = b.Mailbox
// and show to user with name and email
MsgBox x.LabelDecoded+" "+x.Email
```

Notes: (Read only property)

78.9.10 cc as MimeAddressListMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CC address list.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
// get CC
dim l as MimeAddressListMBS = h.CC
// get addresses
dim a() as MimeAddressMBS = l.Addresses
// get first one
dim b as MimeAddressMBS = a(0)
// assume it's an email and get it
dim x as MimeMailboxMBS = b.Mailbox
// and show to user with name and email
MsgBox x.LabelDecoded+" "+x.Email
```

Notes: (Read only property)

78.9.11 ContentDescription as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content description.
Notes: (Read only property)

78.9.12 ContentDisposition as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content disposition.
Notes: (Read only property)

78.9.13 contentId as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content ID for an inline graphic.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
MsgBox h.contentId
```

Notes: (Read only property)

78.9.14 ContentTransferEncoding as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content transfer encoding.
Notes:

e.g. base64
(Read only property)

78.9.15 ContentTransferEncodingMechanism as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content transfer encoding mechanism.
Notes:

base64
(Read only property)

78.9.16 ContentType as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content type.
Notes:

e.g. "multipart/alternative; boundary="Apple-Mail=_F9738882-571C-4469-8349-574115CE32F4""
(Read only property)

78.9.17 from as MimeMailboxListMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The from address list.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
// get from
dim l as MimeMailboxListMBS = h.from
// get mailboxes
dim a() as MimeMailboxMBS = l.Mailboxes
// get first one
dim b as MimeMailboxMBS = a(0)
// and show to user with name and email
MsgBox b.LabelDecoded+" "+b.Email
```

Notes: (Read only property)

78.9.18 messageid as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The message ID for this email.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
MsgBox h.messageid
```

Notes:

e.g. "<599782DA-09A0-4461-8474-2BE9F3197CAF@macsw.de>"
(Read only property)

78.9.19 MimeVersion as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mime version.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
MsgBox h.MimeVersion
```

Notes:

e.g. "1.0"
(Read only property)

78.9.20 replyto as MimeAddressListMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The replyto address field.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
// get replyto
dim l as MimeAddressListMBS = h.replyto
// get addresses
dim a() as MimeAddressMBS = l.Addresses
// get first one
dim b as MimeAddressMBS = a(0)
// assume it's an email and get it
dim x as MimeMailboxMBS = b.Mailbox
// and show to user with name and email
MsgBox x.LabelDecoded+" "+x.Email
```

Notes: (Read only property)

78.9.21 sender as MimeMailboxMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The sender of the email.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
dim b as MimeMailboxMBS = h.sender
MsgBox b.Email
```

Notes:

May be different from "from" field.
(Read only property)

78.9.22 subject as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The original subject line.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
MsgBox h.subject
```

Notes:

The subject property has the original subject line while the plugin provides the decoded subjected line in the subjectDecoded for display to user.
(Read only property)

78.9.23 subjectDecoded as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The decoded subject line.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
MsgBox h.subjectDecoded
```

Notes:

The subject property has the original subject line while the plugin provides the decoded subjected line in the subjectDecoded for display to user.
(Read only property)

78.9.24 too as MimeAddressListMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The TO receivers.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
// get to
dim l as MimeAddressListMBS = h.too
// get addresses
dim a() as MimeAddressMBS = l.Addresses
// get first one
dim b as MimeAddressMBS = a(0)
// assume it's an email and get it
dim x as MimeMailboxMBS = b.Mailbox
// and show to user with name and email
MsgBox x.LabelDecoded+" "+x.Email
```

Notes:

Named "too" in this class as "to" is a reserved word.
(Read only property)

78.10 class MimeMailboxListMBS

78.10.1 class MimeMailboxListMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a list of mailboxes.

78.10.2 Methods

78.10.3 Constructor(TextToParse as String)

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses a list of mailboxes.
Example:

```
dim m as new MimeMailboxListMBS("=?utf-8?Q?M=C3=BCller?= <zivi@mac.com>")
MsgBox str(m.Count)
```

78.10.4 Mailboxes as MimeMailboxMBS()

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of mailboxes.
See also:

- 78.10.5 Mailboxes(index as Integer) as MimeMailboxMBS 15528

78.10.5 Mailboxes(index as Integer) as MimeMailboxMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries mailbox by index.
Notes: Index is zero based.
See also:

- 78.10.4 Mailboxes as MimeMailboxMBS() 15528

78.10.6 Properties

78.10.7 Count as Integer

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of mailboxes in list.
Example:

```
dim m as new MimeMailboxListMBS("=?utf-8?Q?M=C3=BCller?= <zivi@mac.com>")
MsgBox str(m.Count)
```

Notes: (Read only property)

78.10.8 MailboxesVariant as Variant

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of mailboxes.
Notes:

This property is only to see array in debugger.
(Read only property)

78.10.9 StringValue as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content of this list as a string.
Notes: (Read only property)

78.11 class MimeMailboxMBS

78.11.1 class MimeMailboxMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an email address.
Example:

```
dim m as new MimeMailboxMBS("=?utf-8?Q?M=C3=BCller?= <zivi@mac.com>")
MsgBox m.LabelDecoded+" "+m.Email
```

78.11.2 Methods

78.11.3 Constructor(TextToParse as String)

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses an email address.
Example:

```
dim m as new MimeMailboxMBS("=?utf-8?Q?M=C3=BCller?= <zivi@mac.com>")
MsgBox m.LabelDecoded+" "+m.Email
```

78.11.4 Properties

78.11.5 Domain as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The domain name of the email address.
Notes: (Read only property)

78.11.6 Email as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The email address.
Notes:

Mailbox and Domain together.

(Read only property)

78.11.7 Label as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The label for this email address.
Notes:

Label is the raw value and LabelDecoded is the decoded value.
So please use LabelDecoded for display.
(Read only property)

78.11.8 LabelDecoded as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The label for this email address.
Notes:

Label is the raw value and LabelDecoded is the decoded value.
So please use LabelDecoded for display.
(Read only property)

78.11.9 Mailbox as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the email mailbox.
Notes: (Read only property)

78.11.10 Sourceroute as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The source route parameter.
Notes: (Read only property)

78.11.11 StringValue as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The email address as a string.
Notes: (Read only property)

Chapter 79

Encryption and Hash

79.1 class AESMBS

79.1.1 class AESMBS

MBS Encryption Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for AES encryption.
Example:

```
dim a as AESMBS
dim key as MemoryBlock
dim data as MemoryBlock

key=NewMemoryBlock(20)
key.CString(0)="Hello World!1234" // 16 byte key for 128bit

a=new AESMBS

if a.SetKey(key, 128) then

data=NewMemoryBlock(20)
data.StringValue(0,16)="Hello World!"
MsgBox "Before: "+data.StringValue(0,16)
a.Encrypt(data)
MsgBox "After encryption: "+data.StringValue(0,16)
a.Decrypt(data)
MsgBox "After decryption: "+data.StringValue(0,16)
else
MsgBox "Failed"
end if
```

Deprecated: This item is deprecated and should no longer be used. You can use CipherMBS instead.
Notes:

For newer projects we recommend switching to CipherMBS class.

This class has low level functions like Encrypt. It also has mid level functions like EncryptCFB/CBC. For your convenience, we also have high level functions like EncryptString.

79.1.6 Methods

79.1.7 Decrypt(idata as memoryblock, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decryptes the first 16 bytes in the input memoryblock at the given offset and stores the result in the output memoryblock at the given offset.
Notes:

If odata is nil, idata is used for output.
This is ECB mode.

79.1.8 DecryptCBC(idata as memoryblock, LengthBytes as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decryptes the 16 byte data blocks within LengthBytes bytes in the data.
Notes:

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.

79.1.9 DecryptCFB1(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decryptes the data in CFB1 mode.
Notes:

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.

oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.
See also:

- 79.1.10 DecryptCFB1(idata as string, IVector as memoryblock=nil) as string 15536

79.1.10 DecryptCFB1(idata as string, IVector as memoryblock=nil) as string

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decryptes the data in CFB1 mode.
Example:

```
dim a as new AESMBS

if a.SetKey("Hello World") then
dim input as string = "Hello World"
dim encrypted as string = a.EncryptCFB1(input)

if a.SetKey("Hello World") then
dim decrypted as string = a.DecryptCFB1(encrypted)

decrypted = DefineEncoding(decrypted, Encodings.ASCII)

if decrypted = input then
MsgBox "OK"
end if
end if
end if
```

Notes: If IVector is nil, a vector filled with zeros is used.
See also:

- 79.1.9 DecryptCFB1(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0) 15535

79.1.11 DecryptCFB128(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decryptes the data in CFB128 mode.
Notes:

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.

Older plugin version had problems that they didn't use key at all. So if you want to read old data encrypted with them, you need simply to decrypt without setting key.
See also:

- 79.1.12 DecryptCFB128(idata as string, IVector as memoryblock=nil) as string 15537

79.1.12 DecryptCFB128(idata as string, IVector as memoryblock=nil) as string

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decryptes the data in CFB128 mode.
Example:

```
dim a as new AESMBS

if a.SetKey("Hello World") then
dim input as string = "Hello World"
dim encrypted as string = a.EncryptCFB128(input)

if a.SetKey("Hello World") then
dim decrypted as string = a.DecryptCFB128(encrypted)

decrypted = DefineEncoding(decrypted, Encodings.ASCII)

if decrypted = input then
MsgBox "OK"
end if
end if
end if
```

Notes:

If IVector is nil, a vector filled with zeros is used.

Older plugin version had problems that they didn't use key at all. So if you want to read old data encrypted with them, you need simply to decrypt without setting key.
See also:

- 79.1.11 DecryptCFB128(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0) 15536

79.1.13 DecryptCFB8(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decryptes the data in CFB8 mode.
Notes:

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.
See also:

- 79.1.14 DecryptCFB8(idata as string, IVector as memoryblock=nil) as string 15538

79.1.14 DecryptCFB8(idata as string, IVector as memoryblock=nil) as string

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decryptes the data in CFB8 mode.
Example:

```
dim a as new AESMBS

if a.SetKey("Hello World") then
dim input as string = "Hello World"
dim encrypted as string = a.EncryptCFB8(input)

if a.SetKey("Hello World") then
dim decrypted as string = a.DecryptCFB8(encrypted)

decrypted = DefineEncoding(decrypted, Encodings.ASCII)

if decrypted = input then
MsgBox "OK"
end if
end if
end if
```

Notes: If IVector is nil, a vector filled with zeros is used.
See also:

- 79.1.13 DecryptCFB8(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0) 15538

79.1.15 DecryptECB(idata as memoryblock, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decryptes the 16 byte data block in the data.
Notes: If odata is nil, idata is used for output.

79.1.16 Encrypt(idata as memoryblock, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encryptes the first 16 bytes in the input memoryblock at the given offset and stores the result in the output memoryblock at the given offset.
Notes:

If odata is nil, idata is used for output.
This is ECB mode.

79.1.17 EncryptCBC(idata as memoryblock, LengthBytes as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encryptes the 16 byte data blocks within LengthBytes bytes in the data.
Notes:

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.

79.1.18 EncryptCFB1(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encryptes the data in CFB1 mode.
Notes:

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.
See also:

- 79.1.19 EncryptCFB1(idata as string, IVector as memoryblock=nil) as string 15540

79.1.19 EncryptCFB1(idata as string, IVector as memoryblock=nil) as string

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encryptes the data in CFB1 mode.
Example:

```
dim a as new AESMBS

if a.SetKey("Hello World") then
dim input as string = "Hello World"
dim encrypted as string = a.EncryptCFB1(input)

if a.SetKey("Hello World") then
dim decrypted as string = a.DecryptCFB1(encrypted)

decrypted = DefineEncoding(decrypted, Encodings.ASCII)

if decrypted = input then
MsgBox "OK"
end if
end if
end if
```

Notes:

If IVector is nil, a vector filled with zeros is used.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.
See also:

- 79.1.18 EncryptCFB1(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0) 15540

79.1.20 EncryptCFB128(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encryptes the data in CFB128 mode.
Notes:

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.
See also:

- 79.1.21 EncryptCFB128(idata as string, IVector as memoryblock=nil) as string 15541

79.1.21 EncryptCFB128(idata as string, IVector as memoryblock=nil) as string

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encryptes the data in CFB128 mode.
Example:

```
dim a as new AESMBS

if a.SetKey("Hello World") then
dim input as string = "Hello World"
dim encrypted as string = a.EncryptCFB128(input)

if a.SetKey("Hello World") then
dim decrypted as string = a.DecryptCFB128(encrypted)

decrypted = DefineEncoding(decrypted, Encodings.ASCII)

if decrypted = input then
```

```
MsgBox "OK"
end if
end if
end if
```

Notes:

If IVector is nil, a vector filled with zeros is used.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.
See also:

- 79.1.20 EncryptCFB128(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0) 15541

79.1.22 EncryptCFB8(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encryptes the data in CFB8 mode.
Notes:

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.
See also:

- 79.1.23 EncryptCFB8(idata as string, IVector as memoryblock=nil) as string 15542

79.1.23 EncryptCFB8(idata as string, IVector as memoryblock=nil) as string

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encryptes the data in CFB8 mode.
Example:

```
dim a as new AESMBS
```

```
if a.SetKey("Hello World") then
dim input as string = "Hello World"
dim encrypted as string = a.EncryptCFB8(input)

if a.SetKey("Hello World") then
dim decrypted as string = a.DecryptCFB8(encrypted)

decrypted = DefineEncoding(decrypted, Encodings.ASCII)

if decrypted = input then
MsgBox "OK"
end if
end if
end if
```

Notes:

If IVector is nil, a vector filled with zeros is used.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.
See also:

- 79.1.22 EncryptCFB8(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0) 15542

79.1.24 EncryptECB(idata as memoryblock, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encryptes the 16 byte data block in the data.
Notes: If odata is nil, idata is used for output.

79.1.25 EncryptOFB(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encryptes the data in OFB mode.
Notes:

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.

79.1.26 SetKey(key as memoryblock, nBits as Integer) as boolean

MBS Encryption Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the key.
Notes:

possible values for the bitcount:

128	key is 16 bytes long
192	key is 24 bytes long
256	key is 32 bytes long

Plugin version 13.4 and newer pads this memoryblock with 00 bytes if string is shorter.
See also:

- 79.1.27 SetKey(key as string) as boolean 15544

79.1.27 SetKey(key as string) as boolean

MBS Encryption Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the key.
Example:

```
dim x,u,s as string
dim iv as MemoryBlock

s="Hello World"

// encrypt
s=ConvertEncoding(s,encodings.UTF8)

dim a as new AESMBS
```

```
call a.SetKey("1234567890123456")

iv=NewMemoryBlock(16)
x=a.EncryptCFB128(s,iv)

MsgBox x

// decrypt

iv=NewMemoryBlock(16)
u=a.DecryptCFB128(x,iv)

u=DefineEncoding(u,encodings.UTF8)

MsgBox u
```

Notes:

Please use 16, 24 or 32 byte long key strings.
Plugin version 13.4 and newer pads this string with 00 bytes if string is shorter.
See also:

- 79.1.26 SetKey(key as memoryblock, nBits as Integer) as boolean 15544

79.2 class Argon2MBS

79.2.1 class Argon2MBS

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class to calculate hashes using Argon2.
Example:

```
dim a as new Argon2MBS

a.OutputLength = 24
a.Password = "password"
a.Salt = "somesalt"
a.cost = 2
a.MemoryCost = 65536 // 64 Megabytes
a.Lanes = 4
a.Threads = 4

dim hash as string = a.Calc(a.kTypeI)
dim t as string = EncodeHex(hash)

if t = "45d7ac72e76f242b20b77b9bf9bf9d5915894e669a24e6c6" then
// ok
else
Break // failed
end if
```

Notes:

You can use this class to calculate password hashes.
Due to the cost associated to calculate it, the hash is difficult to brute force.

79.2.6 Methods

79.2.7 Calc(type as Integer = 0) as String

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Function that performs memory-hard hashing with certain degree of parallelism.
Example:

```
dim a as new Argon2MBS

a.OutputLength = 24
a.Password = "password"
a.Salt = "somesalt"
a.cost = 2
a.MemoryCost = 65536 // 64 Megabytes
a.Lanes = 4
a.Threads = 4

dim hash as string = a.Calc(a.kTypeI)
dim t as string = EncodeHex(hash)

if t = "45d7ac72e76f242b20b77b9bf9bf9d5915894e669a24e6c6" then
// ok
else
Break // failed
end if
```

Notes:

Returns hash on success or empty string in case of error.
Lasterror is set.

79.2.8 Constructor

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.

79.2.9 Destructor

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Destructor.

79.2.10 Verify(Hash as String, type as Integer = 0) as boolean

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Verifies a password hash.
Example:

```
dim a as new Argon2MBS

a.OutputLength = 24
a.Password = "password"
a.Salt = "somesalt"
a.cost = 2
a.MemoryCost = 65536
a.Lanes = 4
a.Threads = 4

dim h as string = DecodeHex("45d7ac72e76f242b20b77b9bf9bf9d5915894e669a24e6c6")
if a.Verify(h, a.kTypeI) then
// ok
break
else
// failed
break
end if
```

Notes:

Returns true on success.
Lasterror is set.

79.2.11 Properties

79.2.12 AssociatedData as String

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The associated data.
Notes: (Read and Write property)

79.2.13 Cost as Integer

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of passes.
Notes: (Read and Write property)

79.2.14 Flags as Integer

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flags.
Notes: (Read and Write property)

79.2.15 Lanes as Integer

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of lanes.
Notes: (Read and Write property)

79.2.16 LastError as Integer

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes: (Read and Write property)

79.2.17 LastErrorMessage as String

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error message.
Notes: (Read and Write property)

79.2.18 MemoryCost as Integer

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Amount of memory requested (KB).
Notes:

In kilo bytes. Default is 1 MB.
(Read and Write property)

79.2.19 OutputLength as Integer

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The length of the hash.
Notes: (Read and Write property)

79.2.20 Password as String

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The password to hash.
Notes: (Read and Write property)

79.2.21 Salt as String

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The salt.
Notes: (Read and Write property)

79.2.22 Secret as String

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The secret.
Notes: (Read and Write property)

79.2.23 Threads as Integer

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum number of threads.
Notes: (Read and Write property)

79.2.24 Version as Integer

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version of argon to use.
Notes:

Can be kVersion10 or kVersion13.
(Read and Write property)

79.2.25 Constants

79.2.26 kErrorAdPtrMismatch = -21

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: AssociatedData ptr is nil, but size >0.

79.2.27 kErrorAdTooLong = -9

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: AssociatedData too long.

79.2.28 kErrorAdTooShort = -8

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: AssociatedData too short.

79.2.29 kErrorAllocateMemoryCbkNull = -24

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Allocation failed.

79.2.30 kErrorDecodingFail = -32

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Decoding failed.

79.2.31 kErrorDecodingLengthFail = -34

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Decoding length failed.

79.2.32 kErrorEncodingFail = -31

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Encoding failed.

79.2.33 kErrorFreeMemoryCbkNull = -23

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Free memory failed.

79.2.34 kErrorIncorrectParameter = -25

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Incorrect parameter.

79.2.35 kErrorIncorrectType = -26

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Incorrect type.

79.2.36 kErrorLanesTooFew = -16

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Lanes too small.

79.2.37 kErrorLanesTooMany = -17

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Too many lanes.

79.2.38 kErrorMemoryAllocationError = -22

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Memory allocation failed.

79.2.39 kErrorMemoryTooLittle = -14

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Memory too little.

79.2.40 kErrorMemoryTooMuch = -15

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Memory too big.

79.2.41 kErrorMissingArgs = -30

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Missing Argument.

79.2.42 kErrorOk = 0

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Okay.

79.2.43 kErrorOutPtrMismatch = -27

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Output ptr is nil, but size >0.

79.2.44 kErrorOutputPtrNull = -1

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Output Ptr is nil.

79.2.45 kErrorOutputTooLong = -3

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Output too long.

79.2.46 kErrorOutputTooShort = -2

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Output too short.

79.2.47 kErrorPwdPtrMismatch = -18

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Password ptr is nil, but size >0.

79.2.48 kErrorPwdTooLong = -5

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Password too long.

79.2.49 kErrorPwdTooShort = -4

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Password too short.

79.2.50 kErrorSaltPtrMismatch = -19

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Salt ptr is nil, but size >0.

79.2.51 kErrorSaltTooLong = -7

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Salt too long.

79.2.52 kErrorSaltTooShort = -6

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Salt too short.

79.2.53 kErrorSecretPtrMismatch = -20

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Secret ptr is nil, but size >0.

79.2.54 kErrorSecretTooLong = -11

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Secret too long.

79.2.55 kErrorSecretTooShort = -10

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Secret too short.

79.2.56 kErrorThreadFail = -33

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Threads failed.

79.2.57 kErrorThreadsTooFew = -28

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Threads too small.

79.2.58 kErrorThreadsTooMany = -29

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Too many threads.

79.2.59 kErrorTimeTooLarge = -13

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Time too large.

79.2.60 kErrorTimeTooSmall = -12

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Time too small.

79.2.61 kErrorVerifyMismatch = -35

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Verify Mismatch

79.2.62 kFlagClearMemory = 4

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the possible flags.
Notes: Clear memory.

79.2.63 kFlagClearPassword = 1

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the possible flags.
Notes: Clear password.

79.2.64 kFlagClearSecret = 2

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the possible flags.
Notes: Clear Secret after hashing.

79.2.65 kFlagDefault= 4

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the possible flags.
Notes: Default flags.

79.2.66 kMaxAssociatedDataLength = & hFFFFFFFF

MBS Encryption Plugin, Plugin Version: 16.4.

Function: Maximum associated data length in bytes.

79.2.67 kMaxLanes = & hFFFFFF

MBS Encryption Plugin, Plugin Version: 16.4.

Function: Maximum number of lanes (degree of parallelism)

79.2.68 kMaxMemory = & hFFFFFFFF

MBS Encryption Plugin, Plugin Version: 16.4.

Function: Maximum memory size.

79.2.69 kMaxOutputLength = & hFFFFFFFF

MBS Encryption Plugin, Plugin Version: 16.4.

Function: Maximum digest size in bytes.

79.2.70 kMaxPasswordLength = & hFFFFFFFF

MBS Encryption Plugin, Plugin Version: 16.4.

Function: Maximum password length in bytes.

79.2.71 kMaxSaltLength = & hFFFFFFFF

MBS Encryption Plugin, Plugin Version: 16.4.

Function: Maximum salt length in bytes

79.2.72 kMaxSecretLength = & hFFFFFFFF

MBS Encryption Plugin, Plugin Version: 16.4.

Function: Maximum key length in bytes.

79.2.73 kMaxThreads = & hFFFFFF

MBS Encryption Plugin, Plugin Version: 16.4.

Function: Maximum number of threads.

79.2.74 kMaxTime = & hFFFFFFFF

MBS Encryption Plugin, Plugin Version: 16.4.

Function: Maximum number of passes.

79.2.75 kMinAssociatedDataLength = 0

MBS Encryption Plugin, Plugin Version: 16.4.

Function: Minimum associated data length in bytes.

79.2.76 kMinLanes = 1

MBS Encryption Plugin, Plugin Version: 16.4.

Function: Minimum number of lanes (degree of parallelism)

79.2.77 kMinMemory = 8

MBS Encryption Plugin, Plugin Version: 16.4.

Function: Minimum and maximum number of memory blocks (each of BLOCK_SIZE bytes)

79.2.78 kMinOutputLength = 4

MBS Encryption Plugin, Plugin Version: 16.4.

Function: Minimum digest size in bytes.

79.2.79 kMinPasswordLength = 0

MBS Encryption Plugin, Plugin Version: 16.4.

Function: Minimum password length in bytes.

79.2.80 kMinSaltLength = 0

MBS Encryption Plugin, Plugin Version: 16.4.

Function: Minimum salt length in bytes

79.2.81 kMinSecretLength = 0

MBS Encryption Plugin, Plugin Version: 16.4.

Function: Minimum key length in bytes.

79.2.82 kMinThreads = 1

MBS Encryption Plugin, Plugin Version: 16.4.

Function: Minimum number of threads.

79.2.83 kMinTime = 1

MBS Encryption Plugin, Plugin Version: 16.4.

Function: Minimum number of passes.

79.2.84 kSyncPoints = 4

MBS Encryption Plugin, Plugin Version: 16.4.

Function: Number of synchronization points between lanes per pass.

79.2.85 kTypeD = 0

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the types.
Notes: Argon2d is faster and uses data-depending memory access, which makes it highly resistant against GPU cracking attacks and suitable for applications with no threats from side-channel timing attacks (eg. cryptocurrencies).

79.2.86 kTypeI = 1

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the types.
Notes: Argon2i instead uses data-independent memory access, which is preferred for password hashing and password-based key derivation, but it is slower as it makes more passes over the memory to protect from tradeoff attacks.

79.2.87 kVersion10 = & h10

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the version numbers.
Notes: Version 1.0

79.2.88 kVersion13 = & h13

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the version numbers.
Notes: Version 1.3

79.3 module BCryptMBS

79.3.1 module BCryptMBS

MBS Encryption Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The module for bcrypt encryption.

79.3.6 Methods

79.3.7 BCrypt(Pass as String, Salt as String) as String

MBS Encryption Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Hashes password with bcrypt based on given salt.
Example:

```
Dim salt As String = BCryptMBS.BCryptSalt(11)
Dim hash As String = BCryptMBS.BCrypt("password", salt)
```

Break

79.3.8 BCryptSalt(Rounds as Integer) as String

MBS Encryption Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates salt based on given numbers of rounds.

79.3.9 Verify(Pass as String, Hash as String) as Boolean

MBS Encryption Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Verifies a hash to be right.
Example:

```
// check various levels
For i As Integer = 4 To 15
Dim salt As String = BCryptMBS.BCryptSalt(i)
Dim hash As String = BCryptMBS.BCrypt("password", salt)

Dim b As Boolean = BCryptMBS.Verify("password", hash)

System.DebugLog Str(i)+" "+Str(b)+" "+hash

If Not b Then Break
Next
```

Notes:

Check is case sensitive!
Returns true on success.

79.4 class BlowfishMBS

79.4.1 class BlowfishMBS

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for blowfish encryption.
Example:

```
dim s as string

// create string with known encoding so we can later define encoding after decryption!
s=ConvertEncoding("Hello",Encodings.UTF8)

// encrypt with a key
s=BlowfishMBS.Encrypt("MyKey",s)

// encoding is not set for the result string, still RB can guess the encoding when displaying
MsgBox s

// decrypt with same key
s=BlowfishMBS.Decrypt("MyKey",s)

// encoding is not set for the result string, so change it back:
s=DefineEncoding(s,encodings.UTF8)

// show original Hello
MsgBox s
```

Notes: For newer projects we recommend switching to CipherMBS class.

79.4.4 Methods

79.4.5 Decrypt(iodata as memoryblock)

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Lowest level function to decrypt data in a memoryblock.
Notes:

input and output are in host endian format.
memoryblock must be not nil and has a size of 8 bytes.
See also:

- 79.4.6 Decrypt(key as string, data as string) as string 15566

79.4.6 Decrypt(key as string, data as string) as string

MBS Encryption Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrypts the data using blowfish and the given key.
Example:

```
dim s as string

// create string with known encoding so we can later define encoding after decryption!
s=ConvertEncoding("Hello",Encodings.UTF8)

// encrypt with a key
s=BlowfishMBS.Encrypt("MyKey",s)

// encoding is not set for the result string, still RB can guess the encoding when displaying
MsgBox s

// decrypt with same key
s=BlowfishMBS.Decrypt("MyKey",s)
```

```
// encoding is not set for the result string, so change it back:
s=DefineEncoding(s,encodings.UTF8)

// show original Hello
MsgBox s
```

Notes:

This is our convenience function to encode a string quickly. Using CFB64 mode and an all zero initializing vector.
If the lenb(result) is zero and lenb(data) is not zero, the memory was not sufficient.

Key can have any length, but 32 bytes (256 bits) are quite good.
The length of data is limited by the amount of available memory.
See also:

- 79.4.5 Decrypt(iodata as memoryblock) 15566

79.4.7 DecryptCBC(data as string, byref temp as memoryblock) as string

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The continuing Blowfish decryption function.
Example:

```
dim b as new BlowfishMBS

dim s as string = "UTYbBEZSMLfa0kvNDSla/n/GSUcA/545gp7LcA330Nw="
dim x as string = DecodeBase64(s)

dim m as MemoryBlock = nil
b = new BlowfishMBS
b.SetKey "geheim"
dim t1 as string = b.DecryptCBC(x,m)

// shows SD10003$ $ 2012.03.16 11:00
MsgBox t1
```

Notes:

data: data to be decrypted
temp: memoryblock for temporary data. Is created when called with nil value. Pass on following calls to allow data to be shared between function calls.

Returns "" on invalid input.
You can create yourself an eight byte memoryblock with a starting value you want.
Be aware that this CBC method works with data in 8 byte blocks, so you need to unpad data if needed.
See also:

- 79.4.8 DecryptCBC(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock) 15568

79.4.8 DecryptCBC(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock)

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The continuing Blowfish decryption function.
Notes:

idata: memoryblock for input data, 8 bytes in size and not nil.
odata: memoryblock for output data, 8 bytes in size and not nil.
offset: offset in input and output memoryblocks
length: length of data in memoryblock in bytes. Multiply of 8.
ivec: memoryblock for temporary data, 8 bytes in size and not nil.

ivec should be a memoryblock of 8 bytes size which you create before calling the function for the first time. On the next time you passed the same block, so the function can store data inside this memoryblock between function calls.
Be aware that this CBC method works with data in 8 byte blocks, so you need to unpad data if needed.
See also:

- 79.4.7 DecryptCBC(data as string, byref temp as memoryblock) as string 15567

79.4.9 DecryptCFB64(data as string, byref temp as memoryblock) as string

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The continuing Blowfish decryption function.
Notes:

data: data to be decrypted
temp: memoryblock for temporary data. Is created when called with nil value. Pass on following calls to allow data to be shared between function calls.

Returns "" on invalid input.
You can create yourself a twelve byte memoryblock with a starting value you want. First four bytes are position and next 8 bytes the current vector.
See also:

- 79.4.10 DecryptCFB64(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock, byref num as Integer) 15569

79.4.10 DecryptCFB64(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock, byref num as Integer)

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The continuing Blowfish decryption function.
Example:

```
dim b as BlowfishMBS

b=new BlowfishMBS
b.SetKey "Key"

dim temp as MemoryBlock
dim s as string

s=b.EncryptCFB64("Hello World",temp)

MsgBox s

temp=nil // reset
s=b.DecryptCFB64(s,temp)

MsgBox s
```

Notes:

idata: memoryblock for input data, 8 bytes in size and not nil.
odata: memoryblock for output data, 8 bytes in size and not nil.
offset: offset in input and output memoryblocks
length: length of data in memoryblock in bytes. Multiply of 8.
ivec: memoryblock for temporary data, 8 bytes in size and not nil.
num: current position in ivec. Pass 0 as start value and pass the value you get back to the next function call.

Returns "" on invalid input.
You can create yourself a twelve byte memoryblock with a starting value you want. First four bytes are position and next 8 bytes the current vector.
See also:

- 79.4.9 DecryptCFB64(data as string, byref temp as memoryblock) as string 15568

79.4.11 DecryptECB(data as string) as string

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The basic Blowfish decryption function.
Notes:

This function decrypts only 8 bytes. For more, please use other functions!

data: data to be decrypted
Returns "" on invalid input.
See also:

- 79.4.12 DecryptECB(idata as memoryblock, odata as memoryblock, offset as Integer) 15570

79.4.12 DecryptECB(idata as memoryblock, odata as memoryblock, offset as Integer)

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The basic Blowfish encryption function.
Notes:

idata: memoryblock for input data, 8 bytes in size and not nil.
odata: memoryblock for output data, 8 bytes in size and not nil.
offset: offset in input and output memoryblocks
See also:

- 79.4.11 DecryptECB(data as string) as string 15570

79.4.13 DecryptOFB64(data as string, byref temp as memoryblock) as string

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The continuing Blowfish decryption function.
Notes:

data: data to be decrypted
temp: memoryblock for temporary data. Is created when called with nil value. Pass on following calls to allow data to be shared between function calls.

Returns "" on invalid input.
You can create yourself a twelve byte memoryblock with a starting value you want. First four bytes are position and next 8 bytes the current vector.

This is output feedback mode. Encryption is the same a decryption.
See also:

- 79.4.14 DecryptOFB64(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock, byref num as Integer) 15571

79.4.14 DecryptOFB64(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock, byref num as Integer)

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The continuing Blowfish decryption function.
Example:

```
dim b as BlowfishMBS

b=new BlowfishMBS
b.SetKey "Key"

dim temp as MemoryBlock
dim s as string

s=b.EncryptCFB64("Hello World",temp)

MsgBox s

temp=nil // reset
s=b.DecryptCFB64(s,temp)

MsgBox s
```

Notes:

idata: memoryblock for input data, 8 bytes in size and not nil.
odata: memoryblock for output data, 8 bytes in size and not nil.
offset: offset in input and output memoryblocks
length: length of data in memoryblock in bytes. Multiply of 8.
ivec: memoryblock for temporary data, 8 bytes in size and not nil.
num: current position in ivec. Pass 0 as start value and pass the value you get back to the next function call.

Returns "" on invalid input.
You can create yourself a twelve byte memoryblock with a starting value you want. First four bytes are position and next 8 bytes the current vector.

This is output feedback mode. Encryption is the same a decryption.
See also:

- 79.4.13 DecryptOFB64(data as string, byref temp as memoryblock) as string 15570

79.4.15 Encrypt(iodata as memoryblock)

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Lowest level function to encrypt data in a memoryblock.
Notes:

input and output are in host endian format.
memoryblock must be not nil and has a size of 8 bytes.
See also:

- 79.4.16 Encrypt(key as string, data as string) as string 15572

79.4.16 Encrypt(key as string, data as string) as string

MBS Encryption Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts the data using blowfish and the given key.
Example:

```
dim v as string = "Hello World, this is just a test string"

// encrypt CFB64 with BlowfishMBS
dim b as new BlowfishMBS
dim Key as string = "1234567812345678"
dim r as string = b.Encrypt( key , v )
dim h as string = EncodeHex( r )

// and decrypt with OpenSSL
dim c as CipherMBS = CipherMBS.bf_cfb64

c.DecryptInit key
dim d as string = c.ProcessString(r)
d = d + c.FinalizeAsString

Break // see in debugger, v and d have same content
```

Notes:

This is our convenience function to decode a string quickly. Using CFB64 mode and an all zero initializing vector.

If the lenb(result) is zero and lenb(data) is not zero, the memory was not sufficient.

Key can have any length, but 32 bytes (256 bits) are quite good.
The length of data is limited by the amount of available memory.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.
See also:

- 79.4.15 Encrypt(iodata as memoryblock) 15572

79.4.17 EncryptCBC(data as string, byref temp as memoryblock) as string

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The continuing Blowfish encryption function.
Example:

```
dim m as memoryblock // temporary storage of current state
dim b as blowfishmbs
dim s as string

b=new blowfishmbs
b.SetKey "EinKey1234567890" // some key

s=b.EncryptCBC("Hallo",m)
s=s+b.EncryptCBC(" ",m)
s=s+b.EncryptCBC("Leute",m)
s=s+b.EncryptCBC("!",m)
```

Notes:

data: data to be encrypted
temp: memoryblock for temporary data. Is created when called with nil value. Pass on following calls to allow data to be shared between function calls.

Returns "" on invalid input.
You can create yourself an eight byte memoryblock with a starting value you want.
Be aware that this CBC method works with data in 8 byte blocks, so you need to pad data if needed.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.

See also:

- 79.4.18 EncryptCBC(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock) 15574

79.4.18 EncryptCBC(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock)

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The continuing Blowfish encryption function.
Notes:

idata: memoryblock for input data, at least 8 bytes in size and not nil.
odata: memoryblock for output data, at least 8 bytes in size and not nil.
offset: offset in input and output memoryblocks
length: length of data in memoryblock in bytes. Multiply of 8.
ivec: memoryblock for temporary data, 8 bytes in size and not nil.

ivec should be a memoryblock of 8 bytes size which you create before calling the function for the first time. On the next time you passed the same block, so the function can store data inside this memoryblock between function calls.
Be aware that this CBC method works with data in 8 byte blocks, so you need to pad data if needed.
See also:

- 79.4.17 EncryptCBC(data as string, byref temp as memoryblock) as string 15573

79.4.19 EncryptCFB64(data as string, byref temp as memoryblock) as string

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The continuing Blowfish encryption function.
Notes:

data: data to be encrypted
temp: memoryblock for temporary data. Is created when called with nil value. Pass on following calls to allow data to be shared between function calls.

Returns "" on invalid input.
You can create yourself a twelve byte memoryblock with a starting value you want. First four bytes are position and next 8 bytes the current vector.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.
See also:

- 79.4.20 EncryptCFB64(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock, byref num as Integer) 15575

79.4.20 EncryptCFB64(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock, byref num as Integer)

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The continuing Blowfish encryption function.
Notes:

idata: memoryblock for input data, 8 bytes in size and not nil.
odata: memoryblock for output data, 8 bytes in size and not nil.
offset: offset in input and output memoryblocks
length: length of data in memoryblock in bytes. Multiply of 8.
ivec: memoryblock for temporary data, 8 bytes in size and not nil.
num: current position in ivec. Pass 0 as start value and pass the value you get back to the next function call.

Returns "" on invalid input.
You can create yourself a twelve byte memoryblock with a starting value you want. First four bytes are position and next 8 bytes the current vector.
See also:

- 79.4.19 EncryptCFB64(data as string, byref temp as memoryblock) as string 15574

79.4.21 EncryptECB(data as string) as string

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The basic Blowfish encryption function.
Notes:

This function encrypts only 8 bytes. For more, please use other functions!

data: data to be encrypted
Returns "" on invalid input.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.
See also:

- 79.4.22 EncryptECB(idata as memoryblock, odata as memoryblock, offset as Integer) 15576

79.4.22 EncryptECB(idata as memoryblock, odata as memoryblock, offset as Integer)

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The basic Blowfish decryption function.
Notes:

This function encrypts only 8 bytes. For more, please use other functions!

idata: memoryblock for input data, 8 bytes in size and not nil.
odata: memoryblock for output data, 8 bytes in size and not nil.
offset: offset in input and output memoryblocks
length: length of data in memoryblock in bytes. Multiply of 8.
See also:

- 79.4.21 EncryptECB(data as string) as string 15575

79.4.23 EncryptOFB64(data as string, byref temp as memoryblock) as string

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The continuing Blowfish encryption function.
Notes:

data: data to be encrypted
temp: memoryblock for temporary data. Is created when called with nil value. Pass on following calls to allow data to be shared between function calls.

Returns "" on invalid input.
You can create yourself a twelve byte memoryblock with a starting value you want. First four bytes are position and next 8 bytes the current vector.

This is output feedback mode. Encryption is the same a decryption.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.

- 79.4.24 EncryptOFB64(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock, byref num as Integer) 15577

79.4.24 EncryptOFB64(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock, byref num as Integer)

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The continuing Blowfish encryption function.
Notes:

idata: memoryblock for input data, 8 bytes in size and not nil.
odata: memoryblock for output data, 8 bytes in size and not nil.
offset: offset in input and output memoryblocks
length: length of data in memoryblock in bytes. Multiply of 8.
ivec: memoryblock for temporary data, 8 bytes in size and not nil.
num: current position in ivec. Pass 0 as start value and pass the value you get back to the next function call.

Returns "" on invalid input.
You can create yourself a twelve byte memoryblock with a starting value you want. First four bytes are position and next 8 bytes the current vector.

This is output feedback mode. Encryption is the same a decryption.
See also:

- 79.4.23 EncryptOFB64(data as string, byref temp as memoryblock) as string 15576

79.4.25 SetKey(key as string)

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the key to be used.
Notes: The longer the key, the better. Suggested is at least 16 bytes.

79.5 Globals

79.5.1 CalculateCRC16MemoryMBS(data as MemoryBlock, Start as UInt16 = 65535, Polynomial as UInt16 = & h1021, FinalXOR as UInt16 = 0, ReflectInput as boolean = false, ReflectOutput as boolean = false) as UInt16

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16bit Checksum about the provided memoryblock.
Notes:

Start is the start value.
Polynominal is what is xored to the value in each round.
FinalXOR is an XOR we do on the end.
If ReflectInput is true, we swap bits in input.
If ReflectOutput is true, we swap bits in output (before final XOR).

Returns CRC value.

79.5.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.4pr5

79.5.3 CalculateCRC16StringMBS(data as string, Start as UInt16 = 65535, Polynomial as UInt16 = & h1021, FinalXOR as UInt16 = 0, ReflectInput as boolean = false, ReflectOutput as boolean = false) as UInt16

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16bit Checksum about the provided string.
Example:

```
dim c as string = DecodeHex("3E4400026201000D")
dim p as UInt16 = CalculateCRC16StringMBS(c, & hFFFF, & h1021, 0, true, true)
MsgBox hex(p)+" = 3E5A"
```

Notes:

Start is the start value.
Polynominal is what is xored to the value in each round.
FinalXOR is an XOR we do on the end.
If ReflectInput is true, we swap bits in input.

If ReflectOutput is true, we swap bits in output (before final XOR).

Returns CRC value.

79.5.4 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.4pr5

79.5.5 Adler32MemoryMBS(adler as UInt32, buf as memoryblock, offset as Integer, length as Integer) as UInt32

MBS Compression Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The adler32 hash function from the zlib library.
Notes:

Offset and length must be correct for your memoryblock or you will crash your application!

Update a running Adler-32 checksum with the bytes and return the updated checksum. If buf is nil, this function returns the required initial value for the checksum.
An Adler-32 checksum is almost as reliable as a CRC32 but can be computed much faster.

79.5.6 Adler32StringMBS(adler as UInt32, buf as string) as UInt32

MBS Compression Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The adler32 hash function from the zlib library.
Example:

```
dim b as binarystream // some stream
dim adler as Integer
dim data as string
dim originalAdler as Integer = 12345

adler=Adler32MemoryMBS(0,nil,0,0)

data=b.read(10000)
while data<>""
adler=Adler32StringMBS(adler, data)
data=b.read(10000)
wend

if adler <>originalAdler then msgbox "Error in checksum!"
```

Notes:

Update a running Adler-32 checksum with the bytes and return the updated checksum. If buf is nil, this function returns the required initial value for the checksum.
An Adler-32 checksum is almost as reliable as a CRC32 but can be computed much faster.

79.5.7 CRC32MemoryMBS(crc as UInt32, buf as memoryblock, offset as Integer, length as Integer) as UInt32

MBS Compression Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The crc32 hash function from the zlib library.
Notes:

Offset and length must be correct for your memoryblock or you will crash your application!

Update a running crc with the bytes and return the updated crc. If buf is nil, this function returns the required initial value for the crc. Pre- and post-conditioning (one's complement) is performed within this function so it shouldn't be done by the application.

79.5.8 CRC32StringMBS(crc as UInt32, buf as string) as UInt32

MBS Compression Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The crc32 hash function from the zlib library.
Example:

```
dim originalCrc as Integer// original CRC
dim crc as Integer // new crc
dim data as string
dim b as binarystream

crc=0

data=b.read(10000)
while data<>""
crc=CRC32StringMBS(crc, data)
data=b.read(10000)
wend

if crc <>originalCrc then msgbox "Error in checksum!"
```

Notes: Update a running crc with the bytes and return the updated crc. If buf is nil, this function returns the required initial value for the crc. Pre- and post-conditioning (one's complement) is performed within this function so it shouldn't be done by the application.

79.5.9 CRC16MBS(data as string) as UInt16

MBS Util Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16bit Checksum about the provided string.
Example:

```
dim n1 as Integer = CRC16MBS("Hello World")
dim n2 as Integer = CRC16MBS("Hallo World")

MsgBox str(n1)+" "+str(n2)
```

Notes: Please note: Different CRC functions give different result. This is one specific 16 bit CRC function which may be or not be the one you need for your application.

79.5.10 Blog Entries

- MBS Real Studio Plugins, version 12.1pr1

79.5.11 CRC_32InMemContMBS(address as Ptr, length as Integer, prevCRC as UInt32) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 32bit Checksum about the provided memory address.

79.5.12 CRC_32InMemMBS(address as Ptr, length as Integer) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 32bit Checksum about the provided memory address.

79.5.13 CRC_32OfStrContMBS(s as String, prevCRC as UInt32) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 32bit Checksum about the provided block of data.

79.5.14 CRC_32OfStrMBS(s as String) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 32bit Checksum about the provided string.
Example:

```
dim n as Integer
n=CRC_32OfStrMBS("Hello World")
' n is now 1243066710
```

Notes:

See the text "About-CRC" for details about this Checksum things.
This function is also available as part of the memoryblock class.

About Checksums:

These functions calculate CRCs over a range of bytes in a MemoryBlock or in a String.

There are three versions of CRC calculation: One for 16 Bit, one for 32 Bit and one for 16 to 64 Bit wide checksums. If you are free to choose, I suggest that you use the 32 Bit version because of its accuracy and performance.

Some background on using checksums/CRCs:
Checksums, such as CRCs, are used to quickly verify that a chunk of data has not been modified somehow without your control. To use it, you'd calculate the checksum (CRC) of your data, then store that checksum value (which only needs 2 to 8 bytes of storage) somewhere. Later, when retrieving your data, you calculate its checksum again and compare its value with the previously stored value. If it does not match, the data got somehow corrupted. If it matches, that it is quite likely, although not 100% sure, that the data is still in its original state.

There are 3 different CRC algorithms available:

- CRC_CCITT...() as Integer

- CRC_32...() as Integer
- CRC_Dillon...(bitWidth as Integer, ...) as String

The CCITT version calculates a rather classic 16 bit CRC. Unless you need that CRC for legacy data, I recomment not to use it, but rather use the CRC_32 version.

CRC_32 is the most common used algorithm for 32 bit wide CRCs. Be aware there are theoretically many other ways to calculate a CRC 32, however.

The Dillon algorithm is a smart routine to calculate CRCs in any width between 16 and 64 bit. This one is only useful if you find that a 32 bit CRC is not sufficient for your needs. If you can live with a plain 32 bit CRC, you should prefer the CRC_32 routines, because they are faster than the Dillon code.

The result, since it can be up to 64 bit in size, cannot be returned in an Integer (they can only hold 32 bit). Instead, the result is returned as a 8 byte value, stored in a 8 byte long string. To get the value of that string, you can copy the string into a MemoryBlock, and then access the parts opf the 8 byte long value there. The demo project shows how to accomplish this.

The CRC code was developed and published by Matthew Dillon. Here's his web page with more information about it:
http://www.backplane.com/diablo/crc64.html

79.5.15 CRC_CCITTInMemContMBS(address as Ptr, length as Integer, prevCRC as UInt32) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16bit Checksum about the provided memory address.

79.5.16 CRC_CCITTInMemMBS(address as Ptr, length as Integer) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16bit Checksum about the provided memory address.

79.5.17 CRC_CCITTOfStrContMBS(s as String, prevCRC as UInt32) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16bit Checksum about the provided string.

79.5.18 CRC_CCITTOfStrMBS(s as String) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16bit Checksum about the provided string.
Example:

```
dim n as Integer
n=CRC_CCITTOfStrMBS("Hello World")
' n is now 39210
```

79.5.19 CRC_DillonInMemMBS(bitWidth as Integer, address as Ptr, length as Integer) as String

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16 to 64bit Checksum about the provided memory address.

79.5.20 CRC_DillonOfStrMBS(bitWidth as Integer, s as String) as String

MBS Util Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16 to 64bit Checksum about the provided string.
Example:

```
dim s as string
s=CRC_DillonOfStrMBS(64,"Hello World")
' s has now the 64bit checksum inside an 8 byte binary string
```

79.5.21 CRC_DillonUInt64InMemMBS(bitWidth as Integer, address as Ptr, length as Integer) as UInt64

MBS Util Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16 to 64bit Checksum about the provided memory address.

79.5.22 CRC_DillonUInt64OfStrMBS(bitWidth as Integer, s as String) as UInt64

MBS Util Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16 to 64bit Checksum about the provided string.

79.5.23 GetHash32MBS(s as string) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates some special Hash value.
Example:

```
MsgBox hex(GetHash32MBS("xskin-b013fafit_01-PELVIS-BODY.skn")) // should show 67A53A4D
```

Notes:

The 255 char limit was in the original C function, but should be resolved for this plugin, so string longer than 255 chars will work.
The original C code looks like this:

```
static UInt32 GetHash32 (StringPtr inString)
{

 int                                    length = inString [ 0 ] ;
  UInt32        hash = length + 1;
  int                                   i;

for (i = 1; i <= length; i++)
{
hash = ___rlwinm(hash, 3, 0, 31) ^tolower(inString [ i ] );
}

return hash;
}
```

Originally this was added for Cherie Benoit, which describes it like this:

"GetHash32MBS" duplicates the hashing function of Westlake
Interactive's "Namer" application which creates LFN-style short
filenames for use with the Macintosh version of "The Sims."

79.5.24 ModBusCalculateRTUMessageCRCMBS(data as string) as UInt16

MBS Util Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the RTU Message CRC string.
Example:

```
dim m as new MemoryBlock(9)

m.UInt8Value(0) = 1 // start of package
m.UInt8Value(1) = 6 // command code
m.UInt8Value(2) = 0 // some data...
m.UInt8Value(3) = 0
m.UInt8Value(4) = 0
m.UInt8Value(5) = & h21
m.UInt8Value(6) = 0 // checksum comes here
m.UInt8Value(7) = 0
m.UInt8Value(8) = 4 // end of package

dim Data as string = m.StringValue(0,6)
dim CheckSum as Int16 = ModBusCalculateRTUMessageCRCMBS(data)

m.UInt16Value(6) = checksum

MsgBox EncodeHex(m)
```

79.5.25 MD5MBS(data as memoryblock) as string

MBS Encryption Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the MD5 message digest value of a memoryblock as 16 byte string.

79.5.26 MD5StringMBS(data as memoryblock) as string

MBS Encryption Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the MD5 message digest value of a string as hex string.

79.5.27 ValidateUUIDMBS(UUID as string, mode as Integer = 0, requiredVersion as Integer = 0) as string

MBS Util Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Validates the given UUID/GUID.
Example:

```
// wrong
dim w1 as string = ValidateUUIDMBS("hello") // wrong due to missing {
dim w2 as string = ValidateUUIDMBS("550e8400-z29b-11d4-a716-446655440000",1) // wrong with, with z
dim w3 as string = ValidateUUIDMBS(" { 550e8400-e29b-11d40716-446655440000 } ") // wrong with missing minus
dim w4 as string = ValidateUUIDMBS(" { 550e8400-e29b-11d4-a716-44665544000 } ") // wrong with being too short
dim w5 as string = ValidateUUIDMBS(" { 550e8400-e29b-11d4-a716-446655440000 } dssdsd",1) // wrong as it has extra chars on end
dim w6 as string = ValidateUUIDMBS("550e8400-e29b-11d4-a716-446655440000",1,4) // wrong as not version 4
dim w7 as string = ValidateUUIDMBS("6a12a4d5-e9e6-4568-ffcc-34c70b24a668",1,4) // wrong as not version 4

// okay
dim o1 as string = ValidateUUIDMBS("550e8400-e29b-11d4-a716-446655440000",1)
dim o2 as string = ValidateUUIDMBS(" { 550e8400-e29b-11d4-a716-446655440000 } ")
dim o3 as string = ValidateUUIDMBS("6a12a4d5-e9e6-4568-afcc-34c70b24a668", 1)
dim o4 as string = ValidateUUIDMBS("6a12a4d5-e9e6-4568-afcc-34c70b24a668", 3)
dim o5 as string = ValidateUUIDMBS(" { 550e8400-e29b-11d4-a716-446655440000 } ", 2)
dim o6 as string = ValidateUUIDMBS(" { 550e8400e29b11d4a716446655440000 } ", 2)
dim o7 as string = ValidateUUIDMBS(" { 550e8400-e29b-11d40716-446655440000 } ",4) // wrong with missing minus, but fixed
dim o8 as string = ValidateUUIDMBS("550e8400-e29b-11d40716-446655440000 } ",4) // wrong with missing { , but fixed
dim o9 as string = ValidateUUIDMBS("6a12a4d5-e9e6-4568-afcc-34c70b24a668", 4, 4) // is version 4
dim o10 as string = ValidateUUIDMBS("6a12a4d5-e9e6-1568-afcc-34c70b24a668", 4, 1) // is version 1
dim o11 as string = ValidateUUIDMBS(" { 550e8400-e29b-11d4-a716-446655440000 } dssdsd",1+4) // wrong as it has extra chars on end, but fixed

break // check in debugger
```

Notes:

If the UUID is valid, you get it back.
If the UUID is invalid, you get an empty string back.

Pass 1 in mode to not require braces around UUID. Pass 2 to ignore minus characters. Pass 3 to combine those two.
You can add 4 to have the GUID fixed a bit like adding braces and minus chars if missing.
The requiredVersion parameter can be 1 to 5 to indicate the required GUID version you want to have.

- MBS Real Studio Plugins, version 12.3pr11

79.5.29 MD5MBS(data as string) as string

MBS Encryption Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the MD5 message digest value of a string.
Example:

```
// Compare RB5 MD5 to the one from MBS

dim a,b as String

a=MD5("Hallo")

b=MD5MBS("Hallo")

msgbox str(StrComp(a,b,0))
```

Notes: Same as the MD5 function in RB5.

79.5.31 MD5StringMBS(data as string) as string

MBS Encryption Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the MD5 message digest value of a string as hex string.
Example:

```
// Compare RB5 MD5 to the one from MBS
```

```
dim a,b as String

a=EncodingToHexMBS(MD5("Franz jagt im komplett verwahrlosten Taxi quer durch Bayern"))
b=MD5StringMBS("Franz jagt im komplett verwahrlosten Taxi quer durch Bayern")

msgbox a+EndOfLine+b+EndOfLine+str(StrComp(a,b,0))
```

- REAL Server Plugin 0.2

79.5.33 CRC_DillonUInt64MBS(extends mem as memoryblock, bitWidth as Integer, offset as Integer, numBytes as Integer) as UInt64

MBS Util Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16 to 64bit Checksum about the provided memory address.
Notes: The 64bit integer version for RB 2006r4 and newer.

79.5.34 CalculateTOTPMBS(Key as String, timeNow as UInt64, timeStart as UInt64, timeStep as UInt64, digitCount as Integer, DecodeBase32 as Boolean = false) as UInt32

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Calculates a Time-based one-time password.
Notes:

Key is the secret to use.
timeNow the current time in seconds, e.g. pass CurrentUnixTimeMBS.
timeStart the start time in seconds, e.g. zero.
timeStep the duration the code is valid in seconds, e.g. 30 seconds.
digitCount: the number of digits to generate, e.g. 6.

Uses SHA-1 as hash algorithm.
Added DecodeBase32 parameter in v22.5 to specify whether the password is base32 encoded and should be decoded.

The result is returned as number and may miss leading zeros, if you just convert it to text.

79.5.36 CurrentUnixTimeMBS as UInt64

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries unix time stamp.
Notes:

Seconds since 1970.
Useful for CalculateTOTPMBS function.

79.5.37 Blog Entries

- MBS Xojo Plugins, version 22.3pr1

79.6 class CCCryptorMBS

79.6.1 class CCCryptorMBS

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Generic interface for symmetric encryption.
Example:

```
// initialize
dim h as new CCCryptorMBS(CCCryptorMBS.kCCEncrypt, CCCryptorMBS.kCCAlgorithmAES128, 0,
"Hello12312345678")

if h.Lasterror<>0 then break

// destination memoryblock

dim m as new MemoryBlock(100)
dim Position as Uint64 = 0
dim BytesLeft as UInt64 = m.Size

// add a few bytes
dim q as UInt64 = 0

h.Update "Hello World!1234", m, BytesLeft, q
```

```
if h.Lasterror<>0 then break

Position = Position + q
BytesLeft = BytesLeft - q

// now finalize:
q = 0

dim dp as ptr = m.AddressPtrMBS(Position)

h.Final dp, BytesLeft, q
if h.Lasterror<>0 then break

Position = Position + q
BytesLeft = BytesLeft - q

// and show result
dim d as string = m.StringValue(0, Position)
MsgBox EncodingToHexMBS(d)
```

Notes:

This interface provides access to a number of symmetric encryption algorithms. Symmetric encryption algorithms come in two "flavors" - block ciphers, and stream ciphers. Block ciphers process data (while both encrypting and decrypting) in discrete chunks of data called blocks; stream ciphers operate on arbitrary sized data.

The object declared in this interface, CCCryptorMBS, provides access to both block ciphers and stream ciphers with the same API; however some options are available for block ciphers that do not apply to stream ciphers.

The general operation of a CCCryptor is: initialize it with raw key data and other optional fields with Constructor(); process input data via one or more calls to Update(), each of which may result in output data being written to caller-supplied memory; and obtain possible remaining output data with Final(). The CCCryptor is disposed of via Destructor(), or it can be reused (with the same key data as provided to Constructor()) by calling Reset().

One option for block ciphers is padding, as defined in PKCS7; when padding is enabled, the total amount of data encrypted does not have to be an even multiple of the block size, and the actual length of plaintext is calculated during decryption.

Another option for block ciphers is Cipher Block Chaining, known as CBC mode. When using CBC mode, an Initialization Vector (IV) is provided along with the key when starting an encrypt or decrypt operation. If CBC mode is selected and no IV is provided, an IV of all zeroes will be used.

CCCryptorMBS also implements block bufferring, so that individual calls to Update() do not have to provide data whose length is aligned to the block size. (If padding is disabled, encrypting with block ciphers does require that the *total* length of data input to Update() call(s) be aligned to the block size.)

A given CCCryptorMBS can only be used by one thread at a time; multiple threads can use safely different CCCryptors at the same time.

This class uses the CommonCrypto interface which is available on Mac OS X 10.5 or newer and also on iOS. So you can use it to get the same results on both operation systems. Also as you simply use Apple provided encryption, you don't need to apply for an export license for this classes here.

79.6.4 Methods

79.6.5 Constructor(operation as Integer, Algorithm as Integer, options as Integer, key as Ptr, keyLength as UInt64, iv as Ptr = nil)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Create a cryptographic context.
Notes:

operation: Defines the basic operation: kCCEncrypt or kCCDecrypt.
Algorithm: Defines the algorithm.
options: A word of flags defining options.
key: Raw key material, length keyLength bytes.

keyLength: Length of key material. Must be appropriate for the selected operation and algorithm. Some algorithms provide for varying key lengths.

iv: Initialization vector, optional. Used by block ciphers when Cipher Block Chaining (CBC) mode is enabled. If present, must be the same length as the selected algorithm's block size. If CBC mode is selected (by the absence of the kCCOptionECBMode bit in the options flags) and no IV is present, a NULL (all zeroes) IV will be used. This parameter is ignored if ECB mode is used or if a stream cipher algorithm is selected.

Possible error is lasterror are kCCParamError and kCCMemoryFailure.
See also:

- 79.6.6 Constructor(operation as Integer, Algorithm as Integer, options as Integer, key as String, iv as Ptr = nil) 15593

79.6.6 Constructor(operation as Integer, Algorithm as Integer, options as Integer, key as String, iv as Ptr = nil)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Create a cryptographic context.
Example:

```
// key length must be 16 bytes for AES128
dim key as string = "1234567890123456"

dim h as new CCCryptorMBS(CCCryptorMBS.kCCEncrypt, CCCryptorMBS.kCCAlgorithmAES128, 0, key)

if h.Lasterror<>0 then
MsgBox "error: "+str(h.Lasterror)
else
MsgBox "OK"
end if
```

Notes:

operation: Defines the basic operation: kCCEncrypt or kCCDecrypt.
Algorithm: Defines the algorithm.
options: A word of flags defining options.
key: Raw key material, length keyLength bytes.

iv: Initialization vector, optional. Used by block ciphers when Cipher Block Chaining (CBC) mode is enabled. If present, must be the same length as the selected algorithm's block size. If CBC mode is selected

keyLength: Length of key material. Must be appropriate for the selected operation and algorithm. Some algorithms provide for varying key lengths.

(by the absence of the kCCOptionECBMode bit in the options flags) and no IV is present, a NULL (all zeroes) IV will be used. This parameter is ignored if ECB mode is used or if a stream cipher algorithm is selected.

Possible error is lasterror are kCCParamError and kCCMemoryFailure.
See also:

- 79.6.5 Constructor(operation as Integer, Algorithm as Integer, options as Integer, key as Ptr, keyLength as UInt64, iv as Ptr = nil) 15592

79.6.7 Crypt(Operation as Integer, Algorithm as Integer, Options as Integer, key as Ptr, KeyLength as UInt64, IV as Ptr, DataIn as Ptr, DataInLength as UInt64, DataOut as Ptr, DataOutAvailable as UInt64, byref DataOutMoved as UInt64) as Integer

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Stateless, one-shot encrypt or decrypt operation.
Example:

```
dim KeyString as string = "Hello12312345678"
dim InputString as string = "Hello World!1234"

dim InputMemory as MemoryBlock = InputString
dim KeyMemory as MemoryBlock = KeyString
dim IV as ptr = nil // default to zeros
dim OutputMemory as new MemoryBlock(100)
dim Size as UInt64 = 0

dim e as Integer = CCCryptorMBS.Crypt(CCCryptorMBS.kCCEncrypt, CCCryptorMBS.kCCAlgorithmAES128, 0, KeyMemory, KeyMemory.size, IV, InputMemory, InputMemory.size, OutputMemory, OutputMemory.size, size)

if e = CCCryptorMBS.kCCSuccess then
dim result as string = OutputMemory.StringValue(0, size)
MsgBox EncodingToHexMBS(result)
else
MsgBox "Error: "+str(e)
end if
```

Notes:

This basically performs a sequence of Constructor, Update, Final and Destructor.

Parameters:

Operation	Defines the basic operation: kCCEncrypt or kCCDecrypt.
Algorithm	Defines the encryption algorithm.
Options	A word of flags defining options. See kCCOption constants.
Key	Raw key material, length keyLength bytes.
keyLength	Length of key material. Must be appropriate for the select algorithm. Some algorithms may provide for varying key lengths.
IV	Initialization vector, optional. Used for Cipher Block Chaining (CBC) mode. If present, must be the same length as the selected algorithm's block size. If CBC mode is selected (by the absence of any mode bits in the options flags) and no IV is present, a nil (all zeroes) IV will be used. This is ignored if ECB mode is used or if a stream cipher algorithm is selected.
dataIn	Data to encrypt or decrypt, length dataInLength bytes.
dataInLength	Length of data to encrypt or decrypt.
dataOut	Result is written here. Allocated by caller. Encryption and decryption can be performed "in-place", with the same buffer used for input and output.
dataOutAvailable	The size of the dataOut buffer in bytes.
dataOutMoved	On successful return, the number of bytes written to dataOut. If kCCBuffer-TooSmall is returned as a result of insufficient buffer space being provided, the required buffer space is returned here.

Possible errors in lasterror:
kCCBufferTooSmall indicates insufficent space in the dataOut buffer. In this case, the dataOutMoved parameter will indicate the size of the buffer needed to complete the operation. The operation can be retried with minimal runtime penalty.
kCCAlignmentError indicates that dataInLength was not properly aligned. This can only be returned for block ciphers, and then only when decrypting or when encrypting with block with padding disabled.

kCCDecodeError	Indicates improperly formatted ciphertext or a "wrong key" error; occurs only during decrypt operations.

See also:

- 79.6.8 Crypt(Operation as Integer, Algorithm as Integer, Options as Integer, key as string, IV as Ptr, DataIn as string, byref DataOut as string) as Integer 15596

79.6.8 Crypt(Operation as Integer, Algorithm as Integer, Options as Integer, key as string, IV as Ptr, DataIn as string, byref DataOut as string) as Integer

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Stateless, one-shot encrypt or decrypt operation.
Example:

```
dim KeyString as string = "Hello12312345678"
dim InputString as string = "Hello World!1234"
dim IV as ptr = nil // default to zeros
dim Output as string = ""

dim e as Integer = CCCryptorMBS.Crypt(CCCryptorMBS.kCCEncrypt, CCCryptorMBS.kCCAlgorithmAES128, 0, KeyString, IV, InputString, Output)

if e = CCCryptorMBS.kCCSuccess then
MsgBox EncodingToHexMBS(Output)
else
MsgBox "Error: "+str(e)
end if
```

Notes:

This basically performs a sequence of Constructor, Update, Final and Destructor. This is the convenience function for Xojo with using strings instead of data pointers.

Parameters:

Operation	Defines the basic operation: kCCEncrypt or kCCDecrypt.
Algorithm	Defines the encryption algorithm.
Options	A word of flags defining options. See kCCOption constants.
Key	Raw Key.
IV	Initialization vector, optional. Used for Cipher Block Chaining (CBC) mode. If present, must be the same length as the selected algorithm's block size. If CBC mode is selected (by the absence of any mode bits in the options flags) and no IV is present, a nil (all zeroes) IV will be used. This is ignored if ECB mode is used or if a stream cipher algorithm is selected.
dataIn	Data to encrypt or decrypt.
dataOut	Result is written here.

Possible errors in lasterror:

kCCBufferTooSmall indicates insufficent space in the dataOut buffer. In this case, the dataOutMoved parameter will indicate the size of the buffer needed to complete the operation. The operation can be retried with minimal runtime penalty.
kCCAlignmentError indicates that dataInLength was not properly aligned. This can only be returned for block ciphers, and then only when decrypting or when encrypting with block with padding disabled.

kCCDecodeError	Indicates improperly formatted ciphertext or a "wrong key" error; occurs only during decrypt operations.

- 79.6.7 Crypt(Operation as Integer, Algorithm as Integer, Options as Integer, key as Ptr, KeyLength as UInt64, IV as Ptr, DataIn as Ptr, DataInLength as UInt64, DataOut as Ptr, DataOutAvailable as UInt64, byref DataOutMoved as UInt64) as Integer 15594

79.6.9 Final(DataOut as Ptr, dataOutAvailable as UInt64, byref dataOutMoved as UInt64)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Finish an encrypt or decrypt operation, and obtain the (possible) final data output.
Notes:

dataOut: Result is written here. Allocated by caller. Pass a memoryblock of right size.
dataOutAvailable: The size of the dataOut buffer in bytes.
dataOutMoved: On successful return, the number of bytes written to dataOut.

Lasterror is set to:
kCCBufferTooSmall indicates insufficent space in the dataOut buffer. The caller can use GetOutputLength() to determine the required output buffer size in this case. The operation can be retried; no state is lost when this is returned.

kCCAlignmentError When decrypting, or when encrypting with a block cipher with padding disabled, kCCAlignmentError will be returned if the total number of bytes provided to Update() is not an integral multiple of the current algorithm's block size.

kCCDecodeError Indicates garbled ciphertext or the wrong key during decryption. This can only be returned while decrypting with padding enabled.

Except when kCCBufferTooSmall is returned, the CCCryptorMBS can no longer be used for subsequent operations unless Reset() is called on it.
It is not necessary to call Final() when performing symmetric encryption or decryption if padding is disabled, or when using a stream cipher.

79.6.10 GetOutputLength(inputLength as UInt64, Final as Boolean = true) as UInt64

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Determine output buffer size required to process a given input size.
Example:

```
dim h as new CCCryptorMBS(CCCryptorMBS.kCCEncrypt, CCCryptorMBS.kCCAlgorithmAES128, 0, "Hello12312345678")

MsgBox str(h.GetOutputLength(1000))
```

Notes:

inputLength: The length of data which will be provided to Update().

Final: If false, the returned value will indicate the output buffer space needed when 'inputLength' bytes are provided to CCCryptorMBS.Update(). When 'final' is true, the returned value will indicate the total combined buffer space needed when 'inputLength' bytes are provided to CCCryptorMBS.Update() and then CCCryptorMBS.Final() is called.

Returns the maximum buffer space need to perform CCCryptorMBS.Update() and optionally CCCryptorMBS.Final().

Some general rules apply that allow clients of this module to know a priori how much output buffer space will be required in a given situation. For stream ciphers, the output size is always equal to the input size, and CCCryptorMBS.Final() never produces any data. For block ciphers, the output size will always be less than or equal to the input size plus the size of one block. For block ciphers, if the input size provided to each call to CCCryptorMBS.Update() is is an integral multiple of the block size, then the output size for each call to CCCryptorMBS.Update() is less than or equal to the input size for that call to CCCryptorMBS.Update(). CCCryptorMBS.Final() only produces output when using a block cipher with padding enabled.

79.6.11 RandomGenerateBytes(data as MemoryBlock) as integer

MBS MacOSX Plugin, Plugin Version: 21.4, Platform: macOS, Targets: All.

Function: Return random bytes in a buffer allocated by the caller.
Example:

```
Dim m As New MemoryBlock(16)

Dim r As Integer = CCCryptorMBS.RandomGenerateBytes(m)

If r = CCCryptorMBS.kCCSuccess Then
MessageBox EncodeHex(m)
```

```
Else
MessageBox "Error " + Str(r)
End If
```

Notes:

The PRNG returns cryptographically strong random bits suitable for use as cryptographic keys, IVs, nonces etc.

Return kCCSuccess on success.

79.6.12 Reset(iv as Ptr = nil)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Reinitializes an existing CCCryptorRef with a (possibly) new initialization vector.
Notes:

The key is unchanged. Not implemented for stream ciphers.

iv: Optional initialization vector; if present, must be the same size as the current algorithm's block size.

The the only possible errors are kCCParamError and kCCUnimplemented.
This can be called on a CCCryptorMBS with data pending (i.e. in a padded mode operation before Final is called); however any pending data will be lost in that case.

79.6.13 Update(dataIn as Ptr, dataInLength as UInt64, dataOut as Ptr, dataOutAvailable as UInt64, byref dataOutMoved as UInt64)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Process (encrypt, decrypt) some data.
Notes:

The result, if any, is written to a caller-provided buffer.

Parameters:

dataOutAvailable The size of the dataOut buffer in bytes.

dataIn	Data to process, length dataInLength bytes.
dataInLength	Length of data to process.
dataOut	Result is written here. Allocated by caller. Encryption and decryption can be performed "in-place", with the same buffer used for input and output.
dataOutMoved	On successful return, the number of bytes written to dataOut.

Possible error codes:
kCCBufferTooSmall indicates insufficent space in the dataOut buffer. The caller can use CCCryptorMBS.GetOutputLength() to determine the required output buffer size in this case. The operation can be retried; no state is lost when this is returned.

This routine can be called multiple times. The caller does not need to align input data lengths to block sizes; input is bufferred as necessary for block ciphers. When performing symmetric encryption with block ciphers, and padding is enabled via kCCOptionPKCS7Padding, the total number of bytes provided by all the calls to this function when encrypting can be arbitrary (i.e., the total number of bytes does not have to be block aligned). However if padding is disabled, or when decrypting, the total number of bytes does have to be aligned to the block size; otherwise CCCryptMBS.Final() will return kCCAlignmentError. A general rule for the size of the output buffer which must be provided by the caller is that for block ciphers, the output length is never larger than the input length plus the block size. For stream ciphers, the output length is always exactly the same as the input length. See the discussion for CCCryptorMBS.GetOutputLength() for more information on this topic. Generally, when all data has been processed, call CCCryptorMBS.Final(). In the following cases, the CCCryptorMBS.Final() is superfluous as it will not yield any data nor return an error:
1. Encrypting or decrypting with a block cipher with padding disabled, when the total amount of data provided to CCCryptorMBS.Update() is an integral multiple of the block size.
2. Encrypting or decrypting with a stream cipher.

79.6.14 Update(dataIn as String, dataOut as Ptr, dataOutAvailable as UInt64, byref dataOutMoved as UInt64)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Process (encrypt, decrypt) some data.
Notes:

The result, if any, is written to a caller-provided buffer.

Parameters:

dataIn	Data to process, length dataInLength bytes.
dataInLength	Length of data to process.
dataOut	Result is written here. Allocated by caller. Encryption and decryption can be performed "in-place", with the same buffer used for input and output.

dataOutAvailable The size of the dataOut buffer in bytes.

dataOutMoved	On successful return, the number of bytes written to dataOut.

Possible error codes:
kCCBufferTooSmall indicates insufficent space in the dataOut buffer. The caller can use CCCryptorMBS.GetOutputLength() to determine the required output buffer size in this case. The operation can be retried; no state is lost when this is returned.

This routine can be called multiple times. The caller does not need to align input data lengths to block sizes; input is bufferred as necessary for block ciphers. When performing symmetric encryption with block ciphers, and padding is enabled via kCCOptionPKCS7Padding, the total number of bytes provided by all the calls to this function when encrypting can be arbitrary (i.e., the total number of bytes does not have to be block aligned). However if padding is disabled, or when decrypting, the total number of bytes does have to be aligned to the block size; otherwise CCCryptMBS.Final() will return kCCAlignmentError. A general rule for the size of the output buffer which must be provided by the caller is that for block ciphers, the output length is never larger than the input length plus the block size. For stream ciphers, the output length is always exactly the same as the input length. See the discussion for CCCryptorMBS.GetOutputLength() for more information on this topic. Generally, when all data has been processed, call CCCryptorMBS.Final(). In the following cases, the CCCryptorMBS.Final() is superfluous as it will not yield any data nor return an error:
1. Encrypting or decrypting with a block cipher with padding disabled, when the total amount of data provided to CCCryptorMBS.Update() is an integral multiple of the block size.
2. Encrypting or decrypting with a stream cipher.

79.6.15 Properties

79.6.16 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The internal handle for the crypter instance.
Notes: (Read and Write property)

79.6.17 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Last error code.
Notes: (Read and Write property)

79.6.18 Constants

79.6.19 kCCAlgorithm3DES = 2

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the encryption algorithms constants.
Notes: Triple-DES, three key, EDE configuration

79.6.20 kCCAlgorithmAES128 = 0

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the encryption algorithms constants.
Notes: Advanced Encryption Standard, 128-bit block. Key length 128 to 256 bits.

79.6.21 kCCAlgorithmBlowfish = 6

MBS MacOSX Plugin, Plugin Version: 21.4.

Function: One of the encryption algorithms constants.
Notes: Blowfish encryption.

79.6.22 kCCAlgorithmCAST = 3

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the encryption algorithms constants.
Notes: CAST

79.6.23 kCCAlgorithmDES = 1

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the encryption algorithms constants.
Notes: Data Encryption Standard

79.6.24 kCCAlgorithmRC2 = 5

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the encryption algorithms constants.
Notes: RC2 stream cipher

79.6.25 kCCAlgorithmRC4 = 4

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the encryption algorithms constants.
Notes: RC4 stream cipher

79.6.26 kCCAlignmentError = -4303

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the error constants.
Notes: Input size was not aligned properly.

79.6.27 kCCBlockSize3DES = 8

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the block size constants.
Notes: Triple DES block size.

79.6.28 kCCBlockSizeAES128 = 16

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the block size constants.
Notes: AES block size (currently, only 128-bit blocks are supported).

79.6.29 kCCBlockSizeBlowfish = 8

MBS MacOSX Plugin, Plugin Version: 21.4.

Function: One of the block size constants.
Notes: Blowfish block size.

79.6.30 kCCBlockSizeCAST = 8

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the block size constants.
Notes: CAST block size.

79.6.31 kCCBlockSizeDES = 8

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the block size constants.
Notes: DES block size.

79.6.32 kCCBlockSizeRC2 = 8

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the block size constants.
Notes: RC2 block size.

79.6.33 kCCBufferTooSmall = -4301

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the error constants.
Notes: Insufficent buffer provided for specified operation.

79.6.34 kCCCallSequenceError = -4309

MBS MacOSX Plugin, Plugin Version: 21.4.

Function: One of the error constants.
Notes: Functions called in wrong order.

79.6.35 kCCDecodeError = -4304

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the error constants.
Notes: Input data did not decode or decrypt properly.

79.6.36 kCCDecrypt = 1

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the operation modes.
Notes: Symmetric decryption.

79.6.37 kCCEncrypt = 0

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the operation modes.
Notes: Symmetric encryption.

79.6.38 kCCInvalidKey = -4311

MBS MacOSX Plugin, Plugin Version: 21.4.

Function: One of the error constants.
Notes: Key is not valid.

79.6.39 kCCKeySize3DES = 24

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the key size constants.
Notes:

Triple DES key size.
DES and TripleDES have fixed key sizes.

79.6.40 kCCKeySizeAES128 = 16

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the key size constants.
Notes:

128 bit AES key size.
AES has three discrete key sizes.

79.6.41 kCCKeySizeAES192 = 24

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the key size constants.
Notes:

192 bit AES key size.
AES has three discrete key sizes.

79.6.42 kCCKeySizeAES256 = 32

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the key size constants.
Notes:

256 bit AES key size.
AES has three discrete key sizes.

79.6.43 kCCKeySizeDES = 8

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the key size constants.
Notes:

DES key size.
DES and TripleDES have fixed key sizes.

79.6.44 kCCKeySizeError = -4310

MBS MacOSX Plugin, Plugin Version: 21.4.

Function: One of the error constants.
Notes: The key size is incorrect.

79.6.45 kCCKeySizeMaxBlowfish = 56

MBS MacOSX Plugin, Plugin Version: 21.4.

Function: One of the key size constants.
Notes: Maximum key size for blowfish. You may better do a hash on the key and use the hash.

79.6.46 kCCKeySizeMaxCAST = 16

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the key size constants.
Notes:

CAST maximum key size.
CAST and RC4 have variable key sizes.

79.6.47 kCCKeySizeMaxRC2 = 128

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the key size constants.
Notes:

RC2 maximum key size.
CAST and RC4 have variable key sizes.

79.6.48 kCCKeySizeMaxRC4 = 512

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the key size constants.
Notes:

RC4 maximum key size.
CAST and RC4 have variable key sizes.

79.6.49 kCCKeySizeMinBlowfish = 8

MBS MacOSX Plugin, Plugin Version: 21.4.

Function: One of the key size constants.
Notes: Minimum key size for blowfish.

79.6.50 kCCKeySizeMinCAST = 5

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the key size constants.
Notes:

CAST minimum key size.
CAST and RC4 have variable key sizes.

79.6.51 kCCKeySizeMinRC2 = 1

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the key size constants.
Notes:

RC2 minimum key size.
CAST and RC4 have variable key sizes.

79.6.52 kCCKeySizeMinRC4 = 1

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the key size constants.
Notes:

RC4 minimum key size.
CAST and RC4 have variable key sizes.

79.6.53 kCCMemoryFailure = -4302

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the error constants.
Notes: Memory allocation failure.

79.6.54 kCCOptionCBCMode = 0

MBS MacOSX Plugin, Plugin Version: 20.1.

Function: One of the option constants.
Notes: Cipher Block Chaining Mode. Default is CBC.

79.6.55 kCCOptionECBMode = 2

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the option constants.
Notes:

Electronic Code Book Mode. Default is CBC.
Stream ciphers currently have no options

79.6.56 kCCOptionPKCS7Padding = 1

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the option constants.
Example:

```
// initialize
dim h as new CCCryptorMBS(CCCryptorMBS.kCCEncrypt, CCCryptorMBS.kCCAlgorithmAES128, CC-
CryptorMBS.kCCOptionPKCS7Padding, "Hello12312345678")

if h.Lasterror<>0 then break

// destination memoryblock

dim m as new MemoryBlock(100)
dim Position as Uint64 = 0
dim BytesLeft as UInt64 = m.Size

// add a few bytes
```

```
dim q as UInt64 = 0

// due to padding, we don't need to pass a multiple of block size
h.Update "Hello World!", m, BytesLeft, q
if h.Lasterror<>0 then break

Position = Position + q
BytesLeft = BytesLeft - q

// now finalize:
q = 0

dim dp as ptr = m.AddressPtrMBS(Position)

h.Final dp, BytesLeft, q
if h.Lasterror<>0 then break

Position = Position + q
BytesLeft = BytesLeft - q

// and show result
dim d as string = m.StringValue(0, Position)
MsgBox EncodingToHexMBS(d)
```

Notes:

Perform PKCS7 padding.
Stream ciphers currently have no options

79.6.57 kCCOverflow = -4306

MBS MacOSX Plugin, Plugin Version: 21.4.

Function: One of the error constants.
Notes: Buffer overflow.

79.6.58 kCCParamError = -4300

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the error constants.
Notes: Illegal parameter value.

79.6.59 kCCRNGFailure = -4307

MBS MacOSX Plugin, Plugin Version: 21.4.

Function: One of the error constants.
Notes: Random number generator failed.

79.6.60 kCCSuccess = 0

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the error constants.
Notes: Operation completed normally.

79.6.61 kCCUnimplemented = -4305

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the error constants.
Notes: Function not implemented for the current algorithm.

79.6.62 kCCUnspecifiedError = -4308

MBS MacOSX Plugin, Plugin Version: 21.4.

Function: One of the error constants.
Notes: An error occurred, but not matching one of the other error codes.

79.7 class CCHMacMBS

79.7.1 class CCHMacMBS

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Keyed Message Authentication Code (HMAC) functions.
Example:

```
dim h as new CCHMacMBS(CCHMacMBS.kCCHmacAlgSHA1, "Hello")
h.Update "Hello World!"
dim m as MemoryBlock = h.Finalize
MsgBox EncodingToHexMBS(m)
```

Notes: This class uses the CommonCrypto interface which is available on Mac OS X 10.5 or newer and also on iOS. So you can use it to get the same results on both operation systems. Also as you simply use Apple provided encryption, you don't need to apply for an export license for this classes here.

79.7.8 Final(macOut as Ptr)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Obtain the final Message Authentication Code.
Notes:

Writes mac to given pointer.
Please pass a memoryblock with 16 bytes for MD5 and 20 bytes for SHA1.

79.7.9 Finalize as Memoryblock

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Obtain the final Message Authentication Code.
Notes: Returns digest. 16 bytes for MD5 and 20 bytes for SHA1.

79.7.10 Hmac(algorithm as Integer, key as Ptr, keyLength as Integer, data as Ptr, dataLength as Integer, MacOut as Ptr)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Stateless, one-shot HMAC function.
Notes:

Make sure your memoryblock for key, data and macout have the right size and are not nil!
keyLength and dataLength are the size of key and data in bytes.

79.7.15 Properties

79.7.16 Algorithm as Integer

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The algorithm passed in the constructor.
Notes:

see kCCHmacAlg* constants.
(Read and Write property)

79.7.17 Constants

79.7.18 kCCHmacAlgMD5 = 1

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the Algorithms selector constants.

79.7.19 kCCHmacAlgSHA1 = 0

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the Algorithms selector constants.

79.7.20 kCCHmacAlgSHA224 = 5

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the Algorithms selector constants.

79.7.21 kCCHmacAlgSHA256 = 2

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the Algorithms selector constants.

79.7.22 kCCHmacAlgSHA384 = 3

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the Algorithms selector constants.

79.7.23 kCCHmacAlgSHA512 = 4

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the Algorithms selector constants.

79.7.24 kCCMD5DigestLength = 16

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: The length of the SHA1 digest in bytes.

79.7.25 kCCSHA1DigestLength = 20

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: The length of the SHA1 digest in bytes.

79.8 class CCMD2MBS

79.8.1 class CCMD2MBS

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The class for MD2 hash.
Example:

```
dim s as new CCMD2MBS
s.Update "The quick brown fox jumps over the lazy dog"

dim m as MemoryBlock = s.Finalize
MsgBox EncodingToHexMBS(m)
```

Notes: This class uses the CommonCrypto interface which is available on Mac OS X 10.4 or newer and also on iOS. So you can use it to get the same results on both operation systems. Also as you simply use Apple provided encryption, you don't need to apply for an export license for this classes here.

79.8.4 Methods

79.8.5 Constructor

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Initializes the hash engine.

79.8.6 Finalize as Memoryblock

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Finalizes hash and returns digest as memoryblock.
Notes: If you want to show the value to a human, please use EncodingToHexMBS function.

79.8.7 MD2(data as Ptr, dataLength as Integer) as Memoryblock

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One-shot hash calculation with MD2.
Notes: Simply pass in a memoryblock with data and the size in bytes and receive digest as memoryblock. If you need to show digest to human, please use EncodingToHexMBS function.
See also:

- 79.8.8 MD2(data as String) as Memoryblock 15618

79.8.8 MD2(data as String) as Memoryblock

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One-shot hash calculation with MD2.
Example:

```
dim m as MemoryBlock = CCMD2MBS.MD2("The quick brown fox jumps over the lazy dog")
MsgBox EncodingToHexMBS(m)
```

Notes: Simply pass in a string and receive digest as memoryblock. If you need to show digest to human, please use EncodingToHexMBS function.
See also:

- 79.8.7 MD2(data as Ptr, dataLength as Integer) as Memoryblock 15618

79.8.9 Update(data as Ptr, dataLength as UInt64)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Processes some data.
Notes: Pass memoryblock and data length in bytes.
See also:

- 79.8.10 Update(data as string) 15618

79.8.10 Update(data as string)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Processes some data.
Notes: Pass string with data.
See also:

- 79.8.9 Update(data as Ptr, dataLength as UInt64) 15618

79.9 class CCMD4MBS

79.9.1 class CCMD4MBS

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The class for MD4 hash.
Example:

```
dim s as new CCMD4MBS
s.Update "The quick brown fox jumps over the lazy dog"

dim m as MemoryBlock = s.Finalize
MsgBox EncodingToHexMBS(m)
```

Notes: This class uses the CommonCrypto interface which is available on Mac OS X 10.4 or newer and also on iOS. So you can use it to get the same results on both operation systems. Also as you simply use Apple provided encryption, you don't need to apply for an export license for this classes here.

79.9.4 Methods

79.9.5 Constructor

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Initializes the hash engine.

79.9.6 Finalize as Memoryblock

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Finalizes hash and returns digest as memoryblock.
Notes: If you want to show the value to a human, please use EncodingToHexMBS function.

79.9.7 MD4(data as Ptr, dataLength as Integer) as Memoryblock

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One-shot hash calculation with MD4.
Notes: Simply pass in a memoryblock with data and the size in bytes and receive digest as memoryblock. If you need to show digest to human, please use EncodingToHexMBS function.
See also:

- 79.9.8 MD4(data as String) as Memoryblock 15621

79.9.8 MD4(data as String) as Memoryblock

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One-shot hash calculation with MD4.
Example:

```
dim m as MemoryBlock = CCMD4MBS.MD4("The quick brown fox jumps over the lazy dog")
MsgBox EncodingToHexMBS(m)
```

Notes: Simply pass in a string and receive digest as memoryblock. If you need to show digest to human, please use EncodingToHexMBS function.
See also:

- 79.9.7 MD4(data as Ptr, dataLength as Integer) as Memoryblock 15621

79.9.9 Update(data as Ptr, dataLength as UInt64)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Processes some data.
Notes: Pass memoryblock and data length in bytes.
See also:

79.16 class CipherMBS

79.16.1 class CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The high level cipher class using OpenSSL encryption.
Example:

```
dim c as CipherMBS = CipherMBS.aes_128_cfb128
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

dim a as new AESMBS

call a.SetKey CKey, 128
dim output2 as string = a.EncryptCFB128(data, CIV)

MsgBox EncodeHex(output1)+EndOfLine+EncodeHex(output2)
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

79.16.6 Methods

79.16.7 aes_128_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
dim key as string = "mysecretkey"
dim encrypted as string = "6IcB9bpDwOjjONErhYQ6c7+Fb4qszsUNZVU0iThLYqOu7chJ7MG2nwSpRBUY0ZC3"

encrypted = DecodeBase64(encrypted)

dim c as CipherMBS = CipherMBS.aes_128_cbc
call c.DecryptInit key

dim s as string = c.ProcessString(Encrypted)+c.FinalizeAsString

Break // "In welcher Stadt steht das Bundeshaus?" is now in s.
```

79.16.8 aes_128_ccm as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.9 aes_128_cfb1 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.10 aes_128_cfb128 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
dim c as CipherMBS = CipherMBS.aes_128_cfb128
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

dim a as new AESMBS
```

```
call a.SetKey CKey, 128
dim output2 as string = a.EncryptCFB128(data, CIV)

MsgBox EncodeHex(output1)+EndOfLine+EncodeHex(output2)
```

79.16.11 aes_128_cfb8 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.12 aes_128_ctr as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.13 aes_128_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.14 aes_128_gcm as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.15 aes_128_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.16 aes_128_xts as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

dim c as CipherMBS = CipherMBS.aes_128_xts
call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

CIV = nil
c = CipherMBS.aes_128_xts
call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Encrypred via "+c.Name+" as hex: "+EncodeHex(output1)+EndOfLine+"Decrypted: "+output2
```

79.16.17 aes_192_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.18 aes_192_ccm as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.19 aes_192_cfb1 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.20 aes_192_cfb128 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.21 aes_192_cfb8 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.22 aes_192_ctr as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.23 aes_192_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.24 aes_192_gcm as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.25 aes_192_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.26 aes_256_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

dim c as CipherMBS = CipherMBS.aes_256_cbc
call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

CIV = nil
c = CipherMBS.aes_256_cbc
call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Encrypred via "+c.Name+" as hex: "+EncodeHex(output1)+EndOfLine+"Decrypted: "+output2
```

79.16.27 aes_256_ccm as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.28 aes_256_cfb1 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.29 aes_256_cfb128 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

dim c as CipherMBS = CipherMBS.aes_256_cfb128
call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

CIV = nil
c = CipherMBS.aes_256_cfb128
call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Encrypred via "+c.Name+" as hex: "+EncodeHex(output1)+EndOfLine+"Decrypted: "+output2
```

79.16.30 aes_256_cfb8 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.31 aes_256_ctr as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.32 aes_256_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
dim c as CipherMBS = CipherMBS.aes_256_ecb
```

```
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

c = CipherMBS.aes_256_ecb
CIV = nil

call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Encrypred as hex: "+EncodeHex(output1)+EndOfLine+"Decrypted: "+output2
```

79.16.33 aes_256_gcm as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.34 aes_256_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.35 aes_256_xts as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.36 bf_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for Blowfish with CBC mode.

79.16.37 bf_cfb64 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for Blowfish with CFB64 mode.
Example:

```
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

dim c as CipherMBS = CipherMBS.bf_cfb64
call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

CIV = nil
c = CipherMBS.bf_cfb64
call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Encrypred via "+c.Name+" as hex: "+EncodeHex(output1)+EndOfLine+"Decrypted: "+output2
```

79.16.38 bf_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for Blowfish with ECB mode.

79.16.39 bf_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for Blowfish with OFB mode.

79.16.40 BytesToKey(cipher as CipherMBS, digest as DigestMBS, Salt as MemoryBlock, InputKey as Memoryblock, IterationCount as Integer, byref OutputKey as memoryblock, byref IV as memoryblock) as boolean

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Derives a key and IV from a given input data.
Notes:

Returns true on success or false on failure.

BytesToKey() derives a key and IV from various parameters. type is the cipher to derive the key and IV for. md is the message digest to use. The salt paramter is used as a salt in the derivation: it should point to an 8 byte buffer or nil if no salt is used. data is a buffer containing datal bytes which is used to derive the keying data. count is the iteration count to use. The derived key and IV will be written to key and iv respectively.

A typical application of this function is to derive keying material for an encryption algorithm from a password in the data parameter.

Increasing the count parameter slows down the algorithm which makes it harder for an attacker to peform a brute force attack using a large number of candidate passwords.

If the total key and IV length is less than the digest length and MD5 is used then the derivation algorithm is compatible with PKCS# 5 v1.5 otherwise a non standard extension is used to derive the extra data.

Newer applications should use more standard algorithms such as PBKDF2 as defined in PKCS# 5v2.1 for key derivation.

Key Derivation Algorithm

The key and IV is derived by concatenating D_1, D_2, etc until enough data is available for the key and IV. D_i is defined as:

D_i = HASH^count(D_(i-1) | | data | | salt)

where | | denotes concatentaion, D_0 is empty, HASH is the digest algorithm in use, HASH^1(data) is simply HASH(data), HASH^2(data) is HASH(HASH(data)) and so on.

The initial bytes are used for the key and the subsequent bytes for the IV.

79.16.41 camellia_128_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.42 camellia_128_cfb1 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.43 camellia_128_cfb128 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.44 camellia_128_cfb8 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.45 camellia_128_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.46 camellia_128_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.47 camellia_192_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.48 camellia_192_cfb1 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.49 camellia_192_cfb128 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.50 camellia_192_cfb8 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.51 camellia_192_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.52 camellia_192_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.53 camellia_256_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

dim c as CipherMBS = CipherMBS.camellia_256_cbc
call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

CIV = nil
c = CipherMBS.camellia_256_cbc
call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Encrypred via "+c.Name+" as hex: "+EncodeHex(output1)+EndOfLine+"Decrypted: "+output2
```

79.16.54 camellia_256_cfb1 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.55 camellia_256_cfb128 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.56 camellia_256_cfb8 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.57 camellia_256_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.58 camellia_256_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.59 cast5_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.60 cast5_cfb64 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.61 cast5_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.62 cast5_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.63 CipherByName(name as string) as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds a cipher by name.
Notes:

Possible names:
AES-128-CFB, BF-CBC, BF-CFB, BF-ECB, BF-OFB, AES-128-CBC, id-aes128-CCM, AES-128-CFB1, AES-128-CFB8, AES-128-CTR, AES-128-ECB, id-aes128-GCM, AES-128-OFB, AES-128-XTS, AES-192-CBC, id-aes192-CCM, AES-192-CFB1, AES-192-CFB8, AES-192-CFB, AES-192-CTR, AES-192-ECB, id-aes192-GCM, AES-192-OFB, AES-256-CBC, id-aes256-CCM, AES-256-CFB1, AES-256-CFB8, AES-256-CFB, AES-256-CTR, AES-256-ECB, id-aes256-GCM, AES-256-OFB, AES-256-XTS, CAMELLIA-128-CBC, CAMELLIA-128-CFB1, CAMELLIA-128-CFB8, CAMELLIA-128-CFB, CAMELLIA-128-ECB, CAMELLIA-128-OFB, CAMELLIA-192-CBC, CAMELLIA-192-CFB1, CAMELLIA-192-CFB8, CAMELLIA-192-CFB, CAMELLIA-192-ECB, CAMELLIA-192-OFB, CAMELLIA-256-CBC, CAMELLIA-256-CFB1, CAMELLIA-256-CFB8, CAMELLIA-256-CFB, CAMELLIA-256-ECB, CAMELLIA-256-OFB, CAST5-CBC, CAST5-CFB, CAST5-ECB, CAST5-OFB, DES-EDE, DES-EDE-CBC, DES-EDE-CFB, DES-EDE, DES-EDE-OFB, DES-EDE3, DES-EDE3-CBC, DES-EDE3-CFB1, DES-EDE3-CFB8, DES-EDE3-CFB, DES-EDE3, DES-EDE3-OFB, RC2-40-CBC, RC2-64-CBC, RC2-CBC, RC2-CFB, RC2-ECB, RC2-OFB, RC4, RC4-40, RC4-HMAC-MD5, IDEA-CFB, IDEA-ECB, IDEA-OFB, IDEA-CBC, DES-CFB1, DES-CFB8, DES-CFB, DES-OFB, DES-ECB, DES-CBC or DESX-CBC.

79.16.64 CipherInit(key as memoryblock, IV as memoryblock, Encrypt as boolean) as Boolean

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the cipher for encryption or decryption.
Notes:

We added for 17.3 a new boolean result:

Returns true in case of success and key length is okay.
Returns false in case of failures like out of memory, wrong key length.

Even if key length is wrong, we initialize (as with older versions before) but may crop the key length to default length.
AES 128 uses 16 byte key length, AES 256 uses 32 byte key length.
Key and IV are both filled with zeros to reach the minimum length.

key: The key to use.
IV: Optional, the initial vector.

You can use IVLength and KeyLength properties to learn how long those should be.

79.16.65 CipherNames as String()

MBS Encryption Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of all ciphers.
Example:

```
// see hash and encryption algorithms available
dim CipherNames() as string = CipherMBS.CipherNames
dim DigestNames() as string = DigestMBS.DigestNames
Break
```

Notes:

The list may not be the same for Mac, Windows and Linux.

Current list:

aes-128-cbc, aes-128-cbc-hmac-sha1, aes-128-ccm, aes-128-cfb, aes-128-cfb1, aes-128-cfb8, aes-128-ctr, aes-128-ecb, aes-128-gcm, aes-128-ocb, aes-128-ofb, aes-128-xts, aes-192-cbc, aes-192-ccm, aes-192-cfb, aes-192-cfb1, aes-192-cfb8, aes-192-ctr, aes-192-ecb, aes-192-gcm, aes-192-ocb, aes-192-ofb, aes-256-cbc, aes-256-cbc-hmac-sha1, aes-256-ccm, aes-256-cfb, aes-256-cfb1, aes-256-cfb8, aes-256-ctr, aes-256-ecb, aes-256-gcm, aes-256-ocb, aes-256-ofb, aes-256-xts, aes128, aes128-wrap, aes192, aes192-wrap, aes256, aes256-wrap, aria-128-cbc, aria-128-ccm, aria-128-cfb, aria-128-cfb1, aria-128-cfb8, aria-128-ctr, aria-128-ecb, aria-128-gcm, aria-128-ofb, aria-192-cbc, aria-192-ccm, aria-192-cfb, aria-192-cfb1, aria-192-cfb8, aria-192-ctr, aria-192-ecb, aria-192-gcm, aria-192-ofb, aria-256-cbc, aria-256-ccm, aria-256-cfb, aria-256-cfb1, aria-256-cfb8, aria-256-ctr, aria-256-ecb, aria-256-gcm, aria-256-ofb, aria128, aria192, aria256, bf, bf-cbc, bf-cfb, bf-ecb, bf-ofb, blowfish, camellia-128-cbc, camellia-128-cfb, camellia-128-cfb1, camellia-128-cfb8, camellia-128-ctr, camellia-128-ecb, camellia-128-ofb, camellia-192-cbc, camellia-192-cfb, camellia-192-cfb1, camellia-192-cfb8, camellia-192-ctr, camellia-192-ecb, camellia-192-ofb, camellia-256-cbc, camellia-256-cfb, camellia-256-cfb1, camellia-256-cfb8, camellia-256-ctr, camellia-256-ecb, camellia-256-ofb, camellia128, camellia192, camellia256, cast, cast-cbc, cast5-cbc, cast5-cfb, cast5-ecb, cast5-ofb, chacha20, chacha20-poly1305, des, des-cbc, des-cfb, des-cfb1, des-cfb8, des-ecb, des-ede, des-ede-cbc, des-ede-cfb, des-ede-ecb, des-ede-ofb, des-ede3, des-ede3-cbc, des-ede3-cfb, des-ede3-cfb1, des-ede3-cfb8, des-ede3-ecb, des-ede3-ofb, des-ofb, des3, des3-wrap, desx, desx-cbc, id-aes128-CCM, id-aes128-GCM, id-aes128-wrap, id-aes128-wrap-pad, id-aes192-CCM, id-aes192-GCM, id-aes192-wrap, id-aes192-wrap-pad, id-aes256-CCM, id-aes256-GCM, id-aes256-wrap, id-aes256-wrap-pad, id-smime-alg-CMS3DESwrap, idea, idea-cbc, idea-cfb, idea-ecb, idea-ofb, rc2, rc2-128, rc2-40, rc2-40-cbc, rc2-64, rc2-64-cbc, rc2-cbc, rc2-cfb, rc2-ecb, rc2-ofb, rc4, rc4-40, rc4-hmac-md5, RC5, rc5-cbc, rc5-cfb, rc5-ecb, rc5-ofb, seed, seed-cbc, seed-cfb, seed-ecb, seed-ofb, sm4, sm4-cbc, sm4-cfb, sm4-ctr, sm4-ecb, sm4-ofb

79.16.66 Clear

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the current state.

79.16.67 Constructor

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

79.16.68 DecryptInit(key as memoryblock, IV as memoryblock = nil) as Boolean

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the cipher for decrypting.
Example:

```
dim key as string = "mysecretkey"
dim encrypted as string = "6IcB9bpDwOjjONErhYQ6c7+Fb4qszsUNZVU0iThLYqOu7chJ7MG2nwSpRBUY0ZC3"

encrypted = DecodeBase64(encrypted)

dim c as CipherMBS = CipherMBS.aes_128_cbc
call c.DecryptInit key

dim s as string = c.ProcessString(Encrypted)+c.FinalizeAsString

Break // "In welcher Stadt steht das Bundeshaus?" is now in s.
```

Notes:

We added for 17.3 a new boolean result:

Returns true in case of success and key length is okay.
Returns false in case of failures like out of memory, wrong key length.

Even if key length is wrong, we initialize (as with older versions before) but may crop the key length to default length.
AES 128 uses 16 byte key length, AES 256 uses 32 byte key length.
Key and IV are both filled with zeros to reach the minimum length.

key: The key to use.
IV: Optional, the initial vector.

You can use IVLength and KeyLength properties to learn how long those should be.

For AES the length of the key defines whether you get 128, 192 or 256 bit encryption. Pass some other key length will return an error. Best is usually to put a hashing algorithm before to make sure the key has the required bit length, e.g. use SHA256MBS class.

79.16.69 desx_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for DESX algorithm in CBC mode.

79.16.70 des_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for DES in CBC.

79.16.71 des_cfb1 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for DES in CFB.

79.16.72 des_cfb64 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for DES in CFB.

79.16.73 des_cfb8 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for DES in CFB.

79.16.74 des_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for DES in ECB.

79.16.75 des_ede as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.76 des_ede3 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.77 des_ede3_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.78 des_ede3_cfb1 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.79 des_ede3_cfb64 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.80 des_ede3_cfb8 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.81 des_ede3_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.82 des_ede3_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.83 des_ede_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.84 des_ede_cfb64 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.85 des_ede_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.86 des_ede_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.87 des_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for DES in OFB.

79.16.88 EncryptInit(key as memoryblock, IV as memoryblock = nil) as Boolean

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the cipher for encrypting.
Example:

```
dim c as CipherMBS = CipherMBS.aes_128_cfb128
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output as string = c.ProcessString(data)
output = output + c.FinalizeAsString

MsgBox EncodeHex(output)
```

Notes:

We added for 17.3 a new boolean result:

Returns true in case of success and key length is okay.
Returns false in case of failures like out of memory, wrong key length.

Even if key length is wrong, we initialize (as with older versions before) but may crop the key length to default length.
AES 128 uses 16 byte key length, AES 256 uses 32 byte key length.
Key and IV are both filled with zeros to reach the minimum length.

key: The key to use.
IV: Optional, the initial vector.

You can use IVLength and KeyLength properties to learn how long those should be.

For AES the length of the key defines whether you get 128, 192 or 256 bit encryption. Pass some other key length will return an error. Best is usually to put a hashing algorithm before to make sure the key has the required bit length, e.g. use SHA256MBS class.

79.16.89 FinalizeAsMemory as memoryblock

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finalizes en/decryption and returns last data.

79.16.90 FinalizeAsString as String

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finalizes en/decryption and returns last data.
Example:

```
dim c as CipherMBS = CipherMBS.aes_128_cfb128
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output as string = c.ProcessString(data)
output = output + c.FinalizeAsString

MsgBox EncodeHex(output)
```

Notes:

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.

79.16.91 idea_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for IDEA encryption algorithm in CBC.

79.16.92 idea_cfb64 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for IDEA encryption algorithm in CFB.

79.16.93 idea_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for IDEA encryption algorithm in ECB.

79.16.94 idea_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for IDEA encryption algorithm in OFB.

79.16.95 MaxBlockLength as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum possible block length size for any cipher.

79.16.96 MaxIVLength as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum possible IV vector size for any cipher.

79.16.97 MaxKeyLength as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum possible key length size for any cipher.

79.16.98 ProcessFile(InputFile as FolderItem, OutputFile as FolderItem) as boolean

MBS Encryption Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Processes content of file.
Notes:

Plugin will start a preemptive thread to read in file and process all data in chunks and write to output file.
Returns true on success or false on failure. May raise OutOfMemoryException or IOException.
This function works best if called from a thread.

79.16.99 ProcessMemory(data as memoryblock) as MemoryBlock

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Processes data in a memory block.
Notes: due to block sizes, the result may be longer or shorter than the input size.

79.16.100 ProcessString(data as String) as string

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Processes data in a string.
Example:

```
dim key as string = "mysecretkey"
dim encrypted as string = "6IcB9bpDwOjjONErhYQ6c7+Fb4qszsUNZVU0iThLYqOu7chJ7MG2nwSpRBUY0ZC3"

encrypted = DecodeBase64(encrypted)

dim c as CipherMBS = CipherMBS.aes_128_cbc
call c.DecryptInit key

dim s as string = c.ProcessString(Encrypted)+c.FinalizeAsString

Break // "In welcher Stadt steht das Bundeshaus?" is now in s.
```

Notes:

due to block sizes, the result may be longer or shorter than the input size.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.

79.16.101 rc2_40_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.102 rc2_64_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

79.16.103 rc2_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

dim c as CipherMBS = CipherMBS.rc2_cbc
call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

CIV = nil
c = CipherMBS.rc2_cbc
call c.DecryptInit Ckey, CIV
```

```
dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Encrypred as hex: "+EncodeHex(output1)+EndOfLine+"Decrypted: "+output2
```

79.16.104 rc2_cfb64 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

dim c as CipherMBS = CipherMBS.rc2_cfb64
call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

CIV = nil
c = CipherMBS.rc2_cfb64
call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Encrypred as hex: "+EncodeHex(output1)+EndOfLine+"Decrypted: "+output2
```

79.16.105 rc2_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

dim c as CipherMBS = CipherMBS.rc2_ecb
```

```
call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

CIV = nil
c = CipherMBS.rc2_ecb
call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Encrypred as hex: "+EncodeHex(output1)+EndOfLine+"Decrypted: "+output2
```

79.16.106 rc2_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
dim c as CipherMBS = CipherMBS.rc2_ofb
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

MsgBox "Encrypred as hex: "+EncodeHex(output1)

c = CipherMBS.rc2_ofb
CIV = nil

call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Decrypted: "+output2
```

79.16.107 rc4 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
dim c as CipherMBS = CipherMBS.rc4
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

MsgBox "Encrypred as hex: "+EncodeHex(output1)

c = CipherMBS.rc4
CIV = nil

call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Decrypted: "+output2
```

79.16.108 rc4_40 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
dim c as CipherMBS = CipherMBS.rc4_40
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString
```

```
MsgBox "Encrypred as hex: "+EncodeHex(output1)

c = CipherMBS.rc4_40
CIV = nil

call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Decrypted: "+output2
```

79.16.109 rc4_hmac_md5 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
dim c as CipherMBS = CipherMBS.rc4_hmac_md5
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

MsgBox "Encrypred as hex: "+EncodeHex(output1)

c = CipherMBS.rc4_hmac_md5
CIV = nil

call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Decrypted: "+output2
```

79.16.110 rc5_32_12_16_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
dim c as CipherMBS = CipherMBS.rc5_32_12_16_cbc
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

MsgBox "Encrypred as hex: "+EncodeHex(output1)

c = CipherMBS.rc5_32_12_16_cbc
CIV = nil

call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Decrypted: "+output2
```

Notes: RC5 with CBC. 32 bit word size, 12 rounds, 16 byte key.

79.16.111 rc5_32_12_16_cfb64 as CipherMBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
dim c as CipherMBS = CipherMBS.rc5_32_12_16_cfb64
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
```

```
output1 = output1 + c.FinalizeAsString

MsgBox "Encrypred as hex: "+EncodeHex(output1)

c = CipherMBS.rc5_32_12_16_cfb64
CIV = nil

call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Decrypted: "+output2
```

Notes: RC5 with CFB64. 32 bit word size, 12 rounds, 16 byte key.

79.16.112 rc5_32_12_16_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
dim c as CipherMBS = CipherMBS.rc5_32_12_16_ecb
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

MsgBox "Encrypred as hex: "+EncodeHex(output1)

c = CipherMBS.rc5_32_12_16_ecb
CIV = nil

call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Decrypted: "+output2
```

Notes: RC5 with ECB. 32 bit word size, 12 rounds, 16 byte key.

79.16.113 rc5_32_12_16_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
dim c as CipherMBS = CipherMBS.rc5_32_12_16_ofb
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

MsgBox "Encrypred as hex: "+EncodeHex(output1)

c = CipherMBS.rc5_32_12_16_ofb
CIV = nil

call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Decrypted: "+output2
```

Notes: RC5 with OFB. 32 bit word size, 12 rounds, 16 byte key.

79.16.114 seed_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The cipher for a Seed CBC.

79.16.115 seed_cfb128 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Seed cipher for CFB128 mode.

79.16.116 seed_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Cipher for seed ECB.

79.16.117 seed_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Seed cipher for OFB mode.

79.16.118 SetPadding(padding as boolean)

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enables padding.
Notes: On by default.

79.16.119 Properties

79.16.120 BlockSize as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the block size for this cipher.
Notes: (Read only property)

79.16.121 Encrypting as Boolean

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the class is encrypting or decrypting.
Notes:

True if encrypting or false for decrypting.
(Read only property)

79.16.122 Flags as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the flags for the cipher.
Notes: (Read only property)

79.16.123 IVLength as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the size of the initialization vector.
Notes: (Read only property)

79.16.124 KeyLength as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The key length.
Notes: (Read and Write property)

79.16.125 Mode as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries cipher mode.
Notes: (Read only property)

79.16.126 Name as String

MBS Encryption Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the cipher engine.
Notes: (Read only property)

79.16.127 Padding as Boolean

MBS Encryption Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to apply padding or not.
Example:

```
dim c as CipherMBS = CipherMBS.aes_256_ctr

call c.EncryptInit "Hello"

MsgBox "default: "+str(c.Padding)
c.Padding = false

MsgBox "set to false: "+str(c.Padding)
c.Padding = true

MsgBox "set to true: "+str(c.Padding)
```

Notes:

On by default.
(Read and Write property)

79.16.128 RC2KeyBits as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bits for RC2.
Notes: (Read and Write property)

79.16.129 RC5Rounds as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of rounds for RC5.
Notes: (Read and Write property)

79.17 class DigestMBS

79.17.1 class DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The OpenSSL class for calculating hashes.
Example:

```
dim d as DigestMBS = DigestMBS.MD5
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

79.17.6 Methods

79.17.7 Clear

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the current state.

79.17.8 Constructor

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

79.17.9 DigestByName(name as string) as DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries a digest by name.
Example:

```
dim d as DigestMBS = DigestMBS.DigestByName("md5")
MsgBox str(d.Size)
```

Notes:

Returns nil if name is not registered.
May need string to be in upper case.

79.17.10 DigestNames as String()

MBS Encryption Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of all digest algorithms.
Example:

```
// see hash and encryption algorithms available
dim CipherNames() as string = CipherMBS.CipherNames
dim DigestNames() as string = DigestMBS.DigestNames
Break
```

Notes:

The list may not be the same for Mac, Windows and Linux.

Current list:

blake2b512, blake2s256, id-rsassa-pkcs1-v1_5-with-sha3-224, id-rsassa-pkcs1-v1_5-with-sha3-256, id-rsassa-pkcs1-v1_5-with-sha3-384, id-rsassa-pkcs1-v1_5-with-sha3-512, md4, md4WithRSAEncryption, md5, md5-sha1, md5WithRSAEncryption, mdc2, mdc2WithRSA, ripemd, ripemd160, ripemd160WithRSA, rmd160, RSA-MD4, RSA-MD5, RSA-MDC2, RSA-RIPEMD160, RSA-SHA1, RSA-SHA1-2, RSA-SHA224, RSA-SHA256, RSA-SHA3-224, RSA-SHA3-256, RSA-SHA3-384, RSA-SHA3-512, RSA-SHA384, RSA-SHA512, RSA-SHA512/224, RSA-SHA512/256, RSA-SM3, sha1, sha1WithRSAEncryption, sha224, sha224WithRSAEncryption, sha256, sha256WithRSAEncryption, sha3-224, sha3-256, sha3-384, sha3-512, sha384, sha384WithRSAEncryption, sha512, sha512-224, sha512-224WithRSAEncryption, sha512-256, sha512-256WithRSAEncryption, sha512WithRSAEncryption, shake128, shake256, sm3, sm3WithRSAEncryption, ssl3-md5, ssl3-sha1, whirlpool

79.17.11 Final as memoryblock

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finalizes the hash and returns it.

79.17.12 FinalText as String

MBS Encryption Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finalizes the hash and returns it.
Notes: Returns text with hex encoding.

79.17.13 MD5 as DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for MD5.
Example:

```
dim d as DigestMBS = DigestMBS.MD5
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

79.17.14 MDC2 as DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for MDC2.
Example:

```
dim d as DigestMBS = DigestMBS.MDC2
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

79.17.15 Process(data as memoryblock)

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds more data to the hash.
See also:

- 79.17.16 Process(data as string) 15680
- 79.17.17 Process(file as FolderItem) as boolean 15681

79.17.16 Process(data as string)

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds more data to the hash.
See also:

- 79.17.15 Process(data as memoryblock) 15680
- 79.17.17 Process(file as FolderItem) as boolean 15681

79.17.17 Process(file as FolderItem) as boolean

MBS Encryption Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Processes content of file.
Notes:

Plugin will start a preemptive thread to read in file and process all data in chunks.
Returns true on success or false on failure. May raise OutOfMemoryException or IOException.
This function works best if called from a thread.

- 79.17.16 Process(data as string) 15680

79.17.18 RipeMD160 as DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for RipeMD160.
Example:

```
dim d as DigestMBS = DigestMBS.RipeMD160
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

79.17.19 SHA1 as DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for SHA 1.
Example:

```
dim d as DigestMBS = DigestMBS.SHA1
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
```

```
MsgBox result
```

79.17.20 SHA224 as DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for SHA 224.
Example:

```
dim d as DigestMBS = DigestMBS.SHA224
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

79.17.21 SHA256 as DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for SHA 256.
Example:

```
dim d as DigestMBS = DigestMBS.SHA256
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

79.17.22 SHA384 as DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for SHA 384.
Example:

```
dim d as DigestMBS = DigestMBS.SHA384
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

79.17.23 SHA3_224 as DigestMBS

MBS Encryption Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for SHA-3 with 224 bits.
Example:

```
dim d as DigestMBS = DigestMBS.SHA3_224
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

79.17.24 SHA3_256 as DigestMBS

MBS Encryption Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for SHA-3 with 256 bits.
Example:

```
dim d as DigestMBS = DigestMBS.SHA3_256
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

79.17.25 SHA3_384 as DigestMBS

MBS Encryption Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for SHA-3 with 384 bits.
Example:

```
dim d as DigestMBS = DigestMBS.SHA3_384
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

79.17.26 SHA3_512 as DigestMBS

MBS Encryption Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for SHA-3 with 512 bits.

Example:

```
dim d as DigestMBS = DigestMBS.SHA3_512
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

79.17.27 SHA512 as DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for SHA512.
Example:

```
dim d as DigestMBS = DigestMBS.SHA512
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

79.17.28 Properties

79.17.29 BlockSize as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries block size.
Example:

```
dim d as DigestMBS = DigestMBS.DigestByName("md5")
MsgBox str(d.BlockSize)
```

Notes: (Read only property)

79.17.30 Name as String

MBS Encryption Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the digest engine.
Notes: (Read only property)

79.17.31 Size as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries size of digest.
Example:

```
dim d as DigestMBS = DigestMBS.SHA512
MsgBox str(d.Size)
```

Notes: (Read only property)

79.18 class ECDHEMBS

79.18.1 class ECDHEMBS

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for ECDH key creation.
Notes:

Elliptic Curve Diffie Hellman (ECDH) is an Elliptic Curve variant of the standard Diffie Hellman algorithm. See Elliptic Curve Cryptography for an overview of the basic concepts behind Elliptic Curve algorithms. ECDH is used for the purposes of key agreement.

Constructor to create and map functions into the struct.
EC_Curve_NID An Elliptical Curve ID specified in the openssl header <openssl/obj_mac.h>. (e.g. NID_X9_62_prime256v1)

79.18.6 Methods

79.18.7 Constructor(CurveID as Integer)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Notes: Creates a new key with the given CurveID, e.g. NID_X9_62_prime256v1.

79.18.8 DeriveSecretKey(peerKey as string) as string

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: After receiving a public key from your peer, derive the secret key by combining the peer key with yours.
Notes:

Returns a string (i.e. shared secret) that is the result of the EC DHE secret derivation.
Never use a derived secret directly. Typically it is passed through some hash function to produce a key (e.g. SHA512).
peerKey: A string containing the peer's public key.

79.18.9 Destructor

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: Public keys and shared secrets should be copied before freeing memory as ecdhe owns the public key and shared secret.

79.18.10 LastError as String

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error string.

79.18.11 PublicKey as string

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the public key.
Example:

```
dim EC_Curve_ID as Integer = 415 // NID_X9_62_prime256v1
dim ec_dhe as new ECDHEMBS(EC_Curve_ID)
dim publicKey as string = ec_dhe.PublicKey

MsgBox publicKey
```

Notes:

Returns a string (i.e. public key) to be shared with your peer; this can be accomplished over the network or by file.
Encoding is PEM, so you can write to a file with .pem file name extension.

79.18.12 Properties

79.18.13 CurveID as Integer

MBS Encryption Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Curve ID used in constructor.
Notes: (Read only property)

79.18.14 CurveIDName as String

MBS Encryption Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The textual name of the used curve ID.
Notes: (Read only property)

79.18.15 ParamsInfo as String

MBS Encryption Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Debug Information on the parameters used.
Notes: (Read only property)

79.18.16 PeerKeyInfo as String

MBS Encryption Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Debug Information on the peer key used.
Notes: (Read only property)

79.18.17 PrivateKeyInfo as String

MBS Encryption Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Debug Information on the private key used.
Notes: (Read only property)

79.18.18 Constants

79.18.19 NID_secp112r1 = 704

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.20 NID_secp112r2 = 705

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.21 NID_secp128r1 = 706

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.22 NID_secp128r2 = 707

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.23 NID_secp160k1 = 708

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.24 NID_secp160r1 = 709

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.25 NID_secp160r2 = 710

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.26 NID_secp192k1 = 711

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.27 NID_secp224k1 = 712

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.28 NID_secp224r1 = 713

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.29 NID_secp256k1 = 714

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.30 NID_secp384r1 = 715

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.31 NID_secp521r1 = 716

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.32 NID_sect113r1 = 717

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.33 NID_sect113r2 = 718

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.34 NID_sect131r1 = 719

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.35 NID_sect131r2 = 720

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.36 NID_sect163k1 = 721

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.37 NID_sect163r1 = 722

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.38 NID_sect163r2 = 723

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.39 NID_sect193r1 = 724

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.40 NID_sect193r2 = 725

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.41 NID_sect233k1 = 726

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.42 NID_sect233r1 = 727

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.43 NID_sect239k1 = 728

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.44 NID_sect283k1 = 729

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.45 NID_sect283r1 = 730

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.46 NID_sect409k1 = 731

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.47 NID_sect409r1 = 732

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.48 NID_sect571k1 = 733

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.49 NID_sect571r1 = 734

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.50 NID_wap_wsg_idm_ecid_wtls1 = 735

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.51 NID_wap_wsg_idm_ecid_wtls10 = 743

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.52 NID_wap_wsg_idm_ecid_wtls11 = 744

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.53 NID_wap_wsg_idm_ecid_wtls12 = 745

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.54 NID_wap_wsg_idm_ecid_wtls3 = 736

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.55 NID_wap_wsg_idm_ecid_wtls4 = 737

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.56 NID_wap_wsg_idm_ecid_wtls5 = 738

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.57 NID_wap_wsg_idm_ecid_wtls7 = 740

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.58 NID_wap_wsg_idm_ecid_wtls8 = 741

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.59 NID_wap_wsg_idm_ecid_wtls9 = 742

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.60 NID_X9_62_c2pnb163v1 = 684

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.61 NID_X9_62_c2pnb163v2 = 685

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.62 NID_X9_62_c2pnb163v3 = 686

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.63 NID_X9_62_c2pnb176v1 = 687

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.64 NID_X9_62_c2pnb208w1 = 693

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.65 NID_X9_62_c2pnb272w1 = 699

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.66 NID_X9_62_c2pnb304w1 = 700

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.67 NID_X9_62_c2pnb368w1 = 702

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.68 NID_X9_62_c2tnb191v1 = 688

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.69 NID_X9_62_c2tnb191v2 = 689

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.70 NID_X9_62_c2tnb191v3 = 690

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.71 NID_X9_62_c2tnb239v1 = 694

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.72 NID_X9_62_c2tnb239v2 = 695

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.73 NID_X9_62_c2tnb239v3 = 696

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.74 NID_X9_62_c2tnb359v1 = 701

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.75 NID_X9_62_c2tnb431r1 = 703

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.18.76 NID_X9_62_prime256v1 = 415

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

79.19 class ECKeyMBS

79.19.1 class ECKeyMBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for Elliptic Curve Digital Signature Algorithm.
Example:

```
const NID_secp192k1 = 711
dim key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)

MsgBox key.Description
```

79.19.4 Methods

79.19.5 BuiltInCurves as Dictionary

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries built in curves.
Example:

```
// show curve IDs with description in listbox
dim d as Dictionary = ECKeyMBS.BuiltInCurves
```

```
for each key as Variant in d.keys
Listbox1.AddRow key, d.Value(key)
next
```

Notes:

The dictionary returned has as key the ID and the description as value.

The list looks like this:

79.19.6 Constructor

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.

79.19.7 Copy as ECKeyMBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the key.

79.19.8 Generate as Boolean

MBS Encryption Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Generates new key and stores in the current object.
Notes: Returns true on success or false on failure.

79.19.9 GetPrivateKey(Hex as Boolean) as String

MBS Encryption Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries priv key.
Example:

```
// make a key
Const NID_secp192k1 = 711
Dim e As ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)
```

```
// show private key
MsgBox e.GetPrivateKey(True)+_
EndOfLine+_
e.GetPrivateKey(False)
```

Notes: The private key is a big number, which can be returned as decimal or hexadecimal value.

79.19.10 GetPublicKey(byref x as String, byref y as String, Hex as Boolean) as Boolean

MBS Encryption Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries X and Y of public key.
Example:

```
// make a key
Const NID_secp192k1 = 711
Dim e As ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)

// show public key
dim x,y as string
If e.GetPublicKey(x, y, False) Then
MsgBox x+EndOfLine+y
End If
```

Notes:

The public key is made up with two big numbers, which can be returned as decimal or hexadecimal value.
Returns true on success or false on failure.

79.19.11 GetPublicKeyPoint as String

MBS Encryption Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries Public key as hex string.
Example:

```
// make a key
Const NID_secp192k1 = 711
Dim e As ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)

// show public key
```

msgbox e.GetPublicKeyPoint

Notes: Can be queried to save/send and later be assigned with SetPublicKeyPoint.

79.19.12 KeyByCurveName(CurveID as Integer, Generate as Boolean = true) as ECKeyMBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Generates a new pair of private and public keys.
Example:

```
const NID_secp192k1 = 711
dim key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)

MsgBox key.Description
```

Notes:

You can use ReadPrivateKey and ReadPublicKey functions to get the keys.
If Generate is false, we create an empty object with private and public keys.

Some possible curve IDs:

79.19.13 OpenPrivateKey(Data as String) as ECKeyMBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a private key.
Example:

```
const NID_secp192k1 = 711
dim key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)
dim PrivateKeyData as string = key.PrivateKey

// read again
dim pub as ECKeyMBS = ECKeyMBS.OpenPrivateKey(PrivateKeyData)
MsgBox pub.Description
```

Notes: The key is in binary format and you may need to use EncodeBase64/DecodeBase64.

79.19.14 OpenPublicKey(Data as String, CurveID as Integer) as ECKeyMBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a public key.
Example:

```
const NID_secp192k1 = 711
dim key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)
dim pubKeyData as string = key.PublicKey

// read again
dim pub as ECKeyMBS = ECKeyMBS.OpenPublicKey(pubKeyData, NID_secp192k1)
MsgBox pub.Description
```

79.19.15 PrivateKey as String

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the priv key.
Example:

```
const NID_secp192k1 = 711
dim key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)
dim Data as string = key.PrivateKey
MsgBox EncodeBase64(data)
```

79.19.16 PublicKey as String

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the public key.
Example:

```
const NID_secp192k1 = 711
dim key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)
dim Data as string = key.PublicKey
MsgBox EncodeBase64(data)
```

79.19.17 SetPrivateKey(Value as String, Hex as Boolean) as Boolean

MBS Encryption Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the key.
Example:

```
// make a key
Const NID_secp192k1 = 711
Dim e As ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)

MsgBox e.Description

// get hex
Dim pubk As String = e.GetPublicKeyPoint
Dim priv As String = e.GetPrivateKey(False)

// make new empty key and put in the data
Dim ee As ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1, False)

If ee.SetPrivateKey(priv, False) Then
If ee.SetPublicKeyPoint(pubk) Then
MsgBox ee.Description
Else
Break // failed?
End If
Else
Break // failed?
End If
```

Notes: Returns true on success or false on failure.

79.19.18 SetPublicKey(x as String, y as String, Hex as Boolean) as Boolean

MBS Encryption Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets X and Y of public key.
Example:

```
// make a key
Const NID_secp192k1 = 711
Dim e As ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)

MsgBox e.Description
```

```
// get hex
Dim pubk As String = e.GetPublicKeyPoint
Dim priv As String = e.GetPrivateKey(False)

// make new empty key and put in the data
Dim ee As ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1, False)

If ee.SetPrivateKey(priv, False) Then
If ee.SetPublicKeyPoint(pubk) Then
MsgBox ee.Description
Else
Break // failed?
End If
Else
Break // failed?
End If
```

Notes: Returns true on success or false on failure.

79.19.19 SetPublicKeyPoint(Value as String) as Boolean

MBS Encryption Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets public key.
Notes: Returns true on success or false on failure.

79.19.20 Sign(Data as String) as String

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Signs the given data.
Example:

```
const NID_secp192k1 = 711
dim key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)
dim text as string = "Hello World"
dim data as string = SHA512MBS.Hash(text)
dim sig as string = key.Sign(data)

if key.Verify(data, sig) then
MsgBox "Signature ok"
end if
```

Notes:

We highly recommend to use a hash like SHA-512 to preprocess the data.
Returns the signature as string on success.

79.19.21 Verify(SignatureData as String, Data as String) as Boolean

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Verifies the digital signature.
Example:

```
const NID_secp192k1 = 711
dim key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)
dim text as string = "Hello World"
dim data as string = SHA512MBS.Hash(text)
dim sig as string = key.Sign(data)

if key.Verify(data, sig) then
MsgBox "Signature ok"
end if
```

Notes:

Returns true on success. Returns false if data, signature and public key don't belong together.
We highly recommend to use a hash like SHA-512 to preprocess the data.

79.19.22 Properties

79.19.23 CanSign as Boolean

MBS Encryption Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Indicates if an ECKey can be used for signing.
Notes:

Returns true if can can sign and false otherwise.
(Read only property)

79.19.24 Description as String

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an user readable description text for the current key.
Example:

```
const NID_secp192k1 = 711
dim key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)

MsgBox key.Description
```

Notes: (Read only property)

79.19.25 Flags as Integer

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flag field.
Notes:

see OpenSSL for details.
(Read and Write property)

79.19.26 Size as Integer

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns size of key.
Notes: (Read only property)

79.19.27 Valid as Boolean

MBS Encryption Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Verifies that a private and/or public key is valid.
Notes:

Returns true on success and false otherwise.
(Read only property)

79.20 class MD5DigestMBS

79.20.1 class MD5DigestMBS

MBS Encryption Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to calculate the message-digest of a string.
Notes:

Same class as the one in RB5, so the same documentation:

The MD5Digest class enables you to process a string in segments. Pass each string segment to the Process method. The value property contains the current message digest and the clear method clears the MD5Digest object so that you can repeat the process.

The MD5 message digest algorithm takes a message of any length and produces a 128-bit "fingerprint" or message digest of the input string. The MD5 algorithm is useful for digital signature applications, where a large file must be processed in a secure manner before being encrypted with a secret key under a system such as RSA.

79.20.4 Methods

79.20.5 clear

MBS Encryption Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resets the MD5Digest object so that you can start with a new data stream.

79.20.6 HashFile(file as FolderItem, Hex as boolean = true) as string

MBS Encryption Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates hash from whole file.
Notes:

Plugin will start a preemptive thread to read in file and process all data in chunks.
Returns hash on success or empty string on failure. May raise OutOfMemoryException or IOException.
This function works best if called from a thread.
If hex is true, the result is encoded as hex string.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

79.20.7 HMAC(key as string, data as string) as string

MBS Encryption Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the a specific HASH based on the key and the data string.

79.20.8 MD5(data as memoryblock) as string

MBS Encryption Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the MD5 message digest value of a string.
See also:

- 79.20.9 MD5(data as string) as string

79.20.9 MD5(data as string) as string

MBS Encryption Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the MD5 message digest value of a string.
Example:

```
// Compare RB5 MD5 to the one from MBS

dim a,b as String

a=MD5("Hallo")

b=MD5DigestMBS.MD5("Hallo")

msgbox str(StrComp(a,b,0))
```

Notes: Same as the MD5 function in RB5.
See also:

- 79.20.8 MD5(data as memoryblock) as string 15712

79.20.10 MD5String(data as memoryblock) as string

MBS Encryption Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the MD5 message digest value of a memoryblock as hex string.
See also:

- 79.20.11 MD5String(data as string) as string 15713

79.20.11 MD5String(data as string) as string

MBS Encryption Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the MD5 message digest value of a string as hex string.
Example:

```
// Compare RB5 MD5 to the one from MBS

dim a,b as String

a=EncodingToHexMBS(MD5("Franz jagt im komplett verwahrlosten Taxi quer durch Bayern"))
b=MD5DigestMBS.MD5String("Franz jagt im komplett verwahrlosten Taxi quer durch Bayern")

msgbox a+EndOfLine+b+EndOfLine+str(StrComp(a,b,0))
```

See also:

- 79.20.10 MD5String(data as memoryblock) as string 15713

79.20.12 Process(data as memoryblock)

MBS Encryption Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Processes the given data.
See also:

- 79.20.13 Process(Data as string) 15714

79.20.13 Process(Data as string)

MBS Encryption Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Processes the given data.
Example:

```
dim f as FolderItem
dim b as BinaryStream
dim s as string
dim m as new MD5DigestMBS
dim lines(-1) as string

// process file part by part (big files)

f=SpecialFolder.Desktop.Child("test.jpg")
b=f.OpenAsBinaryFile(False)

while not b.eof
s=b.Read(1000000)
m.Process s
wend

lines.append EncodingToHexMBS(m.Value)+" using plugin with MD5DigestMBS"

dim d as new MD5Digest

f=SpecialFolder.Desktop.Child("test.jpg")
b=f.OpenAsBinaryFile(False)

while not b.eof
```

```
s=b.Read(1000000)
d.Process s
wend

lines.append EncodingToHexMBS(d.Value)+" using RB with MD5Digest"

// process file in one chunk (small files)

f=SpecialFolder.Desktop.Child("test.jpg")
b=f.OpenAsBinaryFile(False)

s=b.Read(b.Length)

lines.append EncodingToHexMBS(MD5MBS(s))+" using plugin with MD5MBS()"

f=SpecialFolder.Desktop.Child("test.jpg")
b=f.OpenAsBinaryFile(False)

s=b.Read(b.length)

lines.append EncodingToHexMBS(MD5(s))+" using RB with MD5()"

MsgBox Join(lines,EndOfLine)
```

See also:

- 79.20.12 Process(data as memoryblock) 15714

79.20.14 Properties

79.20.15 Value as string

MBS Encryption Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Contains the current message digest.
Notes: (Read only property)

79.21 class OpenSSLExceptionMBS

79.21.1 class OpenSSLExceptionMBS

MBS Encryption Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The OpenSSL class for error exceptions.
Notes: Subclass of the RuntimeException class.

79.22.6 Methods

79.22.7 ErrorString(ErrorCode as Integer) as string

MBS Encryption Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the human readable error string for an OpenSSL error.
Example:

```
MsgBox OpenSSLMBS.ErrorString(336109761)
```

79.22.8 GeneratePrivateKey(Bits as Integer = 4096, Exp as Integer = 65537, Password as string = """, Algorithm as string = """) as string

MBS Encryption Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Generates a new private key.
Example:

```
dim privateKey as string = OpenSSLMBS.GeneratePrivateKey
dim publicKey as string = OpenSSLMBS.GetPublicKey(privateKey)

break // got key pair
```

Notes:

Bit size of key should be high.
See RSA key documentation on the web about details.

In Plugin version 16.2 and later this function yields time to other Xojo threads.
Algorithm specifies the encryption algorithm for key encryption. See CipherMBS for cipher names, e.g. "AES-128-CBC". (new in 17.5)

79.22.9 GetPublicKey(PrivateKey as String, PrivateKeyPassword as string = "") as string

MBS Encryption Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts public key from private key.
Example:

```
dim privateKey as string = OpenSSLMBS.GeneratePrivateKey
dim publicKey as string = OpenSSLMBS.GetPublicKey(privateKey)

break // got key pair
```

Notes: Optionally you can define a password for private key.

79.22.10 OpenSSLVersion as String

MBS Encryption Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries version of OpenSSL version.
Example:

```
MsgBox OpenSSLMBS.OpenSSLVersion
```

79.22.11 PKCS7Sign(flags as Integer, InputData as string, SignKey as string, PrivateKey as String, PrivateKeyPassword as string, intermediaCertsData() as string, OutputBinary as boolean) as string

MBS Encryption Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Signs with SMIME.
Example:

```
dim testPrivKey as string = ReadFile("passkey.pem")
dim testCertificate as string = ReadFile("passcertificate.pem")
dim data as string = ReadFile("test.txt")
dim privKeyPassword as string = "12345"

dim intermediateCertificates() as string
intermediateCertificates.Append ReadFile("WWDR.pem")
dim Sign as string = OpenSSLMBS.PKCS7Sign(0, data, testCertificate, testPrivKey, privKeyPassword, intermediateCertificates, true)
```

```
// write result
dim f as FolderItem = SpecialFolder.Desktop.Child("output")
dim b as BinaryStream = BinaryStream.Create(f, true)
b.Write sign
```

Notes:

Returns the signature. If OutputBinary is true, we use DER output, else text based output.
intermediaCertsData array can be empty if you have no intermediate certificates.

79.22.12 PKCS7SignData(Certificate as X509MBS, PrivateKey as PKeyMBS, certs() as X509MBS = nil, data as string, flags as Integer = 0) as string

MBS Encryption Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Signs with PKCS7.
Notes:

Returns the signature (binary format = DER).
intermediaCertsData array can be empty or nil if you have no intermediate certificates.

79.22.13 PKCS7SignedData(DataP7M as String) as String

MBS Encryption Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads content of signed data in PKCS7 file.
Example:

```
// get a file
Dim f As FolderItem = GetFolderItem("/Users/cs/Desktop/p7m/work.xml.p7m", FolderItem.PathTypeNa-
tive)

// read
Dim b As BinaryStream = BinaryStream.Open(f)
Dim s As String = b.Read(b.Length)

// decode
Dim data As String = OpenSSLMBS.PKCS7SignedData(s)

Break
```

Notes:

Please pass content of a P7M file, so we can read signed content.
Returns data or empty string if this failed.

79.22.14 RandomBytes(count as Integer) as MemoryBlock

MBS Encryption Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Generates random bytes.
Example:

```
Dim m As MemoryBlock = OpenSSLMBS.RandomBytes(16)
MsgBox EncodeHex(m)
```

Notes: Puts count cryptographically strong pseudo-random bytes into MemoryBlock.

79.22.15 RandomBytesString(count as Integer) as String

MBS Encryption Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Generates random bytes.
Example:

```
Dim p As String = OpenSSLMBS.RandomBytesString(16)
MsgBox EncodeHex(p)
```

Notes: Puts count cryptographically strong pseudo-random bytes into string.

79.22.16 RSAPrivateDecrypt(data as string, PrivateKey as string, padding as Integer = 1, Password as string = "") as String

MBS Encryption Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrypts data using private key.
Example:

```
// encrypt with public, decrypt with private key

dim f1 as FolderItem = GetFolderItem("test.pem")
dim b1 as BinaryStream = BinaryStream.Open(f1)
```

```
dim PrivKey as string = B1.Read(b1.Length)

dim f2 as FolderItem = GetFolderItem("test.pub")
dim b2 as BinaryStream = BinaryStream.Open(f2)
dim PubKey as string = B2.Read(b2.Length)

dim UnencryptedData as string = "Hello World. This is just a test."
dim EncryptedData as string = OpenSSLMBS.RSAPublicEncrypt(UnencryptedData, PubKey)
dim decryptedData as string = OpenSSLMBS.RSAPrivateDecrypt(EncryptedData, PrivKey)

Break // check in debugger
```

Notes:

See kPadding constants for Padding parameter.
Password is optional for decrypting encrypted keys.
Returns empty string on failure or raises exceptions.

RSA can only decrypt data if it's <= length of key.

79.22.17 RSAPrivateEncrypt(data as string, PrivateKey as string, padding as Integer = 1, Password as string = "") as String

MBS Encryption Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts data using private key.
Example:

```
// encrypt with private, decrypt with public key

dim f1 as FolderItem = GetFolderItem("test.pem")
dim b1 as BinaryStream = BinaryStream.Open(f1)
dim PrivKey as string = B1.Read(b1.Length)

dim f2 as FolderItem = GetFolderItem("test.pub")
dim b2 as BinaryStream = BinaryStream.Open(f2)
dim PubKey as string = B2.Read(b2.Length)

dim UnencryptedData as string = "Hello World. This is just a test."
dim EncryptedData as string = OpenSSLMBS.RSAPrivateEncrypt(UnencryptedData, PrivKey)
dim decryptedData as string = OpenSSLMBS.RSAPublicDecrypt(EncryptedData, PubKey)

Break // check in debugger
```

Notes:

See kPadding constants for Padding parameter.
Password is optional for decrypting encrypted keys.
Returns empty string on failure or raises exceptions.

RSA can only encrypt data if it's <= length of key.

79.22.18 RSAPublicDecrypt(data as string, PublicKey as string, padding as Integer = 1, Password as string = "") as String

MBS Encryption Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrypts data using public key.
Example:

```
// encrypt with private, decrypt with public key

dim f1 as FolderItem = GetFolderItem("test.pem")
dim b1 as BinaryStream = BinaryStream.Open(f1)
dim PrivKey as string = B1.Read(b1.Length)

dim f2 as FolderItem = GetFolderItem("test.pub")
dim b2 as BinaryStream = BinaryStream.Open(f2)
dim PubKey as string = B2.Read(b2.Length)

dim UnencryptedData as string = "Hello World. This is just a test."
dim EncryptedData as string = OpenSSLMBS.RSAPrivateEncrypt(UnencryptedData, PrivKey)
dim decryptedData as string = OpenSSLMBS.RSAPublicDecrypt(EncryptedData, PubKey)

Break // check in debugger
```

Notes:

See kPadding constants for Padding parameter.
Password is optional for decrypting encrypted keys.
Returns empty string on failure or raises exceptions.

RSA can only decrypt data if it's <= length of key.

79.22.19 RSAPublicEncrypt(data as string, PublicKey as string, padding as Integer = 1, Password as string = "") as String

MBS Encryption Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts data using public key.
Example:

```
// encrypt with public, decrypt with private key

dim f1 as FolderItem = GetFolderItem("test.pem")
dim b1 as BinaryStream = BinaryStream.Open(f1)
dim PrivKey as string = B1.Read(b1.Length)

dim f2 as FolderItem = GetFolderItem("test.pub")
dim b2 as BinaryStream = BinaryStream.Open(f2)
dim PubKey as string = B2.Read(b2.Length)

dim UnencryptedData as string = "Hello World. This is just a test."
dim EncryptedData as string = OpenSSLMBS.RSAPublicEncrypt(UnencryptedData, PubKey)
dim decryptedData as string = OpenSSLMBS.RSAPrivateDecrypt(EncryptedData, PrivKey)

Break // check in debugger
```

Notes:

See kPadding constants for Padding parameter.
Password is optional for decrypting encrypted keys.
Returns empty string on failure or raises exceptions.

RSA can only encrypt data if it's <= length of key.

79.22.20 SignData(data as string, key as string, Password as string = "") as string

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Signs a piece of data with a given private key.
Example:

```
dim data as string // some data
dim test as string // the private key PEM file content
dim Signature as string = OpenSSLMBS.SignData(data, test)
msgbox EncodeHex(Signature)
```

Notes:

Returns signature. Use EncodeHex or EncodeBase64 to make a text representation.

Internally we make a SHA1 hash of the data, open the private RSA key and do a RSA sign operation. We return the raw key as a string bytes.
On any error, we return an empty string.
Optional you can pass a password to read password protected keys.
See also:

- 79.22.21 SignData(data as string, key as string, Password as string = "", Algorithm as Integer) as string 15725

79.22.21 SignData(data as string, key as string, Password as string = "", Algorithm as Integer) as string

MBS Encryption Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Signs a piece of data with a given private key.
Example:

```
dim test_pem as string = ReadFile("test.pem")
dim test_pub as string = ReadFile("test.pub")
dim data as string = ReadFile("Create Keys.rtf") // some data file
dim signature as string

// create signature

Signature = OpenSSLMBS.SignData(data, test_pem, OpenSSLMBS.kAlgorithmSHA512)
if Signature = "" then
// failed
break
end if

// verify with private key
dim r1 as Boolean = OpenSSLMBS.VerifyData(data, signature, test_pem, OpenSSLMBS.kAlgorithmSHA256)

// verify with public key
dim r2 as Boolean = OpenSSLMBS.VerifyData(data, signature, test_pub, OpenSSLMBS.kAlgorithmSHA256)
```

Notes:

Returns signature. Use EncodeHex or EncodeBase64 to make a text representation.

Internally we make a hash of the data with given algorithm, open the private RSA key and do a RSA sign operation. We return the raw signature as a string bytes.
On any error, we return an empty string.
Optional you can pass a password to read password protected keys.
See also:

- 79.22.20 SignData(data as string, key as string, Password as string = "") as string 15724

79.22.22 SMimePKCS7Decrypt(InputData as string, Certificate as X509MBS, SignKey as PKeyMBS) as String

MBS Encryption Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrypts S/Mime PKCS# 7 encrypted data.
Notes:

Raises nil object exception if certificate or key is nil.
Returns empty text on error.

79.22.23 SMimePKCS7Encrypt(InputData as string, Certificate as X509MBS) as String

MBS Encryption Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts data with S/Mime PKCS# 7.
Notes:

Raises nil object exception if certificate is nil.
Returns empty text on error.

79.22.24 SMimePKCS7Sign(InputData as string, Certificate as X509MBS, SignKey as PKeyMBS) as String

MBS Encryption Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Signs data with S/Mime PKCS# 7.
Notes:

Raises nil object exception if certificate or key is nil.
Returns empty text on error.

79.22.25 SMimePKCS7Verify(InputData as string, Certificate as X509MBS) as String

MBS Encryption Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Verifies S/Mime PKCS# 7 signature.
Notes:

Raises nil object exception if certificate is nil.
Returns empty text on error.

79.22.26 VerifyData(data as string, Signature as string, Key as string, Password as string = "") as boolean

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Verifies a signature with given data and public key.
Notes:

Key can be the public or private key, but of course normally you use the public key.
Data is the raw data to compare agains. A SHA1 hash is performed and verified with the signature.
Signature must be the string returned like from SignData function. If you used EncodeHex on it, you now need to do DecodeHex.
Returns true if signature is valid and false on any other error.
Optional you can pass a password to read password protected keys.
See also:

- 79.22.27 VerifyData(data as string, Signature as string, Key as string, Password as string = "", Algorithm as Integer) as boolean 15727

79.22.27 VerifyData(data as string, Signature as string, Key as string, Password as string = "", Algorithm as Integer) as boolean

MBS Encryption Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Verifies a signature with given data and public key.
Example:

```
dim test_pem as string = ReadFile("test.pem")
dim test_pub as string = ReadFile("test.pub")
dim data as string = ReadFile("Create Keys.rtf") // some data file
dim signature as string

// create signature

Signature = OpenSSLMBS.SignData(data, test_pem, OpenSSLMBS.kAlgorithmSHA512)
```

```
if Signature = "" then
// failed
break
end if

// verify with private key
dim r1 as Boolean = OpenSSLMBS.VerifyData(data, signature, test_pem, OpenSSLMBS.kAlgorithmSHA512)

// verify with public key
dim r2 as Boolean = OpenSSLMBS.VerifyData(data, signature, test_pub, OpenSSLMBS.kAlgorithmSHA512)
```

Notes:

Key can be the public or private key, but of course normally you use the public key.
Data is the raw data to compare agains. A hash is performed with given algorithm and verified with the signature.
Signature must be the string returned like from SignData function. If you used EncodeHex on it, you now need to do DecodeHex.
Returns true if signature is valid and false on any other error.
Optional you can pass a password to read password protected keys.
See also:

- 79.22.26 VerifyData(data as string, Signature as string, Key as string, Password as string = "") as boolean 15727

79.22.28 Constants

79.22.29 kAlgorithmSHA1 = 1

MBS Encryption Plugin, Plugin Version: 16.0.

Function: One of the hash algorithms.
Notes: SHA 1.

79.22.30 kAlgorithmSHA224 = 2

MBS Encryption Plugin, Plugin Version: 16.0.

Function: One of the hash algorithms.
Notes: SHA 2 with 224bit.

79.22.31 kAlgorithmSHA256 = 3

MBS Encryption Plugin, Plugin Version: 16.0.

Function: One of the hash algorithms.
Notes: SHA 2 with 256bit.

79.22.32 kAlgorithmSHA384 = 4

MBS Encryption Plugin, Plugin Version: 16.0.

Function: One of the hash algorithms.
Notes: SHA 2 with 384bit.

79.22.33 kAlgorithmSHA512 = 5

MBS Encryption Plugin, Plugin Version: 16.0.

Function: One of the hash algorithms.
Notes: SHA 2 with 512bit.

79.22.34 kPaddingNone = 3

MBS Encryption Plugin, Plugin Version: 16.2.

Function: One of the padding options for RSA encryption.
Notes: Raw RSA encryption. This mode should only be used to implement cryptographically sound padding modes in the application code. Encrypting user data directly with RSA is insecure.

79.22.35 kPaddingPKCS1 = 1

MBS Encryption Plugin, Plugin Version: 16.2.

Function: One of the padding options for RSA encryption.
Notes: PKCS # 1 v1.5 padding. This currently is the most widely used mode.

79.22.36 kPaddingPKCS1OAEP = 4

MBS Encryption Plugin, Plugin Version: 16.2.

Function: One of the padding options for RSA encryption.
Notes: EME-OAEP as defined in PKCS # 1 v2.0 with SHA-1, MGF1 and an empty encoding parameter. This mode is recommended for all new applications.

79.22.37 kPaddingSSLv23 = 2

MBS Encryption Plugin, Plugin Version: 16.2.

Function: One of the padding options for RSA encryption.
Notes: PKCS # 1 v1.5 padding with an SSL-specific modification that denotes that the server is SSL3 capable.

79.22.38 kPaddingX931 = 5

MBS Encryption Plugin, Plugin Version: 16.2.

Function: One of the padding options for RSA encryption.
Notes: X931 padding.

79.23 module PassSignerMBS

79.23.1 module PassSignerMBS

MBS MacExtras Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: The module to sign iOS passes from a Mac app.

79.23.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.1pr7

79.23.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.1pr7

79.23.4 Methods

79.23.5 signPass(Pass as folderitem, CertSuffix as String, Output as folderitem, Zip as boolean = true) as boolean

MBS MacExtras Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Sign a pass.
Notes:

Pass: Input folder with pass files.
CertSuffix: The certificate suffix.
Output: Where to store the new pass.
Zip: If true, we do the last step to zip the pass.
Returns true if signed or false if failed.

79.23.6 verifyPassSignature(pass as folderitem) as Boolean

MBS MacExtras Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Verify a pass.
Notes:

Pass must point to the pass file (a zip archive).
Returns true if verified and false if failed.

79.24 class PKeyMBS

79.24.1 class PKeyMBS

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a public/private key.
Notes:

Currently this class only implements a part of the PKey functionality of OpenSSL. If needed, we could add more.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

79.24.8 Methods

79.24.9 Constructor

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.
Notes:

Creates a new empty key.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

79.24.10 Copy as PKeyMBS

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the key.

79.24.11 Open(Data as MemoryBlock) as PKeyMBS

MBS Encryption Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a private or public key.
Notes: Returns key or nil in case of error.
See also:

- 79.24.12 Open(Data as String) as PKeyMBS 15734

79.24.12 Open(Data as String) as PKeyMBS

MBS Encryption Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a private or public key.
Notes: Returns key or nil in case of error.
See also:

- 79.24.11 Open(Data as MemoryBlock) as PKeyMBS 15733

79.24.13 PrivateKeyData as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The key as binary representation.
Notes: You can write this to a pem file.

79.24.14 PublicKeyData as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The key as binary representation.
Notes: You can write this to a pem file.

79.24.15 Properties

79.24.16 Bits as Integer

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of bits of key.
Notes: (Read only property)

79.24.17 DescriptionParams as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The description of the parameters.
Notes:

This is only for human to read.
(Read only property)

79.24.18 DescriptionPrivateKey as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The description of private/public key.
Notes:

If no private key is there, you only get the public key part here.
This is only for human to read.
(Read only property)

79.24.19 DescriptionPublicKey as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The description of public key.
Notes:

This is only for human to read.
(Read only property)

79.24.20 Handle as Integer

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle to the key.
Notes: (Read and Write property)

79.24.21 ID as Integer

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The ID (type) of the key.
Notes: (Read only property)

79.24.22 PrivateKey as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts the private key.
Notes:

This is the binary representation.
(Read only property)

79.24.23 PublicKey as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts the public key.
Notes:

This is the binary representation.
(Read only property)

79.24.24 Size as Integer

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of the key in bytes.
Notes: (Read only property)

79.24.25 Type as Integer

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of key.
Notes: (Read only property)

79.24.26 TypeString as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of key as string.
Notes:

EC, DSA, RSA or DH.
(Read only property)

79.25 class RC4MBS

79.25.1 class RC4MBS

MBS Encryption Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: An implementation of the RC4 algorithem.
Example:

```
dim r as RC4MBS

// Encrypt:
r = new RC4MBS("Key")

dim OriginalData as string = ConvertEncoding("Hello World!", encodings.UTF8)
dim EncryptedData as string = r.Crypt(OriginalData)
MsgBox EncodeHex(EncryptedData)

// Same for decrypt:
r = new RC4MBS("Key")

dim UnencryptedData as string = r.Crypt(EncryptedData)
UnencryptedData = DefineEncoding(UnencryptedData, encodings.UTF8)
MsgBox UnencryptedData
```

Notes:

The source in RB is in the examples folder (see Crypto 1.5 via RB). This implementation inside the plugin is only to make the calculation faster.
In case RS will improve RB more to produce faster code, the plugin may be no longer needed.

79.25.2 Methods

79.25.3 Constructor(key as MemoryBlock)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the class with the given key.
See also:

- 79.25.4 Constructor(key as string) 15738

79.25.4 Constructor(key as string)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the class with the given key.
Example:

```
dim r as new RC4MBS("MyKey")
dim s as string = r.Crypt("MyData")

MsgBox EncodeHex(s)
```

Notes: Please make sure the key has right text encoding to avoid unexpected results.
See also:

- 79.25.3 Constructor(key as MemoryBlock) 15737

79.25.5 Crypt(data as Memoryblock) as Memoryblock

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encryptes or decryptes the given Memoryblock.
See also:

- 79.25.6 Crypt(data as string) as string 15738

79.25.6 Crypt(data as string) as string

MBS Encryption Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encryptes or decryptes the given string.
Example:

```
dim r as RC4MBS

// Encrypt:
r = new RC4MBS("Key")

dim OriginalData as string = ConvertEncoding("Hello World!", encodings.UTF8)
dim EncryptedData as string = r.Crypt(OriginalData)
MsgBox EncodeHex(EncryptedData)

// Same for decrypt:
r = new RC4MBS("Key")

dim UnencryptedData as string = r.Crypt(EncryptedData)
```

```
UnencryptedData = DefineEncoding(UnencryptedData, encodings.UTF8)
MsgBox UnencryptedData
```

Notes:

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.
See also:

- 79.25.5 Crypt(data as Memoryblock) as Memoryblock 15738

79.26 class RC5MBS

79.26.1 class RC5MBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for RC5 encryption.
Example:

```
dim r as RC5MBS

// Encrypt:
r = new RC5MBS("Key")

dim iv as MemoryBlock
dim num as Integer
dim OriginalData as string = ConvertEncoding("Hello World!", encodings.UTF8)
dim EncryptedData as string = r.encryptCFB64(OriginalData, iv, num)
MsgBox EncodeHex(EncryptedData)

// Same for decrypt:
r = new RC5MBS("Key")

iv = nil
num = 0
dim UnencryptedData as string = r.decryptCFB64(EncryptedData, iv, num)
UnencryptedData = DefineEncoding(UnencryptedData, encodings.UTF8)
MsgBox UnencryptedData
```

Notes:

Do use to read existing RC5 encrypted things.
New projects may better use a better encryption.

79.26.2 Methods

79.26.3 Constructor(key as MemoryBlock, rounds as Integer = 16)

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Example:

```
dim r as new RC5MBS("MyKey")
dim s as string = r.Encrypt("MyData")
```

MsgBox EncodeHex(s)

See also:

- 79.26.4 Constructor(key as string, rounds as Integer = 16) 15741

79.26.4 Constructor(key as string, rounds as Integer = 16)

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Example:

```
dim r as new RC5MBS("MyKey")
dim s as string = r.Encrypt("MyData")

MsgBox EncodeHex(s)
```

Notes: Please make sure the key has right text encoding to avoid unexpected results.
See also:

- 79.26.3 Constructor(key as MemoryBlock, rounds as Integer = 16) 15740

79.26.5 decrypt(data as Memoryblock) as Memoryblock

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrypts some data.
Notes: Low level variant without any block mode.
See also:

- 79.26.6 decrypt(data as string) as string 15741

79.26.6 decrypt(data as string) as string

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrypts some data.
Notes:

Please make sure the key has right text encoding to avoid unexpected results.
Low level variant without any block mode.
See also:

- 79.26.5 decrypt(data as Memoryblock) as Memoryblock 15741

79.26.7 decryptCBC(data as Memoryblock, iv as memoryblock = nil) as Memoryblock

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrypts some data.
Notes: With Cipher Block Chaining mode.
See also:

- 79.26.8 decryptCBC(data as string, iv as memoryblock = nil) as string 15742

79.26.8 decryptCBC(data as string, iv as memoryblock = nil) as string

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrypts some data.
Notes:

Please make sure the key has right text encoding to avoid unexpected results.
With Cipher Block Chaining mode.
See also:

- 79.26.7 decryptCBC(data as Memoryblock, iv as memoryblock = nil) as Memoryblock 15742

79.26.9 decryptCFB64(data as Memoryblock, iv as memoryblock, byref num as Integer) as Memoryblock

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrypts some data.
Example:

```
dim r as RC5MBS

// Encrypt:
r = new RC5MBS("Key")

dim iv as MemoryBlock
dim num as Integer
dim OriginalData as string = ConvertEncoding("Hello World!", encodings.UTF8)
dim EncryptedData as string = r.encryptCFB64(OriginalData, iv, num)
MsgBox EncodeHex(EncryptedData)

// Same for decrypt:
```

```
r = new RC5MBS("Key")

iv = nil
num = 0
dim UnencryptedData as string = r.decryptCFB64(EncryptedData, iv, num)
UnencryptedData = DefineEncoding(UnencryptedData, encodings.UTF8)
MsgBox UnencryptedData
```

Notes: with Cipher Feedback mode.
See also:

- 79.26.10 decryptCFB64(data as string, iv as memoryblock, byref num as Integer) as string 15743

79.26.10 decryptCFB64(data as string, iv as memoryblock, byref num as Integer) as string

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrypts some data.
Notes:

Please make sure the key has right text encoding to avoid unexpected results.
with Cipher Feedback mode.
See also:

- 79.26.9 decryptCFB64(data as Memoryblock, iv as memoryblock, byref num as Integer) as Memoryblock 15742

79.26.11 encrypt(data as Memoryblock) as Memoryblock

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts some data.
Notes: Low level variant without any block mode.
See also:

- 79.26.12 encrypt(data as string) as string 15743

79.26.12 encrypt(data as string) as string

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts some data.
Notes:

Please make sure the key has right text encoding to avoid unexpected results.
Low level variant without any block mode.
See also:

- 79.26.11 encrypt(data as Memoryblock) as Memoryblock 15743

79.26.13 encryptCBC(data as Memoryblock, iv as memoryblock = nil) as Memoryblock

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts some data.
Notes: With Cipher Block Chaining mode.
See also:

- 79.26.14 encryptCBC(data as string, iv as memoryblock = nil) as string 15744

79.26.14 encryptCBC(data as string, iv as memoryblock = nil) as string

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts some data.
Notes:

Please make sure the key has right text encoding to avoid unexpected results.
With Cipher Block Chaining mode.
See also:

- 79.26.13 encryptCBC(data as Memoryblock, iv as memoryblock = nil) as Memoryblock 15744

79.26.15 encryptCFB64(data as Memoryblock, iv as memoryblock, byref num as Integer) as Memoryblock

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts some data.
Example:

```
dim r as RC5MBS

// Encrypt:
r = new RC5MBS("Key")

dim iv as MemoryBlock
dim num as Integer
dim OriginalData as string = ConvertEncoding("Hello World!", encodings.UTF8)
```

```
dim EncryptedData as string = r.encryptCFB64(OriginalData, iv, num)
MsgBox EncodeHex(EncryptedData)

// Same for decrypt:
r = new RC5MBS("Key")

iv = nil
num = 0
dim UnencryptedData as string = r.decryptCFB64(EncryptedData, iv, num)
UnencryptedData = DefineEncoding(UnencryptedData, encodings.UTF8)
MsgBox UnencryptedData
```

Notes: with Cipher Feedback mode.
See also:

- 79.26.16 encryptCFB64(data as string, iv as memoryblock, byref num as Integer) as string 15745

79.26.16 encryptCFB64(data as string, iv as memoryblock, byref num as Integer) as string

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts some data.
Notes:

Please make sure the key has right text encoding to avoid unexpected results.
with Cipher Feedback mode.
See also:

- 79.26.15 encryptCFB64(data as Memoryblock, iv as memoryblock, byref num as Integer) as Memoryblock 15744

79.26.17 encryptOFB64(data as Memoryblock, iv as memoryblock, byref num as Integer) as Memoryblock

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts some data.
Notes: with Output Feedback mode.
See also:

- 79.26.18 encryptOFB64(data as string, iv as memoryblock, byref num as Integer) as string 15746

79.26.18 encryptOFB64(data as string, iv as memoryblock, byref num as Integer) as string

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts some data.
Notes:

Please make sure the key has right text encoding to avoid unexpected results.
with Output Feedback mode.
See also:

- 79.26.17 encryptOFB64(data as Memoryblock, iv as memoryblock, byref num as Integer) as Memoryblock 15745

79.27 class SHA1MBS

79.27.1 class SHA1MBS

MBS Encryption Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: An implementation of the SHA1 algorithem to calculate hash values.
Example:

```
dim f as FolderItem
dim b as BinaryStream
dim s as string
dim m as new SHA1MBS

// process file part by part (big files)

f=SpecialFolder.Desktop.Child("test.jpg")
b=f.OpenAsBinaryFile(False)

while not b.eof
s=b.Read(1000000)
m.Add s

wend

MsgBox EncodingToHexMBS(m.Result)+" using plugin with SHA1MBS"
```

Notes:

The source in RB is in the examples folder (see Crypto 1.5 via RB). This implementation inside the plugin is only to make the calculation faster.
In case RS will improve RB more to produce faster code, the plugin may be no longer needed.

79.27.6 Methods

79.27.7 Add(data as string)

MBS Encryption Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds more input bytes to the current hash.
Example:

```
dim s as new SHA1MBS
s.Reset
s.Add "Hello"
s.Add "World"
dim e as string=s.Result
```

Notes: Lasterror is set.

79.27.8 Hash(data as string) as string

MBS Encryption Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the hash string for the given key.
Example:

MsgBox EncodeHex(SHA1MBS.Hash("Hello World"))

Notes:

The string returned is 20 bytes long (if successfull) and has the 5 integer properties stored inside (in big endian format) which make up the key.
Does change the current hash value stored in the class itself.

79.27.9 HashFile(file as FolderItem, Hex as boolean = true) as string

MBS Encryption Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates hash from whole file.
Notes:

Plugin will start a preemptive thread to read in file and process all data in chunks.
Returns hash on success or empty string on failure. May raise OutOfMemoryException or IOException.
This function works best if called from a thread.
If hex is true, the result is encoded as hex string.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

79.27.10 HashText(data as string) as string

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the hash string for the given key.
Example:

MsgBox EncodeHex(SHA1MBS.Hash("Hello World"))

Notes:

The string returned is 20 bytes long (if successfull) and has the 5 integer properties stored inside (in big endian format) which make up the key.
Does change the current hash value stored in the class itself.
Returns the digest as text string with hexadecimal digits.

79.27.11 HMAC(key as string, data as string) as string

MBS Encryption Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the a specific HASH based on the key and the data string.
Example:

```
Function HMAC(key as string, data as string) As string
// Implementation by Matthijs van Duin
# pragma DisableBackgroundTasks

dim ikey, okey, k as string
dim temp, i as Integer

if (lenB(key) >64) then
k = Hash(key)
else
k = key
end if

for i = 1 to 64
temp = ascB(midB(k, i, 1))
ikey = ikey + chrB(BitwiseXor(temp, & h36))
okey = okey + chrB(BitwiseXor(temp, & h5C))
next

return Hash(okey + Hash(ikey + data))
End Function

// test code:

// de7c9b85b8b78aa6bc8a7a36f70a90701c9db4d9
dim s as string = SHA1MBS.HMAC("key", "The quick brown fox jumps over the lazy dog")
MsgBox EncodeHex(s)

// fbdb1d1b18aa6c08324b7d64b71fb76370690e1d
s = SHA1MBS.HMAC("", "")
MsgBox EncodeHex(s)
```

Notes: Above is the source code of this function.

79.27.12 Reset

MBS Encryption Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resets the current hash value.

79.27.13 Result as string

MBS Encryption Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current hash value.
Notes:

Returns "" on any error.
Lasterror is set.

79.27.14 ResultText as string

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current hash value.
Notes:

Returns the digest as text string with hexadecimal digits.
Returns "" on any error.
Lasterror is set.

79.28 class SHA256MBS

79.28.1 class SHA256MBS

MBS Encryption Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to calculate SHA-256 hashes.
Example:

```
dim s3 as string = SHA256MBS.Hash("")
dim e3 as string = EncodingToHexMBS(s3)
dim e4 as string = SHA256MBS.HashText("")

if e3 <>"e3b0c44298fc1c149afbf4c8996fb92427ae41e4649b934ca495991b7852b855" then
break
elseif e3 <>e4 then
break
else
MsgBox "OK"
end if
```

79.28.4 Methods

79.28.5 Add(data as string)

MBS Encryption Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds data to the hash calculation.
Example:

```
dim s as new SHA256MBS

s.Add "Franz jagt im komplett"
s.Add " verwahrlosten Taxi quer"
s.Add " durch Bayern"

dim r as string = s.ResultText
if r = "d32b568cd1b96d459e7291ebf4b25d007f275c9f13149beeb782fac0716613f8" then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes: Using this method you can process huge amounts of data by passing them in small portions.

79.28.6 Hash(data as string) as string

MBS Encryption Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convenience function to quickly create a hash for a given string.
Example:

```
dim s2 as string = SHA256MBS.Hash("Frank jagt im komplett verwahrlosten Taxi quer durch Bayern")
dim e2 as string = EncodingToHexMBS(s2)

if e2 = "78206a866dbb2bf017d8e34274aed01a8ce405b69d45db30bafa00f5eeed7d5e" then
Msgbox "OK"
else
MsgBox "Failed"
```

```
end if
```

Notes:

Returns the digest as binary string.
Before you show it to the user, pass it through EncodingToHexMBS.

79.28.7 HashFile(file as FolderItem, Hex as boolean = true) as string

MBS Encryption Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates hash from whole file.
Notes:

Plugin will start a preemptive thread to read in file and process all data in chunks.
Returns hash on success or empty string on failure. May raise OutOfMemoryException or IOException.
This function works best if called from a thread.
If hex is true, the result is encoded as hex string.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

79.28.8 HashText(data as string) as string

MBS Encryption Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convenience function to quickly create a hash for a given string.
Example:

```
dim s1 as string = SHA256MBS.HashText("Franz jagt im komplett verwahrlosten Taxi quer durch Bayern")

if s1 = "d32b568cd1b96d459e7291ebf4b25d007f275c9f13149beeb782fac0716613f8" then
Msgbox "OK"
else
MsgBox "Failed"
end if
```

Notes: Returns the digest as text string with hexadecimal digits.

79.28.9 HMAC(key as string, data as string) as string

MBS Encryption Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the a specific HASH based on the key and the data string.

79.28.10 Reset

MBS Encryption Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resets the hash class so you can reuse it for the SHA-256 hash.

79.28.11 Result as string

MBS Encryption Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The final hash.
Notes:

Returns the digest as binary string.
Before you show it to the user, pass it through EncodingToHexMBS.

79.28.12 ResultText as string

MBS Encryption Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The final hash.
Notes: Returns the digest as text string with hexadecimal digits.

79.29 class SHA3MBS

79.29.1 class SHA3MBS

MBS Encryption Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to calculate SHA-3 hashes.
Example:

```
dim t as string = "The quick brown fox jumps over the lazy dog"
dim s as new SHA3MBS(1088, 512)

s.Add t
dim h as string = s.ResultText(32)

// shows 4d741b6f1eb29cb2a9b9911c82f56fa8d73b04959d3d9d222895df6c0b28aa15
MsgBox h
```

79.29.4 Methods

79.29.5 Add(data as memoryblock)

MBS Encryption Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds data to the hash calculation.
Notes: Using this method you can process huge amounts of data by passing them in small portions.
See also:

- 79.29.6 Add(data as string)

79.29.6 Add(data as string)

MBS Encryption Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds data to the hash calculation.
Notes: Using this method you can process huge amounts of data by passing them in small portions.
See also:

- 79.29.5 Add(data as memoryblock) 15756

79.29.7 Constructor(Rate as UInt32, capacity as UInt32)

MBS Encryption Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Example:

```
dim s as new SHA3MBS(1088, 512) // 256 bit

s.Add "Compute Me"
s.Add "Me too"

dim h as string = s.ResultText(256/8)

Break
```

Notes: See example project or SHA-3 documentation for useful values for Rate and Capacity.

79.29.8 Hash(data as string, Rate as UInt32, capacity as UInt32, outputLength as Integer) as string

MBS Encryption Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convenience function to quickly create a hash for a given string.
Example:

```
dim t as string = "The quick brown fox jumps over the lazy dog"
dim h as string = SHA3MBS.Hash(t, 1088, 512, 32)

// encode as text to display
h = EncodeHex(h)
// shows 4d741b6f1eb29cb2a9b9911c82f56fa8d73b04959d3d9d222895df6c0b28aa15
MsgBox h
```

Notes:

Returns the digest as text string with hexadecimal digits.
Or empty string in case of any error.
Before you show it to the user, pass it through EncodingToHexMBS.

79.29.9 HashText(data as string, Rate as UInt32, capacity as UInt32, outputLength as Integer) as string

MBS Encryption Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convenience function to quickly create a hash for a given string.
Example:

```
dim t as string = "The quick brown fox jumps over the lazy dog"
dim h as string = SHA3MBS.HashText(t, 1088, 512, 32)

// shows 4d741b6f1eb29cb2a9b9911c82f56fa8d73b04959d3d9d222895df6c0b28aa15
MsgBox h
```

Notes:

Returns the digest as text string with hexadecimal digits.
Or empty string in case of any error.

79.29.10 Reset(Rate as UInt32, capacity as UInt32)

MBS Encryption Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resets the hash class so you can reuse it for another SHA-3 hash.

79.29.11 Result(outputLength as Integer) as string

MBS Encryption Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The final hash in the requested length.
Notes:

Returns the digest as binary string.
Before you show it to the user, pass it through EncodingToHexMBS.

79.29.12 ResultText(outputLength as Integer) as string

MBS Encryption Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The final hash in the requested length.
Example:

```
dim t as string = "The quick brown fox jumps over the lazy dog"
dim s as new SHA3MBS(1088, 512)

s.Add t
dim h as string = s.ResultText(32)

// shows 4d741b6f1eb29cb2a9b9911c82f56fa8d73b04959d3d9d222895df6c0b28aa15
MsgBox h
```

Notes: Returns the digest as text string with hexadecimal digits.

79.30 class SHA512MBS

79.30.1 class SHA512MBS

MBS Encryption Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to calculate SHA-512 hashes.
Example:

```
dim s3 as string = SHA512MBS.Hash("")
dim e3 as string = EncodingToHexMBS(s3)

if e3 = "CF83E1357EEFB8BDF1542850D66D8007D620E4050B5715DC83F4A921D36CE9CE47D0D13C5D85F2B0FF8318D2
then
Msgbox "OK"
else
MsgBox "Failed"
end if
```

79.30.4 Methods

79.30.5 Add(data as string)

MBS Encryption Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds data to the hash calculation.
Example:

```
dim s as new SHA512MBS

s.Add "Franz jagt im komplett"
s.Add " verwahrlosten Taxi quer"
s.Add " durch Bayern"

dim r as string = s.ResultText
if r = "AF9ED2DE700433B803240A552B41B5A472A6EF3FE1431A722B2063C75E9F07451F67A28E37D09CDE769424C96A
then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes: Using this method you can process huge amounts of data by passing them in small portions.

79.30.6 Hash(data as string) as string

MBS Encryption Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convenience function to quickly create a hash for a given string.
Example:

```
dim s2 as string = SHA512MBS.Hash("Frank jagt im komplett verwahrlosten Taxi quer durch Bayern")
dim e2 as string = EncodingToHexMBS(s2)

if e2 = "90B30EF9902AE4C4C691D2D78C2F8FA0AA785AFBC5545286B310F68E91DD2299C84A2484F0419FC5EAA7DE5
then
Msgbox "OK"
else
```

```
MsgBox "Failed"
end if
```

Notes:

Returns the digest as binary string.
Before you show it to the user, pass it through EncodingToHexMBS.

79.30.7 HashFile(file as FolderItem, Hex as boolean = true) as string

MBS Encryption Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates hash from whole file.
Notes:

Plugin will start a preemptive thread to read in file and process all data in chunks.
Returns hash on success or empty string on failure. May raise OutOfMemoryException or IOException.
This function works best if called from a thread.
If hex is true, the result is encoded as hex string.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

79.30.8 HashText(data as string) as string

MBS Encryption Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convenience function to quickly create a hash for a given string.
Example:

```
dim s1 as string = SHA512MBS.HashText("Franz jagt im komplett verwahrlosten Taxi quer durch Bayern")

if s1 = "AF9ED2DE700433B803240A552B41B5A472A6EF3FE1431A722B2063C75E9F07451F67A28E37D09CDE769424C96A
then
Msgbox "OK"
else
MsgBox "Failed"
end if
```

Notes: Returns the digest as text string with hexadecimal digits.

79.30.9 HMAC(key as string, data as string) as string

MBS Encryption Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the a specific HASH based on the key and the data string.

79.30.10 Reset

MBS Encryption Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resets the hash class so you can reuse it for the SHA-256 hash.

79.30.11 Result as string

MBS Encryption Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The final hash.
Notes:

Returns the digest as binary string.
Before you show it to the user, pass it through EncodingToHexMBS.

79.30.12 ResultText as string

MBS Encryption Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The final hash.
Notes: Returns the digest as text string with hexadecimal digits.

79.31 module TwofishMBS

79.31.1 module TwofishMBS

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The module for Twofish encryption.
Notes: You can use this class for compatibility to PHP.

79.31.8 Methods

79.31.9 DecryptCBC(Key as MemoryBlock, InputData as MemoryBlock, IV as MemoryBlock) as MemoryBlock

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrypts with CBC mode and memoryblocks.
Example:

```
// key is 16 bytes, so 128 bit
dim key as MemoryBlock = "Hello World 1234"
dim IV as MemoryBlock = "1234567812345678" // 16 byte IV

// some UTF-8 input
dim InputText as string = "Just a test. √§√√º"
dim InputData as MemoryBlock = ConvertEncoding(InputText, encodings.UTF8)

dim EncryptedData as MemoryBlock = TwofishMBS.EncryptCBC(key, InputData, IV)
dim DecryptedData as MemoryBlock = TwofishMBS.DecryptCBC(key, encryptedData, IV)

// restore encoding
dim Decryptedtext as String = DefineEncoding(DecryptedData, encodings.UTF8)

// remove training zeros
dim p as Integer = instrb(Decryptedtext, chrb(0))
if p >0 then
Decryptedtext = leftb(Decryptedtext, p-1)
end if

// check
if Decryptedtext = InputText then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes:

IV can be nil for using zeros.
IV size should be 16 bytes.
Key length should be 16 for 128bit, 24 for 192 bit or 32 for 256 bit.
InputData should be aligned to 16byte size. Else the plugin will fill up with zero bytes.
See also:

- 79.31.10 DecryptCBC(Key as String, InputData as String, IV as String) as String

79.31.10 DecryptCBC(Key as String, InputData as String, IV as String) as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrypts with CBC mode and strings.
Example:

```
// key is 16 bytes, so 128 bit
dim key as String = "Hello World 1234"
dim IV as String = "1234567812345678" // 16 byte IV

// some UTF-8 input
dim InputText as string = "Just a test. √§√√º"
dim InputData as String = ConvertEncoding(InputText, encodings.UTF8)

dim EncryptedData as String = TwofishMBS.EncryptCBC(key, InputData, IV)
dim DecryptedData as String = TwofishMBS.DecryptCBC(key, encryptedData, IV)

// restore encoding
dim Decryptedtext as String = DefineEncoding(DecryptedData, encodings.UTF8)

// remove training zeros
dim p as Integer = instrb(Decryptedtext, chrb(0))
if p >0 then
Decryptedtext = leftb(Decryptedtext, p-1)
end if

// check
if Decryptedtext = InputText then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes:

IV can be empty for using zeros.
IV size should be 16 bytes.
Key length should be 16 for 128bit, 24 for 192 bit or 32 for 256 bit.
InputData should be aligned to 16byte size. Else the plugin will fill up with zero bytes.
See also:

- 79.31.9 DecryptCBC(Key as MemoryBlock, InputData as MemoryBlock, IV as MemoryBlock) as MemoryBlock

79.31.11 DecryptECB(Key as MemoryBlock, InputData as MemoryBlock) as MemoryBlock

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrypts with ECB mode and memoryblocks.
Example:

```
// key is 16 bytes, so 128 bit
dim key as MemoryBlock = "Hello World 1234"

// some UTF-8 input
dim InputText as string = "Just a test. √§√√º"
dim InputData as MemoryBlock = ConvertEncoding(InputText, encodings.UTF8)

dim EncryptedData as MemoryBlock = TwofishMBS.EncryptECB(key, InputData)
dim DecryptedData as MemoryBlock = TwofishMBS.DecryptECB(key, encryptedData)

// restore encoding
dim Decryptedtext as String = DefineEncoding(DecryptedData, encodings.UTF8)

// remove training zeros
dim p as Integer = instrb(Decryptedtext, chrb(0))
if p >0 then
Decryptedtext = leftb(Decryptedtext, p-1)
end if

// check
if Decryptedtext = InputText then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes:

Key length should be 16 for 128bit, 24 for 192 bit or 32 for 256 bit.
InputData should be aligned to 16byte size. Else the plugin will fill up with zero bytes.
See also:

- 79.31.12 DecryptECB(Key as String, InputData as String) as String 15767

79.31.12 DecryptECB(Key as String, InputData as String) as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrypts with ECB mode and strings.

Example:

```
// key is 16 bytes, so 128 bit
dim key as string = "Hello World 1234"

// some UTF-8 input
dim InputData as string = "Just a test. √§√√º"
InputData = ConvertEncoding(InputData, encodings.UTF8)

dim Encrypted as string = TwofishMBS.EncryptECB(key, InputData)
dim Decrypted as string = TwofishMBS.DecryptECB(key, encrypted)

// restore encoding
Decrypted = DefineEncoding(Decrypted, encodings.UTF8)

// remove training zeros
dim p as Integer = instrb(Decrypted, chrb(0))
if p >0 then
Decrypted = leftb(Decrypted, p-1)
end if

// check
if Decrypted = InputData then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes:

Key length should be 16 for 128bit, 24 for 192 bit or 32 for 256 bit.
InputData should be aligned to 16byte size. Else the plugin will fill up with zero bytes.
See also:

- 79.31.11 DecryptECB(Key as MemoryBlock, InputData as MemoryBlock) as MemoryBlock 15767

79.31.13 EncryptCBC(Key as MemoryBlock, InputData as MemoryBlock, IV as MemoryBlock) as MemoryBlock

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts with CBC mode and memoryblocks.
Example:

```
// key is 16 bytes, so 128 bit
dim key as MemoryBlock = "Hello World 1234"
dim IV as MemoryBlock = "1234567812345678" // 16 byte IV
```

```
// some UTF-8 input
dim InputText as string = "Just a test. √§√√º"
dim InputData as MemoryBlock = ConvertEncoding(InputText, encodings.UTF8)

dim EncryptedData as MemoryBlock = TwofishMBS.EncryptCBC(key, InputData, IV)
dim DecryptedData as MemoryBlock = TwofishMBS.DecryptCBC(key, encryptedData, IV)

// restore encoding
dim Decryptedtext as String = DefineEncoding(DecryptedData, encodings.UTF8)

// remove training zeros
dim p as Integer = instrb(Decryptedtext, chrb(0))
if p >0 then
Decryptedtext = leftb(Decryptedtext, p-1)
end if

// check
if Decryptedtext = InputText then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes:

IV can be nil for using zeros.
IV size should be 16 bytes.
Key length should be 16 for 128bit, 24 for 192 bit or 32 for 256 bit.
InputData should be aligned to 16byte size. Else the plugin will fill up with zero bytes.
See also:

- 79.31.14 EncryptCBC(Key as String, InputData as String, IV as String) as String 15769

79.31.14 EncryptCBC(Key as String, InputData as String, IV as String) as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts with CBC mode and string.
Example:

```
// key is 16 bytes, so 128 bit
dim key as String = "Hello World 1234"
dim IV as String = "1234567812345678" // 16 byte IV
```

```
// some UTF-8 input
dim InputText as string = "Just a test. √§√√º"
dim InputData as String = ConvertEncoding(InputText, encodings.UTF8)

dim EncryptedData as String = TwofishMBS.EncryptCBC(key, InputData, IV)
dim DecryptedData as String = TwofishMBS.DecryptCBC(key, encryptedData, IV)

// restore encoding
dim Decryptedtext as String = DefineEncoding(DecryptedData, encodings.UTF8)

// remove training zeros
dim p as Integer = instrb(Decryptedtext, chrb(0))
if p >0 then
Decryptedtext = leftb(Decryptedtext, p-1)
end if

// check
if Decryptedtext = InputText then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes:

IV can be empty for using zeros.
IV size should be 16 bytes.
Key length should be 16 for 128bit, 24 for 192 bit or 32 for 256 bit.
InputData should be aligned to 16byte size. Else the plugin will fill up with zero bytes.

79.31.15 EncryptECB(Key as MemoryBlock, InputData as MemoryBlock) as MemoryBlock

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts with ECB mode and memoryblocks.
Example:

```
// key is 16 bytes, so 128 bit
dim key as MemoryBlock = "Hello World 1234"

// some UTF-8 input
```

```
dim InputText as string = "Just a test. √§√√º"
dim InputData as MemoryBlock = ConvertEncoding(InputText, encodings.UTF8)

dim EncryptedData as MemoryBlock = TwofishMBS.EncryptECB(key, InputData)
dim DecryptedData as MemoryBlock = TwofishMBS.DecryptECB(key, encryptedData)

// restore encoding
dim Decryptedtext as String = DefineEncoding(DecryptedData, encodings.UTF8)

// remove training zeros
dim p as Integer = instrb(Decryptedtext, chrb(0))
if p >0 then
Decryptedtext = leftb(Decryptedtext, p-1)
end if

// check
if Decryptedtext = InputText then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes:

Key length should be 16 for 128bit, 24 for 192 bit or 32 for 256 bit.
InputData should be aligned to 16byte size. Else the plugin will fill up with zero bytes.
See also:

- 79.31.16 EncryptECB(Key as String, InputData as String) as String 15771

79.31.16 EncryptECB(Key as String, InputData as String) as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts with ECB mode and strings.
Example:

```
// key is 16 bytes, so 128 bit
dim key as string = "Hello World 1234"

// some UTF-8 input
dim InputData as string = "Just a test. √§√√º"
InputData = ConvertEncoding(InputData, encodings.UTF8)

dim Encrypted as string = TwofishMBS.EncryptECB(key, InputData)
dim Decrypted as string = TwofishMBS.DecryptECB(key, encrypted)
```

```
// restore encoding
Decrypted = DefineEncoding(Decrypted, encodings.UTF8)

// remove training zeros
dim p as Integer = instrb(Decrypted, chrb(0))
if p >0 then
Decrypted = leftb(Decrypted, p-1)
end if

// check
if Decrypted = InputData then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes:

Key length should be 16 for 128bit, 24 for 192 bit or 32 for 256 bit.
InputData should be aligned to 16byte size. Else the plugin will fill up with zero bytes.
See also:

- 79.31.15 EncryptECB(Key as MemoryBlock, InputData as MemoryBlock) as MemoryBlock 15770

79.32 class UUIDMBS

79.32.1 class UUIDMBS

MBS Util Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to create Universally Unique Identifier.
Example:

```
dim u as UUIDMBS

u=new UUIDMBS

MsgBox EncodingToHexMBS(u.ValueString)
```

Notes:

This class creates a 128 bit UUID (or UID or GUID) which is random.

On Mac OS X: Uses CoreFoundation system functions from Mac OS X 10.3.
On Linux: Uses unix system functions (libuuid).
On Windows: Uses UUID functions from RPC functions (Rpcrt4.dll).

If you need to validate a GUID or UUID, please check the Validate function.

79.32.4 Methods

79.32.5 randomUUID as UUIDMBS

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a random v4 GUID.
Example:

```
for i as Integer = 1 to 20
Listbox1.AddRow UUIDMBS.randomUUID.ValueFormattedString
next
```

Notes:

This is using random numbers.
It is unlikely, but possible to have duplicates.
The UUID function checks for that.

79.32.6 UUID as UUIDMBS

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new UUID with system functions.
Notes:

On Mac OS X: Uses CoreFoundation system functions from Mac OS X 10.3.
On Linux: Uses unix system functions (libuuid).
On Windows: Uses UUID functions from RPC functions (Rpcrt4.dll).

79.32.7 Validate(UUID as string, mode as Integer = 0, requiredVersion as Integer = 0) as string

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Validates the given UUID/GUID.
Example:

```
// wrong
dim w1 as string = UUIDMBS.Validate("hello") // wrong due to missing {
dim w2 as string = UUIDMBS.Validate("550e8400-z29b-11d4-a716-446655440000",1) // wrong with, with z
```

```
dim w3 as string = UUIDMBS.Validate(" { 550e8400-e29b-11d40716-446655440000 } ") // wrong with missing minus
dim w4 as string = UUIDMBS.Validate(" { 550e8400-e29b-11d4-a716-44665544000 } ") // wrong with being too short
dim w5 as string = UUIDMBS.Validate(" { 550e8400-e29b-11d4-a716-446655440000 } dssdsd",1) // wrong as it has extra chars on end
dim w6 as string = UUIDMBS.Validate("550e8400-e29b-11d4-a716-446655440000",1,4) // wrong as not version 4
dim w7 as string = UUIDMBS.Validate("6a12a4d5-e9e6-4568-ffcc-34c70b24a668",1,4) // wrong as not version 4

// okay
dim o1 as string = UUIDMBS.Validate("550e8400-e29b-11d4-a716-446655440000",1)
dim o2 as string = UUIDMBS.Validate(" { 550e8400-e29b-11d4-a716-446655440000 } ")
dim o3 as string = UUIDMBS.Validate("6a12a4d5-e9e6-4568-afcc-34c70b24a668", 1)
dim o4 as string = UUIDMBS.Validate("6a12a4d5-e9e6-4568-afcc-34c70b24a668", 3)
dim o5 as string = UUIDMBS.Validate(" { 550e8400-e29b-11d4-a716-446655440000 } ", 2)
dim o6 as string = UUIDMBS.Validate(" { 550e8400e29b11d4a716446655440000 } ", 2)
dim o7 as string = UUIDMBS.Validate(" { 550e8400-e29b-11d40716-446655440000 } ",4) // wrong with missing minus, but fixed
dim o8 as string = UUIDMBS.Validate("550e8400-e29b-11d40716-446655440000 } ",4) // wrong with missing { , but fixed
dim o9 as string = UUIDMBS.Validate("6a12a4d5-e9e6-4568-afcc-34c70b24a668", 4, 4) // is version 4
dim o10 as string = UUIDMBS.Validate("6a12a4d5-e9e6-1568-afcc-34c70b24a668", 4, 1) // is version 1
dim o11 as string = UUIDMBS.Validate(" { 550e8400-e29b-11d4-a716-446655440000 } dssdsd",1+4) // wrong as it has extra chars on end, but fixed

break // check in debugger
```

Notes:

If the UUID is valid, you get it back.
If the UUID is invalid, you get an empty string back.

Pass 1 in mode to not require braces around UUID. Pass 2 to ignore minus characters. Pass 3 to combine those two.
You can add 4 to have the GUID fixed a bit like adding braces and minus chars if missing.
The requiredVersion parameter can be 1 to 5 to indicate the required GUID version you want to have.

79.32.8 ValueFormattedString(WithBrackets as Boolean = true) as String

MBS Util Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The UUID as a 38 character formatted hex string.

Example:

```
dim u as new UUIDMBS
MsgBox u.ValueFormattedString
```

Notes:

example output: { D3ED4292-FC09-11DF-8AC5-7C6D628C4C29 }

Added WithBrackets parameter in version 22.1, so you can turn curly brackets off.

79.32.9 ValueHexString as String

MBS Util Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The UUID as a 32 character long hex string.
Example:

```
dim u as new UUIDMBS
MsgBox u.ValueHexString
```

Notes: example output: DCACAF4EFC0911DF92E37C6D628C4C29

79.32.10 ValueMemory as Memoryblock

MBS Util Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The UUID as a sixteen byte big memoryblock.

79.32.11 ValueString as String

MBS Util Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The UUID as a sixteen byte big binary string.
Example:

```
dim u as new UUIDMBS
MsgBox u.ValueString
```

Notes: This string is not for user display as it contains unreadable characters.

79.32.12 Properties

79.32.13 Lasterror as Integer

MBS Util Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Last error code.
Notes:

-1 is for failure, 0 for okay.
Windows or Mac OS error codes else.
(Read and Write property)

79.32.14 Valid as Boolean

MBS Util Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the constructor was able to create an UUID.
Notes: (Read and Write property)

79.33 class X509MBS

79.33.1 class X509MBS

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a X509 certificate.
Notes:

Currently this class only implements a part of the X509 functionality of OpenSSL. If needed, we could add more.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

79.33.8 Methods

79.33.9 CheckCertificates(rootCertificates() as X509MBS, certificate as X509MBS, intermediates() as X509MBS = nil) as Boolean

MBS Encryption Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Validates certificate agains root certificates and may use intermediates for it.
Notes:

Returns true if valid or false if not.

This function attempts to discover and validate a certificate chain based on parameters in context. The verification context, is constructed using given root certificates.

79.33.10 Constructor

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

79.33.11 Copy as X509MBS

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the certificate.

79.33.12 Data as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The data of the certificate.
Notes: You can write this to a PEM file.

79.33.13 Open(Data as MemoryBlock) as X509MBS

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a X509 PEM file.
Notes: Line endings must be LF, not CR.
See also:

- 79.33.14 Open(Data as String) as X509MBS 15780

79.33.14 Open(Data as String) as X509MBS

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a X509 PEM file.
Notes:

Please read file via binarystream and pass here as string.
Line endings must be LF, not CR.
See also:

- 79.33.13 Open(Data as MemoryBlock) as X509MBS 15780

79.33.15 ReadFromPkcs12(Data as String, Pass as String, byref PKey as PKeyMBS, byref Cert as X509MBS, byref certs() as X509MBS) as Boolean

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads certificate and private key from a PKCS12 file.
Example:

```
dim f as FolderItem = FindFile("test.p12")
dim b as BinaryStream = BinaryStream.Open(f)
dim s as string = b.Read(b.Length)
dim c as X509MBS
dim p as PKeyMBS
dim others() as X509MBS

if X509MBS.ReadFromPkcs12(s, "HelloWorld", p, c, others) then
MsgBox c.Name
end if
```

Notes:

Data is the content of the PKCS12 file.
Returns true on success or false on failure.

79.33.16 ReadFromPkcs7(Data as String, Pass as String, byref certs() as X509MBS) as Boolean

MBS Encryption Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads certificates from PKCS# 7 data.
Example:

```
dim contents as string // PKCS# 7 file data
Dim certs() As X509MBS
If X509MBS.ReadFromPkcs7(contents, "", certs) Then

Dim x As X509MBS = certs(0)
If x <>Nil Then
// show it
TextArea1.Text= x.Description
end if
End If
```

Notes:

Returns true on success.
Only for PKCS# 7 data containing signatures.

79.33.17 Verify(PublicKey as PKeyMBS) as Integer

MBS Encryption Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Verifies the signature of certificate using given public key.
Notes:

Returns 1 if valid, 0 if key is not valid, but -1 if format of key is invalid.
Calls X509_verify internally in OpenSSL.

79.33.18 Properties

79.33.19 Description as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The textual description of the certificate.
Notes:

This is only for human to read.
(Read only property)

79.33.20 Handle as Integer

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

79.33.21 IssuerName as Dictionary

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The issuer name.
Notes: (Read only property)

79.33.22 Name as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the certificate.
Notes: (Read only property)

79.33.23 PublicKey as PKeyMBS

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts public key.
Notes: (Read only property)

79.33.24 SerialNumber as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The serial number as text.
Notes: (Read only property)

79.33.25 SubjectName as Dictionary

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The subject name.
Notes: (Read only property)

79.33.26 ValidNotAfter as Date

MBS Encryption Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The date where the certificate expires.
Example:

```
// read certificate
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.pem")
Dim b As BinaryStream = BinaryStream.Open(f, False)
Dim s As String = b.Read(b.Length)

// parse the certificate
```

```
Dim x As X509MBS = X509MBS.Open(s)

// check dates
MsgBox x.ValidNotBefore.SQLDateTime + EndOfLine + x.ValidNotAfter.SQLDateTime
```

Notes:

In GMT time zone.
(Read only property)

79.33.27 ValidNotAfterDateTime as DateTime

MBS Encryption Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The date where the certificate expires.
Notes:

In GMT time zone.
(Read only property)

79.33.28 ValidNotBefore as Date

MBS Encryption Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The date where the certificate was created.
Example:

```
// read certificate
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.pem")
Dim b As BinaryStream = BinaryStream.Open(f, False)
Dim s As String = b.Read(b.Length)

// parse the certificate
Dim x As X509MBS = X509MBS.Open(s)

// check dates
MsgBox x.ValidNotBefore.SQLDateTime + EndOfLine + x.ValidNotAfter.SQLDateTime
```

Notes:

In GMT time zone.
(Read only property)

79.33.29 ValidNotBeforeDateTime as DateTime

MBS Encryption Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The date where the certificate was created.
Notes:

In GMT time zone.
(Read only property)

79.33.30 Version as Integer

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version of the file.
Notes:

Currently usually 2 for version 3.
(Read only property)

Chapter 80

Endian

80.1 Globals

80.1.1 EndianS16_BtoLMBS(n as Int16) as Int16

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Notes:

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16_LtoBMBS(n as Integer) as Integer

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

80.1.2 EndianS16_BtoNMBS(n as Int16) as Int16

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Notes:

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16_LtoBMBS(n as Integer) as Integer

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

80.1.3 EndianS16_LtoBMBS(n as Int16) as Int16

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Notes:

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16_LtoBMBS(n as Integer) as Integer

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

80.1.4 EndianS16_LtoNMBS(n as Int16) as Int16

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Notes:

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16_LtoBMBS(n as Integer) as Integer

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

80.1.5 EndianS16_NtoBMBS(n as Int16) as Int16

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Notes:

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16_LtoBMBS(n as Integer) as Integer

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

80.1.6 EndianS16_NtoLMBS(n as Int16) as Int16

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Notes:

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16_LtoBMBS(n as Integer) as Integer

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

80.1.7 EndianS32_BtoLMBS(n as Int32) as Int32

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Notes:

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16_LtoBMBS(n as Integer) as Integer

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

80.1.8 EndianS32_BtoNMBS(n as Int32) as Int32

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Notes:

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16_LtoBMBS(n as Integer) as Integer

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

80.1.9 EndianS32_LtoBMBS(n as Int32) as Int32

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Notes:

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16_LtoBMBS(n as Integer) as Integer

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

80.1.10 EndianS32_LtoNMBS(n as Int32) as Int32

Chapter 81

Exif

81.1 class ExifTagMBS

81.1.1 class ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a data tag in EXIF.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

81.1.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 20.2
- MBS Xojo Plugins, version 20.2pr3

81.1.3 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 20.2
- MBS Xojo Plugins, version 20.2pr3

81.1.4 Methods

81.1.5 Constructor

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

81.1.6 Destructor

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.

81.1.7 Values as Variant()

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries all values for the current tag.
Notes: Number of entries should be equal to components property.

81.1.8 Properties

81.1.9 ByteCount as Integer

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bytes used for this tag's data.
Notes: (Read only property)

81.1.10 Components as Integer

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of components.
Notes:

Some values can be arrays, so components is greater than 1.
(Read only property)

81.1.11 DataPointer as Ptr

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The pointer to the data.
Notes:

Points into the MemoryBlock stored in data property of ExifTagsMBS object.
(Read only property)

81.1.12 Endian as Integer

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The endian setting for this value.
Notes:

See kEndian* constants.
(Read only property)

81.1.13 Format as Integer

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The data format of this entry.
Notes:

See kFormat* constants.
(Read only property)

81.1.14 IsNumeric as Boolean

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this tag is a numeric data type.
Notes:

False if format is invalid, string or undefined.
(Read only property)

81.1.15 StringValue as String

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value as string to display.
Notes:

Returns list of values with comma separated if there are multiple numeric values.
String or unknown fields are interpreted as text and trimmed.

(Read only property)

81.1.16 Tag as Integer

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tag ID.
Notes:

See EXIF data format documentation for complete list of possible values.
(Read only property)

81.1.17 TagName as String

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the tag.
Notes:

We have a list of known tags where we lookup the name for you.
(Read only property)

81.1.18 Value as Variant

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the tag.
Notes:

First value for multi value objects (if Components >1).
(Read and Write property)
See also:

- 81.1.19 Value(ComponentIndex as Integer) as Variant 15800

81.1.19 Value(ComponentIndex as Integer) as Variant

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the given component.
Notes:

ComponentIndex is from 0 to Components-1.
e.g. GPS Coordinate may be stored as 3 values (hour, minute and second)

(Read and Write computed property)
See also:

- 81.1.18 Value as Variant 15800

81.1.20 Constants

81.1.21 kEndianBig = 1

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the endian constants.
Notes: Value is stored in big endian format.

81.1.22 kEndianLittle = 2

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the endian constants.
Notes: Value is stored in little endian format.

81.1.23 kEndianUnknown = 0

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the endian constants.
Notes: Unknown

81.1.24 kFlashAuto = & h18

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the flash constants.
Notes: Auto

81.1.25 kFlashFired = 1

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the flash constants.
Notes: Fired

81.1.26 kFlashFlashFunctionPresent = & h20

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the flash constants.
Notes: Flash Function Present

81.1.27 kFlashNo = 0

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the flash constants.
Notes: No flash

81.1.28 kFlashOff = & h10

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the flash constants.
Notes: Off

81.1.29 kFlashOn = 8

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the flash constants.
Notes: On

81.1.30 kFlashRedEyeReduction = & h40

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the flash constants.
Notes: Red Eye Reduction

81.1.31 kFlashStrobeReturnLightDetected = 6

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the flash constants.
Notes: Strobe Return Light Detected

81.1.32 kFormatByte = 1

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the data format constants.
Notes: Byte data. (UInt8)

81.1.33 kFormatDouble = 12

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the data format constants.
Notes: Double

81.1.34 kFormatInvalid = 0

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the data format constants.
Notes: Invalid

81.1.35 kFormatSByte = 6

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the data format constants.
Notes: Signed byte

81.1.36 kFormatSingle = 11

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the data format constants.
Notes: Single

81.1.37 kFormatSLong = 9

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the data format constants.
Notes: Signed long

81.1.38 kFormatSRational = 10

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the data format constants.
Notes: Signed rational value.

81.1.39 kFormatSShort = 8

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the data format constants.
Notes: Signed short. (Int16)

81.1.40 kFormatString = 2

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the data format constants.
Notes: Text

81.1.41 kFormatULong = 4

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the data format constants.
Notes: Unsigned long. (UInt32)

81.1.42 kFormatUndefined = 7

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the data format constants.
Notes: Undefined

81.1.43 kFormatURational = 5

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the data format constants.
Notes: Unsigned rational value.

81.1.44 kFormatUShort = 3

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the data format constants.
Notes: Unsigned short. (UInt16)

81.1.45 kOrientationBottomLeft = 4

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the orientation constants.
Notes: Bottom Left

81.1.46 kOrientationBottomRight = 3

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the orientation constants.
Notes: Bottom Right

81.1.47 kOrientationLeftBottom = 8

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the orientation constants.
Notes: Left Bottom

81.1.48 kOrientationLeftTop = 5

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the orientation constants.
Notes: Left Top

81.1.49 kOrientationRightBottom = 7

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the orientation constants.
Notes: Right Bottom

81.1.50 kOrientationRightTop = 6

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the orientation constants.
Notes: Right Top

81.1.51 kOrientationTopLeft = 1

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the orientation constants.
Notes: Top Left

81.1.52 kOrientationTopRight = 2

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the orientation constants.
Notes: Top Right

81.1.53 kTagArtist = & h13B

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the tag constant.

Function: One of the tag constant.

81.1.85 kTagGPSSpeedRef = 12

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the tag constant.

81.1.86 kTagGPSStatus = 9

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the tag constant.

81.1.87 kTagGPSTimeStamp = 7

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the tag constant.

81.1.88 kTagGPSTrack = 15

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the tag constant.

81.1.89 kTagGPSTrackRef = 14

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the tag constant.

81.1.90 kTagGPSVersion = 0

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the tag constant.

81.1.91 kTagImageHeight = & h101

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the tag constant.

81.1.92 kTagImageWidth = & h100

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the tag constant.

81.1.93 kTagMake = & h10F

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the tag constant.

81.1.94 kTagModel = & h110

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the tag constant.

81.1.95 kTagOrientation = & h112

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the tag constant.

81.1.96 kTagResolutionUnit = & h128

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the tag constant.

81.1.97 kTagSoftware = & h131

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the tag constant.

81.1.98 kTagThumbnailLength = & h202

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the tag constant.

81.1.99 kTagThumbnailOffset = & h201

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the tag constant.

81.1.100 kTagUserComment = & h9286

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the tag constant.

81.1.101 kTagXResolution = & h11A

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the tag constant.

81.1.102 kTagYResolution = & h11B

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the tag constant.

81.1.103 kUnitCentimeter = 3

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the unit constants.
Notes: Pixel per centimeter

81.1.104 kUnitInch = 2

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the unit constants.
Notes: Pixel per Inches

81.1.105 kUnitUndefined = 1

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the unit constants.
Notes: Undefined.

81.2 class ExifTagsMBS

81.2.1 class ExifTagsMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The EXIF class.
Notes:

This is a home grown class to parse Exif and allow small modifications.
Great to just read values or to update a date field.
This class does not allow to add values or to increase text lengths.
But you can take a template EXIF from one picture, change values and store it with another one.

See also CGImageSourceMBS class for MacOS and iOS for Apple's way to read/write EXIF data.
And see GMImageMBS class to read EXIF via attribute functions in GraphicsMagick.

81.2.6 Methods

81.2.7 Constructor(ExifData as MemoryBlock)

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor taking exif data as memoryblock.
Notes: Please use JPEGImporterMBS, GMImageMBS, NSImageMBS, PNGReaderMBS or other classes to get EXIF data block.
See also:

- 81.2.8 Constructor(ExifData as String) 15817

81.2.8 Constructor(ExifData as String)

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor taking exif data as string.
Notes: Please use JPEGImporterMBS, GMImageMBS, NSImageMBS, PNGReaderMBS or other classes to get EXIF data block.
See also:

- 81.2.7 Constructor(ExifData as MemoryBlock) 15817

81.2.9 TagByID(Tag as integer) as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries a tag by ID.
Notes: This looks on the Tag property.

81.2.10 TagByIndex(index as integer) as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries a tag by index.

81.2.11 Tags as ExifTagMBS()

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries an array with all tags found.

81.2.12 Properties

81.2.13 Artist as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for Artist.
Notes:

May be nil if not found.
(Read only property)

81.2.14 Copyright as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for Copyright.
Notes:

May be nil if not found.
(Read only property)

81.2.15 Count as Integer

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of tags found.
Notes: (Read only property)

81.2.16 Data as MemoryBlock

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The data of the Exif record.
Notes:

This is a copy of what you passed to the constructor.
It may have been modified if you overwrote a value.
(Read only property)

81.2.17 DateTime as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for DateTime.
Notes:

May be nil if not found.
(Read only property)

81.2.18 Description as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for Description.
Notes:

May be nil if not found.
(Read only property)

81.2.19 ExposureTime as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for ExposureTime.
Notes:

May be nil if not found.
(Read only property)

81.2.20 FlashUsed as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for FlashUsed.
Notes:

May be nil if not found.
(Read only property)

81.2.21 FNumber as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for FNumber.
Notes:

May be nil if not found.
(Read only property)

81.2.22 GPSAltitude as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for GPSAltitude.
Notes:

May be nil if not found.
(Read only property)

81.2.23 GPSAltitudeRef as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for GPSAltitudeRef.
Notes:

May be nil if not found.
(Read only property)

81.2.24 GPSAreaInformation as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for GPSAreaInformation.
Notes:

May be nil if not found.
(Read only property)

81.2.25 GPSDateStamp as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for GPSDateStamp.
Notes:

May be nil if not found.
(Read only property)

81.2.26 GPSDestBearing as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for GPSDestBearing.
Notes:

May be nil if not found.
(Read only property)

81.2.27 GPSDestBearingRef as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for GPSDestBearingRef.
Notes:

May be nil if not found.
(Read only property)

81.2.28 GPSDestDistance as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for GPSDestDistance.
Notes:

May be nil if not found.
(Read only property)

81.2.29 GPSDestDistanceRef as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for GPSDestDistanceRef.
Notes:

May be nil if not found.
(Read only property)

81.2.30 GPSDestLatitude as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for GPSDestLatitude.
Notes:

May be nil if not found.
(Read only property)

81.2.31 GPSDestLatitudeRef as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for GPSDestLatitudeRef.
Notes:

May be nil if not found.
(Read only property)

81.2.32 GPSDestLongitude as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for GPSDestLongitude.
Notes:

May be nil if not found.
(Read only property)

81.2.33 GPSDestLongitudeRef as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for GPSDestLongitudeRef.
Notes:

May be nil if not found.
(Read only property)

81.2.34 GPSDifferential as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for GPSDifferential.
Notes:

May be nil if not found.
(Read only property)

81.2.35 GPSDOP as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for GPSDOP.
Notes:

May be nil if not found.
(Read only property)

81.2.36 GPSImgDirection as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for GPSImgDirection.
Notes:

May be nil if not found.
(Read only property)

81.2.37 GPSImgDirectionRef as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for GPSImgDirectionRef.
Notes:

May be nil if not found.
(Read only property)

81.2.38 GPSLatitude as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for GPSLatitude.
Notes:

May be nil if not found.
(Read only property)

81.2.39 GPSLatitudeRef as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for GPSLatitudeRef.
Notes:

May be nil if not found.
(Read only property)

81.2.40 GPSLongitude as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for GPSLongitude.
Notes:

May be nil if not found.
(Read only property)

81.2.41 GPSLongitudeRef as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for GPSLongitudeRef.
Notes:

May be nil if not found.
(Read only property)

81.2.42 GPSMapDatum as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for GPSMapDatum.
Notes:

May be nil if not found.
(Read only property)

81.2.43 GPSMeasureMode as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for GPSMeasureMode.
Notes:

May be nil if not found.
(Read only property)

81.2.44 GPSProcessingMethod as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for GPSProcessingMethod.
Notes:

May be nil if not found.
(Read only property)

81.2.45 GPSSatellites as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for GPSSatellites.
Notes:

May be nil if not found.
(Read only property)

81.2.46 GPSSpeed as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for GPSSpeed.
Notes:

May be nil if not found.
(Read only property)

81.2.47 GPSSpeedRef as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for GPSSpeedRef.
Notes:

May be nil if not found.
(Read only property)

81.2.48 GPSStatus as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for GPSStatus.
Notes:

May be nil if not found.
(Read only property)

81.2.49 GPSTimeStamp as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for GPSTimeStamp.
Notes:

May be nil if not found.
(Read only property)

81.2.50 GPSTrack as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for GPSTrack.
Notes:

May be nil if not found.
(Read only property)

81.2.51 GPSTrackRef as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for GPSTrackRef.
Notes:

May be nil if not found.
(Read only property)

81.2.52 GPSVersion as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for GPSVersion.
Notes:

May be nil if not found.
(Read only property)

81.2.53 ImageHeight as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for ImageHeight.
Notes:

May be nil if not found.
(Read only property)

81.2.54 ImageWidth as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for ImageWidth.
Notes:

May be nil if not found.
(Read only property)

81.2.55 Make as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for Make.
Notes:

May be nil if not found.
(Read only property)

81.2.56 Model as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for Model.
Notes:

May be nil if not found.
(Read only property)

81.2.57 Orientation as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for Orientation.
Notes:

May be nil if not found.
(Read only property)

81.2.58 ResolutionUnit as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for ResolutionUnit.
Notes:

May be nil if not found.
(Read only property)

81.2.59 Software as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for Software.
Notes:

May be nil if not found.
(Read only property)

81.2.60 ThumbnailLength as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for ThumbnailLength.
Notes:

May be nil if not found.
(Read only property)

81.2.61 ThumbnailOffset as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for ThumbnailOffset.
Notes:

May be nil if not found.
(Read only property)

81.2.62 ThumnnailData as MemoryBlock

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies thumbnail from the EXIF data.
Notes:

Returns nil if not thumbnail exists.
(Read only property)

81.2.63 UserComment as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for UserComment.
Notes:

May be nil if not found.
(Read only property)

81.2.64 XResolution as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for XResolution.
Notes:

May be nil if not found.
(Read only property)

81.2.65 YResolution as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the tag for YResolution.
Notes:

May be nil if not found.
(Read only property)

Chapter 82

Filemapping and Shared Memory

82.1 class FileMappingMBS

82.1.1 class FileMappingMBS

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for file mapping and shared memory access.
Notes:

FilemappingMBS is a clever way to map the content of a file into memory without loading it.
All applications are today loaded via mapping using the virtual memory manager. So your data is inside the file but some memory is used to cache it and you can access it as a memoryblock.

You can use this class in several ways:

1. file mapping read/write: Call the constructor with a file, open the file mapping and map memory in your process to read or write a file.
2. file mapping read/write with temporary files: You can create (multi gigabyte) tempory memory storage to store data too big for your application own address space.
3. a variant of 2 is to pass nil to the constructor on Windows to have the data stored in the swap files.
4. use Constructor without paramaters and call CreateSharedMemory to create a shared memory object.
5. use Constructor without paramaters and call OpenSharedMemory to access a shared memory object from another process.

For shared memory objects, be careful how you design it. Your shared memory should have a flag for editing, so one app does not edit while another app edits. Add a version value to check your application versions. Also add a value for the revision of the content so your apps can see modifications. Finally your app should handle the possibility that the application crashes while writing data. So the data can be in a bad state.

82.1.6 Methods

82.1.7 CloseFile

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Closes the file you used for backstore.
Notes: Called by the destructor automatically.

82.1.8 CloseFileMapping

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Closes the file mapping.
Notes:

Called by the destructor automatically.
You close all views, than you close the file mapping and finally the file.

82.1.9 Constructor

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The dummy constructor used if you create a shared memory object.
Notes: Use this constructor if you continue with OpenSharedMemory or CreateSharedMemory.
See also:

- 82.1.10 Constructor(file as folderitem, write as boolean = false) 15833

82.1.10 Constructor(file as folderitem, write as boolean = false)

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens or creates a file for file mapping.
Notes:

On Windows you can pass nil for the file parameter in order to have a file mapping using the swap files for back storage.

If write is true, the file is opened/created for write access.
See also:

- 82.1.9 Constructor 15833

82.1.11 CreateSharedMemory(name as string, Size as Int64) as boolean

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a shared memory object with the given name.
Notes:

Returns true on success and false on failure. The name must be unique on the whole PC.

On success, you can call MapView to access memory.
isWriteable is set to true as shared memory objects are always read and write.

Fails if the shared memory object does exist. In this case, call OpenSharedMemory.
If your application crashes, on the next run the object will still exist on Mac OS X and Linux, so you need to open or delete & create it.

The Size should be a multiply of the page size (4096).
Sets DeleteSharedMemory to true so the object is deleted by the destructor. Set it to false if you don't want that behavior.

82.1.12 DeleteSharedMemory(name as string) as boolean

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Targets: All.

Function: Deletes the shared memory object.
Notes:

Returns true on success and false on failure.
Called by the destructor if DeleteSharedMemory property is true.
See also:

- 82.1.24 DeleteSharedMemory as Boolean 15837

82.1.13 EnlargeFile(Size as Int64)

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resizes the file to the given size.
Notes: This is for file mappings used as temporary storage with a temporary file. You use the Constructor to create a temporary file. This file is enlarged to the size you need. Next you call OpenFileMapping and MapView. To cleanup, you close all views and the file mapping. Now before you close the file, you should call ShrinkFile. ShrinkFile reduces the file size to zero so the operation system doesn't start flushing the shared memory to the file. You can get this automatically if you set ShrinkFileOnClose to true.

82.1.14 GetSharedMemoryValue(name as string) as MemoryBlock

MBS Util Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries value of shared memory object.
Notes:

Returns copy of the data.
Since data is stored in blocks of page size (usually 4K), the returned size has additional null bytes on the end to round size up.
If you store text there, you may look for the end of your data, e.g. for JSON do a trim(Chr(0)) to remove the null bytes.

82.1.15 HasSharedMemoryValue(name as string) as Boolean

MBS Util Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether shared memory object exists.

82.1.16 MapView(mem as MemoryBlock, offset as Int64, Size as Integer) as FileMappingViewMBS

MBS Util Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maps a portion of the file mapping or shared memory object into your application's address space.
Notes:

Returns nil on any error.
Using invalide offset/size values can lead into a bad mapping.
Here you can pass your own memoryblock for back storage.
Make sure your memory is 4 or 64 KB aligned, depending on platform.
(Windows need 64 KB, Mac only 4 KB)

Changed Size parameter from Int32 to Integer in version 21.0.
Xojo may not handle ptr with offsets >2 GB as of version 2020r2. This is fixed in 2020r2.1.
See also:

- 82.1.17 MapView(offset as Int64, Size as Integer) as FileMappingViewMBS 15835

82.1.17 MapView(offset as Int64, Size as Integer) as FileMappingViewMBS

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maps a portion of the file mapping or shared memory object into your application's address space.
Notes:

Returns nil on any error.
Using invalide offset/size values can lead into a bad mapping.
(Windows need 64 KB, Mac only 4 KB)

Changed Size parameter from Int32 to Integer in version 21.0.
Xojo may not handle ptr with offsets >2 GB as of version 2020r2. This is fixed in 2020r2.1.

- 82.1.16 MapView(mem as MemoryBlock, offset as Int64, Size as Integer) as FileMappingViewMBS 15835

82.1.18 OpenFileMapping(MaxSize as Int64 = 0) as boolean

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a file mapping.
Notes:

If MaxSize is zero, the file size is used for creating the mapping.
The Size should be a multiply of the page size (4096).

Returns true on success.
Do not call after using OpenSharedMemory or CreateSharedMemory as they open the file mapping for you.

82.1.19 OpenSharedMemory(name as string) as boolean

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a shared memory object with the given name.
Notes:

Returns true on success and false on failure.

On success, you can call MapView to access memory.
isWriteable is set to true as shared memory objects are always read and write.

Fails if the shared memory object does not exist. In this case, call CreateSharedMemory.

82.1.20 SetSharedMemoryValue(name as string, data as MemoryBlock) as Boolean

MBS Util Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets shared memory value.
Notes:

Persistent object on Mac/Linux till computer restarts or shuts down.
On Windows object is destroyed when last application referring it quits.

Returns true on success.
Size of the data block will be rounded up to page size.

82.1.21 ShrinkFile

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resizes the file to by empty.
Notes: Useful if you used EnlargeFile before.

82.1.22 Properties

82.1.23 DeleteFileOnClose as Boolean

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to delete the file in the destructor.
Notes:

Useful if a tempory file is used as backstore.
(Read and Write property)

82.1.24 DeleteSharedMemory as Boolean

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Targets: All.

Function: Whether to delete the shared memory object on closing.
Notes:

True by default after Creating a shared memory object.

On Windows the shared memory objects exist as long as someone uses them.
On Mac OS X they live until you kill them even if your application is not running.

(Read and Write property)
See also:

- 82.1.12 DeleteSharedMemory(name as string) as boolean 15834

82.1.25 File as FolderItem

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file reference used for the backstore.
Notes: (Read only property)

82.1.26 isWriteable as Boolean

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether opened/created the file mapping with write permission.
Notes:

Opening files for reading only in order to read inside gives the operation system some optimization possibilities.
(Read only property)

82.1.27 Lasterror as Integer

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes:

On Windows typically a Windows error code.
On Linux and Mac OS X typically 0 for success and other values for errors.
(Read and Write property)

82.1.28 LasterrorString as String

MBS Util Plugin, Plugin Version: 10.5, Platform: Windows, Targets: All.

Function: The string for the last error code.
Notes:

Only implemented for Windows.
Returns "" on any error.

(Read only property)

82.1.29 Name as String

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name used for a named shared memory object.
Notes: (Read only property)

82.1.30 SharedMemorySize as Int64

MBS Util Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries shared memory object size.
Notes:

Only valid for shared memory objects in handle.
(Read only property)

82.1.31 ShrinkFileOnClose as Boolean

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to call ShrinkFile automatically from the destructor.
Notes:

Default false.
(Read and Write property)

82.2 class FileMappingViewMBS

82.2.1 class FileMappingViewMBS

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a file mapping view.
Notes: You can using file mapping with a 10 GB bit file. Your application has only 4 GB of address space and effectively you can only use 2 GB. So you can try to map in a few hundred mega bytes at a given time. But you can move this view on the large file to read the whole file. But remember: File mapping is only efficient if you read a little data form the file and jump a lot. For reading the whole file, use a binarystream.

82.2.2 Blog Entries

- MBS REALbasic Plugins, version 10.5pr4

82.2.3 Blog Entries

- MBS REALbasic Plugins, version 10.5pr4

82.2.4 Methods

82.2.5 FlushView

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flushes all data to the backstore.
Notes: For file mappings, the modified pages are written back to the file now. Normally you won't call this and let the operation system decide when to write the data to the file.

82.2.6 UnmapView

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Frees the memory allocated by the view.
Notes: Called automaticaly be the destructor.

82.2.7 Properties

82.2.8 FlushOnClose as Boolean

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to call FlushView for you in the destructor.
Notes: (Read and Write property)

82.2.9 Memory as Memoryblock

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The memoryblock for this view.
Example:

```
dim v as FileMappingViewMBS // your view

v.memory.cstring(0)="Hello World"
```

Notes:

The memoryblock has no known size and it becomes invalid once this view object is destroyed. So keep a reference around as long as you use the memoryblock.
(Read only property)

82.2.10 Offset as Int64

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The offset used to create this view.
Notes: (Read only property)

82.2.11 Parent as FileMappingMBS

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The owner FileMapping object.
Notes: (Read only property)

82.2.12 Size as Integer

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size in bytes of this view.
Notes: (Read only property)

Chapter 83

Files

83.1 class ACLEntryMBS

83.1.1 class ACLEntryMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: The class for an ACL entry.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

83.1.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.0pr1

83.1.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.0pr1

83.1.4 Methods

83.1.5 Constructor

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: The private constructor.

83.1.6 Copy(dest as ACLEntryMBS)

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Copy an ACL entry to another ACL entry.
Notes: see also acl_copy_entry man page.

83.1.7 GIDtoUUID(GID as Integer) as memoryblock

MBS MacOSX Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

Function: Queries the UUID for a group id.
Notes: Returns nil on any error.

83.1.8 GroupFromGID(GID as Integer) as string

MBS MacOSX Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

Function: Queries the group name for a Group ID.

83.1.9 MaximalPermsetMask as UInt64

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: The maximal permset mask.
Notes: see also acl_maximal_permset_mask_np man page.

83.1.10 UIDtoUUID(UID as Integer) as memoryblock

MBS MacOSX Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

Function: Queries the UUID for an user id.
Notes: Returns nil on any error.

83.1.11 UserFromUID(UID as Integer) as string

MBS MacOSX Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

Function: Queries the user name for a UID.

83.1.12 UUIDtoID(UUID as memoryblock, byref ID as Integer, byref Type as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

Function: Queries the GID/UID for an UUID.
Notes:

Type is 0 for user and 1 for group.
Returns true on success.

83.1.13 Properties

83.1.14 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

83.1.15 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: The last error code.
Notes: (Read and Write property)

83.1.16 Parent as Variant

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: The parent object.
Notes: (Read only property)

83.1.17 FlagSet as ACLFlagSetMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Get or Set the flag set.
Notes:

see also acl_get_flagset_np/acl_set_flagset_np man page.
(Read and Write computed property)

83.1.18 PermSet as ACLPermSetMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Get/Set the permissions set.
Notes:

see also acl_get_permset/acl_set_permset man page.
(Read and Write computed property)

83.1.19 PermSetMask as UInt64

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Get/Set the permission set mask.
Notes:

see also acl_get_permset_mask_np/acl_set_permset_mask_np man page.
(Read and Write computed property)

83.1.20 Qualifier as Memoryblock

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Get/Set the qualifier.
Notes:

Value is a 16byte big GUID as memoryblock.
see also acl_set_qualifier/acl_get_qualifier man page.
(Read and Write computed property)

83.1.21 TagType as Integer

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Sets or gets the the tag type.
Notes:

see also acl_get_tag_type/acl_set_tag_type man page.
(Read and Write computed property)

83.1.22 Constants

83.1.23 kACLExtendedAllow = 1

MBS MacOSX Plugin, Plugin Version: 13.5.

Function: One of the ACL entry tag type bits.

83.1.24 kACLExtendedDeny = 2

MBS MacOSX Plugin, Plugin Version: 13.5.

Function: One of the ACL entry tag type bits.

83.1.25 kACLUndefinedTag = 0

MBS MacOSX Plugin, Plugin Version: 13.5.

Function: One of the ACL entry tag type bits.

83.2 class ACLFlagSetMBS

83.2.1 class ACLFlagSetMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: The class for an ACL flag set.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

83.2.2 Methods

83.2.3 Add(flag as Integer)

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Adds a flag to the flag set.
Notes: see also acl_add_flag_np man page.

83.2.4 Clear

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Clears the flag set.
Notes: see also acl_clear_flags_np man page.

83.2.5 Constructor

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: The private constructor.

83.2.6 Delete(flag as Integer)

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Deletes flag from flag set.
Notes: see also acl_delete_flag_np man page.

83.2.7 HasFlag(flag as Integer) as Boolean

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Checks if a flag is set in this flag set.
Notes: see also acl_get_flag_np man page.

83.2.8 Properties

83.2.9 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

83.2.10 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: The last error code.
Notes: (Read and Write property)

83.2.11 Parent as Variant

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: The parent object.
Notes: (Read only property)

83.2.12 Constants

83.2.13 kACLEntryDirectoryInherit = 64

MBS MacOSX Plugin, Plugin Version: 13.5.

Function: One of the flag constants.

83.2.14 kACLEntryFileInherit = 32

MBS MacOSX Plugin, Plugin Version: 13.5.

Function: One of the flag constants.

83.2.15 kACLEntryInherited = 16

MBS MacOSX Plugin, Plugin Version: 13.5.

Function: One of the flag constants.

83.2.16 kACLEntryLimitInherit = 128

MBS MacOSX Plugin, Plugin Version: 13.5.

Function: One of the flag constants.

83.2.17 kACLEntryOnlyInherit = 256

MBS MacOSX Plugin, Plugin Version: 13.5.

Function: One of the flag constants.

83.2.18 kACLFlagDeferInherit = 1

MBS MacOSX Plugin, Plugin Version: 13.5.

Function: One of the flag constants.

83.2.19 kACLFlagNoInherit = 131072

MBS MacOSX Plugin, Plugin Version: 13.5.

Function: One of the flag constants.

83.3 class ACLPermSetMBS

83.3.1 class ACLPermSetMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: The class for an ACL permission set.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

83.3.2 Methods

83.3.3 Add(perm as Integer)

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Adds a permission.
Notes: see also acl_add_perm man page.

83.3.4 Clear

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Clears the permission set.
Notes: see also acl_clear_perms man page.

83.3.5 Constructor

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: The private constructor.

83.3.6 Delete(perm as Integer)

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Deletes a permission.
Notes: see also acl_delete_perm man page.

83.3.7 HasPerm(perm as Integer) as Boolean

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Checks if permissions is included in this permission set.
Notes: see also acl_get_perm_np man page.

83.3.8 Properties

83.3.9 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

83.3.10 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: The last error code.
Notes: (Read and Write property)

83.3.11 Parent as Variant

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: The parent object.
Notes: (Read only property)

83.3.12 Constants

83.3.13 kACLAddFile = 4

MBS MacOSX Plugin, Plugin Version: 13.5.

Function: One of the individual object access permissions.

83.3.14 kACLAddSubDirectory = 32

MBS MacOSX Plugin, Plugin Version: 13.5.

Function: One of the individual object access permissions.

83.3.15 kACLAppendData = 32

MBS MacOSX Plugin, Plugin Version: 13.5.

Function: One of the individual object access permissions.

83.3.16 kACLChangeOwner = 8192

MBS MacOSX Plugin, Plugin Version: 13.5.

Function: One of the individual object access permissions.

83.3.17 kACLDelete = 16

MBS MacOSX Plugin, Plugin Version: 13.5.

Function: One of the individual object access permissions.

83.3.18 kACLDeleteChild = 64

MBS MacOSX Plugin, Plugin Version: 13.5.

Function: One of the individual object access permissions.

83.3.19 kACLExecute = 8

MBS MacOSX Plugin, Plugin Version: 13.5.

Function: One of the individual object access permissions.

83.3.20 kACLListDirectory = 2

MBS MacOSX Plugin, Plugin Version: 13.5.

Function: One of the individual object access permissions.

83.3.21 kACLMaxEntries = 128

MBS MacOSX Plugin, Plugin Version: 13.5.

Function: Maximum number of entries.

83.3.22 kACLReadAttributes = 128

MBS MacOSX Plugin, Plugin Version: 13.5.

Function: One of the individual object access permissions.

83.3.23 kACLReadData = 2

MBS MacOSX Plugin, Plugin Version: 13.5.

Function: One of the individual object access permissions.

83.3.24 kACLReadExtraAttributes = 512

MBS MacOSX Plugin, Plugin Version: 13.5.

Function: One of the individual object access permissions.

83.3.25 kACLReadSecurity = 2048

MBS MacOSX Plugin, Plugin Version: 13.5.

Function: One of the individual object access permissions.

83.3.26 kACLSearch = 8

MBS MacOSX Plugin, Plugin Version: 13.5.

Function: One of the individual object access permissions.

83.3.27 kACLWriteAttributes = 256

MBS MacOSX Plugin, Plugin Version: 13.5.

Function: One of the individual object access permissions.

83.3.28 kACLWriteData = 4

MBS MacOSX Plugin, Plugin Version: 13.5.

Function: One of the individual object access permissions.

83.3.29 kACLWriteExtraAttributes = 1024

MBS MacOSX Plugin, Plugin Version: 13.5.

Function: One of the individual object access permissions.

83.3.30 kACLWriteSecurity = 4096

MBS MacOSX Plugin, Plugin Version: 13.5.

Function: One of the individual object access permissions.

83.4 class ACLRightMBS

83.4.1 class ACLRightMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: The class for ACL rights.

83.4.2 Methods

83.4.3 Constructor(count as Integer)

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Allocates and initializes the working storage for an ACL of at least count ACL entries.
Notes: see also acl_init man page.
See also:

- 83.4.4 Constructor(text as string) 15856

83.4.4 Constructor(text as string)

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Creates new ACL from text representation.
Notes: see also acl_from_text man page.
See also:

- 83.4.3 Constructor(count as Integer) 15856

83.4.5 CopyData(Native as boolean = false) as String

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Creates external representation.
Notes: see also acl_copy_int man page.

83.4.6 CreateEntry as ACLEntryMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Creates a new entry.
Notes: see also acl_create_entry man page.
See also:

- 83.4.7 CreateEntry(entryIndex as Integer, tag_type as Integer = 1) as ACLEntryMBS 15857

83.4.7 CreateEntry(entryIndex as Integer, tag_type as Integer = 1) as ACLEntryMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Creates a new entry.
Notes: see also acl_create_entry_np man page.
See also:

- 83.4.6 CreateEntry as ACLEntryMBS 15856

83.4.8 DeleteEntry(entry as ACLEntryMBS)

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Deletes an entry.
Notes: see also acl_delete_entry man page.

83.4.9 Duplicate as ACLRightMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Creates a duplicate of this right set.
Notes: see also acl_dup man page.

83.4.10 Entries as ACLEntryMBS()

MBS MacOSX Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

Function: Queries array with all entries in this ACL.
Notes:

Lasterror is set.
see also acl_get_entry man page.

83.4.11 Entry(entryIndex as Integer) as ACLEntryMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Queries entry with given index.
Notes:

You can use constants kACLFirstEntry, kACLLastEntry or kACLNextEntry.
see also acl_get_entry man page.

83.4.12 NewACL(count as Integer) as ACLRightMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Allocates and initializes the working storage for an ACL of at least count ACL entries.
Notes: see also acl_init man page.

83.4.13 NewACLFromExternal(data as string, native as boolean = false) as ACLRightMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Creates new ACL object from external representation.
Notes: see also acl_copy_ext man page.

83.4.14 NewACLFromFile(file as folderitem, type as Integer) as ACLRightMBS

MBS MacOSX Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

Function: Creates ACL object from file.
Notes: see also acl_get_file man page.
See also:

- 83.4.15 NewACLFromFile(path as string, type as Integer) as ACLRightMBS 15858

83.4.15 NewACLFromFile(path as string, type as Integer) as ACLRightMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Creates ACL object from file.
Notes: see also acl_get_file man page.
See also:

- 83.4.14 NewACLFromFile(file as folderitem, type as Integer) as ACLRightMBS 15858

83.4.16 NewACLFromFilePointer(FilePointer as Integer) as ACLRightMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Creates ACL object from FilePointer.
Notes: see also acl_get_fd man page.
See also:

- 83.4.17 NewACLFromFilePointer(FilePointer as Integer, type as Integer) as ACLRightMBS 15859

83.4.17 NewACLFromFilePointer(FilePointer as Integer, type as Integer) as ACLRightMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Creates ACL object from FilePointer.
Notes: see also acl_get_fd_np man page.
See also:

- 83.4.16 NewACLFromFilePointer(FilePointer as Integer) as ACLRightMBS 15859

83.4.18 NewACLFromLink(path as string, type as Integer) as ACLRightMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Creates ACL object from link.
Notes: see also acl_get_link_np man page.

83.4.19 NewACLFromText(text as string) as ACLRightMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Creates new ACL from text representation.
Notes: see also acl_from_text man page.

83.4.20 SetFile(Path as string, type as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Applies this ACL to a file.
Notes: see also acl_set_file man page.

83.4.21 SetFilePointer(FilePointer as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Applies this ACL to a file pointer.
Notes: see also acl_set_fd man page.
See also:

- 83.4.22 SetFilePointer(FilePointer as Integer, type as Integer) as boolean 15860

83.4.22 SetFilePointer(FilePointer as Integer, type as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Applies this ACL to a file pointer.
Notes: see also acl_set_fd_np man page.
See also:

- 83.4.21 SetFilePointer(FilePointer as Integer) as boolean 15860

83.4.23 SetLink(Path as string, type as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Applies this ACL to a link file.
Notes: see also acl_set_link_np man page.

83.4.24 Size as Int64

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Queries size of binary representation.
Notes: see also acl_size man page.

83.4.25 Text as String

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Queries text representation of this ACL.
Notes: see also acl_to_text man page.

83.4.26 Valid as boolean

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Checks if ACL is valid in general.
Notes: see also acl_valid man page.

83.4.27 ValidFile(Path as string, type as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Checks if ACL is valid for this file.
Notes: see also acl_valid_file_np man page.

83.4.28 ValidFilePointer(FilePointer as Integer, type as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Checks if ACL is valid for this file pointer.
Notes: see also acl_valid_fd_np man page.

83.4.29 Properties

83.4.30 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

83.4.31 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: The last error code.
Notes: (Read and Write property)

83.4.32 FlagSet as ACLFlagSetMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Get/Set the flag set.
Notes:

see also acl_get_flagset_np/acl_set_flagset_np man page.
(Read and Write computed property)

83.4.33 Constants

83.4.34 kACLFirstEntry = 0

MBS MacOSX Plugin, Plugin Version: 13.5.

Function: One of the ACL Entry constants.
Notes: Next entry.

83.4.35 kACLLastEntry = -2

MBS MacOSX Plugin, Plugin Version: 13.5.

Function: One of the ACL Entry constants.
Notes: Last entry.

83.4.36 kACLNextEntry = -1

MBS MacOSX Plugin, Plugin Version: 13.5.

Function: One of the ACL Entry constants.
Notes: Next entry.

83.4.37 kACLTypeAccess = 0

MBS MacOSX Plugin, Plugin Version: 13.5.

Function: One of the ACL types.
Notes: Posix 1003.1e type, not supported.

83.4.38 kACLTypeAFS = 2

MBS MacOSX Plugin, Plugin Version: 13.5.

Function: One of the ACL types.
Notes: No supported on Mac OS X, only for Linux/FreeBSD.

83.4.39 kACLTypeCODA = 3

MBS MacOSX Plugin, Plugin Version: 13.5.

Function: One of the ACL types.
Notes: No supported on Mac OS X, only for Linux/FreeBSD.

83.4.40 kACLTypeDefault = 1

MBS MacOSX Plugin, Plugin Version: 13.5.

Function: One of the ACL types.
Notes: Posix 1003.1e type, not supported.

83.4.41 kACLTypeExtended = 256

MBS MacOSX Plugin, Plugin Version: 13.5.

Function: One of the ACL types.
Notes: Extended ACL.

83.4.42 kACLTypeNTFS = 4

MBS MacOSX Plugin, Plugin Version: 13.5.

Function: One of the ACL types.
Notes: No supported on Mac OS X, only for Linux/FreeBSD.

83.4.43 kACLTypeNWFS = 5

MBS MacOSX Plugin, Plugin Version: 13.5.

Function: One of the ACL types.
Notes: No supported on Mac OS X, only for Linux/FreeBSD.

83.5 class CopyFileMBS

83.5.1 class CopyFileMBS

MBS MacOSX Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The class for copyfile function.
Notes:

We provide a class to hold state and get event for progress.
Uses low level copyfile API from MacOS.

See copyfile man page in terminal.

83.5.8 Methods

83.5.9 CopyFile(From as FolderItem, Dest as FolderItem, flags as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Copies files or folders.
Notes:

Copy a file's data and/or metadata. (Metadata consists of permissions, extended attributes, access control lists, and so forth.)

Recursive Copies When given the kFlagsRecursive flag, copyfile() will use the fts(3) functions to recursively descend into the source file-system object. It then calls copyfile() on each of the entries it finds that way. If a progress event is given the event will be called four times for each directory object, and twice for all other objects. (Each directory will be examined twice, once on entry – before copying each of the objects contained in the directory – and once on exit – after copying each object contained in the directory, in order to perform some final cleanup.)

Returns error code or zero for success.
See also:

- 83.5.10 CopyFile(From as String, Dest as String, flags as Integer) as Integer 15866

83.5.10 CopyFile(From as String, Dest as String, flags as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Copies files or folders.
Notes:

Copy a file's data and/or metadata. (Metadata consists of permissions, extended attributes, access control lists, and so forth.)

Recursive Copies When given the kFlagsRecursive flag, copyfile() will use the fts(3) functions to recursively descend into the source file-system object. It then calls copyfile() on each of the entries it finds that way. If a progress event is given the event will be called four times for each directory object, and twice for all other objects. (Each directory will be examined twice, once on entry – before copying each of the objects contained in the directory – and once on exit – after copying each object contained in the directory, in order to perform some final cleanup.)

Returns error code or zero for success.
See also:

- 83.5.9 CopyFile(From as FolderItem, Dest as FolderItem, flags as Integer) as Integer 15866

83.5.11 ErrorMessage(error as Integer) as String

MBS MacOSX Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Queries error message for unix error code.

83.5.12 Properties

83.5.13 BytesCopied as Int64

MBS MacOSX Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Get the number of data bytes copied so far.
Notes:

Valid only in Progress event.
If a kFlagsClone or kFlagsCloneForce operation successfully cloned the requested objects, then this value will be 0.
(Read only property)

83.5.14 WasCloned as Boolean

MBS MacOSX Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Whether file was cloned.
Notes:

Valid only in Progress event.
True if a kFlagsClone or kFlagsCloneForce operation successfully cloned the requested objects.
(Read only property)

83.5.15 XAttrName as String

MBS MacOSX Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Get the name of the extended attribute.
Notes:

Valid only in Progress event.
(Read only property)

83.5.16 YieldTicks as Integer

MBS MacOSX Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: How much time is given back to Xojo for other ticks.
Example:

```
dim t as new CopyFileMBS
t.YieldTicks=6 // only use 1/10th of a second
```

Notes:

If value is greater than zero, the application will yield to another RB thread after the given number of ticks have passed. 60 ticks are one second. Using a small value can slow down processing a lot while a big value keeps your application not responding to mouse clicks.
If you use this property with e.g. 6 as the value, you may also want to use this method in a thread so you can handle mouse events or let Xojo redraw a progressbar.
(Read and Write property)

83.5.17 Events

83.5.18 Progress(What as Integer, Stage as Integer, Source as String, Dest as String) as Integer

MBS MacOSX Plugin, Plugin Version: 19.4, Platform: macOS, Targets: .

Function: The progress event called while copying.
Notes:

What is one of the kWhat* constants.
Stage is one of the kStage* constants.
Source and Dest point to the current files being copied.

Return one of the kReturn* constants.

83.5.19 Constants

83.5.20 kFlagsACL = 1

MBS MacOSX Plugin, Plugin Version: 19.4.

Function: One of the flag constants.
Notes: Copy the source file's access control lists.

83.5.21 kFlagsAll = 15

MBS MacOSX Plugin, Plugin Version: 19.4.

Function: One of the flag constants.
Notes: Copy the entire file; equivalent to BitwiseOr(kFlagsMetaData, kFlagsData).

83.5.22 kFlagsCheck = & h10000

MBS MacOSX Plugin, Plugin Version: 19.4.

Function: One of the flag constants.
Notes: Return a bitmask (corresponding to the flags argument) indicating which contents would be copied; no data are actually copied. (E.g., if flags was set to kFlagsCheck + kFlagsMetaData, and the from file had extended attributes but no ACLs, the return value would be kFlagsXAttr.)

83.5.23 kFlagsClone = & h1000000

MBS MacOSX Plugin, Plugin Version: 19.4.

Function: One of the flag constants.
Notes:

Try to clone the file instead. This is a best try flag i.e. if cloning fails, fallback to copying the file. This flag is equivalent to BitwiseOr(kFlagsExcl, kFlagsACL, kFlagsStat, kFlagsXAttr, kFlagsData, kFlagsNoFollowSource).
Note that if cloning is successful, progress event will not be invoked. Note also that there is no support for cloning directories: if a directory is provided as the source and kFlagsCloneForce is not passed, this will instead copy the directory. Recursive copying however is supported.

83.5.24 kFlagsCloneForce = & h2000000

MBS MacOSX Plugin, Plugin Version: 19.4.

Function: One of the flag constants.
Notes: Clone the file instead. This is a force flag i.e. if cloning fails, an error is returned. This flag is equivalent to BitwiseOr(kFlagsExcl, kFlagsACL, kFlagsStat, kFlagsXAttr, kFlagsData, kFlagsNoFollowSource). Note that if cloning is successful, progress callbacks will not be invoked. Note also that there is no support for cloning directories: if a directory is provided as the source, an error will be returned.

83.5.25 kFlagsData = 8

MBS MacOSX Plugin, Plugin Version: 19.4.

Function: One of the flag constants.
Notes: Copy the source file's data.

83.5.26 kFlagsDataSparse = & h8000000

MBS MacOSX Plugin, Plugin Version: 19.4.

Function: One of the flag constants.
Notes:

Copy a file sparsely. This requires that the source and destination file systems support sparse files with hole sizes at least as large as their block sizes.
If kFlagsData is also specified, this will fall back to a full copy if sparse copying cannot be performed for any reason; otherwise, an error is returned.

83.5.27 kFlagsExcl = & h20000

MBS MacOSX Plugin, Plugin Version: 19.4.

Function: One of the flag constants.
Notes: Fail if the to file already exists.

83.5.28 kFlagsMetaData = 7

MBS MacOSX Plugin, Plugin Version: 19.4.

Function: One of the flag constants.
Notes: Copy the metadata; equivalent to BitwiseOr(kFlagsSecurity, kFlagsXAttr).

83.5.29 kFlagsMove = & h100000

MBS MacOSX Plugin, Plugin Version: 19.4.

Function: One of the flag constants.
Notes:

Unlink (using remove(3)) the from file.
No error is returned if remove(3) fails. Note that remove(3) removes a symbolic link itself, not the target of

the link.

83.5.30 kFlagsNoFollow = & hC00000

MBS MacOSX Plugin, Plugin Version: 19.4.

Function: One of the flag constants.
Notes: This is a convenience macro, equivalent to BitwiseOr(kFlagsNoFollowDest, kFlagsNoFollowSource).

83.5.31 kFlagsNoFollowDest = & h80000

MBS MacOSX Plugin, Plugin Version: 19.4.

Function: One of the flag constants.
Notes: Do not follow the to file, if it is a symbolic link.

83.5.32 kFlagsNoFollowSource = & h40000

MBS MacOSX Plugin, Plugin Version: 19.4.

Function: One of the flag constants.
Notes: Do not follow the from file, if it is a symbolic link.

83.5.33 kFlagsPack = & h400000

MBS MacOSX Plugin, Plugin Version: 19.4.

Function: One of the flag constants.
Notes: Serialize the from file. The to file is an Apple-Double-format file.

83.5.34 kFlagsRecursive = & h8000

MBS MacOSX Plugin, Plugin Version: 19.4.

Function: One of the flag constants.
Notes: Causes copyfile to recursively copy a hierarchy.

83.5.35 kFlagsRunInPlace = & h4000000

MBS MacOSX Plugin, Plugin Version: 19.4.

Function: One of the flag constants.
Notes: If the src file has quarantine information, add the QTN_FLAG_DO_NOT_TRANSLOCATE flag to the quarantine information of the dst file. This allows a bundle to run in place instead of being translocated.

83.5.36 kFlagsSecurity = 3

MBS MacOSX Plugin, Plugin Version: 19.4.

Function: One of the flag constants.
Notes: Copy the source file's POSIX and ACL information; equivalent to BitwiseOr(kFlagsStat,kFlagsACL).

83.5.37 kFlagsStat = 2

MBS MacOSX Plugin, Plugin Version: 19.4.

Function: One of the flag constants.
Notes: Copy the source file's POSIX information (mode, modification time, etc.).

83.5.38 kFlagsUnlink = & h200000

MBS MacOSX Plugin, Plugin Version: 19.4.

Function: One of the flag constants.
Notes: Unlink the to file before starting.

83.5.39 kFlagsUnpack = & h800000

MBS MacOSX Plugin, Plugin Version: 19.4.

Function: One of the flag constants.
Notes: Unserialize the from file. The from file is an AppleDouble-format file; the to file will have the extended attributes, ACLs, resource fork, and FinderInfo data from the to file, regardless of the flags argument passed in.

83.5.40 kFlagsVerbose = & h40000000

MBS MacOSX Plugin, Plugin Version: 19.4.

Function: One of the flag constants.
Notes: Verbose messages.

83.5.41 kFlagsXAttr = 4

MBS MacOSX Plugin, Plugin Version: 19.4.

Function: One of the flag constants.
Notes: Copy the source file's extended attributes.

83.5.42 kReturnContinue = 0

MBS MacOSX Plugin, Plugin Version: 19.4.

Function: One of the return values for progress event.
Notes: The copy will continue as expected.

83.5.43 kReturnQuit = 2

MBS MacOSX Plugin, Plugin Version: 19.4.

Function: One of the return values for progress event.
Notes: The data copy will be aborted; in the case of kStageProgress, result will be set to ECANCELED (89).

83.5.44 kReturnSkip = 1

MBS MacOSX Plugin, Plugin Version: 19.4.

Function: One of the return values for progress event.
Notes: The data copy will be aborted, but without error.

83.5.45 kStageError = 3

MBS MacOSX Plugin, Plugin Version: 19.4.

Function: One of the progress stages.
Notes: Indicates an error has happened at some stage.

83.5.46 kStageFinish = 2

MBS MacOSX Plugin, Plugin Version: 19.4.

Function: One of the progress stages.
Notes: After copying has successfully finished.

83.5.47 kStageProgress = 4

MBS MacOSX Plugin, Plugin Version: 19.4.

Function: One of the progress stages.
Notes: Copy in progress.

83.5.48 kStageStart = 1

MBS MacOSX Plugin, Plugin Version: 19.4.

Function: One of the progress stages.
Notes: Before copying has begun.

83.5.49 kWhatCopyData = 4

MBS MacOSX Plugin, Plugin Version: 19.4.

Function: One of the constants to describe what is copied.
Notes: Data is copied currently.

83.5.50 kWhatCopyXAttr = 5

MBS MacOSX Plugin, Plugin Version: 19.4.

Function: One of the constants to describe what is copied.
Notes: Extended attributes are copied currently.

83.5.51 kWhatRecurseDir = 2

MBS MacOSX Plugin, Plugin Version: 19.4.

Function: One of the constants to describe what is copied.
Notes: The object being copied is a directory, and is being entered. (That is, none of the filesystem objects contained within the directory have been copied yet.)

83.5.52 kWhatRecurseDirCleanup = 3

MBS MacOSX Plugin, Plugin Version: 19.4.

Function: One of the constants to describe what is copied.
Notes: The object being copied is a directory, and all of the objects contained have been copied. At this stage, the destination directory being copied will have any extra permissions that were added to allow the copying will be removed.

83.5.53 kWhatRecurseError = 0

MBS MacOSX Plugin, Plugin Version: 19.4.

Function: One of the constants to describe what is copied.
Notes: There was an error in processing an element of the source hierarchy; this happens when fts(3) returns an error or unknown file type.

83.5.54 kWhatRecurseFile = 1

MBS MacOSX Plugin, Plugin Version: 19.4.

Function: One of the constants to describe what is copied.
Notes: The object being copied is a file (or, rather, something other than a directory).

83.6 class DADiskMBS

83.6.1 class DADiskMBS

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for a disk in Disk Arbitation.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

83.6.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr1

83.6.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr1

83.6.4 Methods

83.6.5 BSDName as string

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Obtains the BSD device name for the specified disk.
Example:

```
dim session as new DASessionMBS
dim d as DADiskMBS = DADiskMBS.CreateFromVolume(session,volume(0))
MsgBox d.BSDName
```

83.6.6 Constructor

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The private constructor.

83.6.7 CreateFromBSDName(session as DASessionMBS, name as string) as DADiskMBS

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new disk object.
Notes:

session: The DASession in which to contact Disk Arbitration.
name: The BSD device name.

Returns a reference to a new DADisk.

83.6.8 CreateFromVolume(session as DASessionMBS, volume as folderitem) as DADiskMBS

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new disk object.
Notes: Creates a new disk object.

83.6.9 CreateFromVolumePath(session as DASessionMBS, path as string) as DADiskMBS

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new disk object.
Notes:

session: The DASession in which to contact Disk Arbitration.
path: The BSD mount point.

Available in OS X v10.7 and later.

83.6.10 Description as dictionary

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Obtains the Disk Arbitration description of the specified disk.
Example:

```
dim session as new DASessionMBS
dim d as DADiskMBS = DADiskMBS.CreateFromVolume(session,volume(0))
```

```
dim dic as Dictionary = d.Description
MsgBox dic.Value(d.kDADiskDescriptionVolumeNameKey)
```

Notes:

This function will contact Disk Arbitration to acquire the latest description of the specified disk, unless this function is called on a disk object passed within the context of an event, in which case the description is current as of that event.
Available in OS X v10.4 and later.

83.6.11 kDADiskDescriptionBusNameKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a String.

83.6.12 kDADiskDescriptionBusPathKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a String.

83.6.13 kDADiskDescriptionDeviceGUIDKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a memoryblock.

83.6.14 kDADiskDescriptionDeviceInternalKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a Boolean.

83.6.15 kDADiskDescriptionDeviceModelKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a String.

83.6.16 kDADiskDescriptionDevicePathKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a String.

83.6.17 kDADiskDescriptionDeviceProtocolKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a String.

83.6.18 kDADiskDescriptionDeviceRevisionKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a String.

83.6.19 kDADiskDescriptionDeviceUnitKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a Number.

83.6.20 kDADiskDescriptionDeviceVendorKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a String.

83.6.21 kDADiskDescriptionMediaBlockSizeKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a Number.

83.6.22 kDADiskDescriptionMediaBSDMajorKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a Number.

83.6.23 kDADiskDescriptionMediaBSDMinorKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a Number.

83.6.24 kDADiskDescriptionMediaBSDNameKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a String.

83.6.25 kDADiskDescriptionMediaBSDUnitKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a Number.

83.6.26 kDADiskDescriptionMediaContentKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a String.

83.6.27 kDADiskDescriptionMediaEjectableKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a Boolean.

83.6.28 kDADiskDescriptionMediaIconKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a Dictionary.

83.6.29 kDADiskDescriptionMediaKindKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a String.

83.6.30 kDADiskDescriptionMediaLeafKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a Boolean.

83.6.31 kDADiskDescriptionMediaNameKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a String.

83.6.32 kDADiskDescriptionMediaPathKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a String.

83.6.33 kDADiskDescriptionMediaRemovableKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a Boolean.

83.6.34 kDADiskDescriptionMediaSizeKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a Number.

83.6.35 kDADiskDescriptionMediaTypeKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a String.

83.6.36 kDADiskDescriptionMediaUUIDKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a CFUUIDMBS.

83.6.37 kDADiskDescriptionMediaWholeKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a Boolean.

83.6.38 kDADiskDescriptionMediaWritableKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a Boolean.

83.6.39 kDADiskDescriptionVolumeKindKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a String.

83.6.40 kDADiskDescriptionVolumeMountableKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a Boolean.

83.6.41 kDADiskDescriptionVolumeNameKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a String.

83.6.42 kDADiskDescriptionVolumeNetworkKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a Boolean.

83.6.43 kDADiskDescriptionVolumePathKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a folderitem.

83.6.44 kDADiskDescriptionVolumeUUIDKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a CFUUIDMBS.

83.6.45 Options as Integer

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Obtains the options for the specified disk.

83.6.46 SetOptions(options as Integer, value as boolean) as Integer

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets the options for the specified disk.
Notes:

options: The options to set or clear.
value: Pass true to set options; otherwise pass false to clear options.
Returns result code.

83.6.47 WholeDisk as DADiskMBS

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Obtain the associated whole disk object for the specified disk.

83.6.48 Properties

83.6.49 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

83.7 class DADissenterMBS

83.7.1 class DADissenterMBS

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for an error.
Example:

```
dim d as new DADissenterMBS(11, "Write Error")

MsgBox str(d.Status)+" "+d.StatusString
```

83.7.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr1

83.7.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr1

83.7.4 Methods

83.7.5 Constructor(status as Integer, s as string)

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new dissenter object.
Example:

```
dim d as new DADissenterMBS(11, "Write Error")

MsgBox str(d.Status)+" "+d.StatusString
```

Notes:

status: The return code.
s: The return code string. Pass empty string for no reason.

83.7.6 Properties

83.7.7 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

83.7.8 Status as Integer

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Obtains the return code.
Notes: (Read only property)

83.7.9 StatusString as String

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Obtains the return code string.
Notes: (Read only property)

83.7.10 Constants

83.7.11 kDAReturnBadArgument = & hF8DA0003

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the error constants.
Notes: Bad Argument

83.7.12 kDAReturnBusy = & hF8DA0002

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the error constants.
Notes: Busy

83.7.13 kDAReturnError = & hF8DA0001

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the error constants.
Notes: Error

83.7.14 kDAReturnExclusiveAccess = & hF8DA0004

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the error constants.
Notes: Exclusive Access

83.7.15 kDAReturnNoResources = & hF8DA0005

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the error constants.
Notes: No Resources

83.7.16 kDAReturnNotFound = & hF8DA0006

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the error constants.
Notes: Not found

83.7.17 kDAReturnNotMounted = & hF8DA0007

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the error constants.
Notes: Not mounted

83.7.18 kDAReturnNotPermitted = & hF8DA0008

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the error constants.
Notes: Not permitted

83.7.19 kDAReturnNotPrivileged = & hF8DA0009

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the error constants.
Notes: Not privileged

83.7.20 kDAReturnNotReady = & hF8DA000A

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the error constants.
Notes: Not ready

83.7.21 kDAReturnNotWritable = & hF8DA000B

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the error constants.
Notes: Not writable

83.7.22 kDAReturnSuccess = 0

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the error constants.
Notes: Success

83.7.23 kDAReturnUnsupported = & hF8DA000C

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the error constants.
Notes: Unsupported

83.8 class DarwinChmodMBS

83.8.1 class DarwinChmodMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: A class to change the owner or mode of a file on Mac OS X.
Example:

```
dim c as DarwinChmodMBS
dim userfolder as FolderItem
dim darwinResult as Integer
dim s as string

c=new DarwinChmodMBS

userFolder=SpecialFolder.Desktop.Child("chmod.rb")
s=userFolder.NativePath

darwinResult = c.chmod( s, & B111111111 ) // all rwx

// 1 = ———x
// 2 = ———wx
// 7 = ——-rwx
// 8 = ——x—

darwinResult=c.lstat(s)

MsgBox s+" "+str(darwinResult)+" "+str(c.error)
```

83.8.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.0pr1
- MBS Real Studio Plugins, version 12.4pr10

83.8.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.0pr1
- MBS Real Studio Plugins, version 12.4pr10

83.8.4 Methods

83.8.5 chflags(path as string, flags as Integer) as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The file whose name is given by path has its flags changed to flags.
Notes:

The flags specified are formed by or'ing the following values

UF_NODUMP	0x00000001	Do not dump the file.
UF_IMMUTABLE	0x00000002	The file may not be changed.
UF_APPEND	0x00000004	The file may only be appended to.
UF_OPAQUE	0x00000008	Directory is opaque wrt. union

The "UF_IMMUTABLE" and "UF_APPEND" flags may be set or unset by either the owner of a file or the super-user.

The "SF_IMMUTABLE" and "SF_APPEND" flags may only be set or unset by the super-user. They may be set at any time, but normally may only be unset when the system is in single-user mode.

You can type "man 2 chflags" on the Mac OS X terminal for more details.

Upon successful completion, a value of 0 is returned. Otherwise, -1 is returned.
Returns -2 on bad parameter or if function is not available.

Chflags() will fail it:

ENOTDIR	A component of the path prefix is not a directory.
ENAMETOOLONG	A component of a pathname exceeded { NAME_MAX } characters, or an entire path name exceeded { PATH_MAX } characters.
ENOENT	The named file does not exist.
EACCES	Search permission is denied for a component of the path prefix.
ELOOP	Too many symbolic links were encountered in translating the pathname.
EPERM	The effective user ID does not match the owner of the file and the effective user ID is not the super-user.
EROFS	The named file resides on a read-only file system.
EFAULT	Path points outside the process's allocated address space.
EIO	An I/O error occurred while reading from or writing to the file system.

83.8.6 chmod(path as string, mode as Integer) as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Sets the file permission bits of the file specified by the pathname path to mode.
Example:

```
dim f as FolderItem
dim g as FolderItem

f=SpecialFolder.Desktop.Child("test1")
g=SpecialFolder.Desktop.Child("test2")

dim d as DarwinChmodMBS

d=new DarwinChmodMBS

if d.stat(f.NativePath)=0 then // read mode
if d.chmod(g.NativePath,d.mode)=0 then // set mode
// worked
end if
end if
```

Notes:

Chmod() verifies that the process owner (user) either owns the file specified by path (or fd), or is the superuser. A mode is created from or'd permission bit masks like this:

IRWXU	& o0000700	RWX mask for owner
IRUSR	& o0000400	R for owner
IWUSR	& o0000200	W for owner
IXUSR	& o0000100	X for owner
IRWXG	& o0000070	RWX mask for group
IRGRP	& o0000040	R for group
IWGRP	& o0000020	W for group
IXGRP	& o0000010	X for group
IRWXO	& o0000007	RWX mask for other
IROTH	& o0000004	R for other
IWOTH	& o0000002	W for other
IXOTH	& o0000001	X for other
ISUID	& o0004000	set user id on execution
ISGID	& o0002000	set group id on execution
ISVTX	& o0001000	save swapped text even after use

The ISVTX (the sticky bit) indicates to the system which executable files are shareable (the default) and the system maintains the program text of the files in the swap area. The sticky bit may only be set by the

super user on shareable executable files.

If mode ISVTX (the 'sticky bit') is set on a directory, an unprivileged user may not delete or rename files of other users in that directory. The sticky bit may be set by any user on a directory which the user owns or has appropriate permissions. For more details of the properties of the sticky bit, see sticky(8).

Writing or changing the owner of a file turns off the set-user-id and set-group-id bits unless the user is the super-user. This makes the system somewhat more secure by protecting set-user-id (set-group-id) files from remaining set-user-id (set-group-id) if they are modified, at the expense of a degree of compatibility.

You can type "man 2 chmod" on the Mac OS X terminal for more details.

Upon successful completion, a value of 0 is returned. Otherwise, -1 is returned.
Returns -2 on bad parameter or if function is not available.

Chmod() will fail and the file mode will be unchanged if:

ENOTDIR	A component of the path prefix is not a directory.
ENAMETOOLONG	A component of a pathname exceeded { NAME_MAX } characters, or an entire path name exceeded { PATH_MAX } characters.
ENOENT	The named file does not exist.
EACCES	Search permission is denied for a component of the path prefix.
ELOOP	Too many symbolic links were encountered in translating the pathname.
EPERM	The effective user ID does not match the owner of the file and the effective user ID is not the super-user.
EROFS	The named file resides on a read-only file system.
EFAULT	Path points outside the process's allocated address space.
EIO	An I/O error occurred while reading from or writing to the file system.

83.8.7 chown(path as string, uid as Integer, gid as Integer) as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The owner ID and group ID of the file (or link) named by path is changed as specified by the arguments owner (uid) and group (gid).
Notes:

The owner of a file may change the group to a group of which he or she is a member, but the change owner capability is restricted to the superuser.

Chown() clears the set-user-id and set-group-id bits on the file to prevent accidental or mischievous creation of set-user-id and set-group-id programs.

You can type "man 2 chmod" on the Mac OS X terminal for more details.

Upon successful completion, a value of 0 is returned. Otherwise, -1 is returned.
Returns -2 on bad parameter or if function is not available.

Chown() will fail and the file or link will be unchanged if:

ENOTDIR	A component of the path prefix is not a directory.
ENAMETOOLONG	A component of a pathname exceeded { NAME_MAX } characters, or an entire path name exceeded { PATH_MAX } characters.
ENOENT	The named file does not exist.
EACCES	Search permission is denied for a component of the path prefix.
ELOOP	Too many symbolic links were encountered in translating the pathname.
EPERM	The effective user ID is not the super-user.
EROFS	The named file resides on a read-only file system.
EFAULT	Path points outside the process's allocated addressspace.
EIO	An I/O error occurred while reading from or writing to the file system.

83.8.8 error as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Returns the error code from the last operation.
Notes:

This function asks the operation system. It's not a property like in other classes.

Error codes:

Returns -2 if function is not available.

83.8.9 lstat(path as string) as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The stat function obtains information about the file pointed to by path.
Example:

```
// we use truechild to not resolve the symbol link
dim f as FolderItem = SpecialFolder.Desktop.trueChild("test.rtf")
```

```
dim c as new DarwinChmodMBS
if c.lstat(f.NativePath) = 0 then
// ok

Break // see values in debugger
else
MsgBox "failed"
end if
```

Notes: See stat for details.

83.8.10 stat(path as string) as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The stat function obtains information about the file pointed to by path.
Example:

```
dim d as DarwinChmodMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test")
d=new DarwinChmodMBS

if d.stat(f.NativePath)=0 then
MsgBox hex(d.mode)
end if
```

Notes:

Read, write or execute permission of the named file is not required, but all directories listed in the path name leading to the file must be searchable.

Lstat() is like stat() except in the case where the named file is a symbolic link, in which case lstat() returns information about the link, while stat() returns information about the file the link references. Unlike other filesystem objects, symbolic links do not have an owner, group, access mode, times, etc. Instead, these attributes are taken from the directory that contains the link. The only attributes returned from an lstat() that refer to the symbolic link itself are the file type (S_IFLNK), size, blocks, and link count (always 1).

Information about the file is stored directly into the fields of the class if the function is successfull.

You can type ”man 2 stat” on the Mac OS X terminal for more details.

Upon successful completion, a value of 0 is returned. Otherwise, -1 is returned.
Returns -2 on bad parameter or if function is not available.

Stat() and lstat() will fail if:

83.8.11 Properties

83.8.12 blocks as Double

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Number of blocks allocated for the file.
Notes:

The actual number of blocks allocated for the file in 512-byte units. As short symbolic links are stored in the inode, this number may be zero.

Set by the stat and lstat function if it was successfull.
(Read and Write property)

83.8.13 blocksize as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The optimal I/O block size for the file.
Notes:

Set by the stat and lstat function if it was successfull.
(Read and Write property)

83.8.14 dev as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The device inode where the file resides on.
Notes:

Set by the stat and lstat function if it was successfull.
(Read and Write property)

83.8.15 flags as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: User defined flags for the file.
Notes:

Set by the stat and lstat function if it was successfull.
(Read and Write property)

83.8.16 gen as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The file generation number.
Notes:

Set by the stat and lstat function if it was successfull.
(Read and Write property)

83.8.17 gid as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The group-id of the owner of the file.
Notes:

Set by the stat and lstat function if it was successfull.
(Read and Write property)

83.8.18 ino as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The inode's number of the file.
Notes:

Set by the stat and lstat function if it was successfull.
(Read and Write property)

83.8.19 mode as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The inode protection mode of the file.
Notes:

Set by the stat and lstat function if it was successfull.

Some Constants:

(Read and Write property)

83.8.20 nlink as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The number or hard links to the file.
Notes:

Set by the stat and lstat function if it was successfull.
(Read and Write property)

83.8.21 rdev as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The device type, for special file inode.
Notes:

Set by the stat and lstat function if it was successfull.
(Read and Write property)

83.8.22 size as Double

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The file size, in bytes.
Notes:

Set by the stat and lstat function if it was successfull.
(Read and Write property)

83.8.23 uid as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The user-id of the owner of the file.
Notes:

Set by the stat and lstat function if it was successfull.
(Read and Write property)

EPERM	1	Operation not permitted
ENOENT	2	No such file or directory
ESRCH	3	No such process
EINTR	4	Interrupted system call
EIO	5	Input/output error
ENXIO	6	Device not configured
E2BIG	7	Argument list too long
ENOEXEC	8	Exec format error
EBADF	9	Bad file descriptor
ECHILD	10	No child processes
EDEADLK	11	Resource deadlock avoided (11 was EAGAIN)
ENOMEM	12	Cannot allocate memory
EACCES	13	Permission denied
EFAULT	14	Bad address
ENOTBLK	15	Block device required
EBUSY	16	Device busy
EEXIST	17	File exists
EXDEV	18	Cross-device link
ENODEV	19	Operation not supported by device
ENOTDIR	20	Not a directory
EISDIR	21	Is a directory
EINVAL	22	Invalid argument
ENFILE	23	Too many open files in system
EMFILE	24	Too many open files
ENOTTY	25	Inappropriate ioctl for device
ETXTBSY	26	Text file busy
EFBIG	27	File too large
ENOSPC	28	No space left on device
ESPIPE	29	Illegal seek
EROFS	30	Read-only file system
EMLINK	31	Too many links
EPIPE	32	Broken pipe
math software		
EDOM	33	Numerical argument out of domain
ERANGE	34	Result too large
non-blocking and interrupt i/o		
EAGAIN	35	Resource temporarily unavailable
EWOULDBLOCK	EAGAIN	Operation would block
EINPROGRESS	36	Operation now in progress
EALREADY	37	Operation already in progress
ipc/network software – argument errors		
ENOTSOCK	38	Socket operation on non-socket
EDESTADDRREQ	39	Destination address required
EMSGSIZE	40	Message too long
EPROTOTYPE	41	Protocol wrong type for socket
ENOPROTOOPT	42	Protocol not available
EPROTONOSUPPORT	43	Protocol not supported
ESOCKTNOSUPPORT	44	Socket type not supported
ENOTSUP	45	Operation not supported
EOPNOTSUPP	ENOTSUP	Operation not supported
EPFNOSUPPORT	46	Protocol family not supported
EAFNOSUPPORT	47	Address family not supported by protocol family
EADDRINUSE	48	Address already in use
EADDRNOTAVAIL	49	Can't assign requested address
ipc/network software – operational errors		
ENETDOWN	50	Network is down
ENETUNREACH	51	Network is unreachable
ENETRESET	52	Network dropped connection on reset
ECONNABORTED	53	Software caused connection abort
ECONNRESET	54	Connection reset by peer
ENOBUFS	55	No buffer space available
EISCONN	56	Socket is already connected
ENOTCONN	57	Socket is not connected
ESHUTDOWN	58	Can't send after socket shutdown
ETOOMANYREFS	59	Too many references: can't splice
ETIMEDOUT	60	Operation timed out
ECONNREFUSED	61	Connection refused
ELOOP	62	Too many levels of symbolic links
ENAMETOOLONG	63	File name too long
should be rearranged		
EHOSTDOWN	64	Host is down

ENOTDIR	A component of the path prefix is not a directory.
ENAMETOOLONG	A component of a pathname exceeded { NAME_MAX } characters, or an entire path name exceeded { PATH_MAX } characters.
ENOENT	The named file does not exist.
EACCES	Search permission is denied for a component of the path prefix.
ELOOP	Too many symbolic links were encountered in translating the pathname.
EFAULT	Sb or name points to an invalid address.
EIO	An I/O error occurred while reading from or writing to the file system.

ISUID	0004000	set user id on execution
ISGID	0002000	set group id on execution
ISTXT	0001000	sticky bit
IRWXU	0000700	RWX mask for owner
IRUSR	0000400	R for owner
IWUSR	0000200	W for owner
IXUSR	0000100	X for owner
IRWXG	0000070	RWX mask for group
IRGRP	0000040	R for group
IWGRP	0000020	W for group
IXGRP	0000010	X for group
IRWXO	0000007	RWX mask for other
IROTH	0000004	R for other
IWOTH	0000002	W for other
IXOTH	0000001	X for other

83.9 class DarwinIFStatInterfaceMBS

83.9.1 class DarwinIFStatInterfaceMBS

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: A class for the statistics of one interface.
Example:

```
dim d as new DarwinIFStatMBS
call d.Update
dim it as DarwinIFStatInterfaceMBS = d.Item(0)
MsgBox it.name
```

Notes:

All this integer properties are internally unsigned and they may overflow.
Your application may need to take care for this.

83.9.2 Blog Entries

- MacOSX plugin for iOS

83.9.3 Blog Entries

- MacOSX plugin for iOS

83.9.4 Properties

83.9.5 Baudrate as UInt32

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: The linespeed.
Example:

```
dim d as new DarwinIFStatMBS
call d.Update
dim it as DarwinIFStatInterfaceMBS = d.Item(0)
MsgBox str(it.Baudrate)
```

Notes: (Read only property)

83.9.6 Collisions as UInt64

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: The number of collisions on csma interfaces.
Example:

```
dim d as new DarwinIFStatMBS
call d.Update
dim it as DarwinIFStatInterfaceMBS = d.Item(0)
MsgBox str(it.Collisions)
```

Notes: (Read only property)

83.9.7 InputBytes as UInt64

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: Total number of octets received.
Example:

```
dim d as new DarwinIFStatMBS
call d.Update
dim it as DarwinIFStatInterfaceMBS = d.Item(0)
MsgBox str(it.InputBytes)
```

Notes: (Read only property)

83.9.8 InputErrors as UInt64

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: The number of input errors on interface.
Example:

```
dim d as new DarwinIFStatMBS
call d.Update
dim it as DarwinIFStatInterfaceMBS = d.Item(0)
MsgBox str(it.InputErrors)
```

Notes: (Read only property)

83.9.9 InputMulticasts as UInt64

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: The number of packets received via multicast.
Example:

```
dim d as new DarwinIFStatMBS
call d.Update
dim it as DarwinIFStatInterfaceMBS = d.Item(0)
MsgBox str(it.InputMulticasts)
```

Notes: (Read only property)

83.9.10 InputPackets as UInt64

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: The number of packets received.
Example:

```
dim d as new DarwinIFStatMBS
call d.Update
dim it as DarwinIFStatInterfaceMBS = d.Item(0)
MsgBox str(it.InputPackets)
```

Notes: (Read only property)

83.9.11 MTU as UInt32

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: The maximum transmission unit.
Example:

```
dim d as new DarwinIFStatMBS
```

```
call d.Update
dim it as DarwinIFStatInterfaceMBS = d.Item(0)
MsgBox str(it.MTU)
```

Notes:

Maximum size of a packet.

none
(Read only property)

83.9.12 Name as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: The name of the interface.
Example:

```
dim d as new DarwinIFStatMBS
call d.Update
dim it as DarwinIFStatInterfaceMBS = d.Item(0)
MsgBox it.Name
```

Notes:

e.g. lo0 for localhost, en0 for the first ethernet interface, fw0 for the first firewire interface, etc.
(Read and Write property)

83.9.13 OutputBytes as UInt64

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: Total number of octets sent.
Example:

```
dim d as new DarwinIFStatMBS
call d.Update
dim it as DarwinIFStatInterfaceMBS = d.Item(0)
MsgBox str(it.OutputBytes)
```

Notes: (Read only property)

83.9.14 OutputErrors as UInt64

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: The number of output errors.
Example:

```
dim d as new DarwinIFStatMBS
call d.Update
dim it as DarwinIFStatInterfaceMBS = d.Item(0)
MsgBox str(it.OutputErrors)
```

Notes: (Read only property)

83.9.15 OutputMulticasts as UInt64

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: The number of packets sent via multicast.
Example:

```
dim d as new DarwinIFStatMBS
call d.Update
dim it as DarwinIFStatInterfaceMBS = d.Item(0)
MsgBox str(it.OutputMulticasts)
```

Notes: (Read only property)

83.9.16 OutputPackets as UInt64

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: The number of packets sent.
Example:

```
dim d as new DarwinIFStatMBS
call d.Update
dim it as DarwinIFStatInterfaceMBS = d.Item(0)
MsgBox str(it.OutputPackets)
```

Notes: (Read only property)

83.9.17 PhysicalType as Integer

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: The physical network type.
Example:

```
dim d as new DarwinIFStatMBS
call d.Update
dim it as DarwinIFStatInterfaceMBS = d.Item(0)
MsgBox str(it.PhysicalType)
```

Notes:

e.g., AUI, Thinnet, 10base-T, etc
(Read and Write property)

83.9.18 Type as Integer

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: The network type.
Example:

```
dim d as new DarwinIFStatMBS
call d.Update
dim it as DarwinIFStatInterfaceMBS = d.Item(0)
MsgBox str(it.type)
```

Notes:

e.g. ethernet, tokenring, etc

from if_types.h:

Interface types for benefit of parsing media address headers.
This list is derived from the SNMP list of ifTypes, currently documented in RFC1573.

83.10 class DarwinIFStatMBS

83.10.1 class DarwinIFStatMBS

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: A class for network interface throughput statistics.
Example:

```
dim d as new DarwinIFStatMBS
call d.Update
MsgBox str(d.Count)
```

83.10.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.2pr1

83.10.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.2pr1

83.10.4 Methods

83.10.5 Item(index as Integer) as DarwinIFStatInterfaceMBS

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: Returns the statistics for the given interface.
Example:

```
dim d as new DarwinIFStatMBS
call d.Update
MsgBox str(d.Item(0).InputBytes)
```

Notes: Index goes from 0 to count-1.

83.10.6 Update as boolean

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: Asks the system for new statistics.
Example:

```
dim d as new DarwinIFStatMBS
call d.Update
MsgBox str(d.Count)
```

Notes: Returns true on success.

83.10.7 Properties

83.10.8 Count as Integer

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: The number of interfaces in the item array.
Example:

```
dim d as new DarwinIFStatMBS
call d.Update
MsgBox str(d.Count)
```

Notes: (Read only property)

83.11 class DASessionMBS

83.11.1 class DASessionMBS

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The disk arbitration session class from Mac OS X.
Notes: The session manages all the events and operations you may do on disks using Apple's Disk Arbitration framework.

83.11.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr1

83.11.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr1

83.11.4 Methods

83.11.5 Constructor

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor.

83.11.6 Eject(disk as DADiskMBS, options as Integer = 0)

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Ejects the specified disk object.
Notes:

disk: The disk object.
options: The eject options.
Calls Ejected event later with result.

83.11.7 IsClaimed(disk as DADiskMBS) as boolean

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Reports whether or not the disk is claimed.
Notes:

disk: The disk object.
Returns true if the disk is claimed, otherwise false.

83.11.8 Mount(disk as DADiskMBS, path as string, options as Integer = 0)

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Mounts the volume at the specified disk object.
Notes:

disk: The disk object.
path: The mount path. Pass empty string for a "standard" mount path.
options: The mount options.
Calls Mounted event later.

83.11.9 MountWithArguments(disk as DADiskMBS, path as string, arguments() as string, options as Integer = 0)

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Mounts the volume at the specified disk object, with the specified mount options.
Notes:

disk: The disk object.
path: The mount path. Pass empty string for a "standard" mount path.
options: The mount options.
arguments: The list of mount options to pass to /sbin/mount -o.

83.11.10 Rename(disk as DADiskMBS, name as string, options as Integer = 0)

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Renames the volume at the specified disk object.
Notes:

disk: The disk object.
options: The rename options.
Calls later the Renamed event with result.

83.11.11 Unclaim(disk as DADiskMBS)

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Unclaims the specified disk object.

83.11.12 Unmount(disk as DADiskMBS, options as Integer = 0)

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Unmounts the volume at the specified disk object.
Notes:

disk: The disk object.
options: The unmount options.
Calles Unmounted event later.

83.11.13 Properties

83.11.14 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

83.11.15 Events

83.11.16 Appeared(disk as DADiskMBS)

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: .

Function: The event called when a disk appears.
Notes: disk: A disk object.

83.11.17 DescriptionChanged(disk as DADiskMBS, keys() as string)

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: .

Function: The event called whenever a disk description has changed.
Notes:

disk: A disk object.
keys: A list of changed keys.

83.11.18 Disappeared(disk as DADiskMBS)

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: .

Function: The event called whenever a disk has disappeared.

83.11.19 Ejected(disk as DADiskMBS, dissenter as DADissenterMBS)

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: .

Function: Event called after eject operation finished.
Notes:

Disk: The disk object.
dissenter A dissenter object on failure or nil on success.

83.11.20 Mounted(disk as DADiskMBS, dissenter as DADissenterMBS)

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: .

Function: Event called after mount operation finished.
Notes:

disk: The disk object.
dissenter: A dissenter object on failure or nil on success.

83.11.21 Peek(disk as DADiskMBS)

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: .

Function: A disk has been peeked.

83.11.22 Renamed(disk as DADiskMBS, dissenter as DADissenterMBS)

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: .

Function: Called after the rename operation finished.
Notes:

disk: The disk object.
dissenter: A dissenter object on failure or nil on success.

83.11.23 Unmounted(disk as DADiskMBS, dissenter as DADissenterMBS)

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: .

Function: Called after unmount operation finished.
Notes:

disk: The disk object.
dissenter: A dissenter object on failure or nil on success.

83.11.24 Constants

83.11.25 kDADiskClaimOptionDefault = 0

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the claim option constants.
Notes: Default

83.11.26 kDADiskEjectOptionDefault = 0

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the eject option constants.
Notes: Default

83.11.27 kDADiskMountOptionDefault = 0

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: Options for mounting disk.
Notes: Default

83.11.28 kDADiskMountOptionWhole = 1

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: Options for mounting disk.
Notes: Mount the volumes tied to the whole disk object.

83.11.29 kDADiskOptionDefault = 0

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the options for disks.
Notes: Default

83.11.30 kDADiskOptionEjectUponLogout = 1

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the options for disks.
Notes: Eject the disk upon logout.

83.11.31 kDADiskOptionMountAutomatic = 16

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the options for disks.
Notes: Mount the disk upon appearance.

83.11.32 kDADiskOptionMountAutomaticNoDefer = 32

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the options for disks.
Notes: Mount the disk upon appearance, even if no login.

83.11.33 kDADiskOptionPrivate = 256

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the options for disks.
Notes: Hides the disk from callbacks.

83.11.34 kDADiskRenameOptionDefault = 0

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: Options for renaming.
Notes: Default

83.11.35 kDADiskUnmountOptionDefault = 0

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the options for unmounting.
Notes: Default

83.11.36 kDADiskUnmountOptionForce = & h00080000

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the options for unmounting.
Notes: Unmount the volume even if files are still active.

83.11.37 kDADiskUnmountOptionWhole = 0

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the options for unmounting.
Notes: Unmount the volumes tied to the whole disk object.

83.12 class DirectorySizeMBS

83.12.1 class DirectorySizeMBS

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for size information about a folder.
Example:

```
// chose a folder
dim f as FolderItem = SelectFolder

// calculate
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)

// display
MsgBox str(d.FilesCount)+" files in "+str(d.FolderCount)+" folder"
```

83.12.5 Videos

- Presentation from London conference about MBS Plugins.

83.12.6 Methods

83.12.7 Add(d as DirectorySizeMBS)

MBS Util Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds the values of the given directory size object to the current one.
Notes:

Passing nil is okay and will be ignored.
This method was added to support counting several folders and adding the results to one central object.

83.12.8 close

MBS Util Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

83.12.9 Constructor

MBS Util Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.

83.12.10 Update(folder as folderitem, recursive as boolean, ticks as Integer) as boolean

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Updates the class.
Example:

```
// chose a folder
dim f as FolderItem = SpecialFolder.Applications

// calculate
dim d as new DirectorySizeMBS

// update object
call d.Update(f, true, 0)

// display
MsgBox str(d.FilesCount)+" files and "+str(d.FolderCount)+" folders"
```

Notes:

The folder specified is searched for files and folders. Normally you'd better use CalculateDirectorySizeMBS.

Ticks is the count of ticks (1/60th second) which must pass till time is given to other threads. (e.g. 10)
Returns true if successfull.

If you call this function in a thread you can set the cancel property in a pushbutton event handler to stop this function.

83.12.11 Properties

83.12.12 Cancel as Boolean

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the Update function should stop as soon as possible.
Notes: (Read and Write property)

83.12.13 CompressedSize as UInt64

MBS Util Plugin, Plugin Version: 11.3, Platform: Windows, Targets: All.

Function: The size in bytes of all files.
Notes:

If a file is compressed, we add here the compressed size.
If a file is not compressed, we add the normal logical size.
Only used on Windows and only with QueryCompressedSizes = true.
(Read only property)

83.12.14 CountBundlesAsItem as Boolean

MBS Util Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Whether to cound bundles as files.
Example:

```
// chose a folder
dim f as FolderItem = SpecialFolder.Applications

// calculate
dim d1 as new DirectorySizeMBS
d1.CountBundlesAsItem = true

call d1.Update(f, true, 0)

dim d2 as new DirectorySizeMBS
d2.CountBundlesAsItem = false

call d2.Update(f, true, 0)

// display
MsgBox "Normal count: "+str(D2.FilesCount)+" files and "+str(d2.FolderCount)+" folders"+EndOfLine+_
"With bundles as files: "+str(D1.FilesCount)+" files and "+str(d1.FolderCount)+" folders"
```

Notes:

Bundles like applications are counted as a single file if this property is true or as a folder with files inside if this property is false.

Default is false.
(Read and Write property)

83.12.15 Directory as FolderItem

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The folder which was searched.
Notes: (Read and Write property)

83.12.16 FilesCount as UInt64

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of files counted.
Example:

```
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox str(d.FilesCount)+" files"
```

Notes:

FilesCount=VisibleFilesCount+HiddenFilesCount
(Read only property)

83.12.17 FolderCount as UInt64

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of folders counted.
Example:

```
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox str(d.FolderCount)+" folder"
```

Notes:

FolderCount=VisibleFolderCount+HiddenFolderCount
(Read only property)

83.12.18 HiddenCompressedSize as UInt64

MBS Util Plugin, Plugin Version: 11.3, Platform: Windows, Targets: All.

Function: The size in bytes of all hidden files.
Notes:

If a file is compressed, we add here the compressed size.
If a file is not compressed, we add the normal logical size.
Only used on Windows and only with QueryCompressedSizes = true.
(Read only property)

83.12.19 HiddenFilesCount as Integer

MBS Util Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of hidden files counted.
Example:

```
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox str(d.HiddenFilesCount)+" hidden files"
```

Notes:

A file is invisible if the Invisible flag is set for this file.
(Read and Write property)

83.12.20 HiddenFolderCount as Integer

MBS Util Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of folders.
Example:

```
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox str(d.HiddenFolderCount)+" hidden folders"
```

Notes:

A file is invisible if the Invisible flag is set for this file.
(Read and Write property)

83.12.21 HiddenItemCount as UInt64

MBS Util Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of invisible items.
Example:

```
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox str(d.HiddenItemCount)+" hidden items"
```

Notes:

An item is invisible if the Invisible flag is set for this file.
HiddenItemCount=HiddenFolderCount+HiddenFilesCount
(Read only property)

83.12.22 HiddenLogicalDataForkSize as UInt64

MBS Util Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The logical size of the data forks of all hidden file in Bytes.
Example:

```
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox "Logical data fork size of hidden files: "+Format(d.HiddenLogicalDataForkSize/1000000,"0")+"
MB"
```

Notes: (Read and Write property)

83.12.23 HiddenLogicalResourceForkSize as UInt64

MBS Util Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The logical size of the resource forks of all hidden file in Bytes.
Example:

```
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox "Logical resource fork size of hidden files: "+Format(d.HiddenLogicalResourceForkSize/1000000,"0")+" MB"
```

Notes: (Read and Write property)

83.12.24 HiddenLogicalTotalSize as UInt64

MBS Util Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The logical size of the all forks of all hidden file in Bytes.
Example:

```
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox "Logical total size of hidden files: "+Format(d.HiddenLogicalTotalSize/1000000,"0")+" MB"
```

Notes: (Read only property)

83.12.25 HiddenPhysicalDataForkSize as UInt64

MBS Util Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The physical size of the data forks of all hidden file in Bytes.
Example:

```
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox "Physical data fork size of hidden files: "+Format(d.HiddenPhysicalDataForkSize/1000000,"0")+" MB"
```

Notes: (Read and Write property)

83.12.26 HiddenPhysicalResourceForkSize as UInt64

MBS Util Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The physical size of the resource forks of all hidden file in Bytes.

Example:

```
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox "Physical resource fork size of hidden files: "+Format(d.HiddenPhysicalResourceForkSize/1000000,"0")+"
MB"
```

Notes: (Read and Write property)

83.12.27 HiddenPhysicalTotalSize as UInt64

MBS Util Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The physical size of the both forks of all hidden file in Bytes.
Example:

```
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox "Physical total size of hidden files: "+Format(d.HiddenPhysicalTotalSize/1000000,"0")+" MB"
```

Notes: (Read only property)

83.12.28 IgnoreHiddenFolderContent as Boolean

MBS Util Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: If this flag is set, the Update method will not count invisible files.
Notes: (Read and Write property)

83.12.29 ItemCount as UInt64

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items counted.
Example:

```
// chose a folder
dim f as FolderItem = SpecialFolder.Music
// calculate size
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(true,0)
```

```
// show number of files
MsgBox str(d.ItemCount)
```

Notes:

ItemCount=VisibleItemCount+HiddenItemCount
(Read only property)

83.12.30 LogicalDataForkSize as UInt64

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The logical data fork size in Bytes.
Example:

```
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox "Logical data fork size of all files: "+Format(d.LogicalDataForkSize/1000000,"0")+" MB"
```

Notes: (Read only property)

83.12.31 LogicalResourceForkSize as UInt64

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The logical resource fork size in Bytes.
Notes:

dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox "Logical resource fork size of all files: "+Format(d.LogicalResourceForkSize/1000000,"0")+" MB"
(Read only property)

83.12.32 LogicalTotalSize as UInt64

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The logical total size in Bytes.
Example:

```
dim f as FolderItem = SpecialFolder.desktop
```

```
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox "Logical total size of all files: "+Format(d.LogicalTotalSize/1000000,"0")+" MB"
```

Notes:

(ResourceFork+DataFork)
(Read only property)

83.12.33 PhysicalDataForkSize as UInt64

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The physical data fork size in Bytes.
Example:

```
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox "Physical data fork size of all files: "+Format(d.PhysicalDataForkSize/1000000,"0")+" MB"
```

Notes: (Read only property)

83.12.34 PhysicalResourceForkSize as UInt64

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The physical resource fork size in Bytes.
Example:

```
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox "Physical resource fork size of all files: "+Format(d.PhysicalResourceForkSize/1000000,"0")+" MB"
```

Notes: (Read only property)

83.12.35 PhysicalTotalSize as UInt64

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The physical total file size in Bytes.

Example:

```
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox "Physical total size of all files: "+Format(d.VisiblePhysicalTotalSize/1000000,"0")+" MB"
```

Notes:

(ResourceFork+DataFork)
That's what the Finder shows you.
(Read only property)

83.12.36 QueryCompressedSizes as Boolean

MBS Util Plugin, Plugin Version: 11.3, Platform: Windows, Targets: All.

Function: Whether to query compressed file sizes on Windows.
Notes: (Read and Write property)

83.12.37 RecursionLimit as Integer

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The limit for recursion.
Notes:

Default is -1 for no limit.
Zero means we do not recurse into subfolders.
Other values define how many recursion levels are allowed.
(Read and Write property)

83.12.38 RecursionMaxLevel as Integer

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum levels of recursions we had for searching this folder.
Notes: (Read and Write property)

83.12.39 VisibleCompressedSize as UInt64

MBS Util Plugin, Plugin Version: 11.3, Platform: Windows, Targets: All.

Function: The size in bytes of all visible files.
Notes:

If a file is compressed, we add here the compressed size.
If a file is not compressed, we add the normal logical size.
Only used on Windows and only with QueryCompressedSizes = true.
(Read only property)

83.12.40 VisibleFilesCount as Integer

MBS Util Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of visible files.
Example:

```
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox str(d.VisibleFilesCount)+" visible files"
```

Notes: (Read and Write property)

83.12.41 VisibleFolderCount as Integer

MBS Util Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of visible folders.
Example:

```
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox str(d.VisibleFolderCount)+" visible folders"
```

Notes: (Read and Write property)

83.12.42 VisibleItemCount as UInt64

MBS Util Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of visible items.
Example:

```
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox str(d.VisibleItemCount)+" visible items"
```

Notes:

Items are folders or files.
VisibleItemCount=VisibleFolderCount+VisibleFilesCount
(Read only property)

83.12.43 VisibleLogicalDataForkSize as UInt64

MBS Util Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The logical size of the data forks of all visible file in Bytes.
Example:

```
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox "Logical data fork size of visible files: "+Format(d.VisibleLogicalDataForkSize/1000000,"0")+"
MB"
```

Notes: (Read and Write property)

83.12.44 VisibleLogicalResourceForkSize as UInt64

MBS Util Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The logical size of the resource forks of all visible file in Bytes.
Example:

```
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox "Logical resource fork size of visible files: "+Format(d.VisibleLogicalResourceForkSize/1000000,"0")+"
MB"
```

Notes: (Read and Write property)

83.12.45 VisibleLogicalTotalSize as UInt64

MBS Util Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The logical size of the both forks of all visible file in Bytes.
Example:

```
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox "Logical total size of visible files: "+Format(d.VisibleLogicalTotalSize/1000000,"0")+" MB"
```

Notes: (Read only property)

83.12.46 VisiblePhysicalDataForkSize as UInt64

MBS Util Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The physical size of the data forks of all visible file in Bytes.
Example:

```
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox "Physical data fork size of visible files: "+Format(d.VisiblePhysicalDataForkSize/1000000,"0")+"
MB"
```

Notes: (Read and Write property)

83.12.47 VisiblePhysicalResourceForkSize as UInt64

MBS Util Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The physical size of the resource forks of all visible file in Bytes.
Example:

```
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox "Physical resource fork size of visible files: "+Format(d.VisiblePhysicalResourceForkSize/1000000,"0")+"
MB"
```

Notes: (Read and Write property)

83.12.48 VisiblePhysicalTotalSize as UInt64

MBS Util Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The physical size of the both forks of all visible file in Bytes.
Example:

```
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox "Physical total size of visible files: "+Format(d.VisiblePhysicalTotalSize/1000000,"0")+" MB"
```

Notes: (Read only property)

83.12.49 YieldTicks as Integer

MBS Util Plugin, Plugin Version: 7.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: How much time is given back to Xojo for other ticks.
Example:

```
dim d as DirectorySizeMBS // your DirectorySizeMBS object
d.YieldTicks=6 // only use 1/10th of a second
```

Notes:

If value is greater than zero, the application will yield to another Xojo thread after the given number of ticks have passed. 60 ticks are one second. Using a small value can slow down processing a lot while a big value keeps your application not responding to mouse clicks.
If you use this property with e.g. 6 as the value, you may also want to use this method in a thread so you can handle mouse events or let Xojo redraw a progressbar.
(Read and Write property)

83.13 Globals

83.13.1 WindowsEjectVolumeMBS(driveLetter as string, byref status as Integer) as boolean

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Unmounts and ejects the given drive.
Example:

```
// editfield1 has the drive letter

dim status as Integer
dim b as Boolean = WindowsEjectVolumeMBS(EditField1.text, status)

if b then
Select case status
case 1
MsgBox "Media in Drive "+EditField1.text+" has been ejected safely."
case 2
MsgBox "Media in Drive "+EditField1.text+" can be safely removed."
else
MsgBox "Failed?"
end Select
else
MsgBox "Failed."
end if
```

Notes:

Status is set to 1 after an eject or 2 after an unmount without eject.
Returns true on success and false on failure.

83.13.2 Blog Entries

- MBS REALbasic Plugins, version 10.6pr4

83.13.3 ExchangeFilesMBS(first as folderitem, second as folderitem) as Integer

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Windows, Targets: All.

Function: Exchanges two files.
Example:

```
dim f1 as FolderItem = SpecialFolder.Desktop.Child("some picture.jpg")
```

```
dim f2 as FolderItem = SpecialFolder.Desktop.Child("another picture.jpg")

dim e as Integer = ExchangeFilesMBS(f1,f2)

MsgBox str(e) // show error code (0=no error)
```

Notes:

On Mac swaps the contents of two files:

The ExchangeFilesMBS function allows programs to implement a "safe save" operation by creating and writing a complete new file and swapping the contents. An folderitem, alias, FSSpec, or FSRef that refers to the old file will now access the new data. The corresponding information in in-memory data structures are also exchanged.

Either or both files may have open access paths. After the exchange, the access path will refer to the opposite file's data (that is, to the same data it originally referred, which is now part of the other file).

On Windows files are renamed so they exchange their paths.

PS: Xojo does not notice the change, so the folderitems you pass should no longer be used. To access the file, please make new folderitem with parent.truechild(filename).

- MBS REALbasic Plugins, version 10.4pr12

83.13.5 FolderItemToPathMBS(file as folderitem) as string

MBS MacOSX Plugin, Platform: macOS, Targets: All.

Function: Returns a unix path for the given folderitem.
Notes:

Works only on Mac OS X.
This function is not very good, as Apple doesn't document for FSRefMakePath what path it returns, which encoding the path uses (maybe UTF8) and when it fails.

(e.g. it currently doesn't work for volumes)

83.13.6 Blog Entries

- MBS Plugins updated for Xojo 2019r2

83.13.7 NewFolderItemMBS(vRefNum as Integer, parID as Integer, name as String) as FolderItem

MBS MacClassic Plugin, Platform: macOS, Targets: All.

Function: Creates a FolderItem from a specified volume, the item's directory ID and its name.
Notes: The vRefNum with value -1 is the boot volume on Mac OS.

83.13.8 Blog Entries

- MBS Plugins updated for Xojo 2019r2
- MBS Xojo / Real Studio Plugins, version 16.4pr3

83.13.9 NewVolumeFolderItemMBS(vRefNum as Integer) as FolderItem

MBS MacClassic Plugin, Platform: macOS, Targets: All.

Function: Creates a FolderItem from a specified volume based on the volume reference number.
Example:

```
dim f as folderItem

f=NewVolumeFolderItemMBS(-1)
msgBox f.NativePath
```

Notes:

The vRefNum with value -1 is the boot volume on Mac OS.

Pass in the vRefNum of any mounted volume and it returns the Volume as a FolderItem.
Returns nil if the vRefNum was invalid.

83.13.10 Blog Entries

- MBS Plugins updated for Xojo 2019r2

83.13.11 PathToFolderItemMBS(path as string) as folderitem

MBS MacOSX Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem for the given unix path.
Notes:

Works only on Mac OS X.
This function is not very good, as Apple doesn't document which path is exspected, which encoding the path should use (maybe UTF8) and when it fails.
(e.g. it currently doesn't work for paths with "
textasciitilde " inside)

83.13.12 Blog Entries

- MBS Plugins updated for Xojo 2019r2

83.13.13 VolResolveIDMBS(volume as FolderItem, id as Integer) as FolderItem

MBS MacClassic Plugin, Platform: macOS, Targets: All.

Function:

return a FolderItem for a passed FileID or DirID. If the item can not be resolved, nil is returned instead.
The first parameter specified the volume where you want to resolve the ID on.
Example:

```
dim f,g as folderItem
f=SpecialFolder.Desktop
g=VolResolveIDMBS(f,f.MacDirID)
msgBox f.NativePath
```

Notes: This function returns a FolderItem for a passed FileID or DirID. If the item can not be resolved, nil is returned instead.
See also:

- 83.13.14 VolResolveIDMBS(vRefNum as Integer, id as Integer) as FolderItem

83.13.14 VolResolveIDMBS(vRefNum as Integer, id as Integer) as FolderItem

MBS MacClassic Plugin, Platform: macOS, Targets: All.

Function:

return a FolderItem for a passed FileID or DirID. If the item can not be resolved, nil is returned instead.
The first parameter specified the volume where you want to resolve the ID on.
Example:

```
dim f,g as folderItem
f=SpecialFolder.Desktop
g=VolResolveIDMBS(f.macVRefNum,f.MacDirID)
msgBox f.NativePath
```

Notes:

This function returns a FolderItem for a passed FileID or DirID. If the item can not be resolved, nil is returned instead.
The first parameter specified the volume where you want to resolve the ID on.There is a bug in RB which may say "type mistmatch error" in RB. Than use the other variant of that function.

83.13.16 AdminToolsMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 13.0, Platform: Windows, Targets: All.

Function: Returns a folderitem to the admin tools folder on Windows.
Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:** Returns on Windows the common admin tools folder for domain = -32766 and user's admin tools folder if domain = -32763.

83.13.17 CookiesMBS as folderitem

MBS Util Plugin, Plugin Version: 13.0, Platform: Windows, Targets: All.

Function: Returns a folderitem to the Cookie folder on Windows.
Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead.

83.13.18 HistoryMBS as folderitem

MBS Util Plugin, Plugin Version: 13.0, Platform: Windows, Targets: All.

Function: Returns a folderitem to the history folder on Windows.
Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead.

83.13.19 InternetCacheMBS as folderitem

MBS Util Plugin, Plugin Version: 13.0, Platform: Windows, Targets: All.

Function: Returns a folderitem to the Internet Cache folder on Windows.
Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead.

83.13.20 WindowsStartMenuMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 13.0, Platform: Windows, Targets: All.

Function: Returns a folderitem to the start menu folder on Windows.
Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead.

83.13.21 NewFolderItemFromAbsolutePathMBS(AbsolutePath as string) as FolderItem

MBS MacOSX Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates new folderitem based on absolute path.
Example:

```
// test absolute path
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.txt")
Dim p As String = f.AbsolutePath

Dim g As FolderItem = NewFolderItemFromAbsolutePathMBS(p)
Dim n As String = g.NativePath
```

MsgBox p+EndOfLine+n

83.13.22 Blog Entries

- MBS Xojo Plugins, version 19.5pr8
- AbsolutePath for Xojo

83.13.23 SetCurrentWorkingDirectoryMBS(path as folderitem) as boolean

MBS Util Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the current working directory for the application.
Example:

```
MsgBox SpecialFolder.CurrentWorkingDirectory.NativePath
call SetCurrentWorkingDirectoryMBS(SpecialFolder.Desktop)
MsgBox SpecialFolder.CurrentWorkingDirectory.NativePath
```

Notes:

This is sometimes needed if some library references files relative to this current working directory.
Returns true on success and false on failure.

83.13.24 Blog Entries

- MBS Real Studio Plugins, version 11.3fc

83.13.25 VolumeFreeSizePathMBS(Path as String) as Int64

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the size of the free space of the volume which the path points to.
Notes:

See also folderitem.VolumeFreeSizeMBS function.
Returns -1 on error.
For Windows, the path should point to directory and end with a backslash.

83.13.26 Blog Entries

- MBS Xojo Plugins, version 20.3pr1

83.13.27 VolumeSizePathMBS(Path as String) as Int64

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the size on the volume which the path points to.
Notes:

See also folderitem.VolumeSizeMBS function.
Returns -1 on error.
For Windows, the path should point to directory and end with a backslash.

83.13.28 Blog Entries

- MBS Xojo Plugins, version 20.3pr1

83.13.29 MountMBS(URL as String, Dest as string = """, Username as String, Password as String, Interactive as boolean = false, Prompt as boolean = false, byref ErrorCode as Integer, Threaded as boolean = false) as String

MBS MacOSX Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Mounts a network share.
Notes:

Use on Server may require extra work as server runs with a different user account than you being logged in on the server machine. Permissions don't always allow things to be done.

URL: The URL for the network resource.

Dest: The destination path to mount to. If you leave this empty, the system decides. On Mac this can be the path to a folder where to mount new disk inside, e.g. to make a private mount. For Linux destination is required and must exists.
Username: The user name. If none is provided, system can take credentials from keychain, e.g. "test"
Password: The password to use, e.g. "test"
Interactive: Default is false for no dialogs. But you can pass true to have a dialog show up.
Prompt: Pass true on Windows to show dialog always to enter password.

When used on Linux the parameters are a little bit different:
Please pass source (URL), target (Dest), type (Username) and data (Password).
The dest path may need to be created first as new folder.

Returns the new path to the mounted disk.

Examples for URLs:

"afp://Ablage1.local" to mount on Mac via Apple Filesharing Protocol.
"\\myServer\public" to mount a disk on Windows.
"afp://192.168.168.250/Customer% 20Data" to mount disk with space in name (URL encoded).
"\\192.168.0.242\ERP" mounts from Windows Server and e.g. pass "SRV2012\bob" as user name.

Threaded: If true and run on a Xojo thread, we yield time to other thread.

83.13.32 MountPathMBS(Path as String) as String

MBS MacOSX Plugin, Plugin Version: 18.3, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Queries mount path for a volume.
Example:

MsgBox MountPathMBS("/Volumes/Ablage2")

Notes:

For a network mounted disk, you can query the original mount point.
May not work on Mac for AFP shares, but for SMB shares.
Returns empty path if no path is known.
See also:

• 83.13.33 MountPathMBS(Volume as FolderItem) as String 15944

83.13.33 MountPathMBS(Volume as FolderItem) as String

MBS MacOSX Plugin, Plugin Version: 18.3, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Queries mount path for a volume.
Example:

```
dim f as FolderItem = Volume(VolumeCount-1)

MsgBox MountPathMBS(f)
```

Notes:

For a network mounted disk, you can query the original mount point.
May not work on Mac for AFP shares, but for SMB shares.
Returns empty path if no path is known.

83.13.36 UnmountMBS(Path as String, force as boolean = false) as Boolean

MBS MacOSX Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Unmount a volume.
Notes:

Path: The local path of the volume, e.g. "/Volumes/Test"
Force: Pass true to force unmount, even if files are still open.

Use on Server may require extra work as server runs with a different user account than you being logged in on the server machine. Permissions don't always allow things to be done.
See also:

- 83.13.37 UnmountMBS(Volume as FolderItem, force as boolean = false) as Boolean 15945

83.13.37 UnmountMBS(Volume as FolderItem, force as boolean = false) as Boolean

MBS MacOSX Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Unmount a volume.
Notes:

Path: The local path of the volume, e.g. "/Volumes/Test"
Force: Pass true to force unmount, even if files are still open.

Use on Server may require extra work as server runs with a different user account than you being logged in on the server machine. Permissions don't always allow things to be done.

83.13.40 GetDriveTypeMBS(path as string) as Integer

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Determines whether a disk drive is a removable, fixed, CD-ROM, RAM disk, or network drive.
Example:

```
if GetDriveTypeMBS("E:") = 4 then
msgbox "network drive"
end if
```

Notes:

Path: The root directory for the drive.

Possible values:

0	Unknown	The drive type cannot be determined.
1	Error	The root path is invalid; for example, there is no volume mounted at the specified path.
2	Removable	The drive has removable media; for example, a floppy drive, thumb drive, or flash card reader.
3	Fixed	The drive has fixed media; for example, a hard disk drive or flash drive.
4	Remote	The drive is a remote (network) drive.
5	CD-ROM	The drive is a CD-ROM drive.
6	RAM Disk	The drive is a RAM disk.

83.14.8 Methods

83.14.9 Available as boolean

MBS MacOSX Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Targets: All.

Function: Returns true if extended attribute functions are available.

83.14.10 GetAttribute(path as folderitem, name as string, options as Integer = 0) as Variant

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Get an extended attribute value.
Example:

```
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.txt")
// query attribute
Dim v As Variant = ExtendedAttributesMBS.GetAttribute(f, "com.apple.metadata:_kMDItemUserTags")

// plugin converts it to Xojo data types with variants
If v <>Nil Then
// tags should be an array of Variant with strings
Dim a() As Variant = v

For Each s As String In a
MsgBox s
Next
End If
```

Notes:

On Mac the extended attributes are normally formatted property lists, so please use the high level functions SetAttribute/GetAttribute. Raw functions are better for things like resourcefork or FinderInfo.

Extended attributes extend the basic attributes of files and directories in the file system. They are stored as name:data pairs associated with file system objects (files, directories, symlinks, etc).

The GetAttribute function retrieves all bytes of data from the extended attribute identified by name associated with path.

An extended attribute's name is a simple UTF-8 string. position specifies an offset within the extended attribute. In the current implementation, this argument is only used with the resource fork attribute. For all other extended attributes, this parameter is reserved and should be zero.

On success, returns the data associated with name.

Options specify options for retrieving extended attributes:

kNoFollow Do not follow symbolic links. getxattr() normally returns information from the target of path if it is a symbolic link. With this option, GetAttribute will return extended attribute data from the symbolic link instead.

kShowCompression: GetAttribute will return HFS Plus Compression extended attribute name (if present) for the file referred to by path or fd.

On success, the value is returned. On failure, nil is returned and lasterror is set.
See also:

- 83.14.11 GetAttribute(path as string, name as string, options as Integer = 0) as Variant 15949

83.14.11 GetAttribute(path as string, name as string, options as Integer = 0) as Variant

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Get an extended attribute value.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.rtf")
dim v as Variant = ExtendedAttributesMBS.GetAttribute(f, ExtendedAttributesMBS.kAttributeNameFinderComment)
break // see comment string in debugger
```

Notes:

On Mac the extended attributes are normally formatted property lists, so please use the high level functions SetAttribute/GetAttribute. Raw functions are better for things like resourcefork or FinderInfo.

Extended attributes extend the basic attributes of files and directories in the file system. They are stored as name:data pairs associated with file system objects (files, directories, symlinks, etc).

The GetAttribute function retrieves all bytes of data from the extended attribute identified by name associated with path.

An extended attribute's name is a simple UTF-8 string. position specifies an offset within the extended attribute. In the current implementation, this argument is only used with the resource fork attribute. For all other extended attributes, this parameter is reserved and should be zero.

On success, returns the data associated with name.

83.14.12 GetRawAttribute(path as folderitem, name as string, options as Integer = 0) as memoryblock

MBS MacOSX Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Targets: All.

Function: Get an extended attribute value.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.rtf")
dim value as MemoryBlock = ExtendedAttributesMBS.GetRawAttribute(f, ExtendedAttributesMBS.kAttributeNameFinderInfo)
```

```
break // see in debugger
```

Notes:

On Mac the extended attributes are normally formatted property lists, so please use the high level functions SetAttribute/GetAttribute. Raw functions are better for things like resourcefork or FinderInfo.

Extended attributes extend the basic attributes of files and directories in the file system. They are stored as name:data pairs associated with file system objects (files, directories, symlinks, etc).

The GetRawAttribute function retrieves all bytes of data from the extended attribute identified by name associated with path.

An extended attribute's name is a simple UTF-8 string. position specifies an offset within the extended attribute. In the current implementation, this argument is only used with the resource fork attribute. For all other extended attributes, this parameter is reserved and should be zero.

On success, returns the data associated with name.

Options specify options for retrieving extended attributes:

kNoFollow	Do not follow symbolic links. getxattr() normally returns information from the target of path if it is a symbolic link. With this option, GetRawAttribute will return extended attribute data from the symbolic link instead.

kShowCompression: GetRawAttribute will return HFS Plus Compression extended attribute name (if present) for the file referred to by path or fd.

On success, the value is returned. On failure, nil is returned and lasterror is set.

83.14.14 LastError as Integer

MBS MacOSX Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Targets: All.

Function: The last error code.
Notes:

Possible error values:

EPERM	1	Attributes cannot be associated with this type of object. For example, attributes are not allowed for resource forks.
EIO	5	An I/O error occurred while reading from or writing to the file system.
E2BIG	7	The data size of the extended attribute is too large.
EACCES	13	Permissions denied
EFAULT	14	path or name points to an invalid address.
EEXIST	17	options contains XATTR_CREATE and the named attribute already exists.
ENOTDIR	20	A component of path's prefix is not a directory.
EISDIR	21	path or fd do not refer to a regular file and the attribute in question is only applicable to files. Similar to EPERM.
EINVAL	22	name or options is invalid. name must be valid UTF-8 and options must make sense.
ENOSPC	28	Not enough space left on the file system.
EROFS	30	The file system is mounted read-only.
ERANGE	34	The data size of the attribute is out of range (some attributes have size restrictions).
ENOTSUP	45	The file system does not support extended attributes or has the feature disabled.
ELOOP	62	Too many symbolic links were encountered resolving path.
ENAMETOOLONG	63	Name exceeded XATTR_MAXNAMELEN UTF-8 bytes, or a component of path exceeded NAME_MAX characters, or the entire path exceeded PATH_MAX characters.
ENOATTR	93	options is set to kReplace and the named attribute does not exist.

83.14.15 LastErrorMessage as string

MBS MacOSX Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Targets: All.

Function: The error message for the last error.

83.14.16 ListAttributes(path as folderitem, Options as Integer = 0) as string()

MBS MacOSX Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Targets: All.

Function: List extended attribute names.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.rtf")
dim names() as string = ExtendedAttributesMBS.ListAttributes(f, ExtendedAttributesMBS.kNoFollow+ExtendedAttributesMBS.kShowCompression)
MsgBox Join(names, EndOfLine)
```

Notes:

Extended attributes extend the basic attributes associated with files and directories in the file system. They

are stored as name:data pairs associated with file system objects (files, directories, symlinks, etc).

ListAttributes retrieves a list of names of extended attributes associated with the given path in the file system. The list will only include names of extended attributes to which the calling process has access.

Options controls how the attribute list is generated:

kNoFollow: Do not follow symbolic links. ListAttributes normally lists attributes of the target of path if it is a symbolic link. With this option, ListAttributes will list attributes of the link itself.
kShowCompression: ListAttributes will list HFS Plus Compression extended attribute(s) (if present) for the file referred to by path.

On success returns array with names. If no accessible extended attributes are associated with the given path, the function returns empty array. Lasterror is set.
See also:

- 83.14.17 ListAttributes(path as string, Options as Integer = 0) as string() 15954

83.14.17 ListAttributes(path as string, Options as Integer = 0) as string()

MBS MacOSX Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Targets: All.

Function: List extended attribute names.
Notes:

Extended attributes extend the basic attributes associated with files and directories in the file system. They are stored as name:data pairs associated with file system objects (files, directories, symlinks, etc).

ListAttributes retrieves a list of names of extended attributes associated with the given path in the file system. The list will only include names of extended attributes to which the calling process has access.

Options controls how the attribute list is generated:

kNoFollow: Do not follow symbolic links. ListAttributes normally lists attributes of the target of path if it is a symbolic link. With this option, ListAttributes will list attributes of the link itself.
kShowCompression: ListAttributes will list HFS Plus Compression extended attribute(s) (if present) for the file referred to by path.

On success returns array with names. If no accessible extended attributes are associated with the given path, the function returns empty array. Lasterror is set.
See also:

- 83.14.16 ListAttributes(path as folderitem, Options as Integer = 0) as string() 15953

83.14.18 RemoveAttribute(path as folderitem, name as string, options as Integer = 0) as boolean

MBS MacOSX Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Targets: All.

Function: Remove an extended attribute value.
Notes:

Extended attributes extend the basic attributes associated with files and directories in the file system. They are stored as name:data pairs associated with file system objects (files, directories, symlinks, etc).

RemoveAttribute deletes the extended attribute name associated with path.

An extended attribute's name is a simple UTF-8 string. Options is a bit mask specifying various options:

kNoFollow Do not follow symbolic links. Normally, removexattr() acts on the target of path if it is a symbolic link. With this option, RemoveAttribute will act on the link itself.

kShowCompression: RemoveAttribute will remove HFS Plus Compression extended attribute name (if present) for the file referred to by path or fd.

On success, true is returned. On failure, false is returned and the lasterror value is set.
See also:

- 83.14.19 RemoveAttribute(path as string, name as string, options as Integer = 0) as boolean 15955

83.14.19 RemoveAttribute(path as string, name as string, options as Integer = 0) as boolean

MBS MacOSX Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Targets: All.

Function: Remove an extended attribute value.
Notes:

Extended attributes extend the basic attributes associated with files and directories in the file system. They are stored as name:data pairs associated with file system objects (files, directories, symlinks, etc).

RemoveAttribute deletes the extended attribute name associated with path.

An extended attribute's name is a simple UTF-8 string. Options is a bit mask specifying various options:

kNoFollow Do not follow symbolic links. Normally, removexattr() acts on the target of path if it is a symbolic link. With this option, RemoveAttribute will act on the link itself.

kShowCompression: RemoveAttribute will remove HFS Plus Compression extended attribute name (if present) for the file referred to by path or fd.

On success, true is returned. On failure, false is returned and the lasterror value is set.
See also:

- 83.14.18 RemoveAttribute(path as folderitem, name as string, options as Integer = 0) as boolean 15955

83.14.20 SetAttribute(path as folderitem, name as string, data as Variant, options as Integer = 0) as boolean

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Set an extended attribute value.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.txt")
call ExtendedAttributesMBS.SetAttribute(f, ExtendedAttributesMBS.kAttributeNameFinderComment, "Test Comment")
```

Notes:

On Mac the extended attributes are normally formatted property lists, so please use the high level functions SetAttribute/GetAttribute. Raw functions are better for things like resourcefork or FinderInfo.

Extended attributes extend the basic attributes associated with files and directories in the file system. They are stored as name:data pairs associated with file system objects (files, directories, symlinks, etc).

SetAttribute associates name and data together as an attribute of path.

An extended attribute's name is a simple UTF-8 string. Data is a memoryblock with the data and contains textual or binary data to be associated with the extended attribute. Position specifies the offset within the extended attribute. In the current implementation, only the resource fork extended attribute makes use of this argument. For all others, position is reserved and should be set to zero.

Options controls how the attribute is set:

kNoFollow	Do not follow symbolic links. SetAttribute normally sets attributes on the target of path if it is a symbolic link. With this option, SetAttribute will act on the link itself.
kCreate	Fail if the named attribute already exists.
kReplace	Fail if the named attribute does not exist. Failure to specify kReplace or kCreate allows creation and replacement.

On some filesystems, such as HFS+, setting the extended attribute com.apple.ResourceFork will update the modification time of the file.

Returns true on success and false on failure. Lasterror is set.
You may need to inform other applications like Finder that file changed and attributes need to be read.
See also:

- 83.14.21 SetAttribute(path as string, name as string, data as Variant, options as Integer = 0) as boolean 15957

83.14.24 Constants

83.14.25 kAttributeNameFinderComment = "com.apple.metadata:kMDItemFinderComment"

MBS MacOSX Plugin, Plugin Version: 12.5.

Function: The attribute name for the Finder Comment.

83.14.26 kAttributeNameFinderInfo = "com.apple.FinderInfo"

MBS MacOSX Plugin, Plugin Version: 12.5.

Function: The attribute name for the Finder Info.

83.14.27 kAttributeNameResourceFork = "com.apple.ResourceFork"

MBS MacOSX Plugin, Plugin Version: 12.5.

Function: The attribute name for the resource fork.

83.14.28 kCreate = 2

MBS MacOSX Plugin, Plugin Version: 12.5.

Function: One of the option flags.
Notes: Fail if the named attribute already exists.

83.14.29 kNoDefault = 16

MBS MacOSX Plugin, Plugin Version: 12.5.

Function: One of the option flags.

83.14.30 kNoFollow = 1

MBS MacOSX Plugin, Plugin Version: 12.5.

Function: One of the option flags.
Notes: Do not follow symbolic links. ListAttributes normally lists attributes of the target of path if it is a symbolic link. With this option, ListAttributes will list attributes of the link itself.

83.14.31 kNoSecurity = 8

MBS MacOSX Plugin, Plugin Version: 12.5.

Function: One of the option flags.

83.14.32 kReplace = 4

MBS MacOSX Plugin, Plugin Version: 12.5.

Function: One of the option flags.
Notes: Fail if the named attribute does not exist. Failure to specify kReplace or kCreate allows creation and replacement.

83.14.33 kShowCompression = 32

MBS MacOSX Plugin, Plugin Version: 12.5.

Function: One of the option flags.
Notes: ListAttributes will list HFS Plus Compression extended attribute(s) (if present) for the file referred to by path.

83.15 class FileListMBS

83.15.1 class FileListMBS

MBS Util Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a list of files.
Notes: This class is made to get a list of files in a folder faster than by using a folderitem.

83.15.8 Methods

83.15.9 AttributeModificationDate(index as Integer) as Double

MBS Util Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: The attribute modification date of this file or directory.
Notes:

On Mac OS the UTC date (+0 time zone)
Raises an exception if index is out of bounds. Index is zero based.
See also:

- 83.15.10 AttributeModificationDate(index as Integer, UTC as boolean) as Date 15963

83.15.10 AttributeModificationDate(index as Integer, UTC as boolean) as Date

MBS Util Plugin, Plugin Version: 13.4, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: The attribute modification date of this file or directory.
Notes:

Either in UTC time zone or in local time zone.
Raises an exception if index is out of bounds. Index is zero based.
See also:

- 83.15.9 AttributeModificationDate(index as Integer) as Double 15963

83.15.11 AttributeModificationDateTime(index as integer, UTC as boolean) as DateTime

MBS Util Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The attribute modification date of this file or directory.
Notes:

Either in UTC time zone or in local time zone.
Raises an exception if index is out of bounds. Index is zero based.

83.15.12 BackupDate(index as Integer) as Double

MBS Util Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: The backup date of this file or directory.
Notes: On Mac OS the UTC date (+0 time zone)
See also:

- 83.15.13 BackupDate(index as Integer, UTC as boolean) as Date 15964

83.15.13 BackupDate(index as Integer, UTC as boolean) as Date

MBS Util Plugin, Plugin Version: 13.4, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: The backup date of this file or directory.
Notes:

Either in UTC time zone or in local time zone.
Raises an exception if index is out of bounds. Index is zero based.
See also:

- 83.15.12 BackupDate(index as Integer) as Double 15964

83.15.14 BackupDateTime(index as integer, UTC as boolean) as DateTime

MBS Util Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The backup date of this file or directory.
Notes:

Either in UTC time zone or in local time zone.
Raises an exception if index is out of bounds. Index is zero based.

83.15.15 CFURL(index as integer) as Variant

MBS Util Plugin, Plugin Version: 19.0, Platform: macOS, Targets: All.

Function: Queries CFURLMBS object for an entry.
Notes:

Returns nil if no CFURL is kept for this item.
Raises an exception if index is out of bounds. Index is zero based.

83.15.16 Close

MBS Util Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

83.15.17 Constructor

MBS Util Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Targets: All.

Function: A dummy constructor used only for automatic plugin testing.
See also:

- 83.15.18 Constructor(filelist as FileListMBS, index as Integer, WinFilter as string = """, SkipMode as Integer = 0) 15965
- 83.15.19 Constructor(folder as folderitem, WinFilter as string = """, SkipMode as Integer = 0) 15966
- 83.15.20 Constructor(Path as String, WinFilter as string = """, SkipMode as Integer = 0) 15967

83.15.18 Constructor(filelist as FileListMBS, index as Integer, WinFilter as string = """, SkipMode as Integer = 0)

MBS Util Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor which creates a new file list based on item in a given file list.
Example:

```
dim f1 as new FileListMBS(SpecialFolder.UserHome)
'MsgBox f1.path

// search first index of a visible folder
dim IndexOfDirectory as integer = 0
```

```
while f1.Directory(IndexOfDirectory) = false or f1.Visible(IndexOfDirectory) = false
IndexOfDirectory = IndexOfDirectory + 1
wend

// list that folder
dim f2 as new FileListMBS(f1, IndexOfDirectory)
'MsgBox f2.path

// show first file and path
MsgBox f2.Name(0)+EndOfLine+f2.ItemPath(0)
```

Notes:

If count is 0 after the contrustor the folder is invalid or empty.
On Windows the WinFilter allows you to pass a custom filter like "*.txt" to only find some files there.

SkipMode, added in version 20.1, allows you to skip some files from being part of the file list. Please use BitwiseOr() to combine Skip flags, e.g. BitwiseOr(SkipHidden, SkipFolders) returns only visible files.
See also:

- 83.15.17 Constructor 15965
- 83.15.19 Constructor(folder as folderitem, WinFilter as string = "", SkipMode as Integer = 0) 15966
- 83.15.20 Constructor(Path as String, WinFilter as string = "", SkipMode as Integer = 0) 15967

83.15.19 Constructor(folder as folderitem, WinFilter as string = "", SkipMode as Integer = 0)

MBS Util Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor which creates a new file list based on the folder.
Notes:

If count is 0 after the contrustor the folder is invalid or empty.
On Windows the WinFilter allows you to pass a custom filter like "*.txt" to only find some files there.

SkipMode, added in version 20.1, allows you to skip some files from being part of the file list. Please use BitwiseOr() to combine Skip flags, e.g. BitwiseOr(SkipHidden, SkipFolders) returns only visible files.
See also:

- 83.15.17 Constructor 15965
- 83.15.18 Constructor(filelist as FileListMBS, index as Integer, WinFilter as string = "", SkipMode as Integer = 0) 15965
- 83.15.20 Constructor(Path as String, WinFilter as string = "", SkipMode as Integer = 0) 15967

83.15.20 Constructor(Path as String, WinFilter as string = """, SkipMode as Integer = 0)

MBS Util Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor which creates a new file list based on the directory path.
Notes:

If count is 0 after the contrustor the directory path is invalid or empty.
On Windows the WinFilter allows you to pass a custom filter like "*.txt" to only find some files there.

SkipMode, added in version 20.1, allows you to skip some files from being part of the file list. Please use BitwiseOr() to combine Skip flags, e.g. BitwiseOr(SkipHidden, SkipFolders) returns only visible files.
See also:

- 83.15.17 Constructor 15965
- 83.15.18 Constructor(filelist as FileListMBS, index as Integer, WinFilter as string = "", SkipMode as Integer = 0) 15965
- 83.15.19 Constructor(folder as folderitem, WinFilter as string = "", SkipMode as Integer = 0) 15966

83.15.21 CreationDate(index as Integer) as Double

MBS Util Plugin, Plugin Version: 5.1, Platforms: macOS, Windows, Targets: All.

Function: The creation date.
Notes:

On Mac OS the UTC date (+0 time zone)
On Windows looks like local timezone.
See also:

- 83.15.22 CreationDate(index as Integer, UTC as boolean) as Date 15967

83.15.22 CreationDate(index as Integer, UTC as boolean) as Date

MBS Util Plugin, Plugin Version: 13.4, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: The creation date.
Notes:

Either in UTC time zone or in local time zone.
Raises an exception if index is out of bounds. Index is zero based.
See also:

- 83.15.21 CreationDate(index as Integer) as Double 15967

83.15.23 CreationDateTime(index as integer, UTC as boolean) as DateTime

MBS Util Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The creation date.
Notes:

Either in UTC time zone or in local time zone.
Raises an exception if index is out of bounds. Index is zero based.

83.15.24 Creator(index as Integer) as string

MBS Util Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Targets: All.

Function: The Mac Creator code of the item with the given index.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Always "" on Windows and Linux.
Raises an exception if index is out of bounds. Index is zero based.

Stopped working on macOS Monterey and newer since Apple deprecated the API long ago.

83.15.25 Directory(index as Integer) as boolean

MBS Util Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the item with the given index is a folder.
Notes:

True if it is a folder and false if it is a file.
Raises an exception if index is out of bounds. Index is zero based.

83.15.26 DisplayName(index as Integer) as string

MBS Util Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The display name of the item with the given index.
Notes:

Asks the System for the display name of the item. Returns the normal name on any error.

As this call may cost quite some CPU time you may cache the value if you need it more often.

May return a Unicode string, so be carefull with encoding.
Returns "" on any error.

Raises an exception if index is out of bounds. Index is zero based.

83.15.27 FinderFlags(index as Integer) as Integer

MBS Util Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Finder flags from Mac OS.
Notes:

On Windows and Linux value is 0.

The flag value is a set of bits with the following meaning:

bit 15	value & H8000	isAlias
bit 14	value & H4000	isInvisible
bit 13	value & H2000	hasBundle (has a BNDL resource)
bit 12	value & H1000	nameLocked
bit 11	value & H0800	isStationary
bit 10	value & H0400	hasCustomIcon
bit 8	value & H0100	hasBeenInited (Finder has seen the file since it has been created)
bit 7	value & H0080	hasNoINITs (there is no INIT rsrc in the Extension file)
bit 6	value & H0040	isShared
bits 1-3	value & H000E	color (as a 3-bit value from 0-7)

83.15.28 FSRef(index as Integer) as memoryblock

MBS Util Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: The FSRef used for this item.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Returns nil if no FSRef is kept for this item.
On Mac OS there is a FSSpec or (FSRef and HFSUniStr255).
Raises an exception if index is out of bounds. Index is zero based.

83.15.29 HFSUniStr255(index as Integer) as memoryblock

MBS Util Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: The HFSUniStr255 used for this item.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Returns nil if no HFSUniStr255 is kept for this item.
On Mac OS there is a FSSpec or (FSRef and HFSUniStr255).
Raises an exception if index is out of bounds. Index is zero based.

83.15.30 IsBundle(index as Integer) as Boolean

MBS Util Plugin, Plugin Version: 6.1, Platforms: macOS, Windows, Targets: All.

Function: Queries using LaunchServices whether this item is a folder and the root of a bundle.
Example:

```
Protected Sub Dir(f as FolderItem)
dim l as FileListMBS
dim i,c as Integer

// search subfolders and find bundles

l=new FileListMBS(f)
c=l.Count-1
for i=0 to c
// if bundle, show it in listbox
if l.IsBundle(i) then
ListBox1.AddRow l.Item(i).NativePath
elseif l.Directory(i) then
// if sub folder, browse it
dir l.Item(i)
end if
next
End Sub
```

Notes: On Windows, Linux and Mac OS Classic always false.

83.15.31 IsHardLinked(index as Integer) as boolean

MBS Util Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Targets: All.

Function: Whether the file is a hard link.
Notes:

If two directory entries point to the same hard disc space, you have a file which has two directory entries, but only one storage.

This function returns true for files in a Time Machine backup which did not change since the last backup and share their disc space with the other backups.

Raises an exception if index is out of bounds. Index is zero based.

83.15.32 Item(index as Integer) as folderitem

MBS Util Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a folderitem for the item with the given index.
Notes:

Returns nil on any error.
The reason why you use this class is to avoid makeing folderitems which is slow, so don't use this function too often.
Raises an exception if index is out of bounds. Index is zero based.

83.15.33 ItemPath(index as Integer) as string

MBS Util Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The native file path for an item.

83.15.34 LastAccessDate(index as Integer) as Double

MBS Util Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last access date of this file or directory.
Notes:

On Mac OS the UTC date (+0 time zone)
Raises an exception if index is out of bounds. Index is zero based.

To query Spotlight's Last Open day, please check the FAQ for sampel code.
See also:

- 83.15.35 LastAccessDate(index as Integer, UTC as boolean) as Date 15972

83.15.35 LastAccessDate(index as Integer, UTC as boolean) as Date

MBS Util Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last access date of this file or directory.
Notes:

Either in UTC time zone or in local time zone.
Raises an exception if index is out of bounds. Index is zero based.
To query Spotlight's Last Open day, please check the FAQ for sample code.
See also:

- 83.15.34 LastAccessDate(index as Integer) as Double 15971

83.15.36 LastAccessDateTime(index as integer, UTC as boolean) as DateTime

MBS Util Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last access date of this file or directory.
Notes:

Either in UTC time zone or in local time zone.
Raises an exception if index is out of bounds. Index is zero based.
To query Spotlight's Last Open day, please check the FAQ for sample code.

83.15.37 LogicalDataLength(index as Integer) as Int64

MBS Util Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The logical file data length for the item with the given index.
Notes:

Same value as folderitem.length, but works with files >2GB.
Raises an exception if index is out of bounds. Index is zero based.

83.15.38 LogicalResourceLength(index as Integer) as Int64

MBS Util Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The logical resource length of the item with the given index.
Notes: Raises an exception if index is out of bounds. Index is zero based.

83.15.39 ModificationDate(index as Integer) as Double

MBS Util Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The modification date.
Notes:

On Mac OS the UTC date (+0 time zone)
On Windows looks like local timezone.
Raises an exception if index is out of bounds. Index is zero based.
See also:

- 83.15.40 ModificationDate(index as Integer, UTC as boolean) as Date 15973

83.15.40 ModificationDate(index as Integer, UTC as boolean) as Date

MBS Util Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The modification date.
Notes:

Either in UTC time zone or in local time zone.
Raises an exception if index is out of bounds. Index is zero based.
See also:

- 83.15.39 ModificationDate(index as Integer) as Double 15973

83.15.41 ModificationDateTime(index as integer, UTC as boolean) as DateTime

MBS Util Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The modification date.
Notes:

Either in UTC time zone or in local time zone.
Raises an exception if index is out of bounds. Index is zero based.

83.15.42 Name(index as Integer) as string

MBS Util Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the item with the given index.
Notes:

May return a Unicode string, so be carefull with encoding.
Returns "" on any error.
Raises an exception if index is out of bounds. Index is zero based.

83.15.43 NodeID(index as Integer) as Int64

MBS Util Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Targets: All.

Function: The Mac node ID for the given file or directory.
Notes:

The node id is zero on Windows and Linux.
Raises an exception if index is out of bounds. Index is zero based.

83.15.44 ParentDirectoryID(index as Integer) as Int64

MBS Util Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Targets: All.

Function: The Mac ID for the parent directory.
Notes:

Parent Directory ID is zero on Windows and Linux.
Raises an exception if index is out of bounds. Index is zero based.

83.15.45 PhysicalDataLength(index as Integer) as Int64

MBS Util Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The physical data length of the item with the given index.
Notes:

Returns 0 on any error.
Raises an exception if index is out of bounds. Index is zero based.

83.15.46 PhysicalResourceLength(index as Integer) as Int64

MBS Util Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The physical resource length of the item with the given index.
Notes:

Value is always 0 on Windows.
Returns 0 on any error.

Raises an exception if index is out of bounds. Index is zero based.

83.15.47 SortByCreationDate

MBS Util Plugin, Plugin Version: 6.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sorts items in list by creation date.

83.15.48 SortByFileName

MBS Util Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sorts items in list by file names.

83.15.49 SortByModificationDate

MBS Util Plugin, Plugin Version: 6.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sorts items in list by modification date.

83.15.50 TrueItem(index as Integer) as folderitem

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a folderitem for the item with the given index.
Notes:

Returns nil on any error.
The reason why you use this class is to avoid makeing folderitems which is slow, so don't use this function too often. e.g. good if you just take 5 folderitems for 20000 files by filtering.

TrueItem will use GetTrueFolderItem so the link/alias files are not resolved by Xojo.
Due to bugs in Xojo, you may still get alias resolved.

83.15.51 Type(index as Integer) as string

MBS Util Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Targets: All.

Function: The Mac Type code of the item with the given index.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Always "" on Windows and Linux.
Raises an exception if index is out of bounds. Index is zero based.

Stopped working on macOS Monterey and newer since Apple deprecated the API long ago.

83.15.52 Visible(index as Integer) as boolean

MBS Util Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the item with the given index is visible.
Notes:

On Mac OS X, files with name starting with "." are considered to be invisible.
False on any error.
Raises an exception if index is out of bounds. Index is zero based.

83.15.53 WinFileAttributes(index as Integer) as Integer

MBS Util Plugin, Plugin Version: 6.1, Platforms: macOS, Windows, Targets: All.

Function: The file attributes for this file on Windows.
Notes:

Value is 0 on other platforms.
Raises an exception if index is out of bounds. Index is zero based.

83.15.54 Properties

83.15.55 Cancel as Boolean

MBS Util Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tells FileListMBS to stop gathering files.
Notes:

To be used with threaded flag to stop background threads from working on directory listings soon. You may want to set FileListMBS.cancel to true in app.CancelClose when you let the application has a running thread, so you can quit properly.

The constructors set cancel = false to make sure they work.
(Read and Write property)

83.15.56 Count as Integer

MBS Util Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items found.
Notes:

So index goes from 0 to count-1 in all functions.
(Read and Write property)

83.15.57 Folder as FolderItem

MBS Util Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The folderitem used in the constructor.
Notes: (Read and Write property)

83.15.58 OK as Boolean

MBS Util Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the process of reading the directory content in the constructor was successful.
Notes:

Should be true on success.
(Read and Write property)

83.15.59 Path as String

MBS Util Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file path for the folder.
Notes:

The plugin makes sure it ends with slash or backslash.
(Read and Write property)

83.15.60 Threaded as Boolean

MBS Util Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether you want to run FileListMBS constructors threaded.
Notes:

If you run code in a Xojo thread, which uses FileListMBS, you can set this property to true. We then do the work on a preemptive thread to keep the GUI responsive.
(Read and Write property)

83.15.61 TotalLogicalDataLength as Int64

MBS Util Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The sum of logical dats length for all items.
Notes: (Read only property)

83.15.62 TotalLogicalResourceLength as Int64

MBS Util Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The sum of logical resource length for all items.
Notes: (Read only property)

83.15.63 TotalPhysicalDataLength as Int64

MBS Util Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The sum of physical data length for all items.
Notes: (Read only property)

83.15.64 TotalPhysicalResourceLength as Int64

MBS Util Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The sum of physical resource length for all items.
Notes: (Read only property)

83.15.65 YieldTicks as Integer

MBS Util Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: How much time is given back to Xojo for other ticks.
Example:

FileListMBS.YieldTicks = 6

Notes:

If value is greater than zero, the application will yield to another Xojo thread after the given number of ticks have passed. 60 ticks are one second. Using a small value can slow down processing a lot while a big value keeps your application not responding to mouse clicks.
If you use this property with e.g. 6 as the value, you may also want to use this method in a thread so you can handle mouse events or let Xojo redraw a progressbar.

For threaded FileListMBS, this property has no effect.
(Read and Write property)

83.15.66 Constants

83.15.67 SkipFiles = 1

MBS Util Plugin, Plugin Version: 20.1.

Function: One of the skip modes.
Notes: Skip files.

83.15.68 SkipFolders = 2

MBS Util Plugin, Plugin Version: 20.1.

Function: One of the skip modes.
Notes: Skip folders.

83.15.69 SkipHidden = 12

MBS Util Plugin, Plugin Version: 20.1.

Function: One of the skip modes.
Notes: Skip hidden files and folders.

83.15.70 SkipHiddenFiles = 4

MBS Util Plugin, Plugin Version: 20.1.

Function: One of the skip modes.
Notes: Skip hidden files.

83.15.71 SkipHiddenFolders = 8

MBS Util Plugin, Plugin Version: 20.1.

Function: One of the skip modes.
Notes: Skip hidden folders.

83.15.72 SkipNone = 0

MBS Util Plugin, Plugin Version: 20.1.

Function: One of the skip modes.
Notes: Skip no files.

83.16 class FinderSelectionMBS

83.16.1 class FinderSelectionMBS

MBS MacClassic Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

Function: A class to query the Finder for the current selection.
Example:

```
dim f as new FinderSelectionMBS
dim i,n as Integer
dim a(-1) as string
dim g as FolderItem

f.GetSelection
if f.LastError=0 then
n=f.CountItems

for i=1 to n
g=f.Item(i)
if g<>nil then
a.Append g.DisplayName
end if
next
end if

MsgBox Join(a,EndOfLine)
```

83.16.2 Blog Entries

- MonkeyBread Software Releases the MBS Plugins 8.2

83.16.4 Methods

83.16.5 CountItems as Integer

MBS MacClassic Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

Function: Returns the number of items in the Finder selection.
Example:

```
dim f as new FinderSelectionMBS

f.GetSelection
MsgBox str(F.CountItems)
```

Notes: Returns 0 on any error.

83.16.6 GetSelection

MBS MacClassic Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

Function: Asks the Finder for the current selection.
Example:

```
dim f as new FinderSelectionMBS

f.GetSelection
```

Notes: Lasterror is set.

83.16.7 Item(index as Integer) as folderitem

MBS MacClassic Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

Function: Returns the item with the given index.
Example:

```
dim f as new FinderSelectionMBS

f.GetSelection
MsgBox f.Item(1).DisplayName // display first item's name
```

Notes:

Index is from 1 to count.
Lasterror is set.

83.16.8 Properties

83.16.9 LastError as Integer

MBS MacClassic Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

Function: The last error code reported.
Example:

```
dim f as new FinderSelectionMBS

f.GetSelection
MsgBox str(F.LastError)
```

Notes:

A Mac OS error code.
(Read and Write property)

83.17 class FolderItem

83.17.1 class FolderItem

Platforms: macOS, Linux, Windows, Targets: All.

Function: One of Xojo's base classes.
Notes: Handles access to files.

83.17.2 Methods

83.17.3 AbsolutePath as string

MBS MacOSX Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the absolute path for the file.
Example:

```
// test absolute path
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.txt")
Dim p As String = f.AbsolutePath

Dim g As FolderItem = NewFolderItemFromAbsolutePathMBS(p)
Dim n As String = g.NativePath

MsgBox p+EndOfLine+n
```

Notes:

For Xojo we register this function for compatibility to older Xojo and Real Studio versions.
Same as AbsolutePathMBS, but with name AbsolutePath.
On MacOS queries absolute path in MacOS Classic HFS style, but on Windows and Linux just queries native path.

83.17.4 AbsolutePathMBS as string

MBS MacOSX Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the absolute path for the file.
Example:

```
// test absolute path
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.txt")
Dim p As String = f.AbsolutePathMBS
```

```
Dim g As FolderItem = NewFolderItemFromAbsolutePathMBS(p)
Dim n As String = g.NativePath

MsgBox p+EndOfLine+n
```

Notes:

On MacOS queries absolute path in MacOS Classic HFS style, but on Windows and Linux just queries native path.
Version 20.1 or newer makes sure directories return a path ending in double colon.

83.17.5 Blog Entries

- MBS Xojo Plugins, version 20.1pr5
- MBS Xojo Plugins, version 19.5pr8
- AbsolutePath for Xojo

83.17.6 AliasInfoMBS as AliasInfoMBS

MBS MacClassic Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Alias information about the folderitem if it is an alias file.
Example:

```
// select an alias file. use TrueChild so it's not resolved
dim f as FolderItem = SpecialFolder.Desktop.TrueChild("Development")

// get alias info
dim a as AliasInfoMBS = f.AliasInfoMBS

// show info
MsgBox "alias points to "+a.TargetName+" in path "+a.PathString+" of volume "+a.VolumeName
```

Deprecated: This item is deprecated and should no longer be used. You can use CFBookmarkMBS module instead. **Notes:** Returns nil on any error.

83.17.7 BackupIsItemExcludedMBS(byref excludeByPath as boolean) as boolean

MBS MacFrameworks Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Report whether or not an item is being excluded from backup.
Notes:

excludeByPath: pass a boolean variable to determine whether or not the given item is excluded as an absolute path or whether it is sticky to the item.

Returns true if the item or any of its ancestors are excluded from backup, false otherwise.

Require Mac OS X 10.5.

83.17.8 BackupSetItemExcludedMBS(exclude as boolean, excludeByPath as boolean) as Integer

MBS MacFrameworks Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Add or remove an item from the list of items excluded from backup.
Notes:

When backing up, the backup daemon skips items marked by this call. If a folder is marked for exclusion, it and its contents are excluded from backup. When specifying by path, it is OK to pass a URL of an item/folder that does not exist yet.

Returns the error code. -1 is the error code in case the function is not available.
Require Mac OS X 10.5.

83.17.9 CalculateDirectorySizeMBS(recursive as boolean = false, ticks as Integer = 0, QueryCompressedSizes as boolean = false, RecursionLimit as Integer = -1) as DirectorySizeMBS

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an object with informations about the folder size.
Example:

```
// chose a folder
dim f as FolderItem = SelectFolder

// calculate
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)

// display
MsgBox str(d.FilesCount)+" files in "+str(d.FolderCount)+" folder"
```

Notes:

recursive: Whether to count items in the subfolders.
ticks: Whether to yield time to other threads. (See YieldTicks property)
QueryCompressedSizes: Whether to query compressed file sizes on Windows.
RecursionLimit: If positive, the recursion limit.

Returns nil on any error.

83.17.10 Blog Entries

- MBS Real Studio Plugins, version 12.4pr9

83.17.11 CompressedFileLengthMBS as int64

MBS Util Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the length of the compressed file on disk.
Example:

```
filesize.text=format(file.CompressedFileLengthMBS,"0")
```

Notes: On Windows files can be compressed and this function returns the size of the compressed file. On Mac and for non compressed files on Windows this function returns the uncompressed size.

83.17.12 CountMBS as Integer

MBS MacClassic Plugin, Plugin Version: 3.2, Platforms: macOS, Windows, Targets: All.

Function: Returns the number of items in this folder.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop
MsgBox str(F.Count)+" vs. "+str(F.CountMBS)
```

Deprecated: This item is deprecated and should no longer be used. You can use folderitem.Count instead.
Notes:

The count property of the Xojo folderitem class is cached.
So if you create a file, the count property may not update.

If you need a more up to date value, you can use the CountMBS function to return the value the Mac OS system software returns.
On any error (e.g. invalid folderitem) the function returns 0.

Windows support added in 4.2dr2.

83.17.13 Blog Entries

- MBS Plugins updated for Xojo 2019r2

83.17.14 CreateLargeBinaryStreamMBS(MacType as string, MacCreator as string) as LargeBinaryStreamMBS

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a file as a LargeBinaryStreamMBS.
Example:

```
dim f as FolderItem // your file
dim l as LargeBinaryStreamMBS

l=f.CreateLargeBinaryStreamMBS("TEXT","ttxt")
```

Notes:

If there is already a file, it is deleted.
On Windows the parameters are ignored.
Returns nil on any error.

83.17.15 CreateResStreamMBS(MacType as string, MacCreator as string) as ResStreamMBS

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Creates a new ResStreamMBS.
Notes:

If there is already a file, it is deleted.
If the file could not be created it is deleted.
Returns nil on any error.

83.17.16 CreatorAppMBS as FolderItem

MBS MacClassic Plugin, Platform: macOS, Targets: All.

Function: Returns the application that would be launched if you'd call the above Launch method, or NIL if no appropriate app can be located.
Example:

```
dim docfile as folderitem // your document file
dim appfile as folderitem
appfile=docfile.CreatorAppMBS
```

Notes:

This function doesn't work with bundles and should be only used on Mac OS 9.
Use Launch service functions on Mac OS X.
See also:

- 83.17.17 CreatorAppMBS(creatorCode as String) as FolderItem 15989

83.17.17 CreatorAppMBS(creatorCode as String) as FolderItem

MBS MacClassic Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to the Application which created this file for the given creator code on the volume of the folderitem.
Example:

```
dim myvolume as folderitem // your volume
dim theFile as folderitem // your file
dim appfile as folderitem
dim ok as boolean
dim inFront as Boolean

appfile=myvolume.CreatorAppMBS("iCAB")
' or
ok = theFile.OpenWithAppMBS(myvolume.CreatorAppMBS("RSED"), inFront)
```

Notes:

Returns the application that would be launched if you'd call the above Launch method and if the file had the specified creator code. Returns NIL if no appropriate app can be located.

This method allows you to open a document with a creator code that you specify instead of having to locate

the application by your own. Here's an example on how to open any file with ResEdit (whose creator code is 'RSED'):

This function doesn't work with bundles and should be only used on Mac OS 9.
Use Launch service functions on Mac OS X.

83.17.19 DarwinMediaClassMBS as string

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Returns the class of the media.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop

MsgBox f.DarwinMediaClassMBS
```

Notes:

Returns nil on any problem.

Possible values:

kIOCDMediaClass	"IOCDMedia"
kIODVDMediaClass	"IODVDMedia"
kIOMediaClass	"IOMedia"

83.17.20 Blog Entries

- MBS Plugins updated for Xojo 2019r2

83.17.21 DarwinMediaInfoMBS as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 5.1, Platform: macOS, Targets: All.

Function: Returns the info dictionary of the media.
Example:

```
// info for boot volume
dim info as CFDictionaryMBS = volume(0).DarwinMediaInfoMBS

if info = nil then
beep // error
else
CFShowMBS info // show in console

dim RemovableKey as CFStringMBS = NewCFStringMBS("Removable")
dim RemovableCFO as CFObjectMBS = info.Value(RemovableKey)
dim RemovableCFB as CFBooleanMBS = CFBooleanMBS(RemovableCFO)
dim Removable as Boolean = RemovableCFB.Value

MsgBox "Removable: "+str(Removable)

dim EjectableKey as CFStringMBS = NewCFStringMBS("Ejectable")
dim EjectableCFO as CFObjectMBS = info.Value(EjectableKey)
dim EjectableCFB as CFBooleanMBS = CFBooleanMBS(EjectableCFO)
dim Ejectable as Boolean = EjectableCFB.Value

MsgBox "Ejectable: "+str(Ejectable)

dim SizeKey as CFStringMBS = NewCFStringMBS("Size")
dim SizeCFO as CFObjectMBS = info.Value(SizeKey)
dim SizeCFN as CFNumberMBS = CFNumberMBS(SizeCFO)
dim Size as Double = SizeCFN.doubleValue / 1000000000.0

MsgBox "Size: "+str(Size, "0.0")+" GB"
end if
```

Notes:

Returns nil on any problem.

example output for the example code above:
<CFDictionary 0x7d60510 [0xa01900e0] >{ type = fixed-mutable, count = 14, capacity = 14, pairs = (
0 : <CFString 0x7d5ffe0 [0xa01900e0] >{ contents = "Leaf" } = <CFBoolean 0xa0190b98 [0xa01900e0]

83.17.23 DarwinVolumeNameMBS as string

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Returns the name of the volume from the BSD part of Mac OS X.
Example:

```
MsgBox Volume(0).DarwinVolumeNameMBS // shows here disk1s10
```

Notes:

Returns "" on any error.
The returned string is encoded as ASCII.

83.17.25 DeleteDataForkMBS

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Deletes the data fork of a file.
Notes:

Equal to open the file using a binarystream and setting the length property to 0.
On Mac OS a file can exist without a datafork, with a resource fork or even without any fork.

83.17.26 Blog Entries

- MBS Plugins 10.3 Release Notes

83.17.27 DeleteResourceForkMBS

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Deletes the resource fork of a file.
Notes:

Equal to open the file using a ResStreamMBS and setting the length property to 0.
On Mac OS a file can exist without a datafork, with a resource fork or even without any fork.

83.17.28 Blog Entries

- MBS Plugins 10.3 Release Notes

83.17.29 DisplayPathMBS(delimiter as string = "/") as string

MBS Util Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shows display path.
Example:

```
// Sample values in German:

// SnowLeopard/Programme/Dienstprogramme/Konsole

MsgBox SpecialFolder.Applications.Child("Utilities").Child("Console.app").DisplayPathMBS("/")

// SnowLeopard/Benutzer/cs/Schreibtisch

MsgBox SpecialFolder.Desktop.DisplayPathMBS("/")

// SnowLeopard ,ûú Programme ,ûú Dienstprogramme ,ûú Konsole

MsgBox SpecialFolder.Applications.Child("Utilities").Child("Console.app").DisplayPathMBS(" ,ûú ")

// SnowLeopard ,ûú Benutzer ,ûú cs ,ûú Schreibtisch

MsgBox SpecialFolder.Desktop.DisplayPathMBS(" ,ûú ")
```

Notes: You can pass any string for delimiter. Good looks an arrow or just a slash.

83.17.30 Blog Entries

- MBS Xojo Plugins, version 17.5pr3

83.17.31 EjectVolumeMBS(force as boolean, byref dissenterPID as Integer) as Integer

MBS MacClassic Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: This routine ejects the volume specified by folderitem.
Example:

```
dim disk as FolderItem

dim c as Integer = VolumeCount-1
for i as Integer = 0 to c
dim v as FolderItem = volume(i)
if v.Name = "testvolume" then
```

```
disk = v
exit
end if
next

if disk = nil then
MsgBox "Please change the name in this code."
else
dim pid as Integer
dim e as Integer = disk.EjectVolumeMBS(false, pid)

if e=0 then
msgBox "Volume unmounted."
else

if pid=0 then
msgBox "Failed to unmount with error: "+str(e)
else
dim name as string
dim p as new ProcessMBS // from Util plugin
p.GetFirstProcess

do
if p.ProcessID = pid then
name = p.Name
end if
loop until not p.GetNextProcess

if len(name)>0 then
msgBox "Failed to unmount with error: "+str(e)
else
MsgBox "Failed to unmount."+EndOfLine+EndOfLine+"The application "+name+" is still using this volume."+EndOfLine+"Error: "+str(e)
end if

end if
end if
end if
```

Notes:

If the volume cannot be ejected the pid of the process which denied the unmount will be returned in the dissenter parameter. This routine returns after the eject is complete. Ejecting a volume will result in the unmounting of other volumes on the same device.

force: Specify true if you want the volume forcibly unmounted. Force unmounting a volume will very likely result in data loss since the volume will be ejected even if there are open files on it. This option should be reserved for situations such as the backing store for a volume is gone (so the data is lost regardless).
dissenterPID: Optionally, pid of the process which denied the unmount if the unmount is denied.

Returns a Mac OS error code. 0 means no error and -1 is a plugin error if the function can't be called. -47 is returned if the disc is in use.

PS: Seems like on my tests the pid is not set by Apple.

83.17.33 FilesMBS as FolderItem()

MBS Util Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns array of files in the given folder.
Example:

```
dim folder as FolderItem = SpecialFolder.Desktop
dim files() as FolderItem = folder.FilesMBS
MsgBox str(UBound(files)+1)+" files"
```

Notes: Similar to item() function, but returns all files with one call.

83.17.34 Blog Entries

- MBS Real Studio Plugins, version 12.0fc1

83.17.35 FinderUpdateMBS as Integer

MBS Picture Plugin, Platform: macOS, Targets: Desktop, Console & Web.

Function: Updates the file or folder in the Finder.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Returns 0 for successfull and any Mac OS error code on a problem.
Returns -1 on Windows.

This function is called automatically when adding or removing an icon.
If you add a folder icon, use this function to update the Finder to display it.

83.17.39 FoldersMBS as FolderItem()

MBS Util Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns array of folders in the given folder.
Example:

```
dim folder as FolderItem = SpecialFolder.Desktop
dim folders() as FolderItem = folder.FoldersMBS
MsgBox str(UBound(folders)+1)+" folders"
```

Notes: Similar to item() function, but returns all folders with one call.

83.17.41 FontActivateMBS(OnlyLocal as boolean) as Integer

MBS Util Plugin, Plugin Version: 4.3, Platforms: macOS, Windows, Targets: All.

Function: Activates one font.
Example:

```
dim f as folderitem
dim e as Integer

f=SpecialFolder.Desktop.child("MyWonderfulFont.dfont")
e=f.FontActivateMBS(true)

select case e
case 0
msgbox "No error"
case -1
MsgBox "Parameter error. (Plugin)"
case 1 // Windows error
MsgBox "Parameter error. (System)"
case -43 // Mac error
MsgBox "File not found."
case -50 // Mac error
MsgBox "Parameter error. (System)"
case -108 // Mac error
MsgBox "File is not a font file."
else
MsgBox "Error: "+str(e)
end Select
```

Notes:

The folderitem used here points to a font file.
If you want the Font Manager to make fonts not visible to all applications installed on the system, use the OnlyLocal property.

Requires Mac OS 9.0 or newer.
Returns -1 if this FontManager function was not found. 0 on success.

Some error codes for Mac:

Fails in Xojo 2017 on Windows due to changes in Xojo's way to handle fonts. The plugin still activates them, but Xojo doesn't allow you to use fonts which haven't been there earlier. See feedback case 46596.

0	No error.
-43	File not found.
-45	File locked.
-108	Out of memory.
-105	Already registered.

83.17.44 FontDeactivateMBS(OnlyLocal as boolean) as Integer

MBS Util Plugin, Plugin Version: 4.3, Platforms: macOS, Windows, Targets: All.

Function: Deactivates one font.
Notes:

The folderitem used here points to font file.
The OnlyLocal must match the value which was used on registration.

Requires Mac OS 9.0 or newer, Windows 2000/XP.
Returns -1 if this FontManager function was not found. 0 on success.

An user reported that this does not work on Mac OS X 10.4.

Some error codes for Mac:

On Windows you may need to call this function several times until all references of the file are freed.

0	No error.
-43	File not found.
-45	File locked.
-108	Out of memory.

83.17.46 GetFileFlagsMBS as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: All.

Function: Get the file flags for a folderitem.
Example:

```
// For example, testing for a file being invible works like this:
dim fdFlags as Integer
dim fileIsInvisible as boolean
dim f as FolderItem // file

fdFlags = f.GetFileFlagsMBS
if fdFlags <0 then
' ... oops, an error occured
else
fileIsInvisible = BitwiseAnd (fdFlags, & H4000) <>0
end
```

Notes:

Returns the fdFlags of a file. If you pass in a non-existing file or a folder, a negative error code is returned instead.

The fdFlags is a set of bits with the following meaning:

bit 15	value & H8000	isAlias
bit 14	value & H4000	isInvisible
bit 13	value & H2000	hasBundle (has a BNDL resource)
bit 12	value & H1000	nameLocked
bit 11	value & H0800	isStationary
bit 10	value & H0400	hasCustomIcon
bit 8	value & H0100	hasBeenInited (Finder has seen the file since it has been created)
bit 7	value & H0080	hasNoINITs (there is no INIT rsrc in the Extension file)
bit 6	value & H0040	isShared
bits 1-3	value & H000E	color (as a 3-bit value from 0-7)

83.17.47 Blog Entries

- MBS Plugins updated for Xojo 2019r2
- MBS Xojo / Real Studio Plugins, version 16.4pr3

83.17.48 GetFolderFlagsMBS as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: All.

Function: Get the folder flags for the folderitem to the given value. Returns a negative if there is an error.
Notes:

Returns the frFlags of a folder. If you pass in a non-existing folder, a negative error code is returned instead. The frFlags are similar to the fdFlags (see GetFileFlags), but only a subset of them is used with folders.

83.17.49 Blog Entries

- MBS Plugins updated for Xojo 2019r2
- MBS Xojo / Real Studio Plugins, version 16.4pr3

83.17.50 GetVolumeRefMBS as Integer

MBS MacClassic Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: Returns the volume reference number.
Notes:

Returns zero in case of error.
This can replace FolderItem.MacVRefNum for newer Xojo versions.

83.17.51 Blog Entries

- MBS Plugins updated for Xojo 2019r2

83.17.52 HasUnresolvedConflictsMBS as boolean

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the iCloud file properties.
Notes:

A boolean that contains true if this item has conflicts outstanding, false otherwise.
Available in Mac OS X v10.7 and later.

83.17.53 Blog Entries

- MBS Real Studio Plugins, version 11.3pr9

83.17.54 IconImageMBS(width as Integer, WindowsFlags as Integer=0) as picture

MBS Picture Plugin, Plugin Version: 3.3, Platforms: macOS, Windows, Targets: All.

Function: Returns an picture with the icon image of a FolderItem.
Example:

Backdrop=SpecialFolder.Desktop.IconImageMBS(512)

Notes:

May return a picture which is smaller as requested if the given picture size is not available. (Changed in v5.3 to return the requested size)
On Windows the icon picture is scaled to the requested size. (Actually the plugin can only get 32bit pixels wide icons on Windows as maximum)
Good sizes on Mac OS are 16, 32, 48 and 128 pixels.
Returns nil on low memory.

Version 8.6: Now reads the 32bit image data if possible.

You can pass flags for Windows options:

This function can fail if the file does not exist.
Added 1024 pixel support in 12.3 plugins.

SHGFI_ADDOVERLAYS	= & h20	Apply the appropriate overlays to the file's icon.
SHGFI_LINKOVERLAY	= & h8000	Adds the link overlay to the file's icon.
SHGFI_OPENICON	= 2	Retrieve the file's open icon
SHGFI_SELECTED	= & h10000	Blend the file's icon with the system highlight color.

On Windows, it may be that you get a 256 pixel icon with small icon on top left. This is simply how windows handles the case when no big icon is available.

83.17.55 Blog Entries

83.17.56 IconMaskMBS(width as Integer, WindowsFlags as Integer=0) as picture

MBS Picture Plugin, Plugin Version: 3.3, Platforms: macOS, Windows, Targets: All.

Function: Returns an picture with the icon mask of a FolderItem.
Example:

Backdrop=SpecialFolder.Desktop.IconMaskMBS(512)

Notes:

May return a picture which is smaller as requested if the given picture size is not available. (Changed in v5.3 to return the requested size)
On Windows the icon picture is scaled to the requested size. (Actually the plugin can only get 32bit pixels wide icons on Windows as maximum)
Good sizes on Mac OS are 16, 32, 48 and 128 pixels.
Returns nil on low memory.

Please use with IconImageMBS and not with IconMBS function.
Version 8.6: Now reads the 8 bit alpha values if possible.

You can pass flags for Windows options:

SHGFI_ADDOVERLAYS	= & h20	Apply the appropriate overlays to the file's icon.
SHGFI_LINKOVERLAY	= & h8000	Adds the link overlay to the file's icon.
SHGFI_OPENICON	= 2	Retrieve the file's open icon
SHGFI_SELECTED	= & h10000	Blend the file's icon with the system highlight color.

This function can fail if the file does not exist.
Added 1024 pixel support in 12.3 plugins.

On Windows, it may be that you get a 256 pixel icon with small icon on top left. This is simply how windows handles the case when no big icon is available.

83.17.57 Blog Entries

- MBS Real Studio Plugins, version 12.1pr2
- MBS Real Studio Plugins, version 11.2pr2

83.17.58 IconMBS(width as Integer, WindowsFlags as Integer=0) as picture

MBS Picture Plugin, Platforms: macOS, Windows, Targets: All.

Function: Returns an picture with the icon of a FolderItem for the given iconsize.
Example:

```
Backdrop=SpecialFolder.Desktop.IconMBS(512)

// newer way for Mac apps:

// get image
dim n as NSImageMBS = NSWorkspaceMBS.iconForFile(SpecialFolder.desktop)
// set the size we want
n.setSize 512,512
// make a copy as picture
Backdrop = n.CopyPictureWithMask
```

Notes:

Changed in plugin version 7.7 to return a picture with mask of the given size.

On Windows the icon picture is scaled to the requested size. (Actually the plugin can only get 32bit pixels wide icons on Windows as maximum)

Version 8.6: Now reads the 32bit image data with 8 bit alpha values if possible.

You can pass flags for Windows options:

SHGFI_ADDOVERLAYS	= & h20	Apply the appropriate overlays to the file's icon.
SHGFI_LINKOVERLAY	= & h8000	Adds the link overlay to the file's icon.
SHGFI_OPENICON	= 2	Retrieve the file's open icon
SHGFI_SELECTED	= & h10000	Blend the file's icon with the system highlight color.

This function can fail if the file does not exist.
Please note that icons on alias files takes much longer to get than normal files.
Added 1024 pixel support in 12.3 plugins.

On Windows, it may be that you get a 256 pixel icon with small icon on top left. This is simply how windows handles the case when no big icon is available.

For Linux, please use LinuxIconMBS module.

83.17.59 isApplicationMBS as boolean

MBS MacOSX Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: Whether the folderitem points to an application.
Example:

```
// try an application
dim file1 as FolderItem = SpecialFolder.Applications.Child("iTunes.app")
MsgBox "Bundle: "+str(file1.isBundleMBS)+EndOfLine+"Application: "+str(file1.isApplicationMBS)

// try some other file
dim file2 as FolderItem = SpecialFolder.Preferences.Child("com.apple.itunes.plist")
MsgBox "Bundle: "+str(file2.isBundleMBS)+EndOfLine+"Application: "+str(file2.isApplicationMBS)
```

Notes:

Returns true if the folderitem points to an application on Mac.
Upgraded in version 19.5 to use CFURL instead of FSRef APIs.

83.17.60 Blog Entries

- MBS Xojo Plugins, version 19.5pr1
- MBS Real Studio Plugins, version 12.1pr2

83.17.61 isBundleMBS as boolean

MBS MacOSX Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: Whether the folderitem points to a bundle.
Example:

```
// try an application
dim file1 as FolderItem = SpecialFolder.Applications.Child("iTunes.app")
MsgBox "Bundle: "+str(file1.isBundleMBS)+EndOfLine+"Application: "+str(file1.isApplicationMBS)

// try some other file
dim file2 as FolderItem = SpecialFolder.Preferences.Child("com.apple.itunes.plist")
MsgBox "Bundle: "+str(file2.isBundleMBS)+EndOfLine+"Application: "+str(file2.isApplicationMBS)
```

Notes:

Returns true if the folderitem points to a directory which is a bundle/package.
For example an application package (.app).
Upgraded in version 19.5 to use CFURL instead of FSRef APIs.

- MBS Xojo Plugins, version 19.5pr1
- MBS Xojo Plugins, version 19.0pr6

83.17.63 IsCompressedFileMBS as Boolean

MBS Util Plugin, Platform: Windows, Targets: All.

Function: Is this file a compressed one?
Notes: On Windows you can compress individual files to double your harddisk, but no application may note, because this compression is transparent.

83.17.64 IsDownloadedMBS as boolean

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the iCloud file properties.
Notes:

A boolean that contains true if a local copy of this item exists, false otherwise.
Available in Mac OS X v10.7 and later.

83.17.65 Blog Entries

- MBS Real Studio Plugins, version 11.3pr9

83.17.66 IsDownloadingMBS as boolean

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the iCloud file properties.
Notes:

A boolean that contains true if a local copy of this item is currently being downloaded, false otherwise.
Available in Mac OS X v10.7 and later.

83.17.67 Blog Entries

- MBS Real Studio Plugins, version 11.3pr9

83.17.68 IsEjectableVolumeMBS as Boolean

MBS MacClassic Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Returns true if the file is on a ejectable volume.
Example:

```
dim bool as Boolean
dim f as FolderItem = volume(0)

bool=f.IsEjectableVolumeMBS
```

Notes:

If false is returned it may also be possible that the function is not available (on Mac OS X 10.2) or doesn't make sense. So the volume may be ejectable even if false is returned.

For remote volumes, the eject flag is not set from Apple. That makes sense as those volume are not physically ejected, but just unmounted. So check IsOnRemoteVolumeMBS, too.

83.17.69 Blog Entries

- MBS Plugins updated for Xojo 2019r2
- MBS Plugins 10.3 Release Notes

83.17.70 IsEncryptedFileMBS as Boolean

MBS Util Plugin, Platform: Windows, Targets: All.

Function: Is this file an encrypted one?
Notes: On Windows you can encrypted individual files to secure your harddisk, but no application may note, because this encryption is transparent to them.

83.17.71 IsFileDataForkOpenReadWriteMBS as boolean

MBS Util Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Test whether a file is currently opened for read and write by an application.
Notes: This method tries to open the file with exclusive access. If this fails for access/permission errors, the function returns true.

83.17.72 Blog Entries

- MBS Plugins updated for Xojo 2019r2

83.17.73 IsFileResourceForkOpenReadWriteMBS as boolean

MBS Util Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Test whether a file is currently opened for read and write by an application.
Notes:

This method tries to open the file with exclusive access. If this fails for access/permission errors, the function returns true.

On Windows, the function result is always false.

83.17.74 Blog Entries

- MBS Plugins updated for Xojo 2019r2

83.17.75 IsOnRemoteVolumeMBS as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: All.

Function: Returns true if the file is on a remote volume.

83.17.76 Blog Entries

- MBS Plugins updated for Xojo 2019r2
- MBS Plugins 10.3 Release Notes

83.17.77 IsUbiquitousItemMBS as boolean

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the iCloud file properties.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.rtf")
MsgBox "IsUbiquitousItemMBS: "+str(f.IsUbiquitousItemMBS)
```

Notes:

A boolean that contains true if this item is synchronized to cloud-based storage, false otherwise.
Available in Mac OS X v10.7 and later.

83.17.78 Blog Entries

- MBS Real Studio Plugins, version 11.3pr9

83.17.79 IsUploadedMBS as boolean

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the iCloud file properties.
Notes:

A boolean that contains true if a copy of this item exists in cloud-based storage, false otherwise.
Available in Mac OS X v10.7 and later.

83.17.80 Blog Entries

- MBS Real Studio Plugins, version 11.3pr9

83.17.81 IsUploadingMBS as boolean

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the iCloud file properties.
Notes:

A boolean that contains true if a local copy of this item is currently being uploaded, false otherwise.
Available in Mac OS X v10.7 and later.

83.17.82 Blog Entries

- MBS Real Studio Plugins, version 11.3pr9

83.17.83 ItemsMBS as FolderItem()

MBS Util Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns array of items in the given folder.
Example:

```
dim folder as FolderItem = SpecialFolder.Desktop
dim Items() as FolderItem = folder.ItemsMBS
MsgBox str(UBound(Items)+1)+" items"
```

Notes: Similar to item() function, but returns all items with one call.

83.17.84 Blog Entries

- MBS Xojo Plugins, version 20.0r6
- MBS Real Studio Plugins, version 12.0fc1

83.17.85 KindMBS as string

MBS MacClassic Plugin, Platforms: macOS, Windows, Targets: All.

Function: Returns a string about the kind of the document.
Example:

```
dim s as string
dim file as FolderItem = SpecialFolder.Desktop

s=file.KindMBS

MsgBox s
```

Notes:

e.g. for a Xojo document on Mac OS X "Xojo Document" or on Mac OS 9 something like "Xojo 4.0.2fc6 Mac OS X Document".

This text may be localized.
Added Windows support in 12.4 plugins.

83.17.86 Blog Entries

- MBS Xojo Plugins, version 19.4pr1
- MBS Real Studio Plugins, version 12.4pr3

83.17.87 LaunchMBS(inFront as Boolean) as Boolean

MBS MacClassic Plugin, Platforms: macOS, Windows, Targets: All.

Function: Launches a file.
Notes:

In Xojo 4.5 Realsoftware introduces a new Launch variant: "Launch(inFront)". To be compatible I renamed the old Launch method to MBSLaunch and added a Launch method which is compatible to Xojo's.

The return value is true if no immediate error occured. It would be false, for instance, if the FolderItem object does not exists, is a folder, or is not allowed to be opened (can happen with files on network volumes, as well as in Mac OS X environments).
Added Windows support in version 3.4.

83.17.88 LaunchServicesApplicationForItemMBS(role as Integer) as folderitem

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return the application used to open an item.
Example:

```
Dim file As FolderItem = SpecialFolder.Desktop.Child("Test.xojo_binary_project")

Const kLSRolesNone = 1 // no claim Is made about support For this type/scheme
Const kLSRolesViewer = 2 // claim To be able To view this type/scheme
Const kLSRolesEditor = 4 // claim To be able To edit this type/scheme
Const kLSRolesAll = -1 // claim To Do it all

Dim appfile As FolderItem = file.LaunchServicesApplicationForItemMBS(kLSRolesEditor)

// shows Xojo
MsgBox appfile.NativePath
```

Notes:

Consults the binding tables to return the application that would be used to open the folderitem if it were double-clicked in the Finder. This application will be the user-specified override if appropriate or the default otherwise. If no application is known to LaunchServices suitable for opening this item, nil (kLSApplicationNotFoundErr) will be returned.

Constants you can use for the role parameter:

kLSRolesNone	= 1	no claim is made about support for this type/scheme
kLSRolesViewer	= 2	claim to be able to view this type/scheme
kLSRolesEditor	= 4	claim to be able to edit this type/scheme
kLSRolesAll	= -1	claim to do it all

Upgraded in version 19.5 to use CFURL instead of FSRef APIs.

83.17.89 LaunchServicesApplicationsForItemMBS(role as Integer) as LaunchServicesApplicationListMBS

MBS MacOSX Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Returns a list of folderitems to applications that offer the requested role(s) for the input item.
Example:

```
dim l as LaunchServicesApplicationListMBS
```

```
dim f as FolderItem

f=GetFolderItem("text file")
l=f.LaunchServicesApplicationsForItemMBS(4)

if l<>nil then
MsgBox str(l.Count)
MsgBox l.Item(0).NativePath
end if
```

Notes:

Requires Mac OS X 10.3.

If the folderitem is a file reference, it is treated as a document, and applications are selected based on the document's type information. Otherwise, applications are selected based on the folderitem's scheme.

Role:
The role(s) which must intersect with the role provided by an application for the specified item in order for the application to be included in the result. Pass kLSRolesAll if any role is acceptable.

Constants you can use for the role parameter:

kLSRolesNone	= 1	no claim is made about support for this type/scheme
kLSRolesViewer	= 2	claim to be able to view this type/scheme
kLSRolesEditor	= 4	claim to be able to edit this type/scheme
kLSRolesAll	= -1	claim to do it all

Upgraded in version 19.5 to use CFURL instead of FSRef APIs.

83.17.90 LaunchServicesCanApplicationAcceptItemMBS(TargetApp as folderitem, role as Integer, flags as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Determine whether an item can accept another item.
Example:

```
dim appl,item as FolderItem

appl=LaunchServicesApplicationForInfoMBS("","","rb",-1)
item=GetFolderItem("file.rb")
```

```
MsgBox appl.Name

if item.LaunchServicesCanApplicationAcceptItemMBS(appl,-1,1) then
MsgBox "accept"
else
MsgBox "not accepted"
end if
```

Notes:

Returns whether TargetApp can accept this folderitem as in a drag and drop operation. If role is other than kLSRolesAll then make sure TargetApp claims to fulfill the requested role.

Constants you can use for the role parameter:

kLSRolesNone	= 1	no claim is made about support for this type/scheme
kLSRolesViewer	= 2	claim to be able to view this type/scheme
kLSRolesEditor	= 4	claim to be able to edit this type/scheme
kLSRolesAll	= -1	claim to do it all

Values for the flags:

kLSAcceptDefault	= 1	
kLSAcceptAllowLoginUI	= 2	show UI to log in if necessary

Upgraded in version 19.5 to use CFURL instead of FSRef APIs.

83.17.91 LaunchServicesDisplayNameMBS as string

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Get the display name for a folderitem.
Example:

```
Dim f As FolderItem = SpecialFolder.Desktop.Child("Test.xojo_binary_project")

MsgBox f.LaunchServicesKindStringMBS+EndOfLine+f.LaunchServicesDisplayNameMBS#
```

Notes:

Return a copy of the display name for a folderitem. Takes into consideration whether this item has a hidden extension or not.
Upgraded in version 19.5 to use CFURL instead of FSRef APIs.

83.17.92 Blog Entries

- MBS Xojo Plugins, version 19.5pr1

83.17.93 LaunchServicesItemInfoMBS(WhichInfo as Integer) as LaunchServicesItemInfoMBS

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return information about an item.
Example:

```
dim l as LaunchServicesItemInfoMBS
dim f as FolderItem

f=SpecialFolder.Applications.Child("Mail.app")
l=f.LaunchServicesItemInfoMBS(-1)

if l.IsApplication then // True for mail.app
MsgBox "is Application"
end if

if l.IsContainer then // True for mail.app
MsgBox "is Container"
end if

if l.IsPackage then // True for mail.app
MsgBox "is Package"
end if
```

Notes:

Returns as much or as little information as requested about the folderitem. Some information is available in a thread-safe manner, some is not.

Possible values you can combine for the WhichInfo parameter:

kLSRequestExtension	= & h01	Requests the item's filename extension.
kLSRequestTypeCreator	= & h02	Requests the item's file type and creator signature.
kLSRequestBasicFlagsOnly	= & h04	Requests all item-information flags that are not application-specific: that is, all except IsNativeApp, IsClassicApp, AppPrefersNative, AppPrefersClassic and AppIsScriptable.
kLSRequestAppTypeFlags	= & h08	Requests all application-specific item-information flags: that is, IsNativeApp, IsClassicApp, AppPrefersNative, AppPrefersClassic and AppIsScriptable.
kLSRequestAllFlags	= & h10	Requests all item-information flags.
kLSRequestIconAndKind	= & h20	Not used.
kLSRequestExtensionFlagsOnly	= & h40	Requests only the kLSItemInfoExtensionIsHidden item-information flag.
kLSRequestAllInfo	= -1	

83.17.94 LaunchServicesKindStringMBS as string

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Get the kind string for an item.
Example:

```
Dim f As FolderItem = SpecialFolder.Desktop.Child("Test.xojo_binary_project")

MsgBox f.LaunchServicesKindStringMBS+EndOfLine+f.LaunchServicesDisplayNameMBS
```

Notes:

Returns the kind string as used in the Finder and elsewhere for the given folderitem.

Upgraded in version 19.5 to use CFURL instead of FSRef APIs.

83.17.95 Blog Entries

- MBS Xojo Plugins, version 19.5pr1

83.17.96 LaunchServicesOpenMBS as folderitem

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Launches the given item.
Example:

```
Dim file As FolderItem = SpecialFolder.Desktop.Child("Test.xojo_binary_project")
Dim a As FolderItem = file.LaunchServicesOpenMBS

MsgBox a.NativePath
```

Notes:

Returns the file or folder which was launched, e.g. the application for a file.
Upgraded in version 19.5 to use CFURL instead of FSRef APIs.

83.17.97 LaunchServicesRegisterMBS(update as boolean) as Integer

MBS MacOSX Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: If the specified folderitem refers to an application or other bundle claiming to handle documents or URLs, add the bundle's document and URL claims to the Launch Services database.
Notes:

Requires Mac OS X 10.3.

Update: When false, LaunchServicesRegisterMBS does not register the item if it has already been registered and the current modification date of the item has not changed from when it was last registered. When true, the item's registered info is updated, even if the modification has not changed.

Returns an error code:
An OSStatus value: noErr (0) - Success kLSNoRegistrationInfoErr (-10824) - The item does not contain info requiring registration kLSDataErr (-10817) - The item's property list info is malformed.
Returns -1 if the function is not available.

83.17.98 Blog Entries

- MBS Plugins updated for Xojo 2019r2

83.17.99 LogicalFileDataLengthMBS as int64

MBS Util Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the length of the logical disk space used for this file's data fork.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")

dim lines(-1) as string

lines.Append "Length: "+str(F.Length)
lines.Append "ResourceForkLength: "+str(F.ResourceForkLength)
lines.Append "LogicalFileDataLengthMBS: "+str(F.LogicalFileDataLengthMBS)
```

```
lines.Append "LogicalFileResLengthMBS: "+str(F.LogicalFileResLengthMBS)
lines.Append "LogicalFileTotalLengthMBS: "+str(F.LogicalFileTotalLengthMBS)
lines.Append "PhysicalFileDataLengthMBS: "+str(F.PhysicalFileDataLengthMBS)
lines.Append "PhysicalFileResLengthMBS: "+str(F.PhysicalFileResLengthMBS)
lines.Append "PhysicalFileTotalLengthMBS: "+str(F.PhysicalFileTotalLengthMBS)

MsgBox Join(lines,EndOfLine)
```

Notes:

This function works for files bigger than 2 GB which RB's built in functions don't.
On Windows the physical size reported is equal to the logical size, because there is no function for the physical size.

83.17.100 LogicalFileResLengthMBS as int64

MBS Util Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the length of the logical disk space used for this file's resourcefork.
Example:

```
filesize.text=format(file.LogicalFileResLengthMBS,"0")
```

Notes:

This function works for files bigger than 2 GB which RB's built in functions don't.
On Windows the physical size reported is equal to the logical size, because there is no function for the physical size.

83.17.101 LogicalFileTotalLengthMBS as int64

MBS Util Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the length of the logical disk space used for this file's datafork.
Example:

```
filesize.text=format(file.LogicalFileTotalLengthMBS,"0")
```

Notes:

This function works for files bigger than 2 GB which RB's built in functions don't.
On Windows the physical size reported is equal to the logical size, because there is no function for the

physical size.

83.17.102 LongPathMBS as string

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the long path for the file.
Example:

```
dim f as folderitem = specialfolder.desktop.child("test.file")
msgbox f.longpathMBS
```

Notes:

Should be the same as f.NativePath
Works with Windows NT 4 or newer.

83.17.103 Blog Entries

- MBS Real Studio Plugins, version 12.5pr8

- 12.2, page 28: Smart Reporting, Implementing a custom reporting system by Trisha Duke

83.17.105 MacCopyObjectMBS(DestinationFolder as folderitem, DestinationName as string, byref Result as folderitem, Options as Integer) as Integer

MBS MacClassic Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: This routine will copy the source object into the destination directory.
Notes:

The source object can be a file or directory.

self: The source object to copy.
DestinationFolder: The destination directory for the copy.
DestinationName: The name for the new object in the destination directory. Pass "" to use the source object name.
result: Upon successful completion a ref to the newly created object. If source is a directory then target will be the corresponding object in the destination directory.

options: One or more FSFileOperation flags

Requires Mac OS X 10.4.

Use this constants:

kFSFileOperationDefaultOptions	0	Use the default options - no overwrite, fail if any source item cannot be read, cross volume moves OK.
kFSFileOperationOverwrite	1	Replace an item in the destDir that has the same name as an item being moved/copied there.
kFSFileOperationSkipSourcePermissionErrors	2	Skip items that cannot be read and continue copying/moving instead of failing the operation.
kFSFileOperationDoNotMoveAcrossVolumes	4	Do not perform a copy/delete to move an item across volume boundries - fail the operation instead.
kFSFileOperationSkipPreflight	8	Skip the preflight for a directory move/copy. This will limit the status information that can be returned since the totals will not be calculated.

Returns a Mac OS error code. Error code -1 is from the plugin for invalid parameters or the function not being availanle.

83.17.106 Blog Entries

- MBS Plugins updated for Xojo 2019r2
- MonkeyBread Software Releases the MBS REALbasic plug-ins 9.2

83.17.107 MacIsHardLinkedMBS as boolean

MBS MacClassic Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: Whether the file is a hard link.
Notes:

If two directory entries point to the same hard disc space, you have a file which has two directory entries, but only one storage.

This function returns true for files in a Time Machine backup which did not change since the last backup and share their disc space with the other backups.

83.17.108 MacMoveObjectMBS(DestinationFolder as folderitem, DestinationName as string, byref Result as folderitem, Options as Integer) as Integer

MBS MacClassic Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: This routine will move the source object into the destination directory.
Notes:

The source object can be a file or directory. If a destName is provided then the object will be renamed as well as moved. By default a move across volumes will result in a copy and deletion of the original source. The kFSFileOperationDoNotMoveAcrossVolumes flag will cause cross volume moves to do nothing and return an error.

self: The source object to copy.
DestinationFolder: The destination directory for the copy.
DestinationName: The name for the new object in the destination directory. Pass "" to use the source object name.
result: Upon successful completion a ref to the newly created object. If source is a directory then target will be the corresponding object in the destination directory.
options: One or more FSFileOperation flags

Requires Mac OS X 10.4.

Use this constants:

kFSFileOperationDefaultOptions	0	Use the default options - no overwrite, fail if any source item cannot be read, cross volume moves OK.
kFSFileOperationOverwrite	1	Replace an item in the destDir that has the same name as an item being moved/copied there.
kFSFileOperationSkipSourcePermissionErrors	2	Skip items that cannot be read and continue copying/moving instead of failing the operation.
kFSFileOperationDoNotMoveAcrossVolumes	4	Do not perform a copy/delete to move an item across volume boundries - fail the operation instead.
kFSFileOperationSkipPreflight	8	Skip the preflight for a directory move/copy. This will limit the status information that can be returned since the totals will not be calculated.

Returns a Mac OS error code. Error code -1 is from the plugin for invalid parameters or the function not being availanle.

83.17.109 Blog Entries

- MonkeyBread Software Releases the MBS REALbasic plug-ins 9.2

83.17.110 MacMoveObjectToTrashMBS(byref Result as folderitem, Options as Integer) as Integer

MBS MacClassic Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: This routine will move the source object into the trash.
Notes:

The source object can be a file or directory. If the volume the source object resides on does not support a trash folder then this call will return an error (this is the same circumstance that triggers the delete immediately behavior in the Finder).

self: The source object to move to the trash.
result: Upon successful completion a ref the object in the trash. If source is a directory then target will be the corresponding object in the destination directory.
options: One or more FSFileOperation flags

Requires Mac OS X 10.5.

Use this constants:

kFSFileOperationDefaultOptions	0	Use the default options - no overwrite, fail if any source item cannot be read, cross volume moves OK.
kFSFileOperationOverwrite	1	Replace an item in the destDir that has the same name as an item being moved/copied there.
kFSFileOperationSkipSourcePermissionErrors	2	Skip items that cannot be read and continue copying/moving instead of failing the operation.
kFSFileOperationDoNotMoveAcrossVolumes	4	Do not perform a copy/delete to move an item across volume boundries - fail the operation instead.
kFSFileOperationSkipPreflight	8	Skip the preflight for a directory move/copy. This will limit the status information that can be returned since the totals will not be calculated.

Returns a Mac OS error code. Error code -1 is from the plugin for invalid parameters or the function not being availanle.

- MBS Plugins updated for Xojo 2019r2
- MonkeyBread Software Releases the MBS REALbasic plug-ins 9.2

83.17.112 MacNodeIDMBS as UInt64

MBS MacClassic Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: The node ID for this file or folder.
Example:

```
// get some file
dim f as FolderItem = GetTrueFolderItem("/Users/cs/Desktop/test.rtf", folderitem.PathTypeNative)

// get
dim NodeId as UInt64 = f.MacNodeIDMBS
dim ParentId as UInt64 = f.MacParentDirectoryIDMBS
dim p as FolderItem = volume(0).MacResolveNodeIDMBS(NodeId)

MsgBox "Node ID: "+str(NodeId)+EndOfLine+_
"Parent ID: "+str(ParentId)+EndOfLine+_
"Path resolved: "+p.NativePath
```

Notes: Upgraded in plugin version 18.4 to use newer APIs for 64-bit IDs on AFS volumes.

83.17.113 Blog Entries

- MBS Xojo Plugins, version 18.4pr3

83.17.114 MacParentDirectoryIDMBS as UInt64

MBS MacClassic Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: The parent directory node ID for this file or folder.
Notes: Upgraded in plugin version 18.4 to use newer APIs for 64-bit IDs on AFS volumes.

83.17.115 Blog Entries

- MBS Xojo Plugins, version 18.4pr3

83.17.116 MacResolveNodeIDMBS(NodeID as UInt64) as folderitem

MBS MacClassic Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Resolves a NodeID by searching for a folderitem on the volume with given NodeID.
Example:

```
// get a volume
dim f as FolderItem = volume(0)
```

```
// test with desktop
dim d as FolderItem= SpecialFolder.Desktop

// query node
dim NodeID as UInt32 = d.MacNodeIDMBS

// and search back
dim dest as FolderItem = f.MacResolveNodeIDMBS(nodeid)

MsgBox dest.NativePath
```

Notes:

NodeIDs may not be supported on all volumes.
Returns nil on any error.
Upgraded in plugin version 18.4 to use newer APIs for 64-bit IDs on AFS volumes.

83.17.117 Blog Entries

- MBS Xojo Plugins, version 18.4pr3
- MBS Real Studio Plugins, version 13.0pr10

83.17.118 NameExtensionMBS as string

MBS Util Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file extension from the file name.
Example:

```
dim f as folderitem = SpecialFolder.desktop

MsgBox "Name: "+f.Name+EndOfLine+"Name extension: "+f.NameExtensionMBS+EndOfLine+"Name without extension: "+f.NameWithoutExtensionMBS

dim g as FolderItem = SpecialFolder.Desktop.Child("test.rbp")

MsgBox "Name: "+g.Name+EndOfLine+"Name extension: "+g.NameExtensionMBS+EndOfLine+"Name without extension: "+g.NameWithoutExtensionMBS
```

Notes:

If there is no extension, this string is empty.
The extension does not include the dot.

83.17.121 NameWithoutExtensionMBS as string

MBS Util Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file name without file extension.
Example:

```
dim f as folderitem = SpecialFolder.desktop

MsgBox "Name: "+f.Name+EndOfLine+"Name extension: "+f.NameExtensionMBS+EndOfLine+"Name without extension: "+f.NameWithoutExtensionMBS

dim g as FolderItem = SpecialFolder.Desktop.Child("test.rbp")

MsgBox "Name: "+g.Name+EndOfLine+"Name extension: "+g.NameExtensionMBS+EndOfLine+"Name without extension: "+g.NameWithoutExtensionMBS
```

Notes: If there is no extension, the whole name is returned.

83.17.124 NativePath as string

MBS MacOSX Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the native path for the file.
Example:

```
// test absolute path
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.txt")
Dim p As String = f.AbsolutePath

Dim g As FolderItem = NewFolderItemFromAbsolutePathMBS(p)
Dim n As String = g.NativePath

MsgBox p+EndOfLine+n
```

Notes:

For Real Studio we register this function for compatibility to Xojo.
Same as UnixpathMBS, but with name NativePath.

83.17.125 NewCGPDFDocumentMBS(MediaBox as CGRectMBS, title as string, author as string, creator as string) as CGPDFContextMBS

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: Creates a PDF document.
Example:

```
// create pdf
dim file as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim r as new CGRectMBS(0,0,500,500)
dim c as CGContextMBS = file.NewCGPDFDocumentMBS(r, "My Title", "My Author", "My Creator")

if c<>Nil then

// create page
c.BeginPage r

// draw something
c.SetRGBFillColor(1.0, 0.0, 0.0, 1.0)
c.FillRect CGMakeRectMBS(100,100,100,100)

// close page
c.EndPage
```

```
// flush and show in PDF viewer
c = nil
file.Launch
end if
```

Notes:

Title, author and creator are all optional.
RB 4.5 should do this perfectly, but older RB versions may have problems.
(seems like the file must exist before calling this function)
Requires Mac OS X to work.
See also:

- 83.17.126 NewCGPDFDocumentMBS(MediaBox as CGRectMBS, title as string, author as string, creator as string, subject as string, keywords as string, OwnerPassword as string, UserPassword as string, AllowsPrinting as boolean, AllowsCopy as boolean) as CGPDFContextMBS 16027
- 83.17.127 NewCGPDFDocumentMBS(MediaBox as CGRectMBS, title as string, author as string, creator as string, subject as string, keywords as string, OwnerPassword as string, UserPassword as string, AllowsPrinting as boolean, AllowsCopy as boolean, KeyLength as Integer) as CGPDFContextMBS 16028

83.17.126 NewCGPDFDocumentMBS(MediaBox as CGRectMBS, title as string, author as string, creator as string, subject as string, keywords as string, OwnerPassword as string, UserPassword as string, AllowsPrinting as boolean, AllowsCopy as boolean) as CGPDFContextMBS

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: Creates a PDF document.
Example:

```
// create pdf
dim file as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim r as new CGRectMBS(0,0,500,500)
dim c as CGContextMBS = file.NewCGPDFDocumentMBS(r, "My Title", "My Author", "My Creator",
"My Subject", "test,pdf,mac", "","", true, true)

if c<>Nil then

// create page
c.BeginPage r

// draw something
c.SetRGBFillColor(1.0, 0.0, 0.0, 1.0)
c.FillRect CGMakeRectMBS(100,100,100,100)
```

```
// close page
c.EndPage

// flush and show in PDF viewer
c = nil
file.Launch
end if
```

Notes:

Title, Author, Creator, Subject and Keywords parameters can be empty.

If OwnerPassword and UserPassword are filled in the PDF is encrypted and AllowsPrinting/AllowsCopy define what the user can do after he entered his password.

Requires Mac OS X to work.
See also:

- 83.17.125 NewCGPDFDocumentMBS(MediaBox as CGRectMBS, title as string, author as string, creator as string) as CGPDFContextMBS 16026
- 83.17.127 NewCGPDFDocumentMBS(MediaBox as CGRectMBS, title as string, author as string, creator as string, subject as string, keywords as string, OwnerPassword as string, UserPassword as string, AllowsPrinting as boolean, AllowsCopy as boolean, KeyLength as Integer) as CGPDFContextMBS 16028

83.17.127 NewCGPDFDocumentMBS(MediaBox as CGRectMBS, title as string, author as string, creator as string, subject as string, keywords as string, OwnerPassword as string, UserPassword as string, AllowsPrinting as boolean, AllowsCopy as boolean, KeyLength as Integer) as CGPDFContextMBS

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: Creates a PDF document.
Example:

```
// create pdf
dim file as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim r as new CGRectMBS(0,0,500,500)
dim c as CGContextMBS = file.NewCGPDFDocumentMBS(r, "My Title", "My Author", "My Creator",
"My Subject", "test,pdf,mac", "owner","user", false, false, 128)

if c<>Nil then
```

```
// create page
c.BeginPage r

// draw something
c.SetRGBFillColor(1.0, 0.0, 0.0, 1.0)
c.FillRect CGMakeRectMBS(100,100,100,100)

// close page
c.EndPage

// flush and show in PDF viewer
c = nil
file.Launch
end if
```

Notes:

Title, Author, Creator, Subject and Keywords parameters can be empty.

If OwnerPassword and UserPassword are filled in the PDF is encrypted and AllowsPrinting/AllowsCopy define what the user can do after he entered his password.

Keylength must be a value between 48 bit and 128 bit in 8 bit steps. 0 uses default value.

Requires Mac OS X to work.

- 83.17.126 NewCGPDFDocumentMBS(MediaBox as CGRectMBS, title as string, author as string, creator as string, subject as string, keywords as string, OwnerPassword as string, UserPassword as string, AllowsPrinting as boolean, AllowsCopy as boolean) as CGPDFContextMBS 16027

83.17.129 NewCGPDFDocumentWithInfoMBS(MediaBox as CGRectMBS, info as object) as CGPDFContextMBS

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: Creates a PDF document.
Example:

```
// create pdf
dim file as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim r as new CGRectMBS(0,0,500,500)

dim d as new CFMutableDictionaryMBS

d.Add NewCFStringMBS("kCGPDFContextTitle"), NewCFStringMBS("My Title")
d.Add NewCFStringMBS("kCGPDFContextAuthor"), NewCFStringMBS("My Author")
d.Add NewCFStringMBS("kCGPDFContextCreator"), NewCFStringMBS("My Creator")
d.Add NewCFStringMBS("kCGPDFContextSubject"), NewCFStringMBS("My Subject")
d.Add NewCFStringMBS("kCGPDFContextKeywords"), NewCFStringMBS("keyword,mac,pdf")

dim c as CGContextMBS = file.NewCGPDFDocumentWithInfoMBS(r, d)

if c<>Nil then

// create page
c.BeginPage r

// draw something
c.SetRGBFillColor(1.0, 0.0, 0.0, 1.0)
c.FillRect CGMakeRectMBS(100,100,100,100)

// close page
c.EndPage

// flush and show in PDF viewer
c = nil
file.Launch
end if
```

Notes:

The optional info parameter is a CFDictionaryMBS object and contains some information about the PDF file.

Keys for auxiliary info dictionary:

NewCFStringMBS("kCGPDFContextTitle")

The document's title. Optional; if present, the value must be a CFString.

NewCFStringMBS("kCGPDFContextAuthor")
The name of the person who created this document. Optional; if present, the value must be a CFString.

NewCFStringMBS("kCGPDFContextCreator")
The name of the application that created the original data used to create this document. Optional; if present, the value must be a CFString.

NewCFStringMBS("kCGPDFContextOutputIntent")
The document's output intent. Optional; if present, the value must be a CFDictionaryMBS. The dictionary is added to the PDF document in the /OutputIntents entry in the PDF file's document catalog. The keys and values contained in the dictionary must match those specified in section 9.10.4 of the PDF 1.4 specification, ISO/DIS 15930-3 document published by ISO/TC 130, and Adobe Technical Note # 5413.

The following keys are supported:

"S" - The output intent subtype. This key is required; the value must be a CFString equal to "GTS_PDFX"; otherwise, the dictionary is ignored.

"OutputConditionIdentifier" - A string identifying the intended output device or production condition in a human- or machine-readable form. This key is required; the value must be a CFString. For best results, the string should be representable losslessly in ASCII encoding.

"OutputCondition" - A text string identifying the intended output device or production condition in a human-readable form. This key is optional; if present, the value must be a CFString.

"RegistryName" - A string identifying the registry in which the condition designated by "OutputConditionIdentifier" is defined. This key is optional; if present, the value must be a CFString. For best results, the string should be representable losslessly in ASCII encoding.

"Info" - A human-readable text string containing additional information or comments about the intended target device or production condition. This key is required if "OutputConditionIdentifier" does not specify a standard production condition; it is optional otherwise. If present, the value must be a CFString.

"DestOutputProfile" - An ICC profile stream defined the transformation from the PDF document's source colors to output device colorants. This key is required if "OutputConditionIdentifier" does not specify a standard production condition; it is optional otherwise. If present, the value must be a ICC-based CGColorSpaceMBS.

NewCFStringMBS("kCGPDFContextOutputIntents")

The document's output intents. Optional; if present, the value must be a CFArrayMBS containing one or more CFDictionaryMBSs. The array is added to the PDF document in the /OutputIntents entry in the PDF file's document catalog. Each dictionary in the array must be of form specified above for the "kCGPDFContextOutputIntent" key, except that only the first dictionary in the array is required to contain the "S" key with a value of "GTS_PDFX". If both the "kCGPDFContextOutputIntent" and "kCGPDFContextOutputIntents" keys are specified, the former will be ignored.

More keys in CGPDFContext.h coming with Xcode.

83.17.130 OpenAsCGPDFDocumentMBS as CGPDFDocumentMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Opens a PDF document.
Notes:

RB 4.5 should do this perfectly, but older RB versions may have problems with longer file names.
Requires Mac OS X to work.

83.17.131 Xojo Developer Magazine

- 8.5, pages 20 to 21: Printing PDFs, Easy PDF printing on Mac and Windows
- 6.4, page 30: Creating PDF Files, How to create PDFs using the MBS Plugins by Christian Schmitz

83.17.132 OpenAsGIFMBS as GIFMBS

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a GIF file.
Notes:

Returns nil on any error.
QuickTime is not required!

83.17.133 Blog Entries

- Tip of day: Load GIF into WebImageView

83.17.134 OpenAsJPEGMBS as picture

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a picture from a JPEG file.
Notes: A short version of OpenAsJPEG with fileposition=0 and allowdamage=false.
See also:

- 83.17.135 OpenAsJPEGMBS(allowdamaged as Boolean) as picture 16033
- 83.17.136 OpenAsJPEGMBS(allowdamaged as Boolean,fileposition as Integer) as picture 16033

83.17.135 OpenAsJPEGMBS(allowdamaged as Boolean) as picture

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a picture from a JPEG file.
Notes: A short version of OpenAsJPEG with fileposition=0.
See also:

- 83.17.134 OpenAsJPEGMBS as picture 16032
- 83.17.136 OpenAsJPEGMBS(allowdamaged as Boolean,fileposition as Integer) as picture 16033

83.17.136 OpenAsJPEGMBS(allowdamaged as Boolean,fileposition as Integer) as picture

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a picture from a JPEG file.
Example:

```
dim f as folderitem
f=SpecialFolder.Desktop.child("a great jpeg picture.jpg")
window1.backdrop=f.openasjpegMBS
```

Notes:

This methods should read all JPEG files you can get, but I've only tested it for 32 bit color and 8 bit grayscale.

This method is not depending on any library! It works without QuickTime even on System 7, but as it contains everything needed this method is around 120 KB big!

I wrote it mainly because Xojo's built in OpenAsJPEG code crashes badly if your picture is not full downloaded. For example if you have a webbrowser you can now show JPEGs while you download them. Normally you can see a good picture allready with 50% of the data.

Xojo's OpenAsPicture in contrast crashes if the picture is not 100% downloaded or instead of a crash you get a white picture.

See the folder "jpeg load crashtest" in the examples.

The two parameters are both optional. The second is to give a file position to start reading. This way you can load several JPEGs from different file position from one file.
See also:

- 83.17.134 OpenAsJPEGMBS as picture 16032
- 83.17.135 OpenAsJPEGMBS(allowdamaged as Boolean) as picture 16033

83.17.137 OpenAsLargeBinaryStreamMBS(write as Boolean) as LargeBinaryStreamMBS

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a file as a LargeBinaryStreamMBS.
Example:

```
dim l as LargeBinaryStreamMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("testfile")

l=f.OpenAsLargeBinaryStreamMBS(true)
```

Notes: Returns nil on any error.

83.17.138 OpenAsPNGMBS(gamma as single = 0.0, AllowDamaged as Boolean = false) as PNGPictureMBS

MBS Images Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a picture from a PNG file.
Example:

```
dim f as folderitem
f=SpecialFolder.Desktop.child("a great picture.png")
window1.backdrop=f.OpenAsPNGMBS(0).pict
```

Notes:

This methods should read all PNG files you can get.

This method is not depending on any library! It works without QuickTime even on System 7, but as it contains everything needed this method is around 130 KB big!

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma
A bad gamma value can give you a black image.

AllowDamaged: Whether to allow damaged PNG files to return a part of the image as picture.

83.17.139 OpenAsResStreamMBS(write as Boolean) as ResStreamMBS

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Opens a file's resourcefork as a ResStreamMBS.
Notes: Returns nil on any error.

83.17.140 OpenAsTiffMBS(HeaderOnly as boolean=false) as TiffPictureMBS

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a picture from a TIFF file.
Example:

```
dim f as FolderItem
dim t as TiffPictureMBS

f=SpecialFolder.Desktop.Child("008.tiff")
t=f.OpenAsTiffMBS(true)

if t<>Nil then
msgbox str(t.width)+" x "+str(t.height)
else
MsgBox "Problem?"
end if
```

Notes:

This method is not depending on any library! It works without QuickTime even on System 7, but as it

contains everything needed this method is around 270 KB big!
The plugin supports even more stuff like zlib compressed picture data or JPEGs embedded into TIFFs.

If the function returns nil, you can use a TiffPictureMBS subclass and use the methods there so you get error messages in the error event.

Setting HeaderOnly to true will ignore the actual picture data and load only the header data.

This function works with most Tiff formats, but has problems with some like 16 bit CMYK.

83.17.141 OpenWithAppMBS(TheApplication as FolderItem, inFront as Boolean) as Boolean

MBS MacClassic Plugin, Platforms: macOS, Windows, Targets: All.

Function: Opens a file using the given application.
Notes:

Similar to Launch (see FolderItem.Launch), with the additional option to specify the application that should be used to open the FolderItem object. Passing nil in the app parameter is functionally identical to calling Launch.

Works with Graphicconverter, but not with Preview!?
Added Windows support in version 3.4.

83.17.142 Blog Entries

- MBS Plugins updated for Xojo 2019r2

83.17.143 ParentVolumeMBS as folderitem

MBS Util Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the folderitem for the volume the folderitem is pointing to.

83.17.144 Blog Entries

- MBS Xojo Plugins, version 19.5pr7

83.17.145 PercentDownloadedMBS as Double

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the iCloud file properties.
Notes:

An Number in the range 0-100 that tells what percentage of the file has been downloaded.
Available in Mac OS X v10.7 and later.

83.17.146 Blog Entries

- MBS Real Studio Plugins, version 11.3pr9

83.17.147 PercentUploadedMBS as Double

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the iCloud file properties.
Notes:

An Number in the range 0-100 that tells what percentage of the file has been uploaded.
Available in Mac OS X v10.7 and later.

83.17.148 Blog Entries

- MBS Real Studio Plugins, version 11.3pr9

83.17.149 PermissionsMBS(OldWay as boolean) as PermissionsMBS

MBS MacOSX Plugin, Platform: macOS, Targets: All.

Function: Returns an object for the Permissions of a file.
Example:

```
dim f as FolderItem
dim p as PermissionsMBS

f=GetOpenFolderItem("special/any")

if f<>nil then
p=f.PermissionsMBS(true)

if p<>Nil then // requires Mac OS X
p.Access=& H6
```

```
// & h000006 = -rw——-
// & h000600 = —-rw—-
// & h060000 = ——-rw-

if 0=p.SetPermissions(true) then
MsgBox "Permissions set"
else
MsgBox "Permissions could not be set"
end if
else
MsgBox "We require Mac OS X"
end if
else
' nothing selected
end if
```

Notes:

You can use old API if you set Oldway=true. Than you set access value like in older version of the plugin.
If you set Oldway = false, you use the newer API which set unix permissions, but not the old ones.
The old way is not supported for 64bit.

83.17.150 PhysicalFileDataLengthMBS as int64

MBS Util Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the length of the physical disk space used for this file's data fork.
Example:

```
filesize.text=format(file.PhysicalFileDataLengthMBS,"0")
```

Notes:

This function works for files bigger than 2 GB which RB's built in functions don't.
On Windows the physical size reported is equal to the logical size, because there is no function for the physical size.

83.17.151 PhysicalFileResLengthMBS as int64

MBS Util Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the length of the physical disk space used for this file's resourcefork.

Example:

```
filesize.text=format(file.PhysicalFileResLengthMBS,"0")
```

Notes:

This function works for files bigger than 2 GB which RB's built in functions don't.
On Windows the physical size reported is equal to the logical size, because there is no function for the physical size.

83.17.152 PhysicalFileTotalLengthMBS as int64

MBS Util Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the length of the physical disk space used for this file.
Example:

```
filesize.text=format(file.PhysicalFileTotalLengthMBS,"0")
```

Notes:

This function works for files bigger than 2 GB which RB's built in functions don't.
On Windows the physical size reported is equal to the logical size, because there is no function for the physical size.

83.17.153 QuickLookMBS(MaxWidth as Integer = 500, MaxHeight as Integer = 500, IconMode as Boolean = false, ScaleFactor as Double = 1.0) as picture

MBS MacFrameworks Plugin, Plugin Version: 7.7, Platform: macOS, Targets: All.

Function: Creates a thumbnail for the designated file.
Example:

```
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")

// shows the icon in 128x128 scaled by factor 4:
Backdrop=f.QuickLookMBS(128,128,true,4)

// shows the icon in default size:
Backdrop=f.QuickLookMBS(128,128,true,0)
```

```
// shows preview of image in 128x128 pixels.
Backdrop=f.QuickLookMBS(128,128,false,0)

// shows preview of image in 512x512 pixels.
Backdrop=f.QuickLookMBS(128,128,false,4)

// shows preview of image in 512x512 pixels.
Backdrop=f.QuickLookMBS(512,512,false,0)

// use Icon function in case no preview is available:
Backdrop=f.iconmbs(512)
```

Notes:

Returns nil if Quick Look does not support this file type. In that case you may use folderitem.Icon() with the given size.

MaxWidth and MacHeight specify the maximum desired size.
If ScaleFactor is bigger than zero, it is used. Else the default value is used.
If IconMode is true, QL will produce an icon (ie a thumbnail and all the icon decor, like shadows, curled corner, etc.).

If you look for a control to show quicklook preview like the finder, please check the QLPreviewPanelMBS window and the QLPreviewViewMBS control.

QuickLook does not provide images for items in special folders like temporary folders.

83.17.155 QuickLookMTMBS(MaxWidth as Integer = 500, MaxHeight as Integer = 500, IconMode as Boolean = false, ScaleFactor as Double = 1.0) as picture

MBS MacFrameworks Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

Function: Creates a thumbnail for the designated file.
Example:

```
Dim f As FolderItem

f=SpecialFolder.Desktop.Child("test.png")

// shows preview of image in 512x512 pixels.
Backdrop=f.QuickLookMTMBS(512,512,False,0)
```

Notes:

Same as QuickLookMBS, but thread friendly.

QuickLook does not provide images for items in special folders like temporary folders.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

83.17.156 Blog Entries

- Multithreaded plugin functions can increase speed of Xojo application
- Problems with killing Xojo threads with plugin calls.
- MBS Xojo / Real Studio Plugins, version 13.2pr10

83.17.157 ReadFileMBS(byref data as MemoryBlock, offset As Integer = 0, byteCount As Integer = -1) as boolean

MBS Util Plugin, Plugin Version: 21.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a file to a memory block.
Example:

```
Dim f As New FolderItem("/Users/cs/Downloads/Download Archive/Xcode_13_beta_5.xip", FolderItem.PathModes.Native)

Dim m As MemoryBlock
'Dim m As New MemoryBlock(f.Length)

If f.ReadFileMBS(m) Then
// okay
```

```
Dim Len As Integer = m.size
Break
Else
// failed
Dim e As Integer = f.LastErrorCode
Break
End If
```

Notes:

Reads content of file and returns it in data parameter.
Returns true on success of false on failure.

See also WriteFileMBS function.

If the MemoryBlock is nil, we create one.
If the MemoryBlock is not nil and has right size, we use it, otherwise we create a new one.
Not intended for files >2 GB.

Added offset and length parameters in version 23.1.
If byteCount is negative, we read whole file. If byteCount is bigger than file, we only read the available portion.
See also:

- 83.17.158 ReadFileMBS(byref data as string, offset As Integer = 0, byteCount As Integer = -1) as boolean 16042

83.17.158 ReadFileMBS(byref data as string, offset As Integer = 0, byteCount As Integer = -1) as boolean

MBS Util Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a file.
Notes:

Reads content of file and returns it in data parameter.
Returns true on success of false on failure.

See also WriteFileMBS function.

Limited to maximum size of a string (2 GB)
Data must fit in memory, so 32-bit processes may be limited to reading less than 2 GB.

Added offset and length parameters in version 23.1.
If byteCount is negative, we read whole file. If byteCount is bigger than file, we only read the available portion.

83.17.162 SaveAs8BitAlphaPNGMBS(pic as picture, colors() as color, alphas() as Integer, gamma as single = 0.0) as boolean

MBS Images Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Saves a palette based RGB picture as a PNG file with alpha.
Notes:

Pic should have no mask.
Colors must be an array with 256 values defining the palette.

Alphas must be an array with 256 values specifying the alpha value for each palette entry. 255 is opaque and 0 is transparent.

Returns true on success and false on failure.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma
See also:

```

- 83.17.162 SaveAs8BitAlphaPNGMBS(pic as picture, colors() as color, alphas() as Integer, gamma as single = 0.0) as boolean 16043

83.17.165 SaveAs8BitPNGMBS(pic as picture, colors() as color, gamma as single = 0.0) as boolean

MBS Images Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Saves a palette based RGB picture as a PNG file.
Notes:

Pic should have no mask.
Colors must be an array with 256 values defining the palette.

Returns true on success and false on failure.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma
See also:

- 83.17.166 SaveAs8BitPNGMBS(pic as picture, colors() as color, gamma as single, Interlace as Boolean, FilterType as Integer) as boolean 16045

83.17.166 SaveAs8BitPNGMBS(pic as picture, colors() as color, gamma as single, Interlace as Boolean, FilterType as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Saves a palette based RGB picture as a PNG file.
Notes:

Pic should have no mask.
Colors must be an array with 256 values defining the palette.

Returns true on success and false on failure.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma

If Interlace is true the Adam7 interlacing is used.
FilterType specifies the filter:

```
const PNG_NO_FILTERS      = 0
const PNG_FILTER_NONE     = 8
const PNG_FILTER_SUB      = 16
const PNG_FILTER_UP       = 32
const PNG_FILTER_AVG      = 64
const PNG_FILTER_PAETH    = 128
const PNG_FILTER_ALL      = 248
```

See also:

- 83.17.165 SaveAs8BitPNGMBS(pic as picture, colors() as color, gamma as single = 0.0) as boolean 16045

83.17.169 SaveAsGIFMBS(data as GIFMBS) as boolean

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Saves a gif file.
Notes:

Returns true on success and false on any error.
QuickTime is not required!
Please check for the lzw patent in your country before using this function as you may need to pay license fees.

83.17.170 SaveAsJPEGMBS(pic as picture, quality as Integer = 80) as boolean

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Saves a picture into a file using JPEG compression.
Example:

```
dim pic as Picture = LogoMBS(500)
dim f as folderitem
f=SpecialFolder.Desktop.child("a great jpeg picture.jpg")
if f.SaveAsJPEGMBS(pic,75) then
msgbox "Picture saved."
end if
```

Notes:

This methods saves 32bit pictures to a file using JPEG Compression. Using the parameter you can specify the quality in range between 25 and 100%

See the "SaveJPEG without QuickTime" example.

As JPEG does not support alpha channel or mask, those are ignored.
The second parameter is optional. There you can give a file position where to start writing. This way you can save several JPEGs to different file position inside one file.
Use the JPEGExporterMBS class for more options.

83.17.171 SaveAsPNGMBS(pic as picture, gamma as single = 0.0) as boolean

MBS Images Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Saves RGB picture as PNG file.
Notes:

If pic has a mask, it is written to the file as alpha channel.

Returns true on success and false on failure.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma
See also:

- 83.17.174 SaveAsPNGMBS(pic as picture, mask as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as boolean 16049

83.17.172 SaveAsPNGMBS(pic as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as boolean

MBS Images Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Saves RGB picture as PNG file.
Notes:

If pic has a mask, it is written to the file as alpha channel.

Returns true on success and false on failure.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma

If Interlace is true the Adam7 interlacing is used.
FilterType specifies the filter:

```
const PNG_NO_FILTERS      = 0
const PNG_FILTER_NONE     = 8
const PNG_FILTER_SUB      = 16
const PNG_FILTER_UP       = 32
const PNG_FILTER_AVG      = 64
const PNG_FILTER_PAETH    = 128
const PNG_FILTER_ALL      = 248
```

- 83.17.174 SaveAsPNGMBS(pic as picture, mask as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as boolean 16049

83.17.173 SaveAsPNGMBS(pic as picture, mask as picture, gamma as single = 0.0) as boolean

MBS Images Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Saves RGB picture as PNG file.
Example:

```
// load
dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")
dim p as PNGPictureMBS = f.OpenAsPNGMBS

// save
dim g as FolderItem = SpecialFolder.Desktop.Child("output.png")
if g.SaveAsPNGMBS(p.Pict, p.Mask) then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes:

If mask is nil no alpha channel is written to the file.

Returns true on success and false on failure.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma
See also:

- 83.17.171 SaveAsPNGMBS(pic as picture, gamma as single = 0.0) as boolean 16047
- 83.17.172 SaveAsPNGMBS(pic as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as boolean 16048
- 83.17.174 SaveAsPNGMBS(pic as picture, mask as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as boolean 16049

83.17.174 SaveAsPNGMBS(pic as picture, mask as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as boolean

MBS Images Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Saves RGB picture as PNG file.
Notes:

If mask is nil no alpha channel is written to the file.

Returns true on success and false on failure.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma

If Interlace is true the Adam7 interlacing is used.
FilterType specifies the filter:

```
const PNG_NO_FILTERS      = 0
const PNG_FILTER_NONE     = 8
const PNG_FILTER_SUB      = 16
const PNG_FILTER_UP       = 32
const PNG_FILTER_AVG      = 64
const PNG_FILTER_PAETH    = 128
const PNG_FILTER_ALL      = 248
```

See also:

- 83.17.171 SaveAsPNGMBS(pic as picture, gamma as single = 0.0) as boolean 16047
- 83.17.172 SaveAsPNGMBS(pic as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as boolean 16048
- 83.17.173 SaveAsPNGMBS(pic as picture, mask as picture, gamma as single = 0.0) as boolean 16049

83.17.175 SetDesktopPictureMBS as Integer

MBS Picture Plugin, Plugin Version: 3.3, Platforms: macOS, Windows, Targets: All.

Function: Asks the Finder/Explorer to change the desktop picture.
Notes:

File must be a valid folderitem for an existing file.
Returns a Mac OS or Windows error code or -1 if the function is not available.

83.17.176 SetFileFlagsMBS(flags as Integer) as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: All.

Function: Set the file flags for the folderitem to the given value. Returns 0 if okay.
Example:

```
dim f as FolderItem
dim err, fdFlags as Integer

// For example, clearing a file's hasCustomIcon flag works like this:
fdFlags = f.GetFileFlagsMBS
if fdFlags >= 0 then
err = f.SetFileFlagsMBS(BitExclMBS(fdFlags, 10))
if err <>0 then
// ... oops, an error occured
// (for instance, the disk could be write protected)
end
end
```

Notes:

Sets the fdFlags of a file. Returns an error code (or zero if no error occured). Possible error conditions include "disk is write protected" and "file not found".
When changing flags of a file, use GetFileFlags to get the original flags, then clear or set the flags by using BitwiseAnd and BitwiseOr and call SetFileFlags to set the new flags.

83.17.177 Blog Entries

- MBS Plugins updated for Xojo 2019r2

83.17.178 SetFolderFlagsMBS(flags as Integer) as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: All.

Function: Set the folder flags for the folderitem to the given value. Returns 0 if okay.
Example:

```
Dim f As FolderItem = GetFolderItem("test") // some folder
If f.SetFolderFlagsMBS(BitwiseOr(f.GetFolderFlagsMBS, 4)) <>0 Then
MsgBox "Can't set label to green."
End If
```

Notes:

Sets the frFlags of a folder. Returns an error code (or zero if no error occured). Possible error conditions include "disk is write protected" and "folder not found".
When changing flags of a folder, use GetFolderFlags to get the original flags, then clear or set the flags by using BitwiseAnd and BitwiseOr and call SetFolderFlags to set the new flags.

with values 2, 4 and 8 in the flags, you control the label color in Finder. Example code above uses 4 which is green by default.

If you need to set bundle bit in newer projects, please use SetResourcePropertyForKey on CFURLMBS class with kCFURLIsPackageKey key.

- MBS Plugins updated for Xojo 2019r2

83.17.180 SetTagNamesMBS(tags() as string) as Integer

MBS MacCF Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Sets file tags.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.xojo_binary_project")

dim Tags() as string = Array("Hello", "World")
dim e as Integer = f.SetTagNamesMBS(tags)

MsgBox "SetTagNamesMBS: "+str(e)
```

Notes:

tags() is array with new tag names.
Provides error code as return value and details about error in CFErrorMBS object.
Requires Mac OS X 10.9 or newer.
Please note that some tags may include chr(10) followed by a number to indicate which label color is used for compatibility to older OS X versions.
See also:

- 83.17.181 SetTagNamesMBS(tags() as string, byref e as CFErrorMBS) as Integer

83.17.181 SetTagNamesMBS(tags() as string, byref e as CFErrorMBS) as Integer

MBS MacCF Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Sets file tags.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.xojo_binary_project")

dim Tags() as string = Array("Hello", "World")
dim ce as CFErrorMBS
dim e as Integer = f.SetTagNamesMBS(tags, ce)

if ce <>nil then
MsgBox "SetTagNamesMBS: "+str(e)+EndOfLine+ce.Description
else
MsgBox "SetTagNamesMBS: "+str(e)
end if
```

Notes:

tags() is array with new tag names.
Provides error code as return value and details about error in CFErrorMBS object.
Requires Mac OS X 10.9 or newer.
Please note that some tags may include chr(10) followed by a number to indicate which label color is used for compatibility to older OS X versions.
See also:

- 83.17.180 SetTagNamesMBS(tags() as string) as Integer 16052

83.17.182 ShortPathMBS as string

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the short path for the file.
Example:

```
dim f as folderitem = specialfolder.desktop.child("test.file")
msgbox f.ShortPathMBS
```

Notes:

In contrast to long path this is the short 8.3 path for Windows.
You need this for the WindowsMCI object.
Works with Windows NT 4 or newer.

- MBS Real Studio Plugins, version 12.5pr8

83.17.184 SortedFilesMBS(followAlias as Boolean = false, SortByDisplayName as boolean = false, VisibleOnly as boolean = false) as FolderItem()

MBS Util Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns array of files in the given folder.
Example:

```
dim folder as FolderItem = SpecialFolder.Desktop
dim Items() as FolderItem = folder.SortedFilesMBS
MsgBox str(UBound(Items)+1)+" items"
```

Notes:

Checks for whether item is not a directory and returns only those.
We can resolve alias if you like and optionally sort by display name instead of normal name field.
And we can filter to only return visible items.

83.17.185 Blog Entries

- Crop a two side page document to a single page document

- MBS Xojo Plugins, version 20.0r6

83.17.186 SortedFoldersMBS(followAlias as Boolean = false, SortByDisplayName as boolean = false, VisibleOnly as boolean = false) as FolderItem()

MBS Util Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns array of folders in the given folder.
Example:

```
dim folder as FolderItem = SpecialFolder.Desktop
dim Items() as FolderItem = folder.SortedFoldersMBS
MsgBox str(UBound(Items)+1)+" items"
```

Notes:

Similar to item() function, but returns all items with one call.
Checks for whether item is directory and returns only those.
We can resolve alias if you like and optionally sort by display name instead of normal name field.
And we can filter to only return visible items.

83.17.187 Blog Entries

83.17.188 SortedItemsMBS(followAlias as Boolean = false, SortByDisplayName as boolean = false, VisibleOnly as boolean = false) as FolderItem()

MBS Util Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns array of items in the given folder.
Example:

```
dim folder as FolderItem = SpecialFolder.Desktop
dim Items() as FolderItem = folder.SortedItemsMBS
MsgBox str(UBound(Items)+1)+" items"
```

Notes:

Similar to item() function, but returns all items with one call.
We can resolve alias if you like and optionally sort by display name instead of normal name field.
And we can filter to only return visible items.

83.17.190 SpotLightFileInfoMBS(uti as string = "") as dictionary

MBS MacOSX Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Runs the spotlight metadata importer for this file and returns the dictionary with the metadata found in the file.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.numbers")
dim d as Dictionary = f.SpotLightFileInfoMBS

MsgBox "Title: "+d.Value("kMDItemTitle")
MsgBox "Text Content: "+d.Value("kMDItemTextContent")
```

Notes:

Returns nil on any error.
Works well with PDF, AppleWorks, Pages, Numbers, Word, Excel, Powerpoint and all other files, where you have an importer.
Does currently not find importers inside an application.

83.17.191 Blog Entries

- MBS Plugins updated for Xojo 2019r2
- MBS Xojo Plugins, version 17.5pr2

83.17.192 SpotLightLoadMDImporterMBS as boolean

MBS MacOSX Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Loads another MDImporter.
Example:

```
dim f as FolderItem = GetFolderItem("/Developer/Applications/Xcode.app/Contents/Library/Spotlight/SourceCode.mdimporter", FolderItem.PathTypeShell)

if f.SpotLightLoadMDImporterMBS then
MsgBox "Loaded SourceCode importer."
end if
```

Notes:

By default importers are loaded from /Library/Spotlight,
textasciitilde /Library/Spotlight and /System/Library/Spotlight. You can load another importers using this method.
Returns true on success and false on failure.

83.17.193 SpotLightTextContentMBS(uti as string = "") as string

MBS MacOSX Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Runs the spotlight metadata importer for this file and returns the text content string for the file.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.rtf")
MsgBox f.SpotLightTextContentMBS
```

Notes:

Returns an empty string on any error.
Works well with PDF, AppleWorks, Pages, Numbers, Word, Excel, Powerpoint and all other files, where you have an importer.
Does currently not find importers inside an application.

83.17.195 TagNamesMBS as string()

MBS MacCF Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Queries tag names for a file or folder.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.xojo_binary_project")
dim Tags() as string = f.TagNamesMBS
MsgBox "Tags: "+Join(tags, EndOfLine)
```

Notes:

Requires Mac OS X 10.9 or newer.
Optionally provides error information in CFErrorMBS object.
Please note that some tags may include chr(10) followed by a number to indicate which label color is used for compatibility to older OS X versions.
See also:

• 83.17.196 TagNamesMBS(byref e as CFErrorMBS) as string() 16058

83.17.196 TagNamesMBS(byref e as CFErrorMBS) as string()

MBS MacCF Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Queries tag names for a file or folder.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.xojo_binary_project")

dim ce as CFErrorMBS
dim Tags() as string = f.TagNamesMBS(ce)

if ce <>nil then
MsgBox "Failed: "+ce.Description
else
MsgBox "Tags: "+Join(tags, EndOfLine)
end if
```

Notes:

Requires Mac OS X 10.9 or newer.
Optionally provides error information in CFErrorMBS object.
Please note that some tags may include chr(10) followed by a number to indicate which label color is used for compatibility to older OS X versions.
See also:

• 83.17.195 TagNamesMBS as string() 16057

83.17.197 TrueFilesMBS as FolderItem()

MBS Util Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns array of files in the given folder.
Example:

```
dim folder as FolderItem = SpecialFolder.Desktop
dim files() as FolderItem = folder.TrueFilesMBS
MsgBox str(UBound(files)+1)+" files"
```

Notes: Similar to trueitem() function, but returns all files with one call.

83.17.198 Blog Entries

- MBS Real Studio Plugins, version 12.0fc1

83.17.199 TrueFoldersMBS as FolderItem()

MBS Util Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns array of folders in the given folder.
Example:

```
dim folder as FolderItem = SpecialFolder.Desktop
dim folders() as FolderItem = folder.TrueFoldersMBS
MsgBox str(UBound(folders)+1)+" folders"
```

Notes: Similar to trueitem() function, but returns all folders with one call.

83.17.200 Blog Entries

- MBS Real Studio Plugins, version 12.0fc1

83.17.201 TrueItemsMBS as FolderItem()

MBS Util Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns array of items in the given folder.
Example:

```
dim folder as FolderItem = SpecialFolder.Desktop
dim Items() as FolderItem = folder.TrueItemsMBS
MsgBox str(UBound(Items)+1)+" items"
```

Notes: Similar to trueitem() function, but returns all items with one call.

83.17.202 Blog Entries

- MBS Real Studio Plugins, version 12.0fc1

83.17.203 UnixpathMBS as string

MBS MacOSX Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the native path for the file.
Example:

```
dim sh as Shell
dim fi as FolderItem
dim s as String
dim t as TextConverter

sh = new Shell
fi = getfolderitem("test ,àö") // or try some other file name

if fi = nil or fi.exists = false then
beep
return
end if

s="ls -al """ + fi.Unixpathmbs + """"

sh.Execute s
MsgBox sh.Result
```

Notes:

test on the Desktop could be this:
On Mac OS X: /Users/cs/Desktop/test
On Mac OS 9: Mac OS 9:Desktop folder:test
On Windows: c:\windows\desktop\test

This function will return an empty string if the path can not be encoded in a Xojo String. For my tests ICQ's path which is includes the folder name "ICQ 3.0 í" can not be converted to MacRoman for some reason.

On Mac OS X this function returns the posix path. So if you are looking for POSIXPathMBS or PosixPath this method is it.
This function should do the same as NativePath in Xojo 2013r1.

83.17.205 UnMountVolumeMBS(force as boolean = false) as Integer

MBS MacClassic Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: This routine unmounts the volume specified by the folderitem.
Example:

```
dim disk as FolderItem

dim c as Integer = VolumeCount-1
for i as Integer = 0 to c
dim v as FolderItem = volume(i)
if v.Name = "monikajuchmes" then
disk = v
exit
end if
next

if disk = nil then
MsgBox "Please change the name in this code."
else
dim e as Integer = disk.UnMountVolumeMBS

if e=0 then
msgBox "Volume unmounted."
else
msgBox "There was an error!"
end if
end if
```

Notes:

If the volume cannot be unmounted the pid of the process which denied the unmount will be returned in the dissenterPID parameter.
This routine returns after the unmount is complete.

force: Specify true if you want the volume forcibly unmounted. Force unmounting a volume will very likely result in data loss since the volume will be ejected even if there are open files on it. This option should be reserved for situations such as the backing store for a volume is gone (so the data is lost regardless).
dissenterPID: Optionally, pid of the process which denied the unmount if the unmount is denied.

Returns a Mac OS error code. 0 means no error and -1 is a plugin error if the function can't be called. -47 is returned if the disc is in use.
See also:

- 83.17.206 UnMountVolumeMBS(force as boolean, byref dissenterPID as Integer) as Integer 16062

83.17.206 UnMountVolumeMBS(force as boolean, byref dissenterPID as Integer) as Integer

MBS MacClassic Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: This routine unmounts the volume specified by the folderitem.
Example:

```
dim disk as FolderItem

dim c as Integer = VolumeCount-1
for i as Integer = 0 to c
dim v as FolderItem = volume(i)
if v.Name = "testvolume" then
disk = v
exit
end if
next

if disk = nil then
MsgBox "Please change the name in this code."
else
dim pid as Integer
dim e as Integer = disk.UnMountVolumeMBS(false, pid)

if e=0 then
msgBox "Volume unmounted."
else

if pid=0 then
msgBox "Failed to unmount with error: "+str(e)
else
dim name as string
dim p as new ProcessMBS // from Util plugin
p.GetFirstProcess

do
if p.ProcessID = pid then
name = p.Name
end if
loop until not p.GetNextProcess

if len(name)>0 then
msgBox "Failed to unmount with error: "+str(e)
else
MsgBox "Failed to unmount."+EndOfLine+EndOfLine+"The application "+name+" is still using this volume."+EndOfLine+"Error: "+str(e)
end if
```

```
end if
end if
end if
```

Notes:

If the volume cannot be unmounted the pid of the process which denied the unmount will be returned in the dissenterPID parameter.
This routine returns after the unmount is complete.

force: Specify true if you want the volume forcibly unmounted. Force unmounting a volume will very likely result in data loss since the volume will be ejected even if there are open files on it. This option should be reserved for situations such as the backing store for a volume is gone (so the data is lost regardless).
dissenterPID: Optionally, pid of the process which denied the unmount if the unmount is denied.

Returns a Mac OS error code. 0 means no error and -1 is a plugin error if the function can't be called. -47 is returned if the disc is in use.

PS: Seems like on my tests the pid is not set by Apple.

83.17.208 VolGetFolderItemIDMBS(createFileIDs as Boolean = true) as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: All.

Function: Returns the unique FileID or DirID of a FolderItem.
Notes:

Returns the unique FileID or DirID of a FolderItem. This ID is unique over all items on the same volume. The value 2 always identifies the root directory, all negative values and positive ones above 15 are used for user-created files and folders, while the values 3-15 are used internally by the File System (for the Desktop Database, for example).

If the item does not exists, 0 (zero) is returned instead.

IDs for Folders can always be resolved back to a FolderItem using VolResolveID, while resolving FileIDs only works when they've previously been created explicitly. To create a resolvable FileID, pass true to the createFileIDs parameter. But be aware that if the FileID can not be created (because the disk is locked or because the File System Format does not support it), the call will fail and a zero will be returned!

So, if you are just interested in reading the FileID, pass false to the second parameter. This will not fail even there hasn't been created a resolvable ID for that file yet.

83.17.209 Blog Entries

- MBS Plugins updated for Xojo 2019r2

83.17.210 VolSupportsCatSearchMBS as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: All.

Function: Returns true if this volume supports Catalog Search which only HFS(+) volumes does for now.
Example:

```
dim v as folderitem
v=volume(0) // boot volume
if v.VolSupportsCatSearchMBS then
msgbox "CatSearchMBS class will be fast!"
end if
```

Notes: Returns true if the volume is valid and supports the CatSearchMBS functions. Returns false otherwise. From this you can tell whether a search will be fast or slow when using CatSearchOpen with the "allowRecursiveSearch" parameter set to true.

83.17.211 VolumeFreeSizeKBMBS as Int64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the size on the free space on volume which the folderitem objects points to.
Example:

```
msgBox "The volume with your system folder has "+str(specialfolder.system.volumeFreeSizeKBMBS)+"
KBytes free."
```

Deprecated: This item is deprecated and should no longer be used. You can use VolumeFreeSizeMBS instead. **Notes:**

This can't work with anything bigger than 2048 Gigabytes (until version 10.0).
Return value changed in version 10.0 from integer to SInt64.

Added Linux support in version 16.0.

83.17.212 VolumeFreeSizeMBS as Int64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the size of the free space of the volume which the folderitem objects points to.
Example:

```
// 1. a short:
msgBox "The volume with your system folder has "+str(specialfolder.system.VolumeFreeSizeMBS)+" Bytes free."
// 2. a nicer:
dim d as Double
dim s as string

d=specialfolder.system.VolumeFreeSizeMBS

if d>10000.0 then
if d>10000000.0 then
if d>10000000000.0 then
s=format(d/1024.0/1024.0/1024.0,"0")+" GigaBytes"
else
s=format(d/1024.0/1024.0,"0")+" MegaBytes"
end if
else
s=format(d/1024.0,"0")+" KiloBytes"
end if
else
s=format(d,"0")+" Bytes"
end if

msgBox "On your drive with the system folder you have "+s+" free."
```

Notes:

This should be used to handle any volume size.
Return value changed in version 10.0 from double to SInt64.

Added Linux support in version 16.0.
Returns -1 on error.

83.17.215 VolumeInformationMBS as VolumeInformationMBS

MBS MacClassic Plugin, Platform: macOS, Targets: All.

Function: Returns a VolumeInformationMBS object with detailed information about the volume where the folderitem's file is located on.
Notes: May return nil on errors.

83.17.216 VolumeSizeKBMBS as Int64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the Size on the volume which the folderitem objects points to.
Example:

msgBox "The volume with your system folder is "+str(specialfolder.system.volumeSizeKBMBS)+" KB big."

Deprecated: This item is deprecated and should no longer be used. You can use VolumeSizeMBS instead.
Notes:

This can't work with anything bigger than 2048 Gigabytes (until plugin version 10.0).
Return value changed in version 10.0 from integer to SInt64.

Added Linux support in version 16.0.

- MBS Xojo Plugins, version 19.4pr1

83.17.218 VolumeSizeMBS as Int64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the size on the volume which the folderitem objects points to.
Example:

```
// 1. a short:
msgBox "The volume with your system folder is "+str(specialfolder.system.volumeSizeMBS)+" big."
// 2. a nicer:
dim d as Double
dim s as string

d=SpecialFolder.System.volumesizeMBS

if d>10000.0 then
if d>10000000.0 then
if d>10000000000.0 then
s=format(d/1024.0/1024.0/1024.0,"0")+" GigaBytes"
else
s=format(d/1024.0/1024.0,"0")+" MegaBytes"
end if
else
s=format(d/1024.0,"0")+" KiloBytes"
end if
else
s=format(d,"0")+" Bytes"
end if

msgBox "Your drive with the system folder is "+s+" big."
```

Notes:

This should be used to handle any volume size.
Return value changed in version 10.0 from double to SInt64.

Added Linux support in version 16.0.
Returns -1 on error.

83.17.221 VolumeSupportsHugeFilesMBS as Integer

MBS MacOSX Plugin, Plugin Version: 13.3, Platform: macOS, Targets: All.

Function: Queries whether a volume supports 2 TB file size on Mac OS X.
Notes:

Some volumes only support 2 GB or 4 GB file size. Some can handle more than that up to 2 TB.
Returns 0 if not supported, 1 if supported and -1 if unknown.

83.17.223 VolumeUUIDMBS as string

MBS Util Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Queries volume UUID.
Notes: Requires Mac OS X 10.7 or newer.

83.17.224 Blog Entries

- MBS Real Studio Plugins, version 13.0pr1

83.17.225 WinThumbnailMBS(preferredSize as Integer = 512) as picture

MBS Win Plugin, Plugin Version: 14.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries a thumbnail for an item.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Backdrop = f.WinThumbnailMBS
```

Notes:

preferredSize is the size you'd like to have. Resulting image can be smaller or bigger.
Returns nil on any error.
If user disabled thumbnails for explorer, the shell also provides none for us, just icons.
Requires Windows Vista or newer.

83.17.227 WriteFileMBS(data as MemoryBlock) as boolean

MBS Util Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes a file.
Notes:

Faster than TextOutputStream or BinaryStream on MacOS.

Returns true on success or false on failure.
See also ReadFileMBS function.

Limited to maximum size of a string (2 GB)
See also:

- 83.17.228 WriteFileMBS(data as string) as boolean 16069

83.17.228 WriteFileMBS(data as string) as boolean

MBS Util Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes a file.
Notes:

Faster than TextOutputStream or BinaryStream on MacOS.

Returns true on success or false on failure.
See also ReadFileMBS function.

Limited to maximum size of a string (2 GB)

83.17.232 Properties

83.17.233 AccessDateMBS(UTC as boolean = false) as date

MBS Util Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The access date of the file or folder.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.txt")
dim xd as date = f.AccessDateMBS
MsgBox xd.LongDate+" "+xd.LongTime
```

Notes:

Setting this value is not supported on Linux currently.

To query Spotlight's Last Open day, please check the FAQ for sample code.
If UTC is true, you get/set date object where time is UTC.
(Read and Write computed property)

83.17.234 AccessDateTimeMBS(UTC as boolean = false) as DateTime

MBS Util Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The access date of the file or folder.
Notes:

Setting this value is not supported on Linux currently.

To query Spotlight's Last Open day, please check the FAQ for sample code.
If UTC is true, you get/set date object where time is UTC.
(Read and Write computed property)

83.17.235 AddedToDirectoryDateMBS as date

MBS Util Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the date the file was added to the folder.
Notes:

Requires OS X 10.10 or newer.
(Read and Write computed property)

83.17.236 AddedToDirectoryDateTimeMBS as DateTime

MBS Util Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the date the file was added to the folder.
Notes:

Requires OS X 10.10 or newer.
(Read and Write computed property)

83.17.237 AttributeModificationDateMBS(UTC as boolean = false) as date

MBS Util Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The attribute modification date of the file or folder.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.txt")
dim xd as date = f.AttributeModificationDateMBS
MsgBox xd.LongDate+" "+xd.LongTime
```

Notes:

Attribute Motification dates are supported only on Mac OS X currently.
If UTC is true, you get/set date object where time is UTC.
(Read and Write computed property)

83.17.238 AttributeModificationDateTimeMBS(UTC as boolean = false) as DateTime

MBS Util Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The attribute modification date of the file or folder.
Notes:

Attribute Motification dates are supported only on Mac OS X currently.
If UTC is true, you get/set date object where time is UTC.
(Read and Write computed property)

83.17.239 BackupDateMBS(UTC as boolean = false) as date

MBS Util Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The backup date of the file or folder.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.txt")
dim xd as date = f.BackupDateMBS
MsgBox xd.LongDate+" "+xd.LongTime
```

Notes:

Backup dates are supported only on Mac OS X currently.
If UTC is true, you get/set date object where time is UTC.
(Read and Write computed property)

83.17.240 BackupDateTimeMBS(UTC as boolean = false) as DateTime

MBS Util Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The backup date of the file or folder.
Notes:

Backup dates are supported only on Mac OS X currently.
If UTC is true, you get/set date object where time is UTC.
(Read and Write computed property)

83.17.241 BackupItemExcludedMBS as boolean

MBS MacFrameworks Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether or not an item is being excluded from backup.
Notes:

This is the easy method to just query whether a file is marked as being excluded from backup. You can assign a boolean value to exclude (true) or include (false) the file.

Require Mac OS X 10.5. Returns false on all other operation systems.
(Read and Write computed property)

83.17.242 CommentMBS as string

MBS MacClassic Plugin, Platform: macOS, Targets: All.

Function: The comment for that file.
Example:

```
dim f as folderitem // your file
f.CommentMBS="Hello world!"
```

Notes:

This function sends an AppleEvent to the Finder. It may take some milliseconds.
(on Mac OS X)

Querying comment is not thread safe.
Your application needs to be allowed to control Finder via AppleScripts.

See DeterminePermissionToAutomateTarget method in NSAppleScriptMBS class.

see also
https://developer.apple.com/documentation/bundleresources/entitlements/com_apple_security_automation_apple-events
(Read and Write computed property)

83.17.243 CreationDateMBS(UTC as boolean = false) as date

MBS Util Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The creation date of the file or folder.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.txt")
dim xd as date = f.CreationDateMBS
MsgBox xd.LongDate+" "+xd.LongTime
```

Notes:

Setting this value is not supported on Linux currently.
If UTC is true, you get/set date object where time is UTC.
(Read and Write computed property)

83.17.244 CreationDateTimeMBS(UTC as boolean = false) as DateTime

MBS Util Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The creation date of the file or folder.
Notes:

Setting this value is not supported on Linux currently.
If UTC is true, you get/set date object where time is UTC.
(Read and Write computed property)

83.17.245 FinderLabelMBS as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: All.

Function: Returns the color code for the file.
Example:

file.FinderLabelMBS=2

Notes:

The file label is a number between 0 and 7 to give the file a color.
Used in the Classic Finder for labels (and on Mac OS X for Finder replacement or Finder extending utilities)
On reading the value you can get negative values like -43 if the file is not found.

To know labels and colors, please use NSWorkspaceMBS.fileLabelColors and NSWorkspaceMBS.fileLabels methods.

Current list:

0	none
1	gray
2	green
3	violett
4	blue
5	yellow
6	red
7	orange

(Read and Write computed property)

83.17.246 MacQuarantinePropertiesMBS as MacQuarantinePropertiesMBS

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Gets or sets the quarantine options for a file.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.app")

// read value
dim q as MacQuarantinePropertiesMBS = f.MacQuarantinePropertiesMBS
MsgBox q.AgentName

// set value
q = new MacQuarantinePropertiesMBS

q.AgentBundleIdentifier = "test.test"
q.AgentName = "testing app"
q.DataURL="http://www.monkeybreadsoftware.de/test.dmg"
q.OriginURL="http://www.monkeybreadsoftware.de/"
q.Type=q.kTypeWebDownload

f.MacQuarantinePropertiesMBS = q

// clear
f.MacQuarantinePropertiesMBS = nil
```

Notes:

Requires Mac OS X 10.5.
(Read and Write computed property)

83.17.247 ModificationDateMBS(UTC as boolean = false) as date

MBS Util Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The modification date of the file or folder.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.txt")
dim xd as date = f.ModificationDateMBS
MsgBox xd.LongDate+" "+xd.LongTime
```

Notes:

Setting this value is not supported on Linux currently.
If UTC is true, you get/set date object where time is UTC.
(Read and Write computed property)

83.17.248 ModificationDateTimeMBS(UTC as boolean = false) as DateTime

MBS Util Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The modification date of the file or folder.
Notes:

Setting this value is not supported on Linux currently.
If UTC is true, you get/set date object where time is UTC.
(Read and Write computed property)

83.18 class LargeBinaryStreamMBS

83.18.1 class LargeBinaryStreamMBS

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allows you to access files with more than 2GB in size.
Notes: Deprecated in favor of BinaryStream class in Xojo unless you need a feature provided here, so please let us know!

83.18.6 Methods

83.18.7 Allocate(count as int64, flags as Integer) as int64

MBS Util Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Allocates disk space for this file.
Example:

```
dim l as LargeBinaryStreamMBS // your stream
dim d as int64

d=l.Allocate(1024*1024*1024,2) // 1 GB
```

Notes:

Only for Mac OS.
The flags can be like this:

AllocDefaultFlags	0	as much as possible, not contiguous
AllocAllOrNothingMask	1	allocate all of the space, or nothing
AllocContiguousMask	2	new space must be one contiguous piece
AllocNoRoundUpMask	4	don't round up allocation to clump size

Note that the length property is not changed because the space is not used.

83.18.8 close

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

83.18.9 Create(file as folderitem, MacType as string, MacCreator as string) as LargeBinaryStreamMBS

MBS Util Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a file as a LargeBinaryStreamMBS.
Example:

```
dim f as FolderItem // your file
dim l as LargeBinaryStreamMBS

l = LargeBinaryStreamMBS.Create(f, "TEXT","ttxt")
```

Notes:

If there is already a file, it is deleted.
On Windows the parameters are ignored.
Returns nil on any error.
See also:

- 83.18.10 Create(path as string, MacType as string, MacCreator as string, WinShareMode as Integer = 0) as LargeBinaryStreamMBS 16080

83.18.10 Create(path as string, MacType as string, MacCreator as string, WinShareMode as Integer = 0) as LargeBinaryStreamMBS

MBS Util Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a file as a LargeBinaryStreamMBS.
Example:

```
dim l as LargeBinaryStreamMBS
l = LargeBinaryStreamMBS.Create("C:\test.txt", "", "")
```

Notes:

If there is already a file, it is deleted.
On Windows the parameters are ignored.
Returns nil on any error.
See also:

- 83.18.9 Create(file as folderitem, MacType as string, MacCreator as string) as LargeBinaryStreamMBS 16080

83.18.11 CreateResStream(file as folderitem, MacType as string, MacCreator as string) as ResStreamMBS

MBS Util Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Creates a new ResStreamMBS.
Notes:

If there is already a file, it is deleted.
If the file could not be created it is deleted.
Returns nil on any error.
See also:

- 83.18.12 CreateResStream(path as string, MacType as string, MacCreator as string) as ResStreamMBS 16081

83.18.12 CreateResStream(path as string, MacType as string, MacCreator as string) as ResStreamMBS

MBS Util Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Creates a new ResStreamMBS.
Notes:

If there is already a file, it is deleted.
If the file could not be created it is deleted.
Returns nil on any error.
See also:

- 83.18.11 CreateResStream(file as folderitem, MacType as string, MacCreator as string) as ResStreamMBS 16081

83.18.13 DeleteDataFork(file as folderitem)

MBS Util Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Deletes the data fork of a file.
Notes:

Equal to open the file using a binarystream and setting the length property to 0.
On Mac OS a file can exist without a datafork, with a resource fork or even without any fork.

83.18.14 DeleteResourceFork(file as folderitem)

MBS Util Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Deletes the resource fork of a file.
Notes:

Equal to open the file using a ResStreamMBS and setting the length property to 0.
On Mac OS a file can exist without a datafork, with a resource fork or even without any fork.

83.18.15 Flush

MBS Util Plugin, Plugin Version: 5.0, Platforms: macOS, Linux, Targets: All.

Function: Makes sure every bit of the stream is written to disc.
Notes: Only for Mac OS X.

83.18.16 LockFileExclusive as boolean

MBS Util Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Locks the file so no other app can access it.
Notes:

Returns true on success.
It may be possible that there is still a way around the lock.

83.18.17 Open(file as folderitem, write as Boolean) as LargeBinaryStreamMBS

MBS Util Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a file as a LargeBinaryStreamMBS.
Example:

```
dim l as LargeBinaryStreamMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("testfile")

l = LargeBinaryStreamMBS.Open(f, true)
```

Notes: Returns nil on any error.
See also:

- 83.18.18 Open(path as string, write as Boolean, WinShareMode as Integer = 0) as LargeBinaryStreamMBS

83.18.18 Open(path as string, write as Boolean, WinShareMode as Integer = 0) as LargeBinaryStreamMBS

MBS Util Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a file as a LargeBinaryStreamMBS.
Example:

```
// write to parallel port:
dim b as LargeBinaryStreamMBS = LargeBinaryStreamMBS.Open("LPT1", true, 3)
b.Write "Hello World"
b.Close
```

Notes:

Returns nil on any error.
For special cases, you may need to allow Shared Read or Write and for that case, we have WinShareMode parameter.
For WinShareMode, you can pass 1 for shared reading, 2 for shared writing, 4 for shared deletion. Or combine those. Passing zero prevents sharing.
See also:

- 83.18.17 Open(file as folderitem, write as Boolean) as LargeBinaryStreamMBS 16082

83.18.19 OpenAsResStream(file as folderitem, write as Boolean) as ResStreamMBS

MBS Util Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Opens a file's resourcefork as a ResStreamMBS.
Notes: Returns nil on any error.
See also:

- 83.18.20 OpenAsResStream(path as string, write as Boolean) as ResStreamMBS 16083

83.18.20 OpenAsResStream(path as string, write as Boolean) as ResStreamMBS

MBS Util Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Opens a file's resourcefork as a ResStreamMBS.
Notes: Returns nil on any error.
See also:

- 83.18.19 OpenAsResStream(file as folderitem, write as Boolean) as ResStreamMBS 16083

83.18.21 QueryDiskGeometry(byref Cylinders as Int64, byref MediaType as Integer, byref TracksPerCylinder as Integer, byref SectorsPerTrack as Integer, byref BytesPerSector as Integer) as boolean

MBS Util Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries disk size on Windows.
Notes:

This function is only useful on Windows and only if you opened a physical disc.
Returns true on success.

83.18.22 Read(count as Integer) as string

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads bytes into a string.
Example:

```
dim b as LargeBinaryStreamMBS // your stream
dim s as string

s=b.read(5)
```

83.18.23 ReadBlock(count as Integer) as memoryblock

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads bytes into a memoryblock.
Example:

```
dim b as LargeBinaryStreamMBS // your stream
dim s as memoryblock

s=b.read(5)
```

83.18.24 Readbyte as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads an 8bit Byte from the stream.
Example:

```
dim b as LargeBinaryStreamMBS // your stream
dim i as Integer

i=B.readbyte
```

83.18.25 ReadLong as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a signed 32bit Integer from the stream.
Example:

```
dim b as LargeBinaryStreamMBS // your stream
dim i as Integer

i=B.readlong
```

Notes: This function is affected by the LittleEndian Setting.

83.18.26 ReadShort as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a signed 16bit Integer from the stream.
Example:

```
dim b as LargeBinaryStreamMBS // your stream
dim i as Integer

i=B.readshort
```

Notes: This function is affected by the LittleEndian Setting.

83.18.27 UnlockFileExclusive as boolean

MBS Util Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unlocks the file so other applications can possibily access it.
Notes: Returns true on success.

83.18.28 WinCreateStream(file as folderitem, StreamName as String, WinShareMode as Integer = 0) as LargeBinaryStreamMBS

MBS Util Plugin, Plugin Version: 16.4, Platform: Windows, Targets: All.

Function: Creates a named stream in a file.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.txt")
dim l as LargeBinaryStreamMBS = LargeBinaryStreamMBS.WinCreateStream(f, "test")
if l = nil then
MsgBox "Error
else
l.Write "Hello"
l.close
end if
```

Notes: Returns nil in case of error.

83.18.29 WinDeleteStream(file as folderitem, StreamName as String) as boolean

MBS Util Plugin, Plugin Version: 16.4, Platform: Windows, Targets: All.

Function: Deletes a named stream in a file.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.txt")
if LargeBinaryStreamMBS.WinDeleteStream(f) then
MsgBox "OK"
else
MsgBox "Error
end if
```

Notes: Returns true on success.

83.18.30 WinOpenStream(file as folderitem, StreamName as String, write as Boolean, WinShareMode as Integer = 0) as LargeBinaryStreamMBS

MBS Util Plugin, Plugin Version: 16.4, Platform: Windows, Targets: All.

Function: Opens a named stream in a file.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.txt")
dim l as LargeBinaryStreamMBS = LargeBinaryStreamMBS.WinOpenStream(f, "test", false)
if l = nil then
MsgBox "Error
else
MsgBox l.Read(l.Length)
end if
```

Notes: Returns nil in case of error.

83.18.31 Write(data as string)

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes bytes from a string to file.

83.18.32 WriteBlock(data as memoryblock,count as Integer)

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes count bytes from a memoryblock to file.
Example:

```
dim b as LargeBinaryStreamMBS // your stream
dim m as memoryblock

b.writeblock m,m.size
```

83.18.33 WriteByte(data as Integer)

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes a byte to file.

83.18.34 WriteLong(data as Integer)

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes an 32bit integer to file.

Notes: This method is affected by the LittleEndian Setting.

83.18.35 WriteShort(data as Integer)

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes an 16bit integer to file.
Notes: This method is affected by the LittleEndian Setting.

83.18.36 Properties

83.18.37 CanWrite as boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if you are allowed to write.
Notes:

Even if you open a file for write you may still not be allowed to write if the permissions of the file don't allow you to write.
(Read only property)

83.18.38 EOF as boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if you are at the end of the stream.
Notes:

You can set this property to truncate the file.
(Read only property)

83.18.39 Lasterror as Integer

MBS Util Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes:

The values are platform dependent, but zero is no error everywhere.
(Read and Write property)

83.18.40 Length as Int64

MBS Util Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current length of the file.
Notes:

You can truncate the stream by setting this property.
Can't be set on Linux currently.
(Read and Write property)

83.18.41 LittleEndian as boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies if Integers and Shorts shall be converted in their endienness when read or written.
Notes:

See Xojo's binarystream for more details.
For native platform you may set "littleendian=targetwin32".
(Read and Write property)

83.18.42 Position as Int64

MBS Util Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns current position.
Notes:

You can set the current file stream position using this property.
(Read and Write property)

83.18.43 Yield as Boolean

MBS Util Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Whether time should be given to other threads.
Notes:

If true on Mac OS X CPU time will be given to other threads while read or write operations are pending.
To have an effect you need to call read/write methods in a thread.
(Read and Write property)

83.19 class MacFileOperationMBS

83.19.1 class MacFileOperationMBS

MBS MacClassic Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: This class allows you to perform asynchronous file operations on Mac OS X 10.4 like copy and move.
Notes: Available in Mac OS X 10.4.

83.19.4 Methods

83.19.5 Cancel

MBS MacClassic Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Cancels the specified FSFileOperation.
Notes: Lasterror is set.

83.19.6 CopyObject(Item as folderitem, DestinationFolder as folderitem, DestinationName as string, Options as Integer, statusChangeInterval as Double)

MBS MacClassic Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: This routine will start an asynchronous copy of the object specified by Item to the directory specified by DestinationFolder.
Notes:

If DestinationName is provided then the new object will be renamed to DestinationName. If DestinationName is empty then the name of the source object will be used.

You will receive StatusChanged events.

Options: One or more FSFileOperation flags
statusChangeInterval: The minimum time between callbacks within a single stage of an operation in seconds.

83.19.7 CopyObjectSync(SourceItem as folderitem, DestinationFolder as folderitem, DestinationName as string, byref Result as folderitem, Options as Integer) as Integer

MBS MacClassic Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: This routine will copy the source object into the destination directory.
Notes:

The source object can be a file or directory.

self: The source object to copy.
DestinationFolder: The destination directory for the copy.
DestinationName: The name for the new object in the destination directory. Pass "" to use the source object name.
result: Upon successful completion a ref to the newly created object. If source is a directory then target will be the corresponding object in the destination directory.
options: One or more FSFileOperation flags

Requires Mac OS X 10.4.

Use this constants:

Returns a Mac OS error code. Error code -1 is from the plugin for invalid parameters or the function not being availanle.

kFSFileOperationDefaultOptions	0	Use the default options - no overwrite, fail if any source item cannot be read, cross volume moves OK.
kFSFileOperationOverwrite	1	Replace an item in the destDir that has the same name as an item being moved/copied there.
kFSFileOperationSkipSourcePermissionErrors	2	Skip items that cannot be read and continue copying/moving instead of failing the operation.
kFSFileOperationDoNotMoveAcrossVolumes	4	Do not perform a copy/delete to move an item across volume boundries - fail the operation instead.
kFSFileOperationSkipPreflight	8	Skip the preflight for a directory move/copy. This will limit the status information that can be returned since the totals will not be calculated.

83.19.8 MoveObject(Item as folderitem, DestinationFolder as folderitem, DestinationName as string, Options as Integer, statusChangeInterval as Double)

MBS MacClassic Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: This routine will start an asynchronous move of the object specified by source to the directory specified by DestinationFolder.
Notes:

If DestinationName is provided then the new object will be renamed to destName. If DestinationName is empty then the name of the source object will be used.

By default a move across volumes will result in a copy and deletion of the original source. The kFSFileOperationDoNotMoveAcrossVolumes flag will cause cross volume moves to do nothing and return an error.

Options: One or more FSFileOperation flags
statusChangeInterval: The minimum time between callbacks within a single stage of an operation in seconds.

83.19.9 MoveObjectSync(SourceItem as folderitem, DestinationFolder as folderitem, DestinationName as string, byref Result as folderitem, Options as Integer) as Integer

MBS MacClassic Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: This routine will move the source object into the destination directory.
Notes:

The source object can be a file or directory. If a destName is provided then the object will be renamed as well as moved. By default a move across volumes will result in a copy and deletion of the original source. The kFSFileOperationDoNotMoveAcrossVolumes flag will cause cross volume moves to do nothing and return an error.

self: The source object to copy.
DestinationFolder: The destination directory for the copy.
DestinationName: The name for the new object in the destination directory. Pass "" to use the source object name.
result: Upon successful completion a ref to the newly created object. If source is a directory then target will be the corresponding object in the destination directory.
options: One or more FSFileOperation flags

Requires Mac OS X 10.4.

Use this constants:

kFSFileOperationDefaultOptions	0	Use the default options - no overwrite, fail if any source item cannot be read, cross volume moves OK.
kFSFileOperationOverwrite	1	Replace an item in the destDir that has the same name as an item being moved/copied there.
kFSFileOperationSkipSourcePermissionErrors	2	Skip items that cannot be read and continue copying/moving instead of failing the operation.
kFSFileOperationDoNotMoveAcrossVolumes	4	Do not perform a copy/delete to move an item across volume boundries - fail the operation instead.
kFSFileOperationSkipPreflight	8	Skip the preflight for a directory move/copy. This will limit the status information that can be returned since the totals will not be calculated.

Returns a Mac OS error code. Error code -1 is from the plugin for invalid parameters or the function not being availanle.

83.19.10 MoveObjectToTrash(Item as folderitem, Options as Integer, statusChangeInterval as Double)

MBS MacClassic Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: This routine will start an asynchronous move of the object specified by source to the trash.
Notes:

If the volume the source object resides on does not support a trash folder then the operation will return an error (this is the same circumstance that triggers the delete immediately behavior in the Finder).

Options: One or more FSFileOperation flags
statusChangeInterval: The minimum time between callbacks within a single stage of an operation in seconds.

83.19.11 MoveObjectToTrashSync(SourceItem as folderitem, byref Result as folderitem, Options as Integer) as Integer

MBS MacClassic Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: This routine will move the source object into the trash.
Notes:

The source object can be a file or directory. If the volume the source object resides on does not support a trash folder then this call will return an error (this is the same circumstance that triggers the delete immediately behavior in the Finder).

self: The source object to move to the trash.
result: Upon successful completion a ref the object in the trash. If source is a directory then target will be the corresponding object in the destination directory.
options: One or more FSFileOperation flags

Requires Mac OS X 10.5.

Use this constants:

kFSFileOperationDefaultOptions	0	Use the default options - no overwrite, fail if any source item cannot be read, cross volume moves OK.
kFSFileOperationOverwrite	1	Replace an item in the destDir that has the same name as an item being moved/copied there.
kFSFileOperationSkipSourcePermissionErrors	2	Skip items that cannot be read and continue copying/moving instead of failing the operation.
kFSFileOperationDoNotMoveAcrossVolumes	4	Do not perform a copy/delete to move an item across volume boundries - fail the operation instead.
kFSFileOperationSkipPreflight	8	Skip the preflight for a directory move/copy. This will limit the status information that can be returned since the totals will not be calculated.

Returns a Mac OS error code. Error code -1 is from the plugin for invalid parameters or the function not being availanle.

See WindowsFileCopyMBS for similar function for Windows.

83.19.12 Status as MacFileOperationStatusMBS

MBS MacClassic Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: This routine returns the current status of an FileOperation.
Notes:

Lasterror is set.

Returns nil on any error.

83.19.13 Properties

83.19.14 Handle as Integer

MBS MacClassic Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal handle.
Notes: (Read and Write property)

83.19.15 LastError as Integer

MBS MacClassic Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Users report that you get error -50 (parameter error) if you reuse a file operation object for a new operation.
So maybe create a new instance for each operation?
(Read and Write property)

83.19.16 Events

83.19.17 StatusChanged(status as MacFileOperationStatusMBS)

MBS MacClassic Plugin, Plugin Version: 9.2, Platform: macOS, Targets: .

Function: This event is called whenever the status changed.

83.19.18 Constants

83.19.19 kFSFileOperationDefaultOptions=0

MBS MacClassic Plugin, Plugin Version: 9.2.

Function: One of the file operation flags.
Notes: Use the default options - no overwrite, fail if any source item cannot be read, cross volume moves OK.

83.19.20 kFSFileOperationDoNotMoveAcrossVolumes=4

MBS MacClassic Plugin, Plugin Version: 9.2.

Function: One of the file operation flags.
Notes: Do not perform a copy/delete to move an item across volume boundries - fail the operation instead.

83.19.21 kFSFileOperationOverwrite=1

MBS MacClassic Plugin, Plugin Version: 9.2.

Function: One of the file operation flags.
Notes: Replace an item in the destDir that has the same name as an item being moved/copied there.

83.19.22 kFSFileOperationSkipPreflight=8

MBS MacClassic Plugin, Plugin Version: 9.2.

Function: One of the file operation flags.
Notes: Skip the preflight for a directory move/copy. This will limit the status information that can be returned since the totals will not be calculated.

83.19.23 kFSFileOperationSkipSourcePermissionErrors=2

MBS MacClassic Plugin, Plugin Version: 9.2.

Function: One of the file operation flags.
Notes: Skip items that cannot be read and continue copying/moving instead of failing the operation.

83.19.24 kFSOperationStageComplete=3

MBS MacClassic Plugin, Plugin Version: 9.2.

Function: One of the constants for the stage.
Notes: Operation is done.

83.19.25 kFSOperationStagePreflighting=1

MBS MacClassic Plugin, Plugin Version: 9.2.

Function: One of the constants for the stage.
Notes: Operation is calulating sizes and number of items involved in the operation.

83.19.26 kFSOperationStageRunning=2

MBS MacClassic Plugin, Plugin Version: 9.2.

Function: One of the constants for the stage.
Notes: Operation is in progress.

83.19.27 kFSOperationStageUndefined=0

MBS MacClassic Plugin, Plugin Version: 9.2.

Function: One of the constants for the stage.
Notes: Operation has not started yet.

83.20 class MacFileOperationStatusMBS

83.20.1 class MacFileOperationStatusMBS

MBS MacClassic Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: This class represents the status of a file operation.
Notes: Available in Mac OS X 10.4.

83.20.2 Blog Entries

83.20.4 Properties

83.20.5 BytesComplete as Int64

MBS MacClassic Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The number of bytes that have been moved/copied by this operation at the time the status call was made.
Notes:

During the preflight stage this value represents the currently known number of bytes that will be copied/moved.
Value is -1 if undefined.
(Read only property)

83.20.6 BytesRemaining as Int64

MBS MacClassic Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The number of bytes that remain to be moved/copied by this operation at the time the status call was made.
Notes:

Value is -1 if undefined.
This value is not available for a directory operation if kFSFileOperationSkipPreflight was specified.

Seems like newer MacOS versions like 10.13 don't update this value.
(Read only property)

83.20.7 CurrentItem as FolderItem

MBS MacClassic Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: A folderitem to item operation is currently processing.
Notes:

If the operation is complete then currentItem refers to the target item (the new item corresponding to the source item in the destination directory).
(Read and Write property)

83.20.8 Dictionary as Dictionary

MBS MacClassic Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: All details in the status object as a dictionary.
Notes:

You get the internal CFDictionary converted to Xojo dictionary to inspect yourself.
(Read only property)

83.20.9 Error as Integer

MBS MacClassic Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The error code.
Notes:

Either noErr (0) or an error value which caused the operation to fail.
(Read and Write property)

83.20.10 Handle as Integer

MBS MacClassic Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries internal object reference.
Example:

```
dim status as MacFileOperationStatusMBS // your status object
dim d as CFDictionaryMBS = CFDictionaryMBS.dictionaryWithHandle(status.Handle)
dim dd as Dictionary = d.Dictionary
Break
```

Notes:

Value is a CFDictionaryRef reference.
(Read and Write property)

83.20.11 ObjectsComplete as Int64

MBS MacClassic Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The number of objects that have been moved/copied by this operation at the time the status call was made.
Notes:

Value is -1 if undefined.
During the preflight stage this value represents the currently known number of objects that will be copied/moved.
(Read only property)

83.20.12 ObjectsRemaining as Int64

MBS MacClassic Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The number of objects that remain to be moved/copied by this operation at the time the status call was made
Notes:

Value is -1 if undefined.

This value is not available for a directory operation if kFSFileOperationSkipPreflight was specified.
(Read only property)

83.20.13 Stage as Integer

MBS MacClassic Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Current stage of the operation.
Notes:

See this constants for possible values:
kFSOperationStageComplete
kFSOperationStagePreflighting
kFSOperationStageRunning
kFSOperationStageUndefined
(Read and Write property)

83.20.14 Throughput as Int64

MBS MacClassic Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The current throughput for the operation in bytes per second.
Notes:

Value is -1 if undefined.
(Read only property)

83.20.15 TotalBytes as Int64

MBS MacClassic Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The total number of bytes that will be moved/copied by this operation.
Notes:

This value is not available for a directory operation if kFSFileOperationSkipPreflight was specified.
Value is -1 if undefined.
(Read only property)

83.20.16 TotalObjects as Int64

MBS MacClassic Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The total number of objects that will be moved/copied by this operation.
Notes:

Value is -1 if undefined.
This value is not available for a directory operation if kFSFileOperationSkipPreflight was specified.

(Read only property)

83.20.17 TotalUserVisibleObjects as Int64

MBS MacClassic Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The total number of user visibleobjects that will be moved/copied by this operation.
Notes:

Value is -1 if undefined.

This value is not available for a directory operation if kFSFileOperationSkipPreflight was specified. A packaged application is one user visible object even though it is made up of multiple files and directories.
(Read only property)

83.20.18 UserVisibleObjectsComplete as Int64

MBS MacClassic Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The number of user visible objects that have been moved/copied by this operation at the time the status call was made.
Notes:

Value is -1 if undefined.

During the preflight stage this value represents the currently known number of objects that will be copied/moved. A packaged application is one user visible object even though it is made up of multiple files and directories.
(Read only property)

83.20.19 UserVisibleObjectsRemaining as Int64

MBS MacClassic Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The number of user visible objects that remain to be moved/copied by this operation at the time the status call was made
Notes:

Value is -1 if undefined.

This value is not available for a directory operation if kFSFileOperationSkipPreflight was specified. A packaged application is one user visible object even though it is made up of multiple files and directories.
(Read only property)

83.21 class MacQuarantinePropertiesMBS

83.21.1 class MacQuarantinePropertiesMBS

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for quarantine options.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.app")

// read value
dim q as MacQuarantinePropertiesMBS = f.MacQuarantinePropertiesMBS
MsgBox q.AgentName

// set value
q = new MacQuarantinePropertiesMBS

q.AgentBundleIdentifier = "test.test"
q.AgentName = "testing app"
q.DataURL="http://www.monkeybreadsoftware.de/test.dmg"
q.OriginURL="http://www.monkeybreadsoftware.de/"
q.Type=q.kTypeWebDownload

f.MacQuarantinePropertiesMBS = q

// clear
f.MacQuarantinePropertiesMBS = nil
```

Notes:

Requires Mac OS X 10.5.
Since the LSCopyItemAttribute function got deprecated by Apple, please use NSURLMBS class instead to read various properties.

83.21.2 Blog Entries

- Files in quarantine

83.21.4 Properties

83.21.5 AgentBundleIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: The bundle identifier of the quarantining agent, if available.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.app")
dim q as MacQuarantinePropertiesMBS = f.MacQuarantinePropertiesMBS
MsgBox q.AgentBundleIdentifier
```

Notes:

When setting quarantine properties, this value is set automatically if the it is undefined. The automatic value is the main bundle identifier of the current process.
(Read and Write property)

83.21.6 AgentName as String

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: The name of the quarantining agent (application or program).
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.app")
dim q as MacQuarantinePropertiesMBS = f.MacQuarantinePropertiesMBS
MsgBox q.AgentName
```

Notes:

When setting quarantine properties, this value is set automatically to the current process name if this value is not defined.

(Read and Write property)

83.21.7 DataURL as String

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: The URL from which the data for the quarantined item data was actaully streamed or downloaded, if available.
Notes:

dim f as FolderItem = SpecialFolder.Desktop.Child("test.app")
dim q as MacQuarantinePropertiesMBS = f.MacQuarantinePropertiesMBS
MsgBox q.DataURL
(Read and Write property)

83.21.8 DateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The date and time the item was quarantined.
Notes:

When setting quarantine properties, this property is set automatically to the current date and time if this value is not set.
(Read and Write property)

83.21.9 Dic as Variant

MBS MacFrameworks Plugin, Plugin Version: 12.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The original dictionary from Mac OS X.
Notes:

This is a CFDictionaryMBS object which we provide for debugging.
You can pass it to CFShowMBS to print on console.
(Read and Write property)

83.21.10 OriginURL as String

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: The URL of the resource originally hosting the quarantined item, from the user's point of view.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.app")
dim q as MacQuarantinePropertiesMBS = f.MacQuarantinePropertiesMBS
MsgBox q.OriginURL
```

Notes:

For web downloads, this property is the URL of the web page on which the user initiated the download. For attachments, this property is the URL of the resource to which the quarantined item was attached (e.g. the email message, calendar event, etc.). The origin URL may be a file URL for local resources, or a custom URL to which the quarantining application will respond when asked to open it. The quarantining application should respond by displaying the resource to the user. Note: The origin URL should not be set to the data URL, or the quarantining application may start downloading the file again if the user choses to view the origin URL while resolving a quarantine warning.
(Read and Write property)

83.21.11 TimeStamp as Date

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: The date and time the item was quarantined.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.app")
dim q as MacQuarantinePropertiesMBS = f.MacQuarantinePropertiesMBS
MsgBox q.TimeStamp.LongDate+" "+q.TimeStamp.LongTime
```

Notes:

When setting quarantine properties, this property is set automatically to the current date and time if this value is not set.
(Read and Write property)

83.21.12 Type as String

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: A symbolic string identifying the why the item is quarantined, if available.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.app")
dim q as MacQuarantinePropertiesMBS = f.MacQuarantinePropertiesMBS
MsgBox q.Type
```

Notes: (Read and Write property)

83.21.13 Constants

83.21.14 kTypeCalendarEventAttachment = "LSQuarantineTypeCalendarEventAttachment"

MBS MacFrameworks Plugin, Plugin Version: 9.8.

Function: One of the type constants.

83.21.15 kTypeEmailAttachment = "LSQuarantineTypeEmailAttachment"

MBS MacFrameworks Plugin, Plugin Version: 9.8.

Function: One of the type constants.

83.21.16 kTypeInstantMessageAttachment = "LSQuarantineTypeInstantMessageAttachment"

MBS MacFrameworks Plugin, Plugin Version: 9.8.

Function: One of the type constants.

83.21.17 kTypeOtherAttachment = "LSQuarantineTypeOtherAttachment"

MBS MacFrameworks Plugin, Plugin Version: 9.8.

Function: One of the type constants.

83.21.18 kTypeOtherDownload = "LSQuarantineTypeOtherDownload"

MBS MacFrameworks Plugin, Plugin Version: 9.8.

Function: One of the type constants.

83.21.19 kTypeWebDownload = "LSQuarantineTypeWebDownload"

MBS MacFrameworks Plugin, Plugin Version: 9.8.

Function: One of the type constants.

83.22 class NetFSMountMBS

83.22.1 class NetFSMountMBS

MBS MacOSX Plugin, Plugin Version: 18.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Our class for NetFS mounting.
Notes: Based on NetFS framework in MacOS 10.8 or later.

83.22.8 Methods

83.22.9 Cancel

MBS MacOSX Plugin, Plugin Version: 18.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Cancels asynchronous mounting.
Notes: MountURLAsyncCompleted event will not run.

83.22.10 MountURLAsync(URL as String, MountPath as String = """, User as String = """, Password as String = """, OpenOptions as Dictionary = nil, MountOptions as Dictionary = nil) as Integer

MBS MacOSX Plugin, Plugin Version: 18.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: MountURLAsync is the same as MountURLSync except it does the mount asynchronously.
Notes:

The MountURLAsyncCompleted event is run after the mount with an array of POSIX mountpoint paths.

You can call Cancel method to cancel a pending mount request.

83.22.11 MountURLSync(URL as String, MountPath as String = """, User as String = """, Password as String = """, OpenOptions as Dictionary = nil, MountOptions as Dictionary = nil, byref MountPoints() as String) as Integer

MBS MacOSX Plugin, Plugin Version: 18.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Given a URL that refers to a file server, connect to that server and mount stuff.
Notes:

If the URL just specifies a server and you can't just mount the "root directory" of the server, the user will be prompted with a window to let them select one or more items to mount from that server, otherwise whatever item the URL specifies to mount will be mounted.
If the mountpath is provided it will be used as the mount point. If the mountpath is set to "", a default mount point will be used.
If the user and passwd are set, they will override any user name or password that may be set in the URL. These calls go through the NetAuth agent. If the URL doesn't specify a password, and one is needed, the user will be prompted with a window requesting password.
Options can be provided for the session open and the mount itself. If the mount is successful, the POSIX path to each mountpoint is returned as a string in mountpoints.
If the return value is zero the mount has succeeded.

A positive non-zero return value represents an errno value (see /usr/include/sys/errno.h). For instance, a missing mountpoint error will be returned as ENOENT (2).

A negative non-zero return value represents an OSStatus error. For instance, error -128 is userCanceledErr, returned when a mount operation is canceled by the user.

83.22.12 URLForRemountingVolume(path as String) as String

MBS MacOSX Plugin, Plugin Version: 18.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Given a localPathURL that refers to a location on a mounted network share, return the URL needed to remount that volume.
Example:

```
dim url as string = NetFSMountMBS.URLForRemountingVolume("/Volumes/Ablage2")

MsgBox url
```

Notes: The return value is an URL of the server, or "" if localPathURL isn't a mounted network share.
See also:

- 83.22.13 URLForRemountingVolume(vol as FolderItem) as String 16112

83.22.13 URLForRemountingVolume(vol as FolderItem) as String

MBS MacOSX Plugin, Plugin Version: 18.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Given a localPathURL that refers to a location on a mounted network share, return the URL needed to remount that volume.
Example:

```
dim v as FolderItem = volume(VolumeCount-1)
dim url as string = NetFSMountMBS.URLForRemountingVolume(v)

MsgBox url
```

Notes: The return value is an URL of the server, or "" if localPathURL isn't a mounted network share.
See also:

- 83.22.12 URLForRemountingVolume(path as String) as String 16112

83.22.14 URLProbe(hostname as String) as String

MBS MacOSX Plugin, Plugin Version: 18.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Checks what protocol may be used to mount disk from this server.
Example:

```
dim protocol as string = NetFSMountMBS.URLProbe("Ablage2.local")

MsgBox protocol
```

Notes:

The user may enter a hostname in lieu of a full URL. We need to determine an appropriate protocol for this host and return a scheme from which a URL can be derived. For instance, if we determine that it's an SMB server then we return "smb" which the caller can use to build a URL: "smb://hostname".

We start with a list of likely protocols, e.g. "smb", "afp" and initiate a TCP connection to the port for each protocol. These connect attempts run in parallel. Then wait in a select() call to see which connections are successful, or refused, or do not respond. There is a preference order, even if a protocol later in the list responds first, it may lose out if a protocol earlier in the list responds within the timeout.

Returns "smb" for example.

83.22.15 Properties

83.22.16 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 18.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The handle for a pending request.
Notes: (Read and Write property)

83.22.17 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 18.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

83.22.18 Events

83.22.19 MountURLAsyncCompleted(status as Integer, URL as String, mountpoints() as String)

MBS MacOSX Plugin, Plugin Version: 18.3, Platform: macOS, Targets: .

Function: The event called when mount is done.

83.22.20 Constants

83.22.21 kErrorAccountRestricted = -5999

MBS MacOSX Plugin, Plugin Version: 18.3.

Function: One of the error codes.
Notes: Account is restricted.

83.22.22 kErrorMissingMountpoint = 2

MBS MacOSX Plugin, Plugin Version: 18.3.

Function: One of the error codes.
Notes: The mount point is missing.

83.22.23 kErrorNoAuthMethodSupported = -5997

MBS MacOSX Plugin, Plugin Version: 18.3.

Function: One of the error codes.
Notes: No supported auth method found.

83.22.24 kErrorNoProtocolVersionSupported = -5996

MBS MacOSX Plugin, Plugin Version: 18.3.

Function: One of the error codes.
Notes: No Protocol Version Supported.

83.22.25 kErrorNoSharesAvailable = -5998

MBS MacOSX Plugin, Plugin Version: 18.3.

Function: One of the error codes.
Notes: No shares available.

83.22.26 kErrorPasswordNeedsChange = -5045

MBS MacOSX Plugin, Plugin Version: 18.3.

Function: One of the error codes.
Notes: The password needs change.

83.22.27 kErrorPasswordPolicy = -5046

MBS MacOSX Plugin, Plugin Version: 18.3.

Function: One of the error codes.
Notes: Error with Password policy.

83.22.28 kErrorUserCanceled = -128

MBS MacOSX Plugin, Plugin Version: 18.3.

Function: One of the error codes.
Notes: User cancelled.

83.22.29 kMountFlagsReadOnly = 1

MBS MacOSX Plugin, Plugin Version: 18.3.

Function: One of the mount flags.
Notes: Mount read only.

83.22.30 kNAUIOptionAllowUI = "AllowUI"

MBS MacOSX Plugin, Plugin Version: 18.3.

Function: One of the values for kNAUIOptionKey key.
Notes: Allow user interface.

83.22.31 kNAUIOptionForceUI = "ForceUI"

MBS MacOSX Plugin, Plugin Version: 18.3.

Function: One of the values for kNAUIOptionKey key.
Notes: Force user interface.

83.22.32 kNAUIOptionKey = "UIOption"

MBS MacOSX Plugin, Plugin Version: 18.3.

Function: One of the keys for open options dictionary.
Notes: Suppress authentication dialog UI.

83.22.33 kNAUIOptionNoUI = "NoUI"

MBS MacOSX Plugin, Plugin Version: 18.3.

Function: One of the values for kNAUIOptionKey key.
Notes: No user interface.

83.22.34 kNetAuthErrorAlreadyClosed = -6005

MBS MacOSX Plugin, Plugin Version: 18.3.

Function: One of the error codes.
Notes: Already closed.

83.22.35 kNetAuthErrorGuestNotSupported = -6004

MBS MacOSX Plugin, Plugin Version: 18.3.

Function: One of the error codes.
Notes: Guest login not supported.

83.22.36 kNetAuthErrorInternal = -6600

MBS MacOSX Plugin, Plugin Version: 18.3.

Function: One of the error codes.
Notes: Internal error.

83.22.37 kNetAuthErrorMountFailed = -6602

MBS MacOSX Plugin, Plugin Version: 18.3.

Function: One of the error codes.
Notes: Mount failed.

83.22.38 kNetAuthErrorNoSharesAvailable = -6003

MBS MacOSX Plugin, Plugin Version: 18.3.

Function: One of the error codes.
Notes: No shared available.

83.22.39 kNetFSAllowLoopbackKey = "AllowLoopback"

MBS MacOSX Plugin, Plugin Version: 18.3.

Function: One of the keys for open options dictionary.
Notes: Allow a loopback mount.

83.22.40 kNetFSAllowSubMountsKey = "AllowSubMounts"

MBS MacOSX Plugin, Plugin Version: 18.3.

Function: One of the keys for mount options dictionary.
Notes:

Allow a mount from a dir beneath the share point.
Pass boolean value.

83.22.41 kNetFSMountAtMountDirKey = "MountAtMountDir"

MBS MacOSX Plugin, Plugin Version: 18.3.

Function: One of the keys for mount options dictionary.
Notes:

Mount on the specified mountpath instead of below it.
Note that if kNetFSSoftMountKey isn't set, then it's set to true.

83.22.42 kNetFSMountFlagsKey = "MountFlags"

MBS MacOSX Plugin, Plugin Version: 18.3.

Function: One of the keys for mount options dictionary.
Notes:

Mount flags.
e.g. integer with value 1 for read only.

83.22.43 kNetFSSoftMountKey = "SoftMount"

MBS MacOSX Plugin, Plugin Version: 18.3.

Function: One of the keys for mount options dictionary.
Notes:

Mount with "soft" failure semantics.
Pass boolean with true.

83.22.44 kNetFSUseGuestKey = "Guest"

MBS MacOSX Plugin, Plugin Version: 18.3.

Function: One of the keys for open options dictionary.
Notes:

Login as a guest user.
The value is a string with login name.

83.23 class PermissionsMBS

83.23.1 class PermissionsMBS

MBS MacOSX Plugin, Platform: macOS, Targets: All.

Function: Gives access to the current Permissions of a file.
Example:

```
dim p as PermissionsMBS
p=file.PermissionsMBS(false)
```

83.23.2 Blog Entries

83.23.4 Methods

83.23.5 SetPermissions(OldWay as boolean) as Integer

MBS MacOSX Plugin, Platform: macOS, Targets: All.

Function: Sets the Permissions.
Notes:

Returns -1 if function is not available.
Any other value is a Mac OS error code including 0 for success. You can use the MacErrorString function to get some details on the error code.
You may not have enough Permissions to set Permissions!

You can use old API if you set Oldway=true. Than you read access value like in older version of the plugin.
If you set Oldway = false, you use the newer API which read unix permissions, but not the old ones.

The old way is not supported for 64bit.

83.23.6 Properties

83.23.7 Access as Integer

MBS MacOSX Plugin, Platform: macOS, Targets: All.

Function: The access mode for this file.
Notes:

Only set if you use older API.
Some constants:

AccessOwner	& h80000000	User is owner of directory
AccessBlankAccess	& h10000000	Directory has blank access privileges
AccessUserWrite	& h04000000	User has write privileges
AccessUserRead	& h02000000	User has read privileges
AccessUserSearch	& h01000000	User has search privileges
AccessEveryoneWrite	& h00040000	Everyone has write privileges
AccessEveryoneRead	& h00020000	Everyone has read privileges
AccessEveryoneSearch	& h00010000	Everyone has search privileges
AccessGroupWrite	& h00000400	Group has write privileges
AccessGroupRead	& h00000200	Group has read privileges
AccessGroupSearch	& h00000100	Group has search privileges
AccessOwnerWrite	& h00000004	Owner has write privileges
AccessOwnerRead	& h00000002	Owner has read privileges
AccessOwnerSearch	& h00000001	Owner has search privileges

(Read and Write property)

83.23.8 GroupID as Integer

MBS MacOSX Plugin, Platform: macOS, Targets: All.

Function: The Group ID for this file.
Notes:

constants:

knoGroup	0

(Read and Write property)

83.23.9 Mode as Integer

MBS MacOSX Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

Function: The unix file mode.
Notes:

Only set if you use newer API.
(Read and Write property)

83.23.10 UserID as Integer

MBS MacOSX Plugin, Platform: macOS, Targets: All.

Function: The User ID for this file.
Example:

```
dim f as FolderItem

f=SpecialFolder.Desktop

MsgBox str(f.PermissionsMBS(true).UserID) // 501
```

Notes:

e.g. User 501 is normally the first user.

constants:

```
knoUser              0,
 kadministratorUser  1
```

(Read and Write property)

83.24 class ResourceForkMBS

83.24.1 class ResourceForkMBS

MBS MacClassic Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: This class is for reading/writing resource forks on Mac.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.rsrc")
dim r as ResourceForkMBS = ResourceForkMBS.Create(f)

r.AddResource "Hello World", "TEXT", 128, "just a test"
```

Notes:

It is a replacement for ResourceFork class in Xojo which has been removed for Cocoa and Console targets in Xojo version 2012r2.

Resourcefork methods are deprecated by Apple, but work in 32 and 64-bit applications as of MBS Plugin version 19.5.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

83.24.4 Methods

83.24.5 AddResource(Data as Memoryblock, ResourceType as String, ID as Integer, Name as String)

MBS MacClassic Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds a resource of the Type specified, using the Name and ID specified and fills it with the Data specified.
Notes: We added this method to avoid extra conversion from memoryblock to string when adding data.
See also:

- 83.24.6 AddResource(Data as String, ResourceType as String, ID as Integer, Name as String) 16123

83.24.6 AddResource(Data as String, ResourceType as String, ID as Integer, Name as String)

MBS MacClassic Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds a resource of the Type specified, using the Name and ID specified and fills it with the Data specified.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.rsrc")
dim r as ResourceForkMBS = ResourceForkMBS.Create(f)

r.AddResource "Hello World", "TEXT", 128, "just a test"
```

See also:

- 83.24.5 AddResource(Data as Memoryblock, ResourceType as String, ID as Integer, Name as String) 16123

83.24.7 Close

MBS MacClassic Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Closes the open resource fork.
Notes: The resource fork will be closed automatically when the instance is destroyed.

83.24.8 Constructor

MBS MacClassic Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The private constructor.

83.24.9 Create(file as folderitem, UseDataFork as boolean = false) as ResourceForkMBS

MBS MacClassic Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new ResourceFork.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.rsrc")
dim r as ResourceForkMBS = ResourceForkMBS.Create(f)

r.AddResource "Hello World", "TEXT", 128, "just a test"
```

Notes:

If the file has a resource fork, it is deleted first.
If the file does not exist, it is created.
Returns nil on any error.
If UseDataFork is true, the resources are read/write from data fork.

83.24.10 GetIndResource(ResourceType as String, index as Integer) As String

MBS MacClassic Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the specified resource as a string.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.rsrc")
dim r as ResourceForkMBS = ResourceForkMBS.create(f)

r.AddResource "Hello World", "TEXT", 128, "just a test"

dim s as string = r.GetIndResource("TEXT", 0)
MsgBox s
```

Notes: Index is zero based.

83.24.11 GetNamedResource(ResourceType as String, Name as String) As String

MBS MacClassic Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the specified resource as a string.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.rsrc")
dim r as ResourceForkMBS = ResourceForkMBS.create(f)

r.AddResource "Hello World", "TEXT", 128, "just a test"

dim s as string = r.GetNamedResource("TEXT", "just a test")
MsgBox s
```

83.24.12 GetResource(ResourceType as String, ID as Integer) As String

MBS MacClassic Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the specified resource as a string.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.rsrc")
dim r as ResourceForkMBS = ResourceForkMBS.create(f)

r.AddResource "Hello World", "TEXT", 128, "just a test"

dim s as string = r.GetResource("TEXT", 128)
MsgBox s
```

83.24.13 GetResourceMemory(ResourceType as String, ID as Integer) As Memoryblock

MBS MacClassic Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the specified resource as a Memoryblock.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.rsrc")
dim r as ResourceForkMBS = ResourceForkMBS.create(f)

r.AddResource "Hello World", "TEXT", 128, "just a test"

dim s as MemoryBlock = r.GetResourceMemory("TEXT", 128)
```

MsgBox s

83.24.14 Open(file as folderitem, Write as boolean, UseDataFork as boolean = false) as ResourceForkMBS

MBS MacClassic Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Opens the resource fork of the FolderItem.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.rsrc")
dim r as ResourceForkMBS = ResourceForkMBS.Open(f, false)
MsgBox str(r.TypeCount)+" types in file"
```

Notes:

If the FolderItem has no resource fork, OpenResourceFork returns Nil.
Access to the resourcefork is supported only on Macintosh.
If UseDataFork is true, the resources are read/write from data fork.

83.24.15 RemoveResource(ResourceType as String, ID as Integer)

MBS MacClassic Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Removes the specified resource from the resource fork.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.rsrc")
dim r as ResourceForkMBS = ResourceForkMBS.Create(f)

r.AddResource "Hello World", "TEXT", 128, "just a test"
MsgBox str(r.TypeCount)+" resources"
r.RemoveResource "TEXT", 128
MsgBox str(r.TypeCount)+" resources"
```

83.24.16 ResourceCount(ResourceType as String) as Integer

MBS MacClassic Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the number of resources of the specified type.

Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.rsrc")
dim r as ResourceForkMBS = ResourceForkMBS.create(f)

r.AddResource "Hello World", "TEXT", 128, "just a test"

MsgBox str(r.ResourceCount("TEXT")) // shows 1
```

83.24.17 ResourceID(ResourceType as String, index as Integer) as Integer

MBS MacClassic Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the resource ID as an Integer based on the Type and Index passed.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.rsrc")
dim r as ResourceForkMBS = ResourceForkMBS.Create(f)

r.AddResource "Hello World", "TEXT", 128, "just a test"

MsgBox str(r.ResourceID("TEXT", 0)) // shows 128
```

Notes: This list is zero-based.

83.24.18 ResourceName(ResourceType as String, index as Integer) As String

MBS MacClassic Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the resource name as a string based on the Type and the zero-based index to that type.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.rsrc")
dim r as ResourceForkMBS = ResourceForkMBS.Create(f)

r.AddResource "Hello World", "TEXT", 128, "just a test"

MsgBox r.ResourceName("TEXT", 0)
```

83.24.19 ResourceSizeOnDisk(ResourceType as String, ID as Integer) as Integer

MBS MacClassic Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries the size on disk for a given resource.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.rsrc")
dim r as ResourceForkMBS = ResourceForkMBS.Create(f)

r.AddResource "Hello World", "TEXT", 128, "just a test"
MsgBox str(r.ResourceSizeOnDisk("TEXT", 128))+" bytes"
```

83.24.20 ResourceType(index as Integer) As String

MBS MacClassic Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the resource type as a string based on the Index passed.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.rsrc")
dim r as ResourceForkMBS = ResourceForkMBS.create(f)

r.AddResource "Hello World", "TEXT", 128, "just a test"

MsgBox r.ResourceType(0)
```

Notes: This list is zero-based.

83.24.21 UniqueID(ResourceType as String) as Integer

MBS MacClassic Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Finds an unique ID for a given resource type.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.rsrc")
dim r as ResourceForkMBS = ResourceForkMBS.create(f)

MsgBox str(R.UniqueID("TEXT"))
```

83.24.22 Properties

83.24.23 Handle as Integer

MBS MacClassic Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal handle to the resource fork.
Notes: (Read only property)

83.24.24 LastError as Integer

MBS MacClassic Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The last error code.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.rsrc")
dim r as ResourceForkMBS = ResourceForkMBS.Open(f, false) // open read only

r.AddResource "Hello World", "TEXT", 128, "just a test"
MsgBox str(R.LastError) // shows -61, write permission error
```

Notes:

All methods set this property.
(Read and Write property)

83.24.25 Modified as Boolean

MBS MacClassic Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether the resource fork has been modified by you.
Notes: (Read only property)

83.24.26 TypeCount as Integer

MBS MacClassic Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The number of resource types present in the resource fork.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.rsrc")
dim r as ResourceForkMBS = ResourceForkMBS.create(f)
```

```
r.AddResource "Hello World", "TEXT", 128, "just a test"

MsgBox str(r.TypeCount) // shows 1
```

Notes: (Read only property)

83.24.27 Writable as Boolean

MBS MacClassic Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether the resourcefork was opened writable.
Notes: (Read only property)

83.24.28 ResourceAttributes(ResourceType as String, ID as Integer) as Integer

MBS MacClassic Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Get or set all resource attributes together.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.rsrc")
dim r as ResourceForkMBS = ResourceForkMBS.Create(f)

r.AddResource "Hello World", "TEXT", 128, "just a test"

MsgBox str(r.ResourceAttributes("TEXT", 128))
// shows 2 which means it has been changed and need to be written to disk soon
```

Notes: (Read and Write computed property)

83.24.29 ResourceLocked(ResourceType as String, ID as Integer) as boolean

MBS MacClassic Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Used to get and set the locked attribute of the resource.
Notes: (Read and Write computed property)

83.24.30 ResourcePreload(ResourceType as String, ID as Integer) as boolean

MBS MacClassic Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Used to get and set the Preload attribute of the resource.
Notes: (Read and Write computed property)

83.24.31 ResourceProtected(ResourceType as String, ID as Integer) as boolean

MBS MacClassic Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Used to get and set the Protected attribute of the resource.
Notes: (Read and Write computed property)

83.24.32 ResourcePurgeable(ResourceType as String, ID as Integer) as boolean

MBS MacClassic Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Used to get and set the Purgeable attribute of the resource.
Notes: (Read and Write computed property)

83.24.33 ResourceSysHeap(ResourceType as String, ID as Integer) as boolean

MBS MacClassic Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Used to get and set the SysHeap attribute of the resource.
Notes: (Read and Write computed property)

83.25 class ResStreamMBS

83.25.1 class ResStreamMBS

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Alows you to access a ressourcefork in its binary representation.
Notes:

Useful to copy the resourcefork faster from one file to another.
Subclass of the LargeBinaryStreamMBS class.

83.25.2 Blog Entries

83.26 class StdinMBS

83.26.1 class StdinMBS

MBS Util Plugin, Plugin Version: 6.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class to read from stdin.
Example:

```
dim s as new StdoutMBS
dim r as new StdinMBS
dim v,n as Integer

s.Write "Integer: "
n=r.ReadInteger(v)

print "integer read: "+str(v)
print "integer count: "+str(n)

dim d as Double

s.Write "Double: "
n=r.ReadDouble(d)

print "double read: "+str(d)
print "double count: "+str(n)

dim t as string

s.Write "String: "
n=r.ReadString(t)

print "string read: "+t
print "string count: "+str(n)

do
s.Write "Character (type a and return to end): "
n=r.GetCharacter

print "got character: "+str(n)
loop until n=65 or n=97
```

83.26.4 Methods

83.26.5 AttachConsole(ProcessID as Integer = -1) as Integer

MBS Util Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Attaches the calling process to the console of the specified process.
Notes:

ProcessId: The identifier of the process whose console is to be used. This parameter can be one of the following values.

Value	Meaning
pid	Use the console of the specified process.
-1	Use the console of the parent of the current process.

Returns Windows error code or zero for success.

A process can be attached to at most one console. If the calling process is already attached to a console, the error code returned is ERROR_ACCESS_DENIED (5). If the specified process does not have a console, the error code returned is ERROR_INVALID_HANDLE (6). If the specified process does not exist, the error code returned is ERROR_GEN_FAILURE (31).

83.26.6 Flush

MBS Util Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Flushes input.

83.26.7 FreeConsole as Integer

MBS Util Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Detaches the calling process from its console.
Notes:

Returns Windows error code or zero for success.

A process can be attached to at most one console. If the calling process is not already attached to a console, the error code returned is ERROR_INVALID_PARAMETER (87).
A process can use the FreeConsole function to detach itself from its console. If other processes share the console, the console is not destroyed, but the process that called FreeConsole cannot refer to it. A console is closed when the last process attached to it terminates or calls FreeConsole. After a process calls FreeConsole, it can call the AllocConsole function to create a new console or AttachConsole to attach to another console.

83.26.8 GetCharacter as Integer

MBS Util Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Reads in one character and returns the ASCII code.
Notes: Returns one if a value was read and 0 if not.

83.26.9 Read(count as Integer) as string

MBS Util Plugin, Plugin Version: 6.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads data from stdin.
Notes: Data is returned in binary encoding.

83.26.10 ReadDouble(byref value as Double) as Integer

MBS Util Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads a double from the console.
Notes: Returns one if a value was read and 0 if not.

83.26.11 ReadInteger(byref value as Integer) as Integer

MBS Util Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads an integer from the console.
Notes: Returns one if a value was read and 0 if not.

83.26.12 ReadString(byref value as string) as Integer

MBS Util Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads a string from the console.
Notes:

This string is limited to 4095 characters.
Returns one if a value was read and 0 if not.

83.26.13 Properties

83.26.14 Echo as Boolean

MBS Util Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enables/disables echo for stdin.
Example:

```
// try this on Mac/Linux GUI/Console app with the app launched from Terminal,
// or in console app on Windows launched from command prompt

dim s as new StdoutMBS
```

```
s.Write "Hello World"+chr(10)

dim t as string
dim n as integer = StdinMBS.ReadString(t)
s.Write chr(10)
s.Write "Read with echo: "+t+chr(10)

StdinMBS.Echo = false

n = StdinMBS.ReadString(t)
s.Write chr(10)
s.Write "Read without echo: "+t+chr(10)

StdinMBS.Echo = true
```

Notes:

You can disable echo for password input.
By default it is enabled.
(Read and Write property)

83.26.15 IsReady as boolean

MBS Util Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Checks whether there is data waiting in input buffer to be read.
Example:

```
Dim d As New date

Do
// print time if second changed
Dim e As New date
If e.Second <>d.Second Then
Print e.LongTime
d = e
End If

// if ready, read a key
If StdinMBS.IsReady Then
Dim s As String
Dim l As Integer = StdinMBS.ReadString(s)
Print "Input "+Str(l)+": "+s
End If
```

Loop

Notes:

If IsReady returns false and you would call ReadString method, the app could be blocked until user types something on console.
Added Windows support in version 20.5. We return true, if there is a return in the input buffer, so you can call Read() functions.
(Read only property)

83.27 class StdoutMBS

83.27.1 class StdoutMBS

MBS Util Plugin, Plugin Version: 6.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class to write to stdout.
Example:

```
dim s as new StdoutMBS
dim r as new StdinMBS
dim v,n as Integer

s.Write "Integer: "
n=r.ReadInteger(v)

print "integer read: "+str(v)
print "integer count: "+str(n)

dim d as Double

s.Write "Double: "
n=r.ReadDouble(d)

print "double read: "+str(d)
print "double count: "+str(n)

dim t as string

s.Write "String: "
n=r.ReadString(t)

print "string read: "+t
print "string count: "+str(n)

do
s.Write "Character (type a and return to end): "
n=r.GetCharacter

print "got character: "+str(n)
loop until n=65 or n=97
```

83.27.4 Methods

83.27.5 AttachConsole(ProcessID as Integer = -1) as Integer

MBS Util Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Attaches the calling process to the console of the specified process.
Notes:

ProcessId: The identifier of the process whose console is to be used. This parameter can be one of the following values.

Value	Meaning
pid	Use the console of the specified process.
-1	Use the console of the parent of the current process.

Returns Windows error code or zero for success.

A process can be attached to at most one console. If the calling process is already attached to a console, the error code returned is ERROR_ACCESS_DENIED (5). If the specified process does not have a console, the error code returned is ERROR_INVALID_HANDLE (6). If the specified process does not exist, the error code returned is ERROR_GEN_FAILURE (31).

83.27.6 Flush

MBS Util Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Makes sure that all data written using Write is already on the console.

83.27.7 FreeConsole as Integer

MBS Util Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Detaches the calling process from its console.
Notes:

Returns Windows error code or zero for success.

A process can be attached to at most one console. If the calling process is not already attached to a console, the error code returned is ERROR_INVALID_PARAMETER (87).
A process can use the FreeConsole function to detach itself from its console. If other processes share the console, the console is not destroyed, but the process that called FreeConsole cannot refer to it. A console is closed when the last process attached to it terminates or calls FreeConsole. After a process calls FreeConsole, it can call the AllocConsole function to create a new console or AttachConsole to attach to another console.

83.27.8 Write(data as string)

MBS Util Plugin, Plugin Version: 6.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes data to stdout.
Notes: You have to make sure your data is in good text encoding.

83.28 class VolumeInformationMBS

83.28.1 class VolumeInformationMBS

MBS MacClassic Plugin, Platform: macOS, Targets: All.

Function: Detailed information on Mac volumes.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

83.28.6 Methods

83.28.7 Constructor

MBS MacClassic Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

Function: The private constructor.

83.28.8 Properties

83.28.9 Blocksize as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: All.

Function: The size of an allocation block, in bytes.
Notes:

This field is only appropriate for volume formats (such as HFS and HFS Plus) that allocate space in fixed-size pieces; other volume formats may not have a similar concept, and may set this field to zero.
(Read only property)

83.28.10 DataForkClumpSize as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: All.

Function: Default data fork clump size.
Notes:

When a fork is automatically grown as it is written, the File Manager attempts to allocate space that is a multiple of the clump size. This field is zero for volume formats that don't support the notion of a clump size.
(Read only property)

83.28.11 DefaultVolume as boolean

MBS MacClassic Plugin, Platform: macOS, Targets: All.

Function: Is this the default volume?
Notes:

Not supported if LimitedInformation is false.
(This property requires Mac OS 9 or newer)
(Read only property)

83.28.12 DriveNumber as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: All.

Function: The drive number for the drive (drive queue element) associated with the volume.
Notes: (Read only property)

83.28.13 DriverRefNum as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: All.

Function: The driver reference number for the drive (drive queue element) associated with the volume.
Notes: (Read only property)

83.28.14 FileCount as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: All.

Function: The total number of files on the volume, or 0 if unknown.
Notes: (Read only property)

83.28.15 FilesOpen as boolean

MBS MacClassic Plugin, Platform: macOS, Targets: All.

Function: Are there files open on this volume?
Notes:

For the boot volume false!?
Not supported if LimitedInformation is false.
(This property requires Mac OS 9 or newer)
(Read only property)

83.28.16 FileSystemID as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: All.

Function: Identifies the filesystem implementation that is handling the volume; this is zero for HFS and HFS Plus volumes.
Notes: (Read only property)

83.28.17 FolderCount as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: All.

Function: The total number of folders on the volume, or 0 if unknown. Note that no root directory counts.
Notes: (Read only property)

83.28.18 freeBlocks as Int64

MBS MacClassic Plugin, Platform: macOS, Targets: All.

Function: The number of unused allocation blocks on the volume.
Notes:

This field is only appropriate for volume formats (such as HFS and HFS Plus) that allocate space in fixed-size pieces; other volume formats may not have a similar concept, and may set this field to zero.
(Read only property)

83.28.19 Freebytes as Int64

MBS MacClassic Plugin, Platform: macOS, Targets: All.

Function: The number of bytes of free space on the volume.
Notes:

On Mac OS versions before 9.0, this returns never a number bigger than 2 GBytes, even if the disc is bigger.
(Read only property)

83.28.20 HardwareLocked as boolean

MBS MacClassic Plugin, Platform: macOS, Targets: All.

Function: is the volume locked by hardware?
Notes:

Not supported if LimitedInformation is false.
(This property requires Mac OS 9 or newer)
(Read only property)

83.28.21 LimitedInformation as boolean

MBS MacClassic Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: True if some properties are not filled.
Notes:

Not all values are supported on Mac OS 8.6
(Read only property)

83.28.22 Name as String

MBS MacClassic Plugin, Platform: macOS, Targets: All.

Function: The name of the volume.
Notes:

The name is returned in 16bit Unicode.
RB 4.5 should know how to handle that.
(Read only property)

83.28.23 NextAllocation as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: All.

Function: A hint for where to start searching for free space during an allocation.
Notes:

This field is only appropriate for volume formats (such as HFS and HFS Plus) that allocate space in fixed-size pieces; other volume formats may not have a similar concept, and may set this field to zero.
(Read only property)

83.28.24 NextCatalogID as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: All.

Function: The next unused catalog node ID.
Notes:

Some volume formats (such as HFS and HFS Plus) use a monotonically increasing number for the catalog node ID (i.e. File ID or Directory ID) of newly created files and directories. For those volume formats, the nextCatalogID is the next file/directory ID that will be assigned. For other volume formats, this field will be zero.
(Read only property)

83.28.25 ResourceForkClumpSize as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: All.

Function: Default resource fork clump size.
Notes:

When a fork is automatically grown as it is written, the File Manager attempts to allocate space that is a multiple of the clump size. This field is zero for volume formats that don't support the notion of a clump size.

(Read only property)

83.28.26 Root as FolderItem

MBS MacClassic Plugin, Platform: macOS, Targets: All.

Function: A folderitem to the root of this volume.
Notes:

Not supported if LimitedInformation is false.
(This property requires Mac OS 9 or newer)
(Read only property)

83.28.27 RootFSRef as memoryblock

MBS MacClassic Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The root folderitem as FSRef packed into a memoryblock.
Notes: (Read only property)

83.28.28 Signature as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: All.

Function: This field is used to distinguish between volume formats supported by a single filesystem implementation.
Notes:

Example values:

```
HFS     & h4244    "BD"
 HFS+   & h482B    "H+"
```

(Read only property)

83.28.29 SoftwareLocked as boolean

MBS MacClassic Plugin, Platform: macOS, Targets: All.

Function: is the volume locked by software?
Notes:

Not supported if LimitedInformation is false.
(This property requires Mac OS 9 or newer)
(Read only property)

83.28.30 Totalblocks as Int64

MBS MacClassic Plugin, Platform: macOS, Targets: All.

Function: The total number of allocation blocks on the volume.
Notes:

This field is only appropriate for volume formats (such as HFS and HFS Plus) that allocate space in fixed-size pieces; other volume formats may not have a similar concept, and may set this field to zero.
(Read only property)

83.28.31 Totalbytes as Int64

MBS MacClassic Plugin, Platform: macOS, Targets: All.

Function: The size of the volume in bytes.
Notes:

On Mac OS versions before 9.0, this returns never a number bigger than 2 GBytes, even if the disc is bigger.
(Read only property)

83.29 class WindowsDiskChangeMBS

83.29.1 class WindowsDiskChangeMBS

MBS Win Plugin, Plugin Version: 13.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class to get events for media or devices being added/inserted or removed.

83.29.2 Blog Entries

- MonkeyBread Software Releases the MBS Real Studio plug-ins in version 13.1
- MBS Real Studio Plugins, version 13.1pr10

83.29.4 Methods

83.29.5 Constructor

MBS Win Plugin, Plugin Version: 13.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.

83.29.6 Properties

83.29.7 Valid as Boolean

MBS Win Plugin, Plugin Version: 13.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether the constructor registered the events successfully.
Notes: (Read and Write property)

83.29.8 Events

83.29.9 DriveAdded(Path as string)

MBS Win Plugin, Plugin Version: 13.1, Platform: Windows, Targets: .

Function: The event to notify you about drive being added.

83.29.10 DriveRemoved(Path as string)

MBS Win Plugin, Plugin Version: 13.1, Platform: Windows, Targets: .

Function: The event to notify you about drive being removed.

83.29.11 MediaInserted(Path as string)

MBS Win Plugin, Plugin Version: 13.1, Platform: Windows, Targets: .

Function: The event to notify you about media being added.

83.29.12 MediaRemoved(Path as string)

MBS Win Plugin, Plugin Version: 13.1, Platform: Windows, Targets: .

Function: The event to notify you about media being removed.
Notes: You may get the event multiple times.

83.30 class WindowsDriveNotificationMBS

83.30.1 class WindowsDriveNotificationMBS

MBS Win Plugin, Plugin Version: 15.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class to detect devices being mounted/unmounted in Windows.

83.30.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo / Real Studio plug-ins in version 15.0

83.30.4 Events

83.30.5 DeviceArrival(Path as string)

MBS Win Plugin, Plugin Version: 15.0, Platform: Windows, Targets: .

Function: A device arrived.
Notes: Path my be path to USB device or path to mount point. For USB sticks you get both.

83.30.6 DeviceRemoved(Path as string)

MBS Win Plugin, Plugin Version: 15.0, Platform: Windows, Targets: .

Function: A device was removed.
Notes: Path my be path to USB device or path to mount point. For USB sticks you get both.

83.31 module WindowsJunctionMBS

83.31.1 module WindowsJunctionMBS

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: This module implements various functions for links.
Notes:

Symbol links (link files), Hard links (several directory entries for one file on disc) and junctions (show content of one folder inside another folder).

Some operations needs Administrator permissions.
Check lasterror in case of trouble.
Error 1314 for example is permissions problem.

See also WindowsShortCutMBS and WindowsInternetShortCutMBS classes.
For Mac see also CFBookmarkMBS and MacAliasMBS classes.

83.31.4 Methods

83.31.5 CreateHardLink(NewFile as folderitem, TargetFile as folderitem) as boolean

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Establishes a hard link between an existing file and a new file.
Example:

```
dim file as FolderItem = SpecialFolder.Desktop.Child("test.exe")
dim nfile as FolderItem = SpecialFolder.Desktop.Child("hello.exe")
```

```
if WindowsJunctionMBS.CreateHardLink(nfile, file) then
MsgBox "OK"
end if
```

Notes:

This function is only supported on the NTFS file system, and only for files, not directories.

NewFile: The name of the new file. Function fails if NewFile exists already. This parameter cannot specify the name of a directory.
TargetFile: The name of the existing file. This parameter cannot specify the name of a directory.

Returns true on success. Lasterror is set.

The maximum number of hard links that can be created with this function is 1023 per file. If more than 1023 links are created for a file, an error results.

Any directory entry for a file that is created with CreateFile or CreateHardLink is a hard link to an associated file. An additional hard link that is created with the CreateHardLink function allows you to have multiple directory entries for a file, that is, multiple hard links to the same file, which can be different names in the same directory, or the same or different names in different directories. However, all hard links to a file must be on the same volume.
Because hard links are only directory entries for a file, many changes to that file are instantly visible to applications that access it through the hard links that reference it. However, the directory entry size and attribute information is updated only for the link through which the change was made.
The security descriptor belongs to the file to which a hard link points. The link itself is only a directory entry, and does not have a security descriptor. Therefore, when you change the security descriptor of a hard link, you a change the security descriptor of the underlying file, and all hard links that point to the file allow the newly specified access. You cannot give a file different security descriptors on a per-hard-link basis.

Use DeleteFile to delete hard links (folderitem.delete in Xojo). You can delete them in any order regardless of the order in which they are created.
Flags, attributes, access, and sharing that are specified in CreateFile operate on a per-file basis. That is, if you open a file that does not allow sharing, another application cannot share the file by creating a new hard link to the file.
When you create a hard link on the NTFS file system, the file attribute information in the directory entry is refreshed only when the file is opened, or when GetFileInformationByHandle is called with the handle of a specific file.
Symbolic link behavior,ÄîIf the path points to a symbolic link, the function creates a hard link to the target.

Lasterror is set. Returns true on success.

83.31.6 CreateJunction(JunctionDir as folderitem, TargetDir as folderitem) as boolean

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new junction.
Example:

```
dim file as FolderItem = SpecialFolder.Desktop.Child("test")
dim nfile as FolderItem = SpecialFolder.System

if WindowsJunctionMBS.CreateJunction(file, nfile) then
MsgBox "OK"
end if
```

Notes: Lasterror is set. Returns true on success.

83.31.7 CreateSymbolicLink(NewFile as folderitem, TargetFile as folderitem) as boolean

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a symbolic link.
Example:

```
dim file as FolderItem = SpecialFolder.Desktop.Child("test.lnk")
dim nfile as FolderItem = SpecialFolder.Desktop.Child("test.txt")

if WindowsJunctionMBS.CreateSymbolicLink(file,nfile) then
MsgBox "Ok"
end if
```

Notes:

NewFile: The symbolic link to be created.
TargetFile: The name of the target for the symbolic link to be created. If TargetFile has a device name associated with it, the link is treated as an absolute link; otherwise, the link is treated as a relative link.
TargetIsDirectory: Indicates whether the link target, TargetFile, is a directory. (Pass true for a directory).

Returns true on success. False on failure. Lasterror is set.

If the function fails, the return value is zero. To get extended error information, call GetLastError.

Symbolic links can either be absolute or relative links. Absolute links are links that specify each portion of the path name; relative links are determined relative to where relative,Äìlink specifiers are in a specified path. Relative links are specified using the following conventions:

- Dot (. and ..) conventions,Äîfor example, "..\" resolves the path relative to the parent directory.
- Names with no slashes (\),Äîfor example, "tmp" resolves the path relative to the current directory.
- Root relative,Äîfor example, "\Windows\System32" resolves to "current drive:\Windows\System32".
- Current working directory,Äìrelative,Äîfor example, if the current working directory is C:\Windows\System32, "C:File.txt" resolves to "C:\Windows\System32\File.txt".

If you specify a current working directory,Äìrelative link, it is created as an absolute link, due to the way the current working directory is processed based on the user and the thread.

This function can fail due to missing permissions.
See also:

- 83.31.8 CreateSymbolicLink(NewFile as folderitem, TargetFile as string, TargetIsDirectory as Boolean) as boolean 16155

83.31.8 CreateSymbolicLink(NewFile as folderitem, TargetFile as string, TargetIsDirectory as Boolean) as boolean

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a symbolic link.
Notes:

NewFile: The symbolic link to be created.
TargetFile: The name of the target for the symbolic link to be created. If TargetFile has a device name associated with it, the link is treated as an absolute link; otherwise, the link is treated as a relative link.
TargetIsDirectory: Indicates whether the link target, TargetFile, is a directory. (Pass true for a directory).

Returns true on success. False on failure. Lasterror is set.

If the function fails, the return value is zero. To get extended error information, call GetLastError.

Symbolic links can either be absolute or relative links. Absolute links are links that specify each portion of the path name; relative links are determined relative to where relative,Äìlink specifiers are in a specified path. Relative links are specified using the following conventions:

- Dot (. and ..) conventions,Äîfor example, "..\" resolves the path relative to the parent directory.

- Names with no slashes (\),Äîfor example, "tmp" resolves the path relative to the current directory.
- Root relative,Äîfor example, "\Windows\System32" resolves to "current drive:\Windows\System32".
- Current working directory,Äìrelative,Äîfor example, if the current working directory is C:\Windows\System32, "C:File.txt" resolves to "C:\Windows\System32\File.txt".

If you specify a current working directory,Äìrelative link, it is created as an absolute link, due to the way the current working directory is processed based on the user and the thread.

This function can fail due to missing permissions.
See also:

- 83.31.7 CreateSymbolicLink(NewFile as folderitem, TargetFile as folderitem) as boolean 16154

83.31.9 DeleteJunction(JunctionDir as folderitem) as boolean

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Deletes the junction.
Example:

```
dim file as FolderItem = SpecialFolder.Desktop.Child("test")

if WindowsJunctionMBS.DeleteJunction(file) then
MsgBox "Ok"
end if
```

Notes: Folder is not deleted.

83.31.10 GetJunctionTarget(JunctionDir as folderitem) as string

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks whether a directory is a directory junction.
Example:

```
dim file as FolderItem = SpecialFolder.Desktop.Child("test")

msgbox WindowsJunctionMBS.GetJunctionTarget(file)
```

Notes: Lasterror is set. Returns path of junction target.

83.31.11 HardLinksForFile(path as string) as string()

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Finds all the hard links to the specified file.
Example:

```
dim path as string = "C:\Users\Christian\Desktop\test.xojo_binary_project"

dim oldfile as FolderItem = GetFolderItem(path, FolderItem.PathTypeNative)
dim newfile as FolderItem = GetFolderItem(path+".copy", FolderItem.PathTypeNative)

call WindowsJunctionMBS.CreateHardLink(newfile, oldfile)

dim paths() as string = WindowsJunctionMBS.HardLinksForFile(path)

MsgBox Join(paths, EndOfLine)
```

Notes:

Path: The name of the file.

Array has only one entry if file has no other hard links.

83.31.12 IsDirectoryJunction(JunctionDir as folderitem) as boolean

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks whether a directory is a directory junction.
Example:

```
dim file as FolderItem = SpecialFolder.Desktop.Child("test")

if WindowsJunctionMBS.IsDirectoryJunction(file) then
MsgBox "Is junction."
else
MsgBox "Is no junction."
end if
```

Notes:

Returns true if this file is a junction.
Lasterror is set.

83.31.13 Lasterror as Integer

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the last error code.
Notes:

Value is 0 for no error
-1 for some parameter error or not implemented inside plugin.
other values are windows error codes.

83.32 class WindowsVolumeInformationMBS

83.32.1 class WindowsVolumeInformationMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Detailed information on Windows volumes.

83.32.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.2pr1

83.32.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.2pr1

83.32.4 Methods

83.32.5 Constructor

MBS Win Plugin, Plugin Version: 5.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: A dummy constructor used only for automatic plugin testing.
Notes: Uses "C:" as path and does the same as the other constructor.
See also:

- 83.32.6 Constructor(path as string) 16159

83.32.6 Constructor(path as string)

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Fills the class with information about the given volume.
Example:

```
Function Window1.ToString(v as Variant) As string
return v
End Function

Sub Window1.Open
dim w as WindowsVolumeInformationMBS

w=new WindowsVolumeInformationMBS("C:\")
```

```
pname.text=w.name
pfsName.text=w.FileSystemName
pmaxLen.text=tostring(w.maxNameLength)
pcasePres.text=tostring(w.CaseIsPreserved)
pcasetiv.text=tostring(w.caseSensitive)
punicode.text=tostring(w.SupportsUnicodeFilenames)
pcompressed.text=tostring(w.IsCompressedVolume)
pfileCompress.text=tostring(w.SupportsFileCompression)
pfileEncrypt.text=tostring(w.SupportsFileEncryption)
pserial.text=hex(w.serial)
End Sub
```

Notes: Path must something like "C:\" or "\\MyServer\MyShare\".
See also:

- 83.32.5 Constructor 16159

83.32.7 Properties

83.32.8 CaseIsPreserved as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The file system preserves the case of filenames when it places a name on disk.
Notes: (Read only property)

83.32.9 CaseSensitive as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The file system supports case-sensitive filenames.
Notes: (Read only property)

83.32.10 FileSystemName as string

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the filesystem.
Notes:

For example "FAT" or "NTFS".
(Read only property)

83.32.11 IsCompressedVolume as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The specified volume is a compressed volume; for example a DoubleSpace volume.
Notes:

A volume is only SupportsFileCompression or IsCompressedVolume, but never both together.
(Read only property)

83.32.12 MaxNameLength as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The maximum length of a file name on this volume.
Notes:

Should be 255 on normal Windows disks.
(Read only property)

83.32.13 Name as string

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The volume name or label if the volume is named.
Notes: (Read only property)

83.32.14 Path as string

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The path used in the constructor.
Notes: (Read only property)

83.32.15 Serial as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The volume serial number.
Example:

```
dim w as WindowsVolumeInformationMBS
```

```
w=new WindowsVolumeInformationMBS("C:\")
MsgBox hex(w.Serial)
```

Notes:

This serial is set to a random name on formatting and can be changed later using some special tools.
(Read only property)

83.32.16 SupportsFileCompression as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The file system supports file-based compression.
Notes:

A volume is only SupportsFileCompression or IsCompressedVolume, but never both together.
(Read only property)

83.32.17 SupportsFileEncryption as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The file system supports the Encrypted File System (EPS).
Notes: (Read only property)

83.32.18 SupportsUnicodeFilenames as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The file system supports Unicode in filenames as they appear on disk.
Notes: (Read only property)

83.32.19 Valid as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Was the constructor successfull?
Notes:

May fail on bad file paths.
(Read only property)

Chapter 84

Folder Change Watching

84.1 class FolderChangedNotificationMBS

84.1.1 class FolderChangedNotificationMBS

MBS MacOSX Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: A class to receive notifications
Deprecated: This item is deprecated and should no longer be used. You can use FSEventsMBS instead.
Notes:

It's only for Mac OS X!
And not every application does send notifications around.
Please use FSEventsMBS for getting better results. This class is deprecated.

84.1.2 Blog Entries

- MBS Plugins updated for Xojo 2019r2

84.1.3 Blog Entries

- MBS Plugins updated for Xojo 2019r2

84.1.4 Methods

84.1.5 Directory as folderitem

MBS MacOSX Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Returns a folderitem for the directory observed.
Notes:

Returns nil on any error.
Lasterror is set.

84.1.6 Notify(dir as folderitem)

MBS MacOSX Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Notifies the system about a modification you made in the given directory.
Notes: Lasterror is set.

84.1.7 NotifyAll

MBS MacOSX Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Notifies the system about a modification you made on several directories.
Notes:

Used by installers which may change hundreds of directories.
Lasterror is set.

84.1.8 NotifyByPath(path as string)

MBS MacOSX Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Notifies the system about a modification you made in the given directory.
Notes:

Path should be a valid Mac OS X path.
Lasterror is set.

84.1.9 Subscribe(dir as folderitem)

MBS MacOSX Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Subscribes the class to observe a specified directory.
Notes: Lasterror is set.
See also:

- 84.1.10 Subscribe(dir as folderitem, flags as Integer)

84.1.10 Subscribe(dir as folderitem, flags as Integer)

MBS MacOSX Plugin, Plugin Version: 4.3, Platform: macOS, Targets: Desktop only.

Function: Subscribes the class to observe a specified directory.
Notes:

Lasterror is set.

Constants for the flags parameter:

kFNNoImplicitAllSubscription	1	Specify this option if you do not want to receive notifications on this subscription when FNNotifyAll is called; by default any subscription is also implicitly a subscription to wildcard notifications.
kFNNotifyInBackground	2	Specify this option if you want to receive notifications on this subscription when your application is in background. By default notifications will be coalesced and and delivered when your application becomes foreground.

See also:

- 84.1.9 Subscribe(dir as folderitem) 16166

84.1.11 SubscribeByPath(path as string)

MBS MacOSX Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Subscribes the class to observe a specified directory.
Notes:

Lasterror is set.
Path must be a valid Mac OS X path.
See also:

- 84.1.12 SubscribeByPath(path as string, flags as Integer) 16167

84.1.12 SubscribeByPath(path as string, flags as Integer)

MBS MacOSX Plugin, Plugin Version: 4.3, Platform: macOS, Targets: Desktop only.

Function: Subscribes the class to observe a specified directory.
Notes:

Lasterror is set.
Path must be a valid Mac OS X path.

Constants for the flags parameter:

kFNNoImplicitAllSubscription	1	Specify this option if you do not want to receive notifications on this subscription when FNNotifyAll is called; by default any subscription is also implicitly a subscription to wildcard notifications.
kFNNotifyInBackground	2	Specify this option if you want to receive notifications on this subscription when your application is in background. By default notifications will be coalesced and and delivered when your application becomes foreground.

See also:

- 84.1.11 SubscribeByPath(path as string) 16167

84.1.13 Unsubscribe

MBS MacOSX Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Unsubscribes the current directory.
Notes:

Lasterror is set.
This method is called for you by the destructor of the class.

84.1.14 Properties

84.1.15 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: The handle to the notification object.
Notes:

For toolbox development: It's a FNSubscriptionRef.
(Read and Write property)

84.1.16 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: The last error code reported.
Notes:

0 if successfull, -1 if the function is not available or parameters are bad.
Else a Mac OS error code.

(Read and Write property)

84.1.17 Events

84.1.18 DirectoryChanged(message as Integer, flags as Integer)

MBS MacOSX Plugin, Plugin Version: 3.3, Platform: macOS, Targets: .

Function: Out directory changed or some directories changed.
Notes:

An installer application may send a notification without a specified directory. In this case the event is called and the observed directory may not be changed!

message: An indication of what happened
flags: Options about delivery of the notification (typically 0)

Only one message value is defined:
const kFNDirectoryModifiedMessage = 1

84.2 class FSEventsMBS

84.2.1 class FSEventsMBS

MBS MacFrameworks Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class for the Mac OS X 10.5 feature called FSEvents which can be used to monitor a folder hierarchie for changes.
Notes:

The text below is from the Apple documentation (With some plugin related modifications). The plugin does currently not support the device related functions, but that can be added later if you need it.

This class provides a mechanism to notify clients about directories they ought to re-scan in order to keep their internal data structures up-to-date with respect to the true state of the file system. (For example, when files or directories are created, modified, or removed.) It sends these notifications "in bulk", possibly notifying the client of changes to several directories in a single callback. By using the API, clients can notice such changes quickly, without needing to resort to recursive polling/scanning of the file system.

Much like kqueues, the FSEvents API allows an application to find near-immediately when the contents of a particular directory has changed. However, unlike kqueues, the FSEvents API allows the application to monitor the whole file system hierarchy rooted at a specified directory (and still get precise per-directory notifications) – to do this with the kqueues API would require the client to monitor each directory individually.

Clients can register interest in a chunk of the filesystem hierarchy and will receive callbacks from their runloop whenever an event occurs that modifies the filesystem therein. The callback will indicate the exact directory in which the event occurred, so the client only has to scan that directory for updated info, not all its children. Clients can supply a "latency" parameter that tells how long to wait after an event occurs before forwarding it; this reduces the volume of events and reduces the chance that the client will see an "intermediate" state, like those that arise when doing a "safe save" of a file, creating a package, or downloading a file via Safari.

The lifecycle of an FSEventStream consists of these stages:

1. new FSEventsMBS(...) ->Creates an FSEventStream.

2. Start() ->Starts receiving events and servicing them from the client's runloop(s) using the callback supplied by the client when the stream was created. If a value was supplied for the sinceWhen parameter then "historical" events will be sent via your callback first, then a HistoryDone event, then "contemporary" events will be sent on an ongoing basis (as though you had supplied kFSEventStreamEventIdSinceNow for sinceWhen).

3. Stop() ->Stops the stream, ensuring the client's callback will not be called again for this stream. After stopping the stream, it can be restarted seamlessly via Start() without missing any events.

Once the event stream has been started, the following calls can be used:

GetLatestEventId() ->Initially, this returns the sinceWhen value supplied when the stream was created; thereafter, it is updated with the highest-numbered event ID mentioned in the current batch of events just before invoking the client's callback. Clients can store this value persistently as long as they also store the UUID for the device (obtained via UUIDForDevice()). Clients can then later supply this event ID as the sinceWhen parameter to Constructor(), as long as its UUID matches what you stored. This works because the FSEvents service stores events in a persistent, per-volume database. In this regard,the stream of event IDs acts like a global, system-wide clock, but bears no relation to any particular timebase.

FlushAsync() ->Requests that the fseventsd daemon send any events it has already buffered (via the latency parameter to one of the constructors). This occurs asynchronously; clients will not have received all the callbacks by the time this call returns to them.

FlushSync() ->Requests that the fseventsd daemon send any events it has already buffered (via the latency parameter to one of the constructors). Then runs the runloop in its private mode till all events that have occurred have been reported (via the clients callback). This occurs synchronously; clients will have received all the callbacks by the time this call returns to them.

GetDeviceBeingWatched() ->Gets the dev_t value supplied when the stream was created with Constructor(), otherwise 0.

PathsBeingWatched() ->Gets the paths supplied when the stream was created with one of the constructors.

Calls that can be made without a stream:

UUIDForDevice() ->Gets a UUID that uniquely identifies the FSEvents database for that volume. If the database gets discarded then its replacement will have a different UUID so that clients will be able to detect this situation and avoid trying to use event IDs that they stored as the sinceWhen parameter to the FSEventStreamCreate...() functions.

GetCurrentEventId() ->Gets the most recently generated event ID, system-wide (not just for one stream).

GetLastEventIdForDeviceBeforeTime() ->Gets the last event ID for the given device that was returned before the given time. This is conservative in the sense that if you then use the returned event ID as the sinceWhen parameter of Constructor() that you will not miss any events that happened since that time. On the other hand, you might receive some (harmless) extra events.

PurgeEventsForDeviceUpToEventId() ->Purges old events from the persistent per-volume database maintained by the service. You can combine this with GetLastEventIdForDeviceBeforeTime(). Can only be

called by the root user.

For Windows, you can use WindowsDirectoryWatcherMBS class.

84.2.4 Methods

84.2.5 Available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether the FSEvent functions are working.
Example:

```
if FSEventsMBS.Available then
MsgBox "available"
else
MsgBox "not available"
end if
```

Notes: True on Mac OS X 10.5 and false on other versions and operation systems.

84.2.6 Constructor(DeviceToWatch as Integer, path as string, sinceWhen as UInt64, latency as Double, flags as Integer)

MBS MacFrameworks Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new FS event stream object for a particular device with the given parameters.
Notes:

In order to start receiving callbacks you must also call Start().

deviceToWatch:
A dev_t corresponding to the device which you want to receive notifications from. Use GetDeviceID to get such a device ID.

pathsToWatchRelativeToDevice:
A string, specifying a relative path to a directory on the device identified by the dev parameter. The path should be relative to the root of the device. For example, if a volume "MyData" is mounted at "/Volumes/MyData" and you want to watch "/Volumes/MyData/Pictures/July", specify a path string of "Pictures/July". To watch the root of a volume pass a path of "" (the empty string).

sinceWhen:
The service will supply events that have happened after the given event ID. To ask for events "since now" pass the constant kFSEventStreamEventIdSinceNow. Often, clients will supply the highest-numbered FSEventStreamEventId they have received in a callback, which they can obtain via the GetLatestEventId() accessor. Do not pass zero for sinceWhen, unless you want to receive events for every directory modified since "the beginning of time" – an unlikely scenario.

latency:
The number of seconds the service should wait after hearing about an event from the kernel before passing it along to the client via its event. Specifying a larger value may result in more effective temporal coalescing, resulting in fewer callbacks.

flags:
Flags that modify the behavior of the stream being created.

On success the handle property is not 0.

84.2.7 Constructor(DeviceToWatch as Integer, paths() as string, sinceWhen as UInt64, latency as Double, flags as Integer)

MBS MacFrameworks Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new FS event stream object with the given parameters.
Notes:

In order to start receiving callbacks you must also call Start.

paths: The folders you want to watch. (more exactly the root folders of the folder hierarchies you want to watch)
sinceWhen: The service will supply events that have happened after the given event ID. To ask for events "since now" pass the constant kFSEventStreamEventIdSinceNow. Often, clients will supply the highest-numbered FSEventStreamEventId they have received in a callback, which they can obtain via the GetLatestEventId() accessor. Do not pass zero for sinceWhen, unless you want to receive events for every directory modified since "the beginning of time" – an unlikely scenario.
latency: The number of seconds the service should wait after hearing about an event from the kernel before passing it along to the client via its callback. Specifying a larger value may result in more effective temporal coalescing, resulting in fewer callbacks and greater overall efficiency.
flags: Flags that modify the behavior of the stream being created.

- 84.2.7 Constructor(DeviceToWatch as Integer, paths() as string, sinceWhen as UInt64, latency as Double, flags as Integer) 16174
- 84.2.8 Constructor(path as folderitem, sinceWhen as UInt64, latency as Double, flags as Integer) 16175
- 84.2.10 Constructor(paths() as folderitem, sinceWhen as UInt64, latency as Double, flags as Integer) 16176
- 84.2.11 Constructor(paths() as string, sinceWhen as UInt64, latency as Double, flags as Integer) 16177

84.2.10 Constructor(paths() as folderitem, sinceWhen as UInt64, latency as Double, flags as Integer)

MBS MacFrameworks Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new FS event stream object with the given parameters.
Notes:

In order to start receiving callbacks you must also call Start.

paths: The folders you want to watch. (more exactly the root folders of the folder hierarchies you want to watch)
sinceWhen: The service will supply events that have happened after the given event ID. To ask for events "since now" pass the constant kFSEventStreamEventIdSinceNow. Often, clients will supply the highest-numbered FSEventStreamEventId they have received in a callback, which they can obtain via the GetLatestEventId() accessor. Do not pass zero for sinceWhen, unless you want to receive events for every directory modified since "the beginning of time" – an unlikely scenario.
latency: The number of seconds the service should wait after hearing about an event from the kernel before passing it along to the client via its callback. Specifying a larger value may result in more effective temporal coalescing, resulting in fewer callbacks and greater overall efficiency.
flags: Flags that modify the behavior of the stream being created.

- 84.2.7 Constructor(DeviceToWatch as Integer, paths() as string, sinceWhen as UInt64, latency as Double, flags as Integer) 16174
- 84.2.8 Constructor(path as folderitem, sinceWhen as UInt64, latency as Double, flags as Integer) 16175
- 84.2.9 Constructor(path as string, sinceWhen as UInt64, latency as Double, flags as Integer) 16175
- 84.2.11 Constructor(paths() as string, sinceWhen as UInt64, latency as Double, flags as Integer) 16177

84.2.11 Constructor(paths() as string, sinceWhen as UInt64, latency as Double, flags as Integer)

MBS MacFrameworks Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new FS event stream object for a particular device with the given parameters.
Notes:

In order to start receiving callbacks you must also call Start().

deviceToWatch:
A dev_t corresponding to the device which you want to receive notifications from. Use GetDeviceID to get such a device ID.

pathsToWatchRelativeToDevice:
An array of strings, each specifying a relative path to a directory on the device identified by the dev parameter. The paths should be relative to the root of the device. For example, if a volume "MyData" is mounted at "/Volumes/MyData" and you want to watch "/Volumes/MyData/Pictures/July", specify a path string of "Pictures/July". To watch the root of a volume pass a path of "" (the empty string).

sinceWhen:
The service will supply events that have happened after the given event ID. To ask for events "since now" pass the constant kFSEventStreamEventIdSinceNow. Often, clients will supply the highest-numbered FSEventStreamEventId they have received in a callback, which they can obtain via the GetLatestEventId() accessor. Do not pass zero for sinceWhen, unless you want to receive events for every directory modified since "the beginning of time" – an unlikely scenario.

latency:
The number of seconds the service should wait after hearing about an event from the kernel before passing it along to the client via its event. Specifying a larger value may result in more effective temporal coalescing, resulting in fewer callbacks.

flags:
Flags that modify the behavior of the stream being created.

On success the handle property is not 0.

- 84.2.7 Constructor(DeviceToWatch as Integer, paths() as string, sinceWhen as UInt64, latency as Double, flags as Integer) 16174
- 84.2.8 Constructor(path as folderitem, sinceWhen as UInt64, latency as Double, flags as Integer) 16175
- 84.2.9 Constructor(path as string, sinceWhen as UInt64, latency as Double, flags as Integer) 16175
- 84.2.10 Constructor(paths() as folderitem, sinceWhen as UInt64, latency as Double, flags as Integer) 16176

84.2.12 Description as string

MBS MacFrameworks Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a string containing the description of the stream.
Notes: For debugging only.

84.2.13 DeviceBeingWatched as Integer

MBS MacFrameworks Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Fetches the dev_t supplied when the stream was created using a Device ID.
Notes: Returns 0 if there was an error.

84.2.14 ExclusionPaths as String()

MBS MacFrameworks Plugin, Plugin Version: 16.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries exclusion paths.

84.2.15 FlushAsync as UInt64

MBS MacFrameworks Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Flushes all events.
Notes:

Asks the FS Events service to flush out any events that have occurred but have not yet been delivered, due to the latency parameter that was supplied when the stream was created. This flushing occurs asynchronously – do not expect the events to have already been delivered by the time this call returns. FlushAsync() can only be called after the stream has been started, via Start().

Returns The largest event id of any event ever queued for this stream, otherwise zero if no events have been queued for this stream.

84.2.16 FlushSync

MBS MacFrameworks Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Flushes all events.
Notes: Asks the FS Events service to flush out any events that have occurred but have not yet been delivered, due to the latency parameter that was supplied when the stream was created. This flushing occurs synchronously – by the time this call returns, your callback will have been invoked for every event that had already occurred at the time you made this call. FlushSync() can only be called after the stream has been started, via Start().

84.2.17 GetAbsoluteTime(theDate as date) as Double

MBS MacFrameworks Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates an absolute time value based on the system time zone and the values in the date object.
Example:

```
dim d as new date

MsgBox str(FSEventsMBS.GetAbsoluteTime(d))
```

Notes: Returns 0 if the date parameter is nil or invalid.
See also:

- 84.2.18 GetAbsoluteTime(theDate as DateTime) as double 16179

84.2.18 GetAbsoluteTime(theDate as DateTime) as double

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates an absolute time value based on the system time zone and the values in the date object.
Notes: Returns 0 if the date parameter is nil or invalid.
See also:

• 84.2.17 GetAbsoluteTime(theDate as date) as Double 16179

84.2.19 GetCurrentEventId as UInt64

MBS MacFrameworks Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Fetches the most recently generated event ID, system-wide (not just for one stream).
Notes: By thetime it is returned to your application even newer events may have already been generated.

84.2.20 GetDeviceID(volume as folderitem) as Integer

MBS MacFrameworks Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the device ID for the volume the folderitem points to.
Example:

```
dim v as FolderItem

v=volume(0)

MsgBox str(FSEventsMBS.GetDeviceID(v))
```

Notes: Returns 0 on any error.

84.2.21 GetLastEventIdForDeviceBeforeTime(DeviceID as Integer, theTime as Double) as UInt64

MBS MacFrameworks Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Gets the last event ID for the given device that was returned before the given time.
Example:

```
dim d as new date

MsgBox str(FSEventsMBS.GetLastEventIdForDeviceBeforeTime(1,d.TotalSeconds))
```

Notes: This is conservative in the sense that if you then use the returned event ID as the sinceWhen parameter of the constructor that you will not miss any events that happened since that time. On the other hand, you might receive some (harmless) extra events. Beware: there are things that can cause this to fail to be accurate. For example, someone might change the system's clock (either backwards or forwards). Or an external drive might be used on different systems without perfectly synchronized clocks.

84.2.22 GetLatestEventId as UInt64

MBS MacFrameworks Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Fetches the sinceWhen property of the stream.
Notes: Upon receiving an event (and just before invoking the client's callback) this attribute is updated to the highest-numbered event ID mentioned in the event.

84.2.23 kFSEventStreamEventIdSinceNow as UInt64

MBS MacFrameworks Plugin, Plugin Version: 16.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: A special value to pass in if you mean the event ID for now.
Notes: Returns & hFFFFFFFFFFFFFFFF.

84.2.24 PathsBeingWatched as String()

MBS MacFrameworks Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array with the paths being watched.
Notes: Works only on the RB Versions which support arry creation in plugins.

84.2.25 PurgeEventsForDeviceUpToEventId(DeviceID as Integer, EventID as UInt64) as boolean

MBS MacFrameworks Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Purges old events from the persistent per-volume database maintained by the service.
Notes: Can only be called by the root user.

84.2.26 SetExclusionPaths(paths() as String) as boolean

MBS MacFrameworks Plugin, Plugin Version: 16.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets the exclusion paths.
Notes:

Sets directories to be filtered from the EventStream.
A maximum of 8 directories maybe specified.

Requires OS X 10.9 or newer.
Returns true on success or false on failure.

84.2.27 Show

MBS MacFrameworks Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Prints a description of the supplied stream to stderr.
Notes: For debugging only.

84.2.28 Start as boolean

MBS MacFrameworks Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Attempts to register with the FS Events service to receive events per the parameters in the stream.
Notes:

Once started, the stream can be stopped via Stop().

Returns true if it succeeds, otherwise False if it fails. It ought to always succeed, but in the event it does not then your code should fall back to performing recursive scans of the directories of interest as appropriate.

84.2.29 Stop

MBS MacFrameworks Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Unregisters with the FS Events service.
Notes: The client callback will not be called for this stream while it is stopped. Stop() can only be called if the stream has been started, via Start(). Once stopped, the stream can be restarted via Start(), at which point it will resume receiving events from where it left off (”sinceWhen”).

84.2.30 UUIDForDevice(DeviceID as Integer) as memoryblock

MBS MacFrameworks Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Gets the UUID associated with a device, or nil if not possible (for example, on read-only device).
Notes: A (non-nil) UUID uniquely identifies a given stream of FSEvents. If this (non-nil) UUID is different than one that you stored from a previous run then the event stream is different (for example, because

FSEvents were purged, because the disk was erased, or because the event ID counter wrapped around back to zero). A nil return value indicates that "historical" events are not available, i.e., you should not supply a "sinceWhen" value to the constructor other than kFSEventStreamEventIdSinceNow.

84.2.31 Properties

84.2.32 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal stream handle used.
Notes: (Read only property)

84.2.33 Running as Boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether this object has been started.
Notes:

This is set to true when you call Start and set to false when you call Stop.
(Read only property)

84.2.34 Events

84.2.35 Callback(index as Integer, count as Integer, path as string, flags as Integer, eventID as UInt64)

MBS MacFrameworks Plugin, Plugin Version: 8.1, Platform: macOS, Targets: .

Function: The callback received when something changed.
Notes:

The plugin receives count events. This event is called count times with index going from 0 to count-1.
Path is the unix file path for the folder. A path might be "/" if either of these flags is set for the event: kFSEventStreamEventFlagUserDropped, kFSEventStreamEventFlagKernelDropped.
Flags: Flags to specify why the event was called. If no flags are set, then there was some change in the directory at the specific path supplied in this event.
eventID: The event ID for this change. Each event ID comes from the most recent event being reported in the corresponding directory named in the path parameter. Event IDs all come from a single global source. They are guaranteed to always be increasing, usually in leaps and bounds, even across system reboots and moving drives from one machine to another. Just before invoking your callback your stream is updated so that calling the accessor GetLatestEventId() will return the largest of the values passed in the eventIds parameter; if you

were to stop processing events from this stream after this callback and resume processing them later from a newly-created FSEventStream, this is the value you would pass for the sinceWhen parameter to constructor.

84.2.36 Constants

84.2.37 kFSEventStreamCreateFlagFileEvents = 16

MBS MacFrameworks Plugin, Plugin Version: 11.3.

Function: One of the constants used to create a stream.
Notes:

Request file-level notifications. Your stream will receive events about individual files in the hierarchy you're watching instead of only receiving directory level notifications. Use this flag with care as it will generate significantly more events than without it.

Available in Mac OS X 10.7 or newer.

84.2.38 kFSEventStreamCreateFlagIgnoreSelf = 8

MBS MacFrameworks Plugin, Plugin Version: 11.3.

Function: One of the constants used to create a stream.
Notes:

Don't send events that were triggered by the current process. This is useful for reducing the volume of events that are sent. It is only useful if your process might modify the file system hierarchy beneath the path(s) being monitored. Note: this has no effect on historical events, i.e., those delivered before the HistoryDone sentinel event.

Available in Mac OS X 10.7 or newer.

84.2.39 kFSEventStreamCreateFlagMarkSelf = 32

MBS MacFrameworks Plugin, Plugin Version: 16.0.

Function: One of the constants used to create a stream.
Notes: Tag events that were triggered by the current process with the "OwnEvent" flag. This is only useful if your process might modify the file system hierarchy beneath the path(s) being monitored and you wish to know which events were triggered by your process. Note: this has no effect on historical events, i.e., those delivered before the HistoryDone sentinel event.

84.2.40 kFSEventStreamCreateFlagNoDefer = 2

MBS MacFrameworks Plugin, Plugin Version: 8.1.

Function: One of the constants used to create a stream.
Notes: Affects the meaning of the latency parameter. If you specify this flag and more than latency seconds have elapsed since the last event, your app will receive the event immediately. The delivery of the event resets the latency timer and any further events will be delivered after latency seconds have elapsed. This flag is useful for apps that are interactive and want to react immediately to changes but avoid getting swamped by notifications when changes are occurringin rapid succession. If you do not specify this flag, then when an event occurs after a period of no events, the latency timer is started. Any events that occur during the next latency seconds will be delivered as one group (including that first event). The delivery of the group of events resets the latency timer and any further events will be delivered after latency seconds. This is the default behavior and is more appropriate for background, daemon or batch processing apps.

84.2.41 kFSEventStreamCreateFlagNone = 0

MBS MacFrameworks Plugin, Plugin Version: 8.1.

Function: One of the constants used to create a stream.

84.2.42 kFSEventStreamCreateFlagUseCFTypes = 1

MBS MacFrameworks Plugin, Plugin Version: 8.1.

Function: One of the constants used to create a stream.
Notes: The plugin uses this one internally.

84.2.43 kFSEventStreamCreateFlagUseExtendedData = 64

MBS MacFrameworks Plugin, Plugin Version: 17.4.

Function: One of the constants used to create a stream.
Notes:

Requires kFSEventStreamCreateFlagUseCFTypes and instructs the framework to invoke your callback function with CF types but, instead of passing it a CFArrayMBS of CFStringMBSs, a CFArrayMBS of CFDictionaryMBSs is passed. Each dictionary will contain the event path and possibly other "extended data" about the event. See the kFSEventStreamEventExtendedData*Key definitions for the set of keys that may be set in the dictionary.
For macOS 10.13 or newer.

84.2.44 kFSEventStreamCreateFlagWatchRoot = 4

MBS MacFrameworks Plugin, Plugin Version: 8.1.

Function: One of the constants used to create a stream.
Notes: Request notifications of changes along the path to the path(s) you're watching. For example, with this flag, if you watch "/foo/bar" and it is renamed to "/foo/bar.old", you would receive a RootChanged event. The same is true if the directory "/foo" were renamed. The event you receive is a special event: the path for the event is the original path you specified, the flag kFSEventStreamEventFlagRootChanged is set and event ID is zero. RootChanged events are useful to indicate that you should rescan a particular hierarchy because it changed completely (as opposed to the things inside of it changing). If you want to track the current location of a directory, it is best to open the directory before creating the stream so that you have a file descriptor for it and can issue an F_GETPATH fcntl() to find the current path.

84.2.45 kFSEventStreamEventFlagEventIdsWrapped = 8

MBS MacFrameworks Plugin, Plugin Version: 8.1.

Function: One of the flag values you can get on the callback event.
Notes: If kFSEventStreamEventFlagEventIdsWrapped is set, it means the 64-bit event ID counter wrapped around. As a result, previously-issued event ID's are no longer valid arguments for the sinceWhen parameter of the constructors.

84.2.46 kFSEventStreamEventFlagHistoryDone = 16

MBS MacFrameworks Plugin, Plugin Version: 8.1.

Function: One of the flag values you can get on the callback event.
Notes: Denotes a sentinel event sent to mark the end of the "historical" events sent as a result of specifying a sinceWhen value in the constructor call that created this event stream. (It will not be sent if kFSEventStreamEventIdSinceNow was passed for sinceWhen.) After invoking the client's callback with all the "historical" events that occurred before now, the client's callback will be invoked with an event where the kFSEventStreamEventFlagHistoryDone flag is set. The client should ignore the path supplied in this callback.

84.2.47 kFSEventStreamEventFlagItemChangeOwner = & h00004000

MBS MacFrameworks Plugin, Plugin Version: 11.3.

Function: One of the flags passed when you use FileEvents and a file changes.
Notes: File changed owner.

84.2.48 kFSEventStreamEventFlagItemCloned = & h00400000

MBS MacFrameworks Plugin, Plugin Version: 17.4.

Function: One of the flags passed when you use FileEvents and a file changes.
Notes:

The file system object at the specific path supplied in this event is a clone or was cloned.
(This flag is only ever set if you specified the FileEvents flag when creating the stream.)

84.2.49 kFSEventStreamEventFlagItemCreated = & h00000100

MBS MacFrameworks Plugin, Plugin Version: 11.3.

Function: One of the flags passed when you use FileEvents and a file changes.
Notes: File created.

84.2.50 kFSEventStreamEventFlagItemFinderInfoMod = & h00002000

MBS MacFrameworks Plugin, Plugin Version: 11.3.

Function: One of the flags passed when you use FileEvents and a file changes.
Notes: File meta data in Finder info have changed.

84.2.51 kFSEventStreamEventFlagItemInodeMetaMod = & h00000400

MBS MacFrameworks Plugin, Plugin Version: 11.3.

Function: One of the flags passed when you use FileEvents and a file changes.
Notes: File meta data in inode have changed.

84.2.52 kFSEventStreamEventFlagItemIsDir = & h00020000

MBS MacFrameworks Plugin, Plugin Version: 11.3.

Function: One of the flags passed when you use FileEvents and a file changes.
Notes: File is a folder.

84.2.53 kFSEventStreamEventFlagItemIsFile = & h00010000

MBS MacFrameworks Plugin, Plugin Version: 11.3.

Function: One of the flags passed when you use FileEvents and a file changes.
Notes: File is a regular file.

84.2.54 kFSEventStreamEventFlagItemIsHardlink = & h00100000

MBS MacFrameworks Plugin, Plugin Version: 16.0.

Function: One of the flags passed when you use FileEvents and a file changes.
Notes:

Indicates the object at the specified path supplied in this event is a hard link.
(This flag is only ever set if you specified the FileEvents flag when creating the stream.)

84.2.55 kFSEventStreamEventFlagItemIsLastHardlink = & h00200000

MBS MacFrameworks Plugin, Plugin Version: 16.0.

Function: One of the flags passed when you use FileEvents and a file changes.
Notes:

Indicates the object at the specific path supplied in this event was the last hard link.
(This flag is only ever set if you specified the FileEvents flag when creating the stream.)

84.2.56 kFSEventStreamEventFlagItemIsSymlink = & h00040000

MBS MacFrameworks Plugin, Plugin Version: 11.3.

Function: One of the flags passed when you use FileEvents and a file changes.
Notes: File is a symlink.

84.2.57 kFSEventStreamEventFlagItemModified = & h00001000

MBS MacFrameworks Plugin, Plugin Version: 11.3.

Function: One of the flags passed when you use FileEvents and a file changes.
Notes: File modified.

84.2.58 kFSEventStreamEventFlagItemRemoved = & h00000200

MBS MacFrameworks Plugin, Plugin Version: 11.3.

Function: One of the flags passed when you use FileEvents and a file changes.
Notes: File deleted.

84.2.59 kFSEventStreamEventFlagItemRenamed = & h00000800

MBS MacFrameworks Plugin, Plugin Version: 11.3.

Function: One of the flags passed when you use FileEvents and a file changes.
Notes: File renamed.

84.2.60 kFSEventStreamEventFlagItemXattrMod = & h00008000

MBS MacFrameworks Plugin, Plugin Version: 11.3.

Function: One of the flags passed when you use FileEvents and a file changes.
Notes: Extended attributes changed.

84.2.61 kFSEventStreamEventFlagKernelDropped = 4

MBS MacFrameworks Plugin, Plugin Version: 8.1.

Function: One of the flag values you can get on the callback event.
Notes: The kFSEventStreamEventFlagUserDropped or kFSEventStreamEventFlagKernelDropped flags may be set in addition to the kFSEventStreamEventFlagMustScanSubDirs flag to indicate that a problem occurred in buffering the events (the particular flag set indicates where the problem occurred) and that the client must do a full scan of any directories (and their subdirectories, recursively) being monitored by this stream. If you asked to monitor multiple paths with this stream then you will be notified about all of them. Your code need only check for the kFSEventStreamEventFlagMustScanSubDirs flag; these flags (if present) only provide information to help you diagnose the problem.

84.2.62 kFSEventStreamEventFlagMount = 64

MBS MacFrameworks Plugin, Plugin Version: 8.1.

Function: One of the flag values you can get on the callback event.
Notes: Denotes a special event sent when a volume is mounted. The path in the event is the path to the newly-mounted volume. You will receive one of these notifications for every volume mount event inside the kernel (independent of DiskArbitration). Beware that a newly-mounted volume could contain an arbitrarily

large directory hierarchy. Avoid pitfalls like triggering a recursive scan of a non-local filesystem, which you can detect by checking for the absence of the MNT_LOCAL flag in the f_flags returned by statfs(). Also be aware of the MNT_DONTBROWSE flag that is set for volumes which should not be displayed by user interface elements.

84.2.63 kFSEventStreamEventFlagMustScanSubDirs = 1

MBS MacFrameworks Plugin, Plugin Version: 8.1.

Function: One of the flag values you can get on the callback event.
Notes: Your application must rescan not just the directory given in the event, but all its children, recursively. This can happen if there was a problem whereby events were coalesced hierarchically. For example, an event in /Users/jsmith/Music and an event in /Users/jsmith/Pictures might be coalesced into an event with this flag set and path=/Users/jsmith. If this flag is set you may be able to get an idea of whether the bottleneck happened in the kernel (less likely) or in your client (more likely) by checking for the presence of the informational flags kFSEventStreamEventFlagUserDropped or kFSEventStreamEventFlagKernelDropped.

84.2.64 kFSEventStreamEventFlagNone = 0

MBS MacFrameworks Plugin, Plugin Version: 8.1.

Function: The constant to specify that no flags are used.

84.2.65 kFSEventStreamEventFlagOwnEvent = & h00080000

MBS MacFrameworks Plugin, Plugin Version: 16.0.

Function: One of the flags passed when you use FileEvents and a file changes.
Notes:

Indicates the event was triggered by the current process.
(This flag is only ever set if you specified the MarkSelf flag when creating the stream.)

84.2.66 kFSEventStreamEventFlagRootChanged = 32

MBS MacFrameworks Plugin, Plugin Version: 8.1.

Function: One of the flag values you can get on the callback event.
Notes: Denotes a special event sent when there is a change to one of the directories along the path to one of the directories you asked to watch. When this flag is set, the event ID is zero and the path corresponds to one of the paths you asked to watch (specifically, the one that changed). The path may no longer exist because it or one of its parents was deleted or renamed. Events with this flag set will only be sent if you

passed the flag kFSEventStreamCreateFlagWatchRoot to the constructor when you created the stream.

84.2.67 kFSEventStreamEventFlagUnmount = 128

MBS MacFrameworks Plugin, Plugin Version: 8.1.

Function: One of the flag values you can get on the callback event.
Notes: Denotes a special event sent when a volume is unmounted. The path in the event is the path to the directory from which the volume was unmounted. You will receive one of these notifications for every volume unmount event inside the kernel. This is not a substitute for the notifications provided by the DiskArbitration framework; you only get notified after the unmount has occurred. Beware that unmounting a volume could uncover an arbitrarily large directory hierarchy, although Mac OS X never does that.

84.2.68 kFSEventStreamEventFlagUserDropped = 2

MBS MacFrameworks Plugin, Plugin Version: 8.1.

Function: One of the flag values you can get on the callback event.
Notes: The kFSEventStreamEventFlagUserDropped or kFSEventStreamEventFlagKernelDropped flags may be set in addition to the kFSEventStreamEventFlagMustScanSubDirs flag to indicate that a problem occurred in buffering the events (the particular flag set indicates where the problem occurred) and that the client must do a full scan of any directories (and their subdirectories, recursively) being monitored by this stream. If you asked to monitor multiple paths with this stream then you will be notified about all of them. Your code need only check for the kFSEventStreamEventFlagMustScanSubDirs flag; these flags (if present) only provide information to help you diagnose the problem.

84.3 class WindowsDirectoryChangeMBS

84.3.1 class WindowsDirectoryChangeMBS

MBS Win Plugin, Plugin Version: 12.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for directory change information.
Notes: For Mac, you can use FSEventsMBS class.

84.3.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.5pr4

84.3.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.5pr4

84.3.4 Properties

84.3.5 Action as Integer

MBS Win Plugin, Plugin Version: 12.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The type of change that has occurred.
Notes:

See kAction constants.
(Read and Write property)

84.3.6 Filename as String

MBS Win Plugin, Plugin Version: 12.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The file path.
Notes:

For speed reasons we give you string, not folderitem.
(Read and Write property)

84.3.7 Constants

84.3.8 kActionAdded = 1

MBS Win Plugin, Plugin Version: 12.0.

Function: One of the type constants.
Notes: The file was added to the directory.

84.3.9 kActionModified = 3

MBS Win Plugin, Plugin Version: 12.0.

Function: One of the type constants.
Notes: The file was modified. This can be a change in the time stamp or attributes.

84.3.10 kActionRemoved = 2

MBS Win Plugin, Plugin Version: 12.0.

Function: One of the type constants.
Notes: The file was removed from the directory.

84.3.11 kActionRenamedNewName = 5

MBS Win Plugin, Plugin Version: 12.0.

Function: One of the type constants.
Notes: The file was renamed and this is the new name.

84.3.12 kActionRenamedOldName = 4

MBS Win Plugin, Plugin Version: 12.0.

Function: One of the type constants.
Notes: The file was renamed and this is the old name.

84.4 class WindowsDirectoryWatcherMBS

84.4.1 class WindowsDirectoryWatcherMBS

MBS Win Plugin, Plugin Version: 12.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for watching folders on Windows for changes.
Notes: Create an object, add a few directories you want to watch and wait for changes being reported by NextChange method.

84.4.6 Methods

84.4.7 AddDirectory(path as folderitem, Recursive as boolean, Flags as Integer) as Boolean

MBS Win Plugin, Plugin Version: 12.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Schedules a directory for watching.
Notes:

path: Path to folder to watch.
Recursive: Whether to watch subdirectories.
Flags: What to watch for. Please combine kNotifyChange* constants with bitwiseOr.

Returns false on error and true on success.
You can add several directories to a watcher.
See also:

- 84.4.8 AddDirectory(path as string, Recursive as boolean, Flags as Integer) as Boolean 16195

84.4.8 AddDirectory(path as string, Recursive as boolean, Flags as Integer) as Boolean

MBS Win Plugin, Plugin Version: 12.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Schedules a directory for watching.
Notes:

path: Path to folder to watch.
Recursive: Whether to watch subdirectories.
Flags: What to watch for. Please combine kNotifyChange* constants with bitwiseOr.

Returns false on error and true on success.
You can add several directories to a watcher.
See also:

- 84.4.7 AddDirectory(path as folderitem, Recursive as boolean, Flags as Integer) as Boolean 16194

84.4.9 Constructor

MBS Win Plugin, Plugin Version: 12.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.

84.4.10 NextChange as WindowsDirectoryChangeMBS

MBS Win Plugin, Plugin Version: 12.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries changes.
Notes:

Call this method in a loop in a timer until it returns nil.
This way you can get all the changes.

84.4.11 Constants

84.4.12 kNotifyChangeAttributes = 4

MBS Win Plugin, Plugin Version: 12.0.

Function: One of the flag constants.
Notes: Any attribute change in the watched directory or subtree causes a change notification wait operation to return.

84.4.13 kNotifyChangeCreation = 64

MBS Win Plugin, Plugin Version: 12.0.

Function: One of the flag constants.
Notes: Any change to the creation time of files in the watched directory or subtree causes a change notification wait operation to return.

84.4.14 kNotifyChangeDirName = 2

MBS Win Plugin, Plugin Version: 12.0.

Function: One of the flag constants.
Notes: Any directory-name change in the watched directory or subtree causes a change notification wait operation to return. Changes include creating or deleting a directory.

84.4.15 kNotifyChangeFilename = 1

MBS Win Plugin, Plugin Version: 12.0.

Function: One of the flag constants.
Notes: Any file name change in the watched directory or subtree causes a change notification wait operation to return. Changes include renaming, creating, or deleting a file.

84.4.16 kNotifyChangeLastAccess = 32

MBS Win Plugin, Plugin Version: 12.0.

Function: One of the flag constants.
Notes:

Any change to the last access time of files in the watched directory or subtree causes a change notification wait operation to return.

Be careful: This flag is very performance consuming as you get a lot of events!

84.4.17 kNotifyChangeLastWrite = 16

MBS Win Plugin, Plugin Version: 12.0.

Function: One of the flag constants.
Notes: Any change to the last write-time of files in the watched directory or subtree causes a change notification wait operation to return. The operating system detects a change to the last write-time only when the file is written to the disk. For operating systems that use extensive caching, detection occurs only when the cache is sufficiently flushed.

84.4.18 kNotifyChangeSecurity = 256

MBS Win Plugin, Plugin Version: 12.0.

Function: One of the flag constants.
Notes: Any security-descriptor change in the watched directory or subtree causes a change notification wait operation to return.

84.4.19 kNotifyChangeSize = 8

MBS Win Plugin, Plugin Version: 12.0.

Function: One of the flag constants.
Notes: Any file-size change in the watched directory or subtree causes a change notification wait operation to return. The operating system detects a change in file size only when the file is written to the disk. For operating systems that use extensive caching, detection occurs only when the cache is sufficiently flushed.

84.5 class WindowsFolderChangeMBS

84.5.1 class WindowsFolderChangeMBS

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class to get notifications for folder changes on Windows.
Notes:

On Mac OS X 10.5 you can use the FSEventsMBS class and on older Mac OS X the class FolderChangedNotificationMBS.

See also newer WindowsDirectoryWatcherMBS class.

84.5.2 Blog Entries

- MBS REALbasic plug-in 9.6

84.5.3 Blog Entries

- MBS REALbasic plug-in 9.6

84.5.4 Methods

84.5.5 Constructor(path as folderitem, subtree as boolean, FilterFlags as Integer)

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor to start the notification service.
Notes:

path: The full path of the directory to be watched.
subtree: If this parameter is true, the function monitors the directory tree rooted at the specified directory; if it is false, it monitors only the specified directory.
FilterFlags: The filter conditions that satisfy a change notification wait. This parameter can be one or more of the constants in this class.

Requires Windows 2000.

84.5.6 Properties

84.5.7 ChangeCount as Integer

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of calls to the Changed event.
Notes: (Read and Write property)

84.5.8 Handle as Integer

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal handle of the notification.
Notes: (Read and Write property)

84.5.9 Events

84.5.10 Changed

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: .

Function: Something has changed in the given folder.

84.5.11 Constants

84.5.12 ChangeAttribute=4

MBS Win Plugin, Plugin Version: 8.5.

Function: One of the flags for the constructor.
Notes: Any attribute change in the watched directory or subtree causes a change notification wait operation to return.

84.5.13 ChangeDir=2

MBS Win Plugin, Plugin Version: 8.5.

Function: One of the flags for the constructor.
Notes: Any directory-name change in the watched directory or subtree causes a change notification wait

operation to return. Changes include creating or deleting a directory.

84.5.14 ChangeFile=1

MBS Win Plugin, Plugin Version: 8.5.

Function: One of the flags for the constructor.
Notes: Any file name change in the watched directory or subtree causes a change notification wait operation to return. Changes include renaming, creating, or deleting a file name.

84.5.15 ChangeSecurity=256

MBS Win Plugin, Plugin Version: 8.5.

Function: One of the flags for the constructor.
Notes: Any security-descriptor change in the watched directory or subtree causes a change notification wait operation to return.

84.5.16 ChangeSize=8

MBS Win Plugin, Plugin Version: 8.5.

Function: One of the flags for the constructor.
Notes: Any file-size change in the watched directory or subtree causes a change notification wait operation to return. The operating system detects a change in file size only when the file is written to the disk. For operating systems that use extensive caching, detection occurs only when the cache is sufficiently flushed.

84.5.17 ChangeWrite=16

MBS Win Plugin, Plugin Version: 8.5.

Function: One of the flags for the constructor.
Notes: Any change to the last write-time of files in the watched directory or subtree causes a change notification wait operation to return. The operating system detects a change to the last write-time only when the file is written to the disk. For operating systems that use extensive caching, detection occurs only when the cache is sufficiently flushed.

Chapter 85

Fonts

85.1 class WindowsFontDialogMBS

85.1.1 class WindowsFontDialogMBS

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop only.

Function: The class for the standard font dialog for Windows.
Notes:

Creates a Font dialog box that enables the user to choose attributes for a logical font. These attributes include a font family and associated font style, a point size, effects (underline, strikeout, and text color), and a script (or character set).

85.1.8 Methods

85.1.9 ChooseFont as Boolean

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop only.

Function: Creates a Font dialog box that enables the user to choose attributes for a logical font.
Notes:

Returns true if user pressed OK bitton.
Lasterror is set.
Returns false als sets lasterror to zero for cancel.

85.1.10 CloseDialog

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop only.

Function: Close the dialog.
Notes: Can be called from various events to close the dialog programmatically.

85.1.11 Query

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop only.

Function: Queries current dialog values into properties.

85.1.12 Update

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop only.

Function: Updates dialog with current properties.

85.1.13 Properties

85.1.14 Bold as Boolean

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop only.

Function: The bold value.
Notes: (Read and Write property)

85.1.15 CurrentFont as WindowsFontFamilyMBS

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop only.

Function: Returns current font.
Notes:

You may need to call Query to get current state from dialog.
This returns a copy, so changes to the font object are not going back.
(Read only property)

85.1.16 DialogHandle as Integer

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop only.

Function: Internal window handle for dialog.
Notes: (Read and Write property)

85.1.17 Effects as Boolean

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop only.

Function: Whether to show text effect controls.
Notes:

Causes the dialog box to display the controls that allow the user to specify strikeout, underline, and text color options. If this flag is set, you can use the textColor member to specify the initial text color. You can use the StrikeThrough and Underline members to specify the initial settings of the strikeout and underline check boxes. ChooseFont can use these members to return the user's selections.
(Read and Write property)

85.1.18 FontName as String

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop only.

Function: The font name of current font.
Notes: (Read and Write property)

85.1.19 FontType as Integer

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop only.

Function: The type of the selected font when ChooseFont returns.
Notes:

This member can be one or more of the following values:
FontTypeBold, FontTypeItalic, FontTypePrinter, FontTypeRegular, FontTypeScreen and FontTypeSimulator.
(Read and Write property)

85.1.20 ForceFontExist as Boolean

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop only.

Function: Whether to only allow existing fonts.
Notes:

ChooseFont should indicate an error condition if the user attempts to select a font or style that is not listed in the dialog box.
(Read and Write property)

85.1.21 Height as Integer

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop only.

Function: The height, in logical units, of the font's character cell or character.
Notes:

The character height value (also known as the em height) is the character cell height value minus the internal-leading value. The font mapper interprets the value specified in lfHeight in the following manner.

Value	Meaning
>0	The font mapper transforms this value into device units and matches it against the cell height of the available fonts.
0	The font mapper uses a default height value when it searches for a match.
<0	The font mapper transforms this value into device units and matches its absolute value against the character height of the available fonts.

For all height comparisons, the font mapper looks for the largest font that does not exceed the requested size.
This mapping occurs when the font is used for the first time.
(Read and Write property)

85.1.22 Italic as Boolean

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop only.

Function: Whether font is italic.
Notes: (Read and Write property)

85.1.23 LastError as Integer

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop only.

Function: The last error code.
Notes: (Read and Write property)

85.1.24 LimitSize as Boolean

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop only.

Function: Whether to limit font sizes.
Notes:

ChooseFont should select only font sizes within the range specified by the MinSize and MaxSize members.
(Read and Write property)

85.1.25 MaxSize as Integer

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop only.

Function: The maximum allowed font size.
Notes:

Setting this also sets LimitSize to true.
(Read and Write property)

85.1.26 MinSize as Integer

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop only.

Function: The minimum allowed font size.
Notes:

Setting this also sets LimitSize to true.
(Read and Write property)

85.1.27 NoFontSimulations as Boolean

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop only.

Function: Whether ChooseFont should not display or allow selection of font simulations.
Notes: (Read and Write property)

85.1.28 NoInitialFaceSelection as Boolean

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop only.

Function: Whether to show initial font selection.
Notes:

When initializing the dialog box controls, use this flag to prevent the dialog box from displaying an initial selection for the font name combo box. This is useful when there is no single font name that applies to the text selection.

(Read and Write property)

85.1.29 NoInitialSizeSelection as Boolean

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop only.

Function: Whether to show initialize size.
Notes:

When initializing the dialog box controls, use this flag to prevent the dialog box from displaying an initial selection for the Font Size combo box. This is useful when there is no single font size that applies to the text selection.
(Read and Write property)

85.1.30 NoInitialStyleSelection as Boolean

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop only.

Function: Whether to show initial style options.
Notes:

When initializing the dialog box controls, use this flag to prevent the dialog box from displaying an initial selection for the Font Style combo box. This is useful when there is no single font style that applies to the text selection.
(Read and Write property)

85.1.31 NoVectorFonts as Boolean

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop only.

Function: Whether ChooseFont should not allow vector font selections.
Notes: (Read and Write property)

85.1.32 NoVerticalFonts as Boolean

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop only.

Function: Whether the Font dialog box lists only horizontally oriented fonts.
Notes: (Read and Write property)

85.1.33 OnlyFixedPitchFonts as Boolean

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop only.

Function: Whether ChooseFont should enumerate and allow selection of only fixed-pitch fonts.
Notes: (Read and Write property)

85.1.34 OnlyTrueTypeFonts as Boolean

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop only.

Function: Whether ChooseFont should only enumerate and allow the selection of TrueType fonts.
Notes: (Read and Write property)

85.1.35 Parent as Variant

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop only.

Function: The parent window.
Notes:

The window that owns the dialog box. This member can be any valid window, or it can be nil if the dialog box has no owner.
Can reference a Window or DesktopWindow object.
(Read and Write property)

85.1.36 ScalableFontsOnly as Boolean

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop only.

Function: Whether to only allow scalable fonts.
Notes:

Specifies that ChooseFont should allow only the selection of scalable fonts. Scalable fonts include vector fonts, scalable printer fonts, TrueType fonts, and fonts scaled by other technologies.
(Read and Write property)

85.1.37 ShowApply as Boolean

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop only.

Function: Whether to show Apply button.
Notes:

Causes the dialog box to display the Apply button.
Clicking Apply button does trigger Apply event.
(Read and Write property)

85.1.38 ShowInactiveFonts as Boolean

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop only.

Function: Whether to display hidden fonts.
Notes:

ChooseFont can additionally display fonts that are set to Hide in Fonts Control Panel.
(Read and Write property)

85.1.39 Size as Double

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop only.

Function: The size of the font.
Notes: (Read and Write property)

85.1.40 Strikethrough as Boolean

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop only.

Function: Whether font is stroke through.
Notes: (Read and Write property)

85.1.41 TextColor as Color

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop only.

Function: The text color for the font.
Notes:

Only used if Effects is true.
(Read and Write property)

85.1.42 Underline as Boolean

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop only.

Function: Whether font is underlined.
Notes: (Read and Write property)

85.1.43 Weight as Integer

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop only.

Function: The weight of the font in the range 0 through 1000.
Notes:

For example, 400 is normal and 700 is bold. If this value is zero, a default weight is used.

The following values are defined for convenience.

Value	Weight
FW_DONTCARE	0
FW_THIN	100
FW_EXTRALIGHT	200
FW_ULTRALIGHT	200
FW_LIGHT	300
FW_NORMAL	400
FW_REGULAR	400
FW_MEDIUM	500
FW_SEMIBOLD	600
FW_DEMIBOLD	600
FW_BOLD	700
FW_EXTRABOLD	800
FW_ULTRABOLD	800
FW_HEAVY	900
FW_BLACK	900

(Read and Write property)

85.1.44 Events

85.1.45 Apply

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: .

Function: The user pressed apply.
Notes: Our plugin automatically calls query for you to get current values from dialog into properties.

85.1.46 BoundsChanged

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: .

Function: The bounds changed.

85.1.47 BoundsChanging

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: .

Function: The bounds are changing.

85.1.48 GotFocus

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: .

Function: The window got focus.

85.1.49 Hide

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: .

Function: The window is hidden.

85.1.50 Init

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: .

Function: The dialog initialized.
Notes: You can work with dialog via DialogHandle property.

85.1.51 LostFocus

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: .

Function: The window lost focus.

85.1.52 Show

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: .

Function: The window is shown.

85.1.53 Constants

85.1.54 FontTypeBold = & h100

MBS Win Plugin, Plugin Version: 17.3.

Function: One of the font type constants.
Notes: The font weight is bold.

85.1.55 FontTypeItalic = & h200

MBS Win Plugin, Plugin Version: 17.3.

Function: One of the font type constants.
Notes: The italic font attribute is set.

85.1.56 FontTypePrinter = & h4000

MBS Win Plugin, Plugin Version: 17.3.

Function: One of the font type constants.
Notes: The font is a printer font.

85.1.57 FontTypeRegular = & h400

MBS Win Plugin, Plugin Version: 17.3.

Function: One of the font type constants.
Notes: The font weight is normal.

85.1.58 FontTypeScreen = & h2000

MBS Win Plugin, Plugin Version: 17.3.

Function: One of the font type constants.
Notes: The font is a screen font.

85.1.59 FontTypeSimulator = & h8000

MBS Win Plugin, Plugin Version: 17.3.

Function: One of the font type constants.
Notes: The font is simulated by the graphics device interface (GDI).

85.2 class WindowsFontFamilyMBS

85.2.1 class WindowsFontFamilyMBS

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for details on Windows fonts.
Example:

```
dim lines(-1) as string

for each f as WindowsFontFamilyMBS in WindowsFontFamilyMBS.AllFonts
lines.append f.LogFontFullName
next

MsgBox Join(lines,EndOfLine)
```

Notes: The font list is the same as font() function in Xojo as far as we see.

85.2.4 Methods

85.2.5 AllFonts as WindowsFontFamilyMBS()

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries all fonts on this windows machine.
Example:

```
dim lines(-1) as string

for each f as WindowsFontFamilyMBS in WindowsFontFamilyMBS.AllFonts
lines.append f.LogFontFullName
next

MsgBox Join(lines,EndOfLine)
```

Notes:

Font list is queried from OS and not cached, so this should update if new fonts are activated.

Uses EnumFontFamiliesW function, see
https://docs.microsoft.com/en-us/windows/win32/api/wingdi/nf-wingdi-enumfontfamiliesw
See also:

- 85.2.6 AllFonts(fonts() as WindowsFontFamilyMBS) as Integer 16215

85.2.6 AllFonts(fonts() as WindowsFontFamilyMBS) as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries all fonts on this windows machine.
Notes:

Returns the number of fonts found and sets the font objects in the array.
if the array is too short, you get the first ubound(fonts)+1 fonts set there.

Font list is queried from OS and not cached, so this should update if new fonts are activated.
See also:

- 85.2.5 AllFonts as WindowsFontFamilyMBS() 16215

85.2.7 AllFontsEx as WindowsFontFamilyMBS()

MBS Win Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries all fonts on this windows machine.
Example:

```
dim lines(-1) as string

for each f as WindowsFontFamilyMBS in WindowsFontFamilyMBS.AllFontsEx
lines.append f.LogFontFullName
next

MsgBox Join(lines,EndOfLine)
```

Notes:

Font list is queried from OS and not cached, so this should update if new fonts are activated.

Uses EnumFontFamiliesExW function, see
https://docs.microsoft.com/en-us/windows/win32/api/wingdi/nf-wingdi-enumfontfamiliesexw

85.2.8 AxisMaxValue(index as Integer) as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The maximum value for this axis.
Notes:

Index is from zero to NumberOfAxes-1.
Only available for truetype fonts.

85.2.9 AxisMinValue(index as Integer) as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The minimum value for this axis.
Notes:

Index is from zero to NumberOfAxes-1.
Only available for truetype fonts.

85.2.10 AxisName(index as Integer) as string

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the axis.
Notes:

Index is from zero to NumberOfAxes-1.
Only available for truetype fonts.

85.2.11 DesignVectorValues(index as Integer) as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: An array specifying the values of the axes of a multiple master OpenType font.
Notes: This array corresponds to the axes* arrays.

85.2.12 FontsOfFamily(family as string) as WindowsFontFamilyMBS()

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries all fonts of the given font family on this windows machine.
See also:

- 85.2.13 FontsOfFamily(family as string, fonts() as WindowsFontFamilyMBS) as Integer 16217

85.2.13 FontsOfFamily(family as string, fonts() as WindowsFontFamilyMBS) as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries all fonts of the given font family on this windows machine.
Notes:

Returns the number of fonts found and sets the font objects in the array.
if the array is too short, you get the first ubound(fonts)+1 fonts set there.
See also:

- 85.2.12 FontsOfFamily(family as string) as WindowsFontFamilyMBS() 16217

85.2.14 Properties

85.2.15 CodepageBitfield as MemoryBlock

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: A 64-bit, code-page bitfield (CPB) that identifies a specific character set or code page. #
Notes:

Code pages are in the lower 32 bits of this bitfield. The high 32 are used for non-Windows code pages. For more information, see Code Page Bitfields.
http://msdn.microsoft.com/en-us/library/dd317754(v=vs.85).aspx

Only available for truetype fonts.
(Read only property)

85.2.16 FontType as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The type of the font.
Notes:

This parameter can be a combination of these values:

DEVICE_FONTTYPE
RASTER_FONTTYPE
TRUETYPE_FONTTYPE
(Read only property)

85.2.17 LogFontBold as Boolean

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether font is bold.
Notes:

Setting to false, will set Weight to 400, setting to true will set Weight to 700.
Returns true if Weight is equal or more than 700.
(Read only property)

85.2.18 LogFontCharSet as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The character set. The following values are predefined.
Notes:

The following values are predefined.

ANSI_CHARSET

BALTIC_CHARSET
CHINESEBIG5_CHARSET
DEFAULT_CHARSET
EASTEUROPE_CHARSET
GB2312_CHARSET
GREEK_CHARSET
HANGUL_CHARSET
MAC_CHARSET
OEM_CHARSET
RUSSIAN_CHARSET
SHIFTJIS_CHARSET
SYMBOL_CHARSET
TURKISH_CHARSET
VIETNAMESE_CHARSET

Korean language edition of Windows:

JOHAB_CHARSET

Middle East language edition of Windows:

ARABIC_CHARSET
HEBREW_CHARSET

Thai language edition of Windows:

THAI_CHARSET

The OEM_CHARSET value specifies a character set that is operating-system dependent.

DEFAULT_CHARSET is set to a value based on the current system locale. For example, when the system locale is English (United States), it is set as ANSI_CHARSET.

Fonts with other character sets may exist in the operating system. If an application uses a font with an unknown character set, it should not attempt to translate or interpret strings that are rendered with that font.

This parameter is important in the font mapping process. To ensure consistent results, specify a specific character set. If you specify a typeface name in the lfFaceName member, make sure that the lfCharSet value matches the character set of the typeface specified in lfFaceName.
(Read only property)

85.2.19 LogFontClipPrecision as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The clipping precision.
Notes:

The clipping precision defines how to clip characters that are partially outside the clipping region. It can be one or more of the following values.

For more information about the orientation of coordinate systems, see the description of the nOrientation parameter.

Value	Meaning
CLIP_CHARACTER_PRECIS	Not used.
CLIP_DEFAULT_PRECIS	Specifies default clipping behavior.
CLIP_DFA_DISABLE	Windows XP SP1: Turns off font association for the font. Note that this flag is not guaranteed to have any effect on any platform after Windows Server 2003.
CLIP_EMBEDDED	You must specify this flag to use an embedded read-only font.
CLIP_LH_ANGLES	When this value is used, the rotation for all fonts depends on whether the orientation of the coordinate system is left-handed or right-handed. If not used, device fonts always rotate counterclockwise, but the rotation of other fonts is dependent on the orientation of the coordinate system.
CLIP_MASK	Not used.
CLIP_DFA_OVERRIDE	Turns off font association for the font. This is identical to CLIP_DFA_DISABLE, but it can have problems in some situations; the recommended flag to use is CLIP_DFA_DISABLE.
CLIP_STROKE_PRECIS	Not used by the font mapper, but is returned when raster, vector, or TrueType fonts are enumerated. For compatibility, this value is always returned when enumerating fonts.
CLIP_TT_ALWAYS	Not used.

(Read only property)

85.2.20 LogFontEscapement as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The angle, in tenths of degrees, between the escapement vector and the x-axis of the device.
Notes:

The escapement vector is parallel to the base line of a row of text.

When the graphics mode is set to GM_ADVANCED, you can specify the escapement angle of the string independently of the orientation angle of the string's characters.

When the graphics mode is set to GM_COMPATIBLE, LogFontEscapement specifies both the escapement and orientation. You should set LogFontEscapement and LogFontOrientation to the same value.
(Read only property)

85.2.21 LogFontFaceName as String

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string that specifies the typeface name of the font.
Notes: (Read only property)

85.2.22 LogFontFullName as String

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The unique name of the font.
Notes:

For example, ABC Font Company TrueType Bold Italic Sans Serif.
(Read only property)

85.2.23 LogFontHeight as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The height, in logical units, of the font's character cell or character.
Notes:

The character height value (also known as the em height) is the character cell height value minus the internal-leading value. The font mapper interprets the value specified in lfHeight in the following manner.

Value	Meaning
>0	The font mapper transforms this value into device units and matches it against the cell height of the available fonts.
0	The font mapper uses a default height value when it searches for a match.
<0	The font mapper transforms this value into device units and matches its absolute value against the character height of the available fonts.

For all height comparisons, the font mapper looks for the largest font that does not exceed the requested size.

This mapping occurs when the font is used for the first time.
(Read only property)

85.2.24 LogFontItalic as Boolean

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: An italic font if set to true.
Notes: (Read only property)

85.2.25 LogFontOrientation as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The angle, in tenths of degrees, between each character's base line and the x-axis of the device.
Notes: (Read only property)

85.2.26 LogFontOutPrecision as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The output precision.
Notes:

The output precision defines how closely the output must match the requested font's height, width, character orientation, escapement, pitch, and font type. It can be one of the following values.

Applications can use the OUT_DEVICE_PRECIS, OUT_RASTER_PRECIS, OUT_TT_PRECIS, and OUT_PS_ONLY_PRECIS values to control how the font mapper chooses a font when the operating system contains more than one font with a specified name. For example, if an operating system contains a font named Symbol in raster and TrueType form, specifying OUT_TT_PRECIS forces the font mapper to choose the TrueType version. Specifying OUT_TT_ONLY_PRECIS forces the font mapper to choose a TrueType font, even if it must substitute a TrueType font of another name.
(Read only property)

85.2.27 LogFontPitchAndFamily as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The pitch and family of the font.
Notes:

Value	Meaning
OUT_CHARACTER_PRECIS	Not used.
OUT_DEFAULT_PRECIS	Specifies the default font mapper behavior.
OUT_DEVICE_PRECIS	Instructs the font mapper to choose a Device font when the system contains multiple fonts with the same name.
OUT_OUTLINE_PRECIS	This value instructs the font mapper to choose from TrueType and other outline-based fonts.
OUT_PS_ONLY_PRECIS	Instructs the font mapper to choose from only PostScript fonts. If there are no PostScript fonts installed in the system, the font mapper returns to default behavior.
OUT_RASTER_PRECIS	Instructs the font mapper to choose a raster font when the system contains multiple fonts with the same name.
OUT_STRING_PRECIS	This value is not used by the font mapper, but it is returned when raster fonts are enumerated.
OUT_STROKE_PRECIS	This value is not used by the font mapper, but it is returned when TrueType, other outline-based fonts, and vector fonts are enumerated.
OUT_TT_ONLY_PRECIS	Instructs the font mapper to choose from only TrueType fonts. If there are no TrueType fonts installed in the system, the font mapper returns to default behavior.
OUT_TT_PRECIS	Instructs the font mapper to choose a TrueType font when the system contains multiple fonts with the same name.

The two low-order bits specify the pitch of the font and can be one of the following values.

DEFAULT_PITCH
FIXED_PITCH
VARIABLE_PITCH

Bits 4 through 7 of the member specify the font family and can be one of the following values.

FF_DECORATIVE
FF_DONTCARE
FF_MODERN
FF_ROMAN
FF_SCRIPT
FF_SWISS

The proper value can be obtained by using the Boolean OR operator to join one pitch constant with one family constant.

Font families describe the look of a font in a general way. They are intended for specifying fonts when the exact typeface desired is not available. The values for font families are as follows.

(Read only property)

Value	Meaning
FF_DECORATIVE	Novelty fonts. Old English is an example.
FF_DONTCARE	Use default font.
FF_MODERN	Fonts with constant stroke width (monospace), with or without serifs. Monospace fonts are usually modern. Pica, Elite, and CourierNew are examples.
FF_ROMAN	Fonts with variable stroke width (proportional) and with serifs. MS Serif is an example.
FF_SCRIPT	Fonts designed to look like handwriting. Script and Cursive are examples.
FF_SWISS	Fonts with variable stroke width (proportional) and without serifs. MS Sans Serif is an example.

85.2.28 LogFontQuality as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The output quality.
Notes:

The output quality defines how carefully the graphics device interface (GDI) must attempt to match the logical-font attributes to those of an actual physical font. It can be one of the following values.

Value	Meaning
ANTIALIASED_QUALITY	Font is always antialiased if the font supports it and the size of the font is not too small or too large.
CLEARTYPE_QUALITY	If set, text is rendered (when possible) using ClearType antialiasing method. See Remarks for more information.
DEFAULT_QUALITY	Appearance of the font does not matter.
DRAFT_QUALITY	Appearance of the font is less important than when PROOF_QUALITY is used. For GDI raster fonts, scaling is enabled, which means that more font sizes are available, but the quality may be lower. Bold, italic, underline, and strikeout fonts are synthesized if necessary.
NONANTIALIASED_QUALITY	Font is never antialiased.
PROOF_QUALITY	Character quality of the font is more important than exact matching of the logical-font attributes. For GDI raster fonts, scaling is disabled and the font closest in size is chosen. Although the chosen font size may not be mapped exactly when PROOF_QUALITY is used, the quality of the font is high and there is no distortion of appearance. Bold, italic, underline, and strikeout fonts are synthesized if necessary.

(Read only property)

85.2.29 LogFontScript as String

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The script, that is, the character set, of the font. For example, Cyrillic.
Notes: (Read only property)

85.2.30 LogFontStrikeOut as Boolean

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: A strikeout font if set to true.
Notes: (Read only property)

85.2.31 LogFontStyle as String

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The style of the font. For example, Bold Italic.
Notes: (Read only property)

85.2.32 LogFontUnderline as Boolean

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: An underlined font if set to true.
Notes: (Read only property)

85.2.33 LogFontWeight as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The weight of the font in the range 0 through 1000.
Notes:

For example, 400 is normal and 700 is bold. If this value is zero, a default weight is used.

The following values are defined for convenience.

(Read only property)

Value	Weight
FW_DONTCARE	0
FW_THIN	100
FW_EXTRALIGHT	200
FW_ULTRALIGHT	200
FW_LIGHT	300
FW_NORMAL	400
FW_REGULAR	400
FW_MEDIUM	500
FW_SEMIBOLD	600
FW_DEMIBOLD	600
FW_BOLD	700
FW_EXTRABOLD	800
FW_ULTRABOLD	800
FW_HEAVY	900
FW_BLACK	900

85.2.34 LogFontWidth as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The average width, in logical units, of characters in the font.
Notes:

If LogFontWidth is zero, the aspect ratio of the device is matched against the digitization aspect ratio of the available fonts to find the closest match, determined by the absolute value of the difference.
(Read only property)

85.2.35 NumberOfAxes as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of axes for a specified multiple master font.
Notes:

The axes arrays contains information on all the axes of a multiple master font.
Only available for truetype fonts.
(Read only property)

85.2.36 NumberOfDesignVectors as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The design vectors are used by an application to specify values for the axes of a multiple master

font.
Notes: (Read only property)

85.2.37 TextMetricAscent as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The ascent (units above the base line) of characters.
Notes: (Read only property)

85.2.38 TextMetricAverageCharWidth as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The average width of characters in the font (generally defined as the width of the letter x).
Notes:

This value does not include overhang required for bold or italic characters.
(Read only property)

85.2.39 TextMetricAverageWidth as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The average width of characters in the font, in notional units.
Notes:

This value should be compared with the value of the TextMetricSizeEM member.
Only available for truetype fonts.
(Read only property)

85.2.40 TextMetricBreakChar as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The value of the character to be used to define word breaks for text justification.
Notes: (Read only property)

85.2.41 TextMetricCellHeight as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The height, in notional units, of the font.
Notes:

This value should be compared with the value of the TextMetricSizeEM member.
Only available for truetype fonts.
(Read only property)

85.2.42 TextMetricCharSet as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The character set of the font.
Notes: (Read only property)

85.2.43 TextMetricDefaultChar as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The value of the character to be substituted for characters that are not in the font.
Notes: (Read only property)

85.2.44 TextMetricDescent as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The descent (units below the base line) of characters.
Notes: (Read only property)

85.2.45 TextMetricDigitizedAspectX as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The horizontal aspect of the device for which the font was designed.
Notes: (Read only property)

85.2.46 TextMetricDigitizedAspectY as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The vertical aspect of the device for which the font was designed.
Notes:

The ratio of the tmDigitizedAspectX and tmDigitizedAspectY members is the aspect ratio of the device for which the font was designed.
(Read only property)

85.2.47 TextMetricExternalLeading as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The amount of extra leading (space) that the application adds between rows.
Notes:

Since this area is outside the font, it contains no marks and is not altered by text output calls in either OPAQUE or TRANSPARENT mode. The designer may set this member to zero.
(Read only property)

85.2.48 TextMetricFirstChar as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The value of the first character defined in the font.
Notes: (Read only property)

85.2.49 TextMetricFlags as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies whether the font is italic, underscored, outlined, bold, and so forth.
Notes:

May be any reasonable combination of the following values.

Only available for truetype fonts.
(Read only property)

Bit	Name	Meaning
0	NTM_ITALIC	italic
5	NTM_BOLD	bold
8	NTM_REGULAR	regular
16	NTM_NONNEGATIVE_AC	no glyph in a font at any size has a negative A or C space.
17	NTM_PS_OPENTYPE	PostScript OpenType font
18	NTM_TT_OPENTYPE	TrueType OpenType font
19	NTM_MULTIPLEMASTER	multiple master font
20	NTM_TYPE1	Type 1 font
21	NTM_DSIG	font with a digital signature. This allows traceability and ensures that the font has been tested and is not corrupted

85.2.50 TextMetricHeight as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The height (ascent + descent) of characters.
Notes: (Read only property)

85.2.51 TextMetricInternalLeading as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The amount of leading (space) inside the bounds set by the tmHeight member.
Notes:

Accent marks and other diacritical characters may occur in this area. The designer may set this member to zero.
(Read only property)

85.2.52 TextMetricItalic as Boolean

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: An italic font if set to true.
Notes: (Read only property)

85.2.53 TextMetricLastChar as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The value of the last character defined in the font.
Notes: (Read only property)

85.2.54 TextMetricMaxCharWidth as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The width of the widest character in the font.
Notes: (Read only property)

85.2.55 TextMetricOverhang as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The extra width per string that may be added to some synthesized fonts.
Notes:

When synthesizing some attributes, such as bold or italic, graphics device interface (GDI) or a device may have to add width to a string on both a per-character and per-string basis. For example, GDI makes a string bold by expanding the spacing of each character and overstriking by an offset value; it italicizes a font by shearing the string. In either case, there is an overhang past the basic string. For bold strings, the overhang is the distance by which the overstrike is offset. For italic strings, the overhang is the amount the top of the font is sheared past the bottom of the font.

The TextMetricOverhang member enables the application to determine how much of the character width returned by a GetTextExtentPoint32 function call on a single character is the actual character width and how much is the per-string extra width. The actual width is the extent minus the overhang.
(Read only property)

85.2.56 TextMetricPitchAndFamily as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The pitch and family of the selected font.
Notes:

The low-order bit (bit 0) specifies the pitch of the font. If it is 1, the font is variable pitch (or proportional). If it is 0, the font is fixed pitch (or monospace). Bits 1 and 2 specify the font type. If both bits are 0, the font is a raster font; if bit 1 is 1 and bit 2 is 0, the font is a vector font; if bit 1 is 0 and bit 2 is set, or if both bits are 1, the font is some other type. Bit 3 is 1 if the font is a device font; otherwise, it is 0.

The four high-order bits designate the font family. The TextMetricPitchAndFamily member can be combined with the hexadecimal value 0xF0 by using the bitwise AND operator and can then be compared with the font family names for an identical match. For more information about the font families, see LogFontPitchAndFamily.

(Read only property)

85.2.57 TextMetricSizeEM as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The size of the em square for the font.
Notes:

This value is in notional units (that is, the units for which the font was designed).
Only available for truetype fonts.
(Read only property)

85.2.58 TextMetricStruckOut as Boolean

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: An strikeout font if set to true.
Notes: (Read only property)

85.2.59 TextMetricUnderlined as Boolean

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: An underline font if set to true.
Notes: (Read only property)

85.2.60 TextMetricWeight as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The weight of the font.
Notes: (Read only property)

85.2.61 UnicodeSubsetBitfield as MemoryBlock

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: A 128-bit Unicode subset bitfield (USB) identifying up to 126 Unicode subranges.
Notes:

Each bit, except the two most significant bits, represents a single subrange. The most significant bit is always 1 and identifies the bitfield as a font signature; the second most significant bit is reserved and must be 0. Unicode subranges are numbered in accordance with the ISO 10646 standard. For more information, see Unicode Subset Bitfields.
http://msdn.microsoft.com/en-us/library/dd374090(v=vs.85).aspx

Only available for truetype fonts.
(Read only property)

85.2.62 Constants

85.2.63 ANSI_CHARSET = 0

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontCharSet property.

85.2.64 ANTIALIASED_QUALITY = 4

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontQuality property.
Notes: Enables antialiasing for the font. The display driver must support antialised text for this setting to work.

85.2.65 ARABIC_CHARSET = 178

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontCharSet property.

85.2.66 BALTIC_CHARSET = 186

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontCharSet property.

85.2.67 CHINESEBIG5_CHARSET = 136

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontCharSet property.

85.2.68 CLIP_CHARACTER_PRECIS = 1

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontClipPrecision property.
Notes: Not used.

85.2.69 CLIP_DEFAULT_PRECIS = 0

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontClipPrecision property.
Notes: Specifies default clipping behavior.

85.2.70 CLIP_EMBEDDED = 128

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the clip constants.

85.2.71 CLIP_LH_ANGLES = 16

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the clip constants.

85.2.72 CLIP_MASK = & h15

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the clip constants.

85.2.73 CLIP_STROKE_PRECIS = 2

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontClipPrecision property.
Notes: Not used by the font mapper, but is returned when raster, vector, or TrueType fonts are enumerated.

85.2.74 CLIP_TT_ALWAYS = 32

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the clip constants.

85.2.75 DEFAULT_CHARSET = 1

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontCharSet property.

85.2.76 DEFAULT_PITCH = 0

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the pitch constants.

85.2.77 DEFAULT_QUALITY = 0

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontQuality property.
Notes: Appearance of the font does not matter.

85.2.78 DEVICE_FONTTYPE = & h002

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the FontType property.

85.2.79 DRAFT_QUALITY = 1

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontQuality property.
Notes: For GDI raster fonts, scaling is enabled, which means that more font sizes are available, but the quality may be lower. Bold, italic, underline, and strikeout fonts are synthesized if necessary.

85.2.80 EASTEUROPE_CHARSET = 238

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontCharSet property.

85.2.81 FF_DECORATIVE = 80

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontPitchAndFamily property.
Notes: Novelty fonts, for example, Old English.

85.2.82 FF_DONTCARE = 0

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontPitchAndFamily property.
Notes: Do not care or do not know.

85.2.83 FF_MODERN = 48

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontPitchAndFamily property.
Notes: Fonts with constant stroke width (monospace), with or without serifs. Monospace fonts are usually modern, for example, Pica, Elite, and Courier New.

85.2.84 FF_ROMAN = 16

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontPitchAndFamily property.
Notes: Fonts with variable stroke width (proportional) and with serifs, for example, Serif.

85.2.85 FF_SCRIPT = 64

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontPitchAndFamily property.
Notes: Fonts designed to look like handwriting, for example, Script and Cursive.

85.2.86 FF_SWISS = 32

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontPitchAndFamily property.
Notes: Fonts with variable stroke width (proportional) and without serifs, for example, Sans Serif.

85.2.87 FIXED_PITCH = 1

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the pitch constants.

85.2.88 FW_BLACK = 900

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontWeight property.

85.2.89 FW_BOLD = 700

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontWeight property.

85.2.90 FW_DEMIBOLD = 600

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontWeight property.

85.2.91 FW_DONTCARE = 0

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontWeight property.

85.2.92 FW_EXTRABOLD = 800

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontWeight property.

85.2.93 FW_EXTRALIGHT = 200

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontWeight property.

85.2.94 FW_HEAVY = 900

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontWeight property.

85.2.95 FW_LIGHT = 300

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontWeight property.

85.2.96 FW_MEDIUM = 500

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontWeight property.

85.2.97 FW_NORMAL = 400

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontWeight property.

85.2.98 FW_REGULAR = 400

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontWeight property.

85.2.99 FW_SEMIBOLD = 600

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontWeight property.

85.2.100 FW_THIN = 100

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontWeight property.

85.2.101 FW_ULTRABOLD = 800

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontWeight property.

85.2.102 FW_ULTRALIGHT = 200

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontWeight property.

85.2.103 GB2312_CHARSET = 134

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontCharSet property.

85.2.104 GREEK_CHARSET = 161

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontCharSet property.

85.2.105 HANGEUL_CHARSET = 129

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontCharSet property.

85.2.106 HANGUL_CHARSET = 129

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontCharSet property.

85.2.107 HEBREW_CHARSET = 177

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontCharSet property.

85.2.108 JOHAB_CHARSET = 130

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontCharSet property.

85.2.109 MAC_CHARSET = 77

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontCharSet property.

85.2.110 MONO_FONT = 8

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the pitch constants.

85.2.111 NONANTIALIASED_QUALITY = 3

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontQuality property.
Notes: Forces use of draft quality when the HKEY_LOCAL_MACHINE\System\GDI\Fontsmoothing registry key is present.

85.2.112 NTM_BOLD = & h00000020

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the flag constants for the TextMetricFlags property.
Notes: bold

85.2.113 NTM_DSIG = & h00200000

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the flag constants for the TextMetricFlags property.
Notes: Font with a digital signature. This allows traceability and ensures that the font has been tested and is not corrupted.

85.2.114 NTM_ITALIC = & h00000001

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the flag constants for the TextMetricFlags property.
Notes: italic

85.2.115 NTM_MULTIPLEMASTER = & h00080000

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the flag constants for the TextMetricFlags property.
Notes: multiple master font

85.2.116 NTM_NONNEGATIVE_AC = & h00010000

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the flag constants for the TextMetricFlags property.
Notes: no glyph in a font at any size has a negative A or C space.

85.2.117 NTM_PS_OPENTYPE = & h00020000

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the flag constants for the TextMetricFlags property.
Notes: PostScript OpenType font

85.2.118 NTM_REGULAR = & h00000040

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the flag constants for the TextMetricFlags property.
Notes: regular

85.2.119 NTM_TT_OPENTYPE = & h00040000

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the flag constants for the TextMetricFlags property.
Notes: TrueType OpenType font

85.2.120 NTM_TYPE1 = & h00100000

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the flag constants for the TextMetricFlags property.
Notes: Type 1 font

85.2.121 OEM_CHARSET = 255

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontCharSet property.

85.2.122 OUT_CHARACTER_PRECIS = 2

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontOutPrecision property.

85.2.123 OUT_DEFAULT_PRECIS = 0

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontOutPrecision property.
Notes: Specifies the default font mapper behavior.

85.2.124 OUT_DEVICE_PRECIS = 5

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontOutPrecision property.

85.2.125 OUT_OUTLINE_PRECIS = 8

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontOutPrecision property.

85.2.126 OUT_PS_ONLY_PRECIS = 10

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontOutPrecision property.

85.2.127 OUT_RASTER_PRECIS = 6

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontOutPrecision property.
Notes: Instructs the font mapper to choose a raster font when the system contains multiple fonts with the same name.

85.2.128 OUT_SCREEN_OUTLINE_PRECIS = 9

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontOutPrecision property.

85.2.129 OUT_STRING_PRECIS = 1

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontOutPrecision property.
Notes: This value is not used by the font mapper, but it is returned when raster fonts are enumerated.

85.2.130 OUT_STROKE_PRECIS = 3

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontOutPrecision property.

85.2.131 OUT_TT_ONLY_PRECIS = 7

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontOutPrecision property.

85.2.132 OUT_TT_PRECIS = 4

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontOutPrecision property.

85.2.133 PROOF_QUALITY = 2

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontQuality property.

85.2.134 RASTER_FONTTYPE = & h0001

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the FontType property.

85.2.135 RUSSIAN_CHARSET = 204

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontCharSet property.

85.2.136 SHIFTJIS_CHARSET = 128

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontCharSet property.

85.2.137 SYMBOL_CHARSET = 2

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontCharSet property.

85.2.138 THAI_CHARSET = 222

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontCharSet property.

85.2.139 TRUETYPE_FONTTYPE = & h004

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the FontType property.

85.2.140 TURKISH_CHARSET = 162

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontCharSet property.

85.2.141 VARIABLE_PITCH = 2

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the pitch constants.

85.2.142 VIETNAMESE_CHARSET = 163

MBS Win Plugin, Plugin Version: 11.0.

Function: One of the constants for the LogFontCharSet property.

Chapter 86

GameKit

86.1 class GameKitMBS

86.1.1 class GameKitMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The central plugin class for GameKit.
Notes:

Events from various objects end here, so you can implement them in a central subclass of GameKitMBS.
For most events, we carry a "tag as Variant" parameter, so you can pass a window, some object or whatever value you need.

Also we defined that matchdata is a dictionary. This way you can store various values inside including arrays (e.g. array of variant). As data is serialized over the network, you can't pass Xojo objects.

The plugin makes sure that all events run on the main thread, so please make sure you don't block main thread.
Please create only one instance of your GameKitMBS subclass.

GameKit classes are available in OS X v10.8 and later.
Please review Apple's documentation for more details and a guide.

86.1.6 Methods

86.1.7 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: True if the class is available.
Notes: Should always be true on Mac OS X 10.8 and newer.

86.1.8 GKErrorDomain as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The Game Kit framework error domain.
Notes: For NSErrorMBS.

86.1.9 showBannerWithTitle(title as string, message as string, duration as Double, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Displays a banner to the player for a specified period of time.
Notes:

title: The title of the banner.
message: A secondary message to be displayed.
duration: The amount of time that the banner should be displayed to the player.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.NotificationBannerCompleted event.
See also:

- 86.1.10 showBannerWithTitle(title as string, message as string, tag as Variant) 16251

86.1.10 showBannerWithTitle(title as string, message as string, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Displays a banner to the player.
Notes:

title: The title of the banner.
message: A secondary message to be displayed.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.NotificationBannerCompleted event.
See also:

- 86.1.9 showBannerWithTitle(title as string, message as string, duration as Double, tag as Variant) 16250

86.1.11 Events

86.1.12 acceptInviteCompleted(match as GKTurnBasedMatchMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: .

Function: The event to be called after the match is successfully created.
Notes:

match: A newly initialized match object that contains a list of players for the match. If an error occurred, this value is nil.
error: If an error occurred, this error object describes the error. If the operation was completed successfully, the value is nil.

Called by GKTurnBasedMatchMBS.acceptInvite.
Available on Mac OS X 10.8.2 and newer.

86.1.13 achievementViewControllerDidFinish(viewController as Variant)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called when the user dismisses the achievements screen. (required)
Notes:

viewController: The achievement view controller whose interface was dismissed by the player. (GKAchievementViewControllerMBS)

Your should dismiss the view controller. If your game paused any gameplay or other activities, it can restart those services in this method.

86.1.14 addPlayersToMatchCompleted(MatchMaker as GKMatchmakerMBS, match as GKMatchMBS, matchRequest as GKMatchRequestMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called by GKMatchmakerMBS.addPlayersToMatch when matchmaking completes.
Notes: error: If matchmaking was successful, this parameter contains nil. Otherwise, this parameter holds an error object that describes the error that occurred.

86.1.15 authenticateCompleted(localPlayer as GKLocalPlayerMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called by GKLocalPlayerMBS.authenticate when the player has authenticated or when an error occurs.
Notes: error: This parameter is nil if the player successfully authenticated. Otherwise, it contains an error object that describes the error that occurred.

86.1.16 authenticateHandler(LocalPlayer as GKLocalPlayerMBS, viewController as NSViewControllerMBS, error as NSErrorMBS, tag as Variant, viewControllerHandle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: .

Function: The event called when game center needs authentication.
Notes:

viewController: This parameter is nil if the authentication process is complete. Otherwise, it contains a view controller that your game should display to the player.
error: This parameter contains an error object that describes any error that occurred.

Your game should authenticate the player as early as possible after launching, ideally as soon as you can present a user interface to the player. For example, your game may be launched because the player accepted an invitation to join a match or to take a turn in a turn-based match, so you want your game to authenticate the player and process the match invitation as quickly as possible. After you set a handler, authentication begins automatically and is repeated when your game moves to the background and then back to the foreground.

During the authentication process, Game Kit calls your handler one or more times to handle specific authentication events. Your handler must handle three kinds of events:

- If the device does not have an authenticated player, Game Kit passes a view controller to your authenticate handler. When presented, this view controller displays the authentication user interface. Your game should pause other activities that require user interaction (such as your game loop), present this view controller and then return. When the player finishes interacting with it, the view controller is dismissed automatically.
- If the authentication process succeeded, theGKLocalPlayer singleton object's authenticated property is set to true and the object's other properties are set to match those of the connected player.
- If the authentication process failed, the GKLocalPlayer singleton object's authenticated property is set to false and the object's other properties are cleared.

Each time the authentication handler is called, the data stored in the local player singleton object may have changed. A new player may have logged into the device or the player may have simply logged out from Game Center. Because of both of these possibilities, your authentication handler must be prepared to update any other objects that assume that a particular player is logged in. For more information, see "Authenticating the Local Player in a Multitasking Application" in Game Center Programming Guide.

Available on Mac OS X 10.8.2 and newer.

86.1.17 challengesViewControllerDidFinish(viewController as Variant)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: .

Function: The challengesViewController did finish.
Notes:

Called by GKChallengesViewControllerMBS if needed.
Available on Mac OS X 10.8.2 and newer.

86.1.18 chooseBestHostPlayerCompleted(match as GKMatchMBS, playerID as string, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: .

Function: Called when GKMatchMBS.chooseBestHostPlayer completes.
Notes:

playerID: The player identifier for the player with the best estimated network performance, or nil if a player could not currently be determined.

Available on Mac OS X 10.8.2 and newer.

86.1.19 declineInviteCompleted(match as GKTurnBasedMatchMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: .

Function: The event to be called after the match is successfully created.
Notes:

error: If an error occurred, this error object describes the error. If the operation was completed successfully, the value is nil.

Called by GKTurnBasedMatchMBS.declineInvite.
Available on Mac OS X 10.8.2 and newer.

86.1.20 didRequestMatchWithOtherPlayers(players() as GKPlayerMBS)

MBS MacFrameworks Plugin, Plugin Version: 15.0, Platform: macOS, Targets: .

Function: Initiates a match from Game Center with the requested players. (required)
Notes:

player: The GKPlayer object containing the current player,Äôs information.
playersToInvite: An array of GKPlayer objects containing the player identifiers to invite to the match.

When this method is called, you should create a new match using the player identifiers provided and present a GKTurnBasedMatchmakerViewController.

Available in OS X v10.10 and later.

86.1.21 endMatchInTurnWithMatchDataCompleted(match as GKTurnBasedMatchMBS, matchData as Dictionary, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called by GKTurnBasedMatchMBS.endMatchInTurnWithMatchData after the match is successfully ended.
Notes: If an error occurred, this error object describes the error. If the operation was completed successfully, the value is nil.

86.1.22 endTurnWithNextParticipant(match as GKTurnBasedMatchMBS, nextParticipant as GKTurnBasedParticipantMBS, matchData as Dictionary, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called by GKTurnBasedMatchMBS.endTurnWithNextParticipant after the data is uploaded to Game Center.
Notes: If an error occurred, this error object describes the error. If the operation was completed successfully, the value is nil.

86.1.23 endTurnWithNextParticipantsCompleted(match as GKTurnBasedMatchMBS, nextParticipants() as GKTurnBasedParticipantMBS, timeout as Double, matchData as Dictionary, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: .

Function: The event to be called after the data is uploaded to the server.
Notes:

Called by GKTurnBasedMatchMBS.participantQuitInTurnWithOutcome.

error: If an error occurred, this error object describes the error. If the operation was completed successfully, the value is nil.

Available on Mac OS X 10.8.2 and newer.

86.1.24 findMatchForRequestCompleted(MatchMaker as GKMatchmakerMBS, request as GKMatchRequestMBS, match as GKMatchMBS, TurnBasedMatch as GKTurnBasedMatchMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called when the match has been created.
Notes:

This is either called by GKMatchmakerMBS.findMatchForRequest or GKTurnBasedMatchMBS.findMatchForRequest.

match: If matchmaking was successful, this parameter contains the created match. Otherwise, this parameter is nil.
error: If matchmaking was successful, this parameter contains nil. Otherwise, this parameter holds an error object that describes the error that occurred.

86.1.25 findPlayersForHostedMatchRequestCompleted(MatchMaker as GKMatchmakerMBS, request as GKMatchRequestMBS, playerIDs() as string, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called by GKMatchmakerMBS.findPlayersForHostedMatchRequest when the match has been created.
Notes:

players: If matchmaking was successful, this parameter contains an array of players to connect into the match. Otherwise, this parameter is nil.
error: If matchmaking was successful, this parameter contains nil. Otherwise, this parameter holds an error object that describes the error that occurred.

86.1.26 friendRequestComposeViewControllerDidFinish(viewController as Variant)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: The compose view has finished.
Notes: viewController: The GKFriendRequestComposeViewControllerMBS object.

86.1.27 gameCenterViewControllerDidFinish(gameCenterViewController as Variant)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: .

Function: Called when gameCenterViewController did finish.
Notes: Available on Mac OS X 10.8.2 and newer.

86.1.28 handleInviteFromGameCenter(playersToInvite() as string)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Sent when the local player receives an invitation to join a new turn-based match.
Notes:

playersToInvite: An array of player identifiers for the players to initially invite to the game.

When you receive this message, your game should create a new GKMatchRequestMBS object and assign the playersToInvite parameter to the match request's playersToInvite property. Then, your game can either call the GKTurnBasedMatchMBS class method findMatchForRequest to find a match programmatically or it can use the request to instantiate a new GKTurnBasedMatchmakerViewControllerMBS object to show a user interface to the player.

86.1.29 handleMatchEnded(match as GKTurnBasedMatchMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Sent when a match the local player is participating in has ended.
Notes:

match: The match that just ended.

When you receive this message, it should display the match's final results to the player and allow the player the option of saving or removing the match data from Game Center.

86.1.30 handleTurnEventForMatch(match as GKTurnBasedMatchMBS, didBecomeActive as boolean)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Sent when it is the local player's turn to act in a turn-based match.
Notes:

match: A match object containing the current state of the match.

When you receive this message, the player has accepted a push notification for a match already in progress. Your game should end whatever task it was performing and switch to the match information provided by the match object. For more information on handling player actions in a turn-based match, see GKTurnBasedMatch Class Reference.

didBecomeActive: New parameter valid on Mac OS X 10.8.2 and newer.

86.1.31 Invited(MatchMaker as GKMatchmakerMBS, acceptedInvite as GKInviteMBS, playersToInvite() as string)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called by GKMatchmakerMBS when an invitation is received from another player.
Notes:

acceptedInvite: The invitation accepted by the player.
playersToInvite: A list of player identifiers for additional players to invite into the game.

An game responds to an invitation by allocating and initializing a GKMatchmakerViewControllerMBS object, passing the invitation object and the list of player identifiers as parameters. For more information, see Game Kit Programming Guide.

If your game receives an invitation while your game is running, it should clean up any existing gameplay (including disconnecting from any current matches) and then process the invitation.

86.1.32 inviteeResponseHandler(MatchRequest as GKMatchRequestMBS, PlayerID as string, response as Integer, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: .

Function: The event called when an response from an invited player is returned to your game.
Notes:

playerID: The identifier for the player.
response: The nature of the response. See GKInviteeResponse* constants.

Available on Mac OS X 10.8.2 and newer.

86.1.33 leaderboardViewControllerDidFinish(viewController as Variant)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: The leaderboard view has finished.
Notes: viewController: The GKLeaderboardViewControllerMBS object.

86.1.34 loadAchievementDescriptionsCompleted(achievements() as GKAchievementDescriptionMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called by GKAchievementDescriptionMBS.loadAchievementDescriptions when the download is completed.
Notes:

descriptions: An array of description objects for the achievements in your game. If an error occurred, this value may be non-empty. In this case, the array holds whatever descriptions were downloaded by Game Kit before the error occurred.
error: If an error occurred, this error object describes the error. If the operation completed successfully, this value is nil.

86.1.35 loadAchievementsCompleted(achievements() as GKAchievementMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called by GKAchievementMBS.loadAchievements when the download is completed.
Notes:

achievements: An array of achievement objects that represents all progress reported to Game Center for the local player. If an error occurred, this parameter may be non-empty, in which case the array holds whatever achievement information Game Kit was able to fetch.
error: If an error occurred, this object describes the error. If the operation completed successfully, this value is nil.

86.1.36 loadCategoriesCompleted(categories() as string, titles() as string, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called by GKLeaderboardMBS.loadCategories when the categories have been retrieved from the server.
Notes:

categories: An array of strings that provides the categories to your game. If an error occurred, this value may be non-empty. In this case, the array holds whatever data Game Kit was able to download before the error occurred.
titles: An array of strings that provides localized titles for each category. If an error occurred, this value may be non-empty. In this case, the array holds whatever data Game Kit was able to download before the error occurred.
error: If an error occurred, this error object describes the error. If the operation completed successfully, the value is nil.

86.1.37 loadDefaultLeaderboardCategoryIDCompleted(LocalPlayer as GKLocalPlayerMBS, categoryID as string, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: .

Function: The loadDefaultLeaderboardCategoryID method completed.
Notes:

categoryID: The category ID string for the local player's default leaderboard.
error: If an error occurred, this parameter holds an error object that explains the error. Otherwise, the value of this parameter is nil.

Available on Mac OS X 10.8.2 and newer.

86.1.38 loadFriendPlayersCompleted(localPlayer as GKLocalPlayerMBS, friendPlayers() as GKPlayerMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 15.0, Platform: macOS, Targets: .

Function: The event called by GKLocalPlayerMBS.loadFriendPlayers.
Notes:

friendPlayers: An array of GKPlayer objects containing the player identifiers for the players that are friends of the local player. If an error occurred, this value can be non-nil. In that case, the array contains the data that Game Kit was able to download before the error occurred.
error: If an error occurred, this parameter holds an error object that explains the error. Otherwise, the value of this parameter is nil.

86.1.39 loadFriendsCompleted(localPlayer as GKLocalPlayerMBS, friends() as string, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called by GKLocalPlayerMBS.loadFriends when the request completes.
Notes:

friends: An array of player identifiers for the players that are friends of the local player. If an error occurred, this value can be non-empty. In that case, the array contains the data that Game Kit was able to download before the error occurred.
error: If an error occurred, this parameter holds an error object that explains the error. Otherwise, the value of this parameter is nil.

86.1.40 loadImageCompleted(description as GKAchievementDescriptionMBS, image as NSImageMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called by GKAchievementDescriptionMBS.loadImage when the download is completed.
Notes:

image: The downloaded image. If an error occurred, this value is nil.
error: If an error occurred, this error object describes the error. If the operation completed successfully, this value is nil.

86.1.41 loadLeaderboardsCompleted(Leaderboards() as GKLeaderboardMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: .

Function: Leaderboards have been loaded.
Notes: Available on Mac OS X 10.8.2 and newer.

86.1.42 loadMatchDataCompleted(match as GKTurnBasedMatchMBS, matchData as Dictionary, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called by GKTurnBasedMatchMBS.loadMatchData after the match data has been retrieved from the server.
Notes:

matchData: The data stored on Game Center that reflects the current state of the match. If an error occurred, this value is nil.
error: If an error occurred, this error object describes the error. If the operation was completed successfully, the value is nil.

86.1.43 loadMatchesCompleted(matches() as GKTurnBasedMatchMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called by GKTurnBasedMatchMBS.loadMatches after the matches are retrieved from the server.
Notes:

matches: An array of match objects that hold the requested matches. If an error occurred, this value may be non-empty. In this case, the array holds whatever match data could be retrieved from Game Center before the error occurred.
error: If an error occurred, this error object describes the error. If the operation was completed successfully, the value is nil.

86.1.44 loadMatchWithIDCompleted(TurnBasedMatch as GKTurnBasedMatchMBS, matchID as string, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: .

Function: The event to be called after the match is retrieved from the server.
Notes:

Called when GKTurnBasedMatchMBS.loadMatchWithID finishes.

matchID: The identifier for the turn-based match.
match: If the operation completed successfully, this parameter holds the match. If an error occurred, the value is nil.
error: If an error occurred, this error object describes the error. If the operation was completed successfully, the value is nil.

Available on Mac OS X 10.8.2 and newer.

86.1.45 loadPhotoForSizeCompleted(player as GKPlayerMBS, size as Integer, photo as NSImageMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called by GKPlayerMBS.loadPhotoForSize when the player data is retrieved from Game Center.
Notes:

photo: An image for the player. If an error occurred, this may still be non-nil. In this case, the image reflects an image cached by Game Kit on the device.
error: If an error occurred, this error object describes the error. If the operation completed successfully, this is nil.

86.1.46 loadPlayersForIdentifiersCompleted(identifiers() as string, players() as GKPlayerMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called by GKPlayerMBS.loadPlayersForIdentifiers when the player data is retrieved from Game Center.
Notes:

players: An array of GKPlayer objects, one per identifier. If an error occurred, this may be non-empty. In that case, the array holds whatever data Game Kit was able to retrieve for the requested players.
error: If an error occurred, this error object describes the error. If the operation completed successfully, this is nil.

86.1.47 loadReceivedChallengesCompleted(challenges() as GKChallengeMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: .

Function: Called when loadReceivedChallenges finished.
Notes:

challenges: An array of challenge objects that represents all challenges made to the local player. If an error occurred, this parameter may be non-nil, in which case the array holds whatever challenge information Game Kit was able to fetch.
error: If an error occurred, this object describes the error. If the operation completed successfully, this value is nil.

Available on Mac OS X 10.8.2 and newer.

86.1.48 loadScoresCompleted(Leaderboard as GKLeaderboardMBS, scores() as GKScoreMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called by GKLeaderboardMBS.loadScores after the scores are retrieved from the server.
Notes:

scores: An array of score objects that hold the requested scores. If an error occurred, this value may be non-nil. In this case, the array holds whatever score data could be retrieved from Game Center before the error occurred.
error: If an error occurred, this error object describes the error. If the operation was completed successfully,

the value is nil.

86.1.49 localPlayerDidCompleteChallenge(challenge as GKChallengeMBS)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: .

Function: Called when the local player has completed one of their challenges, triggered by a push notification from the server.
Notes:

Received only while the game is running.
Available on Mac OS X 10.8.2 and newer.

86.1.50 localPlayerDidReceiveChallenge(challenge as GKChallengeMBS)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: .

Function: Called when the local player has received a challenge, triggered by a push notification from the server.
Notes:

Received only while the game is running.
Available on Mac OS X 10.8.2 and newer.

86.1.51 localPlayerDidSelectChallenge(challenge as GKChallengeMBS)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: .

Function: Called when the user clicks a challenge notification banner or the "Play Now" button for a challenge inside Game Center, causing the game to launch.
Notes:

Also called when the user clicks a challenge banner inside the game.
Available on Mac OS X 10.8.2 and newer.

86.1.52 matchConnectionWithPlayerFailed(match as GKMatchMBS, playerID as string, error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called when the match fails to connect to a player.
Notes:

match: The match that received the error.
player: The identifier for the player whose connection failed.
error: The error that occurred.

This method is called if the match was unable to send a transmission to another player in the match.

86.1.53 matchDidChangeState(match as GKMatchMBS, playerID as string, state as Integer)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called when a player connects to or disconnects from the match.
Notes:

match: The match that the player is connected to.
player: The identifier for the player whose state changed.
state: The state the player moved to. (see constants in GKMatchMBS)

Your game implements this method to be notified when players connect to or disconnect from the match.one

86.1.54 matchDidFailWithError(match as GKMatchMBS, error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called when the match cannot connect to any other players.
Notes:

match: The match that received the error.
error: The error that occurred.

This method is called if the match cannot connect to any other players associated with the match. It usually means a serious networking error has occurred.

86.1.55 matchDidReceiveData(match as GKMatchMBS, data as Dictionary, playerID as string)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called when data is received from a player. (required)
Notes:

match: The match that received the data.

data: The data sent by the player.
player: The string identifier for the player that sent the data.

Important: Data received from other players should be treated as untrusted data. Be sure to validate the data you receive from the match and write your code carefully to avoid security vulnerabilities. See the Secure Coding Guide for more information.

86.1.56 matchEnded(player as GKPlayerMBS, match as GKTurnBasedMatchMBS)

MBS MacFrameworks Plugin, Plugin Version: 15.0, Platform: macOS, Targets: .

Function: Called when the match has ended. (required)
Notes:

player: The GKPlayer object containing the current player,Äôs information.
match: The GKTurnBasedMatch object containing the current game data.

Available in OS X v10.10 and later.

86.1.57 matchForInviteCompleted(Matchmaker as GKMatchmakerMBS, invite as GKInviteMBS, match as GKMatchMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: .

Function: Called by matchForInvite on completion.
Notes:

Match provides the new match object on success.

Possible reasons for error:
1. Communications failure.
2. Invite cancelled.
Available on Mac OS X 10.8.2 and newer.

86.1.58 matchmakerViewControllerDidFailWithError(viewController as Variant, error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called when the view controller encounters an unrecoverable error. (required)
Notes:

viewController: The view controller that received the error. (GKMatchmakerViewControllerMBS)
error: An error object that describes the error.

86.1.59 matchmakerViewControllerDidFindMatch(viewController as Variant, match as GKMatchMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called when a peer-to-peer match is found.
Notes:

viewController: The view controller that performed the matchmaking. (GKMatchmakerViewControllerMBS)
match: A completed match.

This method is called when the view controller's hosted property is false. Although optional in the protocol, if your game attaches a delegate to the view controller for a peer-to-peer match, the view controller expects your game to provide an implementation of this method.

86.1.60 matchmakerViewControllerDidFindPlayers(viewController as Variant, playerIDs() as string)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called when a hosted match is found.
Notes:

viewController: The view controller that performed the matchmaking. (GKMatchmakerViewControllerMBS)
players: An array of identifier strings for the matched players.

This method is called when the view controller's hosted property is true. Although optional in the protocol, if your game attaches a delegate to the view controller for a hosted match, the view controller expects your game to provide an implementation of this method.

The view controller returns the list of players to your game by calling this method. Your game is responsible for connecting these players to your own server and then using that server to relay messages between the players.

86.1.61 matchmakerViewControllerDidReceiveAcceptFromHostedPlayer(viewController as Variant, playerID as string)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called when a player in a hosted match accepts the invitation.
Notes:

viewController: The view controller that accepted the invitation. (GKMatchmakerViewControllerMBS)
playerID: The identifier of the accepting player.

After a player accepts an invitation, that player's device should connect to your server. Once the connection is established, your game should call the view controller's setHostedPlayer method to update the player's connection status.

86.1.62 matchmakerViewControllerWasCancelled(viewController as Variant)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called when the user cancels the matchmaking request (required)
Notes: viewController: The view controller that received the cancellation. (GKMatchmakerViewControllerMBS)

86.1.63 matchShouldReinvitePlayer(match as GKMatchMBS, playerID as string) as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called when a player in a two-player match was disconnected.
Notes:

match: The match that lost the player.
playerID: The identifier for the player whose connection failed.

Your game should return true if it wants Game Kit to attempt to reconnect the player, false if it wants to terminate the match.

Occasionally, players may get disconnected from a match. If your game implements this method in the match delegate and the match only contains two players, Game Kit calls this method after a player gets disconnected. If your delegate allows Game Kit to reconnect to the other player, it reconnects the other player. Your matchDidChangeState event is called when the other player is reconnected.

86.1.64 NotificationBannerCompleted(title as string, message as string, duration as Double, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called by GameKitMBS.showBannerWithTitle after the banner is reported.
Notes: Duration is only passed if it was sent with the newer method on Mac OS X 10.8.2 and newer.

86.1.65 participantQuitInTurnWithOutcomeCompleted(match as GKTurnBasedMatchMBS, matchOutcome as Integer, nextParticipant as GKTurnBasedParticipantMBS, nextParticipants() as GKTurnBasedParticipantMBS, timeout as Double, matchData as Dictionary, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: .

Function: The event to be called after the data is uploaded to the server.
Notes:

Called by GKTurnBasedMatchMBS.participantQuitInTurnWithOutcome.

error: If an error occurred, this error object describes the error. If the operation was completed successfully, the value is nil.

Available on Mac OS X 10.8.2 and newer.

86.1.66 participantQuitOutOfTurnWithOutcomeCompleted(match as GKTurnBasedMatchMBS, matchOutcome as Integer, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called by GKTurnBasedMatchMBS.participantQuitOutOfTurnWithOutcome called after the data is uploaded to the server.
Notes: If an error occurred, this error object describes the error. If the operation was completed successfully, the value is nil.

86.1.67 PlayerAuthenticationDidChange(player as GKPlayerMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Player's authentication changed.

86.1.68 playerChanged(player as GKPlayerMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: The player changed.

86.1.69 playerStateUpdate(playerID as string, state as Integer, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called when the state of any participant in the chat changes (including the local player).
Notes:

player: The player identifier for the player whose status changed.
state: The new state of the player.
You need to call enablePlayerStateUpdate to receive events.

86.1.70 queryActivityCompleted(MatchMaker as GKMatchmakerMBS, activity as Integer, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called by GKMatchmakerMBS.queryActivity when query is done.
Notes:

activity: The amount of activity in the player group.
error: If the search completed successfully, this parameter is nil; otherwise, this parameter holds an error object that describes the error that occurred.

86.1.71 queryPlayerGroupActivityCompleted(MatchMaker as GKMatchmakerMBS, playerGroup as Integer, activity as Integer, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called by GKMatchmakerMBS.queryPlayerGroupActivity when the search completes.
Notes:

activity: The amount of activity in the player group.
error: If the search completed successfully, this parameter is nil; otherwise, this parameter holds an error object that describes the error that occurred.

86.1.72 receivedTurnEventForMatch(player as GKPlayerMBS, match as GKTurnBasedMatchMBS, didBecomeActive as boolean)

MBS MacFrameworks Plugin, Plugin Version: 15.0, Platform: macOS, Targets: .

Function: Activates the player,Äôs turn. (required)
Notes:

This method is called when the it becomes the player,Äôs turn. It is also called when any of the following events happen:

- The current turn has a time-out associated with it and the turn is about to expire.
- Player accepts an invite from another player.
- Turn was passed to another player. In this case, didBecomeActive is false.
- Match data is saved by another player.
- Player receives a reminder.

Available in OS X v10.10 and later.

86.1.73 recipientResponseHandler(MatchRequest as GKMatchRequestMBS, Player as GKPlayerMBS, response as Integer, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 15.0, Platform: macOS, Targets: .

Function: This event is called whenever you programmatically invite specific players to join a match.
Notes:

It is called once for each player invited to the match. Typically, your game uses the responses to update the custom user interface. For example, you want the player to be able to perform any of the following tasks:

- Start the match.
- Invite an additional set of specific players.
- Use matchmaking to fill the remaining match slots.

Available in OS X v10.10 and later.

86.1.74 rematchCompleted(TurnMatch as GKTurnBasedMatchMBS, match as GKMatchMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: .

Function: Called when GKMatchMBS.rematch completes.
Notes:

match: The new match. If an error occurred, this parameter's value is nil.
error: If an error occurred, this parameter holds an error object that describes the problem. If the match was successfully recreated, this parameter's value is nil.

Available on Mac OS X 10.8.2 and newer.

86.1.75 remotePlayerDidCompleteChallenge(challenge as GKChallengeMBS)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: .

Function: Called when a non-local player has completed a challenge issued by the local player.
Notes:

Triggered by a push notification from the server. Received when a challenge notification banner is clicked, or while the game is running.
Available on Mac OS X 10.8.2 and newer.

86.1.76 removeCompleted(match as GKTurnBasedMatchMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called by GKTurnBasedMatchMBS.remove on completion.
Notes:

If an error occurred, this error object describes the error. If the operation was completed successfully, the value is nil.
Tag is the parameter you passed to remove method.

86.1.77 reportAchievementCompleted(score as GKAchievementMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called by GKAchievementMBS.reportAchievement after the operation completes.

Notes: error: If the operation was successful, this value is nil; otherwise, this parameter holds an object that describes the problem that occurred.

86.1.78 reportAchievementsCompleted(achievements() as GKAchievementMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: .

Function: Called when GKAchievementMBS.reportAchievements completes.
Notes: Available on Mac OS X 10.8.2 and newer.

86.1.79 reportScoreCompleted(score as GKScoreMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called by GKScoreMBS.reportScore after the score is reported.
Notes: error: If an error occurred, this parameter holds an error object that describes the problem. If the score was successfully reported, this parameter's value is nil.

86.1.80 reportScoresCompleted(Scores() as GKScoreMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: .

Function: Reporting scores completed.
Notes:

scores: An array of score objects to report to Game Center.
error: If an error occurred, this parameter holds an error object that describes the problem. If the score was successfully reported, this parameter's value is nil.

Available on Mac OS X 10.8.2 and newer.

86.1.81 resetAchievementsCompleted(error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called by GKAchievementMBS.resetAchievements when the reset action is completed.
Notes: error: If the operation was successful, this value is nil; otherwise, this parameter holds an object

that describes the problem that occurred.

86.1.82 saveCurrentTurnWithMatchDataCompleted(match as GKTurnBasedMatchMBS, matchData as Dictionary, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: .

Function: The event to be called after the data is uploaded to Game Center.
Notes:

error: If an error occurred, this error object describes the error. If the operation was completed successfully, the value is nil.
matchData: The game-specific state for the match.

Available on Mac OS X 10.8.2 and newer.

86.1.83 selectChallengeablePlayerIDsCompleted(Achievement as GKAchievementMBS, playerIDs() as string, challengeablePlayerIDs() as string, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: .

Function: Called by GKAchievementMBS.selectChallengeablePlayerIDs on completion
Notes: Available on Mac OS X 10.8.2 and newer.

86.1.84 setDefaultLeaderboardCategoryIDCompleted(LocalPlayer as GKLocalPlayerMBS, categoryID as string, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: .

Function: Called by GKLocalPlayerMBS.setDefaultLeaderboardCategoryID when completed.
Notes: Available on Mac OS X 10.8.2 and newer.

86.1.85 setDefaultLeaderboardCompleted(categoryID as string, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called by GKLeaderboardMBS.setDefaultLeaderboard after the scores are retrieved from the

server.
Notes: error: If an error occurred, this error object describes the error. If the operation was completed successfully, the value is nil.

86.1.86 shouldShowBannerForLocallyCompletedChallenge(challenge as GKChallengeMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: .

Function: Whether to show banner for locally completed challenge.
Notes:

If the method returns true, a challenge banner (like an achievement or welcome banner – not a notification center banner) is displayed. If false, then no banner is displayed. Default behavior for non-implementing apps is true.
Available on Mac OS X 10.8.2 and newer.

86.1.87 shouldShowBannerForLocallyReceivedChallenge(challenge as GKChallengeMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: .

Function: Whether to show banner for locally received challenge.
Notes:

If the method returns true, a challenge banner (like an achievement or welcome banner – not a notification center banner) is displayed when a challenge is received in-game for the local player. If false, then no banner is displayed, and localPlayerDidSelectChallenge will not be called for that challenge. Default behavior for non-implementing apps is true.

Available on Mac OS X 10.8.2 and newer.

86.1.88 shouldShowBannerForRemotelyCompletedChallenge(challenge as GKChallengeMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: .

Function: Whether to show banner for remotely completed challenge.
Notes:

If the method returns true, a challenge banner (like an achievement or welcome banner – not a notification center banner) is displayed. If false, then no banner is displayed. Default behavior for non-implementing apps is true.

Available on Mac OS X 10.8.2 and newer.

86.1.89 startBrowsingForNearbyPlayersCompleted(Matchmaker as GKMatchmakerMBS, playerID as string, reachable as boolean, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: .

Function: Called when startBrowsingForNearbyPlayers method found a player.
Notes: Available on Mac OS X 10.8.2 and newer.

86.1.90 turnBasedMatchmakerViewControllerDidFailWithError(viewController as Variant, error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called when an error occurs. (required)
Notes:

viewController: The view controller that received an error. (GKTurnBasedMatchmakerViewControllerMBS)
error: An error object that describes the error.

Your game should dismiss the view controller.

86.1.91 turnBasedMatchmakerViewControllerDidFindMatch(viewController as Variant, match as GKTurnBasedMatchMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called when the player selected a match to view. (required)
Notes:

viewController: The view controller that found a match. (GKTurnBasedMatchmakerViewControllerMBS)
match: The match that the player selected.

Your game should dismiss the view controller and use the match object to show the current state of the match to the player.

86.1.92 turnBasedMatchmakerViewControllerPlayerQuitForMatch(viewController as Variant, match as GKTurnBasedMatchMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called when a player chooses to quit the match. (required)
Notes:

viewController: The view controller that the player interacted with. (GKTurnBasedMatchmakerViewControllerMBS)
match: The match the player has chosen to quit.

When this method is called, the player is the current participant in the match, but that player has chosen to resign the match instead of taking a turn. Your game should dismiss the view controller, set an outcome for the player, and then call the match's participantQuitInTurnWithOutcome method.

86.1.93 turnBasedMatchmakerViewControllerWasCancelled(viewController as Variant)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called when the player cancels matchmaking. (required)
Notes:

viewController: The view controller that the player canceled. (GKTurnBasedMatchmakerViewControllerMBS)

Your game should dismiss the view controller.

86.1.94 Constants

86.1.95 GKErrorAuthenticationInProgress = 7

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the GameKit error constants.
Notes: The local player is currently authenticating.

86.1.96 GKErrorCancelled = 2

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the GameKit error constants.

Notes: The requested operation was canceled.

86.1.97 GKErrorChallengeInvalid = 19

MBS MacFrameworks Plugin, Plugin Version: 13.0.

Function: One of the GameKit error constants.
Notes:

The challenge was invalid.
Available on Mac OS X 10.8.2 and newer.

86.1.98 GKErrorCommunicationsFailure = 3

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the GameKit error constants.
Notes: An error occurred when communicating with Game Center.

86.1.99 GKErrorGameUnrecognized = 15

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the GameKit error constants.
Notes: nGame Center does not recognize the application that made the request. Make sure the bundle identifier is set properly for the application.one

86.1.100 GKErrorInvalidCredentials = 5

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the GameKit error constants.
Notes: The operation failed because the player's user name or password or both are incorrect.

86.1.101 GKErrorInvalidParameter = 17

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the GameKit error constants.
Notes:

One or more of the parameters was incorrect.
For example, this error code may be returned if your application attempts to post a score and provides a category string that does not match a category you configured for your leaderboards on iTunes Connect.

86.1.102 GKErrorInvalidPlayer = 8

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the GameKit error constants.
Notes: A player object or identifier is invalid.

86.1.103 GKErrorMatchRequestInvalid = 13

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the GameKit error constants.
Notes: The match request's properties are impossible to fulfill. For example, the minimum number of players cannot be larger than the maximum number of players.

86.1.104 GKErrorNotAuthenticated = 6

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the GameKit error constants.
Notes: The local player has not been authenticated.

86.1.105 GKErrorNotSupported = 16

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the GameKit error constants.
Notes: The device does not support Game Center.

86.1.106 GKErrorOffline = 25

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the GameKit error constants.
Notes:

The user went offline.
In Mac OS X 10.8.2 and newer this constant has value 25. In older versions it has value 19.

86.1.107 GKErrorParentalControlsBlocked = 10

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the GameKit error constants.
Notes: The feature has been blocked by the user.

86.1.108 GKErrorScoreNotSet = 9

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the GameKit error constants.
Notes: A score value was not set before attempting to post the score.

86.1.109 GKErrorTurnBasedInvalidParticipant = 22

MBS MacFrameworks Plugin, Plugin Version: 13.0.

Function: One of the GameKit error constants.
Notes:

One of the participant objects you provided was invalid.
Available on Mac OS X 10.8.2 and newer.

86.1.110 GKErrorTurnBasedInvalidState = 24

MBS MacFrameworks Plugin, Plugin Version: 13.0.

Function: One of the GameKit error constants.
Notes:

The requested operation could not be completed because the session is in an invalid state.
Available on Mac OS X 10.8.2 and newer.

86.1.111 GKErrorTurnBasedInvalidTurn = 23

MBS MacFrameworks Plugin, Plugin Version: 13.0.

Function: One of the GameKit error constants.
Notes:

The requested operation could not be completed because the specified participant does not have the required turn state.
Available on Mac OS X 10.8.2 and newer.

86.1.112 GKErrorTurnBasedMatchDataTooLarge = 20

MBS MacFrameworks Plugin, Plugin Version: 13.0.

Function: One of the GameKit error constants.
Notes:

Your game submitted data that exceeded the maximum size that Game Center permits for a turn-based game.
Available on Mac OS X 10.8.2 and newer.

86.1.113 GKErrorTurnBasedTooManySessions = 21

MBS MacFrameworks Plugin, Plugin Version: 13.0.

Function: One of the GameKit error constants.
Notes:

The requested operation could not be completed because it would exceed the maximum number of sessions. Available on Mac OS X 10.8.2 and newer.

86.1.114 GKErrorUnderage = 14

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the GameKit error constants.
Notes: The feature is disabled because the local player is underage.

86.1.115 GKErrorUnexpectedConnection = 18

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the GameKit error constants.
Notes: An unexpected player has connected to a match.

86.1.116 GKErrorUnknown = 1

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the GameKit error constants.
Notes: An unexpected error occurred.

86.1.117 GKErrorUserDenied = 4

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the GameKit error constants.
Notes: The operation was denied by the user.

86.1.118 GKInviteeResponseAccepted = 0

MBS MacFrameworks Plugin, Plugin Version: 13.0.

Function: One of the possible responses from an invitation to a remote player.
Notes:

The player accepted the invitation.
Available on Mac OS X 10.8.2 and newer.

86.1.119 GKInviteeResponseDeclined = 1

MBS MacFrameworks Plugin, Plugin Version: 13.0.

Function: One of the possible responses from an invitation to a remote player.
Notes:

The player rejected the invitation.
Available on Mac OS X 10.8.2 and newer.

86.1.120 GKInviteeResponseFailed = 2

MBS MacFrameworks Plugin, Plugin Version: 13.0.

Function: One of the possible responses from an invitation to a remote player.
Notes:

The invitation was unable to be delivered.
Available on Mac OS X 10.8.2 and newer.

86.1.121 GKInviteeResponseIncompatible = 3

MBS MacFrameworks Plugin, Plugin Version: 13.0.

Function: One of the possible responses from an invitation to a remote player.
Notes:

The invitee is not running a compatible version of your game.
Available on Mac OS X 10.8.2 and newer.

86.1.122 GKInviteeResponseNoAnswer = 5

MBS MacFrameworks Plugin, Plugin Version: 13.0.

Function: One of the possible responses from an invitation to a remote player.
Notes:

The invitation timed out without an answer.
Available on Mac OS X 10.8.2 and newer.

86.1.123 GKInviteeResponseUnableToConnect = 4

MBS MacFrameworks Plugin, Plugin Version: 13.0.

Function: One of the possible responses from an invitation to a remote player.
Notes:

The invitee could not be contacted.
Available on Mac OS X 10.8.2 and newer.

86.1.124 GKInviteRecipientResponseAccepted = 0

MBS MacFrameworks Plugin, Plugin Version: 15.0.

Function: One of the possible responses from an invitation to a remote player.
Notes:

The player accepted the invitation.
Available in OS X v10.10 and later.

86.1.125 GKInviteRecipientResponseDeclined = 1

MBS MacFrameworks Plugin, Plugin Version: 15.0.

Function: One of the possible responses from an invitation to a remote player.
Notes:

The player rejected the invitation.
Available in OS X v10.10 and later.

86.1.126 GKInviteRecipientResponseFailed = 2

MBS MacFrameworks Plugin, Plugin Version: 15.0.

Function: One of the possible responses from an invitation to a remote player.
Notes:

The invitation was unable to be delivered.
Available in OS X v10.10 and later.

86.1.127 GKInviteRecipientResponseIncompatible = 3

MBS MacFrameworks Plugin, Plugin Version: 15.0.

Function: One of the possible responses from an invitation to a remote player.
Notes:

The invitee is not running a compatible version of your game.
Available in OS X v10.10 and later.

86.1.128 GKInviteRecipientResponseNoAnswer = 5

MBS MacFrameworks Plugin, Plugin Version: 15.0.

Function: One of the possible responses from an invitation to a remote player.
Notes:

The invitation timed out without an answer.
Available in OS X v10.10 and later.

86.1.129 GKInviteRecipientResponseUnableToConnect = 4

MBS MacFrameworks Plugin, Plugin Version: 15.0.

Function: One of the possible responses from an invitation to a remote player.
Notes:

The invitee could not be contacted.
Available in OS X v10.10 and later.

86.2 class GKAchievementChallengeMBS

86.2.1 class GKAchievementChallengeMBS

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: A GKAchievementChallenge is a challenge to a player to complete a specific achievement.
Notes:

Subclass of the GKChallengeMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.2.2 Methods

86.2.3 achievement as GKAchievementMBS

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: The achievement the player must complete.
Notes: (read-only)

86.2.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

86.3 class GKAchievementDescriptionMBS

86.3.1 class GKAchievementDescriptionMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: An GKAchievementDescription object holds text and images used to display an achievement to the player.
Notes:

During development, you create achievement descriptions by editing them in iTunes Connect. At runtime, your game retrieve these descriptions from Game Center. Usually, your game only needs to download achievement descriptions when it wants to present a custom achievement user interface to the player.

see also
http://developer.apple.com/library/ios/# documentation/GameKit/Reference/GKAchievementDescription_Ref/Reference/Reference.html
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.3.2 Methods

86.3.3 achievedDescription as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A localized description of the completed achievement. (read-only)

86.3.4 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: True if the class is available.
Notes: Should always be true on Mac OS X 10.8 and newer.

86.3.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

86.3.6 groupIdentifier as string

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: The group identifier for the achievement, if one exists.
Notes: Available on Mac OS X 10.8.2 and newer.

86.3.7 identifier as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A unique string used to identify the achievement. (read-only)
Notes: The GKAchievementDescription property holds the identifier string you created for the achievement on iTunes Connect.

86.3.8 image as NSImageMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: An image to display for the completed achievement. (read-only)
Notes: The value of this property is undefined until after the image is loaded. See loadImage.

86.3.9 incompleteAchievementImage as NSImageMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A common image for incomplete achievements.

86.3.10 isHidden as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that states whether this achievement should be visible to players. (read-only)
Notes: If the value of this property is false, this achievement is always visible to the user. If true, the achievement is not displayed in any of the standard achievement user interface screens. It remains hidden until the first time your game reports progress towards completing this achievement.

86.3.11 isReplayable as boolean

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Whether or not the achievement will be reported by the game when the user earns it again.
Notes:

This allows the achievement to be used for challenges when the recipient has previously earned it.
Available on Mac OS X 10.8.2 and newer.

86.3.12 loadAchievementDescriptions(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Downloads the achievement descriptions from Game Center.
Notes: When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.loadAchievementDescriptionsCompleted event.

86.3.13 loadImage(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Loads the image property for a completed achievement.
Notes:

Your game should call loadImage for each achievement the user has completed. Your game should display the placeholder image until the image is successfully downloaded. After the event is called, the description's image property holds the same image object that is returned to the event.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.loadImageCompleted event.

86.3.14 maximumPoints as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The number of points earned by completing this achievement. (read-only)

86.3.15 placeholderCompletedAchievementImage as NSImageMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A common image for completed achievements.
Notes: When an achievement is completed, your game can display this image until the custom image for

an achievement finishes loading.

86.3.16 title as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A localized title for the achievement. (read-only)

86.3.17 unachievedDescription as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A localized description of the achievement, to be used when the achievement has not been completed. (read-only)

86.3.18 Properties

86.3.19 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

86.4 class GKAchievementMBS

86.4.1 class GKAchievementMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Your game uses a GKAchievement object to communicate with Game Center about a local player's progress towards completing an achievement.
Notes:

see also
http://developer.apple.com/library/ios/# documentation/GameKit/Reference/GKAchievement_Ref/Reference/Reference.html

86.4.2 Methods

86.4.3 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: True if the class is available.
Notes: Should always be true on Mac OS X 10.8 and newer.

86.4.4 Constructor(identifier as string)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Initializes a new achievement object.
Notes:

identifier: A string that identifies the achievement you want to update.

Your game initializes a new achievement object only when it has not previously reported progress for that achievement. If your game has previously reported progress on an achievement, you should retrieve the achievement object by calling the loadAchievementsWithCompletionHandler class method and update the progress on that object instead.

86.4.5 isCompleted as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that states whether the player has completed the achievement. (read-only)
Notes: The value of this property is true if the percentComplete property is equal to 100.0; otherwise, it is

false.

86.4.6 isHidden as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that states whether this achievement is normally kept secret from the player. (read-only)
Notes: On a newly initialized achievement object, the property's value is invalid. If the achievement object was returned to your game by the loadAchievementsWithCompletionHandler class method, the value of this property matches the value you set in iTunes Connect for that achievement. The value in this property is identical to the value found in the hidden property for an GKAchievementDescriptionMBS object that shares the same achievement identifier.

86.4.7 issueChallengeToPlayers(playerIDs() as string, message as string)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Use this method to issue GKScoreChallenges and GKAchievementChallenges to an array of playerIDs.
Notes:

Players may not issue challenges to themselves nor to non-friends. Please see the GameKit reference documentation for further details on these methods.
Available on Mac OS X 10.8.2 and newer.

86.4.8 lastReportedDate as date

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The last time that the achievement was successfully reported to Game Center. (read-only)
Notes: On a newly initialized achievement object, this property holds the current date.

86.4.9 loadAchievements(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Retrieves previously submitted achievement progress from Game Center.
Notes: When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.loadAchievementsCompleted event.

86.4.10 reportAchievement(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Reports the player's progress to Game Center.
Notes:

When the player makes progress towards completing an achievement, your game should communicate the player's progress to Game Center by calling this method. An achievement object is implicitly tied to the local player that was authenticated when the object was created; your game should only report progress when the same local player is still authenticated on the device.

Note: To avoid using network bandwidth unnecessarily, only report an achievement when the user has actually advanced the progress they have made towards completing it.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.reportAchievementCompleted.

When the progress is successfully reported, the achievement is made visible if it was previously hidden. The percentComplete and lastReportedDate property values stored on Game Center are updated if the new percentComplete value is greater than the value previously stored on Game Center. if the value of the percentComplete property was equal to 100.0, then the achievement is marked as completed and a banner may be shown to the player.

If the error is a network error and your game is running on iOS 4.3 or earlier, your game should periodically attempt to report the progress until the achievement is successfully reported. On iOS 5.0 and later and on OS X, the background reporting task automatically handles network errors on your game's behalf.

86.4.11 reportAchievements(achievements() as GKAchievementMBS, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Report an array of achievements to the server.
Notes:

Percent complete is required. Points, completed state are set based on percentComplete. isHidden is set to false anytime this method is invoqued. Date is optional. Error will be nil on success.

Possible reasons for error:
1. Local player not authenticated.
2. Communications failure.
3. Reported Achievement does not exist.

Later calls GameKitMBS.reportAchievementsCompleted event.
Available on Mac OS X 10.8.2 and newer.

86.4.12 resetAchievements(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Resets all achievement progress for the local player.
Notes:

Calling this class method deletes all progress towards achievements previously reported for the local player. Hidden achievements that were previously visible are now hidden again.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.resetAchievementsCompleted event.

86.4.13 selectChallengeablePlayerIDs(playerIDs() as string, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Given a list of playerIDs, return a subset of that list containing only playerIDs that are eligible to receive a challenge for the achievement.
Notes:

Available on Mac OS X 10.8.2 and newer.
Calls later GameKitMBS.selectChallengeablePlayerIDsCompleted event when completed.

86.4.14 Properties

86.4.15 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

86.4.16 identifier as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A string used to uniquely identify the specific achievement the object refers to.
Notes:

The identifier property must match the identifier string for an achievement you created for your game on iTunes Connect.
(Read and Write computed property)

86.4.17 percentComplete as Double

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A percentage value that states how far the player has progressed on this achievement.
Notes:

The default value for a newly initialized achievement object is 0.0. The range of legal values is between 0.0 and 100.0, inclusive.
(Read and Write computed property)

86.4.18 showsCompletionBanner as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that states whether a banner is displayed when the achievement is completed.
Notes:

When an achievement is completed and the value of this property is true, a notification banner is displayed to the player to inform them of the completed achievement. If the value of this property is false, there is no visual indication that the achievement is completed. Your game should set this property to false only when it wants to provide its own visual indicator that the achievement was earned. The default value is false.
(Read and Write computed property)

86.5 class GKAchievementViewControllerMBS

86.5.1 class GKAchievementViewControllerMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: An GKAchievementViewController object provides a standard user interface to display achievement progress for the local player.
Notes:

see also
http://developer.apple.com/library/ios/# documentation/GameKit/Reference/GKAchievementViewController_Ref/Reference/Reference.html
Subclass of the NSViewControllerMBS class.

86.5.2 Methods

86.5.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The constructor.

86.6 class GKChallengeMBS

86.6.1 class GKChallengeMBS

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: A GKChallenge object represents a challenge issued by a player to another player.
Notes:

Important: Your game must authenticate a local player before you can use any Game Center classes. If there is no authenticated player, your game receives a GKErrorNotAuthenticated error. For more information on authentication see Game Center Programming Guide.

Players use the Game Center app to issue and view challenges. However, your game can also customize its challenge behaviors in a number of ways:

- You can load the list of challenges issued to the local player by calling the loadReceivedChallenges shared method. For example, you might do this to display the challenges in your game's user interface.
- Your app can issue challenges using a GKScoreMBS or GKAchievementMBS object. Your game should only issue challenges when the local player initiates the action in your user interface.
- Your game can be notified when new challenge events are received. See GameKitMBS events.

You never subclass the GKChallengeMBS class directly. However, subclasses of GKChallengeMBS represent specific kinds of challenges. Two challenge types exist:

A GKScoreChallengeMBS is a challenge to beat a score the local player earned in a leaderboard.
A GKAchievementChallengeMBS is a challenge to complete an achievement that the local player has already completed.

Available on Mac OS X 10.8.2 and newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.6.2 Methods

86.6.3 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Whether this class is available.
Notes: Returns true on Mac OS X 10.8.2 and newer.

86.6.4 completionDate as date

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: The date the challenge was completed. (read-only).
Notes:

If the challenge is not complete, this value is nil.
Available on Mac OS X 10.8.2 and newer.

86.6.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: The private constructor.
Notes:

Available on Mac OS X 10.8.2 and newer.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

86.6.6 decline

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Declines a challenge.
Notes:

If your game implements a custom user interface to display challenges, it should include controls that allow a player to decline a challenge. If the player uses your user interface to decline a challenge, call this method.

Available on Mac OS X 10.8.2 and newer.

86.6.7 issueDate as date

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: The date the challenge was issued. (read-only).
Notes: Available on Mac OS X 10.8.2 and newer.

86.6.8 issuingPlayerID as string

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: The player identifier for the player who issued the challenge. (read-only).
Notes: Available on Mac OS X 10.8.2 and newer.

86.6.9 loadReceivedChallenges(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Loads the list of outstanding challenges.
Notes:

Available on Mac OS X 10.8.2 and newer.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKit.loadReceivedChallengesCompleted event.

86.6.10 message as string

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: A text message that describes the challenge. (read-only).
Notes: Available on Mac OS X 10.8.2 and newer.

86.6.11 receivingPlayerID as string

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: The player identifier for the player who received the challenge. (read-only).
Notes: Available on Mac OS X 10.8.2 and newer.

86.6.12 state as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: The current state of the challenge. (read-only).
Notes:

See GKChallengeState* constants.
Available on Mac OS X 10.8.2 and newer.

86.6.13 Properties

86.6.14 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes:

Available on Mac OS X 10.8.2 and newer.
(Read and Write property)

86.6.15 Constants

86.6.16 GKChallengeStateCompleted = 2

MBS MacFrameworks Plugin, Plugin Version: 13.0.

Function: Possible states that a challenge can live in.
Notes:

The receiving player successfully completed the challenge.
Available on Mac OS X 10.8.2 and newer.

86.6.17 GKChallengeStateDeclined = 3

MBS MacFrameworks Plugin, Plugin Version: 13.0.

Function: Possible states that a challenge can live in.
Notes:

The receiving player declined the challenge.
Available on Mac OS X 10.8.2 and newer.

86.6.18 GKChallengeStateInvalid = 0

MBS MacFrameworks Plugin, Plugin Version: 13.0.

Function: Possible states that a challenge can live in.
Notes:

An error occurred. The state of this challenge is not valid.
Available on Mac OS X 10.8.2 and newer.

86.6.19 GKChallengeStatePending = 1

MBS MacFrameworks Plugin, Plugin Version: 13.0.

Function: Possible states that a challenge can live in.
Notes:

The challenge has been issued, but is not yet completed nor declined.
Available on Mac OS X 10.8.2 and newer.

86.7 class GKChallengesViewControllerMBS

86.7.1 class GKChallengesViewControllerMBS

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: View controller that provides the standard user interface for challenges.
Notes:

Present modally from the top view controller.
Calls GameKit.challengesViewControllerDidFinish if needed.
Available on Mac OS X 10.8.2 and newer.
Subclass of the NSViewControllerMBS class.

86.7.2 Methods

86.7.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: The constructor.

86.8 class GKDialogControllerMBS

86.8.1 class GKDialogControllerMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The GKDialogController class provides the ability to present Game Center view controller classes on OS X.
Notes:

To present a view controller, instantiate a new GKDialogControllerMBS object or use the singleton object provided by the sharedDialogController class method. Set the parentWindow property of the dialog controller to the window that should display the view controller's contents. Then, call the dialog controller's presentViewController* methods, passing in the view controller object to be presented. Later, when the view controller's contents should be hidden, call the dialog controller's dismiss method.

see also
https://developer.apple.com/library/prerelease/mac/# documentation/GameKit/Reference/GKDialogController_Ref/Reference/Reference.html
Subclass of the NSResponderMBS class.

86.8.6 Methods

86.8.7 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The constructor.

86.8.8 dismiss

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Dismisses the currently displayed view controller.

86.8.9 parentWindow as NSWindowMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The window that view controllers presented by the dialog controller are displayed in.
Notes: Your app must set this property before presenting a view controller. The window must be at least 800 x 600.

86.8.10 presentViewController(GKViewController as NSViewControllerMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: Desktop only.

Function: Presents a view controller in the dialog controller's window.
Notes:

viewController: A Game Center view controller.

Returns true if the view controller was presented, false if an error occurred.
The contents of the window are covered by the view controller's contents until the view controller is dismissed.

86.8.11 setParentWindow(parentWindow as NSWindowMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Sets the parent window.
See also:

• 86.8.12 setParentWindow(parentWindow as Window) 16305

86.8.12 setParentWindow(parentWindow as Window)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Sets the parent window to the given Xojo Window.
Notes: Should work fine in Cocoa, but may fail in Carbon.
See also:

• 86.8.11 setParentWindow(parentWindow as NSWindowMBS) 16304

86.8.13 sharedDialogController as GKDialogControllerMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Retrieves the shared instance of the dialog controller.
Notes: Game Kit provides the shared dialog controller as a convenience. Your game can either use the shared dialog controller provided by this method, or it can instantiate its own GKDialogController object and configure it. You might create multiple GKDialogController objects when each should be presented in its own window.

86.9 class GKFriendRequestComposeViewControllerMBS

86.9.1 class GKFriendRequestComposeViewControllerMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Your game uses the GKFriendRequestComposeViewController class to present a screen that allows the local player to send friend requests to other players.
Notes:

see also
https://developer.apple.com/library/prerelease/mac/# documentation/GameKit/Reference/GKFriendRequestComposeViewController_Ref/Reference/Reference.html
Subclass of the NSViewControllerMBS class.

86.9.2 Methods

86.9.3 addRecipientsWithEmailAddresses(playerIDs() as string)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Add recipients to the request.
Notes:

If you don't specify at least one recipient before presenting the view, the recipients field will be made firstResponder, to encourage the user to add some.
If you add more than maxNumberOfRecipients recipients, these methods will throw an exception.

86.9.4 addRecipientsWithPlayerIDs(playerIDs() as string)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Add recipients to the request.
Notes:

If you don't specify at least one recipient before presenting the view, the recipients field will be made firstResponder, to encourage the user to add some.
If you add more than maxNumberOfRecipients recipients, these methods will throw an exception.

86.9.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The constructor.

86.9.6 maxNumberOfRecipients as UInt64

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Get the maximum number of recipients permitted.

86.9.7 setMessage(message as string)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specify the message sent to the invitee. A default message will be used if you don't specify one.

86.10 class GKGameCenterViewControllerMBS

86.10.1 class GKGameCenterViewControllerMBS

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: The GKGameCenterViewControllerMBS class aggregates many common Game Center features into a single user interface.
Notes:

It replaces GKAchievementViewControllerMBS and GKLeaderboardViewControllerMBS as the preferred way to show Game Center content in your game.

Important: Your application must authenticate a local player before you can use any Game Center classes. If there is no authenticated player, your application receives a GKErrorNotAuthenticated error. For more information on authentication, see Game Center Programming Guide.

To display the Game Center screen, initialize a new GKGameCenterViewController object and set its delegate. Optionally, you can choose to configure the view controller further to specify which content is initially displayed. Then present the view controller. Your delegate is called when the user dismisses the screen.

Your game should pause other activities before presenting the Game Center user interface.

Available on Mac OS X 10.8.2 and newer.
Subclass of the NSViewControllerMBS class.

86.10.2 Methods

86.10.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: The constructor.
Notes: Available on Mac OS X 10.8.2 and newer.

86.10.4 Properties

86.10.5 leaderboardCategory as string

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: The named leaderboard that is displayed by the view controller.
Notes:

The category property must either be empty or it must match a category identifier you defined when you created your leaderboards on iTunes Connect. If empty, the view displays scores for the aggregate leaderboard. Default is empty.

When the leaderboard is presented, the value of this property determines which leaderboard content is displayed to the player. As the player changes which leaderboard content they view, the leaderboardCategory property is automatically updated. For example, to preserve the player's selections, you can read the leaderboardCategory property after the screen is dismissed, and set that value the next time you initialize the view controller.

Available on Mac OS X 10.8.2 and newer.
(Read and Write computed property)

86.10.6 leaderboardTimeScope as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: A time filter used to restrict which scores are displayed to the player.
Notes:

This property determines which tab view of the scores screen is displayed to the player. The default value is GKLeaderboardTimeScopeAllTime, which shows the best score each player has earned. For more information on time scopes, see GKLeaderboardMBS Class.

When the leaderboard is presented, the value of this property determines the initial tab that is displayed to the player. As the player changes which tab they view, the leaderboardTimeScope property is automatically updated. For example, to preserve the player's selections, you can read the leaderboardTimeScope property after the screen is dismissed, and set that value the next time you initialize the view controller.

Available on Mac OS X 10.8.2 and newer.
(Read and Write computed property)

86.10.7 viewState as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: The content displayed by the Game Center controller.
Notes:

See State* constants for possible values. When you first present the Game Center view controller, the content

displayed by the view controller is determined by this property. If the player navigates to different content, the view state is automatically updated. For example, to preserve the player's selections, you can read the viewState property after the screen is dismissed, and set that value the next time you initialize the view controller.

Available on Mac OS X 10.8.2 and newer.
(Read and Write computed property)

86.10.8 Constants

86.10.9 StateAchievements = 1

MBS MacFrameworks Plugin, Plugin Version: 13.0.

Function: Possible values for the viewState property.
Notes:

Indicates that the view controller presents achievements content.
Available on Mac OS X 10.8.2 and newer.

86.10.10 StateChallenges = 2

MBS MacFrameworks Plugin, Plugin Version: 13.0.

Function: Possible values for the viewState property.
Notes:

Indicates that the view controller presents challenges content.
Available on Mac OS X 10.8.2 and newer.

86.10.11 StateDefault = -1

MBS MacFrameworks Plugin, Plugin Version: 13.0.

Function: Possible values for the viewState property.
Notes:

Indicates that the view controller should present the default screen.
Available on Mac OS X 10.8.2 and newer.

86.10.12 StateLeaderboards = 0

MBS MacFrameworks Plugin, Plugin Version: 13.0.

Function: Possible values for the viewState property.
Notes:

Indicates that the view controller presents leaderboard content. The leaderboardCategory and leaderboardTimeScope properties affect the appearance of this view state.
Available on Mac OS X 10.8.2 and newer.

86.11 class GKInviteMBS

86.11.1 class GKInviteMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Your game receives invitations from other players through the GKInvite class.
Notes:

Your game never directly creates GKInvite objects. Instead, invitations are created by Game Kit and delivered to your game. To receive invitations from Game Center, your game sets an invitation handler.

The properties of the invitation object describe the match the local player is being invited to join.

86.11.2 Xojo Developer Magazine

- 12.5, page 31: Writing OS X Apps for Game Center, Part 2: Requesting a Match by Tom Baumgartner

- 12.5, page 29: Writing OS X Apps for Game Center, Part 2: Requesting a Match by Tom Baumgartner

86.11.4 Methods

86.11.5 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: True if the class is available.
Notes: Should always be true on Mac OS X 10.8 and newer.

86.11.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The constructor.

86.11.7 inviter as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The identifier for the player who invited the local user to join a match. (read-only)

86.11.8 isHosted as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that states whether the game is hosted. (read-only)
Notes: If the value of the hosted property is true, this is a hosted match. If the value is false, this is a peer-to-peer match. The default is false.

86.11.9 playerAttributes as UInt32

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Player attributes from inviter's match request.
Notes: Available on Mac OS X 10.8.2 and newer.

86.11.10 playerGroup as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Player group from inviter's match request.
Notes: Available on Mac OS X 10.8.2 and newer.

86.11.11 Properties

86.11.12 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

86.12 class GKLeaderboardMBS

86.12.1 class GKLeaderboardMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A GKLeaderboard object represents a programmatic query to retrieve scores from Game Center.
Notes:

Your game uses GKLeaderboard objects when it wants to analyze scoring information or when it wants to create its own custom leaderboard screens.

see also
https://developer.apple.com/library/prerelease/mac/# documentation/GameKit/Reference/GKLeaderboard_Ref/Reference/Reference.html

86.12.2 Methods

86.12.3 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: True if the class is available.
Notes: Should always be true on Mac OS X 10.8 and newer.

86.12.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Initializes a default leaderboard request.
Notes: A leaderboard object initialized with this method uses the playerScope, timeScope, and range properties to search Game Center for scores.
See also:

- 86.12.5 Constructor(playerIDs() as string) 16314

86.12.5 Constructor(playerIDs() as string)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Initializes a leaderboard request to retrieve the scores of a specific group of players.
Notes:

playerIDs: An array of strings that holds the player identifier strings of the players to retrieve.

A leaderboard object initialized with this method ignores the playerScope and range properties. Instead, it retrieves scores for the specific list of players whose IDs are included in the playerIDs parameter.
See also:

- 86.12.4 Constructor 16314

86.12.6 groupIdentifier as string

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Set when leaderboards have been designated a game group; set when loadLeaderboards has been called for leaderboards that support game groups.
Notes: Available on Mac OS X 10.8.2 and newer.

86.12.7 isLoading as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that indicates whether the leaderboard object is retrieving scores. (read-only)
Notes: The value of the loading property is true if the leaderboard object has any pending requests for scores.

86.12.8 loadCategories(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Loads the list of leaderboard categories along with their corresponding localized titles.
Notes:

You use this class method to retrieve the category identifiers and titles you configured for your leaderboards on iTunes Connect. To create a leaderboard query that targets a particular category, set the category property to one of the strings returned by this method.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.loadCategoriesCompleted event.

86.12.9 loadLeaderboards(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Loads the leaderboards.
Notes:

Calls GameKitMBS.loadLeaderboardsCompleted later when completed.
Available on Mac OS X 10.8.2 and newer.

86.12.10 loadScores(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Retrieves a set of scores from Game Center.
Notes:

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.loadScoresCompleted event.

You can call this method multiple times; each call represents a different query against the scores stored on Game Center. If you post multiple load operations using the same leaderboard object, any properties that are updated by loading scores reflect the last query that completed. The order that achievement queries are processed is arbitrary.

86.12.11 localPlayerScore as GKScoreMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The score earned by the local player. (read-only)
Notes: This property is invalid until a call to loadScores is completed. Afterward, it contains a score object representing the local player's score on the leaderboard.

86.12.12 maxRange as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The size of the leaderboard. (read-only)
Notes: This property is invalid until a call to loadScores is completed. Afterward, it contains the total number of entries available to return to your game given the filters you applied to the query.

86.12.13 scores as GKScoreMBS()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The list of scores returned by the search. (read-only)
Notes: This property is invalid until a call to loadScores is complete. Afterward, it contains the same score objects that were returned to the completion handler.

86.12.14 setDefaultLeaderboard(categoryID as string, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Sets the default leaderboard for the local player.
Notes:

categoryID: The named leaderboard that should be the new default leaderboard for the local player.

The default leaderboard is used whenever your game uses a GKScore object to report a score to Game Center without explicitly setting the score object's category property. The default leaderboard is normally set in iTunes Connect when you configure your game. However, your game can use this class method to override the default leaderboard that appears for the local player.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.setDefaultLeaderboardCompleted event.

If an error occurs and was a network error, your game should periodically resend the request until it completes.

86.12.15 title as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The localized title for the leaderboard. (read-only)
Notes: This property is invalid until a call to loadScores is complete. Afterward, it contains the localized title that matches the category property of the leaderboard object.

86.12.16 Properties

86.12.17 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

86.12.18 category as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The named leaderboard to retrieve information from.
Notes:

If non-empty, Game Center only returns scores with a matching category value. If empty, this property is ignored. Default is empty.
(Read and Write computed property)

86.12.19 playerScope as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A filter used to restrict the search to a subset of the players on Game Center.
Notes:

The playerScope property is ignored if the leaderboard request was initialized using the Constructor method. Otherwise, the playerScope property determines which players are included in the request for high scores. The default is GKLeaderboardPlayerScopeGlobal. See Leaderboard Player Scope constants for more information.
(Read and Write computed property)

86.12.20 range as NSRangeMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The numerical score rankings to return from the search.
Notes:

The range property is ignored if the leaderboard request was initialized using the Constructor method. Otherwise, the range property is used to filter which scores are returned to your game. For example, if you specified a range of [1,10] , after the search is complete, your game receives the top ten scores. The default range is [1,25] .

The minimum index is 1. The maximum length is 100.
(Read and Write computed property)

86.12.21 timeScope as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A filter used to restrict the search to scores that were posted within a specific period of time.
Notes:

This property determines how far back in time the search looks for scores. The default value is GKLeaderboardTimeScopeAllTime. See Leaderboard Time Scope for more information.
(Read and Write computed property)

86.12.22 Constants

86.12.23 GKLeaderboardPlayerScopeFriendsOnly = 1

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One for the constants for the scope of players to be searched for scores.
Notes: Only friends of the local player should be considered when generating the list of scores.

86.12.24 GKLeaderboardPlayerScopeGlobal = 0

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One for the constants for the scope of players to be searched for scores.
Notes: All players on Game Center should be considered when generating the list of scores.

86.12.25 GKLeaderboardTimeScopeAllTime = 2

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the constants for period of time to which a player's best score is restricted.
Notes: Each player's best score is returned.

86.12.26 GKLeaderboardTimeScopeToday = 0

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the constants for period of time to which a player's best score is restricted.
Notes: Each player is restricted to scores recorded in the past 24 hours.

86.12.27 GKLeaderboardTimeScopeWeek = 1

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the constants for period of time to which a player's best score is restricted.
Notes: Each player is restricted to scores recorded in the past week.

86.13 class GKLeaderboardViewControllerMBS

86.13.1 class GKLeaderboardViewControllerMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The GKLeaderboardViewController class provides a standard user interface that displays high scores to the player.
Notes:

see also
https://developer.apple.com/library/prerelease/mac/# documentation/GameKit/Reference/GKLeaderboard-ViewController_Ref/Reference/Reference.html
Subclass of the NSViewControllerMBS class.

86.13.2 Methods

86.13.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The constructor.

86.13.4 Properties

86.13.5 category as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The category.
Notes: (Read and Write computed property)

86.13.6 timeScope as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The time scope.
Notes: (Read and Write computed property)

86.14 class GKLocalPlayerMBS

86.14.1 class GKLocalPlayerMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The GKLocalPlayer class is a special subclass of GKPlayer that represents the authenticated player running your game on the local device.
Notes:

At any given time, only one player may be authenticated on the device; this player must log out before another player can log in.

Your game must authenticate the local player before using any Game Center features. Authenticating the player ensures that the player has created an account and is connected to Game Center. To authenticate the local player, retrieve the shared instance of the local player by calling the localPlayer class method, and then call the authenticateWithCompletionHandler: method.

You can see whether the local player is authenticated by reading the local player's authenticated property. If authenticated is true, then the local player's other properties are valid, and you can call other Game Center methods.

Call the loadFriendsWithCompletionHandler: method to retrieve the player identifiers for the local player's friends.
Subclass of the GKPlayerMBS class.

- 12.4, pages 30 to 31: Writing OS X Apps for Game Center, Getting started by authenticating the local player with the Game Center Sandbox testing facility by Tom Baumgartner

86.14.4 Methods

86.14.5 authenticate(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Prompts the player to confirm their identity.
Deprecated: This item is deprecated and should no longer be used. You can use SetAuthenticateHandler instead. **Notes:**

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.authenticateCompleted event.

Your game should authenticate the player as early as possible after launching, ideally as soon as you can present a user interface to the player. For example, your game may be launched because the player accepted an invitation to join a match or to take a turn in a turn-based match, so you want your game to authenticate the player and process the match invitation as quickly as possible.

If there is not an authenticated player on the device when your game calls this method, Game Kit displays a user interface that allows the player to sign in with their credentials (or to create a new account if he or she has never used Game Center). Your game should pause other activities that require user interaction (such as a real time game loop) before attempting to authenticate the local player.

Each time the completion handler is called, the data stored in the the GKLocalPlayer singleton object may have changed. A new player may have logged into the device or the player may have simply logged out from Game Center. Because of both of these possibilities, your completion handler must be prepared update any state of the game that assumes that a particular player is logged in if it discovers that the local player has changed. For more information, see "Authenticating the Local Player in a Multitasking Application" in Game Kit Programming Guide.

Deprecated in Mac OS X 10.9.

86.14.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Creates new object pointing to the shared instance of the local player.

86.14.7 friends as string()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A list of player identifiers for the local player's friends. (read-only)
Notes: This property is invalid until a call to loadFriends succeeds.

86.14.8 GKPlayerAuthenticationDidChangeNotificationName as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The notificartion name fo the notification to inform about an authentication change.
Notes: Posted after the authenticated property of the shared local player object changes.

86.14.9 loadDefaultLeaderboardCategoryID(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Loads the category identifier for the local player's default leaderboard.
Notes:

Calls later GameKitMBS.loadDefaultLeaderboardCategoryIDCompleted event.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.loadDefaultLeaderboardCategoryIDCompleted event.

Available on Mac OS X 10.8.2 and newer.

86.14.10 loadFriendPlayers(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

Function: Retrieves a list of player identifiers for the local player,Äôs friends.
Notes:

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls your completion handler. The completion handler is always called on the main thread.

Available in OS X v10.10 and later.
Calls later loadFriendPlayersCompleted event in GameKitMBS class.

86.14.11 loadFriends(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Retrieves a list of player identifiers for the local player's friends.
Notes:

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.loadFriendsCompleted.

Once this call is completed, the friends property is set to the same list of players returned in the completion event.

86.14.12 localPlayer as GKLocalPlayerMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Retrieves the shared instance of the local player.
Notes: You never directly create a local player object. Instead, you retrieve the singleton object by calling this method.

86.14.13 SetAuthenticateHandler(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Sets the handler called to process an authentication-related event with GameKitMBS.authenticateHandler.
Notes:

Calls later GameKitMBS.authenticateHandler.
Available on Mac OS X 10.8.2 and newer.

86.14.14 setDefaultLeaderboardCategoryID(categoryID as string, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Sets the category identifier for the local player's default leaderboard.
Notes:

categoryID: The category ID string for one of your game's leaderboards.

When this method is called, it creates a new background task to handle the request. The method then

returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.setDefaultLeaderboardCategoryIDCompleted event.

The default leaderboard is configured in iTunes Connect as part of configuring your game's leaderboards. All players normally start with this leaderboard as the default leaderboard. Calling this method changes the default leaderboard only for the local player.

Available on Mac OS X 10.8.2 and newer.

86.14.15 Properties

86.14.16 isAuthenticated as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that indicates whether a local player is currently signed in to Game Center. (read-only)
Notes:

Before using other Game Center features, your game must authenticate the local player. Your game can read this property elsewhere in your game to confirm that the local player is authenticated.

Important Even after the local player has successfully authenticated their credentials, the value of this property can change. For example, if your game is switched into the background, the player could launch the Game Center game and sign out of Game Center. To be notified when the value of this property changes, your game should register to receive the GKPlayerAuthenticationDidChangeNotificationName notification (or use GameKitMBS.PlayerAuthenticationDidChange event).
(Read only property)

86.14.17 isUnderage as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that declares whether the local player is underage. (read-only)
Notes:

Some Game Center features are disabled if the local player is underage. Your game can test this property if it wants to disable some of its own features based on the player's age.
(Read only property)

86.15 class GKMatchmakerMBS

86.15.1 class GKMatchmakerMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The GKMatchmaker class is used to programmatically create matches to other players and to receive match invitations sent by other players.
Notes:

- 12.5, page 29: Writing OS X Apps for Game Center, Part 2: Requesting a Match by Tom Baumgartner

86.15.4 Methods

86.15.5 addPlayersToMatch(match as GKMatchMBS, matchRequest as GKMatchRequestMBS, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Adds players to an existing match.
Notes:

match: A previously created match.
matchRequest: The parameters for the new match request.

This method updates an existing match object by adding additional players.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.addPlayersToMatchCompleted event.

86.15.6 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: True if the class is available.
Notes: Should always be true on Mac OS X 10.8 and newer.

86.15.7 cancel

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Cancels a pending matchmaking request.
Notes: The completion event receives a callback with a GKErrorCancelled error.

86.15.8 cancelInviteToPlayer(playerID as string)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Cancel a pending invitation to a player.
Notes: Available on Mac OS X 10.8.2 and newer.

86.15.9 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The constructor.

86.15.10 Destructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The destructor.

86.15.11 findMatchForRequest(request as GKMatchRequestMBS, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Initiates a request to find players for a peer-to-peer match.
Notes:

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.findMatchForRequestCompleted event.

The match request's playersToInvite property is ignored; to invite a specific set of players to the match, you must display the standard user interface.

86.15.12 findPlayersForHostedMatchRequest(request as GKMatchRequestMBS, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Initiates a request to find players for a hosted match.
Notes:

request: The configuration for the desired match.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.findPlayersForHostedMatchRequestCompleted event. When the event is called, your game should connect those players to your own server.

The match request's playersToInvite property is ignored; to invite a specific set of players to the match, you must display the standard user interface.

86.15.13 finishMatchmakingForMatch(match as GKMatchMBS)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Call this when finished with all programmatic P2P invites/matchmaking, for compatability with connected players using GKMatchmakerViewController.
Notes: Available on Mac OS X 10.8.2 and newer.

86.15.14 matchForInvite(invite as GKInviteMBS, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Get a match for an accepted invite.
Notes:

Calls later GameKitMBS.matchForInviteCompleted eventg.

Possible reasons for error:
1. Communications failure.
2. Invite cancelled.

Available on Mac OS X 10.8.2 and newer.

86.15.15 maxPlayersAllowedForMatchOfType(type as Integer) as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: To determine the maximum allowed players for each type of match supported.
Notes: Available on Mac OS X 10.8.2 and newer.

86.15.16 queryActivity(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Initiates a search for activity in all player groups.
Notes:

A query allows your game to see how many players have recently searched for a match, across all player groups.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.queryActivityCompleted.

86.15.17 queryPlayerGroupActivity(playerGroup as Integer, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Queries Game Center for the activity in a player group.

Notes:

playerGroup: A number that uniquely identifies a subset of players of your game.

A query allows your game to see how many players have recently searched for a match. As a result, you can present a user interface that shows the relative activity in each player group. For example, if one group sees less activity than others, you might display a warning so that players are aware that finding a match may take longer.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.queryPlayerGroupActivityCompleted event.

86.15.18 sharedMatchmaker as GKMatchmakerMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Returns the singleton matchmaker instance.
Notes: Games do not create a GKMatchmaker object. Instead, they retrieve the shared singleton by calling this method.

86.15.19 startBrowsingForNearbyPlayers(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Start browsing for nearby players that can be invited to a match.
Notes:

The GameKitMBS.startBrowsingForNearbyPlayersCompleted event will be called for each player found with a compatible game. It may be called more than once for the same player if that player ever becomes unreachable (e.g. moves out of range). You should call stopBrowsingForNearbyPlayers when finished browsing.

Available on Mac OS X 10.8.2 and newer.

86.15.20 stopBrowsingForNearbyPlayers

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Stop browsing for nearby players.
Notes: Available on Mac OS X 10.8.2 and newer.

86.15.21 Properties

86.15.22 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

86.15.23 Constants

86.15.24 GKMatchTypeHosted = 1

MBS MacFrameworks Plugin, Plugin Version: 13.0.

Function: One of the match types.
Notes:

Hosted Match
Available on Mac OS X 10.8.2 and newer.

86.15.25 GKMatchTypePeerToPeer = 0

MBS MacFrameworks Plugin, Plugin Version: 13.0.

Function: One of the match types.
Notes:

Peer to Peer Match.
Available on Mac OS X 10.8.2 and newer.

86.15.26 GKMatchTypeTurnBased = 2

MBS MacFrameworks Plugin, Plugin Version: 13.0.

Function: One of the match types.
Notes:

Turn based match.
Available on Mac OS X 10.8.2 and newer.

86.16 class GKMatchmakerViewControllerMBS

86.16.1 class GKMatchmakerViewControllerMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The GKMatchmakerViewController class is used to present a standard user interface to the player.
Notes:

This interface allows them to invite friends to a match or to allow Game Center to fill the remaining players needed for a match.

see also:
https://developer.apple.com/library/mac/# documentation/GameKit/Reference/GKMatchmakerViewController_Ref/Reference/Reference.html
Subclass of the NSViewControllerMBS class.

- 12.5, page 29: Writing OS X Apps for Game Center, Part 2: Requesting a Match by Tom Baumgartner

86.16.4 Methods

86.16.5 addPlayersToMatch(match as GKMatchMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Adds a player to the match.
Notes:

match: An existing match that you want to add players to.

Your game calls this method prior to presenting the view controller to the player. Calling this method instructs the view controller to add new players to the provided match rather than creating a new match.

When called, this method sets the delegate on the match to nil and updates the view controller's user interface to display the players already connected to the match.

Important Only one device connected to the match should call this method.

86.16.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: The private constructor.
See also:

- 86.16.7 Constructor(invite as GKInviteMBS) 16334
- 86.16.8 Constructor(request as GKMatchRequestMBS) 16334

86.16.7 Constructor(invite as GKInviteMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Initializes a matchmaker view controller to respond to an invitation received from another player.
Notes:

invite: The invitation received from the other player.

The user is allowed to join the match that the user was invited to, but is not allowed to invite others to the match.
See also:

- 86.16.6 Constructor 16334
- 86.16.8 Constructor(request as GKMatchRequestMBS) 16334

86.16.8 Constructor(request as GKMatchRequestMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Initializes a matchmaker view controller to create a new match.
Notes:

request: A request containing the characteristics for the desired match.
Your game uses this Constructor when it wants the local user to create a new match.
See also:

- 86.16.6 Constructor 16334

• 86.16.7 Constructor(invite as GKInviteMBS) 16334

86.16.9 matchRequest as GKMatchRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The configuration for the desired match. (read-only)

86.16.10 setHostedPlayer(playerID as string, connected as boolean)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Updates a player's status on the view to show that the player has connected or disconnected from your server.
Notes:

playerID: The identifier string for a player that connected to the external server.
connected: Optional, a Boolean value that states whether the player is connected to the hosted match.

When setting up a hosted match, each device should instantiate a matchmaker view controller and display it to the player. Then, when a new player connects to your server, your server should notify all participating devices already connected to your server. Each participating device should then call this method to update that player's status in the matchmaking interface. Similarly, if a player disconnects from the server, your server should inform each device so that the devices can update their user interface.

86.16.11 Properties

86.16.12 DefaultInvitationMessage as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The default invitation message used to initialize an invitation.
Notes:

Your game sets this property to change the default invitation text displayed when the local player creates a new invitation. The local player may edit the text before sending the invitation.
(Read and Write computed property)

86.16.13 Hosted as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that indicates whether the match is hosted or peer-to-peer.
Notes:

The value of the hosted property determines which events of GameKitMBS are called when the match is complete. If true, this is a hosted match, and the delegate's matchmakerViewControllerDidFindPlayers method is to provide the list of players to your game. If false, this is a peer-to-peer match, and matchmakerViewControllerDidCreateMatch is called with a GKMatch object. The default value is false.

Hosted matches require you to provide a server that hosts the participants in the match.
(Read and Write computed property)

86.17 class GKMatchMBS

86.17.1 class GKMatchMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A GKMatch object provides a peer-to-peer connection between a group of players that are connected through Game Center.
Notes:

Matches provide both data and voice services. Your application never directly allocates GKMatch objects. Instead, your application uses the GKMatchmaker class to programmatically find a match with other interested players or a GKMatchmakerViewController object to display a user interface to the player.

After your application receives a match object, you must set a delegate and then wait until the other participants are connected to the match. You can read the expectedPlayerCount property to determine how many players have not connected to the match.

Your application transmits data to other players by calling either the sendDataToAllPlayers method or the sendDataToPlayer method. To transmit and receive voice data, call voiceChatWithName to create one or more voice channels.

When you are finished with the match, call the match's disconnect method.

86.17.2 Xojo Developer Magazine

- 12.5, page 34: Writing OS X Apps for Game Center, Part 2: Requesting a Match by Tom Baumgartner
- 12.5, pages 31 to 32: Writing OS X Apps for Game Center, Part 2: Requesting a Match by Tom Baumgartner

86.17.3 Xojo Developer Magazine

- 12.5, page 34: Writing OS X Apps for Game Center, Part 2: Requesting a Match by Tom Baumgartner
- 12.5, pages 31 to 32: Writing OS X Apps for Game Center, Part 2: Requesting a Match by Tom Baumgartner

86.17.4 Methods

86.17.5 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: True if the class is available.
Notes: Should always be true on Mac OS X 10.8 and newer.

86.17.6 chooseBestHostPlayer(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Determines the best player in the game to act as the server for a client-server match.
Notes:

Calling this method causes Game Kit to attempt to estimate which player has the best overall network connection using a variety of metrics such as bandwidth, latency and network reliability. Typically, you call this method when your game implements a client-server model on top of the match's peer-to-peer connection. See "Designing Your Network Game" in Game Center Programming Guide.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls your GKMatchMBS.chooseBestHostPlayerCompleted event.

86.17.7 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The constructor.

86.17.8 disconnect

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Disconnects the local player from the match.
Notes: Your application should call disconnect before releasing the match object. Calling disconnect notifies other players that you have left the match.

86.17.9 expectedPlayerCount as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The remaining number of players who have not yet connected to the match. (read-only)
Notes: The value of this property is decremented whenever a player connects to the match. When its value reaches zero, all expected players are connected, and your game can begin the match.

86.17.10 playerIDs as string()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The player identifiers for the players in the match. (read-only)
Notes: The playerIDs property initially includes the player identifiers for any players already connected to the match; the array may initially be empty. As each player connects to the match, that player's player identifier is added to the array.

86.17.11 rematch(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Create a new match with the list of players from an existing match.
Notes:

Calling this method uses auto-matching to recreate a previous match. A new match with the same set of players is created and returned. If your game attempts to recreate matches using this method, each instance of your game on each device should call this method.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GKGameKitMBS.rematchCompleted event.

86.17.12 sendDataToAllPlayers(data as Dictionary, mode as Integer, byref error as NSErrorMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Transmits data to all players connected to the match.
Notes:

data: The game data to send.
mode: The mechanism used to send the data.
error: If the data could not be queued, on return, this parameter holds an NSError object describing the error.

Return true if the data was successfully queued for transmission; false if the match was unable to queue the data.
The match queues the data and transmits it when the network becomes available.

86.17.13 sendDataToPlayers(players() as string, data as Dictionary, mode as Integer, byref error as NSErrorMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Transmits data to a list of connected players.
Notes:

data: The game data to be sent.
players: An array containing the identifier strings for the list of players who should receive the data.
mode: The mechanism used to send the data.
error: If the data could not be queued, on return, this parameter holds an NSError object describing the error.

Returns true if the data was successfully queued for transmission; false if the match was unable to queue the data.
The match queues the data and transmits it when the network becomes available.

86.17.14 voiceChatWithName(name as string) as GKVoiceChatMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Joins a voice channel.
Notes:

Returns an voice chat object for the voice channel, or nil if an error occurred.

Calling this method joins a voice channel, creating it if necessary. Your application should retain the voice chat object returned by this method. All participants who join a channel with the same name are connected to each other.

A single match can have multiple voice chat channels, and any player in the match can join multiple channels simultaneously. For example, a team-based game might create a channel for each team, and a single channel that includes all of the players.

Voice chat objects are dependent on the network connection provided by the match. When the player disconnects from the match, all voice channels associated with that match stop working. Typically, you should release any voice channels you joined before calling calling disconnect on the match.

Parental controls may prevent a player from joining a voice chat. If the player is not permitted to join the voice channel, a nil object is returned to your application.

86.17.15 Properties

86.17.16 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

86.17.17 Constants

86.17.18 GKMatchSendDataReliable = 0

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the mechanism constants used to transmit data to other players.
Notes:

The data is sent continuously until it is successfully received by the intended recipients or the connection times out.
Reliable transmissions are delivered in the order they were sent. Use this when you need to guarantee delivery.

86.17.19 GKMatchSendDataUnreliable = 1

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the mechanism constants used to transmit data to other players.
Notes:

The data is sent once and is not sent again if a transmission error occurs.
Data transmitted unreliably may be received out of order by recipients. Use this for small packets of data that must arrive quickly to be useful to the recipient.

86.17.20 GKPlayerStateConnected = 1

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the state constants.
Notes: Connected to the match.

86.17.21 GKPlayerStateDisconnected = 2

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the state constants.
Notes: Disconnected from the match.

86.17.22 GKPlayerStateUnknown = 0

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the state constants.
Notes: Initial player state.

86.18 class GKMatchRequestMBS

86.18.1 class GKMatchRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A GKMatchRequest object is used to specify the parameters for a new match.
Notes: A GKMatchRequest object is passed to the GKMatchmaker object to programmatically search for other players, or to a GKMatchmakerViewController (GKMatchmakerPanel on OS X) object when your game wants to present the default user interface to the player.

- 12.5, pages 32 to 33: Writing OS X Apps for Game Center, Part 2: Requesting a Match by Tom Baumgartner
- 12.5, page 29: Writing OS X Apps for Game Center, Part 2: Requesting a Match by Tom Baumgartner

86.18.4 Methods

86.18.5 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: True if the class is available.
Notes: Should always be true on Mac OS X 10.8 and newer.

86.18.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The constructor.

86.18.7 playersToInvite as string()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A list of players to invite to the match.
Notes: If empty (the default), no players are invited. If non-empty, Game Kit populates the match with the provided list of players.

86.18.8 recipients as GKPlayerMBS()

MBS MacFrameworks Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

Function: A list of player identifiers for players to invite to the match.
Notes:

The property holds an array of GKPlayer objects, each of which contains an identifier for a player on Game Center. If the value of the property is non-nil, when you use the request to create a match, Game Center invites those players to the match. No automatching is done and the GKMatchRequestmaxPlayers and minPlayers properties are ignored. If nil (the default), no players are invited. The exact behavior for matchmaking depends on the kind of match being created and the class used to create the match. For more information, see Game Center Programming Guide.

Available in OS X v10.10 and later.

86.18.9 SetInviteeResponseHandler(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Sets the invitee response handler for this match request.
Notes:

An invitee response handler is called whenever you programmatically invite specific players to join a match. It is called once for each player invited to the match. Typically, your game uses the responses to update the custom user interface. For example, you want the player to be able to perform any of the following tasks:

- Start the match.
- Invite an additional set of specific players.
- Use matchmaking to fill the remaining match slots.

Available on Mac OS X 10.8.2 and newer.

86.18.10 setPlayersToInvite(playerIDs() as string)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Sets the list of players to invite to the match.
Notes: If empty (the default), no players are invited. If non-empty, Game Kit populates the match with the provided list of players.

86.18.11 SetRecipientResponseHandler(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

Function: Sets the event to be called when a response from an invited player is returned to your game.
Notes: Once event is installed, the plugin can call GameKitMBS.recipientResponseHandler event for this match request.

86.18.12 setRecipients(players() as GKPlayerMBS)

MBS MacFrameworks Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

Function: Sets the list of player identifiers for players to invite to the match.
Notes:

The property holds an array of GKPlayer objects, each of which contains an identifier for a player on Game Center. If the value of the property is non-nil, when you use the request to create a match, Game Center invites those players to the match. No automatching is done and the GKMatchRequestmaxPlayers and minPlayers properties are ignored. If nil (the default), no players are invited. The exact behavior for matchmaking depends on the kind of match being created and the class used to create the match. For more information, see Game Center Programming Guide.

Available in OS X v10.10 and later.

86.18.13 Properties

86.18.14 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

86.18.15 defaultNumberOfPlayers as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: The default number of players for the match.
Notes:

If this property is not set, then the default number of players is equal to the value stored in the maxPlayers property. The default number of players determines the number of invitees shown in the standard match-making user interface. The player can choose to override this to add or remove slots.

Available on Mac OS X 10.8.2 and newer.
(Read and Write computed property)

86.18.16 inviteMessage as string

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Message sent to invited players, may be modified if using Game Center UI.
Notes:

Available on Mac OS X 10.8.2 and newer.
(Read and Write computed property)

86.18.17 maxPlayers as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The maximum number of players to join the match.
Notes:

The maximum number of players must be equal or greater than the minimum number of players. The maximum number of players may be no more than 4 for a peer-to-peer match and no more than 16 for a hosted match.
(Read and Write computed property)

86.18.18 minPlayers as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The minimum number of players to join the match.
Notes:

The minimum number of players must be at least 2.
(Read and Write computed property)

86.18.19 playerAttributes as UInt32

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A mask that specifies the role that the local player would like to play in the game.
Notes:

If this value is 0 (the default), this property is ignored. If the value is nonzero, then automatching uses the value as a mask that restricts the role the player can play in the group. Automatching with player attributes follows two rules:

A new player can only be added to the match if the bitwise AND of that player's mask and the mask of any player already in the match equals & h00000000.
Players are added to the match until the bitwise OR of the masks of all the players in the match equals & hFFFFFFFF.
(Read and Write computed property)

86.18.20 playerGroup as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A number identifying a subset of players allowed to join the match.
Notes:

If your game sets the playerGroup property, only players whose requests share the same playerGroup value are automatched by Game Center. You can use any values you want for player groups. For example, you could define different playerGroup values to implement any of the following filters:

- A game could restrict players based on skill level.
- A game that provides multiple games could use it to filter players into the specific game they want to play.
- A game with multiple victory conditions (for example, Capture-The-Flag, Survival) could match players to others interested in the same rules.
- A game that provides bonus content through in-app purchase could match players who own the same content with each other.

(Read and Write computed property)

86.19 class GKPlayerMBS

86.19.1 class GKPlayerMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: GKPlayer objects provide information about a player connected to Game Center.
Notes:

see also
https://developer.apple.com/library/mac/# documentation/GameKit/Reference/GKPlayer_Ref/Reference/Reference.html
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.19.2 Methods

86.19.3 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: True if the class is available.
Notes: Should always be true on Mac OS X 10.8 and newer.

86.19.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

86.19.5 GKPlayerDidChangeNotificationName as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The name of the notification posted when a player object's data changes.
Notes: Used internally for GameKitMBS.playerChanged event.

86.19.6 loadPhotoForSize(size as Integer, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Loads a photo depicting this player from Game Center.
Notes:

size: A constant that determines the size of the photo to load.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.loadPhotoForSizeCompleted.

Important The size of the image returned to your game is dependent on both the constant you provided in the initial request and the user interface idiom of the device your game is running on.

86.19.7 loadPlayersForIdentifiers(identifiers() as string, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Loads information from Game Center about a list of players.
Notes:

identifiers: An array of strings, each a unique identifier for a Game Center player.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.loadPlayersForIdentifiersCompleted event.

86.19.8 Properties

86.19.9 alias as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A string chosen by the player to identify themselves to other players. (read-only)
Notes:

Your game uses the alias property when it wants to display a user-visible string for a particular player. (Read only property)

86.19.10 displayName as String

MBS MacFrameworks Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

Function: A string to display for the player.

Notes:

The display name for a player depends on whether the player is a friend of the local player authenticated on the device. If the player is a friend of the local player, then the display name is the actual name of the player. If the player is not a friend, then the display name is the player,Äôs alias.
Available in Mac OS X 10.8 and newer.
(Read only property)

86.19.11 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

86.19.12 isFriend as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that indicates whether the local player has identified this player as a friend. (read-only)
Notes:

The Game Center application allows players to declare other players as friends.
(Read only property)

86.19.13 playerID as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A string assigned by Game Center to uniquely identify a player. (read-only)
Notes:

The player identifier should not be displayed to the user. Your game should use this string whenever it needs to persistently store information for a specific player.

Do not make assumptions about the contents of the player identifier string. Its format and length are subject to change.
(Read only property)

86.19.14 Constants

86.19.15 GKPhotoSizeNormal = 1

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the size constants of a photo loaded by Game Center.
Notes: Load a normal sized photo.

86.19.16 GKPhotoSizeSmall = 0

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the size constants of a photo loaded by Game Center.
Notes: Load a small photo.

86.20 class GKScoreChallengeMBS

86.20.1 class GKScoreChallengeMBS

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: A GKScoreChallenge object represents a challenge based on a score in a leaderboard.
Notes:

To complete the challenge, the player must score an equal or better score than the score used to create the challenge. When a player beats a score challenge, a new score challenge is automatically issued to the player that issued the challenge unless there is already a pending score challenge that requires a better score.

Available on Mac OS X 10.8.2 and newer.
Subclass of the GKChallengeMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.20.2 Methods

86.20.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: The private constructor.
Notes:

Available on Mac OS X 10.8.2 and newer.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

86.20.4 score as GKScoreMBS

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: The score to beat. (read-only)
Notes: Available on Mac OS X 10.8.2 and newer.

86.21 class GKScoreMBS

86.21.1 class GKScoreMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A GKScore class holds information for a score that was earned by the player.
Notes:

Your game creates GKScore objects to post scores to a leaderboard on Game Center. When your game retrieves score information from a leaderboard those scores are returned as GKScore objects.

see also
https://developer.apple.com/library/mac/# documentation/GameKit/Reference/GKScore_Ref/Reference/Reference.html

86.21.2 Methods

86.21.3 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: True if the class is available.
Notes: Should always be true on Mac OS X 10.8 and newer.

86.21.4 Constructor(category as string)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Initializes a score object.
Notes:

Category: A category identifier for a specific leaderboard you've configured on iTunes Connect. Must not be "".

Your game explicitly allocates and initializes a score object when it needs to report a new score to Game Center.

86.21.5 date as date

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The date and time when the score was earned. (read-only)
Notes: When you initialize the new score object, the date property is automatically set to the current date and time.

86.21.6 formattedValue as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Returns the player's score as a localized string. (read-only)
Notes:

This property is invalid on a newly initialized score object. On a score returned from Game Kit, it contains a formatted string based on the player's score. You control the formatting of this string by configuring your leaderboards on iTunes Connect.

Never convert the value property into a string; always configure your leaderboard and call this method to receive the formatted string.

86.21.7 issueChallengeToPlayers(playerIDs() as string, message as string)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Use this method to issue GKScoreChallenges and GKAchievementChallenges to an array of playerIDs.
Notes:

Players may not issue challenges to themselves nor to non-friends. Please see the GameKit reference documentation for further details on these methods.
Available on Mac OS X 10.8.2 and newer.

86.21.8 playerID as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The player identifier for the player that earned the score. (read-only)
Notes: When you initialize a new score object, the playerID property is set to the identifier for the local player. If you read the property on a score object retrieved from Game Center, playerID identifies the player who recorded that score.

86.21.9 rank as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The position of the score in the results of a leaderboard search. (read-only)
Notes: The value of this property is undefined on a newly initialized GKScore object. It is only valid on score objects received from Game Center. The rank property represents the position of the score in the returned results, with 1 being the best score, 2 being the second best, and so on.

86.21.10 reportScore(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Reports a score to Game Center.
Notes:

The value property must be set before calling this method.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.reportScoreCompleted.

If the score object successfully reports progress to Game Center, your game may release it. Otherwise, your game should inspect the error. If the error is a network error and your game is running on iOS 4.3 or earlier, your game should periodically attempt to report the progress until the score is successfully reported. On iOS 5.0 and later and on OS X, the background reporting task automatically handles network errors on your game's behalf.

86.21.11 reportScores(scores() as GKScoreMBS, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Reports a list of scores to Game Center.
Notes:

scores: An array of score objects to report to Game Center.

Calls later GameKitMBS.reportScoresCompleted on completion.

Use this class method whenever you need to submit multiple scores at the same time. Calling this method reports each of the scores, exactly as if you called the reportScore method on each score object in the array. However, the entire operation can typically be processed more efficiently using this method, and the completion handler is only called once.
Available on Mac OS X 10.8.2 and newer.

86.21.12 Properties

86.21.13 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

86.21.14 category as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The leaderboard that this score belongs to.
Notes:

The category string must match an identifier you created when you defined your leaderboards on iTunes Connect.
(Read and Write computed property)

86.21.15 context as UInt64

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: An integer value used by your game.
Notes:

The context property allows your game to associate an arbitrary 64-bit unsigned integer value with the score data reported to Game Center. You decide how this integer value is interpreted by your game. For example, your game might use the context property to store flags that provide game-specific details about a player's score, or it might use the context as a key to some other data stored on the device or on your own server. In either case, your game typically uses this information when it displays a custom leaderboard to the player.
(Read and Write computed property)

86.21.16 shouldSetDefaultLeaderboard as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that indicates whether this score should also update the default leaderboard.
Notes:

If the value of this property is true, when the score is reported to Game Center, Game Center also updates the default leaderboard to match the value stored in the category property of the score object. This matches the behavior of the GKLeaderboardMBS class's setDefaultLeaderboard class method. If the value of this property is true, the default leaderboard is not changed by reporting the score. The default value of this property is false.
(Read and Write computed property)

86.21.17 value as Int64

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The score earned by the player.
Notes:

You can use any algorithm you want to to calculate scores in your game. The value provided by a score object must match the formatting string configured for your leaderboard on iTunes Connect. Your game must set the value property before reporting a score, otherwise an error is returned.
(Read and Write computed property)

86.22 class GKTurnBasedMatchmakerViewControllerMBS

86.22.1 class GKTurnBasedMatchmakerViewControllerMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The GKTurnBasedMatchmakerViewController class displays a user interface that allows players to manage the turn-based matches that they are participating in.
Notes:

see also
https://developer.apple.com/library/mac/# documentation/GameKit/Reference/GKTurnBasedMatchmakerViewController_Ref/Reference/Reference.html

See also GameKitMBS.turnBasedMatchmakerViewController* events.
Subclass of the NSViewControllerMBS class.

86.22.2 Methods

86.22.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: The private constructor.
See also:

- 86.22.4 Constructor(request as GKMatchRequestMBS) 16359

86.22.4 Constructor(request as GKMatchRequestMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Initializes a new matchmaker view controller.
Notes: request: A match request with parameters for the match.
See also:

- 86.22.3 Constructor 16359

86.22.5 Properties

86.22.6 showExistingMatches as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that determines whether the view controller shows existing matches.
Notes:

If the value of this property is true, the view controller shows matches that are already in progress. If the value of this property is false, the view controller only offers the ability to create new matches. The default value is true.
(Read and Write computed property)

86.23 class GKTurnBasedMatchMBS

86.23.1 class GKTurnBasedMatchMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The GKTurnBasedMatch class allows your game to implement turn-based matches between sets of players on Game Center.
Notes:

A turn-based match uses a store-and-forward approach to share data between the participants. When a player participating in the match performs actions to advance the state of the match, your game uploads data to Game Center that defines the new state of the match and tells Game Center which player act next in the match. Later, when the next player launches your game, it downloads the match data from Game Center and continues the match. Players continue to take turns acting (based on whatever internal logic your game implements) until the match ends. A key advantage of turn-based matches is that a player may participate in multiple matches simultaneously.

- 12.5, page 32: Writing OS X Apps for Game Center, Part 2: Requesting a Match by Tom Baumgartner

86.23.4 Methods

86.23.5 acceptInvite(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Programmatically accept an invitation to a turn-based match.
Notes:

When this method is called, it creates a background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls your GameKitMBS.acceptInvite-Completed event.

Available on Mac OS X 10.8.2 and newer.

86.23.6 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: True if the class is available.
Notes: Should always be true on Mac OS X 10.8 and newer.

86.23.7 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The constructor.

86.23.8 creationDate as date

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The date that the match was created. (read-only)

86.23.9 currentParticipant as GKTurnBasedParticipantMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The participant whose turn it is to act next. (read-only)
Notes: After a match starts and until it ends, the current player is the one who needs to take action to

drive the match to completion. Other players are not allowed to change the state of the match.

86.23.10 declineInvite(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Programmatically decline an invitation to a turn-based match.
Notes:

When this method is called, it creates a background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls your GameKitMBS.declineInviteCompleted event.

Available on Mac OS X 10.8.2 and newer.

86.23.11 endMatchInTurnWithMatchData(matchData as Dictionary, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Ends the match.
Notes:

matchData: The end state for the match.

Calling this method ends the match for all players. This method may only be called by the current participant. Before your game calls this method, the matchOutcome property on each participant object stored in the participants property must have been set to a value other than GKTurnBasedMatchOutcomeNone.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls your GameKitMBS.endMatchInTurnWithMatchDataCompleted event.

86.23.12 endTurnWithNextParticipant(nextParticipant as GKTurnBasedParticipantMBS, matchData as Dictionary, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Updates the data stored on Game Center for the current match.
Notes:

nextParticipant: The next player in the match who needs to take an action. It must be one of the object's

stored in the match's participants property.
matchData: The game-specific state for the match.
completionHandler

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls the GameKitMBS.endTurnWithNextParticipant event.

86.23.13 endTurnWithNextParticipants(nextParticipants() as GKTurnBasedParticipantMBS, timeout as Double, matchData as Dictionary, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Updates the data stored on Game Center for the current match.
Notes:

nextParticipants: An array of participant objects reflecting the order in which the players should act next. Each object in the array must be one of the objects stored in the match's participants property.
timeout: The length of time the next player has to complete their turn.
matchData: The game-specific state for the match.

If the next player to act does not take their turn in the specified interval, the next player in the array receives a notification to act. This process continues until a player takes a turn or the last player in the list is notified.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls your GameKitMBS.endTurnWithNextParticipantsCompleted event.

Available on Mac OS X 10.8.2 and newer.

86.23.14 findMatchForRequest(request as GKMatchRequestMBS, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Programmatically searches for a new match to join.
Notes:

request: A match request that specifies the properties that the new match must fulfill.

When this method is called, it creates a background task to handle the request. The method then returns

control to your game. Later, when the task is complete, Game Kit calls your GameKitMBS.findMatchFor-Request2Completed event.

This method may either create a new match or it may place the player into an existing match that does not yet have its full complement of players and needs a new player to advance the match further. Regardless of how the player is placed in the match, the local player is always the current participant in the returned match. Your game should immediately display the match in its user interface and allow the player to take a turn.

86.23.15 loadMatchData(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Loads the game-specific data associated with a match.
Notes: When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.load-MatchDataCompleted event.

86.23.16 loadMatches(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Loads the set of turn-based matches involving the local player and creates a match object for each match.
Notes: When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.load-MatchesCompleted event.

86.23.17 loadMatchWithID(matchID as string, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Loads a specific match.
Notes:

matchID: The identifier for the turn-based match.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls your GameKitMBS.load-MatchWithIDCompleted event.

Available on Mac OS X 10.8.2 and newer.

86.23.18 matchData as Dictionary

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Game-specific data that reflects the details of the match. (read-only)
Notes:

Although Game Center knows who is participating in the match and who is expected to act next, it does not know anything about your game's internal logic. Your game provides the match data and all the programming logic required to interpret it. This data should include the current state of the game and provide any necessary details about what actions the current player is expected to take. It can also be helpful for your game to record information about recent moves made by other players. The game can then replay those moves visually for the player to show exactly how the match reached the state it is in now.

Your game never directly updates the match state associated with this property. Instead, when the data is updated to reflect the actions of the current player, your game serializes the updated state into dictionary and calls one of the match's instance methods that transmit the updated state to Game Center.

The value of this property is nil until after your game calls the loadMatchDataWithCompletionHandler: method and the load task is complete. After this task completes, the matchData property holds the data that the last player to act transmitted to Game Center.

86.23.19 matchDataMaximumSize as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Returns the limit the Game Center servers place on the size of the match data. (read-only)
Notes:

Game Kit returns an error if your game sends updated data larger than this value.
Available on Mac OS X 10.8.2 and newer.

86.23.20 matchID as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A string that uniquely identifies the match. (read-only)
Notes: This string is not intended to be displayed to players. Your game should use this string whenever it needs to refer to a specific match. For example, if you want your game to store additional information on a device, it might store it in a database using the match ID as a key.

86.23.21 message as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A message displayed to all players in the match.
Notes:

The message property is displayed by the standard user interface; this allows your game to use the message to inform players of the current state of the match.

Important This property can be changed only by an instance of your game associated with the current player. If an instance of your game associated with another player in the match attempts to write to this property, an exception is thrown.

86.23.22 participantQuitInTurnWithOutcome(matchOutcome as Integer, nextParticipant as GKTurnBasedParticipantMBS, matchData as Dictionary, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Resigns the current player from the match without ending the match.
Notes:

matchOutcome: The end outcome of the current player in the match.
nextParticipant: The next player in the match who needs to take an action. It must be one of the object's stored in the match's participants property.
matchData: A dictionary the game-specific state for the match.

Your game calls this method on an instance of your game that is processing the current player's turn, but that player has left the match. For example, the player may have willingly resigned from the match or that player may have been eliminated by the other players (based on your game's internal logic).

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.participantQuitInTurnWithOutcome event.
See also:

- 86.23.23 participantQuitInTurnWithOutcome(matchOutcome as Integer, nextParticipants() as GKTurnBasedParticipantMBS, timeout as Double, matchData as Dictionary, tag as Variant = nil) 16368

86.23.23 participantQuitInTurnWithOutcome(matchOutcome as Integer, nextParticipants() as GKTurnBasedParticipantMBS, timeout as Double, matchData as Dictionary, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Resigns the current player from the match without ending the match.
Notes:

matchOutcome: The end outcome of the current player in the match.
nextParticipants: An array of participant objects reflecting the order in which the players should act next. Each object in the array must be one of the objects stored in the match's participants property.
timeout: The length of time the next player has to complete their turn.
matchData: The game-specific state for the match.

Your game calls this method on an instance of your game that is processing the current player's turn, but that player has left the match. For example, the player may have willingly resigned from the match or that player may have been eliminated by the other players (based on your game's internal logic).

If the next player to act does not take their turn in the specified interval, the next player in the array receives a notification to act. This process continues until a player takes a turn or the last player in the list is notified.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls your GameKitMBS.participantQuitInTurnWithOutcomeCompleted event.

Available on Mac OS X 10.8.2 and newer.
See also:

- 86.23.22 participantQuitInTurnWithOutcome(matchOutcome as Integer, nextParticipant as GKTurnBasedParticipantMBS, matchData as Dictionary, tag as Variant = nil) 16367

86.23.24 participantQuitOutOfTurnWithOutcome(matchOutcome as Integer, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Resigns the player from the match when that player is not the current player. This action does not end the match.
Notes:

matchOutcome: The end outcome of the current player in the match.

If the local player decided they wanted to resign from the match but is not the current participant in the match, your game calls this method.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.participantQuitOutOfTurnWithOutcomeCompleted event.

86.23.25 participants as GKTurnBasedParticipantMBS()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Information about the players participating in the match. (read-only)
Notes:

The elements of this array are GKTurnBasedParticipantMBS objects representing each participant in the match. Your game uses these objects to retrieve more information about the participants in the match. Your game also uses one of the objects in this array as a parameter whenever it calls a method that sets a different participant to act in the match.

The size of the array and the order in which the participants appear in the array are set when the match is first created, and never changes. When a match is first created, some participants may not hold actual players yet. Game Center searches for a player to fill that spot in the match only after your game sets that participant as the current player.

86.23.26 rematch(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Create a new match with the list of players from an existing match.
Notes:

Calling this method uses auto-matching to recreate a previous match. A new match with the same set of players is created and returned. If your game attempts to recreate matches using this method, each instance of your game on each device should call this method.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GKGameKitMBS.rematchCompleted event.

86.23.27 remove(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Programmatically removes a match from Game Center.

Notes:

Even after a player's participation in a match ends, the data associated with the match continues to be stored on Game Center. Storing the data on Game Center allows the player to continue to watch the match's progress, or even see the final state of the match when it ends. However, players may also want to delete matches that they have finished playing. If you choose not to use the standard matchmaker user interface, your game should offer the ability to delete a finished match from Game Center. When a player chooses to delete a match from Game Center, call this method. It is a programming error to call this method on a match that has the local player as an active participant.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.removeCompleted event passing the tag. Keep in mind that the completion handler may be called on a thread other than the one originally used to invoke the method. This means that the code in your block needs to be thread-safe.

When the task completes, the match is no longer visible to the local player whose device made the call. Other players involved in the match still see the match.

86.23.28 saveCurrentTurnWithMatchData(matchData as Dictionary, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Update the match data without advancing the game to another player.
Notes:

Available on Mac OS X 10.8.2 and newer.

matchData: The game-specific state for the match.

This method updates the match data stored on Game Center. Call this method when the current player takes an action that advances the state of the match but does not end the player's turn. For example, if your game has a fog-of-war mechanic, you might call this method when the player revealed new information on the map.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls your GameKitMBS.saveCurrentTurnWithMatchDataCompleted event.

86.23.29 status as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The current state of the match. (read-only)

86.23.30 TimeoutDefault as Double

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Indicates that the player has one week to take a turn.
Example:

MsgBox str(GKTurnBasedMatchMBS.TimeoutDefault)

Notes:

One of the common values for turn timeouts.
Available on Mac OS X 10.8.2 and newer.
Currently this function returns 604800 seconds (7 weeks), but this may change in the future.

86.23.31 TimeoutNone as Double

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Indicates that the player's turn never times out.
Example:

MsgBox str(GKTurnBasedMatchMBS.TimeoutNone)

Notes:

One of the common values for turn timeouts.
Available on Mac OS X 10.8.2 and newer.
Currently this function returns 0 seconds, but this may change in the future.

86.23.32 Properties

86.23.33 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

86.23.34 Constants

86.23.35 GKTurnBasedMatchStatusEnded = 2

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the states a match can enter.
Notes: The match has been completed.

86.23.36 GKTurnBasedMatchStatusMatching = 3

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the states a match can enter.
Notes: The match is currently being played.

86.23.37 GKTurnBasedMatchStatusOpen = 1

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the states a match can enter.
Notes: Game Center is still searching for other players to join the match.

86.23.38 GKTurnBasedMatchStatusUnknown = 0

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the states a match can enter.
Notes: The match is in an unexpected state.

86.23.39 GKTurnBasedParticipantStatusActive = 4

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the states the participant is in during the match.
Notes: The participant has joined the match and is an active player in it.

86.23.40 GKTurnBasedParticipantStatusDeclined = 2

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the states the participant is in during the match.
Notes: The participant declined the invitation to join the match. When any participant declines an invitation to join a match, the match is automatically terminated.

86.23.41 GKTurnBasedParticipantStatusDone = 5

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the states the participant is in during the match.
Notes: The participant has exited the match. Your game sets the matchOutcome property to state why the participant left the match.

86.23.42 GKTurnBasedParticipantStatusInvited = 1

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the states the participant is in during the match.
Notes: The participant was invited to the match, but has not responded to the invitation.

86.23.43 GKTurnBasedParticipantStatusMatching = 3

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the states the participant is in during the match.
Notes: The participant is an unfilled position in the match that Game Center promises to fill when needed. When your game sets this participant as the current participant in the match, Game Center fills the position and updates the status and playerID properties.

86.23.44 GKTurnBasedParticipantStatusUnknown = 0

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the states the participant is in during the match.
Notes: The participant is in an unexpected state.

86.24 class GKTurnBasedParticipantMBS

86.24.1 class GKTurnBasedParticipantMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A GKTurnBasedParticipant object stores information for a participant in a turn-based match.
Notes:

Your game never creates objects of this class directly; instead it retrieves an array of GKTurnBasedParticipant objects from an GKTurnBasedMatch object.

Most information stored by a GKTurnBasedParticipant object is read-only, and is provided by Game Kit to assist you in implementing your game logic. However, the matchOutcome property is quite important; before your game may end a match, it must set the matchOutcome property in every GKTurnBasedParticipant object associated with the match.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.24.6 Methods

86.24.7 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

86.24.8 Properties

86.24.9 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

86.24.10 lastTurnDate as date

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The date and time that this participant last took a turn in the game. (read-only)
Notes:

The value of this property is invalid until the participant first takes a turn in the match.
(Read only property)

86.24.11 lastTurnDateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop only.

Function: The date and time that this participant last took a turn in the game. (read-only)
Notes:

The value of this property is invalid until the participant first takes a turn in the match.
(Read only property)

86.24.12 matchOutcome as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The end-state of this participant in the match.
Notes:

Initially, this property holds GKTurnBasedMatchOutcomeNone. Before your game can end a match, it must set the match outcome to some other value that reflects the outcome of this participant when he or she left the match. Your game must use any of the values provided in the "GKTurnBasedMatchOutcome" enumerated type. Optionally, it may also use an OR operation to include a custom match outcome for your specific game. Game Center does not use the custom value; it exists to allow your game to provide additional information at the end of the match. The custom value must fit in the range provided by the GKTurnBasedMatchOutcomeCustomRange constant.
(Read and Write property)

86.24.13 player as GKPlayerMBS

MBS MacFrameworks Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

Function: The GKPlayer object that identifies this participant. (read-only)
Notes:

The value of this property may be nil if this slot in the match has not yet been filled by an actual player.
Available in OS X v10.10 and later.
(Read only property)

86.24.14 playerID as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The player identifier for this participant. (read-only)
Notes:

The value of this property may be nil if this slot in the match has not been filled by an actual player.
(Read only property)

86.24.15 status as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The current status of the participant. (read-only)
Notes:

This property is updated by Game Kit to reflect the status of the participant.
(Read only property)

86.24.16 timeoutDate as date

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: The date and time that the participant's turn times out. (read-only)
Notes:

If a timeout was set when the turn state was advanced, this property holds when the player's turn expires. Otherwise, this property is nil.
Available on Mac OS X 10.8.2 and newer.
(Read only property)

86.24.17 timeoutDateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop only.

Function: The date and time that the participant's turn times out. (read-only)
Notes:

If a timeout was set when the turn state was advanced, this property holds when the player's turn expires. Otherwise, this property is nil.
Available on Mac OS X 10.8.2 and newer.
(Read only property)

86.24.18 Constants

86.24.19 GKTurnBasedMatchOutcomeCustomRange = & h00FF0000

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the states the participant was in when they left the match.
Notes: A mask used to allow your game to provide its own custom outcome. Any custom value must fit inside the mask.

86.24.20 GKTurnBasedMatchOutcomeFirst = 6

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the states the participant was in when they left the match.
Notes: The participant finished first.

86.24.21 GKTurnBasedMatchOutcomeFourth = 9

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the states the participant was in when they left the match.
Notes: The participant finished fourth.

86.24.22 GKTurnBasedMatchOutcomeLost = 3

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the states the participant was in when they left the match.
Notes: The participant lost the match.

86.24.23 GKTurnBasedMatchOutcomeNone = 0

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the states the participant was in when they left the match.
Notes: The participant's outcome has not been set yet (typically because the match is still in progress).

86.24.24 GKTurnBasedMatchOutcomeQuit = 1

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the states the participant was in when they left the match.
Notes: The participant forfeited the match.

86.24.25 GKTurnBasedMatchOutcomeSecond = 7

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the states the participant was in when they left the match.
Notes: The participant finished second.

86.24.26 GKTurnBasedMatchOutcomeThird = 8

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the states the participant was in when they left the match.
Notes: The participant finished third.

86.24.27 GKTurnBasedMatchOutcomeTied = 4

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the states the participant was in when they left the match.
Notes: The participant tied the match.

86.24.28 GKTurnBasedMatchOutcomeTimeExpired = 5

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the states the participant was in when they left the match.
Notes: The participant was ejected from the match because he or she did not act in a timely fashion.

86.24.29 GKTurnBasedMatchOutcomeWon = 2

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the states the participant was in when they left the match.
Notes: The participant won the match.

86.24.30 GKTurnBasedParticipantStatusActive = 4

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the states the participant is in during the match.
Notes: The participant has joined the match and is an active player in it.

86.24.31 GKTurnBasedParticipantStatusDeclined = 2

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the states the participant is in during the match.
Notes: The participant declined the invitation to join the match. When any participant declines an invitation to join a match, the match is automatically terminated.

86.24.32 GKTurnBasedParticipantStatusDone = 5

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the states the participant is in during the match.
Notes: The participant has exited the match. Your game sets the matchOutcome property to state why the participant left the match.

86.24.33 GKTurnBasedParticipantStatusInvited = 1

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the states the participant is in during the match.
Notes: The participant was invited to the match, but has not responded to the invitation.

86.24.34 GKTurnBasedParticipantStatusMatching = 3

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the states the participant is in during the match.
Notes: The participant is an unfilled position in the match that Game Center promises to fill when needed. When your game sets this participant as the current participant in the match, Game Center fills the position and updates the status and playerID properties.

86.24.35 GKTurnBasedParticipantStatusUnknown = 0

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the states the participant is in during the match.
Notes: The participant is in an unexpected state.

86.25 class GKVoiceChatMBS

86.25.1 class GKVoiceChatMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A GKVoiceChat object provides a voice channel that allows a set of players in a match to speak with each other.
Notes:

see also:
https://developer.apple.com/library/mac/# documentation/GameKit/Reference/GKVoiceChat_Ref/Reference/Reference.html

Available in OS X v10.8 and later.

86.25.2 Methods

86.25.3 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: True if the class is available.
Notes: Should always be true on Mac OS X 10.8 and newer.

86.25.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The constructor for a new voice chat.

86.25.5 enablePlayerStateUpdate(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Enables player state update event in GameKitMBS class.
Notes:

You enable GameKit.playerStateUpdate event to be called when the state of any participant in the chat changes (including the local player). The event receives the following parameters:

player: The player identifier for the player whose status changed.

state: The new state of the player.

86.25.6 isVoIPAllowed as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Returns whether voice chat is allowed to be used on the device.
Notes:

True if voice chat is available to the game.

Some countries or phone carriers may restrict the availability of voice over IP services. Before retrieving a GKVoiceChat object, your game should first check to see whether voice over IP is permitted on the device.

86.25.7 name as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The name of the voice chat (read-only).

86.25.8 playerIDs as string()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: An array of player identifiers for the players connected to the channel. (read-only)

86.25.9 setMute(mute as boolean, playerID as string)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Mutes a participant in the chat.
Notes:

isMuted: Determines whether the player is to be muted or not.
player: The player identifier string for a player in the match.

While a player is muted, the local player does not hear voice data transmitted by that player.

86.25.10 start

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Starts communication with other participants in the voice chat.
Notes:

When start is called, the voice chat connects to the channel and notifies other connected players that the local player joined the chat. When the voice chat object is connected, it plays voice data from other participants in the channel. It sends voice data to other participants when its active property is true.

A device only connects to the channel when the device has a microphone and is connected via wi-fi. However, your game may configure and start a voice chat channel when the device is not currently capable of using voice chat. If conditions change to allow voice chat,Äîfor example, the device connects to a wi-fi network,Äîthe GKVoiceChat object automatically connects to the channel.

86.25.11 stop

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Ends communication with other participants in the voice chat.
Notes: When stop is called, the voice chat object disconnects from the other players. You should call stop on a channel before releasing it.

86.25.12 Properties

86.25.13 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

86.25.14 active as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that states whether the channel is sampling the microphone.
Notes:

When active is true, the voice chat samples the microphone and transmits the voice data to other players connected to the channel. Default value is false.

Only one GKVoiceChat object is allowed to sample the microphone at any given time. When your game sets the active property to true on a voice chat object, the previous voice chat object that owned the microphone (if there was one) sets its active property to false.

Available in OS X v10.8 and later.
(Read and Write computed property)

86.25.15 volume as Double

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The volume level for the voice channel.
Notes:

All voice data received from other participants is mixed and then scaled by the volume property. The volume property has a range between 0.0 and 1.0, inclusive. A volume level of 0.0 means the entire channel is muted; a value of 1.0 plays voice samples at full volume. The default value is 1.0.
(Read and Write computed property)

86.25.16 Constants

86.25.17 GKVoiceChatPlayerConnected = 0

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the states returned to your game about other players in a voice chat.
Notes: A new player connected to the chat.

86.25.18 GKVoiceChatPlayerConnecting = 4

MBS MacFrameworks Plugin, Plugin Version: 13.0.

Function: One of the states returned to your game about other players in a voice chat.
Notes: A new player is connecting to the chat.

86.25.19 GKVoiceChatPlayerDisconnected = 1

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the states returned to your game about other players in a voice chat.
Notes: A player left the chat.

86.25.20 GKVoiceChatPlayerSilent = 3

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the states returned to your game about other players in a voice chat.
Notes: A player stopped speaking.

86.25.21 GKVoiceChatPlayerSpeaking = 2

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the states returned to your game about other players in a voice chat.
Notes: A player began speaking.

Chapter 87

GIF

87.1 Globals

87.1.1 GifStringToGifMBS(data as string) as GIFMBS

MBS Images Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a Gif GIFPictureMBS from memory.
Notes:

Returns nil on any error.
Else it should be identical to the folderitem function.

There is a link bug in RB. So if this function always returns nil, you may need a line like "dim g as new GifMBS" to fix it.

87.1.2 GifStringToPictureMBS(data as string) as Picture

MBS Images Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a Gif picture from memory and returns first picture with mask.
Notes:

Returns nil on any error.
Not always a mask is available.

There is a link bug in RB. So if this function always returns nil, you may need a line like "dim g as new GifMBS" to fix it.

87.2 class GifBlockMBS

87.2.1 class GifBlockMBS

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a gif block.
Notes: May have a GIFPictureMBS or an extension, but not both.

87.2.2 Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr6

87.2.3 Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr6

87.2.4 Methods

87.2.5 Clone as GifBlockMBS

MBS Images Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a clone of the object.

87.2.6 Properties

87.2.7 Extension as GifExtensionMBS

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The extension data of this gif block.
Notes: (Read and Write property)

87.2.8 Intro as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The intro value of the gif block.
Notes:

The type of data.
(Read and Write property)

87.2.9 Picture as GifPictureMBS

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The GIFPictureMBS data of this gif block.
Notes:

Not all blocks have a picture, so this property can be nil.
(Read and Write property)

87.3 class GifDataMBS

87.3.1 class GifDataMBS

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for binary data in a gif image.

87.3.2 Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr6

87.3.3 Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes

87.3.4 Methods

87.3.5 Clone as GifDataMBS

MBS Images Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a clone of the object.

87.3.6 Properties

87.3.7 DataMemory as Memoryblock

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The data as a memoryblock.
Notes: (Read and Write property)

87.3.8 DataString as String

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The data as a string.
Notes: (Read and Write property)

87.3.9 Length as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The length in bytes of this data.
Notes:

Returns 0 on any error.
(Read only property)

87.4 class GifExtensionMBS

87.4.1 class GifExtensionMBS

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a gif extension.

87.4.2 Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr6

87.4.3 Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr6

87.4.4 Methods

87.4.5 Add(data as GifDataMBS)

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a data object to this extension.

87.4.6 Clone as GifExtensionMBS

MBS Images Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a clone of the object.

87.4.7 Data(index as Integer) as GifDataMBS

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The data of this extension.
Notes: Index is 0 based.

87.4.8 Properties

87.4.9 Count as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of data objects attached to this extension.
Notes:

Returns 0 on any error.
(Read only property)

87.4.10 FirstData as GifDataMBS

MBS Images Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first data.
Notes:

Same as calling Data(0), but this property is visible in the debugger which makes debugging easier.
(Read only property)

87.4.11 Marker as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The marker field of this extension.
Notes: (Read and Write property)

87.5 class GIFMBS

87.5.1 class GIFMBS

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for reading or writing gif files.
Notes: There are patents on the lzw compression used in this class for writing gif files. This patents may be timeout out for some countries, but please check for your target countries.

87.5.2 Blog Entries

- Tip of day: Load GIF into WebImageView

- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr6

87.5.4 Methods

87.5.5 Add(block as GifBlockMBS)

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a block to this gif object.

87.5.6 Block(index as Integer) as GifBlockMBS

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blocks attached to this gif object.
Notes: Index is 0 based.

87.5.7 Clone as GIFMBS

MBS Images Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a clone of the object.

87.5.8 MakeFirstMask as picture

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches the first picture in this gif object and returns the matching mask.
Notes: Returns nil on any error.

87.5.9 MakeFirstPicture as picture

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches the first picture in this gif object and returns this picture.
Notes:

Returns nil on any error.
There is not always a mask available!

87.5.10 MakeFirstPictureWithMask as picture

MBS Images Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches the first picture in this gif object and returns this picture with mask (if exists).
Notes:

Returns nil on any error.
There is not always a mask available!

87.5.11 Properties

87.5.12 Count as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of blocks attached to this gif object.
Notes:

Not every block has a picture attached, so this is not the picture count.
(Read only property)

87.5.13 FirstBlock as GifBlockMBS

MBS Images Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first block.
Notes:

Same as calling Block(0), but this property is visible in the debugger which makes debugging easier.
(Read only property)

87.5.14 Header as String

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The header string for this gif object.
Notes:

e.g. "GIF89a"
(Read and Write property)

87.5.15 Screen as GifScreenMBS

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The screen object attached to this gif object.
Notes: (Read and Write property)

87.6 class GifPaletteMBS

87.6.1 class GifPaletteMBS

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a color palette.
Example:

```
dim p as new GifPaletteMBS

p.Count = 256

p.Value(0)=& cFFEECC

MsgBox hex(p.red(0))+" "+hex(p.Green(0))+" "+hex(p.Blue(0))
```

Notes: Maximum 256 colors.

87.6.2 Blog Entries

87.6.4 Methods

87.6.5 Clone as GifPaletteMBS

MBS Images Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a clone of the object.

87.6.6 Properties

87.6.7 Count as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of colors in this palette.
Example:

```
dim p as new GifPaletteMBS

p.Count = 256
```

Notes:

Value is 2, 4, 16 or 256.
(Read and Write property)

87.6.8 Blue(index as Integer) as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of the blue color components in this color palette.
Example:

```
dim p as new GifPaletteMBS

p.Count = 1
p.Value(0)=& cFFEECC

MsgBox str(p.blue(0))
```

Notes:

Index from 0 to count-1. (ignores bad indexes)
Value from 0 to 255.
(Read and Write computed property)

87.6.9 Green(index as Integer) as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of the green color components in this color palette.

Example:

```
dim p as new GifPaletteMBS

p.Count = 1
p.Value(0)=& cFFEECC

MsgBox str(p.green(0))
```

Notes:

Index from 0 to count-1. (ignores bad indexes)
Value from 0 to 255.
(Read and Write computed property)

87.6.10 Red(index as Integer) as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of the red color components in this color palette.
Example:

```
dim p as new GifPaletteMBS

p.Count = 1
p.Value(0)=& cFFEECC

MsgBox str(p.red(0))
```

Notes:

Index from 0 to count-1. (ignores bad indexes)
Value from 0 to 255.
(Read and Write computed property)

87.6.11 Value(index as Integer) as color

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The colors in this palette.
Example:

```
dim p as new GifPaletteMBS
```

```
p.Count = 1
p.Value(0)=& cFFEECC

MsgBox hex(p.value(0))
```

Notes:

Index from 0 to count-1. (ignores bad indexes)
(Read and Write computed property)

87.7 class GIFPictureMBS

87.7.1 class GIFPictureMBS

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a gif GIFPictureMBS.

87.7.2 Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr6

87.7.3 Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr6

87.7.4 Methods

87.7.5 Clone as GifPictureMBS

MBS Images Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a clone of the object.

87.7.6 CopyData as memoryblock

MBS Images Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the data of this picture object.
Notes: Returns a new memoryblock with a copy of the data so you can modify it.

87.7.7 MakeMask as picture

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches the matching mask for this picture and returns it as picture.
Notes: May return nil.
See also:

• 87.7.8 MakeMask(TransparentColorIndex as Integer) as picture 16402

87.7.8 MakeMask(TransparentColorIndex as Integer) as picture

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a mask for this picture based on the current transparent color index.
Notes: Returns nil on low memory.
See also:

• 87.7.7 MakeMask as picture 16401

87.7.9 MakePicture as picture

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the picture and returns it.
Notes: Returns nil on any error.

87.7.10 PixelData(row as Integer) as memoryblock

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The raw Pixel data for a given row.
Notes:

Row is 0 based.
Returns nil on any error.

87.7.11 Properties

87.7.12 Data as Memoryblock

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The data of this GIFPictureMBS as a big memoryblock.
Notes: (Read and Write property)

87.7.13 HasPalette as Boolean

MBS Images Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether we have a color map (palette).
Notes:

This property was named HasCMap in older plugin versions.
(Read and Write property)

87.7.14 Height as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Height in pixels.
Notes: (Read and Write property)

87.7.15 Interlace as Boolean

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the GIFPictureMBS is interlaced.
Notes:

Interlacing makes GIFPictureMBS loading faster in a browser, but requires the newer GIF format 89a.
(Read and Write property)

87.7.16 Left as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x position of the GIFPictureMBS.
Notes:

On an animation gif each GIFPictureMBS may have it's own position.
(Read and Write property)

87.7.17 Palette as GifPaletteMBS

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The palette for this GIFPictureMBS.
Notes: (Read and Write property)

87.7.18 PaletteDepth as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The depth of the palette of this GIFPictureMBS.
Notes:

Value should be 2, 4, 16 or 256.
(Read and Write property)

87.7.19 Sorted as Boolean

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the color palette is sorted.
Notes: (Read and Write property)

87.7.20 Top as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The y position of this GIFPictureMBS.
Notes:

On an animation gif each GIFPictureMBS may have it's own position.
(Read and Write property)

87.7.21 Width as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the GIFPictureMBS in pixels.
Notes: (Read and Write property)

87.8 class GifScreenMBS

87.8.1 class GifScreenMBS

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for the gif screen information.

87.8.2 Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr6

87.8.3 Blog Entries

87.8.4 Methods

87.8.5 Clone as GifScreenMBS

MBS Images Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a clone of the object.

87.8.6 Properties

87.8.7 Aspect as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The aspect ration of this GIFPictureMBS.
Notes: (Read and Write property)

87.8.8 BackgroundColor as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Index of the background color for this GIFPictureMBS.
Notes: (Read and Write property)

87.8.9 ColorResolution as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color resolution of the screen area.
Notes: (Read and Write property)

87.8.10 HasPalette as Boolean

MBS Images Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this screen defines a palette.
Notes: (Read and Write property)

87.8.11 Height as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the screen area used.
Notes: (Read and Write property)

87.8.12 Palette as GifPaletteMBS

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color palette to use for the screen area used.
Notes: (Read and Write property)

87.8.13 PaletteDepth as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The palette depth of the screen area used.
Notes: (Read and Write property)

87.8.14 Sorted as Boolean

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the color palette is sorted.
Notes: (Read and Write property)

87.8.15 Width as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the screen area used.
Notes: (Read and Write property)

Chapter 88

Graphics & Pictures

88.1 class Graphics

88.1.1 class Graphics

Platforms: macOS, Linux, Windows, Targets: All.

Function: Extends Xojo's Graphics Class.

88.1.2 Methods

88.1.3 DrawCGPDFDocumentMBS(pdf as CGPDFDocumentMBS, r as CGRectMBS, page as Integer)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Draws a PDF on the graphics object inside the given rectangle.
Notes:

Requires Mac OS X to work.

If destination is scaled page size, you need to also scale the rectangle here.

Seems broken in MacOS Mojave for us with drawing in print context.
See also:

- 88.1.4 DrawCGPDFDocumentMBS(pdf as CGPDFDocumentMBS, r as CGRectMBS, page as Integer, InterpolationQuality as Integer, Antialias as boolean, FontSmoothing as Boolean) 16410

88.1.4 DrawCGPDFDocumentMBS(pdf as CGPDFDocumentMBS, r as CGRectMBS, page as Integer, InterpolationQuality as Integer, Antialias as boolean, FontSmoothing as Boolean)

MBS MacCG Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Draws a PDF on the graphics object inside the given rectangle.
Notes:

Requires Mac OS X to work.

You can pass for interpolation:

0	Let the context decide.
1	Never interpolate.
2	Low quality, fast interpolation.
4	Medium quality, slower than kCGInterpolationLow.
3	Highest quality, slower than kCGInterpolationMedium.

Set Antialias to true to allow anti aliasing and to false to disallow.
Set FontSmoothing to true to allow font smoothing and false to disallow it.

If destination is scaled page size, you need to also scale the rectangle here.

Seems broken in MacOS Mojave for us with drawing in print context.

See also:

- 88.1.3 DrawCGPDFDocumentMBS(pdf as CGPDFDocumentMBS, r as CGRectMBS, page as Integer) 16409

88.1.7 DrawRotatedTextMBS(Rotation as Double, text as string, x as Integer, y as Integer, Center as Boolean = false, alpha as Double = 1.0, NoSwapY as boolean = false, FontWidth as Integer = 0)

MBS Util Plugin, Plugin Version: 11.2, Platforms: macOS, Windows, Targets: Desktop only.

Function: Draws rotated text.
Example:

```
Sub Paint(g As Graphics)

g.DrawRotatedTextMBS 45, "Hello World", 100, 100

End Sub
```

Notes:

Rotation is the angle in degree.
Currently only supported for Mac OS X and Windows in GUI applications.

The plugin does not see the clipping offset for the graphics object. So for graphics objects from printer or canvas, you need to offset the position. Seems like with a Canvas the coordinates are relative to canvas in Cocoa, but relative to Windows in Carbon.

We have the optional parameter Center which tells the plugin to center the rotated text, so the rotation point is in the middle of the text.
The plugin queries Bold, Italic, Underline, ForeColor, TextUnit, TextSize or TextFont.

Alpha gives the alpha value for Mac OS X. Can be 1.0 (Full color) to 0.0 (no color).

On Mac targets the Y coordinate needs to be swapped internally from top down coordinates to bottom up coordinates. As this does not work 100% correct on printers (the plugin doesn't know page margins), you can provide correct Y coordinate yourself and pass NoSwapY = true. (added in plugin version 13.1)
On Windows the OS function used (ExtTextOut) does not support multiple lines.

FontWidth is only for Windows to define the width of the font. Default is 0 to use default width.

The average width, in logical units, of characters in the font. If FontWidth is zero, the aspect ratio of the device is matched against the digitization aspect ratio of the available fonts to find the

On Windows for drawing in a picture, make sure the font size and font name are set. Else it may not draw. For Windows, we only use HDC for drawing, so if you have a graphics context not using a HDC, this function doesn't draw. The function is not updated for DirectDraw.

88.1.11 DrawWindowsIconMBS(file as folderitem, IconID as Integer, x as Integer, y as Integer, w as Integer, h as Integer) as boolean

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop only.

Function: Draws a windows icon on the given rectangle.
Notes:

The folderitem should point to a file with icons (exe, dll, ico or something else). If IconID is zero, the first icon is used. Else IconID is the id of the icon.
If w or h is 0, the default size is used.
Returns true on success and false on failure.

88.1.12 MeasureRotatedTextMBS(text as string, byref Width as Double, byref Height as Double, FontWidth as Integer = 0) as Boolean

MBS Util Plugin, Plugin Version: 17.0, Platforms: macOS, Windows, Targets: Desktop only.

Function: Measure size of text.
Notes:

This is compatible to text drawing in DrawRotatedTextMBS, so you can use it to calculate the required space.
No rotation is used for measurement.
Returns true on success and false on failure.

88.1.15 PaintdesktopMBS

MBS Picture Plugin, Platform: Windows, Targets: Desktop only.

Function: Draws on Windows the desktop into the current graphics port.
Notes: May not draw a desktop picture.

88.1.16 StretchBltMBS(nXOriginDest as Integer, nYOriginDest as Integer, nWidthDest as Integer, nHeightDest as Integer, source as graphics, nXOriginSrc as Integer, nYOriginSrc as Integer, nWidthSrc as Integer, nHeightSrc as Integer, dwRop as Integer) as boolean

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop only.

Function: The StretchBlt function copies a bitmap from a source rectangle into a destination rectangle, stretching or compressing the bitmap to fit the dimensions of the destination rectangle, if necessary.
Notes:

This is just a wrapper to the StretchBlt function from the Windows API.

The system stretches or compresses the bitmap according to the stretching mode currently set in the destination device context.

Parameters:

nXOriginDest	Specifies the x-coordinate, in logical units, of the upper-left corner of the destination rectangle.
nYOriginDest	Specifies the y-coordinate, in logical units, of the upper-left corner of the destination rectangle.
nWidthDest	Specifies the width, in logical units, of the destination rectangle.
nHeightDest	Specifies the height, in logical units, of the destination rectangle.
hdcSrc	The source device context.
nXOriginSrc	Specifies the x-coordinate, in logical units, of the upper-left corner of the source rectangle.
nYOriginSrc	Specifies the y-coordinate, in logical units, of the upper-left corner of the source rectangle.
nWidthSrc	Specifies the width, in logical units, of the source rectangle.
nHeightSrc	Specifies the height, in logical units, of the source rectangle.
dwRop	Specifies the raster operation to be performed. Raster operation codes define how the system combines colors in output operations that involve a brush, a source bitmap, and a destination bitmap. See BitBlt for a list of common raster operation codes (ROPs). Note that the CAPTUREBLT ROP generally cannot be used for printing device contexts.

Return Values

If the function succeeds, the return value is true.
If the function fails, the return value is false.

Possible operation modes:

SRCCOPY	& h00CC0020	dest = source	Copies the source rectangle directly to the destination rectangle.
SRCPAINT	& h00EE0086	dest = source OR dest	Combines the colors of the source and destination rectangles by using the Boolean OR operator.
SRCAND	& h008800C6	dest = source AND dest	Combines the colors of the source and destination rectangles by using the Boolean AND operator.
SRCINVERT	& h00660046	dest = source XOR dest	Combines the colors of the source and destination rectangles by using the Boolean XOR operator.
SRCERASE	& h00440328	dest = source AND (NOT dest)	Combines the inverted colors of the destination rectangle with the colors of the source rectangle by using the Boolean AND operator.
NOTSRCCOPY	& h00330008	dest = (NOT source)	Copies the inverted source rectangle to the destination.
NOTSRCERASE	& h001100A6	dest = (NOT src) AND (NOT dest)	Combines the colors of the source and destination rectangles by using the Boolean OR operator and then inverts the resultant color.
MERGECOPY	& h00C000CA	dest = (source AND pattern)	Merges the colors of the source rectangle with the brush currently selected in hdcDest, by using the Boolean AND operator.
MERGEPAINT	& h00BB0226	dest = (NOT source) OR dest	Merges the colors of the inverted source rectangle with the colors of the destination rectangle by using the Boolean OR operator.
PATCOPY	& h00F00021	dest = pattern	Copies the brush currently selected in hdcDest, into the destination bitmap.
PATPAINT	& h00FB0A09	dest = DPSnoo	Combines the colors of the brush currently selected in hdcDest, with the colors of the inverted source rectangle by using the Boolean OR operator. The result of this operation is combined with the colors of the destination rectangle by using the Boolean OR operator.
PATINVERT	& h005A0049	dest = pattern XOR dest	Combines the colors of the brush currently selected in hdcDest, with the colors of the destination rectangle by using the Boolean XOR operator.
DSTINVERT	& h00550009	dest = (NOT dest)	Inverts the destination rectangle.
BLACKNESS	& h00000042	dest = BLACK	Fills the destination rectangle using the color associated with index 0 in the physical palette. (This color is black for the default physical palette.)
WHITENESS	& h00FF0062	dest = WHITE	Fills the destination rectangle using the color associated with index 1 in the physical palette. (This color is white for the default physical palette.)
NOMIRRORBITMAP	& h80000000	Do not Mirror the bitmap in this call.	Prevents the bitmap from being mirrored.
CAPTUREBLT	& h40000000	Include layered windows.	Includes any windows that are layered on top of your window in the resulting image. By default, the image only contains your window. Note that this generally cannot be used for printing device contexts.

88.1.17 StretchDIBitsMBS(XDest as Integer, YDest as Integer, DestWidth as Integer, DestHeight as Integer, XSource as Integer, YSource as Integer, SourceWidth as Integer, SourceHeight as Integer, Bits as memoryblock, ImageWidth as Integer, ImageHeight as Integer, ImageBitCount as Integer) as boolean

MBS Picture Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop only.

Function: The StretchDIBits function copies the color data for a rectangle of pixels in a DIB image to the specified destination rectangle.
Example:

```
dim m as MemoryBlock
dim p,q as Picture

p=New Picture(100,100,32)
```

```
p.Graphics.ForeColor=rgb(255,128,1)
p.Graphics.FillRect 0,0,100,100

// Make a new MemoryBlock
m=NewMemoryBlock(100*100*3) // 3 bytes per Pixel

// Copy RGB without alpha
if p.CopyBGRtoMemoryblockMBS(m,0) then

dim XDest as Integer = 0
dim YDest as Integer = 0
dim DestWidth as Integer = 100
dim DestHeight as Integer = 100
dim XSource as Integer = 0
dim YSource as Integer = 0
dim SourceWidth as Integer = 100
dim SourceHeight as Integer = 100
dim Bits as memoryblock = m
dim ImageWidth as Integer = 100
dim ImageHeight as Integer = 100
dim ImageBitCount as Integer = 24

call g.StretchDIBitsMBS(XDest, YDest, DestWidth, DestHeight, XSource, YSource, SourceWidth, Source-
Height, bits, ImageWidth, ImageHeight, ImageBitCount)

end if
```

Notes:

If the destination rectangle is larger than the source rectangle, this function stretches the rows and columns of color data to fit the destination rectangle. If the destination rectangle is smaller than the source rectangle, this function compresses the rows and columns by using the specified raster operation.

You specify the dest rectangle in the graphics object, the source rectangle in the picture, the memoryblock with the bits, the size of the image and the bit count of the image (24 or 32).

The origin of a bottom-up DIB is the bottom-left corner; the origin of a top-down DIB is the upper-left corner.

StretchDIBits creates a mirror image of a bitmap if the signs of the nSrcWidth and nDestWidth parameters, or if the nSrcHeight and nDestHeight parameters differ. If nSrcWidth and nDestWidth have different signs, the function creates a mirror image of the bitmap along the x-axis. If nSrcHeight and nDestHeight have different signs, the function creates a mirror image of the bitmap along the y-axis.

Returns true on success and false on failure.

88.1.18 WinApplyDevModeMBS(devmode as WindowsDeviceModeMBS) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: Updates the specified printer or plotter device context (graphics) using the specified information.
Notes:

Returns true on success.

This function cannot be used to change the driver name, device name, or the output port. When the user changes the port connection or device name, the application must delete the original graphics and create a new graphics object with the new information.

Windows seems not to allow changing graphics object for printer while a page is open, so use WinEndPageMBS to close page before changing settings.

Does not work for Xojo 2016r4 and newer due to switch to DirectDraw for printing.

88.1.19 Blog Entries

- MBS Real Studio Plugins, version 12.1pr6
- More on printing on Windows

88.1.20 WindowsGraphicsInfoMBS as WindowsGraphicsInfoMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: Query information about graphics object on Windows.
Notes: Returns nil on any error.

88.1.21 WinEndPageMBS as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The EndPage function notifies the device that the application has finished writing to a page.
Notes:

This function is typically used to direct the device driver to advance to a new page.

Returns true on success.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation-factors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

Use the WinApplyDevModeMBS function to change the device mode, if necessary, after calling the EndPage function. Note that a call to WinApplyDevModeMBS resets all device context attributes back to default values. Neither EndPage nor StartPage resets the device context attributes. Device context attributes remain constant across subsequent pages. You do not need to re-select objects and set up the mapping mode again before printing the next page; however, doing so will produce the same results and reduce code differences between versions of Windows.

When a page in a spooled file exceeds approximately 350 MB, it may fail to print and not send an error message. For example, this can occur when printing large EMF files. The page size limit depends on many factors including the amount of virtual memory available, the amount of memory allocated by calling processes, and the amount of fragmentation in the process heap.

Does not work for Xojo 2016r4 and newer due to switch to DirectDraw for printing.

88.1.22 Blog Entries

- MBS Real Studio Plugins, version 12.1pr6
- More on printing on Windows

88.1.23 WinStartPageMBS as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The StartPage function prepares the printer driver to accept data.
Notes:

Returns true on success.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation-factors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

The system disables the WinApplyDevModeMBS function between calls to the StartPage and EndPage functions. This means that you cannot change the device mode except at page boundaries. After calling

EndPage, you can call WinApplyDevModeMBS to change the device mode, if necessary. Note that a call to WinApplyDevModeMBS resets all device context attributes back to default values.

Neither EndPage nor StartPage resets the device context attributes. Device context attributes remain constant across subsequent pages. You do not need to re-select objects and set up the mapping mode again before printing the next page; however, doing so will produce the same results and reduce code differences between versions of Windows.

Does not work for Xojo 2016r4 and newer due to switch to DirectDraw for printing.

88.2.8 Methods

88.2.9 SaveImageAtPathToSavedPhotosAlbum(ImageFile as FolderItem, CompletionDelegate as ImageSaveCompletedMBS)

MBS Picture Plugin, Plugin Version: 21.1, Platform: iOS, Targets: iOS only.

Function: Adds the specified image to the user,Äôs Camera Roll album.
Notes:

ImageFile: The image file to write to the Camera Roll album.
CompletionDelegate: Optionally, the delegate which should be called after the image has been written to the Camera Roll album.

The use of the CompletionDelegate parameter is optional and necessary only if you want to be notified asynchronously when the function finishes writing the image to the user,Äôs Camera Roll or Saved Photos album. If you do not want to be notified, pass nil for these parameters.
When used on an iOS device without a camera, this method adds the image to the Saved Photos album rather than to the Camera Roll album.
See also:

- 88.2.10 SaveImageAtPathToSavedPhotosAlbum(ImagePath as String, CompletionDelegate as ImageSaveCompletedMBS) 16421

88.2.10 SaveImageAtPathToSavedPhotosAlbum(ImagePath as String, CompletionDelegate as ImageSaveCompletedMBS)

MBS Picture Plugin, Plugin Version: 21.1, Platform: iOS, Targets: iOS only.

Function: Adds the specified image to the user,Äôs Camera Roll album.
Notes:

ImagePath: The image path to write to the Camera Roll album.
CompletionDelegate: Optionally, the delegate which should be called after the image has been written to the Camera Roll album.

The use of the CompletionDelegate parameter is optional and necessary only if you want to be notified asynchronously when the function finishes writing the image to the user,Äôs Camera Roll or Saved Photos album. If you do not want to be notified, pass nil for these parameters.
When used on an iOS device without a camera, this method adds the image to the Saved Photos album rather than to the Camera Roll album.
See also:

88.2.11 SaveVideoAtPathToSavedPhotosAlbum(VideoFile as FolderItem, CompletionDelegate as VideoSaveCompletedMBS)

MBS Picture Plugin, Plugin Version: 21.1, Platform: iOS, Targets: iOS only.

Function: Adds the movie from the specified path to the user,Äôs Camera Roll album.
Notes:

videoPath: The filesystem path to the movie file you want to save to the Camera Roll album.
CompletionDelegate: Optionally, the delegate which should be called after the movie has been written to the Camera Roll album.

Before calling this function, call the VideoAtPathIsCompatibleWithSavedPhotosAlbum function to determine if it is possible to save movies to the Camera Roll album. For a code example, refer to Camera Programming Topics for iOS.

The use of the CompletionDelegate parameter is optional and necessary only if you want to be notified asynchronously when the function finishes writing the movie to the user,Äôs Camera Roll or Saved Photos album. If you do not want to be notified, pass nil for these parameters.

When used on an iOS device without a camera, this method adds the movie to the Saved Photos album rather than to the Camera Roll album.
See also:

- 88.2.12 SaveVideoAtPathToSavedPhotosAlbum(VideoPath as String, CompletionDelegate as VideoSaveCompletedMBS) 16422

88.2.12 SaveVideoAtPathToSavedPhotosAlbum(VideoPath as String, CompletionDelegate as VideoSaveCompletedMBS)

MBS Picture Plugin, Plugin Version: 21.1, Platform: iOS, Targets: iOS only.

Function: Adds the movie from the specified path to the user,Äôs Camera Roll album.
Notes:

videoPath: The filesystem path to the movie file you want to save to the Camera Roll album.
CompletionDelegate: Optionally, the delegate which should be called after the movie has been written to the Camera Roll album.

Before calling this function, call the VideoAtPathIsCompatibleWithSavedPhotosAlbum function to determine if it is possible to save movies to the Camera Roll album. For a code example, refer to Camera Programming Topics for iOS.

The use of the CompletionDelegate parameter is optional and necessary only if you want to be notified asynchronously when the function finishes writing the movie to the user,Äôs Camera Roll or Saved Photos

album. If you do not want to be notified, pass nil for these parameters.

When used on an iOS device without a camera, this method adds the movie to the Saved Photos album rather than to the Camera Roll album.
See also:

- 88.2.11 SaveVideoAtPathToSavedPhotosAlbum(VideoFile as FolderItem, CompletionDelegate as VideoSaveCompletedMBS) 16422

88.2.13 VideoAtPathIsCompatibleWithSavedPhotosAlbum(VideoFile as FolderItem) as Boolean

MBS Picture Plugin, Plugin Version: 21.1, Platform: iOS, Targets: iOS only.

Function: Returns a Boolean value that indicates whether the specified video is compatible to save to the user,Äôs Camera Roll album.
Notes:

VideoFile: The folderitem to the movie file you want to save.

Returns true if the video can be saved to the Camera Roll album or false if it cannot.

Not all devices are able to play video files placed in the user,Äôs Camera Roll album. Before attempting to save a video, call this function and check its return value to ensure that saving the video is supported for the current device. For a code example, refer to Camera Programming Topics for iOS.
When used on an iOS device without a camera, this method indicates whether the specified movie can be saved to the Saved Photos album rather than to the Camera Roll album.
See also:

- 88.2.14 VideoAtPathIsCompatibleWithSavedPhotosAlbum(VideoPath as String) as Boolean 16423

88.2.14 VideoAtPathIsCompatibleWithSavedPhotosAlbum(VideoPath as String) as Boolean

MBS Picture Plugin, Plugin Version: 21.1, Platform: iOS, Targets: iOS only.

Function: Returns a Boolean value that indicates whether the specified video is compatible to save to the user,Äôs Camera Roll album.
Notes:

videoPath: The filesystem path to the movie file you want to save.

Returns true if the video can be saved to the Camera Roll album or false if it cannot.

Not all devices are able to play video files placed in the user,Äôs Camera Roll album. Before attempting to save a video, call this function and check its return value to ensure that saving the video is supported for the current device. For a code example, refer to Camera Programming Topics for iOS.
When used on an iOS device without a camera, this method indicates whether the specified movie can be saved to the Saved Photos album rather than to the Camera Roll album.

- 88.2.13 VideoAtPathIsCompatibleWithSavedPhotosAlbum(VideoFile as FolderItem) as Boolean 16423

88.2.15 WriteImageToSavedPhotosAlbum(Pic as Picture, CompletionDelegate as ImageSaveCompletedMBS)

MBS Picture Plugin, Plugin Version: 21.1, Platform: iOS, Targets: iOS only.

Function: Adds the specified image to the user,Äôs Camera Roll album.
Example:

```
Dim pic As Picture = LogoMBS(500)

iOSPictureMBS.WriteImageToSavedPhotosAlbum(pic, AddressOf ImageSaved)
```

Notes:

Pic: The image to write to the Camera Roll album.
CompletionDelegate: Optionally, the delegate which should be called after the image has been written to the Camera Roll album.

The use of the CompletionDelegate parameter is optional and necessary only if you want to be notified asynchronously when the function finishes writing the image to the user,Äôs Camera Roll or Saved Photos album. If you do not want to be notified, pass nil for these parameters.
When used on an iOS device without a camera, this method adds the image to the Saved Photos album rather than to the Camera Roll album.

88.2.16 Delegates

88.2.17 ImageSaveCompletedMBS(error as NSErrorMBS)

MBS Picture Plugin, Plugin Version: 21.1, Platform: iOS, Targets: Desktop only.

Function: The delegate called when image saving is done.
Example:

```
// sample method you could reference via AddressOf
Sub ImageSaved(error as NSErrorMBS)
```

```
If error <>Nil Then
MessageBox "Failed to save"+EndOfLine+EndOfLine+error.LocalizedDescription
Else
MessageBox "Saved."
End If
End Sub
```

Notes: If error is nil, the save was successful.

88.2.18 VideoSaveCompletedMBS(videoPath as String, error as NSErrorMBS)

MBS Picture Plugin, Plugin Version: 21.1, Platform: iOS, Targets: Desktop only.

Function: The delegate called when video saving is done.
Notes: If error is nil, the save was successful.

88.3 Globals

88.3.1 NewPictureReaderMBS(pic as picture) as PictureReaderMBS

MBS Picture Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new picture reader.
Example:

```
dim pic as Picture = LogoMBS(500)
dim p as PictureReaderMBS
dim m as MemoryBlock
dim r,g,b,rRow,gRow,bRow,h1,w1,x,y,bpp as Integer

// Create a new picture reader
p=NewPictureReaderMBS(pic)

h1=p.Height-1
w1=p.Width-1

bpp=p.BytesPerPixel
rRow=p.RedOffset
gRow=p.GreenOffset
bRow=p.BlueOffset
// in each row the red, blue and green channels have different offsets.
// but offsets are platform dependend

dim sum as Double

for y=0 to h1
// Get data in memory. This Memoryblock has a size property of 0!
m=p.Data(y)
r=rRow
g=gRow
b=bRow

for x=0 to w1

sum = sum + m.UInt8Value(r)
sum = sum + m.UInt8Value(g)
sum = sum + m.UInt8Value(b)

r=r+bpp
g=g+bpp
b=b+bpp
next

next
```

```
// show the sum of all pixels:
MsgBox "Sum with plugin is: "+str(sum)

// now try same in RB code:

dim surface as RGBSurface = pic.RGBSurface
dim c as color

sum = 0.0

for y=0 to h1
for x=0 to w1
c = surface.Pixel(x,y)

sum = sum + c.red
sum = sum + c.Green
sum = sum + c.Blue

next

next

surface = nil

MsgBox "Sum with RB Code is: "+str(sum)
quit
```

Notes:

Returns nil on failure.
Please report if nil is returned as it should work always (except for low memory).

88.3.2 NewPictureWriterMBS(width as Integer, height as Integer, AlphaChannel as boolean = false) as PictureWriterMBS

MBS Picture Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new picture writer.
Example:

```
dim p as PictureWriterMBS
dim m as MemoryBlock
dim r,g,b,rRow,gRow,bRow,h1,w1,x,y,bpp as Integer
```

```
// Create a new picture writer
p=NewPictureWriterMBS(512,512)

h1=p.Height-1
w1=p.Width-1

bpp=p.BytesPerPixel
rRow=p.RedOffset
gRow=p.GreenOffset
bRow=p.BlueOffset
// in each row the red, blue and green channels have different offsets.
// but offsets are platform dependend

for y=0 to h1
// Get data in memory. This Memoryblock has a size property of 0!
m=p.Data(y)
r=rRow
g=gRow
b=bRow

for x=0 to w1

m.UInt8Value(r)=x\2
m.UInt8Value(g)=y\2
m.UInt8Value(b)=x*y\2

r=r+bpp
g=g+bpp
b=b+bpp
next

next

// Use Render to make a picture object
dim pic as Picture = p.Render
Backdrop = pic
```

Notes:

Returns nil on failure (low memory).
If alpha is requested, but not possible in the given version of Xojo (or Xojo), we return a picture without.

88.3.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr12

88.3.4 MemoryblockARGBtoPictureMBS(source as memoryblock, offset as Integer, width as Integer, height as Integer, LittleEndian as boolean) as picture

MBS Picture Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies image data from a memoryblock into a picture object.
Example:

```
const kAlphaOffset=0 ' (BigEndian) and 3 (LittleEndian)
dim m as MemoryBlock
dim p,q,k as Picture

p=New Picture(100,100,32)
p.Graphics.ForeColor=rgb(255,128,1)
p.Graphics.FillRect 0,0,100,100
p.mask.Graphics.ForeColor=rgb(127,127,127)
p.mask.Graphics.FillRect 0,0,100,100

// Make a new MemoryBlock
m=NewMemoryBlock(100*100*4) // 4 bytes per Pixel

// copy RGB and leave room for alpha
if p.CopyARGBtoMemoryblockMBS(m,0,false,-1) then
'MsgBox EncodingToHexMBS(m.StringValue(0,99))
end if

// copy green channel from mask image into Memoryblock
if p.mask.CopyGtoMemoryblockMBS(m,kAlphaOffset,4) then
'MsgBox EncodingToHexMBS(m.StringValue(0,99))
end if

// make the picture from this Memoryblock
q=MemoryblockARGBtoPictureMBS(m,0,100,100,false)

// make the mask from this Memoryblock
k=MemoryblockGrayToPictureMBS(m,kAlphaOffset,100,100,4)

// combine picture and mask
q.Mask.Graphics.DrawPicture k,0,0

Backdrop=q
```

Notes:

Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs width*height*4 bytes in the memoryblock.

Does not access the mask inside the image!
Data is copied from memory block to the new picture, not referenced.

LittleEndian specifies whether the image is stored in ARGB (BigEndian) or BGRA (LittleEndian) mode.

88.3.5 MemoryblockRGBtoPictureMBS(source as memoryblock, offset as Integer, width as Integer, height as Integer) as picture

MBS Picture Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies image data from a memoryblock into a picture object.
Example:

```
dim m as MemoryBlock
dim p,q as Picture

p=New Picture(100,100,32)
p.Graphics.ForeColor=rgb(255,128,1)
p.Graphics.FillRect 0,0,100,100

// Make a new MemoryBlock
m=NewMemoryBlock(100*100*3) // 3 bytes per Pixel

// Copy RGB without alpha
if p.CopyRGBtoMemoryblockMBS(m,0) then

q=MemoryblockRGBtoPictureMBS(m,0,100,100)

Backdrop=q

end if
```

Notes:

Returns nil on any error.
source should not be nil.

offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs width*height*3 bytes in the memoryblock.

Does not access the mask inside the image!
Data is copied from memory block to the new picture, not referenced.

88.3.6 BlendPicturesMBS(source as picture, sourcepercent as Double, dest as picture, destpercent as Double) as picture

MBS Picture Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Blends two pictures.
Example:

```
dim a,b,c as picture

a=New Picture(100,100,32)
b=New Picture(100,100,32)
' ... draw something in a and b
c=New Picture(100,100,32)
c=BlendPicturesMBS(a,0.5,b,0.5)
```

Notes:

Percent is in range from 0 to 1. Values out of this range may work, but you get strange results.

Reason for returning nil:
- One of the two pictures used is nil.
- One of the pictures is not a 32bit bitmap picture.
- The two parameter pictures have not the same size as the others.

88.3.7 BlendPicturesWithMaskMBS(source as picture, dest as picture, mask as picture) as picture

MBS Picture Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Blends two pictures.
Example:

```
dim a,b,c,m as picture
```

```
a=New Picture(100,100,32)
b=New Picture(100,100,32)
m=New Picture(100,100,32)
' ... draw something in a and b
c=BlendPicturesWithMaskMBS(a,b,m)
```

Notes:

The mask defines how much from one picture is used.

Reason for returning false:
- One of the three pictures used is nil.
- One of the pictures is not a 32bit bitmap picture.
- The three parameter pictures have not the same size as the others.

88.3.8 CombinePicturesMBS(red as picture, blue as picture, green as picture) as picture

MBS Picture Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Combines the red, green and blue channels of three images into the a new one.
Notes: Returns nil on any error.

88.3.9 MergePictureMBS(source1 as picture, source2 as picture) as picture

MBS Picture Plugin, Plugin Version: 7.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Merges the two pictures into one.
Example:

```
// in RB this method would work like this:

dim i,j as Integer
dim col2 as color
dim r1,r2,g1,g2,b1,b2 as Integer
dim dest as Picture // destination
dim source1, source2 as Picture // source pictures

col2 = source1.graphics.pixel(i,j)
r1 = col2.red
g1 = col2.green
b1 = col2.blue
col2 = source2.graphics.pixel(i,j)
```

r2 = col2.red
g2 = col2.green
b2 = col2.blue

dest.graphics.pixel(i,j) = RGB(max(r1,r2), max(g1,g2), max(b1,b2))

Notes:

Masks are ignored.
Returns nil on low memory.
Both pictures must have the same size and not be nil.

88.3.10 NewPictureWithColorMBS(width as Integer, height as Integer, c as color) as picture

MBS Picture Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new picture and fills it with the given color.
Example:

window1.backdrop = NewPictureWithColorMBS(200, 200, & c3366CC)

Notes: This function is mostly to check if the picture writer code in our plugins work.

88.3.11 Blog Entries

- MBS REALbasic Plugins, version 10.6pr4

88.3.12 RenderSamplesMBS(Samples as memoryblock, SampleCount as Integer, Smooth as Integer, Width as Integer, Height as Integer, outlinewidth as Integer, BackColor as color=& c88B5C4, ForeColor as color=& c274C5A, OutLineColor as color=& c203F4E, Bits as Integer = 8, AutoScale as boolean = false) as Picture

MBS Picture Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Renders audio samples into a picture.
Notes:

Samples has one byte for each audio value and 2 bytes for each stereo sample.
SampleCount: Number of Samples. = Samples.size/2

Smooth: How smooth the samples should be made.
Width: Width of picture
Height: Height of picture
outlinewidth: The width of the outline (0=no outline)
BackColor: The back color.
ForeColor: the fore color.
OutLineColor: The color for the outline.
Bits: Pass 7 for signed bytes, 8 for unsigned bytes, 15 for signed shorts and 16 for unsigned short values. Pass -32 for Float32 and -64 for Float64.
AutoScale: Whether to scale automatically depending on highest values.

See SoundFileMBS class to get samples cross platform.

88.3.13 Blog Entries

- MBS Xojo Plugins, version 20.3pr1
- MBS Xojo / Real Studio Plugins, version 14.2pr10
- MBS Real Studio Plugins, version 12.5pr7

88.3.14 TintPictureMBS(source as picture, GreyBase as color, SepiaBase as color) as picture

MBS Picture Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tints the image.
Example:

```
// The code does the same thing as this Xojo code:

Sub TintPicture(theImg as Picture, pGreyBase as Color, pSepiaBase as Color)
Dim theRGBSurface as RGBSurface
Dim theWidth, theHeight as Integer
Dim pColor as Color
Dim x, y as Integer
Dim theGrey as Integer

dim SepiaBaseR as Double
dim SepiaBaseG as Double
dim SepiaBaseB as Double

dim GreyBaseR as Double
dim GreyBaseG as Double
dim GreyBaseB as Double
```

```
SepiaBaseR=pSepiaBase.Red / 255.0
SepiaBaseG=pSepiaBase.Green / 255.0
SepiaBaseB=pSepiaBase.Blue / 255.0

GreyBaseR=pGreyBase.Red / 255.0
GreyBaseG=pGreyBase.Green / 255.0
GreyBaseB=pGreyBase.Blue / 255.0

theRGBSurface = theImg.RGBSurface

theWidth = theImg.Width-1
theHeight = theImg.Height-1

For x = 0 to theWidth
For y = 0 to theHeight
pColor = theImg.RGBSurface.Pixel( x, y )

theGrey = ( GreyBaseR * pColor.Red ) + ( GreyBaseG * pColor.Green ) + ( GreyBaseB * pColor.Blue )
theImg.RGBSurface.Pixel( x, y ) = RGB( theGrey * SepiaBaseR, theGrey * SepiaBaseG, theGrey * SepiaBaseB )

Next
Next
End Sub
```

Notes:

You can use the code to do something like a Sepia effect.
Returns a new picture on success.

88.3.15 BlendPicturesMBS(result as picture, source as picture, sourcepercent as Double, dest as picture, destpercent as Double, x as Integer, y as Integer, width as Integer, height as Integer) as boolean

MBS Picture Plugin, Plugin Version: 8.7, Platforms: macOS, Windows, Targets: All.

Function: Blends two pictures.
Example:

```
dim a,b,c as picture

a=New Picture(100,100,32)
b=New Picture(100,100,32)
' ... draw something in a and b
c=New Picture(100,100,32)
```

```
call BlendPicturesMBS(c, a,0.5,b,0.5, 0, 0, 100, 100)
```

Notes:

Percent is in range from 0 to 1. Values out of this range may work, but you get strange results.

Reason for returning false:
- One of the pictures used is nil.
- The result picture must be a 24 bit or a 32 bit picture.
- The two parameter pictures have not the same size as the others.

88.3.16 BlendPicturesWithMaskMBS(result as picture, source as picture, dest as picture, mask as picture, x as Integer, y as Integer, width as Integer, height as Integer) as boolean

MBS Picture Plugin, Plugin Version: 8.7, Platforms: macOS, Windows, Targets: All.

Function: Blends two pictures.
Example:

```
dim a,b,c,m as picture

a=New Picture(100,100,32)
b=New Picture(100,100,32)
m=New Picture(100,100,32)
' ... draw something in a and b
call BlendPicturesWithMaskMBS(c,a,b,m,0,0,a.width,a.height)
```

Notes:

The mask defines how much from one picture is used.

Reason for returning false:
- One of the pictures used is nil.
- The result picture must be a 24 bit or a 32 bit picture.
- The three parameter pictures have not the same size as the others.

88.3.17 BlendPicturesWithMaskWithBackgroundMBS(SourceImage As Picture, DestImage As Picture, Mask As Picture, Result As Picture, X as Integer, Y as Integer, Width as Integer, Height as Integer) as boolean

MBS Picture Plugin, Plugin Version: 8.7, Platforms: macOS, Windows, Targets: All.

Function: Blends a picture with another picture.
Notes:

If DestImage is nil, white is used for the background.
If no mask is specified, a full black mask is used.
Result must be valid picture of right size.

Result must be a 24bit or 32bit picture.
See also:

- 88.3.18 BlendPicturesWithMaskWithBackgroundMBS(SourceImage As Picture, DestImage As Picture, Mask As Picture, Result As Picture, X as Integer, Y as Integer, Width as Integer, Height as Integer, BackgroundColour As Color) as boolean 16437

88.3.18 BlendPicturesWithMaskWithBackgroundMBS(SourceImage As Picture, DestImage As Picture, Mask As Picture, Result As Picture, X as Integer, Y as Integer, Width as Integer, Height as Integer, BackgroundColour As Color) as boolean

MBS Picture Plugin, Plugin Version: 8.7, Platforms: macOS, Windows, Targets: All.

Function: Blends a picture with another picture.
Notes:

If DestImage is nil, BackgroundColour is used for the background.
If no mask is specified, a full black mask is used.
Result must be valid picture of right size.

Result must be a 24bit or 32bit picture.
See also:

- 88.3.17 BlendPicturesWithMaskWithBackgroundMBS(SourceImage As Picture, DestImage As Picture, Mask As Picture, Result As Picture, X as Integer, Y as Integer, Width as Integer, Height as Integer) as boolean 16437

88.3.19 DiffPicturesMBS(source as picture, dest as picture, square as boolean) as picture

MBS Picture Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the difference between two pictures.
Example:

```
// our test Picture
dim p as Picture = LogoMBS(500)

// compress with JPEG and 10%
dim d as string = PictureToJPEGStringMBS(p, 10)

// decompress
dim q as Picture = JPEGStringToPictureMBS(d, true)

// compare them
window1.Backdrop = DiffPicturesMBS(p, q, true)
```

Notes:

Source and dest pictures must have same size. If square, the error is squared, so you see it much better.

Returns nil in case not enough memory is available or pictures do not have same size or are nil.

If both pictures are equal, all pixels in the returned picture are black.
See also Picture.isBlackMBS, and Picture.CompareMBS.

88.3.20 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr10

88.3.21 ColorizePictureMBS(Pict As Picture, Mask As Picture, foreR as Double, foreG as Double, foreB as Double, foreA as Double, backR as Double, backG as Double, backB as Double, backA as Double) as boolean

MBS Picture Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

Function: Colorizes a picture.
Example:

```
dim p as Picture = SpecialFolder.Pictures.Child("test2.tif").OpenAsPicture

if ColorizePictureMBS(p, p.mask, 1.0, 0.0, 0.0, 1.0, 0.0, 0.0, 1.0, 0.1) then
Backdrop=p
end if
```

Notes:

The given pictures are edited. As editing pictures works only on Mac and Windows if the pictures are 24 or 32 bit, this does not work on Linux.
Returns true on success and false on failure.

88.3.22 PictureCombineMBS(DestImage As Picture, Image As Picture, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean) as boolean

MBS Picture Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies pixels from one picture into another picture with some options.
Notes:

Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

Parameters:
Image: the source picture, must not be nil.
Mask: the mask picture, can be nil.
DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy
UseColours: whether to use the mask colour.

ForeColour: the fore colour, optional, can be integer or color
MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The destination image (self) can be either 24 bit or 32 bit.
